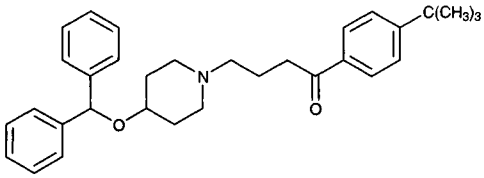
Ebastine



Molecular formula: $C_{32}H_{39}NO_2$
Molecular weight: 469.67
CAS Registry No.: 90729-43-4
Merck Index: 3534
Lednicer No.: 4 48

SAMPLE
Matrix: blood
Sample preparation: SPE (no details)

HPLC VARIABLES
Column: 150 × 4.6 5 μm Sup RS C18 (Prolabo)
Mobile phase: MeCN:200 mM pH 3.5 acetate buffer:triethylamine 80:20:0.025
Detector: UV 254

CHROMATOGRAM
Retention time: 17
Internal standard: terfenadine (8)
Limit of quantitation: 10 ng/mL

OTHER SUBSTANCES
Extracted: carebastine, metabolites

KEY WORDS
plasma; pharmacokinetics; SPE

REFERENCE
Van Rooij,J.; Schoemaker,H.C.; Bruno,R.; Reinhoudt,J.F.; Breimer,D.D.; Cohen,A.F. Cimetidine does not influence the metabolism of the H_1-receptor antagonist ebastine to its active metabolite carebastine, *Br.J.Clin.Pharmacol.*, **1993**, *35*, 661–663.

SAMPLE
Matrix: microsomal incubations
Sample preparation: Add 3 mL MeCN to microsomal incubation, centrifuge at 800 g for 10 min, evaporate an aliquot of the supernatant to dryness in a centrifugal concentrator. Dissolve the residue in 200 μL MeOH and inject an aliquot.

HPLC VARIABLES
Column: 250 × 4.6 Inertsil ODS-3 (GL Sciences, Tokyo, Japan)
Mobile phase: Gradient. A was MeCN. B was 12 mM pH 4.5 ammonium acetate. A:B 35:65 for 3 min, to 85:15 over 25 min
Column temperature: 40
Flow rate: 1
Detector: Radioactivity, Radiomatic Flo-One/Beta A-515 detector (Packard Instrumental Co., Meriden, CT), column effluent mixed with Ultima Flo-M scintillant pumped at 2 mL/min

OTHER SUBSTANCES
Extracted: metabolites

KEY WORDS
human; liver

REFERENCE

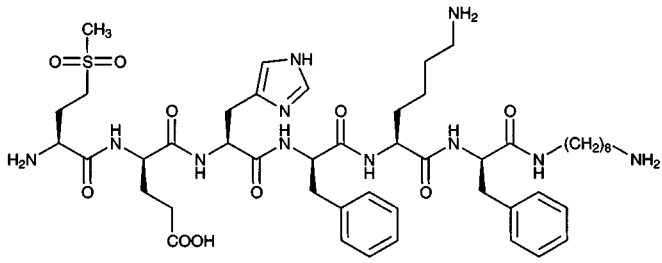
Ebiratide

Molecular formula: $C_{48}H_{73}N_{11}O_{10}S$
Molecular weight: 996.24
CAS Registry No.: 105250-86-0



SAMPLE

Matrix: blood

Sample preparation: Condition a 100 mg C18 SPE cartridge (Varian) with 2 mL MEOH and 2 mL water. 400 μL Plasma + 800 μL water, mix, add to the SPE cartridge, wash with 1 mL water, elute with 1 mL 5 mM HCl in MeOH:water 30:70. Evaporate the eluate to dryness in a freeze dryer, reconstitute with 100 μL 100 mM pH 9.0 borate buffer, add 100 μL 4-(N,N-dimethylaminosulfonyl)-7-fluoro-2,1,3-benzoxadiazole in MeCN, mix, heat at 50° for 30 min, inject a 100 μL aliquot. (Synthesis of 4-(N,N-dimethylaminosulfonyl)-7-fluoro-2,1,3-benzoxadiazole (DBD-F) is as follows. Dissolve 0.5 g magnesium sulfate heptahydrate and 6 g NaOH in 60 mL water, throughout the reaction keep the flask at about 20° with cold water cooling, add 15 mL 30% hydrogen peroxide, add 75 mL MeOH, add 12.1 g powdered benzoyl peroxide in one go, stir for 10 min, pour into 150 mL 20% sulfuric acid, extract three times with 50 mL portions of chloroform, determine peroxybenzoic acid concentration by iodometric titration (Tetrahedron 1967, 23, 3327). Slowly add 110 mL 1 M peroxybenzoic acid in chloroform to 7 g 2,6-difluoroaniline dissolved in 100 mL chloroform, stir at room temperature, when reaction is complete (iodometric titration) wash with 2% sodium thiosulfate, wash with 5% sodium carbonate, wash with water, dry over anhydrous sodium sulfate, evaporate to dryness under reduced pressure, recrystallize 2,6-difluoronitrosobenzene from EtOH (mp 108.5-109.5). Stir 8.5 g 2,6-difluoronitrosobenzene in 85 mL DMSO at room temperature and add a solution of 3.91 g sodium azide in 85 mL DMSO dropwise, let stand for about 1 h, add to a large volume of water, extract with ether, dry the extracts over anhydrous sodium sulfate, evaporate to dryness under reduced pressure and distil to give 4-fluoro-2,1,3-benzoxadiazole as a colorless oil (bp 83°/12 mm Hg) (J.Chem.Soc.(C) 1970, 1433). Add 11 mL chlorosulfonic acid dropwise to 3 g 4-fluoro-2,1,3-benzoxadiazole in 10 mL chloroform at 0-10° (use a calcium chloride drying tube), stir at room temperature for 1 h, reflux for 2 h, cool, slowly pour into ice water, remove the organic layer, extract the aqueous layer with chloroform, combine the organic layer, wash, dry over anhydrous magnesium sulfate, evaporate under reduced pressure, take up the residue in 5 mL benzene (Caution! Benzene is a carcinogen!), chromatograph on a 150 × 30 column of silica gel (100-200 mesh Kanto Chemical) with n-hexane:benzene 50:50, evaporate the appropriate fractions to give 4-(chlorosulfonyl)-7-fluoro-2,1,3-benzoxadiazole (CBD-F) as pale yellow needles (mp 64-66°) (Anal. Chem. 1984. 56, 2461). Stir 0.76 g CBD-F in 70 mL MeCN at 0-10° and add 1 g dimethylamine hydrochloride in 10 mL 100 mM pH 10 borax dropwise, adjust pH to 5 with 1 M HCl, concentrate to about 10 mL under reduced pressure, extract three times with 200 mL portions of diethyl ether, wash with water, dry over anhydrous magnesium sulfate, evaporate under reduced pressure, chromatograph on a 500 × 20 column of silica gel with chloroform, isolate the appropriate fraction and re-chromatograph on the same column with ethyl acetate:benzene 1:2 to give 4-(N,N-dimethylaminosulfonyl)-7-fluoro-2,1,3-benzoxadiazole (DBD-F) as white needles (mp 124-125°) (yield = 1% !). On a Merck no. 5714 $60F_{254}$ tlc plate eluted with chloroform DBD-F has Rf 0.32 and lies between two other reaction products (Analyst 1989, 114, 413). It is also reported that DBD-F can be purchased from Tokyo Kasei.)

HPLC VARIABLES

Column: 150 × 4.6 5C18 (Vydac)

Mobile phase: Gradient. A MeCN:MeOH:50 mM pH 6.0 imidazole nitrate 26.7:13.3:60. B MeCN:MeOH:50 mM pH 6.0 imidazole nitrate 40:20:40. A:B from 100:0 to 55:45 over 15 min, to 30:70 over 45 min, re-equilibrate at initial conditions for 15 min.

Flow rate: 1

Injection volume: 100

Detector: Chemiluminescence. The column effluent mixed with the reagent pumped at 1.2 mL/min and the mixture flowed through a coil at 30° to the detector. (Reagent was 100 mM hydrogen peroxide containing 0.5 mM bis[4-nitro-2-(3,6,9-trioxadecyloxycarbonyl)phenyl]oxalate (Wako, Richmond VA).)

CHROMATOGRAM
Retention time: 33
Limit of detection: 250 fmole

KEY WORDS
derivatization; rat; plasma; SPE; fluorescence detection is more sensitive

SAMPLE
Matrix: solutions
Sample preparation: Prepare a 100 μM solution in 100 mM pH 9.0 borate buffer. 200 μL Solution + 200 μL 30 mM DBD-F in MeCN, mix, heat at 50° for 30 min, inject an aliquot. (DBD-F is 4-(N,N-dimethylaminosulfonyl)-7-fluoro-2,1,3-benzoxadiazole. It can be purchased from Tokyo Kasei Kogyo or synthesized as follows. Dissolve 0.5 g magnesium sulfate heptahydrate and 6 g NaOH in 60 mL water, throughout the reaction keep the flask at about 20° with cold water cooling, add 15 mL 30% hydrogen peroxide, add 75 mL MeOH, add 12.1 g powdered benzoyl peroxide in one go, stir for 10 min, pour into 150 mL 20% sulfuric acid, extract three times with 50 mL portions of chloroform, determine peroxybenzoic acid concentration by iodometric titration (Tetrahedron 1967, 23, 3327). Slowly add 110 mL 1 M peroxybenzoic acid in chloroform to 7 g 2,6-difluoroaniline dissolved in 100 mL chloroform, stir at room temperature, when reaction is complete (iodometric titration) wash with 2% sodium thiosulfate, wash with 5% sodium carbonate, wash with water, dry over anhydrous sodium sulfate, evaporate to dryness under reduced pressure, recrystallize 2,6-difluoronitrosobenzene form EtOH (mp 108.5-109.5). Stir 8.5 g 2,6-difluoronitrosobenzene in 85 mL DMSO at room temperature and add a solution of 3.91 g sodium azide in 85 mL DMSO dropwise, let stand for about 1 h, add to a large volume of water, extract with ether, dry the extracts over anhydrous sodium sulfate, evaporate to dryness under reduced pressure and distil to give 4-fluoro-2,1,3-benzoxadiazole as a colorless oil (bp 83°/12 mm Hg) (J.Chem.Soc.(C) 1970, 1433). Add 11 mL chlorosulfonic acid dropwise to 3 g 4-fluoro-2,1,3-benzoxadiazole in 10 mL chloroform at 0-10° (use a calcium chloride drying tube), stir at room temperature for 1 h, reflux for 2 h, cool, slowly pour into ice water, remove the organic layer, extract the aqueous layer with chloroform, combine the organic layer, wash, dry over anhydrous magnesium sulfate, evaporate under reduced pressure, take up the residue in 5 mL benzene (Caution! Benzene is a carcinogen!), chromatograph on a 150 × 30 column of silica gel (100-200 mesh Kanto Chemical) with n-hexane:benzene 50:50, evaporate the appropriate fractions to give 4-(chlorosulfonyl)-7-fluoro-2,1,3-benzoxadiazole (CBD-F) as pale yellow needles (mp 64-66°) (Anal. Chem. 1984. 56, 2461). Stir 0.76 g CBD-F in 70 mL MeCN at 0-10° and add 1 g dimethylamine hydrochloride in 10 mL 100 mM pH 10 borax dropwise, adjust pH to 5 with 1 M HCl, concentrate to about 10 mL under reduced pressure, extract three times with 200 mL portions of diethyl ether, wash with water, dry over anhydrous magnesium sulfate, evaporate under reduced pressure, chromatograph on a 500 × 20 column of silica gel with chloroform, isolate the appropriate fraction and re-chromatograph on the same column with ethyl acetate:benzene 1:2 to give 4-(N,N-dimethylaminosulfonyl)-7-fluoro-2,1,3-benzoxadiazole (DBD-F) as white needles (mp 124-125°) (yield = 1% !). On a Merck no. 5714 $60F_{254}$ tlc plate eluted with chloroform DBD-F has Rf 0.32 and lies between two other reaction products (Analyst 1989, 114, 413).)

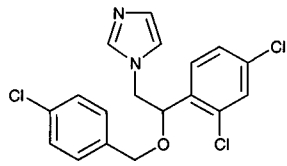
HPLC VARIABLES
Column: 150 × 4.6 5C18 protein and peptide (Vydac)
Mobile phase: MeCN:50 mM Na_2HPO_4 40:60 adjusted to pH 7.0 with 20% phosphoric acid
Flow rate: 1
Injection volume: 10
Detector: F ex 440 em 580 or UV 220

CHROMATOGRAM
Retention time: 10
Limit of detection: 0.25 pmole (F)

KEY WORDS
derivatization

REFERENCE
Hamachi,Y.; Tsujiyama,T.; Nakashima,K.; Akiyama,S. High-performance liquid chromatography with fluorescence detection of ebiratide using 4-(N,N-dimethylamino-sulphonyl)-7-fluoro-2,1,3-benzoxadiazole as a fluorgenic reagent, *Biomed.Chromatogr.*, **1995**, *9*, 216–220.

Econazole



Molecular formula: $C_{18}H_{15}Cl_3N_2O$
Molecular weight: 381.69
CAS Registry No.: 27220-47-9, 68797-31-9 (nitrate)
Merck Index: 3550
Lednicer No.: 2 249

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM
Retention time: 20.137

KEY WORDS
whole blood

SAMPLE
Matrix: formulations
Sample preparation: Powders. Extract a sample equivalent to about 10 mg econazole twice with 20 mL portions of MeOH with magnetic stirring, filter extracts, combine, dilute to 50 mL with MeOH. Remove a 2.5 mL aliquot and add it to 2 mL 200 μg/mL miconazole in MeOH, dilute to 10 mL with MeOH, inject a 10 μL aliquot. Creams. Condition a Baker diol SPE cartridge with 6 mL dichloromethane. Add a sample equivalent to 10 mg econazole to 30 mL dichloromethane, sonicate for 2 min, make up to 50 mL with dichloromethane, filter, add 2 mL of the filtrate to the SPE cartridge. Wash with two 3 mL portions of n-hexane:dichloromethane 4:1, aspirate to dryness, elute with three 1 mL portions of MeOH:100 mM triethylamine adjusted to pH 7.0 with acetic acid 4:1. Combine the eluates and dilute them to 5 mL with MeOH.

Remove a 2.5 mL aliquot and add it to 1 mL 200 μg/mL miconazole in MeOH, dilute to 5 mL with MeOH, inject a 10 μL aliquot.

HPLC VARIABLES
Column: 150 × 3.9 5 μm Nova-Pak RP-18
Mobile phase: MeOH:THF:100 mM triethylamine adjusted to pH 7.0 with acetic acid 70:12:18
Flow rate: 0.8
Injection volume: 10
Detector: UV 230

CHROMATOGRAM
Retention time: 2.5
Internal standard: miconazole (3.5)

KEY WORDS
creams; powders; SPE

SAMPLE
Matrix: formulations
Sample preparation: Tablets. Powder tablets, weigh out amount equivalent to about 30 mg, add 100 mL MeOH, sonicate for 5 min, filter. Add a 2 mL aliquot of filtrate to 5 mL of 100 μg/mL ketoconazole in MeOH, make up to 25 mL with MeOH, inject 20 μL aliquot. Cream. Condition a 500 mg Bond-Elut diol cartridge with 6 mL dichloromethane. Weigh out cream equivalent to about 5 mg of drug, add 30 mL dichloromethane, sonicate for 3 min, make up to 100 mL with dichloromethane, filter. Add a 2 mL aliquot to the cartridge, wash with 2 mL dichloromethane:methanol 4:1, wash with 2 mL dichloromethane, elute with 3 mL MeOH:buffer 85:15. Add eluate to 0.5 mL 100 μg/mL ketoconazole in MeOH, make up to 5 mL with MeOH, inject 20 μL aliquot. (Buffer was 50 mM triethylamine adjusted to pH 7.0 with phosphoric acid.)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Spherisorb CN
Mobile phase: THF:buffer 30:70 (Buffer was 50 mM triethylamine adjusted to pH 3.0 with phosphoric acid.)
Flow rate: 1
Injection volume: 20
Detector: UV 230

CHROMATOGRAM
Retention time: 14
Internal standard: ketoconazole (7)

OTHER SUBSTANCES
Simultaneous: clotrimazole, ketoconazole, bifonazole, tioconazole, isoconazole, miconazole, fenticonazole

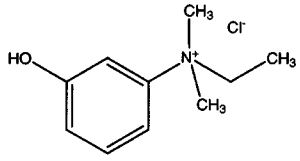
Edrophonium chloride



Molecular formula: $C_{10}H_{16}ClNO$
Molecular weight: 201.70
CAS Registry No.: 116-38-1
Merck Index: 3562

SAMPLE

Matrix: blood
Sample preparation: 1 mL Serum + 100 μL 500 ng/mL neostigmine in water + 500 μL 100 mM picric acid in 100 mM NaOH (pH adjusted to 7) + 400 μL 100 mM NaH_2PO_4 + 12 mL water saturated dichloromethane, shake vigorously for 5 min, centrifuge at 2000 g for 10 min. Remove 10 mL of the organic phase and add it to 200 μL 1 mM tetrabutylammonium hydrogen sulfate, shake vigorously for 30 s, centrifuge at 2000 g for 2 min, discard most of the organic layer, centrifuge at 2000 g for 1 min, inject a 50 μL aliquot of the aqueous layer. (Store glassware in 100 mM tetramethylammonium chloride solution and wash 5 times with water before use.)

HPLC VARIABLES

Guard column: 50 × 3.2 30-40 μm Perisorb RP-2 (Merck)
Column: 150 × 4.6 5 μm Ultrasphere octyl
Mobile phase: MeCN:water 20:80 containing 10 mM sodium heptanesulfonate, 10 mM NaH_2PO_4, and 2.5 mM tetramethylammonium chloride, pH adjusted to 3 with concentrated sulfuric acid
Flow rate: 2
Injection volume: 50
Detector: UV 214

CHROMATOGRAM

Retention time: 3.5
Internal standard: neostigmine (5)
Limit of quantitation: 5 ng/mL

SAMPLE
Matrix: water
Sample preparation: Filter (0.2 μm cellulose nitrate) river water, pass the filtrate through a 10 × 5 column filled with SPE 7090 sulfonic acid material (Baker), collect 2-6 mL, evaporate to dryness in an oven at 90°, add 1 mL buffer, add 20 μL iron solution, heat at 90° for 3 h,

cool, add 40 μL 50 mM tetrabutylammonium bromide in buffer, inject a 200 μL aliquot. (Buffer was 15 mM formic acid containing 5 mM sodium formate and 1 mM tetrabutylammonium bromide. The iron solution was 1 mM ferric nitrate in 10 mM nitric acid.)

HPLC VARIABLES
Guard column: 4 × 4 Lichrocart (Merck)
Column: 250 × 4 Lichrocart RP-18 (Merck)
Mobile phase: MeCN:buffer 8:92 (Buffer was 15 mM formic acid containing 5 mM sodium formate, pH 3.3.)
Flow rate: 1
Injection volume: 200
Detector: UV 258

CHROMATOGRAM
Retention time: 7.6
Limit of detection: 3 nM

KEY WORDS
protect from light; river water; derivatization; complexation; SPE

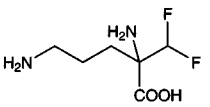
Eflornithine



Molecular formula: $C_6H_{12}F_2N_2O_2$
Molecular weight: 182.17
CAS Registry No.: 67037-37-0, 68278-23-9 (HCl), 96020-91-6 (HCl monohydrate)
Merck Index: 3564
Lednicer No.: 4 2

SAMPLE
Matrix: blood
Sample preparation: 100 μL Plasma + 20 μL 250 μg/mL 4-amino-3-hydroxybutyric acid in water + 400 μL MeOH, centrifuge at 800 g for 20 min. Remove the supernatant and add it to 200 μL 20 mM pH 7.5 phosphate buffer, mix an aliquot of this mixture with an equal volume of reagent, inject. (Reagent was 10 mg o-phthalaldehyde in 1 mL EtOH, add 100 μL 2-mercaptoethanol, add 10 mL 100 mM pH 7.5 phosphate buffer, store in the dark, freshly prepare every 3 days.)

HPLC VARIABLES
Guard column: 37-50 μm Bondapak C18/corasil
Column: 5 μm C18 Radial-Pak (Waters)
Mobile phase: Gradient. A was MeOH:isopropanol:100 mM pH 7.5 phosphate buffer 5:3:92. B was MeOH:MeCN:isopropanol:water 80:5:5:10. A:B 80:20 for 3 min, to 50:50 over 3 min, maintain at 50:50 for 5 min, re-equilibrate at initial conditions for 7 min.
Flow rate: 0.2 for 1 min then 1.5
Detector: F ex 335 em 418

CHROMATOGRAM
Retention time: 19
Internal standard: 4-amino-3-hydroxybutyric acid (13)
Limit of detection: 250 ng/mL
Limit of quantitation: 500 ng/mL

KEY WORDS
plasma; derivatization

SAMPLE
Matrix: blood
Sample preparation: 1 mL Serum + 100 μL 1 mg/mL norvaline in water + 2 mL ice-cold 80% EtOH, vortex for 30 s, centrifuge at 3000 rpm for 5 min, remove the supernatant, extract the residue twice more with 2 mL portions of ice-cold 80% EtOH. Combine the supernatants and dry them under vacuum at 50°, dissolve in 2 mL water and 2 mL buffer. 100 μL Mixture + 100 μL 6 mg/mL dansyl chloride in acetone, let stand at room temperature in the dark for 4 h, add 800 μL water adjusted to pH 8.5 with NaOH, vortex for 15 s, centrifuge at 3000 rpm, inject a 25-50 μL aliquot. (Buffer was 500 mM sodium bicarbonate adjusted to pH 8.5 with 1 M NaOH.)

HPLC VARIABLES
Guard column: 15 × 4.6 5 μm C8 (Rainin)
Column: 150 × 4.6 5 μm C8 (Rainin)
Mobile phase: Gradient. A was THF:10 mM sodium acetate adjusted to pH 4.18 with 1 M acetic acid 5:95. B was MeCN:THF 90:10. A:B from 100:0 to 63.3:36.7 over 19 min, to 0:100 over 2 min, re-equilibrate at 100:0 for 7 min.
Flow rate: 1.5 for 21 min, 2.0 for 2 min, 1.75 for 3 min, 1.5 for 2 min
Injection volume: 25-50
Detector: UV 330

CHROMATOGRAM
Retention time: 14.73
Internal standard: norvaline (17.66)
Limit of detection: 10000 ng/mL

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 150 × 4.6 5 μm Ultrasphere ion pair
Mobile phase: Buffer prepared from 0.92 g L-proline and 1 g $CuSO_4.5H_2O$ in 1 L water, pH adjusted to 5.5 with 1 mL 5 M NaOH.
Column temperature: 30
Flow rate: 0.5
Detector: F ex 340 em 455 following post-column derivatization. The column effluent and the reagent pumped at 0.35 mL/min were mixed and allowed to flow through a 3 m × 0.3 mm i.d. PTFE reaction coil at 50° to the detector. (Reagent was 800 mg o-phthalaldehyde in 10 mL EtOH + 500 mM pH 10.5 potassium borate buffer, filter (0.45 μm), add 3 mL Brij 35, add 2.5 mL 2-mercaptoethanol, store in the dark.)

CHROMATOGRAM
Retention time: 6.4 (+), 13.9 (-)

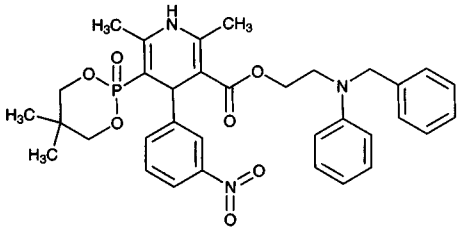
Efonidipine



Molecular formula: $C_{34}H_{38}N_3O_7P$
Molecular weight: 631.67
CAS Registry No.: 111011-76-8 (HCl ethanol)
Merck Index: 3566

SAMPLE

Matrix: blood
Sample preparation: 1 mL Plasma + 100 μL 100 ng/mL IS in MeOH + 40 μL 10 mM diethylamine, extract twice with 5 mL portions of ether. Combine the organic layers and evaporate them to dryness under a stream of nitrogen, reconstitute the residue in 100 μL mobile phase, inject a 70 μL aliquot.

HPLC VARIABLES

Column: 50 × 4.6 2.5 μm Inertsil ODS
Mobile phase: MeCN:50 mM ammonium acetate 55:45
Column temperature: 40
Flow rate: 1
Injection volume: 70
Detector: MS, Hewlett-Packard 1090L and 5988A, ion source 276°, probe stem 95-106°, probe tip 165-175°, m/z 631

CHROMATOGRAM

Retention time: 4.4
Internal standard: heptadeutero-efonidipine (m/z 638)
Limit of detection: 0.5 ng/mL

KEY WORDS

plasma; pharmacokinetics

SAMPLE

Matrix: urine
Sample preparation: Condition a 1 mL 100 mg Bond Elut C18 SPE cartridge with 2 mL MeCN and 2 mL water. 5 mL Urine + 10 μL 5 μg/mL IS in MeOH, mix, add to the SPE cartridge, wash with 3 mL water, wash with 2 mL MeCN:water 30:70, wash with 1 mL MeCN:water 45:55, elute with 2 mL MeCN:water 70:30. Add 500 μL 1 M NaOH and 5 mL diethyl ether to the eluate, shake, centrifuge. Remove the organic layer and evaporate it to dryness, reconstitute the residue in 50 μL n-hexane:EtOH 2:1, inject a 15 μL aliquot.

HPLC VARIABLES

Guard column: 4 × 4 LiChrospher Si60
Column: 250 × 4.6 Nucleosil 50-5
Mobile phase: n-Hexane:MeOH:chloroform 120:15:5
Column temperature: 40
Flow rate: 1
Injection volume: 15
Detector: UV 254

CHROMATOGRAM

Retention time: 11.5
Internal standard: (±)-2-[benzyl(phenyl)amino]ethyl 1,4-dihydro-2,6-dimethyl-4-(3-nitrophenyl)-5-(4,4,6,6-tetramethyl-2-oxo-1,3,2-dioxaphosphorinan-2-yl)-3-pyridinecarboxylate hydrochloride (P00-851743) (10)

Limit of detection: 1 ng/mL

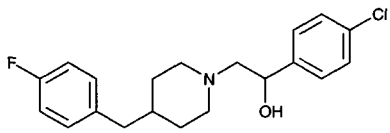
Eliprodil



Molecular formula: $C_{20}H_{23}ClFNO$
Molecular weight: 347.86
CAS Registry No.: 119431-25-3, 136634-88-3 (HCl)

SAMPLE
Matrix: blood, urine
Sample preparation: Plasma. 200 µL Plasma + 200 µL pH 6.5 buffer + 20 µL 200 U/mL β-glucuronidase (from E. coli, Sanofi-Pasteur), mix, heat at 37° for 24 h, make up to 1 mL with water, add 20 µL 1.25 µg/mL IS, add 1 mL pH 12 buffer, vortex, add 6 mL n-hexane, shake at 40 rpm for 10 min, centrifuge at 15° at 900 g for 5 min, centrifuge at -20° at 900 g for 8 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 70°, add 200 µL 0.1% (S)-(+)-1-(1-naphthyl)ethyl isocyanate in MeCN under a stream of nitrogen, vortex for 30 s, heat at 70° for 40 min, evaporate to dryness under a stream of nitrogen, add 250 µL MeCN:pH 4.5 buffer 40:60, vortex, inject a 150 µL aliquot on to column A and elute to waste with mobile phase A, after 5 min elute the contents of column A on to column B with mobile phase B, after 2.5 min remove column A from the circuit, elute column B with mobile phase B, monitor the effluent from column B. (Backflush column A with MeCN:water 70:30, MeCN, MeOH, and THF, then re-equilibrate with MeCN:water 50:50 at 2 mL/min.) Urine. 100 µL Urine + 100 µL pH 6.5 buffer + 50 µL 200 U/mL β-glucuronidase (from E. coli, Sanofi-Pasteur), mix, heat at 37° for 24 h, make up to 1 mL with water, add 20 µL 20 µg/mL IS, add 1 mL pH 12 buffer, vortex, add 6 mL n-hexane, shake at 40 rpm for 10 min, centrifuge at 15° at 900 g for 5 min, centrifuge at -20° at 900 g for 8 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 70°, add 200 µL 0.1% (S)-(+)-1-(1-naphthyl)ethyl isocyanate in MeCN under a stream of nitrogen, vortex for 30 s, heat at 70° for 40 min, evaporate to dryness under a stream of nitrogen, add 250 µL MeCN:pH 4.5 buffer 40:60, vortex, inject a 50 µL aliquot on to column A and elute to waste with mobile phase A, after 5 min elute the contents of column A on to column B with mobile phase B, after 2.5 min remove column A from the circuit, elute column B with mobile phase B, monitor the effluent from column B. (Backflush column A with MeCN:water 70:30, MeCN, MeOH, and THF, then re-equilibrate with MeCN:water 50:50 at 2 mL/min.) (Prepare pH 6.5 buffer by adding 20 mL 136.08 mg/mL KH_2PO_4 to 780 mL water, adjusting pH to 6.5 with 1 M KOH, and making up to 1 L with water. Prepare pH 12 buffer by dissolving 26.5 g sodium carbonate and 21 g sodium bicarbonate in 800 mL water, adjust pH to 12 with about 30 mL 30% NaOH, make up to 1 L with water. Prepare pH 4.5 buffer by dissolving 6.8 g KH_2PO_4 in 1 L water.)

HPLC VARIABLES
Column: A 20 × 4.6 5 µm Supelguard LC8; B 20 × 4.6 40 µm Pelliguard LC8 (Supelco) + 150 × 4.6 5 µm Hypersil C8 BDS
Mobile phase: A MeCN:water 50:50; B MeCN:MeOH:buffer 56:2:42 (Prepare buffer by dissolving 6.8 g KH_2PO_4 and 3.4 mL orthophosphoric acid in 4 L water, pH 2.6.)
Flow rate: A 2; B 1.2
Injection volume: 50-150
Detector: F ex 275 em 336

CHROMATOGRAM
Retention time: 16 (S-(+)), 17 (R-(-))
Internal standard: (+)-α-(3,4-dichlorophenyl)-4[(4-fluorophenyl)methyl]piperidine-1-ethanol hydrochloride (SL83.0601-10, Synthélabo Recherche, Bagneux, France) (19, 21)

Limit of quantitation: 0.75 ng/mL (plasma), 50 ng/mL (urine)

SAMPLE
Matrix: blood
Sample preparation: 2 mL Serum or plasma + 100 μL 10 μg/mL trimethobenzamide in MeOH + 1 mL buffer + 10 mL n-butyl chloride:isopropanol 95:5, shake for 10 min, centrifuge at 500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of air at 40°, reconstitute the residue in 200 μL chloroform and 200 μL 25 mM HCl, vortex for 10 s, centrifuge at 500 g for 3-5 min, inject a 50-60 μL aliquot of the upper aqueous layer. (Buffer was 630 mL of a solution containing 1 M boric acid and 1 M KCl + 370 mL 1 M sodium carbonate, adjust pH to 9.0.)

HPLC VARIABLES
Column: 250 × 4.6 5 μm cyanopropyldimethylsilyl (PCN) (Supelco)
Mobile phase: MeCN:0.06% phosphoric acid 15:85 containing 0.01% octylamine
Flow rate: 2 (After analysis wash out system with MeCN:water 20:80.)
Injection volume: 50-60
Detector: UV 254

CHROMATOGRAM
Retention time: 7
Internal standard: trimethobenzamide (5.5)
Limit of detection: 10 ng/mL

OTHER SUBSTANCES
Extracted: metabolites
Simultaneous: dipyridamole, oxazepam
Noninterfering: amiodarone, caffeine, chloral hydrate, chlordiazepoxide, diazepam, ethosuximide, flecainide, lidocaine, methadone, mexiletine, nicotine, phenobarbital, phenytoin, primidone, procainamide, propranolol, quinidine, tocainide, tricyclic antidepressants

KEY WORDS
plasma; serum

SAMPLE

Matrix: blood

Sample preparation: 1 mL Plasma + 100 μL 5 μg/mL 4-methylpropranolol in water + 500 μL buffer + 5 mL dichloromethane:diethyl ether 70:30, shake vigorously for 5 min, centrifuge at 2000 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 45°, reconstitute the residue in 200 μL mobile phase, inject a 100 μL aliquot. (Buffer was pH 10.5 prepared from 200 mM sodium carbonate and 200 mM sodium bicarbonate.)

HPLC VARIABLES

Guard column: 10 mm long 5 μm Resolve (Waters)
Column: 150 × 4.6 5 μm Resolve (Waters)
Mobile phase: MeOH:water:methanesulfonic acid:triethylamine 400:4:0.02:0.02
Flow rate: 1
Injection volume: 100
Detector: UV 270

CHROMATOGRAM

Retention time: 7.0
Internal standard: 4-methylpropranolol (3.6)
Limit of quantitation: 5 ng/mL

OTHER SUBSTANCES

Extracted: metabolites
Simultaneous: amiodarone, propranolol, sotalol
Noninterfering: acebutolol, caffeine, disopyramide, hydroquinidine, nadoxolol, quinidine, theobromine, theophylline

KEY WORDS

plasma

SAMPLE

Matrix: blood

Sample preparation: Automated SPE by ASPEC system. Condition a C18 Clean-Up SPE cartridge (CEC 18111, Worldwide Monitoring) with 2 mL MeOH then 2 mL water. 1 mL Plasma + 1 mL 400 ng/mL protriptyline in water, vortex, add to column, wash with 3 mL water, wash with 3 mL 750 mL/L methanol. Elute with three aliquots of 300 μL 0.1 M ammonium acetate in MeOH. Add 0.5 mL 0.5 M NaOH and 4 mL 50 mL/L isopropanol in heptane to eluate, mix thoroughly. Allow 5 min for phase separation. Remove upper heptane phase and add it to 300 μL 0.1 M phosphoric acid (pH 2.5), mix, separate, inject a 100 μL aliquot of the aqueous phase.

HPLC VARIABLES

Guard column: LC-8-DB (Supelco)
Column: 150 × 4.6 LC-8-DB (Supelco)
Mobile phase: MeCN:buffer 35:65 (Buffer was 10 mL/L triethylamine in water adjusted to pH 5.5 with glacial acetic acid.)
Flow rate: 2
Injection volume: 100
Detector: UV 228

CHROMATOGRAM

Retention time: 1.7
Internal standard: protriptyline (4)

OTHER SUBSTANCES

Extracted: acetazolamide, amitriptyline, chlordiazepoxide, chlorimipramine, chlorpromazine, desipramine, dextromethorphan, diazepam, diphenhydramine, doxepin, fentanyl, flecainide, fluoxetine, flurazepam, haloperidol, hydroxyethylflurazepam, ibuprofen, imipramine, maprotiline, methadone, methaqualone, midazolam, norchlorimipramine, nordiazepam, nordoxepin, norfluoxetine, nortriptyline, norverapamil, promazine, propafenone, propoxyphene, propranolol, protriptyline, temazepam, trazodone, trimipramine, verapamil

Noninterfering: acetaminophen, acetylmorphine, amiodarone, amobarbital, amphetamine, bendroflumethiazide, benzocaine, benzoylecgonine, benzthiazide, butalbital, carbamazepine, chlorothiazide, clonazepam, cocaine, codeine, cotinine, cyclosporine, cyclothiazide, desalkylflurazepam, diamorphine, dicumerol, ephedrine, ethacrynic acid, ethanol, ethchlorvynol, ethosuximide, furosemide, glutethimide, hydrochlorothiazide, hydrocodone, hydroflumethiazide, hydromorphone, lorazepam, mephentermine, meprobamate, methamphetamine, metharbital, methoxsalen, methoxyphenteramine, methsuximide, methylcyclothiazide, metoprolol, MHPG, monoacetylmorphine, morphine, normethsuximide, oxazepam, oxycodone, oxymorphone, pentobarbital, phencyclidine, phenteramine, phenylephrine, phenytoin, polythiazide, primidone, prochlorperazine, salicylic acid, sulfanilamide, THC-COOH, theophylline, thiazolam, thiopental, thioridazine, tocainide, trichloromethiazide, trifluoperazine, valproic acid, warfarin

Interfering: lidocaine, mexiletine, pentazocine, quinidine

KEY WORDS

plasma; SPE

SAMPLE

Matrix: blood, urine

Sample preparation: 1 mL Plasma or urine + 200 μL 1 (plasma) or 50 (urine) μL/mL ethaverine hydrochloride in water + 100 (plasma) or 500 (urine) μL 500 mM pH 8.5 TRIS-HCl buffer + 2 g NaCl + 5 mL butyl chloride:isopropanol 95:5, vortex for 15 s, centrifuge at 3000 g for 10 min, repeat the extraction. Combine the organic layers and evaporate them to dryness in a vortex-evaporator at 45°, reconstitute the residue in 50 μL mobile phase, inject an aliquot.

HPLC VARIABLES

Column: 250 × 4.6 5 μm Zorbax Sil

Mobile phase: EtOH:water:methanesulfonic acid 500:25:0.5 (plasma) or 500:10:0.25 (urine)

Flow rate: 1.2

Detector: UV 270

CHROMATOGRAM

Retention time: 11.6 (plasma), 13.4 (urine)

Internal standard: ethaverine (6.9 (plasma), 7.6 (urine))

Limit of detection: 1 ng (plasma)

Limit of quantitation: 2.5 ng (plasma)

OTHER SUBSTANCES

Extracted: metabolites

Simultaneous: quinidine

Noninterfering: acetaminophen, alprazolam, aspirin, cephalexin, chloral hydrate, diazepam, digoxin, dipyridamole, docusate, flurazepam, furosemide, hydrochlorothiazide, ibuprofen, isosorbide dinitrate, lidocaine, lorazepam, meclizine, mexiletine, nifedipine, norfloxacin, oxazepam, ranitidine, tocainide, triamterene, triazolam

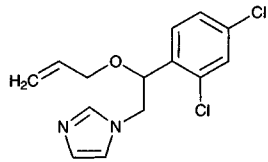
Enilconazole



Molecular formula: $C_{14}H_{14}Cl_2N_2O$
Molecular weight: 297.18
CAS Registry No.: 35554-44-0
Merck Index: 3622

SAMPLE
Matrix: food
Sample preparation: Condition a 3 mL 500 mg Sep-Pak Vac Silica SPE cartridge with 10 mL MeOH and 10 mL ethyl acetate. Condition a 3 mL 300 mg Bond Elut PRS cartridge with 10 mL water and 10 mL MeOH. Place the Sep Pak Vac Silica cartridge on top of the Bond Elut PRS cartridge. Citrus fruit. Slice and homogenize citrus fruit with a mixer. 5 g Aliquot of sample + 20 g anhydrous sodium sulfate + 1.5 g anhydrous sodium hydrogen phosphate + 30 mL ethyl acetate, blend at high-speed, centrifuge at 3100 rpm for 8 min, remove the supernatant. Re-extract with 20 mL ethyl acetate, combine the supernatants. Add the crude extract to the double SPE cartridge, allow to pass at ca. 1 mL/min, wash with 5 mL ethyl acetate, remove the Sep-Pak Vac Silica cartridge. Wash the second SPE cartridge with 10 mL MeOH and 10 mL 100 mM NaCl, elute with 10 mL mobile phase, inject a 20 μL aliquot. Banana. 10 g Homogenized sample + 40 g anhydrous sodium sulfate + 50 mL ethyl acetate, extract as described above. Re-extract with 30 mL ethyl acetate, combine the supernatants. Add the crude extract to the double SPE cartridge, allow to pass at ca. 1 mL/min, wash with 5 mL ethyl acetate, remove the Sep-Pak Vac Silica cartridge. Wash the second SPE cartridge with 10 mL MeOH and 10 mL 100 mM NaCl, elute with 10 mL mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 5 μm TSKgel ODS-80Ts (TOSOH, Japan)
Mobile phase: MeCN:MeOH:water 40:30:30 containing 10 mM sodium 1-tridecanesulfonate, adjusted to pH 2.5 with phosphoric acid
Flow rate: 1
Injection volume: 20
Detector: UV 225

CHROMATOGRAM
Retention time: 17
Limit of detection: 100 ng/g (citrus fruit), 50 ng/g (banana)

OTHER SUBSTANCES
Extracted: thiabendazole

SAMPLE
Matrix: blood, saliva
Sample preparation: 500 μL Plasma or saliva + 50 μL 50 ng/mL difloxacin, vortex briefly, add 500 μL 100 mM pH 7.4 phosphate buffer, add 4 mL dichloromethane, add 1 mL isopropanol, vortex for 30 s, shake gently for 30 min, centrifuge at 1500 g for 20 min. Remove the lower organic layer and evaporate it to dryness under a stream of nitrogen at 45°, reconstitute the residue in 500 μL mobile phase, inject a 50-200 μL aliquot.

HPLC VARIABLES
Guard column: μBondapak C18 Guard-Pak
Column: 300 × 3.9 10 μm μBondapak C18
Mobile phase: MeOH:buffer 35:100 (Buffer was 5.44 g KH_2PO_4 and 4 mL tetrabutylammonium hydroxide in 1 L water, adjust pH to 2.5 with 85% phosphoric acid.)
Flow rate: 2
Injection volume: 50-200
Detector: UV 268

CHROMATOGRAM
Retention time: 5.2
Internal standard: difloxacin (8.8)
Limit of detection: 50 ng/mL

OTHER SUBSTANCES
Extracted: ciprofloxacin, theophylline
Simultaneous: 1,7-dimethylxanthine
Noninterfering: 1,3-dimethyluric acid, hypoxanthine, 1-methyluric acid, 1-methylxanthine, 3-methylxanthine, 7-methylxanthine, theobromine
Interfering: caffeine

KEY WORDS
plasma; pharmacokinetics

REFERENCE
Zhai,S.; Korrapati,M.R.; Wei,X.; Muppalla,S.; Vestal,R.E. Simultaneous determination of theophylline, enoxacin and ciprofloxacin in human plasma and saliva by high-performance liquid chromatography, *J.Chromatogr.B*, **1995**, *669*, 372–376.

SAMPLE
Matrix: blood, tissue
Sample preparation: Plasma. Mix 100 μL plasma with 900 μL 100 mM phosphate buffer, 100 μL 10 μg/mL IS and 5 mL chloroform:ethyl chloroformate 99:1, shake for 10 min, centrifuge at 1620 g for 5 min, evaporate the organic phase under reduced pressure, dissolve the residue in 100 μL MeOH:50 mM NaOH 2:1, inject a 20 μL aliquot. Tissue. Homogenate the cerebrum sample with 4 volumes of 100 mM phosphate buffer. Mix 1 mL homogenate with 100 μL 10 μg/mL IS and 5 mL dichloromethane, shake for 10 min, centrifuge at 1620 g for 5 min. Mix 4 mL 1 mM NaOH with 4 mL organic phase, shake for 10 min, centrifuge it at 1620 g for 5 min, collect 3 mL aqueous phase and treat in a manner similar to that for the plasma samples, except for the IS addition. Inject a 20 μL aliquot. (Caution! Chloroform is a carcinogen!)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Nucleosil 5 C 18
Mobile phase: MeOH:5 mM sodium dodecylsulfate adjusted to pH 2.5 with phosphoric acid
Flow rate: 0.8
Injection volume: 20
Detector: UV 280

CHROMATOGRAM
Internal standard: ciprofloxacin

OTHER SUBSTANCES
Extracted: foscarnet

KEY WORDS
plasma; brain; mouse; pharmacokinetics; derivatization

SAMPLE

Matrix: blood, tissue

Sample preparation: Blood. Briefly vortex 500 μL plasma, 20 μL 8 μg/mL pefloxacin, and 500 μL pH 7.4 phosphate buffer, add 5 mL dichloromethane:isopropanol 80:20, vortex for 30 s, shake gently for 15 min on an electric shaker, centrifuge at 1500 g for 10 min. Separate the lower layer using phase-separating filter paper (Whatman 1 PS), evaporate the organic phase under nitrogen at 25°, dissolve the residue in 100 μL mobile phase, inject a 20μL aliquot. Tissue. Pulverize prostatic tissue under liquid nitrogen, weigh a 200 mg aliquot, add 20 μL pefloxacin, vortex briefly, incubate at 4° for 2 h, add 500 μL pH 7.4 phosphate buffer and 5 mL dichloromethane:isopropanol 80:20, vortex for 30 s, shake gently for 15 min on an electric shaker, centrifuge at 1500 g for 10 min. Separate the lower layer using phase-separating filter paper (Whatman 1 PS), evaporate the organic phase under nitrogen at 25°, dissolve the residue in 100 μL mobile phase, inject a 20μL aliquot. (The pH 7.4 phosphate buffer was 28.2 g K_2HPO_4 and 5.17 g KH_2PO_4 in 1 L water.)

HPLC VARIABLES

Guard column: 4 × 4 5 μm LiChrospher 100 RP-18

Column: 250 × 4 5 μm Nucleosil C18

Mobile phase: MeCN:pH 2.1 buffer 20.9:79.1 (Prepare the mobile phase by dissolving 18.1 g citric acid and 4.1 g ammonium perchlorate in about 300 mL distilled water, add 209 mL MeCN, dilute to 1 L with water, and add 3 mL tetrabutylammonium hydroxide. Filter through a 0.45 μm HV Millipore filter.)

Flow rate: 0.9

Injection volume: 20

Detector: UV 340

CHROMATOGRAM

Retention time: 5.2

Internal standard: pefloxacin (6.8)

Limit of detection: 10 ng/mL (plasma), 25 ng/mL (tissue)

Limit of quantitation: 20 ng/mL (plasma), 50 ng/mL (tissue)

OTHER SUBSTANCES

Extracted: 4-oxo-enoxacin

Noninterfering: amikacin, ciprofloxacin, fosfomycin, ofloxacin, rifampicin, roxithromycin, tobramycin, vancomycin

KEY WORDS

pharmacokinetics; plasma; prostatic tissue; prostate

SAMPLE

Matrix: blood, urine

Sample preparation: Plasma. Condition a Sep-Pak C18 SPE cartridge with 1 mL 4% phosphoric acid in MeOH and 10 mL water. Add 1 mL plasma to the SPE cartridge, wash with 6 mL water, elute with 1 mL 4% phosphoric acid in MeOH, wash out with 1 mL water. Combine the eluates and make up to 2 mL with water, inject a 50 μL aliquot. Urine. 100 μL urine + 900 μL mobile phase, inject a 10 μL aliquot.

HPLC VARIABLES

Guard column: μBondapak C18/Corasil

Column: 300 × 3.9 μBondapak C18

Mobile phase: MeCN:MeOH:water 5:30:70 containing 1.74 g K_2HPO_4 and 20 mg sodium heptanesulfonate, pH adjusted to 3 with phosphoric acid

Flow rate: 2

Injection volume: 10-50

Detector: F ex 285 em 440

OTHER SUBSTANCES
Extracted: norfloxacin

KEY WORDS
plasma; SPE; this procedure can be used for enoxacin (see Infection 1986; 14 (Suppl. 3); S203)

REFERENCE

SAMPLE
Matrix: blood, urine
Sample preparation: Plasma. 500 µL Plasma + 50 µL 20 µg/mL difloxacin + 200 µL MeCN: 60% perchloric acid 80:20, vortex, centrifuge for 5 min, inject a 75 µL aliquot of the supernatant. Urine. 200 µL Urine + 500 µL water + 200 µL 200 µg/mL difloxacin + 200 µL pH 7.4 phosphate buffer. Pass through an Analytichem C18 SPE cartridge, inject a 10 µL aliquot of the eluate.

HPLC VARIABLES
Column: 100 × 4.6 5 µm RAC II Partisil ODS 3
Mobile phase: MeCN:buffer 15:85 (Buffer was 100 mM citrate containing 650 µL/L 20% tetrabutylammonium hydroxide and 450 mg/L ammonium perchlorate.)
Flow rate: 1
Injection volume: 10-75
Detector: UV 340

CHROMATOGRAM
Internal standard: difloxacin
Limit of quantitation: 833 ng/mL (urine), 25 ng/mL (plasma)

OTHER SUBSTANCES
Extracted: metabolites

KEY WORDS
plasma; SPE; pharmacokinetics

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 µL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) µL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 µm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85: 15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)

Injection volume: 10-30
Detector: UV 268.9

CHROMATOGRAM
Retention time: 7.672

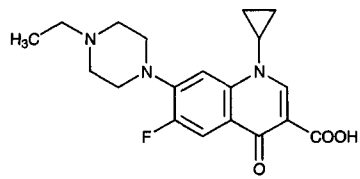
Enrofloxacin



Molecular formula: $C_{19}H_{22}FN_3O_3$
Molecular weight: 359.40
CAS Registry No.: 93106-60-6
Merck Index: 3630
Lednicer No.: 5 125

SAMPLE
Matrix: blood

Sample preparation: Add 20 μL 10 μg/mL IS in MeOH:0.1% trifluoroacetic acid 15:85 and 5 μL (sic) MeCN to 300 μL plasma. Centrifuge at 600 g for 10 min. Evaporate the supernatant under nitrogen at 40° for 30 min. Reconstitute the residue in 200 μL MeOH:0.1% trifluoroacetic acid 15:85. Inject a 50 μL aliquot.

HPLC VARIABLES
Guard column: 12.5 × 4 Zorbax RX-C18
Column: 150 × 4.6 5 μm Zorbax SB-C8
Mobile phase: MeCN:water:trifluoroacetic acid 19:81:0.02
Column temperature: 40
Flow rate: 1
Injection volume: 50
Detector: UV 279

CHROMATOGRAM
Retention time: 5.6-5.8
Internal standard: norfloxacin (3.8-3.9)
Limit of quantitation: 50 ng/mL

OTHER SUBSTANCES
Extracted: ciprofloxacin

KEY WORDS
cat; plasma

SAMPLE
Matrix: blood, tissue
Sample preparation: Serum. 500 μL Serum + 500 μL MeCN:100 mM NaOH 50:50, vortex for 10-15 s, filter (Amicon Centricon-10, 10000 Daltons) while centrifuging at 2677 g for 30 min, inject a 30-120 μL aliquot of the ultrafiltrate. Tissue. Cut up prostate tissue with a scalpel. Weigh out 100-130 mg tissue, make up to 500 μL with MeCN:100 mM NaOH 50:50, sonicate for 30 min, filter (Amicon Centricon-10, 10000 Daltons) while centrifuging at 2677 g for 30 min, inject a 80-120 μL aliquot of the ultrafiltrate.

HPLC VARIABLES
Column: 100 × 4.6 3 μm Spherisorb phenyl
Mobile phase: MeCN:MeOH:water 15:2:83 containing 3 mM dodecanesulfonate, 1.5 mM octanesulfonate, 0.4% phosphoric acid, and 0.4% triethylamine
Column temperature: 40
Injection volume: 30-120
Detector: UV 278.6

CHROMATOGRAM
Retention time: 10.6
Limit of detection: 4 ng/mL

OTHER SUBSTANCES
Extracted: ciprofloxacin

SAMPLE
Matrix: milk
Sample preparation: Condition a 500 mg Bond Elut LRC PRS SPE cartridge with 5 mL MeOH and 5 mL extracting solution 65:35. Add 25 mL extracting solution to 5 mL milk, shake for 15 s, add 4 g anhydrous sodium sulfate, shake for 15 s, centrifuge at 3000 rpm at 5° for 5 min.

Remove the supernatant and repeat the extraction with 25 mL extracting solution as before except do not add any more sodium sulfate, mix mechanically, centrifuge, combine the supernatants, add 25 mL 1% acetic acid, shake for 10-15 s. Freeze for 30 min to facilitate precipitation, centrifuge at 2500 rpm at 5° for 10 min. Add 75 mL to the SPE cartridge, pass the entire sample through the cartridge, then add 2 mL MeOH, wash with 5 mL water, wash with 2 mL MeOH. Elute with 2.5 mL 25% ammonium hydroxide-MeOH. Evaporate to dryness under nitrogen at 55°, dissolve the residue in 2 mL 1% acetic acid, sonicate for 1 min, vortex for 20 s, filter (0.45 μm), inject an aliquot. (Extracting solution was 1% aqueous acetic acid:EtOH 1:99.)

HPLC VARIABLES
Column: 150 × 4.6 5 μm Inertsil
Mobile phase: MeCN:2% acetic acid 15:85
Column temperature: 40
Flow rate: 1
Injection volume: 50
Detector: F ex 278 em 450, with a 418 nm cut-off filter

CHROMATOGRAM
Retention time: 4.2
Limit of detection: 0.3 ppb
Limit of quantitation: 5 ppb

OTHER SUBSTANCES
Extracted: ciprofloxacin, difloxacin, sarafloxacin

SAMPLE
Matrix: tissue
Sample preparation: Soxhlet extract 20 g finely chopped (20 mesh or finer) tissue with 130 mL dichloromethane:MeOH 90:10 for 15 h at 5 exchanges/hour. If no aqueous layer is present filter through a glass wool plug, wash though with 20 mL and 10 mL dichloromethane. (If an aqueous layer is present add 1 mL 1 M pH 7 phosphate buffer, filter through glass wool plug, separate layers, extract aqueous layer with 20 mL and 10 mL dichloromethane, combine the dichloromethane layers.) Concentrate the dichloromethane extracts nearly to dryness (3-ball Snyder column), add 10 mL hexane, concentrate nearly to dryness (≤ 1 mL). Add the residue to 10 mL 100 mM pH 2 phosphate buffer using three 10 mL portions of hexane (wash original flask with two 10 mL portions of warm dichloromethane (A)), shake vigorously for 2 min, discard hexane layer, wash aqueous layer with 10 mL hexane, wash aqueous layer with dichloromethane (A). Extract the dichloromethane layer with a fresh 10 mL portion of 100 mM pH 2 phosphate buffer. Combine the aqueous layers, adjust pH to 12 with 1.7 mL 5 M NaOH, add 20 mL dichloromethane, shake vigorously for 1 min, centrifuge, separate layers. Extract dichloromethane layer with 10 mL 100 mM pH 12 buffer. Combine the aqueous layers, adjust the pH to 7.0 with 600 μL 30% phosphoric acid, add 30 mL dichloromethane, shake vigorously for 1 min, extract aqueous layer again with 15 mL dichloromethane. Combine dichloromethane layers, filter through a glass wool plug, add 1 mL 5% diethylene glycol in dichloromethane, evaporate to dryness under vacuum at 50°, dissolve the residue in 1 mL mobile phase, inject a 10 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Supelcosil LC-18 DB
Mobile phase: MeCN:water:triethylamine 20:75:5, adjusted to pH 3.5 with orthophosphoric acid

SAMPLE
Matrix: tissue
Sample preparation: Wash a 500 mg 2.8 mL Bond-Elut SCX cartridge with 1% HOAc in EtOH. Homogenize 2 g muscle tissue in 20 mL 1% HOAc in EtOH, sonicate 3 min, centrifuge at 4200 g for 5 min, decant supernatant. Repeat extraction, combine supernatants, centrifuge at 4200 g for 5 min. Pass supernatants through SPE cartridge, wash cartridge with 5 mL MeOH, 10 mL water, 5 mL MeOH, and elute with 25% aqueous ammonia (specific gravity 0.88) in MeOH. Evaporate eluate to dryness under a stream of nitrogen at 50°, evaporation of the final portion is aided by the addition of 1 mL MeCN. Add 1 mL mobile phase, vortex 15 s, sonicate 3 min, centrifuge at 1860 g for 5 min, filter (0.45 μm), inject 20 μL.

HPLC VARIABLES
Column: 250 × 4.6 Zorbax RXC8
Mobile phase: MeCN:buffer 20:80 (Buffer was 0.68 mL orthophosphoric acid in 900 mL water, taken to pH 3.0 with triethylamine, made up to 1 L.)
Flow rate: 0.5
Injection volume: 20

Retention time: k' 7.16, 8.26 (enantiomers)

OTHER SUBSTANCES
Also analyzed: amphetamine, bamethan, norpseudoephedrine, 1-phenylethylamine

KEY WORDS
derivatization; chiral

REFERENCE
Vogt,C.; Jira,T.; Beyrich,T. HPLC-Trennung racemischer Amine nach Derivatisierung mit (1S)-(+)-Campher-10-sulfonylchlorid, *Pharmazie*, **1990**, *45*, 691.

SAMPLE
Matrix: formulations
Sample preparation: Syrup. Dilute syrup with an equal volume of water. 2 mL Diluted syrup + 2 mL 1% dansyl chloride in acetone + 200 μL 1.5 M sodium carbonate, heat at 45 ± 2° in the dark for 20 min, cool, add 3 mL water, add 500 μL benzene (Caution! Benzene is a carcin-

ogen!), shake. Remove the organic layer and evaporate it to dryness, reconstitute the residue in mobile phase, inject a 10 μL aliquot. Capsules. Sonicate the contents of a capsule in 20 mL water for 10 min, centrifuge at 2000 g for 10 min. 2 mL Supernatant + 2 mL 1% dansyl chloride in acetone + 200 μL 1.5 M sodium carbonate, heat at 45 ± 2° in the dark for 20 min, cool, add 3 mL water, add 500 μL benzene (Caution! Benzene is a carcinogen!), shake. Remove the organic layer and evaporate it to dryness, reconstitute the residue in mobile phase, inject a 10 μL aliquot.

HPLC VARIABLES
Column: 250 × 2.8 10 μm silica gel SI 100 (Merck)
Mobile phase: Diisopropyl ether:isopropanol:concentrated ammonia 48:2:0.3 (Caution! Diisopropyl ether readily forms explosive peroxides!)
Injection volume: 10
Detector: UV 254 or F ex 354 em 476

CHROMATOGRAM
Retention time: 2

OTHER SUBSTANCES
Simultaneous: cephaeline, emetine, codeine (not derivatized, detect at UV 254 only)

KEY WORDS
derivatization; syrup; capsules; normal phase

SAMPLE
Matrix: formulations
Sample preparation: Dilute formulation 1:10. Remove a 1 mL aliquot and add it to 1.5 mL water and 2.5 mL 20 μg/mL ephedrine, inject an 80 μL aliquot.

HPLC VARIABLES
Column: 100 × 4.6 5 μm Nucleosil C18
Mobile phase: MeCN:buffer 35:65 containing 0.05% sodium tetradecyl sulfate (Buffer was 0.83 mM phosphoric acid adjusted to pH 5.0 with triethylamine. Use a 50 × 4.6 5-25 μm LiChroprep Si 60 column before the injector. Wash column with MeCN:83 mM phosphoric acid 40:60 after use.)
Flow rate: 2.5
Injection volume: 80
Detector: UV

CHROMATOGRAM
Retention time: 10
Internal standard: ephedrine

OTHER SUBSTANCES
Simultaneous: ergonovine (ergometrine), oxytocin

KEY WORDS
injections; ephedrine is IS

REFERENCE

SAMPLE
Matrix: formulations
Sample preparation: Powder tablet and add 50 mg to 50 mL MeCN:20 mM pH 3.8 phosphate buffer 3:97, sonicate for 5 min, filter (0.5 μm), inject a 20 μL aliquot of the filtrate.

HPLC VARIABLES
Guard column: Supelguard pre-column containing 5 μm Suplex pKb100 (Supelco)
Column: 150 × 4.6 5 μm Suplex pKb100 (Supelco)
Mobile phase: Gradient. MeCN:20 mM pH 3.8 phosphate buffer at 3:97 for 3 min, to 15:85 over 5 min, stay at 15:85 for 4 min, re-equilibrate for 8 min.
Flow rate: 1.5
Injection volume: 20
Detector: UV 220 for 5 min then UV 280

CHROMATOGRAM
Retention time: 2.73
Limit of quantitation: 10 μg/mL

OTHER SUBSTANCES
Simultaneous: methamphetamine, amphetamine, caffeine, 3,4-methylenedioxyamphetamine, N-methyl-3,4-methylenedioxyamphetamine, N-ethyl-3,4-methylenedioxyamphetamine

KEY WORDS
tablets

SAMPLE
Matrix: formulations
Sample preparation: Dilute nasal solution 10-fold with water, filter (0.45 μm), inject a 10 μL aliquot of the filtrate.

HPLC VARIABLES
Column: 125 × 4 5 μm Aluspher RP-select B (Merck)
Mobile phase: Gradient. MeCN:1 mM NaOH from 10:90 to 80:20 over 25 min.
Column temperature: 25
Flow rate: 1.2
Injection volume: 10
Detector: UV 224 or UV 259

CHROMATOGRAM
Retention time: 3
Limit of detection: 5 ng (UV 224)

OTHER SUBSTANCES
Simultaneous: naphazoline, oxymetazoline, xylometazoline

KEY WORDS
nasal solutions

SAMPLE
Matrix: formulations
Sample preparation: Dilute syrup with mobile phase to a concentration of 5-100 μg/mL, shake, filter, inject an aliquot.

HPLC VARIABLES
Column: 250 × 4.6 5 μm 80 Å Ultrasphere CN
Mobile phase: MeCN:water:EtOH 60:38:2 containing 1 mM perchloric acid

Column temperature: 30
Flow rate: 1
Injection volume: 20
Detector: Conductivity, zero suppression 2, range 1 or 10

CHROMATOGRAM
Retention time: 9.4

OTHER SUBSTANCES
Simultaneous: bromhexine, chlorpheniramine, codeine, dextromethorphan, diphenhydramine, papaverine, phenylephrine

KEY WORDS
syrup; indirect conductometric detection; presence of compound causes a decrease in mobile phase conductivity

REFERENCE
Lau,O.-W.; Mok,C.-S. High-performance liquid chromatographic determination of active ingredients in cough-cold syrups with indirect conductometric detection, *J.Chromatogr.A*, **1995**, *693*, 45–54.

SAMPLE
Matrix: solutions
Sample preparation: Mix 40 mL of a 325-375 mM amine solution in THF with 150 mL 10% potassium carbonate, add dropwise 40 mL 275-325 mM reagent in THF, heat at 50° while maintaining at pH 8 or above for 3 h, cool, extract with chloroform. Evaporate the extracts to dryness, reconstitute, inject an aliquot. (Prepare reagent (1-[(4-nitrophenyl)sulfonyl]prolyl chloride) as follows. Mix 40-45 mmoles L-(-)-proline, 40 mL THF, and 200 mL 10% potassium carbonate, add 37-43 mmoles 4-nitrobenzenesulfonyl chloride in 40 mL THF dropwise, heat at 50° and maintain at pH 8 or above for 3 h, cool, acidify to pH 2, extract with chloroform. Extract the organic layers with potassium carbonate in water. Acidify the aqueous layer and extract it with chloroform. Dry the chloroform layer and evaporate it to dryness, recrystallize the resulting 1-[(4-nitrophenyl)sulfonyl]proline from petroleum ether and benzene (Caution! Benzene is a carcinogen!). Stir 15 mmoles 1-[(4-nitrophenyl)sulfonyl]proline in 100 mL benzene and add 75 mmoles thionyl chloride in 50 mL benzene dropwise, heat at 35-40° until the reaction is complete (about 48 h; monitor by IR), evaporate to dryness, recrystallize from n-heptane to give 1-[(4-nitrophenyl)sulfonyl]prolyl chloride (mp 110-110.5°).)

HPLC VARIABLES
Column: 150 × 4.6 5 μm Zorbax ODS
Mobile phase: MeOH:water 60:40
Flow rate: 1.5
Detector: UV 254

CHROMATOGRAM
Retention time: 5, 6 (enantiomers)

OTHER SUBSTANCES
Simultaneous: pseudoephedrine

KEY WORDS
derivatization; chiral

REFERENCE
Clark,C.R.; Barksdale,J.M. Synthesis and liquid chromatographic evaluation of some chiral derivatizing agents for resolution of amine enantiomers, *Anal.Chem.*, **1984**, *56*, 958–962.

SAMPLE
Matrix: solutions
Sample preparation: Dissolve in MeOH at a concentration of 1 mg/mL, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 250 × 5 Spherisorb S5W
Mobile phase: MeOH:buffer 90:10 (Buffer was 94 mL 35% ammonia and 21.5 mL 70% nitric acid in 884 mL water, adjust the pH to 10.1 with ammonia.)
Flow rate: 2
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 3.68

OTHER SUBSTANCES
Simultaneous: methamphetamine, mescaline, mephentermine, buprenorphine, dextromoramide, phenoperidine, fentanyl, etorphine, piritramide, noscapine, papaverine, naloxone, dextropropoxyphene, nalorphine, phenazocine, norpipanone, levallorphan, hydroxypethidine, normethadone, meperidine, dipipanone, diamorphine, pentazocine, acetylcodeine, monoacetylmorphine, thebacon, oxycodone, thebaine, norlevorphanol, methadone, benzylmorphine, ethylmorphine, morphine-N-oxide, codeine, codeine-N-oxide, morphine, ethoheptazine, morphine-3-glucuronide, pholcodine, norpethidine, hydrocodone, dihydrocodeine, dihydromorphine, levorphanol, norcodeine, normorphine, pemoline, benzphetamine, diethylpropion, mazindol, tranylcypromine, caffeine, fenethyline, phendimetrazine, methylphenidate, phenelzine, epinephrine, pipradol, phenylpropanolamine, fencamfamin, chlorphentermine, norpseudoephedrine, fenfluramine, methylenedioxyamphetamine, amphetamine, normetanephrine, 4-hydroxyamphetamine, bromo-STP, STP, prolintane, 2-phenethylamine, tyramine, trimethoxyamphetamine
Noninterfering: dopamine, levodopa, methyldopa, methyldopate, norepinephrine
Interfering: phenylephrine, pseudoephedrine, methylephedrine, dimethylamphetamine

SAMPLE
Matrix: solutions
Sample preparation: Mix 1 mL of an aqueous solution with 1 mL 100 mM nickel sulfate in water, 1 mL 20% aqueous ammonia, and 5 mL chloroform:carbon disulfide 98:2, shake vigorously for 1 min, wash the organic layer with three 2 mL portions of water, filter (phase-separation paper). Evaporate the filtrate to dryness under a stream of nitrogen, reconstitute with 1 mL mobile phase, inject a 10 µL aliquot. (Copper may also be used with electrochemical detection or UV detection at 270 nm.)

HPLC VARIABLES
Guard column: 30 × 4 40 µm LiChrosorb RP-18
Column: 250 × 4 7 µm LiChrosorb RP-18
Mobile phase: MeOH:20 mM pH 5.8 sodium acetate buffer 80:20 containing 5 mM lithium perchlorate
Flow rate: 1.5
Injection volume: 10
Detector: UV 325, E, Merck-Clevenot E 230, Model LCC 231 thin-layer electrolytic cell with a glassy carbon electrode at +0.7 V, standard calomel reference electrode

CHROMATOGRAM
Retention time: 5.49
Limit of detection: 1 fmole (E), 1 nmole (UV)

OTHER SUBSTANCES
Simultaneous: methamphetamine
Also analyzed: acebutolol, alprenolol, flecainide, propranolol

KEY WORDS
derivatization; complexation

SAMPLE

Matrix: urine
Sample preparation: Condition a Sep-Pak C18 SPE cartridge with 5 mL MeOH, 3 mL MeCN: 10 mM ammonium acetate 40:60 adjusted to pH 3 with acetic acid, and 5 mL water. 5 mL Urine + 5 mL 500 mM ammonium acetate, adjusted to pH 9.5 with ammonia, mix, add to the SPE cartridge, wash with 20 mL 5 mM pH 9.5 ammonium acetate, wash with 0.5 mL water.

Elute with 2 mL MeCN:10 mM ammonium acetate 40:60 adjusted to pH 3 with acetic acid, inject a 50 μL aliquot of the eluate.

HPLC VARIABLES
Column: 150 × 4.6 L-column ODS (Chemical Inspection & Testing Institute, Tokyo)
Mobile phase: Gradient. MeCN:100 mM ammonium acetate 0:100 for 1 min, to 40:60 over 20 min.
Flow rate: 1
Injection volume: 50
Detector: UV 210; MS Shimadzu model QP-1100EX thermospray, vaporizer temperature from 170 to 150° over 20 min. SIM, m/z 166

CHROMATOGRAM
Retention time: 14
Limit of detection: 2–40 ng/mL

OTHER SUBSTANCES
Extracted: 6-acetylmorphine, amphetamine, benzoylecgonine, cocaine, methamphetamine, methylephedrine, morphine, morphine-3-glucuronide, morphine-6-glucuronide

KEY WORDS
SPE

Tatsuno,M.; Nishikawa,M.; Katagi,M.; Tsuchihashi,H. Simultaneous determination of illicit drugs in human urine by liquid chromatography-mass spectrometry, *J.Anal.Toxicol.*, **1996**, *20*, 281–286.

SAMPLE
Matrix: urine
Sample preparation: 500 μL Urine + N-ethylnordiazepam + chlorpheniramine + 100 μL buffer, centrifuge at 11000 g for 30 s, inject a 500 μL aliquot onto column A with mobile phase A, after 0.6 min backflush column A with mobile phase A to waste for 1.6 min, elute column A with 250 μL mobile phase B, with 200 μL mobile phase C, and with 1.15 mL mobile phase D. Elute column A to waste until drugs start to emerge then elute onto column B. Elute column B to waste until drugs started to emerge, then elute onto column C. When all the drugs have emerged from column B remove it from the circuit, elute column C with mobile phase D, monitor the effluent from column C. Flush column A with 7 mL mobile phase E, with mobile phase D, and mobile phase A. Flush column B with 5 mL mobile phase E then with mobile phase D. (Buffer was 6 M ammonium acetate adjusted to pH 8.0 with 2 M KOH.)

HPLC VARIABLES
Column: A 10 × 2.1 12-20 μm PRP-1 spherical poly(styrene-divinylbenzene) (Hamilton); B 10 × 3.2 11 μm Aminex A-28 (Bio-Rad); C 25 × 3.2 5 μm C8 (Phenomenex) + 150 × 4.6 5 μm silica (Macherey-Nagel)
Mobile phase: A 0.1% pH 8.0 potassium borate buffer; B 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid; C MeCN:buffer 40:60 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.); D MeCN:buffer 33:67 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.); E MeCN:buffer 70:30 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.)
Column temperature: ambient (column A), 40 (columns B and C)
Flow rate: A 5; B-E 1
Injection volume: 500
Detector: UV 210, UV 235

CHROMATOGRAM
Retention time: k' 2.7
Internal standard: N-ethylnordiazepam (k' 2.1), chlorpheniramine (k' 5.9)
Limit of detection: 300 ng/mL

OTHER SUBSTANCES

Extracted: methamphetamine, desipramine, nortriptyline, diphenhydramine, methadone, imipramine, flurazepam, amitriptyline, morphine, codeine, hydromorphone, hydrocodone, caffeine, cotinine, benzoylecgonine, secobarbital, oxazepam, phenobarbital, nordiazepam, diazepam, phenylpropanolamine

Interfering: phentermine, amphetamine, phenmetrazine, lidocaine, pentazocine

KEY WORDS

column-switching

SAMPLE

Matrix: urine

Sample preparation: 5 mL Urine + 25 μL 1 mg/mL phenylpropanolamine in mobile phase + 100 μL 10 M NaOH + 2 mL diethyl ether + 3 g sodium sulfate, shake for 20 min, centrifuge at 1200 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 100 μL mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES

Column: 125 × 4 5 μm LiChrospher 60 RP Select B

Mobile phase: 200 mM pH 5.5 phosphate buffer containing 150 mM triethylamine (Wash column with MeOH for 15 min and with water for 15 min at the end of each day.)

Column temperature: 40

Flow rate: 1.3

Injection volume: 20

Detector: UV 215

CHROMATOGRAM

Retention time: 8

Internal standard: phenylpropanolamine (11.5)

Limit of detection: 200 ng/mL

OTHER SUBSTANCES

Extracted: norephedrine, norpseudoephedrine, pseudoephedrine, N-methylephedrine, ethylephedrine

Noninterfering: amfepramone, amphetamine, caffeine, chlorphentermine, cocaine, codeine, cropropamide, crotethamide, dimethylamphetamine, etamivan, fencamfamine, heptaminol, leptazol, lidocaine, methoxamine, methylamphetamine, methylphenidate, nicotine, niketamine, meperidine, phendimetrazine, phenmetrazine, pipradol, procaine, prolintane, strychnine

SAMPLE

Matrix: urine

Sample preparation: 1 mL Urine + 0.5 mL 1% trichloroacetic acid, centrifuge at 5200 g for 10 min, filter (0.2 μm), inject 20 μL aliquot

HPLC VARIABLES

Column: 250 × 4 Lichrospher 5μm 60 RP-select B

Mobile phase: Gradient. MeCN:50 mM pH 3.2 potassium phosphate buffer from 10:90 to 50:50 over 15 min.

Flow rate: 1.5

Injection volume: 20

Detector: UV 190-370

CHROMATOGRAM
Retention time: 5

OTHER SUBSTANCES
Extracted: morphine, phenylpropanolamine, lidocaine, diphenhydramine, nortriptyline, cocaine, benzoylecgonine, norpropoxyphene, nordiazepam
Also analyzed: amitriptyline, amphetamine, meperidine, codeine, (different gradient)

SAMPLE
Matrix: urine
Sample preparation: 1 mL Urine + 10 mg β-glucuronidase/arylsulfatase (Helix pomatia, Sigma), heat at 37° overnight, add an equal volume of buffer, centrifuge at 2000 g for 5 min, inject an aliquot of the supernatant onto column A with mobile phase A and elute to waste. After 2.5 min backflush the contents of column A onto column B with mobile phase B, monitor the effluent from column B. Re-equilibrate both columns for 12.5 min before the next injection. (Buffer was 200 mM boric acid adjusted to pH 9.5 with 5 M NaOH.)

HPLC VARIABLES
Column: A 10 × 4.6 5 μm Spherisorb cyanopropyl; B 250 × 4.6 Capcell Pak C18 UG-120 (Shiseido)
Mobile phase: A water; B Gradient. MeCN:buffer from 3:97 to 30:70 over 30 min, to 40:60 over 8 min (Buffer was 3.4 mL/L phosphoric acid adjusted to pH 3.0 with 5 M NaOH.)
Flow rate: A 1.25; B 1
Injection volume: 100
Detector: UV 220

CHROMATOGRAM
Retention time: 8.3
Limit of detection: 250 ng/mL

OTHER SUBSTANCES
Extracted: acebutolol, alprenolol, amphetamine, atenolol, bopindolol, codeine, labetalol, metoprolol, morphine, nadolol, oxprenolol, pindolol, propranolol, timolol

KEY WORDS
column-switching

SAMPLE
Matrix: urine
Sample preparation: Inject 15 μL urine, inject a mixture of 5 μL 20 mM 9-fluorenylmethyl chloroformate in MeCN and 45 μL water, and inject 10 μL buffer on to column A and elute to waste with mobile phase A. After 2.8 min backflush the contents of column A on to column B with mobile phase B and start the gradient, monitor the effluent from column B. At the end of the run condition column A with 1 mL mobile phase A. (Buffer was 4% sodium bicarbonate adjusted to pH 10 with 10% NaOH.)

HPLC VARIABLES
Column: A 20 × 2.1 30 μm Hypersil ODS-C18; B 125 × 4 5 μm LiChrospher 100 PR-C18
Mobile phase: A water; B Gradient. MeCN:water from 40:60 to 70:30 over 15 min. to 100:0 over 5 min.
Flow rate: A 0.35; B 1
Injection volume: 15

Detector: F ex 264 em 313

CHROMATOGRAM
Retention time: 11.8
Limit of detection: 25 ng/mL

OTHER SUBSTANCES
Extracted: amphetamine, methamphetamine, norephedrine, 3-phenylpropylamine, pseudoephedrine

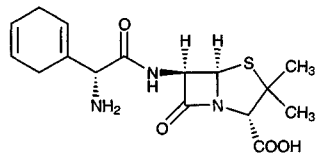
Epicillin



Molecular formula: $C_{16}H_{21}N_3O_4S$
Molecular weight: 351.43
CAS Registry No.: 26774-90-3
Merck Index: 3651

SAMPLE
Matrix: perfusate
Sample preparation: Vortex perfusate, centrifuge at 11600 g for 5 min, inject an aliquot of the supernatant.

HPLC VARIABLES
Guard column: 20 × 2 5 μm Hypersil ODS
Column: 150 × 4.6 5 μm Hypersil ODS
Mobile phase: MeOH:buffer 35:65 (Buffer was 50 mM KH_2PO_4 containing 0.1% triethylamine adjusted to pH 3 with orthophosphoric acid.)
Flow rate: 1
Injection volume: 100
Detector: UV 220

CHROMATOGRAM
Retention time: 6.0
Limit of detection: 20 ng/mL
Limit of quantitation: 100 ng/mL

Epidermal growth factor

Molecular formula: indeterminate
Molecular weight: 6201
CAS Registry No.: 9010-53-1
Merck Index: 3569

SAMPLE
Matrix: blood
Sample preparation: Filter (0.2 μm polysulfone) plasma, inject a 200 μL aliquot on to column A and elute to waste with mobile phase A, after 8 min elute column A to waste with mobile phase B, after 4 min elute the contents of column A on to column B with mobile phase B, after 6 min remove column A from the circuit, elute column B with mobile phase C (start the gradient), monitor the effluent from column B. Re-equilibrate column A with mobile phase A for 17.6 min.

HPLC VARIABLES
Column: A 24 × 4 immunoaffinity (column preparation details in paper); B 20 × 4.6 polysulfoethyl aspartamide (The Nest Group, Southborough, MA)
Mobile phase: A 0.9% NaCl containing 10 mM potassium phosphate and 20 ppm sodium azide, pH 7.4 (Caution! Sodium azide is carcinogenic and should not be discharged to the plumbing system!); B MeOH:100 mM pH 2.50 glycine/HCl buffer 50:50; C Gradient. A was MeCN:5 mM pH 3.0 potassium phosphate buffer 25:75. B was MeCN:600 mM KCl containing 5 mM potassium phosphate, pH 3.0 25:75. A:B 80:20 for 1 min, to 75:25 over 5 min, to 65:35 over 1 min, to 40:60 over 7.5 min, return to initial conditions over 0.1 min, re-equilibrate for 3 min.
Flow rate: A 0.6; B 0.6; C 1
Injection volume: 200
Detector: UV 220 or immunoassay

CHROMATOGRAM
Retention time: 25 (hEGF 1-47), 28 (hEGF 1-48), 32 (hEGF 1-53)

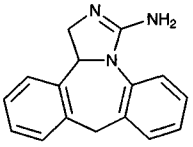
Epinastine



Molecular formula: $C_{16}H_{15}N_3$
Molecular weight: 249.32
CAS Registry No.: 80012-43-7 (HCl)
Merck Index: 3655

SAMPLE
Matrix: blood
Sample preparation: Add 100 μL 600 ng/mL diphenidol in water and 600 μL 100 mM sodium carbonate to 100 μL plasma. Add 5 mL dichloromethane, shake on a reciprocal shaker for 10 min, centrifuge at 1000 g for 8 min, dry 4 mL of the lower organic phase in a rotary evaporator at 45°, dissolve the residue in 50 μL mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 Cosmosil 5C18-MS (Nacalai Tesque, Japan)

Mobile phase: MeOH:buffer 36:64 (Buffer was 0.3% triethylamine adjusted to pH 4.5 with phosphoric acid.)
Flow rate: 1.3
Injection volume: 20
Detector: UV 220

CHROMATOGRAM
Retention time: 8.1
Internal standard: diphenidol (14.8)
Limit of detection: 4 ng/mL
Limit of quantitation: 10 ng/mL

SAMPLE

Matrix: blood
Sample preparation: Prepare a 20 × 5 polypropylene column packed with CM-Sephadex preswollen in water, wash with 5 mL 2 M HCl, wash with 10 mL water, wash with 10 mL 100 mM pH 7 phosphate buffer. 1 mL Plasma + 30 μL 80 ng/mL N-methyldopamine, apply to column, wash with 5.5 mL water (A), elute with 3 mL 0.5 M perchloric acid. Collect eluate, add 2 mL 1.5 M pH 9.3 Tris buffer containing 60 mM EDTA, add 20 mg alumina, vortex for 2 min, discard supernatant, add 2 mL water to alumina, mix, centrifuge at 3000 g for 3 min, repeat water wash, remove as much water as possible, elute catecholamines from alumina with 100 μL 100 mM acetic acid with vortexing for 2 min, centrifuge, inject 25 μL aliquot of supernatant. (Wash water A contains levodopa, carbidopa, DOPAC, and O-methyldopa.)

HPLC VARIABLES

Column: 250 × 4.6 5 μm Nucleosil C18
Mobile phase: MeCN:MeOH:25 mM sodium acetate 4:4:92 containing 0.2 mM 1-octanesulfonic acid and 0.3 mM disodium EDTA, pH was adjusted to pH 3 with acetic acid
Flow rate: 0.9
Injection volume: 10
Detector: E, ESA Coulochem 5100 A, 5010 A analytical cell, first electrode +0.25 V, second electrode -0.30 V

CHROMATOGRAM

Retention time: 9

Internal standard: N-methyldopamine (16)
Limit of detection: 0.5 ng/mL

OTHER SUBSTANCES
Simultaneous: norepinephrine, dopamine

KEY WORDS
plasma

REFERENCE

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 250 μL 1 ng/mL α-methylnorepinephrine + 1 mL buffer + 5 mL n-heptane containing 4.6 mM tetraoctylammonium bromide and 10 mL/L 1-octanol, shake for 2 min, centrifuge at 20° at 1000 g for 5 min, freeze in acetone/dry ice. Remove the organic phase and add it to 2 mL 1-octanol and 200 μL 80 mM acetic acid, shake, centrifuge at 20° at 1000 g for 5 min, freeze in acetone/dry ice. Discard the organic phase, thaw the aqueous phase and add it to 1 mL 10 mM HCl, 1 mL buffer, and 5 mL n-heptane containing 4.6 mM tetraoctylammonium bromide and 10 mL/L 1-octanol, shake for 2 min, centrifuge at 20° at 1000 g for 5 min, freeze in acetone/dry ice. Remove the organic phase and add it to 2 mL 2 M pH 8.6 ammonia/ammonium chloride buffer containing 13.4 mM EDTA, shake, freeze in dry ice/acetone. Remove the organic layer and add it to 2 mL 1-octanol and 150 μL 80 mM acetic acid, shake, centrifuge at 20° at 1000 g for 5 min, freeze in dry ice/acetone, discard the organic layer. Thaw the aqueous layer and add it to 250 μL MeCN, 50 μL 1.75 M pH 7.05 bicine, and 100 μL 100 mM 1,2-diphenylethylenediamine in 100 mM HCl, add 20 μL 20 mM potassium ferricyanide in water, heat at 37° in the dark for 1 h, keep at 20° in the dark, inject a 100 μL aliquot. (Buffer was 2 M pH 8.6 ammonia/ammonium chloride buffer containing 8.9 mM diphenylborate-ethanolamine complex and 13.4 mM EDTA. Stir buffer with 45 g/L activated alumina for 2 h before use. Wash 1-octanol with 80 mM acetic acid. Recrystallize 1,2-diphenylethylenediamine from toluene:light petroleum (bp 60-80°) 10:90, dry overnight at 60°.)

HPLC VARIABLES
Column: 100 × 4.6 3 μm Cp MicroSpher C18 (Chrompack)
Mobile phase: MeCN:MeOH:50 mM pH 7.0 sodium acetate buffer 40:8:50
Flow rate: 1
Injection volume: 100
Detector: F ex 350 em 480

CHROMATOGRAM
Retention time: 4
Internal standard: α-methylnorepinephrine (3)
Limit of detection: 2 pg/mL

OTHER SUBSTANCES
Extracted: dihydroxybenzylamine, dopamine, isoproterenol, norepinephrine

KEY WORDS
plasma; derivatization; comparison with electrochemical detection

REFERENCE

SAMPLE
Matrix: blood

Sample preparation: Pack a 65 × 15 SPE column with 50 mg WA-4 alumina (Sigma). Add 500 μL plasma to the SPE column, add 1 mL buffer, rotate for 15 min, wash three times with water (aspirating to dryness each time), centrifuge to dryness, add 200 μL 100 mM pH 1.2 perchloric acid, mix, let stand for 15 min, centrifuge the SPE column at 1000 *g* for 3 min, inject an aliquot of the effluent. (Buffer was 45 g Tris and 5 g EDTA in 200 mL water, pH adjusted to 8.6 with concentrated HCl.)

HPLC VARIABLES
Guard column: 50 × 4.6 5 μm reversed-phase
Column: 250 × 4.6 5 μm ODS Spherisorb
Mobile phase: Buffer contained 1.4% monochloroacetic acid, 0.47% NaOH, and 0.075% EDTA, finally pH adjusted to 3.0 with NaOH or monochloroacetic acid and 6 mg% sodium octylsulfate added.
Column temperature: 35
Flow rate: 1
Injection volume: 100
Detector: E, Bioanalytical Systems LC-4B, TL-5 transducer with a glassy carbon electrode, +650 mV, 1 nA, Ag/AgCl reference electrode

SAMPLE
Matrix: blood
Sample preparation: Plasma. 1 mL Plasma + 125 μL 2 ng/mL α-methylnorepinephrine + 1 mL buffer + 5 mL n-heptane containing 4.6 mM tetraoctylammonium bromide and 10 mL/L 1-octanol, shake for 2 min, centrifuge at 1000 g for 5 min, freeze in dry ice/acetone. Remove the organic phase and add it to 2 mL 1-octanol (saturated with 80 mM acetic acid) and 200 μL 80 mM acetic acid, shake, centrifuge at 1000 g for 5 min. Freeze the aqueous layer and remove the organic layer. Add 1 mL 10 mM HCl, 1 mL buffer, and 5 mL n-heptane containing 4.6 mM tetraoctylammonium bromide and 10 mL/L 1-octanol to the aqueous phase. Shake, centrifuge, freeze, remove the organic layer and add it to 2 mL 2 M pH 8.6 ammonia-ammonium chloride buffer containing 13.4 mM EDTA (but no complex). Freeze, remove the organic layer and add it to 2 mL 1-octanol and 150 μL 80 mM acetic acid, shake, centrifuge at 1000 g for 5 min. Freeze, remove the organic layer and add the aqueous layer to 200 μL MeCN, 50 μL 1.75 M pH 6.95 bicine buffer containing 1% EDTA, 100 μL 100 mM 1,2-diphenylethylenediamine in 100 mM HCl, and 20 μL 20 mM potassium ferricyanide in water. Heat at 37° in the dark for 1 h, inject a 75 μL aliquot (keep it in the dark in the autosampler). Urine. 100 μL Urine + 1 mL 10 mM HCl + 125 μL 40 ng/mL α-methylnorepinephrine + 1 mL buffer + 5 mL n-heptane containing 4.6 mM tetraoctylammonium bromide and 10 mL/L 1-octanol, shake for 2 min, centrifuge at 1000 g for 5 min, freeze in dry ice/acetone. Remove the organic phase and add it to 2 mL 1-octanol (saturated with 80 mM acetic acid) and 200 μL 80 mM acetic acid, shake, centrifuge at 1000 g for 5 min. Freeze the aqueous layer and remove the organic layer. Add 1 mL 10 mM HCl, 1 mL buffer, and 5 mL n-heptane containing 4.6 mM tetraoctylammonium bromide and 10 mL/L 1-octanol to the aqueous phase. Shake, centrifuge, freeze, remove the organic layer and add it to 2 mL 1-octanol and 150 μL 80 mM acetic acid, shake, centrifuge at 1000 g for 5 min. Freeze, remove the organic layer and add the aqueous layer to 200 μL MeCN, 50 μL 1.75 M pH 6.95 bicine buffer containing 1% EDTA, 100 μL 100 mM 1,2-diphenylethylenediamine in 100 mM HCl, and 20 μL 20 mM potassium ferricyanide in water. Heat at 37° in the dark for 1 h, inject a 50 μL aliquot (keep it in the dark in the autosampler). (Buffer was a 2 M pH 8.6 ammonia-ammonium chloride buffer containing 8.9 mM diphenyl borate-ethanolamine complex and 13.4 mM EDTA.)

HPLC VARIABLES
Column: 100 × 4.6 3 μm PhaseSep C18 ODS2

Mobile phase: Gradient. A was MeCN:MeOH:50 mM pH 7.0 sodium acetate buffer 20:4:76. B was MeCN:MeOH:50 mM pH 7.0 sodium acetate buffer 60:10:30. A:B 40:60 for 3 min, go to 0:100 over 0.5 min, stay at 0:100 for another 4.5 min. (After the last sample flush column with 60 mL MeCN:MeOH:water 70:10:20.)
Flow rate: 1
Injection volume: 50-75
Detector: F ex 350 em 480

CHROMATOGRAM
Retention time: 3.5
Internal standard: α-methylnorepinephrine (2.5)
Limit of detection: 0.3-0.6 pg

OTHER SUBSTANCES
Simultaneous: norepinephrine, dopamine, epinine
Interfering: α-methyldopa

KEY WORDS
plasma

REFERENCE

SAMPLE
Matrix: blood
Sample preparation: 100 μL Plasma + 5 mg alumina + 10 μL 10 μM IS in 10 mM perchloric acid + 100 μL pH 8.7 Tris-HCl buffer, stir for 10 min, centrifuge at 3000 g for 1 min, discard the supernatant. Wash the alumina with two 500 μL portions of water, add 100 μL 100 mM perchloric acid, mix for 1 min, centrifuge at 3000 g for 1 min, inject a 50 μL aliquot of the supernatant. (Heat 20 g alumina (WA-4, Sigma) with 200 mL 2 M HCl at 100° for 1 h with gentle mixing, decant the supernatant, wash with twenty 200 mL portions of water, filter (Toyo Roshi No. 2 paper), dry at 120° overnight.)

HPLC VARIABLES
Column: 150 × 4.6 catecholpak (JASCO)
Mobile phase: MeCN:50 mM pH 3.20 potassium acetate:50 mM pH 3.20 potassium phosphate buffer 3:92.15:4.85 containing 1 mM sodium hexanesulfonate
Column temperature: 40
Flow rate: 0.5
Injection volume: 50
Detector: Chemiluminescence (Kenko filter Y-46) following post-column reaction. The column effluent mixed with reagent 1 pumped at 0.25 mL/min and the mixture flowed through a 15 m × 0.5 mm i.d. knitted PTFE coil at 80°. The effluent from the coil mixed with reagent 2 pumped at 1.4 mL/min and this mixture flowed to the detector. (Reagent 1 was 105 mM ethylenediamine (semiconductor grade) and 175 mM imidazole in MeCN:EtOH 90:10. Reagent 2 was 0.25 mM bis[4-nitro-2-(3,6,9-trioxadecyloxycarbonyl)phenyl] oxalate (Wako), 150 mM hydrogen peroxide, and 110 mM trifluoroacetic acid in dioxane:ethyl acetate 50:50 (Caution! Dioxane is a carcinogen!).)

CHROMATOGRAM
Retention time: 16
Internal standard: 3,4-dihydroxybenzylamine (17)
Limit of detection: 1 fmole

OTHER SUBSTANCES
Extracted: dopamine, norepinephrine

SAMPLE
Matrix: blood, food, peptides, plants, tissue
Sample preparation: Hydrolyze peptide with 6 M HCl containing 0.2% 3,3'-thiodipropionic acid at 110° for 24 h, evaporate to dryness, reconstitute with 50-200 μL 0.1% HCl containing 0.2% 3,3'-thiodipropionic acid. Homogenize (Ultra-Turrax) 0.1-1 g food, tissue, plant material, lyophilized plasma, or lyophilized tissue in 10 mL 250 nM IS in 100 mM HCl containing 0.2% 3,3'-thiodipropionic acid at 20000 rpm for 2 min, sonicate for ≤30 min, centrifuge at 5000 g for 20 min, discard fat layer, filter (Millipore ultrafiltration insert (MW cutoff 5000) prewashed with 200 μL 100 mM HCl containing 0.2% 3,3'-thiodipropionic acid) 3 mL supernatant while centrifuging at 3500 g for 1 h. Mix 20 μL deproteinized sample (or 10 μL peptide hydrolysate) with 180 μL buffer, vortex, add 200 μL reagent, mix, heat at 70° for 15 min with mixing at 1 min and 12 min, cool in an ice bath for 5 min, centrifuge at 10000 g for 10 s, add 400 μL diluent, mix thoroughly, centrifuge at 15000 g for 5 min, inject a 10 μL aliquot of the supernatant. (Prepare buffer by dissolving 630 mg sodium bicarbonate in 40 mL water, adjusting pH to 8.6 with NaOH, and making up to 50 mL with water. Prepare reagent by sonicating 40 mg dabsyl chloride in 10 mL acetone for 10 min, then filtering into brown vials and storing at -20°. Prepare diluent by mixing 50 mL MeCN, 25 mL EtOH, and 25 mL mobile phase A.)

HPLC VARIABLES
Guard column: present but not specified
Column: 150 × 3.9 4 μm Novapak C18
Mobile phase: Gradient. A was DMF:9 mM NaH_2PO_4 containing 0.16% triethylamine, adjusted to pH 6.55 with phosphoric acid. B was MeCN:water 80:20. A:B 92:8 for 2 min, to 80:20 over 5 min (Waters convex curve 5), to 65:35 over 28 min (Waters concave curve 7), to 50:50 over 10 min, to 0:100 over 21 min, maintain at 0:100 for 11 min, return to initial conditions over 0.5 min, re-equilibrate for 12.5 min.

Column temperature: 50
Flow rate: 1
Injection volume: 10
Detector: UV 436

CHROMATOGRAM
Retention time: 70.61
Internal standard: norleucine (40.90), norvaline (35.06)

OTHER SUBSTANCES
Extracted: amino acids dopamine, histamine, norepinephrine, taurine

KEY WORDS
rinse glass and plasticware with 70% EtOH and water and dry before use; derivatization; cheese; meat; sausage; fish; plasma

SAMPLE
Matrix: blood, urine
Sample preparation: Serum. Add 1 mL serum to 100 mg activated aluminum oxide suspended in 1 mL pH 8.7 Tris-HCl buffer, stir, let stand for 10 min. Discard the supernatant and wash the solid three times with 5 mL portions of water, wash the solid with 3 mL MeOH, dry under reduced pressure, elute with 3 mL 4 M acetic acid. Evaporate the eluate to dryness under reduced pressure, reconstitute the residue with 90 μL water, inject a 10 μL aliquot. Urine. 5 mL Urine + 5.3 mL 2 M HCl, heat at 100° for 20 min, cool to room temperature, add 1 mL 50 mM disodium EDTA, adjust the pH to 8.5 with dilute ammonia, add 500 mg 200 mesh aluminum oxide (Wako), shake for 10 min, filter, wash the solid with 10 mL water, elute with 5 mL 300 mM acetic acid, inject an aliquot of the eluate.

HPLC VARIABLES
Column: 250 × 3.6 10-25 μm Hitachi 3011 C resin
Mobile phase: 50 mM K_2HPO_4 containing 0.05% phosphoric acid
Column temperature: 45
Flow rate: 0.6
Injection volume: 10
Detector: F ex 383 em 486 following post-column reaction. The column effluent mixed with 1% 2-cyanoacetamide in water pumped at 0.5 mL/min and with buffer pumped at 1 mL/min and the mixture flowed through a 5 m × 0.5 mm ID PTFE coil at 100 ± 1° to the detector. (Buffer was 600 mM boric acid containing 750 mM KOH.)

CHROMATOGRAM
Retention time: 7
Limit of detection: 0.28 pmole

OTHER SUBSTANCES
Extracted: dopamine, norepinephrine

KEY WORDS
post-column reaction; serum; SPE

SAMPLE
Matrix: blood, urine

Sample preparation: Condition a 150 μL Toyopak IC-SP S (sulfopropyl resin, H^+ form) SPE cartridge (Tosoh) with 10 mL water. Plasma. 700 μL Plasma + 50 μL 700 nM 3,4-dihydroxybenzylamine + 350 μL 2 M perchloric acid, mix, centrifuge at 4° at 1000 g for 15 min. Remove a 700 μL aliquot of the supernatant and add it to 30 μL 2 M potassium carbonate, centrifuge at 4° at 1000 g for 5 min. Add a 500 μL aliquot of the supernatant to the SPE cartridge, wash with 1 mL water, wash with 500 μL EtOH:water 50:50, wash with 5 mL water, elute with 500 μL 2 M sodium perchlorate, filter (0.2 μm), inject a 50 μL aliquot of the filtrate. Urine. Acidify urine collected over 24 h with 10 mL 6 M HCl. 500 μL Urine + 25 μL 10 μM 3,4-dihydroxybenzylamine + 25 μL 40 μM ferulic acid + 500 μL 1 M perchloric acid, mix, centrifuge at 4° at 1000 g for 15 min. Remove a 700 μL aliquot of the supernatant and add it to 30 μL 2 M potassium carbonate, centrifuge at 4° at 1000 g for 5 min, add a 500 μL aliquot of the supernatant to the SPE cartridge, wash with 1.5 mL water, wash with 500 μL EtOH:water 50:50, wash with 5 mL water, elute with 500 μL 2 M sodium perchlorate, filter (0.2 μm), inject a 50 μL aliquot of the filtrate.

HPLC VARIABLES

Column: 150 × 4.6 5 μm TSK-gel ODS-80TM (Tosoh)

Mobile phase: Gradient. A was buffer. B was MeCN:MeOH:buffer 8:12:80, pH 3.1. A:B 100:0 for 4 min, to 60:40 over 8 min, to 0:100 over 2 min, maintain at 0:100 for 16 min, return to initial conditions (step gradient), re-equilibrate for 20 min. Buffer was 60 mM pH 3.1 citric acid containing 32 mM Na_2HPO_4, 1.7 mM sodium hexanesulfonate, and 0.1 mM disodium EDTA (J. Chromatogr. 1989, 467, 237).

Flow rate: 1

Injection volume: 50

Detector: F ex 345 em 480 following post-column reaction. The column effluent passed through a Hitachi 655A electrochemical detector with carbon cloth electrodes; working electrode at +0.68 V versus reference electrode (200 mM equimolar mixture of potassium hexacyanoferrate(II) and potassium hexacyanoferrate(III) containing 200 mM potassium nitrate and 200 mM KOH). The effluent from the electrochemical detector mixed with 20 mM meso-1,2-diphenylethylenediamine in 50 mM HCl pumped at 0.4 mL/min and with 1 M glycine containing 490 mM KOH and 3 mM potassium hexacyanoferrate(III) pumped at 0.4 mL/min. This mixture flowed through a 10 m × 0.47 mm ID coil at 80° to the detector (J. Chromatogr. 1989, 467, 237).

CHROMATOGRAM

Retention time: 10.5

Internal standard: 3,4-dihydroxybenzylamine (12.5)

Limit of detection: 1 nM

OTHER SUBSTANCES

Extracted: dopamine, levodopa, metanephrine, 3-methoxytyramine, norepinephrine

SAMPLE
Matrix: blood, urine
Sample preparation: Condition a Toyopak IC-SP S sulfopropyl resin, H^+ form, SPE cartridge (Tosoh) with 10 mL water and 2 mL 200 mM pH 5.0 sodium phosphate buffer. Plasma. 700 μL Plasma + 30 μL 700 nM isoproterenol + 50 μL 7 μM 3,4-dihydroxyphenylpropanoic acid + 350 μL 2 M perchloric acid, mix, centrifuge at 4° at 1000 g for 15 min. Remove a 700 μL aliquot of the supernatant and adjust the pH to 1.5-2.0 with about 150 μL 2 M potassium carbonate, centrifuge at 4° at 1000 g for 5 min, add the supernatant to the SPE cartridge, wash with 10 mL water, elute with 300 μL MeOH:2 M sodium perchlorate 7:93, filter (cellulose acetate membrane), inject a 100 μL aliquot of the filtrate. Urine. Collect human urine for 24 h in the presence of 10 mL 6 M HCl. 500 μL Urine + 10 μL 15 μM isoproterenol + 25 μL 800 μM 3,4-dihydroxyphenylpropanoic acid + 500 μL 1 M perchloric acid, mix, centrifuge at 4° at 1000 g for 15 min. Remove a 700 μL aliquot of the supernatant and adjust the pH to 1.5-2.0 with about 130 μL 2 M potassium carbonate, centrifuge at 4° at 1000 g for 5 min, add the supernatant to the SPE cartridge, wash with 1.5 mL water, wash with 500 μL EtOH:water 50:50, wash with 5 mL water, elute with 500 μL 1.5 M KCl in MeOH:100 mM HCl 7:93, filter (cellulose acetate membrane), inject a 100 μL aliquot of the filtrate.

HPLC VARIABLES
Column: 250 × 4.6 5 μm TSK-gel ODS-80TM (Tosoh)
Mobile phase: MeOH:buffer 7:93 (Buffer was 30 mM pH 2.5 citrate buffer containing 0.4 mM sodium octanesulfonate.)
Flow rate: 0.8
Injection volume: 100
Detector: F ex 350 em 480 following post-column reaction. The column effluent mixed with reagent A pumped at 0.3 mL/min and the mixture flowed through a 3 m × 0.5 mm ID stainless steel coil at 90°. The effluent from this coil mixed with reagent B pumped at 0.3 mL/min and the mixture flowed through a 10 m × 0.5 mm ID stainless steel coil at 90° and through a 1 m × 0.5 mm ID stainless steel cooling coil to the detector (Anal. Sci. 1991, 7, 257). (Reagent A was 10 mM sodium periodate containing 3 mM potassium ferricyanide. Reagent B was 30 mM meso-1,2-diphenylethylenediamine in EtOH:water 70:30 containing 130 mM sodium methylate.)

CHROMATOGRAM
Retention time: 20
Internal standard: isoproterenol (60)

SAMPLE
Matrix: blood, urine
Sample preparation: 2 mL Plasma or 1 mL urine + dihydroxybenzylamine + 20 mg Sigma WA4 alumina + 200 µL 1 M pH 8.6 Tris-EDTA buffer, mix for 10 min, discard plasma. Wash the alumina three times with 3 mL water and dry it. Add 125 µL 500 mM phosphoric acid, after 1 min inject a 100 µL aliquot. (Ann. Clin. Biochem. 1985, 22, 194-203)

HPLC VARIABLES
Column: 250 × 4.5 5 µm Ultratechsphere
Mobile phase: Per liter 75 mmol citric acid, 58.5 mmol NaH_2PO_4, 0.2 mmol disodium EDTA, and 4.4 mmol heptanesulfonic acid, pH adjusted to 3.4, made up to a final volume of 2 L, add 200 mL MeOH
Flow rate: 1
Injection volume: 100
Detector: E, ESA Coulochem conditioning cell +0.35 V, first electrode +0.05 V, second electrode -0.35 V

CHROMATOGRAM
Retention time: 8.18
Internal standard: dihydroxybenzylamine (10.53)
Limit of detection: 50 ng/mL

OTHER SUBSTANCES
Simultaneous: levodopa, metanephrine, norepinephrine, 3-methoxytyrosine, normetanephrine, dihydroxyphenylacetic acid, dopamine

KEY WORDS
plasma

REFERENCE
Dutton,J.; Copeland,L.G.; Playfer,J.R.; Roberts,N.B. Measuring L-dopa in plasma and urine to monitor therapy of elderly patients with Parkinson disease treated with L-dopa and a dopa decarboxylase inhibitor, *Clin.Chem.*, **1993**, *39*, 629–634.

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 µL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) µL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 µm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30

Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM
Retention time: 2.87

KEY WORDS
whole blood

SAMPLE
Matrix: enzyme incubations
Sample preparation: Prepare a SPE column by adding 500 μL of a 20% suspension of 19-40 μm Toyopak SP (strong cation-exchange sulfopropyl resin, Na^+ (Toyo Soda)) in water to a 35 × 6 column, wash with two 2 mL portions of 2 M NaOH, wash with 5 mL water, wash with 2 mL 2 M HCl, wash with 10 mL water. 350 μL Enzyme incubation at pH 8.5 + 50 μL 3 M trichloroacetic acid + 50 μL 2 μM isoproterenol, centrifuge at 4° at 1000 g for 10 min, add a 300 μL aliquot of the supernatant to the SPE column, wash with 10 mL water, wash with 3 mL 200 mM pH 5.5 phosphate buffer, wash with 10 mL water, elute with 2 mL EtOH:1 M NaCl 70:30. Add 100 μL 100 mM pH 6.7 1,2-diphenylethylenediamine in 100 mM HCl and 100 μL 15 mM potassium ferricyanide to the eluate, heat at 37° for 40 min, inject a 100 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 TSK-gel ODS-120T (Toyo Soda)
Mobile phase: MeCN:MeOH:50 mM pH 7.0 Tris-HCl buffer 52:3:45 (Wash with MeCN:MeOH: water 52:3:45 for 25 min at the end of each day.)
Flow rate: 1
Injection volume: 100
Detector: F ex 360 em 480

CHROMATOGRAM
Retention time: 8
Internal standard: isoproterenol (13)

SAMPLE

Matrix: solutions
Sample preparation: Dissolve in MeOH at a concentration of 1 mg/mL, inject a 20 μL aliquot.

HPLC VARIABLES

Column: 250 × 5 Spherisorb S5W
Mobile phase: MeOH:buffer 90:10 (Buffer was 94 mL 35% ammonia and 21.5 mL 70% nitric acid in 884 mL water, adjust the pH to 10.1 with ammonia.)
Flow rate: 2
Injection volume: 20
Detector: UV 254

CHROMATOGRAM

Retention time: 2.15 (tails)

OTHER SUBSTANCES

Simultaneous: monoacetylmorphine, thebacon, oxycodone, thebaine, norlevorphanol, methadone, benzylmorphine, ethylmorphine, morphine-N-oxide, codeine, codeine-N-oxide, morphine, ethoheptazine, morphine-3-glucuronide, pholcodeine, norpethidine, hydrocodone, dihydrocodeine, dihydromorphine, levorphanol, norcodeine, normorphine, pemoline, benzphetamine, diethylpropion, mazindol, tranylcypromine, caffeine, fenethyline, phendimetrazine, methylphenidate, phenelzine, chlorphentermine, norpseudoephedrine, phentermine, fenfluramine, methylenedioxyamphetamine, amphetamine, normetanephrine, 4-hydroxyamphetamine, bromo-STP, STP, prolintane, 2-phenethylamine, tyramine, trimethoxyamphetamine, phenylephrine, pseudoephedrine, ephedrine, methylephedrine, dimethylamphetamine, methamphetamine, mescaline, mephentermine, buprenorphine, dextromoramide, phenoperidine, fentanyl, etorphine, piritramide, noscapine, papaverine, naloxone, dextropropoxyphene, nalorphine, phenazocine, norpipanone, levallorphan
Noninterfering: dopamine, levodopa, methyldopa, methyldopate, norepinephrine
Interfering: pipradol, phenylpropanolamine, fencamfamin, hydroxypethidine, normethadone, meperidine, dipipanone, diamorphine, pentazocine, acetylcodeine

REFERENCE

Law,B.; Gill,R.; Moffat,A.C. High-performance liquid chromatography retention data for 84 basic drugs of forensic interest on a silica column using an aqueous methanol eluent, *J.Chromatogr.*, **1984**, *301*, 165–172.

SAMPLE
Matrix: solutions
Sample preparation: Inject a 250 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 Nucleosil 5-C18
Mobile phase: 50 mM Potassium perchlorate containing 250 μL/L 3% copper acetate in water and 10 g/L sodium acetate, pH adjusted to 4.45 with acetic acid
Flow rate: 1
Injection volume: 250
Detector: F ex 400 em 500 following post-column reaction. The column effluent flowed through the reactor then through a 3.5 m × 0.8 mm ID coil of PTFE tubing at 30°. The effluent from the coil mixed with reducing solution pumped at 1 (?) mL/min and this mixture flowed through a 2 m × 0.8 mm ID PTFE coil at 30° to the detector. (Prepare the reactor as follows. Dissolve 75.3 g manganese nitrate in 500 mL water, add 50 g 18-35 mesh silica gel (Macherey-Nagel), stir vigorously, slowly add 31.6 g potassium permanganate in 500 mL water, stir for 30 min, filter (500 μm sieve), wash until no permanganate color is left, dry in a desiccator, pack in a 50 × 2.1 stainless steel tube. The reducing solution was 266 g NaOH, 13.4 g anhydrous sodium sulfite, and 9 mL 2-mercaptoethanol in 1 L water. Note that some Nucleosil 5-C18 column packings do not give separation at pH 4.45. In this case it is necessary to use 50 mM perchloric acid as mobile phase and mix the column effluent with pH 4.4 sodium acetate buffer before it enters the reactor.)

CHROMATOGRAM
Retention time: 10
Limit of detection: 0.4 ng/mL

OTHER SUBSTANCES
Extracted: norepinephrine

SAMPLE
Matrix: urine
Sample preparation: Add disodium EDTA and sodium metabisulfite to urine. 100 μL Urine + 2 mL water, vortex, add 1 mL reagent 1, add 5 mL reagent 2, shake vigorously for 2 min, centrifuge at 2000 g for 2 min, freeze in dry ice/acetone. Remove the organic layer and add it to 200 μL 80 mM acetic acid and 2 mL n-octanol saturated with acetic acid, shake vigorously for 2 min, centrifuge at 2000 g for 2 min, freeze in dry ice/acetone until the aqueous layer is just solid, remove the organic layer. Thaw out the aqueous layer and add it to 1 mL reagent 1 and 5 mL reagent 2, shake vigorously for 2 min, centrifuge at 2000 g for 2 min, freeze in dry ice/acetone. Remove the organic layer and add it to 200 μL 80 mM acetic acid and 2 mL n-octanol saturated with acetic acid, shake vigorously for 2 min, centrifuge at 2000 g for 2 min, freeze in dry ice/acetone until the aqueous layer is just solid, remove the organic layer. Thaw out the aqueous layer and add 100 μL Bicine buffer, 250 μL MeCN, and 100 μL 100 mM 1,2-diphenylethylenediamine in 100 mM HCl, vortex, add 20 μL 20 mM potassium ferricyanide, vortex, heat at 37° for 40 min, cool to room temperature, inject a 100 μL aliquot. (Prepare

reagent 1 by dissolving 214 g ammonium chloride and 10 g disodium EDTA in 2 L water, adjust pH to 8.3-8.5 with concentrated ammonium hydroxide, add 4.0 g diphenylborate-ethanolamine complex, stir for several hours until a clear solution is obtained. Prepare reagent 2 by dissolving 2.5 g tetraoctylammonium bromide and 10 mL n-octanol (saturated with acetic acid) in 1 L n-heptane. Prepare Bicine buffer by dissolving 14.3 g Bicine (N,N-bis(2-hydroxyethyl)glycine) and 359 mg anhydrous sodium acetate in 45 mL water, stir overnight until dissolved, adjust pH to 7.30 with concentrated NaOH, make up to 50 mL with water. Note that concentration of 1,2-diphenylethylenediamine is not given in paper. Other authors have used 100 mM (J.Chromatogr. 1989, 487, 17; 1992, 574, 109; 1992, 583, 236).)

HPLC VARIABLES

Column: 150 × 4.6 5 μm Ultrasphere ODS
Mobile phase: Gradient. A was MeCN:MeOH:50 mM pH 7.0 sodium acetate buffer 40:10:50. B was MeCN:MeOH:50 mM pH 7.0 sodium acetate buffer 50:10:40. A:B 75:25 for 1 min, to 10:90 over 7 min, return to initial conditions over 1 min.
Flow rate: 1
Injection volume: 100
Detector: F ex 365 em 418 (cutoff filter)

CHROMATOGRAM

Retention time: 5
Limit of detection: <0.4 nM

OTHER SUBSTANCES

Extracted: dopamine, norepinephrine
Simultaneous: isoproterenol

KEY WORDS

derivatization; protect from light

SAMPLE

Matrix: urine
Sample preparation: Add 10-15 mL 6 M HCl to a 24 h volume of urine. 2 mL 3 M Tris buffer containing 30 mM EDTA + 500 μL 10 μM dihydrobenzylamide in 100 mM perchloric acid + 2 mL 3 M tris buffer containing 30 mM EDTA + 100 μL 5 M NaOH + 4 mL acidified urine, mix, add to a 1 mL SPE column containing 200 mg alumina (70-230 mesh-ASTM (Touzart et Matignon) at 3 mL/min, wash with 9 mL water at 12 mL/min, force through 0.5 mL air, elute with 1 mL 150 mM perchloric acid at 0.75 mL/min, mix eluate, inject a 100 μL aliquot. (The pH of the Tris buffer is such that the pH of the mixture applied to the SPE column is 7.75-8.0.)

HPLC VARIABLES

Column: 250 × 4.6 5 μm Nucleosil 100/C18
Mobile phase: MeOH:buffer 36:64 (Buffer was 75 mM NaH_2PO_4, 0.15 mM EDTA, and 6 mM sodium heptanesulfonate, pH 3.96.)
Flow rate: 1.25
Injection volume: 100
Detector: F ex 280 em 310

CHROMATOGRAM

Retention time: 7.6
Internal standard: dihydrobenzylamide hydrobromide (9.6)
Limit of detection: 10 nM

OTHER SUBSTANCES

Extracted: dopamine, norepinephrine
Simultaneous: levodopa, methyldopa

SAMPLE
Matrix: urine
Sample preparation: 100 μL Urine + 125 μL 218.6 nM α-methylnorepinephrine in 10 mM HCl + 1 mL 10 mM HCl + 1 mL reagent + 5 mL 4.6 mM tetraoctylammonium bromide in n-heptane: 1-octanol 99:1, shake for 2 min, centrifuge at 20° at 1000 g for 5 min, freeze in dry ice/acetone. Remove the organic phase and add it to 2 mL 1-octanol saturated with 80 mM acetic acid and 200 μL 80 mM acetic acid, shake, centrifuge at 20° at 1000 g for 5 min, freeze in dry ice/acetone. Discard the organic layer and add 1 mL 10 mM HCl to the aqueous layer, add 2 mL 1-octanol saturated with 80 mM acetic acid, add 150 μL 80 mM acetic acid, shake, centrifuge at 20° at 1000 g for 5 min, freeze in dry ice/acetone. Discard the organic layer and add 200 μL MeCN and 50 μL buffer to the aqueous layer, add 100 μL 100 mM 1,2-diphenylethylenediamine in 100 mM HCl, add 20 μL 20 mM potassium ferricyanide in water, heat at 37° in the dark for 1 h, inject a 50 μL aliquot. (Reagent was 8.9 mM diphenylborate-ethanolamine complex in 2 M pH 8.6 ammonia/ammonium chloride buffer containing 13.4 mM EDTA. Buffer was 1.75 M pH 7.05 bicine in water containing 1% EDTA. Recrystallize 1,2-diphenylethylenediamine from toluene:light petroleum (bp 60-80°) 10:90, dry overnight at 60°.)

HPLC VARIABLES
Column: 100 × 4.6 3 μm Cp MicroSpher C18 (Chrompack)
Mobile phase: MeCN:MeOH:50 mM pH 7.0 sodium acetate 40:8:50 (At the end of the day flush column with 60 mL MeCN:MeOH:water 70:10:20.)
Flow rate: 1
Injection volume: 50
Detector: F ex 350 em 480

CHROMATOGRAM
Retention time: 4
Internal standard: α-methylnorepinephrine (Janssen, Beerse, Belgium) (3)
Limit of quantitation: 1.6 nM

SAMPLE
Matrix: urine
Sample preparation: Condition a 10 × 2 20 mg 15-25 μm PLRP-S polymer-based SPE cartridge (Spark Holland) with 1 mL MeOH, with 0.5 mL water, and with 1.5 mL 200 mM pH 8.5 ammonia/ammonium chloride buffer containing 0.05% EDTA. Collect 24 h urine with 10 mL 6 M HCl, final pH 1-3. Dilute 4-fold with buffer. Inject a 200 μL aliquot onto the SPE cartridge, wash with 1 mL 200 mM pH 8.5 ammonia/ammonium chloride buffer containing 0.05% EDTA,

wash with 250 μL MeOH:200 mM pH 8.5 ammonia/ammonium chloride buffer 20:80, wash with water at 1 mL/min for 2.25 min. Elute the contents of the SPE cartridge onto column A with the mobile phase for 30 s then remove the SPE cartridge from the circuit, elute column A with mobile phase onto column B, after 1.25 min elute column A to waste with mobile phase and elute column B with mobile phase, monitor the effluent from column B. (Buffer was 2 M pH 8.5 ammonia/ammonium chloride containing 0.5% EDTA, 0.1% diphenylborate, and 18 ng/mL dihydroxybenzylamine.)

HPLC VARIABLES
Column: A 30 × 4.6 C18 (Brownlee); B 250 × 4.6 5 μm Ultrasphere IP C18
Mobile phase: MeCN:MeOH:buffer 15:8:100, apparent pH adjusted to 3.2 with 1.5 M orthophosphoric acid (Buffer was 50 mM KH_2PO_4 containing 1 mM sodium heptane sulphate and 0.07 mM EDTA.)
Flow rate: 0.8
Injection volume: 200
Detector: E, ESA Model 5100A, Model 5021 conditioning cell, Model 5011 analytical cell, oxidizing electrode +350 mV, screen electrode +100 mV, quantifying electrode -300 mV

CHROMATOGRAM
Retention time: 7
Internal standard: dihydroxybenzylamine (8)
Limit of detection: 2 ng/mL

OTHER SUBSTANCES
Extracted: norepinephrine, dopamine

Matrix: blood, tissue

Sample preparation: Plasma. Condition a 100 mg C8 Bond Elut SPE cartridge with 2 mL MeOH and 2 mL 10 μg/mL desipramine hydrochloride in 50 mM pH 7 sodium phosphate buffer. Add 300 μL plasma to the SPE cartridge, wash with 1 mL water, wash with 1 mL 10 μg/mL desipramine hydrochloride in 50 mM pH 7 sodium phosphate buffer, elute with 500 μL MeOH. Evaporate the eluate under a stream of nitrogen, reconstitute in 300 μL mobile phase, inject a 100 μL aliquot. Tissue. Tissue + 1 volume MeOH + 2 volumes 1 M pH 8.5 Tris buffer, homogenize, let stand on ice for 15 min, add 7 volumes MeCN containing daunorubicin, vortex, let stand at room temperature for 15 min, centrifuge, inject a 100 μL aliquot of the supernatant.

HPLC VARIABLES

Column: 150 × 4.6 5 μm Supelcosil LC-8-DB
Mobile phase: MeCN:50 mM pH 1.8 phosphoric acid 27:73
Flow rate: 1.5
Injection volume: 100
Detector: F ex 473 em 593

CHROMATOGRAM

Retention time: 4.5
Internal standard: daunorubicin (for tissue)
Limit of detection: 4 ng/mL

OTHER SUBSTANCES

Extracted: metabolites

KEY WORDS

plasma; rat; liver; pharmacokinetics; SPE

REFERENCE

SAMPLE

Matrix: blood, tissue
Sample preparation: Homogenize (UltraTurrax T25) tissue with 5 volumes of MeOH:water 5:95 at 13500 rpm for about 2 min, centrifuge at 3200 g for about 2 min, remove the supernatant, centrifuge at 4000 g for 2 min, dilute 1:10 with MeOH:water 5:95. Inject a 50 μL aliquot of plasma or tissue homogenate onto column A with mobile phase A, elute column A with mobile phase A to waste for 10 min, backflush the contents of column A onto column B with mobile phase B, after 5 min remove column A from the circuit and flush it to waste with mobile phase A, elute column B with mobile phase B and monitor the effluent.

HPLC VARIABLES

Column: A 20 × 4 25 μm C4-alkyl-diol silica (Pinkerton type); B 250 × 4 5 μm LiChrospher 60 RP-Select B
Mobile phase: A MeOH:water 5:95; B MeCN:buffer 30:70 (Buffer was 0.1% triethylamine in water adjusted to pH 2.0 with trichloroacetic acid.)
Flow rate: 1
Injection volume: 50
Detector: F ex 445 em 560

CHROMATOGRAM

Retention time: 9
Limit of detection: 25 pg
Limit of quantitation: 50 pg

OTHER SUBSTANCES

Extracted: metabolites

SAMPLE

Matrix: blood, urine

Sample preparation: Condition a C18 Sep-Pak SPE cartridge with 3 mL MeOH, 3 mL MeOH:water 50:50, and 10 mL 50 mM pH 8.9 Na_2HPO_4. 1 mL Plasma or urine + 200 ng daunorubicin + 2 mL 0.9% NaCl, mix, add to the SPE cartridge, wash with 3 mL 50 mM pH 8.9 Na_2HPO_4, elute with four 500 μL aliquots of chloroform:MeOH 2:1. Evaporate the eluates to dryness under vacuum while centrifuging, dissolve the residue in 200 μL MeCN:7 mM pH 2.6 Na_2HPO_4 40:60, vortex gently, centrifuge at 3000 g for 15 min, inject an aliquot of the supernatant.

HPLC VARIABLES

Column: 100 × 8 μBondapak phenyl Radial-Pak

Mobile phase: MeCN:buffer 30:70 (Buffer was 7 mM Na_2HPO_4 adjusted to pH 2.6 with formic acid.)

Flow rate: 3

Detector: F ex 480 em 550

CHROMATOGRAM

Internal standard: daunorubicin

Limit of quantitation: 0.6 ng/mL

OTHER SUBSTANCES

Extracted: metabolites

Epoetin

Molecular formula: $C_{809}H_{1301}N_{229}O_{240}S_5$
Molecular weight: 30400 ± 400
CAS Registry No.: 113427-24-0 (alfa), 122312-54-3 (beta)
Merck Index: 3729

SAMPLE
Matrix: dialysate
Sample preparation: Equilibrate 7 mL pre-swollen DEAE-Sephacel gel (Pharmacia) with acetate buffer (40 mM acetic acid + 2.5 mM calcium chloride adjusted to pH 4.5 with 1 M NaOH), pour the gel into a 1 cm diameter column. Add the dialysate (corresponding to 3.7 mg epoetin) to the column at a flow rate of 0.5 mL/min. Elute starting with pH 4.5 acetate buffer and continuing with pH 4.5 acetate buffer containing 15, 30, 60, 150, 350, and 1000 mM NaCl. Collect seven fractions at elution volumes of about 0-35 mL, 35-70 mL, 70-125 mL, 125-160 mL, 160-185 mL, 185-195 mL, and 195-210 mL, adjust the pH of each fraction to 7.5 with 1 M Tris, concentrate by ultra-filtration on PM 10 Amicon membranes, inject an aliquot of the filtrate.

HPLC VARIABLES
Column: 600 × 7.5 TSK G 2000 SW (Pharmacia)
Mobile phase: 20 mM pH 7.4 HEPES-NaOH buffer containing 150 mM NaCl
Flow rate: 0.5
Injection volume: 100
Detector: UV 280

REFERENCE

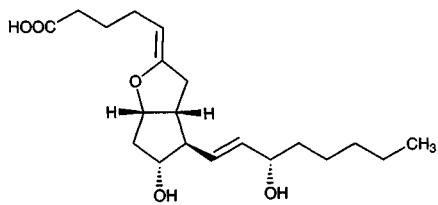
Epoprostenol



Molecular formula: $C_{20}H_{32}O_5$
Molecular weight: 352.47
CAS Registry No.: 35121-78-9, 61849-14-7 (sodium salt)
Merck Index: 8061
Lednicer No.: 3 10

SAMPLE
Matrix: solutions
Sample preparation: Prepare a 1 mg/mL solution in 10 mM NaOH, inject a 20-100 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.1 10 μm PRP-1 styrene-divinylbenzene copolymer (Hamilton)
Mobile phase: MeCN:10 mM NaOH 21:79, measured pH 12.3 (At the end of each day clean the column with 40 mL water and 20 mL MeCN.)
Flow rate: 1
Injection volume: 20-100

Detector: UV 206

CHROMATOGRAM
Retention time: 4.5
Limit of quantitation: 5 μg/mL

OTHER SUBSTANCES
Simultaneous: 6-ketoprostaglandin F1α, 6-ketoprostaglandin E1, prostaglandin A2, prostaglandin B2, prostaglandin D2, dinoprost, dinoprostone, thromboxane B2

REFERENCE

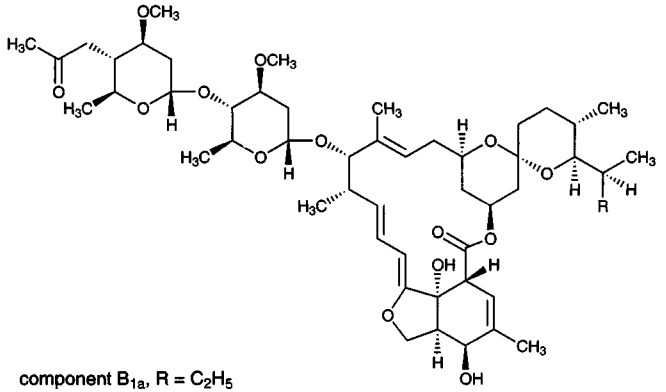
Eprinomectin

Molecular formula: $C_{50}H_{75}NO_{14}$ (component B_{1a}), $C_{49}H_{73}NO_{14}$ (component B_{1b})
Molecular weight: 914.14 (component B_{1a}), 900.12 (component B_{1b})
CAS Registry No.: 123997-26-2, 133305-88-1 (component B_{1a}), 133305-89-2 (component B_{1b})
Merck Index: 3667



component B_{1a}, R = C_2H_5

component B_{1b}, R = CH_3

SAMPLE
Matrix: blood
Sample preparation: Mix 1 mL plasma with 2 ng IS, add 3 mL MeCN, vortex for 60 s centrifuge at 3000 rpm for 12 min. Add 1 mL water, vortex, centrifuge. Condition a 3 mL 200 mg C18 SPE cartridge (Waters) with 4 mL MeCN, 4 mL MeCN:chloroform 1:1 containing 0.1% 1-methylimidazole, 4 mL MeCN and 4 mL 100 mM sodium phosphate buffer. Add the supernatant to the SPE cartridge, wash with two 4 mL portions of MeCN:water 1:2, dry under positive nitrogen pressure for 3 min. Elute with 5 mL MeCN:chloroform 50:50 containing 0.1% 1-methylimidazole, evaporate the eluate to dryness under a stream of nitrogen at 45° for 55 min. Reconstitute the dry residue in 100 μL MeCN:1-methylimidazole 70:30 and vortex. Add 150 μL MeCN:trifluoroacetic anhydride 70:30, mix, inject a 100 μL aliquot. (Caution! Chloroform is a carcinogen!)

HPLC VARIABLES
Guard column: Zorbax ODS
Column: 250 × 4.6 Zorbax RX-C18
Mobile phase: Gradient. A was MeCN:MeOH:water:triethylamine:orthophosphoric acid 50:44:6:0.2:0.2. B was MeCN:MeOH:water:triethylamine:orthophosphoric acid 50:40:10:0.2:0.2. A:B 0:100 for 12 min, to 100:0 over 2 min, 100:0 for 11 min, re-equilibrate at 0:100 for 3 min.
Column temperature: 30

Flow rate: 1
Injection volume: 100
Detector: F ex 365 em 475

CHROMATOGRAM
Retention time: 11.5

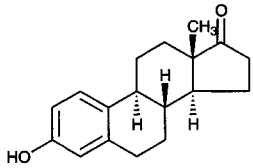
Equilin



Molecular formula: $C_{18}H_{20}O_2$
Molecular weight: 268.36
CAS Registry No.: 474-86-2
Merck Index: 3676

SAMPLE

Matrix: blood

Sample preparation: Mix 9.7 mL antiserum (*J. Steroid Biochem.* 1980, 13, 1291) with 34 mL 0.4% rivanol solution, vortex on ice for 10 min, centrifuge at 3000 rpm at 4° for 10 min. Add 1.1 g activated charcoal to the supernatant, stir for 15 min on ice, centrifuge at 3000 rpm for 10 min, filter (0.45 μm). Lyophilize, add 3.5 mL pH 7.6 sodium phosphate buffer, determine the content of protein, add 2.2 mL Affi-gel 10 (Bio-Rad, pre-rinsed with 10 mL water and pH 7.6 sodium phosphate buffer). Stir the suspension at 4° overnight, add 220 μL mL 1 M pH 8.0 ethanolamine, stir the adsorbent for 1 h, wash with 200 mL water, 200 mL MeCN:water 90:10, and 100 mL sodium phosphate buffer until the absorbance of the eluate at 280 nm disappears. Pack a 1 mL portion into a 6 mm diameter pipette tip (silanized with trichloromethylsilane), wash with 10 mL water and 10 mL pH 7.3 phosphate buffer. Add 1 mL plasma to the immunoaffinity column, wash with 5 mL water. Elute with 4 mL MeCN:water 90:10, inject a 50 μL aliquot.

HPLC VARIABLES

Column: A 150 × 4.6 5 μm Cosmosil AR (Nacalai Tesque Inc.); B 150 × 1 5 μm Capcell Pak C18

Mobile phase: A MeCN:MeOH:60 mM pH 5.0 acetate buffer 30:9:60; B MeOH:100 mM pH 5.0 ammonium acetate buffer 10:40

Flow rate: 1 (A),0.005 (B)

Injection volume: 50

Detector: E, ESA Coulochem 510 A, + 100 mV for first electrode, + 800 mV for the second electrode (A); MS, Hitachi M-1000H, ESI, drift voltage -50 V, nebulizer 150°, m/z 413 (B)

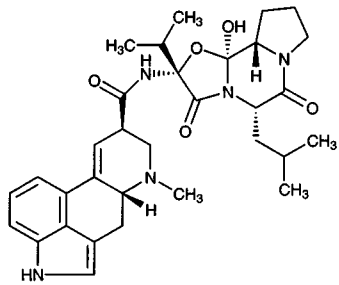
Ergoloid mesylates

Molecular formula: $C_{36}H_{45}N_5O_8S$
Molecular weight: 707.85
CAS Registry No.: 8067-24-1
Merck Index: 3692



Dihydroergocomine R = $CH(CH_3)_2$

Dihydroergocristine R = $CH_2C_6H_5$

Dihydro-α-ergocryptine R = $CH_2CH(CH_3)_2$

Dihydro-β-ergocryptine R = $CH(CH_3)CH_2CH_3$

SAMPLE

Matrix: blood

Sample preparation: 1 mL Plasma + 50 μL 1 μg/mL dihydroergotamine mesylate in water + 30 μL 5 M NaOH + 7 mL chloroform, shake on a reciprocal shaker for 10 min, centrifuge at 2000 g for 15 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue in 100 μL mobile phase, inject a 10-30 μL aliquot.

HPLC VARIABLES

Column: 250 × 4 10 μm RP-8 (Merck)
Mobile phase: MeCN:buffer 60:40 (Buffer was 9 mM NaH_2PO_4 and 9 mM Na_2HPO_4, pH 7.2.)
Flow rate: 1

Injection volume: 10-30
Detector: UV 223 or F ex 295 em 350

CHROMATOGRAM
Retention time: 7.9 (dihydroergocristine)
Internal standard: dihydroergotamine mesylate (5.2)
Limit of detection: 0.5-0.7 ng/mL (F), 5-10 ng/mL (UV)

OTHER SUBSTANCES
Simultaneous: dihydroergocornine, dihydroergocryptine

KEY WORDS
plasma; rat

REFERENCE

SAMPLE
Matrix: blood, urine, tissue
Sample preparation: Homogenize tissue with 4 volumes of water, centrifuge. 1 mL Plasma, urine, or tissue homogenization supernatant + 50 μL 1 (plasma) or 10 (urine, tissue) μg/mL α-dihydroergocristine + 100 μL 1 M HCl, vortex, add 5 mL hexane, extract, centrifuge. Remove the aqueous phase and add it to 100 μL 2 M NaOH, extract with 7 mL chloroform, centrifuge. Remove 5 mL of the organic layer and evaporate it to dryness, reconstitute the residue in 70 μL mobile phase, inject a 50 μL aliquot.

HPLC VARIABLES
Column: 125 × 4 5 μm LiChrospher 100 RP 18
Mobile phase: MeCN:buffer 43:57 (Buffer was 10 mM pH 7.2 Na_2HPO_4/KH_2PO_4.)
Flow rate: 1
Injection volume: 50
Detector: F ex 295 em 350

CHROMATOGRAM
Retention time: 8.9 (dihydroergocriptine)
Internal standard: α-dihydroergocristine (10.2)
Limit of detection: 2 ng/g (tissue), 10 ng/mL (urine), 0.1 ng/mL (plasma)

KEY WORDS
rat; plasma; kidney; heart; lung; spleen; liver; brain; pharmacokinetics

SAMPLE

Matrix: formulations
Sample preparation: Injections. 1 mL Injection (200 μg/mL) + 300 mg NaCl + 200 μL 10% ammonia + 5 mL dichloromethane, shake vigorously for 10 min, let stand for a few min. Remove 4 mL of the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 4 mL water, mix an aliquot with an equal volume of 20 μg/mL 17α-hydroxyprogesterone in MeOH, inject a 20 μL aliquot. Tablets. Weigh out amount of powdered tablets equivalent to about 200 μg compound, add 1 mL water, sonicate for 2 min, add 300 mg

NaCl, add 200 μL 10% ammonia, add 5 mL dichloromethane, shake vigorously for 10 min, let stand for a few min. Remove 4 mL of the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 4 mL water, mix an aliquot with an equal volume of 20 μg/mL 17α-hydroxyprogesterone in MeOH, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 150 × 4 5 μm LiChrosorb RP-18
Mobile phase: MeCN:50 mM pH 3.5 acetate buffer 40:60 containing 1.5 mM triethylamine
Column temperature: 30
Flow rate: 1
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 7.5
Internal standard: 17α-hydroxyprogesterone (12)

OTHER SUBSTANCES
Simultaneous: benzyl alcohol, methylergonovine
Noninterfering: ascorbic acid

KEY WORDS
injections; tablets

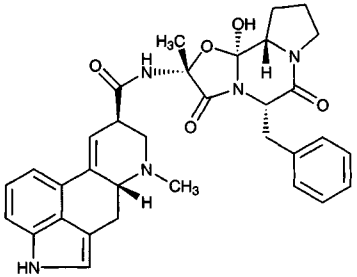
Ergotamine

Molecular formula: $C_{33}H_{35}N_5O_5$
Molecular weight: 581.67
CAS Registry No.: 113-15-5, 379-79-3 (tartrate)
Merck Index: 3703



SAMPLE

Matrix: formulations
Sample preparation: Grind tablet, add 100 μL 90% formic acid for each 100 μg ergotamine tartrate, swirl to thoroughly wet sample, make up to 100 mL with MeOH, mix, filter (paper), dilute filtrate with MeOH (if necessary) so that the ergotamine tartrate concentration is 3 mg/L, inject an aliquot.

HPLC VARIABLES

Column: 250 × 4.6 C18 (Alltech)
Mobile phase: MeCN:water:triethylamine 70:30:0.05
Flow rate: 1
Injection volume: 20
Detector: F ex 250 em 430

CHROMATOGRAM

Retention time: 4

OTHER SUBSTANCES

Simultaneous: ergonovine, ergotaminine
Noninterfering: caffeine

KEY WORDS

tablets

SAMPLE
Matrix: wheat
Sample preparation: Grind wheat to pass 2 mm screen. 25 g Ground wheat + 10 mL 4% ammonia in water + 100 mL ethyl acetate, shake vigorously on a wrist-action shaker for 15 min, filter (paper). Extract 50 mL filtrate twice with 25 mL 1% sulfuric acid. Combine aqueous extracts, add 50 mL 4% ammonia in water, extract twice with 25 mL dichloromethane shaking gently for 30 s each time. Dry extracts over 10-20 g anhydrous sodium sulfate for 10 min in the dark, filter, wash solid with 25 mL dichloromethane. Evaporate filtrate to near dryness at 40° under reduced pressure, rinse into a tube with two 2 mL portions of dichloromethane, evaporate to dryness under a stream of nitrogen, reconstitute in 1 mL mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 10 μm PRP-1 polystyrene-divinylbenzene (Hamilton)
Mobile phase: MeCN:water 45:55 containing 6.6 g/L $(NH_4)_2HPO_4$
Flow rate: 0.3
Injection volume: 20
Detector: F ex not specified em 418 (cut-off filter)

CHROMATOGRAM
Retention time: 15
Limit of detection: < 95 ng/g

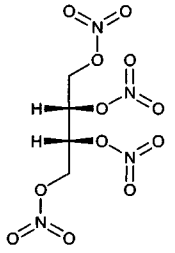
Erythrityl tetranitrate



Molecular formula: $C_4H_6N_4O_{12}$
Molecular weight: 302.11
CAS Registry No.: 7297-25-8
Merck Index: 3716

SAMPLE
Matrix: formulations
Sample preparation: Powder tablets, weigh out a portion equivalent to 3 mg erythrityl tetranitrate, add to 10 mL 75 μg/mL nitroglycerin in MeOH, sonicate for 2 min, shake mechanically for 30 min, filter, inject an aliquot

HPLC VARIABLES
Guard column: 40 × 4.6 μBondapak C18/Corasil
Column: 300 × 3.9 10 μm μBondapak C18
Mobile phase: MeOH:water 40:60
Flow rate: 1
Injection volume: 20
Detector: UV 220

CHROMATOGRAM
Retention time: 31
Internal standard: nitroglycerin (14)

OTHER SUBSTANCES
Simultaneous: pentaerythritol tetranitrate, isosorbide dinitrate

KEY WORDS
tablets

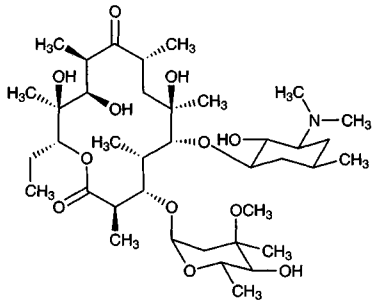
Erythromycin



Molecular formula: $C_{37}H_{67}NO_{13}$
Molecular weight: 733.94
CAS Registry No.: 114-07-8, 41342-53-4 (ethylsuccinate), 96128-89-1 (acistrate), 3521-62-8 (estolate), 304-63-2 (gluheptonate), 23067-13-2 (gluheptonate), 3847-29-8 (lactobionate), 134-36-1 (propionate), 643-22-1 (stearate), 84252-03-9 (stinoprate)
Merck Index: 3720

SAMPLE
Matrix: blood, tissue
Sample preparation: Homogenize (Physcotron) liver with 4 volumes of ice-cold saline. Evaporate 100 μL 3 μg/mL oleandomycin in MeOH to dryness under dry nitrogen. Put 200 μL plasma or liver homogenate into the tube. Add 2 mL MTBE and 5 μL 1 M NaOH and shake mechanically for 5 min. Centrifuge at 1500 g for 10 min, transfer the upper layer transfer into a glass tube and evaporate it to dryness under dry nitrogen. Rinse the inner wall of the tube with 200 μL MeOH and evaporate to dryness. Dissolve the residue in 30 μL MeOH and inject a 10 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 5 μm Cosmosil 5-C18 (Nacalai Tesque)
Mobile phase: MeCN:100 mM pH 6.6 sodium acetate buffer 50:50
Flow rate: 0.6
Injection volume: 10
Detector: E, 1.1 V, Ag/AgCl reference electrode IS oleandomycin (8.5)

CHROMATOGRAM
Retention time: 12.8
Limit of detection: 100 μg/mL (plasma); 0.5 μg/g (liver)

SAMPLE
Matrix: bulk, formulations
Sample preparation: Erythromycin estolate bulk. Dissolve the bulk powder in mobile phase B for a final concentration of 5-6 mg/mL and sonicate for 30 s. Inject an aliquot. Erythromycin estolate capsules. Powder the contents of capsules. Prepare a 5 mg/mL suspension in mobile

phase B, sonicate for 2 min, filter (0.45 μm), discard the first 5 mL of the filtrate. Inject an aliquot. Erythromycin ethylsuccinate powder. Prepare as described for estolate. Erythromycin ethylsuccinate tablets. Powder the tablets, prepare a 15 mg/mL suspension in mobile phase B, sonicate for 2 min, filter (0.45 μm). Discard the first few mL of filtrate. Inject an aliquot. Erythromycin ethylsuccinate powder for oral suspension. Prepare a 500 mg/mL suspension in 100 mL mobile phase B, sonicate for 15 min, make up the supernatant to 100 mL with mobile phase B, filter (0.45 μm). Inject an aliquot. Erythromycin stearate powder. Prepare a 5-6 mg/mL solution in MeOH, inject an aliquot. Erythromycin stearate tablets. Powder the tablets and prepare a 30 mg/mL suspension in MeOH, sonicate for 5 min, filter (0.45 μm), discard the first few mL of the filtrate, inject an aliquot.

HPLC VARIABLES

Guard column: 5 μm Inertsil ODS-2
Column: 150 × 4.6 5 μm Inertsil ODS-2 (A) or 250 × 4.6 5 μm Inertsil ODS-2 (B)
Mobile phase: Gradient. A was MeCN:buffer 10:90. B was MeCN:buffer 75:25. A:B from 90:10 to 0:100 over 10 min, maintain at 0:100. (Prepare mobile phase A as follows. Mix 60 mL 200 mM pH 6.5 ammonium phosphate buffer with 60 mL 200 mM pH 6.5 tetrabutylammonium sulfate buffer and 200 mL water. Add 100 mL MeCN and make up to 1 L with water. Prepare mobile phase B as described for A except use 750 mL MeCN.)
Column temperature: 50
Flow rate: 1.3
Injection volume: 50
Detector: UV 205

CHROMATOGRAM

Retention time: 9.5 (estolate, column A), 14.5 (ethylsuccinate, column A), ca. 26 (stearate, column B), ca. 26 (gluceptate, column B), ca. 26 (lactobionate, column B)

OTHER SUBSTANCES

Simultaneous: degradation products

KEY WORDS

powder; capsules; tablets

SAMPLE

Matrix: tissue
Sample preparation: Condition a 1 mL 100 mg Bond-Elut diol SPE cartridge with 1 mL chloroform (Caution! Chloroform is a carcinogen!). Mix 2 g minced muscle tissue with 800 μL water. Stir, vortex for 1 min at maximum speed, let stand for 15 min. Add 2 mL pH 8 buffer, mix briefly, add 10 mL chloroform. Stir at 100 rpm for 15 min, centrifuge at 4000 g for 10 min, discard the aqueous layer, filter the chloroform layer through glass wool. Add the filtrate to the SPE cartridge, wash with 500 μL chloroform, dry under vacuum, elute with three 200 μL portions of MeOH:100 mM ammonium acetate 50:50, inject a 200 μL aliquot of the eluate. (Buffer was 33.46 g K_2HPO_4 and 1.046 g KH_2PO_4 in 1 L water.)

HPLC VARIABLES

Guard column: 4 × 4 5 μm C18
Column: 125 × 4 5 μm Lichrospher RP18
Mobile phase: Gradient. A was MeCN. B was MeOH. C was 0.1% trifluoroacetic acid in water. A:B:C from 20:20:60 to 25:55:20 in 10 (?) min
Flow rate: 0.5
Injection volume: 200
Detector: MS, HP Model 5989 A, desolvation chamber 60°, source 280° and 300° in negative and positive chemical ionization mode, respectively, with methane as reagent, quadrupole 100°, particle beam nebulizer helium 345 kPa, scan m/z 442.3-619.4 in NCI and 734.4-576.2 in PCI

CHROMATOGRAM

Retention time: 6.4

Limit of detection: 50 ng/g

OTHER SUBSTANCES

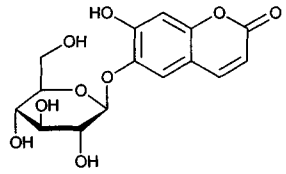
Esculin



Molecular formula: $C_{15}H_{16}O_9$
Molecular weight: 340.29
CAS Registry No.: 531-75-9
Merck Index: 3739

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 µL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) µL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 µm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 202.8

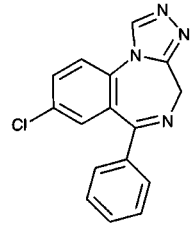
Estazolam



Molecular formula: $C_{16}H_{11}ClN_4$
Molecular weight: 294.74
CAS Registry No.: 29975-16-4
Merck Index: 3744

SAMPLE
Matrix: blood
Sample preparation: 500 μL Serum + 20 μL 20 μg/mL IS + 200 μL 1 M potassium carbonate + 3 mL chloroform, mix for 2 min, centrifuge at 1200 g for 5 min, aspirate aqueous phase. Evaporate the organic phase under a stream of nitrogen at 40°. Dissolve the residue in 100 μL mobile phase, inject a 20 μL aliquot. (Caution! Chloroform is a carcinogen!)

HPLC VARIABLES
Column: 100 × 4.6 2 μm TSK gel Super-ODS (A) or 100 × 4.6 5 μm Hypersil ODS-C18 (B)
Mobile phase: MeCN:5 mM pH 6 NaH_2PO_4 45:55
Flow rate: 0.65
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 10.7 (A), 41.3 (B)
Internal standard: diazepam (29.8 (A), 77.5 (B))
Limit of quantitation: 5 ng/mL (A)

OTHER SUBSTANCES

Extracted: bromazepam, chlordiazepoxide, clonazepam, etizolam, flutazolam, haloxazolam, lorazepam, nitrazepam, oxazolam, triazolam
Simultaneous: alprazolam
Noninterfering: barbital, carbamazepine, cloxazolam, ethosuximide, hexobarbital, mexazolam, oxazepam, pentobarbital, phenobarbital, phenytoin, primidone, trimethadione

KEY WORDS

serum

SAMPLE

Matrix: blood
Sample preparation: 1 mL Serum + 2 mL water + 2 mL 100 mM NaOH, mix gently, add 8 mL diethyl ether, shake for 15 min, centrifuge at 2500 rpm for 5 min. Remove 4 mL of the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue in 100 μL mobile phase, vortex for 30 s, inject a 50 μL aliquot.

HPLC VARIABLES

Column: 50 × 4.6 Shim-pack FLC-C8 (Shimadzu)
Mobile phase: MeOH:buffer 53:47 (Buffer was 5 mM Na_2HPO_4 adjusted to pH 6.0 with phosphoric acid.)
Flow rate: 0.6
Injection volume: 50
Detector: UV 254

CHROMATOGRAM

Retention time: 4
Internal standard: estazolam

OTHER SUBSTANCES

Extracted: diazepam, nordiazepam, clorazepate, temazepam, oxazepam
Simultaneous: sulpride, bromazepam, nitrazepam, flunitrazepam
Noninterfering: haloperidol, trihexyphenidyl
Interfering: triazolam

KEY WORDS

serum; estazolam is IS

SAMPLE

Matrix: blood
Sample preparation: 500 μL Plasma + 20 μL 2.5 μg/mL norprazepam in MeOH + 50 μL buffer + 6 mL diethyl ether:dichloromethane 2:1, agitate, centrifuge. Remove the organic phase and evaporate to dryness under vacuum at 45°, dissolve the residue in 50 μL MeOH, inject a 20 μL aliquot. (Prepare buffer as follows. Solution A was 6.18 g boric acid + 7.46 g KCl in 100 mL water. Solution B was 10.6 g sodium carbonate in 100 mL water. Mix 63 mL solution A and 37 mL solution B and adjust pH to 9.5.)

HPLC VARIABLES

Column: 150 × 4.6 5 μm Nova Pak C18
Mobile phase: MeCN:MeOH:buffer 23:13:64 (Buffer was 94 mL 200 mM NaH_2PO_4 + 6 mL 200 mM Na_2HPO_4, adjusted to pH 5.0 with 100 mM HCl.)

Flow rate: 1.3
Injection volume: 20
Detector: UV 242

CHROMATOGRAM
Retention time: 10.2
Internal standard: norprazepam (18.6)
Limit of quantitation: 30 ng/mL

OTHER SUBSTANCES
Simultaneous: alprazolam, bromazepam, chlordiazepoxide, clobazam, diazepam, flumazenil, flunitrazepam, loflazepate, nitrazepam, norflunitrazepam, tofizopam, triazolam
Noninterfering: acepromazine, aceprometazine, amylobarbital, aprobarbital, barbital, brallobarbital, butalbital, caffeine, carbamazepine, chlorpromazine, cyclobarbital, ethosuximide, heptabarbital, hexobarbital, loprazolam, medazepam, midazolam, pentobarbital, phenobarbital, phenytoin, prazepam, secobarbital, theophylline, thiopental, vinylbarbital
Interfering: oxazepam, clonazepam, lorazepam

KEY WORDS
plasma

REFERENCE

SAMPLE
Matrix: blood
Sample preparation: Inject 100-200 μL plasma onto column A with mobile phase A and elute to waste, after 5 min backflush the contents of column A onto column B with mobile phase B, after 5 min remove column A from the circuit, elute column B with mobile phase B, monitor the effluent from column B. Wash column A with MeCN:water 60:40 at 1 mL/min for 6 min then re-equilibrate with pH 7.5 buffer for 10 min.

HPLC VARIABLES
Column: A 45 × 4 12 μm TSK-gel G 3 PW (Tosohass); B 75 × 4.6 Ultrasphere ODS C18 3 μm
Mobile phase: A 50 mM pH 7.5 phosphate buffer; B Gradient. A was MeCN. B was 65 mM KH_2PO_4 + 1% diethylamine adjusted to pH 5.4 with phosphoric acid. A:B 22:78 for 5 min, to 25:75 over 10 min, to 60:40 over 15 min.
Flow rate: 1
Injection volume: 100-200
Detector: UV 230

CHROMATOGRAM
Retention time: 21.5

OTHER SUBSTANCES
Extracted: alprazolam, bromazepam, chlordiazepoxide, clobazam, clonazepam, clorazepate, clotiazepam, desmethylclobazam, desmethyldiazepam, diazepam, flunitrazepam, loflazepate, lorazepam, medazepam, nitrazepam, prazepam, temazepam, tetrazepam, tofisopam, triazolam
Noninterfering: carbamazepine, phenytoin, ethosuximide, phenobarbital, primidone, valproic acid
Interfering: oxazepam

KEY WORDS
plasma; column-switching

SAMPLE

Matrix: blood

Sample preparation: 2 mL Whole blood or plasma + 2 mL buffer + 5 mL chloroform:isopropanol: n-heptane 60:14:26, shake gently horizontally for 10 min, centrifuge at 2800 g for 10 min. Remove the lower organic layer and evaporate it to dryness under vacuum at 45°, reconstitute the residue in 100 μL mobile phase, centrifuge at 2800 g for 5 min, inject a 50 μL aliquot of the supernatant. (Buffer was saturated ammonium chloride solution 25% diluted with water, adjusted to pH 9.5 with 25% ammonia solution.)

HPLC VARIABLES

Column: 300 × 3.9 4 μm NovaPack C18

Mobile phase: MeOH:THF:buffer 65:5:30 (Buffer was 0.68 g/L (10 mM (sic)) KH_2PO_4 adjusted to pH 2.6 with concentrated orthophosphoric acid.) (At the end of each session wash the column with water for 1 h and MeOH for 1 h, re-equilibrate for 30 min.)

Column temperature: 30

Flow rate: 0.8

Injection volume: 50

Detector: UV 223

CHROMATOGRAM

Retention time: 3.94

Limit of detection: <120 ng/mL

Matrix: blood
Sample preparation: 0.5-1 mL Plasma + 1 mL 500 mM pH 7 phosphate buffer + 12 mL hexane: ethyl acetate 70:30, extract. Remove a 10 mL aliquot of the organic layer and evaporate it to dryness under a stream of nitrogen at 50°, reconstitute the residue in 100 μL mobile phase, inject a 20-50 μL aliquot. (Hydrolyze 500 μL plasma by adding 500 μL 200 mM pH 5 acetate buffer and 100 μL beef liver β-glucuronidase (Sigma) or 10 μL β-glucuronidase/sulfatase (Glusulase), heat at 37° overnight, add 1 mL 500 mM pH 7 phosphate buffer + 12 mL hexane:ethyl acetate 70:30, extract. Remove a 10 mL aliquot of the organic layer and evaporate it to dryness under a stream of nitrogen at 50°, reconstitute the residue in 100 μL mobile phase, inject a 20-50 μL aliquot.)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Partisil 5/25 silica gel
Mobile phase: Hexane:EtOH 92.5:7.5
Flow rate: 1.5
Injection volume: 20-50
Detector: F ex 195 em 250 (cut-off filter)

CHROMATOGRAM
Retention time: 7.2
Limit of detection: 20 ng/mL

OTHER SUBSTANCES
Extracted: estromustine, estrone, estradiol, metabolites

KEY WORDS
plasma; rat; dog; human; pharmacokinetics; normal phase

REFERENCE

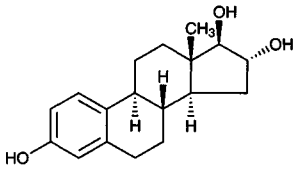
Estriol



Molecular formula: $C_{18}H_{24}O_3$
Molecular weight: 288.39
CAS Registry No.: 50-27-1, 113-22-4 (16,17-bis(sodium hemisuccinate))
Merck Index: 3750

SAMPLE

Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 µL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) µL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 µm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM

Retention time: 13.142

KEY WORDS

whole blood

SAMPLE
Matrix: microsomal incubations
Sample preparation: 1 mL Microsomal incubation + 5 mL ethyl acetate, vortex, centrifuge at 2000 g for 8 min, remove organic phase, repeat extraction. Combine the organic layers and evaporate them to dryness under a stream of nitrogen, reconstitute the residue in 100 μL MeOH:water 50:50, inject a 50 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 5 μm Ultracarb 30 ODS (Phenomenex)
Mobile phase: Gradient. MeCN:0.1% acetic acid in MeOH:0.1% acetic acid in water 16:12:72 for 3 min, to 20:21:59 over 25 min (Waters no. 3 convex gradient), to 24:23:53 over 10 min (linear), to 55:24:21 over 10 min (linear), to 92:5:3 over 1 min, maintain at 92:5:3 for 7 min, return to initial conditions over 15 min.
Flow rate: 1.2
Injection volume: 50

Detector: UV 280

CHROMATOGRAM
Retention time: 50

OTHER SUBSTANCES
Extracted: estradiol, metabolites

KEY WORDS
rat

SAMPLE
Matrix: solutions
Sample preparation: Prepare a 0.5 mg/mL solution in MeOH, inject a 5 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 Zorbax RX
Mobile phase: Gradient. A was 150 mM phosphoric acid and 50 mM triethylamine. B was MeCN: water 80:20 containing 150 mM phosphoric acid and 50 mM triethylamine. A:B 100:0 for 2.2 min then to 0:100 over 30 min.
Column temperature: 30
Flow rate: 2
Injection volume: 5
Detector: UV 210

CHROMATOGRAM
Retention time: 22.7

OTHER SUBSTANCES
Simultaneous: acetaminophen, aprobarbital, butabarbital, chlordiazepoxide, chloroxylenol, chlorpromazine, clenbuterol, cortisone, danazol, diflunisal, doxapram, fluoxymesterone, mefenamic acid, methyltestosterone, nicotine, oxazepam, phentermine, phenylpropanolamine, progesterone, sulfamethazine, sulfanilamide, testosterone propionate, tranylcypromine, tripelennamine

Interfering: testosterone

SAMPLE

Matrix: solutions

Sample preparation: Mix 10 μL 0.5 mM compound in anhydrous benzene containing 100 mM quinuclidine with 10 μL 25 mM DBD-COCl in anhydrous benzene (Caution! Benzene is a carcinogen!), heat at 60° for 15 min, add 980 μL MeCN:water:acetic acid 50:50:1, inject a 2 μL aliquot. (Purify quinuclidine by sublimation. DBD-COCl was 4-(N-chloroformylmethyl-N-methyl)amino-7-N,N-dimethylaminosulfonyl-2,1,3-benzoxadiazole. Synthesis of DBD-COCl is as follows. Dissolve 0.5 g magnesium sulfate heptahydrate and 6 g NaOH in 60 mL water, throughout the reaction keep the flask at about 20° with cold water cooling, add 15 mL 30% hydrogen peroxide, add 75 mL MeOH, add 12.1 g powdered benzoyl peroxide in one go, stir for 10 min, pour into 150 mL 20% sulfuric acid, extract three times with 50 mL portions of chloroform, determine peroxybenzoic acid concentration by iodometric titration (Tetrahedron 1967, 23, 3327). Slowly add 110 mL 1 M peroxybenzoic acid in chloroform to 7 g 2,6-difluoroaniline dissolved in 100 mL chloroform, stir at room temperature, when reaction is complete (iodometric titration) wash with 2% sodium thiosulfate, wash with 5% sodium carbonate, wash with water, dry over anhydrous sodium sulfate, evaporate to dryness under reduced pressure, recrystallize 2,6-difluoronitrosobenzene form EtOH (mp 108.5-109.5). Stir 8.5 g 2,6-difluoronitrosobenzene in 85 mL DMSO at room temperature and add a solution of 3.91 g sodium azide in 85 mL DMSO dropwise, let stand for about 1 h, add to a large volume of water, extract with ether, dry the extracts over anhydrous sodium sulfate, evaporate to dryness under reduced pressure and distil to give 4-fluoro-2,1,3-benzoxadiazole as a colorless oil (bp 83°/12 mm Hg) (J.Chem.Soc.(C) 1970, 1433). Add 11 mL chlorosulfonic acid dropwise to 3 g 4-fluoro-2,1,3-benzoxadiazole in 10 mL chloroform at 0-10° (use a calcium chloride drying tube), stir at room temperature for 1 h, reflux for 2 h, cool, slowly pour into ice water, remove the organic layer, extract the aqueous layer with chloroform, combine the organic layer, wash, dry over anhydrous magnesium sulfate, evaporate under reduced pressure, take up the residue in 5 mL benzene (Caution! Benzene is a carcinogen!), chromatograph on a 150 × 30 column of silica gel (100-200 mesh Kanto Chemical) with n-hexane:benzene 50:50, evaporate the appropriate fractions to give 4-(chlorosulfonyl)-7-fluoro-2,1,3-benzoxadiazole (CBD-F) as pale yellow needles (mp 64-66°) (Anal. Chem. 1984, 56, 2461). Stir 0.76 g CBD-F in 70 mL MeCN at 0-10° and add 1 g dimethylamine hydrochloride in 10 mL 100 mM pH 10 borax dropwise, adjust pH to 5 with 1 M HCl, concentrate to about 10 mL under reduced pressure, extract three times with 200 mL portions of diethyl ether, wash with water, dry over anhydrous magnesium sulfate, evaporate under reduced pressure, chromatograph on a 500 × 20 column of silica gel with chloroform, isolate the appropriate fraction and re-chromatograph on the same column with ethyl acetate: benzene 1:2 to give 4-(N,N-dimethylaminosulfonyl)-7-fluoro-2,1,3-benzoxadiazole (DBD-F) as white needles (mp 124-125°) (yield = 1% !) (Analyst 1989, 114, 413). On a Merck no. 5714 $60F_{254}$ tlc plate eluted with chloroform DBD-F has Rf 0.32 and lies between two other reaction products. It is also reported that DBD-F can be purchased from Tokyo Kasei (TCI America, Portland OR). Stir N-methylglycine and 2.3 g sodium carbonate in water at room temperature, add 880 mg DBD-F in 40 mL MeCN dropwise, stir for 1 h, evaporate to remove the MeCN, wash twice with 50 mL portions of ethyl acetate. Acidify the aqueous phase with HCl and extract it twice with 300 mL portions of ethyl acetate. Wash the organic layer twice with 100 mL portions of saturated aqueous NaCl, dry over anhydrous magnesium sulfate, evaporate to dryness under reduced pressure, recrystallize from ethyl acetate to give 4-(N-carboxymethyl-N-methyl)amino-7-dimethylaminosulfonyl-2,1,3- benzoxadiazole (DBD-COOH) as orange-yellow crystals (mp 209-210°). Add 3.5 mL oxalyl chloride and 24 μL DMF to 1 g DBD-COOH in anhydrous benzene, stir at room temperature for 30 min, reflux for 1 h, evaporate to dryness, add 20 mL dry benzene to the residue, filter, evaporate the filtrate to give 4-(N-chloroformylmethyl-N-methyl)amino-7-N,N-dimethylaminosulfonyl-2,1,3-benzoxadiazole (DBD-COCl) as yellow crystals (mp 102°).)

HPLC VARIABLES

Column: 150 × 4.6 5 μm Cosmosil 5C18

Mobile phase: Gradient. MeCN:water from 50:50 to 100:0 over 20 min, maintain at 100:0 for 1 h.

Flow rate: 1
Injection volume: 2
Detector: F ex 440 em 543

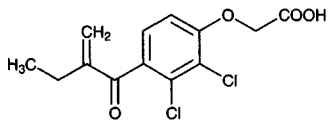
Ethacrynic acid



Molecular formula: $C_{13}H_{12}Cl_2O_4$
Molecular weight: 303.14
CAS Registry No.: 58-54-8, 6500-81-8 (sodium salt)
Merck Index: 3761
Lednicer No.: 1 120

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 20 μL 750 μg/mL 4-(2,4-dichlorophenoxy)butyric acid in MeOH + 20 μL MeOH, vortex briefly, add 3 mL 1 M HCl, vortex, add 5 mL ethyl acetate, rock for 5 min, centrifuge at 400 g for 5 min. Remove the upper ethyl acetate layer and evaporate it to dryness under a stream of nitrogen at 30°, reconstitute the residue in 400 μL MeCN:buffer 30:70, inject a 200 μL aliquot. (Buffer was water containing 0.25% triethylamine and 0.25% phosphoric acid.)

HPLC VARIABLES
Guard column: 15 × 3.2 7 μm Aquapore C18 (Brownlee)
Column: 100 × 4.6 5 μm Hypersil ODS C18
Mobile phase: MeCN:MeOH:buffer 13:32:55 (Buffer was water containing 0.25% triethylamine and 0.25% phosphoric acid.)
Flow rate: 2
Injection volume: 200
Detector: UV 280

CHROMATOGRAM
Retention time: 8.75
Internal standard: 4-(2,4-dichlorophenoxy)butyric acid (10.1)
Limit of detection: 100 ng/mL
Limit of quantitation: 500 ng/mL

SAMPLE

Matrix: urine

Sample preparation: 2 mL Urine + 0.5 g solid buffer I (pH 5-5.5), vortex 15 s, add 4 mL ethyl acetate, agitate for 10 min, centrifuge at 600 g for 5 min. Remove organic layer and vortex it with 2 mL 5% aqueous lead acetate for 10 s, centrifuge at 600 g for 5 min, remove and keep organic phase. 2 mL Urine + 0.5 g solid buffer II (pH 9-9.5), vortex 15 s, add 4 mL ethyl acetate, agitate for 10 min, centrifuge at 600 g for 5 min. Remove organic layer and combine it with previous organic layer. Evaporate to dryness at 50° under a stream of nitrogen, reconstitute in 300 μL 50 μg/mL β-hydroxyethyltheophylline in MeOH, inject 5 μL aliquot. (Solid buffer I was KH_2PO_4:Na_2HPO_4 99:1, solid buffer II was $NaHCO_3$:K_2CO_3 3:2.)

HPLC VARIABLES

Column: 250 × 4.6 5 μm HP Hypersil ODS (A) or HP LiChrosorb RP-18 (B)
Mobile phase: Gradient. MeCN:buffer from 15:85 at 2 min to 80:20 at 20 min (Buffer was 50 mM NaH_2PO_4 containing 16 mM propylamine hydrochloride, adjusted to pH 3 with concentrated phosphoric acid.)
Flow rate: 1
Injection volume: 5
Detector: UV 230, UV 275

CHROMATOGRAM

Retention time: 14.6 (A), 15.3 (B)
Internal standard: β-hydroxyethyltheophylline (3.7 (A), 4.4 (B))
Limit of detection: 5000 ng/mL

OTHER SUBSTANCES

Extracted: furosemide, metolazone, amiloride, acetazolamide, chlorothiazide, hydrochlorothiazide, quinethazone, triamterene, hydroflumethiazide, chlorthalidone, dichlorphenamide, trichloromethiazide, methyclothiazide, benzthiazide, cyclothiazide, polythiazide, bendroflumethiazide, probenecid, spironolactone, canrenone, flumethiazide
Noninterfering: acetaminophen, aspirin, caffeine, diflunisal, fenoprofen, ibuprofen, indomethacin, methocarbamol, naproxen, phenylbutazone, sulindac, tetracycline, theobromine, theophylline, tolmetin, trimethoprim, verapamil
Interfering: bumetanide

SAMPLE

Matrix: urine
Sample preparation: Make 5 mL urine alkaline (pH 9-10), add 2 g NaCl, extract twice with 6 mL ethyl acetate. Combine the organic layers and evaporate them to dryness under a stream of nitrogen, reconstitute the residue in 200 μL MeCN/water, inject a 10-20 μL aliquot.

HPLC VARIABLES

Column: 100 × 4 5 μm SGE 100 GL-4 C18P (Scientific Glass Engineering)
Mobile phase: MeCN:MeOH:water:trifluoroacetic acid 15:15:70:0.5
Flow rate: 0.8 or 1
Injection volume: 10-20
Detector: MS, ZAB2-SEQ (VG), PSP source coupled to LC, source 250°, probe 240-260°, scan m/z 200-550 or UV 270

CHROMATOGRAM

Retention time: 4.8
Limit of detection: 50 ng (by MS)

OTHER SUBSTANCES

Extracted: probenecid, bumetanide, spironolactone

REFERENCE

Ventura,R.; Fraisse,D.; Becchi,M.; Paisse,O.; Segura,J. Approach to the analysis of diuretics and masking agents by high-performance liquid chromatography-mass spectrometry in doping control, *J.Chromatogr.*, **1991**, *562*, 723–736.

SAMPLE

Matrix: urine

Sample preparation: Buffer urine to 4.9 by mixing with an equal volume of pH 4.9 200 mM sodium phosphate buffer. Inject a 40 μL aliquot onto column A with mobile phase A, after 3 min backflush the contents of column A onto column B with mobile phase B and start the gradient. At the end of the run re-equilibrate for 10 min.

HPLC VARIABLES

Column: A 20 × 4 5 μm Hypersil octadecylsilica ODS; B 200 × 4.6 5 μm Shiseido SG-120 polymer-based C18

Mobile phase: A water; B Gradient. MeCN:buffer from 7:93 to 15:85 over 3.5 min, to 50:50 over 8.5 min, maintain at 50:50 for 11 min (Buffer was 6.9 g $NaH_2PO_4.H_2O$ in 1 L water, pH adjusted to 3.1 with phosphoric acid.)

Flow rate: 1

Injection volume: 40

Detector: UV 230

CHROMATOGRAM

Retention time: 19.2

Limit of detection: 500 ng/mL

OTHER SUBSTANCES

Extracted: acetazolamide, amiloride, bendroflumethiazide, benzthiazide, bumetanide, caffeine, carbamazepine, chlorothiazide, chlorthalidone, clopamide, dichlorfenamide, furosemide, hydrochlorothiazide, metyrapone, probenecid, spironolactone, triamterene, trichlormethiazide

KEY WORDS

column-switching; optimum detection wavelengths vary for each drug

REFERENCE

Saarinen,M.; Sirén,H.; Riekkola,M.-L. A column switching technique for the screening of diuretics in urine by high performance liquid chromatography, *J.Liq.Chromatogr.*, **1993**, *16*, 4063–4078.

SAMPLE

Matrix: urine

Sample preparation: 5 mL Urine + 50 μL 100 μg/mL 7-propyltheophylline in MeOH + 200 μL ammonium chloride buffer + 2 g NaCl, extract with 6 mL ethyl acetate by rocking at 40 movements/min for 20 min and centrifuging at 800 g for 5 min, repeat extraction, combine organic layers, evaporate to dryness at 40° under a stream of nitrogen. Reconstitute in 200 μL MeCN: water 15:85 and inject 20 μL aliquots. (Ammonium chloride buffer was 28 g ammonium chloride in 100 mL water with the pH adjusted to 9.5 with concentrated ammonia solution.)

HPLC VARIABLES

Column: 75 × 4.6 3 μm Ultrasphere ODS

Mobile phase: Gradient. MeCN:100 mM ammonium acetate adjusted to pH 3 with concentrated phosphoric acid. From 10:90 to 15:85 over 2 min to 55:45 over 3 min to 60:40 over 3 min. Kept at 60:40 for 1 min, decreased to 10:90 over 1 min and equilibrated at 10:90 for 2 min.

Flow rate: 1

Injection volume: 20

Detector: UV 270

CHROMATOGRAM

Retention time: 6.9

Internal standard: 7-propyltheophylline (4.5)

Limit of detection: 200 ng/mL

OTHER SUBSTANCES

Simultaneous: xipamide, bumetanide, acetazolamide, amiloride, buthiazide, benzthiazide, canrenone, caffeine, clopamide, chlorthalidone, diclofenamide, cyclothiazide, furosemide, hydrochlorothiazide, mesocarb, morazone, piretanide, probenecid, spironolactone, torsemide, triamterene

Interfering: polythiazide, bendroflumethiazide

REFERENCE

SAMPLE

Matrix: urine
Sample preparation: Direct injection into column A with mobile phase A for 1 min then back flush onto column B with mobile phase B.

HPLC VARIABLES

Column: A 20 × 2.1 30 μm Hypersil ODS-C18; B 250 × 4 5 μm Hypersil ODS-C18
Mobile phase: A Water; B Gradient. MeCN:buffer 15:85 for 1.5 min then to 80:20 over 8 min. Keep at 80:20 for 2.5 min then re-equilibrate with 15:85. (Buffer was 50 mM NaH_2PO_4 + 1.4 mL propylamine hydrochloride per liter adjusted to pH 3 with concentrated phosphoric acid.)
Flow rate: 1
Injection volume: 50
Detector: UV 230

CHROMATOGRAM

Retention time: 10
Limit of detection: 200 ng/mL.

OTHER SUBSTANCES

Simultaneous: acetazolamide, amiloride, bendroflumethiazide, chlorthalidone, cyclothiazide, furosemide, hydrochlorothiazide, probenecid, spironolactone, triamterene
Interfering: bumetanide

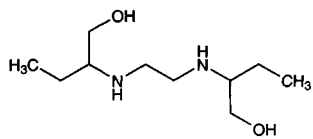
Ethambutol



Molecular formula: $C_{10}H_{24}N_2O_2$
Molecular weight: 204.31
CAS Registry No.: 74-55-5, 1070-11-7 (di HCl)
Merck Index: 3764
Lednicer No.: 1 222

SAMPLE

Matrix: blood
Sample preparation: Add 100 μL 8 ng/mL octylamine in MeCN and 100 μL 4 M NaOH to 100 μL plasma, extract with 4 mL chloroform (Caution! Chloroform is a carcinogen!), agitate for 10 min, centrifuge at 3000 rpm for 5 min, discard the aqueous phase. Add 100 μL 400 ng/mL phenylethylisocyanate in MeCN to the organic layer, mix for 1 min, evaporate to dryness under a stream of nitrogen, reconstitute the residue with 100 μL mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES

Guard column: 30 × 4.6 C18 (Interchim, France)
Column: 150 × 4.6 3 μm Hypersil C18
Mobile phase: MeOH:water 70:30
Flow rate: 1
Injection volume: 20
Detector: UV 200

CHROMATOGRAM
Retention time: 8.9
Internal standard: octylamine (13.7)
Limit of detection: 70 ng/mL
Limit of quantitation: 200 ng/mL

OTHER SUBSTANCES
Noninterfering: amphotericin B, dapsone, didanosine, fluconazole, isoniazid, itraconazole, pyrazinamide, pyrimethamine, rifampicin, rifabutine, sparfloxacin, zidovudine

KEY WORDS
derivatization; plasma

REFERENCE
Chenevier,P.; Massias,L.; Gueylard,D.; Farinotti,R. Determination of ethambutol in plasma by high-performance liquid chromatography after pre-column derivatization, *J.Chromatogr.B*, **1998**, *708*, 310–315.

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 2 mL 4 M NaOH + 100 μL 1 mg/mL IS + 8 mL chloroform, agitate for 20 min, centrifuge. Remove the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 100 μL MeCN, inject a 50 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 5 μm LiChrosorb Si 60
Mobile phase: MeCN:water 50:50 containing 0.04 mM copper sulfate and 2 M ammonia (The mobile phase was saturated with silica using a 250 × 4.6 column packed with 50 μm high-porosity silica (Alltech).)
Flow rate: 1.5
Injection volume: 50
Detector: UV 270

CHROMATOGRAM
Retention time: 5.7
Internal standard: (S,S)-N,N'-bis(hydroxymethyl-1-ethyl)ethylenediamine (7) (Reflux 5 mmoles 1,2-dibromoethane with 50 mmole (S)-2-aminopropan-1-ol at 110° for 25 min, cool to 30°, add 12 mmoles potassium in 5 mL propanol, cool in an ice bath, filter, concentrate the filtrate under reduced pressure, take up the residue in acetone:propanol 1:1, cool in an ice bath, filter, concentrate the filtrate under reduced pressure, add 1 mL EtOH, filter off the product, dry the IS.)
Limit of detection: 150 ng/mL

OTHER SUBSTANCES
Noninterfering: isoniazid, pyrazinamide, rifampin

KEY WORDS
plasma; derivatization; complexation; copper complexes

Détermination de l'éthambutol plasmatique par chromatographie liquide et détection spectrophotométrique ultraviolette [Determination of ethambutol in plasma by liquid chromatography and ultraviolet spectrophotometric detection], *J.Chromatogr.*, **1987**, *415*, 85–94.

SAMPLE
Matrix: blood, urine
Sample preparation: Plasma. 200 μL Plasma + 300 μL 5 M NaOH + 5 mL diethyl ether, vortex for 1 min, centrifuge at 1200 g for 3 min, remove the organic layer, repeat the extraction. Combine the organic layers and add them to 200 μL 10 mM phosphoric acid, vortex for 1 min, centrifuge at 1200 g for 3 min. Remove the aqueous phase and add it to 300 μL 200 mM pH 7.5 borate buffer, vortex for 10 s, add 40 μL 4 mg/mL 4-fluoro-7-nitrobenzo-2-oxa-1,3-diazole

in MeCN, heat at 80° for 30 min, add 50 μL 1 M phosphoric acid, cool in dry ice/acetone for 1 min, add 2 mL ethyl acetate, vortex for 1 min, centrifuge at 1200 g for 3 min. Discard the upper organic layer and add 50 μL 5 M NaOH to the lower aqueous phase, add 2 mL ethyl acetate:MeOH 90:10, mix for 1 min, centrifuge at 1200 g for 3 min. Remove the upper organic layer and evaporate it to dryness under a stream of nitrogen at 37°, reconstitute the residue in 250 μL 10 mM pH 2.5 phosphoric acid, inject a 200 μL aliquot. Urine. Dilute 100 μL urine to 20 mL with water. 200 μL Diluted urine + 300 μL 200 mM pH 7.5 borate buffer, vortex for 10 s, add 40 μL 4 mg/mL 4-fluoro-7-nitrobenzo-2-oxa-1,3-diazole in MeCN, heat at 80° for 30 min, add 50 μL 1 M phosphoric acid, cool in dry ice/acetone for 1 min, add 2 mL ethyl acetate, vortex for 1 min, centrifuge at 1200 g for 3 min. Discard the upper organic layer and add 50 μL 5 M NaOH to the lower aqueous phase, add 2 mL ethyl acetate:MeOH 90:10, mix for 1 min, centrifuge at 1200 g for 3 min. Remove the upper organic layer and evaporate it to dryness under a stream of nitrogen at 37°, reconstitute the residue in 1 mL 10 mM pH 2.5 phosphoric acid, inject a 200 μL aliquot.

HPLC VARIABLES

Guard column: 37-53 μm Pellicular ODS (Whatman)
Column: 250 × 4.6 5 μm Spherisorb CN
Mobile phase: MeCN:buffer 30:70 (Buffer was 10 mM phosphoric acid adjusted to pH 2.5 with 10 M KOH.)
Flow rate: 1
Injection volume: 200
Detector: F ex 490 em 540

CHROMATOGRAM

Retention time: 14
Limit of quantitation: 10 ng/mL (plasma), 10 μg/mL (urine)

KEY WORDS

derivatization; plasma; 4-chloro-7-nitrobenzo-2-oxa-1,3-diazole is a less reactive derivatizing reagent

REFERENCE

SAMPLE

Matrix: solutions
Sample preparation: Mix a 2 mL aliquot of a 25 nM (?) solution of ethambutol in benzene (Caution! Benzene is a carcinogen!) with 5 mL 400 mM (R)-(-)-α-methoxyphenylacetyl chloride in benzene and 300 μL pyridine, stir vigorously at 40° for 30 min, pour into 5 mL ether and 5 mL water. Remove the ether layer and wash it with 5 mL 5% HCl, dry over anhydrous magnesium sulfate, filter, evaporate to dryness under reduced pressure, reconstitute with 500 μL chloroform, inject a 5 μL aliquot. (Synthesis of (R)-(-)-α-methoxyphenylacetyl chloride is as follows. Reflux (R)-(-)-α-methoxyphenylacetic acid with a 5 to 10-fold excess of thionyl chloride on a steam bath for 5 min, add benzene, evaporate under reduced pressure, repeat this procedure 3 or 4 times to remove excess thionyl chloride, distil at 70-75°/0.2 mm Hg to give (R)-(-)-α-methoxyphenylacetyl chloride (J. Org. Chem. 1968, 33, 1142).)

HPLC VARIABLES

Column: 250 × 4 5 μm LiChrosorb Si 60
Mobile phase: Chloroform:ethyl acetate 90:10
Flow rate: 0.7
Injection volume: 5
Detector: UV 254

CHROMATOGRAM

Retention time: 9 (-), 9.5 (+), 10.2 (meso)

OTHER SUBSTANCES

Simultaneous: 2-amino-1-butanol

KEY WORDS
derivatization; normal phase; chiral

SAMPLE
Matrix: blood
Sample preparation: 100 µL Plasma + 10 µL IS in water, extract twice by shaking for 1 min with 1.2 mL dichloromethane, evaporate organic layer below 40° under reduced pressure, dissolve residue in 100 µL MeCN. Add 10 µL reagent 1, add 10 µL reagent 2, heat at 50° for 15 min, cool to room temperature, add 100 µL water, add 200 µL MeOH:water 1:1, add to Sep-Pak C18 cartridge, wash vial with 2 mL MeOH:water 1:1 and add washings to cartridge, wash cartridge with 40 mL MeOH:water 1:1, elute with 5 mL MeOH. Concentrate eluent to 500 µL by evaporation at 40° under reduced pressure, inject 20 µL aliquot. (Reagent 1 was 30 mg 2-(4-carboxyphenyl)-5,6-dimethylbenzimidazole in 3 mL pyridine, add 700 mg 4-piperidinopyridine, dilute to 10 mL with MeCN. Reagent 2 was 700 mg 1-isopropyl-3-(3-dimethylaminopropyl)carbodiimide perchlorate in 10 mL MeCN.)

HPLC VARIABLES
Guard column: 50 × 4 5 µm Wakosil 5C18
Column: 300 × 4 5 µm Wakosil 5C18
Mobile phase: MeOH:water 90:10
Flow rate: 0.7
Injection volume: 20
Detector: F ex 336 em 440

CHROMATOGRAM
Retention time: 15.4
Internal standard: sec-butyl p-hydroxybenzoate (14.3)
Limit of detection: 1-2 pg/mL

OTHER SUBSTANCES
Simultaneous: estriol, estradiol, equilin, equilenin, estrone, estetrol, 4-hydroxyestradiol, 2-hydroxyestradiol

KEY WORDS
plasma; equilin and equilenin not resolved

REFERENCE
Katayama,M.; Taniguchi,H. Determination of estrogens in plasma by high-performance liquid chromatography after pre-column derivatization with 2-(4-carboxyphenyl)-5,6-dimethylbenzimidazole, *J.Chromatogr.*, **1993**, *616*, 317–322.

SAMPLE
Matrix: blood, perfusate
Sample preparation: 200 µL Plasma or perfusate + 5 mL dichloromethane, vortex, centrifuge for 10 min. Remove a 4.5 mL aliquot of the lower organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 200 µL mobile phase, inject a 50 µL aliquot.

HPLC VARIABLES
Column: LiChrocart 100 RP-18
Mobile phase: MeOH:isopropanol:dichloromethane:water 40:9:4:47
Flow rate: 1
Injection volume: 50

Detector: UV 220

CHROMATOGRAM
Internal standard: ethinyl estradiol (17α-ethynylestradiol)

OTHER SUBSTANCES
Extracted: digoxin

KEY WORDS
plasma; rat; ethinyl estradiol is IS

REFERENCE
Su,S.-F.; Huang,J.-D. Inhibition of the intestinal digoxin absorption and exsorption by quinidine, *Drug Metab.Dispos.*, **1996**, *24*, 142–147.

SAMPLE
Matrix: formulations
Sample preparation: 5 Tablets + 2 glass beads + 25 mL 50 μg/mL dibutyl phthalate in MeOH, vortex 15 min or until tablets have completely disintegrated, sonicate 5 min, filter (2 μm), inject 25 μL aliquot.

HPLC VARIABLES
Column: 50 × 4.5 5μm IBM C18
Mobile phase: MeOH:THF:water 10:25:65
Flow rate: 2.1
Injection volume: 25
Detector: UV 230

CHROMATOGRAM
Retention time: 3.5
Internal standard: dibutyl phthalate

OTHER SUBSTANCES
Simultaneous: norgestimate, degradation products

KEY WORDS
tablets; stability-indicating

REFERENCE
Lane,P.A.; Mayberry,D.O.; Young,R.W. Determination of norgestimate and ethinyl estradiol in tablets by high-performance liquid chromatography, *J.Pharm.Sci.*, **1987**, *76*, 44–47.

SAMPLE
Matrix: solutions
Sample preparation: Extract 15 mL water with dichloromethane, evaporate organic layer, take up residue in 3 mL mobile phase, inject 50 μL aliquot.

HPLC VARIABLES
Column: reverse phase
Mobile phase: MeOH:water 82:18
Injection volume: 50
Detector: F ex 200 em 300

CHROMATOGRAM
Internal standard: mestranol
Limit of quantitation: 10 ng/mL

REFERENCE

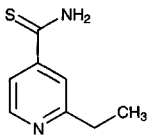
Ethionamide



Molecular formula: $C_8H_{10}N_2S$
Molecular weight: 166.25
CAS Registry No.: 536-33-4
Merck Index: 3783
Lednicer No.: 1 255

SAMPLE

Matrix: blood
Sample preparation: Condition a 1 mL octadecyl SPE cartridge (J.T. Baker) with one volume of MeOH and one volume of water. 200 μL Serum + 4 μL 200 μg/mL prothionamide in MeCN: 20 mM Na_2HPO_4 50:50, vortex for 5 s, add to the SPE cartridge, wash with 400 μL water, wash with 50 μL MeOH:water 90:10, dry under vacuum for 15 min, elute with 1 mL MeOH. Evaporate the eluate under nitrogen at 40°, reconstitute in 200 μL MeCN:20 mM Na_2HPO_4 25:75, vortex for 5 s, inject a 20 μL aliquot.

HPLC VARIABLES

Guard column: 10 × 4.6 5 μm Hypersil ODS
Column: 250 × 4.6 5 μm Hypersil ODS
Mobile phase: MeCN:20 mM Na_2HPO_4 25:75
Flow rate: 1.5
Injection volume: 20
Detector: UV 254

CHROMATOGRAM

Retention time: 4.28
Internal standard: prothionamide (7.24)
Limit of detection: 200 ng/mL

OTHER SUBSTANCES

Noninterfering: acetaminophen, p-aminosalicylic acid, aspirin, amikacin, capreomycin, ethambutol, isoniazid, kanamycin, pyrazinamide, streptomycin, rifampin
Interfering: phenobarbital

KEY WORDS

serum; SPE

REFERENCE

Peloquin,C.A.; James,G.T.; McCarthy,E. Improved high-performance liquid chromatographic assay for the determination of ethionamide in serum, *J.Chromatogr.*, **1991**, *563*, 472–475.

SAMPLE

Matrix: blood, CSF
Sample preparation: 200 μL Serum, plasma, or CSF + 300 μL reagent. Flush column A to waste with 500 μL 500 mM ammonium sulfate, inject sample onto column A, flush column A to waste with 500 μL 500 mM ammonium sulfate, elute the contents of column A onto column B with mobile phase, monitor the effluent from column B. (Reagent was 8.05 M guanidine hydrochloride and 1.02 M ammonium sulfate in water.)

HPLC VARIABLES

Column: A 30 × 2.1 40 μm preparative grade C18 (Analytichem); B 250 × 4.6 10 μm Partisil C8
Mobile phase: Gradient. A was 50 mM pH 4.5 KH_2PO_4. B was MeCN:isopropanol 80:20. A:B 90: 10 for 1 min, to 30:70 over 15 min, maintain at 30:70 for 4 min.
Column temperature: 50
Flow rate: 1.5
Detector: UV 280 for 5 min then UV 254

CHROMATOGRAM
Retention time: 8.93
Internal standard: heptanophenone (19.2)
Limit of quantitation: 300 ng/mL

OTHER SUBSTANCES
Extracted: acetazolamide, ampicillin, bromazepam, caffeine, carbamazepine, chloramphenicol, chlorothiazide, diazepam, droperidol, furosemide, isoniazid, methadone, penicillin G, phenobarbital, phenytoin, prazepam, propoxyphene, pyrazinamide, rifampin, trimeprazine, trimethoprim

KEY WORDS
serum; plasma; column-switching

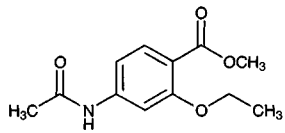
Ethopabate



Molecular formula: $C_{12}H_{15}NO_4$
Molecular weight: 237.26
CAS Registry No.: 59-06-3
Merck Index: 3791

SAMPLE
Matrix: meat
Sample preparation: Homogenize (Ultra-Turrax TP 18/10) 3 g tissue with 1 mL water and 4 mL acetone for 6 s, centrifuge at 5000 rpm for 3 min. Transfer 4 mL supernatant, add 5 mL dichloromethane, mix for 5 s, centrifuge at 3000 rpm for 3 min. Evaporate the organic layer to dryness under a stream of nitrogen at 60°. Dissolve residue in 500 µL MeOH:buffer 70:30, place in freezer at -20° for 5 min. Filter (Costar Spin-X with 0.2 µm nylon membrane) while centrifuging at 5600 g for 3 min. Inject a 20 µL aliquot of the filtrate. (Prepare buffer by dissolving 4.45 g sodium heptanesulfonate and 1.8 g $Na_2HPO_4.2H2O$ in 750 mL water, adjust pH to 6.3 with 5 M phosphoric acid, adjust pH to 6.0 with 1 M phosphoric acid, make up to 1 L with water.)

HPLC VARIABLES
Guard column: 20 × 4.6 5 µm Supelcosil LC-ABZ+Plus
Column: 250 × 4.6 5 µm Supelcosil LC-ABZ+Plus
Mobile phase: MeCN:water 35:65
Flow rate: 0.8
Injection volume: 20
Detector: F ex 300 em 350

CHROMATOGRAM
Retention time: ca. 8.3
Limit of quantitation: 1 ng/g

KEY WORDS
chicken meat

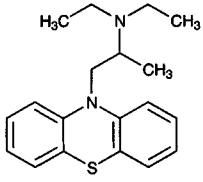
Ethopropazine



Molecular formula: $C_{19}H_{24}N_2S$
Molecular weight: 312.48
CAS Registry No.: 522-00-9, 1094-08-2 (HCl)
Merck Index: 3793
Lednicer No.: 1 373

SAMPLE

Matrix: blood
Sample preparation: Add IS and 300 μL MeCN to 100 μL plasma, vortex, centrifuge for 2 min. Remove the supernatant and add it to 300 μL pH 5.9 sodium phosphate buffer and 3 mL hexane and vortex for 45 s. Centrifuge at 2500g for 3 min. Evaporate the supernatant under a stream of nitrogen and reconstitute with mobile phase, inject an aliquot.

HPLC VARIABLES

Column: 100 × 4.6 ODS
Mobile phase: MeCN:MeOH:25 mM potassium phosphate 25:25:50 containing 0.75 mL/L 2 M sulfuric acid and 0.25 mL/L triethylamine
Flow rate: 1.0
Detector: UV 250

CHROMATOGRAM

Retention time: 7.7
Internal standard: orphenadrine (5.7)
Limit of quantitation: 12.5 mg/mL

KEY WORDS

plasma; rat; pharmacokinetics

REFERENCE

SAMPLE

Matrix: solutions
Sample preparation: Prepare a 10 μg/mL solution in MeOH, inject a 20 μL aliquot.

HPLC VARIABLES

Column: 125 × 4.9 Spherisorb S5W silica
Mobile phase: MeOH containing 10 mM ammonium perchlorate and 1 mL/L 100 mM NaOH in MeOH, pH 6.7
Flow rate: 2
Injection volume: 20
Detector: E, LeCarbone, V25 glassy carbon electrode, + 1.2 V

CHROMATOGRAM

Retention time: 3.1

OTHER SUBSTANCES

Also analyzed: acebutolol, acepromazine, acetophenazine, N-acetylprocainamide, albuterol, alprenolol, amethocaine, amiodarone, amitriptyline, antazoline, atenolol, azacyclonal, bamethan, benactyzine, benperidol, benzethidine, benzocaine, benzoctamine, benzphetamine, benzquinamide, bromhexine, bromodiphenhydramine, bromperidol, brompheniramine, brompromazine, buclizine, bufotenine, bupivacaine, buprenorphine, butacaine, butethamate, chlorcyclizine, chlorpheniramine, chlorphenoxamine, chlorprenaline, chlorpromazine, chlorprothixene, cimetidine, cinchonidine, cinnarizine, clemastine, clomipramine, clonidine, cocaine, cyclazocine, cyclizine, cyclopentamine, cyproheptadine, deserpidine, desipramine, dextromoramide, dextro-

propoxyphene, dicyclomine, diethylcarbamazine, diethylpropion, diethylthiambutene, dihydroergotamine, dimethindene, dimethothiazine, diphenhydramine, diphenoxylate, dipipanone, diprenorphine, dipyridamole, disopyramide, dothiepin, doxapram, doxepin, doxylamine, droperidol, ephedrine, ergocornine, ergocristine, ergocristinine, ergocryptine, ergometrine, ergosine, ergosinine, ergotamine, etorphine, etoxeridine, fenethazine, fenfluramine, fenoterol, fentanyl, flavoxate, fluopromazine, flupenthixol, fluphenazine, flurazepam, haloperidol, hydroxyzine, hyoscine, ibogaine, imipramine, indapamine, iprindole, isothipendyl, isoxsuprine, ketanserin, laudanosine, lidocaine, lofepramine, loxapine, maprotiline, mecamylamine, meclophenoxate, meclozine, medazepam, mephentermine, mepivacaine, meptazinol, mepyramine, mesoridazine, metaraminol, methadone, methamphetamine, methapyrilene, methdilazene, methotrimeprazine, methoxamine, methoxyphenamine, methoxypromazine, methylephedrine, methylergonovine, methysergide, metoclopramide, metopimazine, metoprolol, mianserin, morazone, nadolol, nalorphine, naloxone, naphazoline, nicotine, nifedipine, nomifensine, nortriptyline, noscapine, orphenadrine, oxeladin, oxprenolol, oxymetazolin, papaverine, pargyline, pecazine, penbutolol, pentazocine, penthienate, pericyazine, perphenazine, phenadoxone, phenampromide, phenazocine, phenbutrazate, phendimetrazine, phenelzine, phenglutarimide, phenindamine, pheniramine, phenmetrazine, phenomorphan, phenoperidine, phenothiazine, phenoxybenzamine, phentolamine, phenylephrine, phenyltoloxamine, physostigmine, piminodine, pimozide, pindolol, pipamazine, pipazethate, piperacetazine, piperidolate, pipradol, pirenzepine, piritramide, pizotifen, practolol, pramoxine, prazosin, prenylamine, prilocaine, primaquine, proadifen, procainamide, procaine, prochlorperazine, procyclidine, proheptazine, prolintane, promazine, promethazine, pronethalol, properidine, propiomazine, propranolol, prothipendyl, protriptyline, proxymetacaine, pseudoephedrine, pyrimethamine, quinidine, quinine, ranitidine, rescinnamine, sotalol, tacrine, terazosin, terbutaline, terfenadine, thenyldiamine, theophylline, thiethylperazine, thiopropazate, thioproperazine, thioridazine, thiothixene, thonzylamine, timolol, tocainide, tolpropamine, tolycaine, tranylcypromine, trazodone, trifluoperazine, trifluperidol, trimeperidine, trimeprazine, trimethobenzamide, trimethoprim, trimipramine, tripelennamine, triprolidine, tryptamine, verapamil, xylometazoline

SAMPLE
Matrix: blood

Sample preparation: 500 μL Serum + 50 μL 7 μg/mL IS in water + 1 mL buffer, vortex for 10 s, add 5 mL n-hexane:ether:n-propanol 49:49:2, shake gently for 20 min, centrifuge at 1000 g for 5 min, repeat the extraction. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 50°, reconstitute the residue in 300 μL mobile phase, inject a 50-100 μL aliquot. (Buffer was 10 mM sodium acetate:10 mM acetic acid 88.5:11.5, pH 5.5.)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Partisil 5 ODS-3
Mobile phase: MeCN:buffer 28:72 (Buffer was 300 μL 1 M KH_2PO_4 and 50 μL 900 mM phosphoric acid in 1.8 L water, pH 4.4.)
Column temperature: 50
Flow rate: 2.8
Injection volume: 50-100
Detector: UV 195

CHROMATOGRAM
Retention time: 1.8
Internal standard: 5-(4-methylphenyl)-5-phenylhydantoin (11.5)

OTHER SUBSTANCES
Extracted: carbamazepine, phenytoin, secobarbital
Simultaneous: mephobarbital, paramethadione, phenobarbital
Noninterfering: chlorazepate, clonazepam, diazepam, thioridazine, valproic acid
Interfering: primidone

KEY WORDS
serum

REFERENCE

SAMPLE
Matrix: blood
Sample preparation: 400 μL Serum or plasma + 400 μL 10 μg/mL IS in acetone, vortex for 10 s, centrifuge at 4500-5000 g for 1 min, remove the supernatant to another tube, centrifuge for 30 s, inject a 5-7.5 μL aliquot.

HPLC VARIABLES
Column: 300 × 3.9 μBondapak C18
Mobile phase: MeCN:MeOH:buffer 17:28:55, final pH 6.8-7.0 (Buffer was 400 μL 1 M KH_2PO_4 in 1 L water, pH adjusted to 6.0 with 900 mM phosphoric acid.)
Column temperature: 30
Flow rate: 0.7
Injection volume: 5-7.5
Detector: UV 195

CHROMATOGRAM
Retention time: 6.8
Internal standard: tolybarb (5-ethyl-5-(p-methylphenyl)barbituric acid) (13.8)

OTHER SUBSTANCES
Extracted: carbamazepine, N-desmethylmethsuximide, phenobarbital, phenytoin, primidone
Simultaneous: acetaminophen, butalbital, caffeine, hexobarbital, methsuximide, phenacetin, phenylethylmalonamide, salicylic acid

SAMPLE
Matrix: blood
Sample preparation: 50 μL Serum + 50 μL 10 μg/mL IS in MeCN, vortex for 10 s, centrifuge at 3000 g for 1 min, remove the supernatant and place it in another tube, centrifuge for 1 min, inject a 20 μL aliquot of the supernatant.

HPLC VARIABLES
Column: 100 × 8 5 μm Nova Pak C18 Radial pak
Mobile phase: MeCN:MeOH:acetone:buffer 8:21:10:61 adjusted to pH 7.95 ± 0.02 with NaOH (Buffer was 1.36 g/L KH_2PO_4.)
Flow rate: 2.8
Injection volume: 20
Detector: UV 200

CHROMATOGRAM
Retention time: 1.70
Internal standard: tolybarb (5-ethyl-5-(p-methylphenyl)barbituric acid) (4.89)
Limit of detection: 500 ng/mL

OTHER SUBSTANCES
Extracted: primidone, phenobarbital, carbamazepine, phenytoin, metabolites
Simultaneous: acetaminophen, N-acetylprocainamide, aspirin, ampicillin, caffeine, cephapirin, chloramphenicol, digoxin, disopyramide, hexobarbital, indomethacin, lidocaine, mephobarbital, methsuximide, nafcillin, pentobarbital, phenylethylmalonamide, procainamide, quinidine, salicylic acid, secobarbital, sulfamerazine, sulfamethazine, terbutaline, tetracycline, theobromine, theophylline
Noninterfering: acetazolamide, amikacin, cephalosporin C, gentamicin, propranolol, sulfadiazine, sulfamethoxazole, sulfisoxazole, tobramycin, valproic acid, verapamil

KEY WORDS
serum

SAMPLE
Matrix: blood
Sample preparation: 100 μL Serum + 100 μL buffer + 1.5 mL IS in 5% isopropanol in chloroform, vortex for 30 s, centrifuge. Remove the organic layer and evaporate it to dryness under a stream of air at room temperature, reconstitute the residue in 100 μL mobile phase, inject a 6-10 μL aliquot. (Buffer was 13.6 g KH_2PO_4 in 90 mL water, pH adjusted to 6.8 with about 3 mL 10 M NaOH, made up to 100 mL.)

HPLC VARIABLES
Guard column: 20 × 4.6 Supelguard LC-1 (Supelco)
Column: 250 × 4.6 5 μm Supelcosil LC-1 (Supelco)
Mobile phase: MeOH:MeCN:buffer 17.5:17.5:65 (Buffer was 2.72 g KH_2PO_4 in 1.9 L water, pH adjusted to 6.3 with about 2 mL 1 M NaOH, made up to 2 L.)
Flow rate: 2
Injection volume: 6-10
Detector: UV 204

CHROMATOGRAM
Retention time: 2.57

Internal standard: methsuximide (5.30)

OTHER SUBSTANCES

Extracted: acetaminophen, amobarbital, caffeine, carbamazepine, chloramphenicol, mephobarbital, methsuximide, pentobarbital, phenobarbital, phenytoin, primidone, secobarbital, theophylline, thiopental

Also analyzed: acetanilide, N-acetylcysteine, N-acetylprocainamide, ampicillin, aspirin, butabarbital, butalbital, chlorpropamide, codeine, cyheptamide, diazoxide, diflunisal, diphylline, disopyramide, ethchlorvynol, gentisic acid, glutethimide, heptabarbital, hexobarbital, ibuprofen, indomethacin, ketoprofen, mefenamic acid, mephenytoin, methaqualone, methyl salicylate, methyprylon, morphine, naproxen, nirvanol, oxphenylbutazone, phenacetin, phensuximide, phenylbutazone, procainamide, salicylamide, salicylic acid, sulfamethoxazole, sulindac, tolmetin, trimethoprim, vancomycin

Noninterfering: amikacin, gentamicin, meprobamate, netilmicin, quinidine, tetracycline, tobramycin, valproic acid

Interfering: barbital, cimetidine

KEY WORDS

serum

SAMPLE

Matrix: blood

Sample preparation: Prepare an SPE cartridge by plugging the end of a 1 mL disposable pipette tip with glass wool and adding about 100 mg Chromosorb P/NAW. Add 50 μL plasma then 50 μL 10 μg/mL tolylphenobarbital in 200 mM HCl to the SPE cartridge, let stand for 2 min, elute with 1 mL chloroform:isopropanol 6:1. Evaporate the eluate to dryness under a stream of nitrogen at 30°, reconstitute the residue in 100 μL mobile phase, inject a 15 μL aliquot.

HPLC VARIABLES

Column: 150 × 4.6 5 μm Supelcosil-LC-8
Mobile phase: MeCN:water 20:80
Flow rate: 3.3
Injection volume: 15
Detector: UV 208

CHROMATOGRAM

Retention time: 1.37
Internal standard: tolylphenobarbital (7.57)
Limit of detection: 50-100 ng/mL

OTHER SUBSTANCES

Extracted: theophylline, caffeine, primidone, carbamazepinediol, phenacemide, methyprylon, nirvanol, phenobarbital, chloramphenicol, butabarbital, carbamazepine epoxide, mephenytoin, pentobarbital, amobarbital, carbamazepine, glutethimide, phenytoin, secobarbital, methaqualone

Noninterfering: acetaminophen, amikacin, amitriptyline, clonazepam, cyclosporine,desipramine, diazepam, digoxin, disopyramide, gentamicin, imipramine, lidocaine, methotrexate, N-acetylprocainamide, netilmicin, nortriptyline, procainamide, quinidine, salicylic acid, sulfamethoxazole, tobramycin, trimethoprim, valproic acid, p-hydroxyphenobarbital, vancomycin

Interfering: barbital

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM
Retention time: 10.485

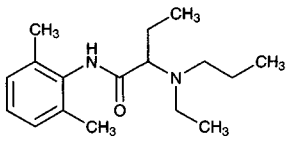
Etidocaine



Molecular formula: $C_{17}H_{28}N_2O$
Molecular weight: 276.42
CAS Registry No.: 36637-18-0
Merck Index: 3907
Lednicer No.: 2 95

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 100 μL 1 M NaOH, vortex for 15 s, add 5 mL diethyl ether, shake on a reciprocating shaker for 10 min, centrifuge. Remove the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 100 μL mobile phase, inject an 80 μL aliquot.

HPLC VARIABLES
Column: 150 × 3.2 10 μm μBondapak C18
Mobile phase: MeCN:50 mM pH 5.80 Na_2HPO_4 25:75
Flow rate: 0.9
Injection volume: 80
Detector: UV 210

CHROMATOGRAM
Retention time: 12.0
Internal standard: etidocaine

OTHER SUBSTANCES
Extracted: 2,6-pipecolylxylidine, lidocaine, bupivacaine, mepivacaine
Noninterfering: metabolites, 2,3-chloroprocaine, theophylline, mexiletine, quinidine, disopyramide, verapamil, phenobarbital, phenytoin, carbamazepine, ethosuximide, digoxin, theobromine, caffeine, furosemide, phenprocoumon, aldactone

KEY WORDS
plasma; etidocaine is IS

SAMPLE
Matrix: blood
Sample preparation: Condition a diol AASP SPE cartridge (Jones Chromatography) with 1 mL MeOH, 1 mL water, 1 mL mobile phase, 0.5 mL MeOH, 0.5 mL toluene. 200 μL Plasma + 100 μL 100 mM K_2HPO_4, mix, add 1 mL toluene, vortex for 1 min, centrifuge at 12000 g for 1 min. Add 750 μL of the toluene layer to the SPE cartridge, wash with 500 μL MeCN, elute the contents of the SPE onto the column with mobile phase (MeCN used for purge (6 strokes) and afterwash (10 strokes), valve reset time 2 min).

HPLC VARIABLES
Guard column: 20 × 2 30-40 μm Co:Pell ODS
Column: 150 × 4.6 Spherisorb 5 CN
Mobile phase: MeCN:water 40:60 containing 10 mM phosphoric acid
Flow rate: 1
Detector: E, Environmental Science Associates Model 5100A Coulochem, screen mode, electrode 1 +0.7 V, electrode 2 +0.9 V, palladium reference electrode, guard cell +1.2 V (before injection valve)

CHROMATOGRAM
Retention time: 10.8
Internal standard: etidocaine

OTHER SUBSTANCES
Extracted: prilocaine

KEY WORDS
plasma; SPE; etidocaine is IS

REFERENCE

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 100 μL 1 M NaOH + 3 mL heptane:ethyl acetate 90:10, shake for 2 min, centrifuge at 1200 g for 10 min. Remove the organic phase and add it to 50 μL 50 mM sulfuric acid, shake for 2 min, centrifuge at 1200 g for 5 min. Remove the aqueous phase and add it to 820 μg sodium acetate, inject a 40 μL aliquot. (The sodium acetate was measured out by adding 50 μL 200 mM sodium acetate in MeOH to the tube and evaporating the MeOH.)

HPLC VARIABLES
Column: 250 × 4 10 μm μBondapak C18
Mobile phase: MeCN:10 mM NaH_2PO_4 20:80, adjusted to pH 2.1
Column temperature: 30
Flow rate: 1
Injection volume: 40
Detector: UV 205

CHROMATOGRAM
Retention time: 10
Limit of detection: 5 ng/mL

OTHER SUBSTANCES
Extracted: bupivacaine

KEY WORDS
plasma; rabbit

SAMPLE
Matrix: blood, urine
Sample preparation: 2 mL Whole blood, plasma, or urine + 1 mL saturated sodium carbonate + 20 μL 100 μg/mL dibucaine, add to a 3 mL Extrelut SPE cartridge, elute with 15 mL dichloromethane. Evaporate eluate to dryness under a stream of nitrogen at 40°, reconstitute in 100 μL 10 mM HCl, add 3 mL diethyl ether, vortex for 20 s, centrifuge at 2800 g for 5 min, inject a 40 μL aliquot of the aqueous layer.

HPLC VARIABLES
Guard column: 5 × 6 μBondapak Guard Pak
Column: 300 × 3.9 10 μm μBondapak C18
Mobile phase: MeCN:100 mM ammonium acetate 50:50
Flow rate: 1.5
Injection volume: 40
Detector: UV 230

CHROMATOGRAM
Retention time: 14
Internal standard: dibucaine (18)
Limit of detection: 40 ng/mL

OTHER SUBSTANCES
Extracted: prilocaine, lidocaine, bupivacaine,
Also analyzed: procaine, butacaine, tetracaine, p-aminobenzoic acid, articaine, o-toluidine, caffeine, amphetamine, ephedrine, epinephrine, morphine, monoacetylmorphine, diamorphine, ethylmorphine, codeine, acetylcodeine

KEY WORDS
whole blood; plasma; SPE

SAMPLE
Matrix: formulations
Sample preparation: Dilute injections 100-fold, inject a 20 μL aliquot. Disintegrate a 5 mg tablet in 100 mL water, sonicate for 5 min, centrifuge an aliquot at 3600 g for 4 min, inject a 20 μL aliquot of the supernatant.

HPLC VARIABLES
Column: 150 × 4.6 10 μm IC-PAK Anion HC (Waters)
Mobile phase: 1.5 mM Nitric acid containing 0.5 mM copper(II) nitrate (Prepare column by pumping ILC Regenerant A (Waters) and 100 mM nitric acid for 30 min.)
Column temperature: 30
Flow rate: 1
Injection volume: 20
Detector: UV 245

CHROMATOGRAM
Retention time: 5.8

OTHER SUBSTANCES
Simultaneous: alendronate, clodronate, neridronate, olpadronate, pamidronate

KEY WORDS
derivatization; complexation; injections; tablets

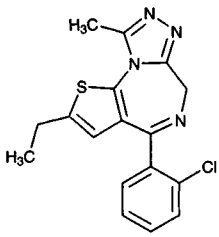
Etizolam



Molecular formula: $C_{17}H_{15}ClN_4S$
Molecular weight: 342.85
CAS Registry No.: 40054-69-1
Merck Index: 3919

SAMPLE
Matrix: blood

Sample preparation: 500 μL Serum + 20 μL 20 μg/mL IS + 200 μL 1 M potassium carbonate + 3 mL chloroform, mix for 2 min, centrifuge at 1200 g for 5 min, aspirate aqueous phase. Evaporate the organic phase under a stream of nitrogen at 40°. Dissolve the residue in 100 μL mobile phase, inject a 20 μL aliquot. (Caution! Chloroform is a carcinogen!)

HPLC VARIABLES
Column: 100 × 4.6 2 μm TSK gel Super-ODS (A) or 100 × 4.6 5 μm Hypersil ODS-C18 (B)
Mobile phase: MeCN:5 mM pH 6 NaH_2PO_4 45:55
Flow rate: 0.65
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 18.4 (A), 67.1 (B)
Internal standard: diazepam (29.8 (A), 77.5 (B))
Limit of quantitation: 5 ng/mL (A)

OTHER SUBSTANCES
Extracted: bromazepam, chlordiazepoxide, clonazepam, estazolam, flutazolam, haloxazolam, lorazepam, nitrazepam, oxazolam, triazolam
Simultaneous: alprazolam
Noninterfering: barbital, carbamazepine, cloxazolam, ethosuximide, hexobarbital, mexazolam, oxazepam, pentobarbital, phenobarbital, phenytoin, primidone, trimethadione

KEY WORDS
serum

REFERENCE
Tanaka,E.; Terada,M.; Misawa,.; Wakasugi,C. Simultaneous determination of twelve benzodiazepines in human serum using a new reversed-phase chromatographic column on a 2-μm porous microspherical silica gel, *J.Chromatogr.B*, **1996**, *682*, 173–178.

SAMPLE
Matrix: urine
Sample preparation: Condition a Sep-Pak C18 SPE cartridge with 5 mL MeOH, 10 mL dichloromethane:MeOH 9:1, 5 mL MeOH, and 10 mL water. Condition a Sep-Pak Silica SPE cartridge with 20 mL dichloromethane, 20 mL dichloromethane:MeOH 9:1, and 20 mL dichloromethane, then air dry. 10 mL Urine adjusted to pH 5 with acetic acid, add 2.5 mL 500 mM pH 5.0 acetate buffer, add 3000 U β-glucuronidase, incubate at 37° for 24 h, make alkaline with ammonia, centrifuge at 1200 g for 15 min, add the supernatant to the C18 SPE cartridge, wash with 5 mL water, wash with 5 mL MeOH:water 20:80, wash with 2 mL water, elute with 7 mL dichloromethane:MeOH 9:1. Evaporate the eluate to dryness under vacuum, dissolve the residue in 5 mL dichloromethane:MeOH 99:1, add to the silica SPE cartridge, wash with 20 mL dichloromethane, wash with 25 mL dichloromethane:MeOH 99:1, elute with 20 mL dichloromethane:MeOH 9:1. Evaporate the eluate to dryness under vacuum, dissolve the residue in 100 μL mobile phase, inject a 20 μL aliquot. (MeOH for silica SPE cartridge was distilled and dried over 3 Å molecular sieve, then 0.1% water added just before use.)

HPLC VARIABLES
Column: 100 × 8 10 μm Radial-Pak C18
Mobile phase: MeOH:10 mM pH 8.0 phosphate buffer 65:35
Flow rate: 1
Injection volume: 20
Detector: UV 220

CHROMATOGRAM
Retention time: 17
Internal standard: etizolam

OTHER SUBSTANCES
Simultaneous: triazolam

KEY WORDS
SPE; etizolam is IS

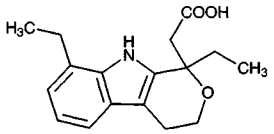
Etodolac



Molecular formula: $C_{17}H_{21}NO_3$
Molecular weight: 287.36
CAS Registry No.: 41340-25-4
Merck Index: 3920

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 225.2

CHROMATOGRAM
Retention time: 21.503

KEY WORDS
whole blood

SAMPLE
Matrix: cell suspensions
Sample preparation: Centrifuge cell suspension at 2000 g for 4 min. Remove a 2 mL aliquot of the supernatant and add it to 200 μL 100 μg/mL IS in DMF, mix, add 200 μL 5 M HCl, extract twice with 3 mL portions of toluene. Combine the organic layers and evaporate them to dryness under a stream of nitrogen, reconstitute the residue in 1 mL dichloromethane, add 20 μL 10 mg/mL 1-hydroxybenzotriazole in dichloromethane:pyridine 99:1, add 300 μL 10 mg/mL 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride in dichloromethane, add 300 μL 10 mg/mL (-)-(S)-α-methylbenzylamine in dichloromethane, let stand for 30 min, evaporate to dryness, reconstitute with 500 μL mobile phase, inject a 10 μL aliquot.

HPLC VARIABLES
Guard column: 10 mm long Techsphere ODS (HPLC Technology, Macclesfield UK)
Column: 250 × 5 5 μm Techsphere ODS (HPLC Technology, Macclesfield UK)
Mobile phase: MeCN:7.5 mM NaH_2PO_4 65:35, containing 5 mM sodium pentanesulfonate, pH adjusted to 2.8 with phosphoric acid
Flow rate: 1
Injection volume: 10
Detector: UV 254

CHROMATOGRAM
Retention time: k' 5.67, 6.08 (enantiomers)
Internal standard: (R)-ibuprofen (k' 5.21)
Limit of detection: 1 μg/mL

SAMPLE
Matrix: blood
Sample preparation: Filter 1 mL plasma (Centrifree micropartition device, molecular mass cut-off 30000, Amicon, USA) using a 33° fixed angle centrifuge (Beckman ModelG56R) at 2000 g and 25° for 30 min. To the ultrafiltrate add 50 μL 10 μg/mL teniposide in MeOH and 1 mL chloroform (Caution! Chloroform is a carcinogen!), agitate slowly for 20 min, centrifuge at 1000 g for 5 min. Evaporate the organic phase to dryness under vacuum at 40°, dissolve the dry extract in 50 μL MeOH, inject a 25 μL aliquot. Alternatively, add 10 μg teniposide and 8 mL chloroform (Caution! Chloroform is a carcinogen!) to 1 mL plasma, agitate slowly for 20 min, centrifuge at 1000 g for 5 min, evaporate the organic phase to dryness, dissolve the dry extract in 100 μL MeOH, inject a 25 μL aliquot.

HPLC VARIABLES
Column: 300 × 3.9 10 μm 125 Å μBondapak Phenyl (Waters)
Mobile phase: MeCN:water:glacial acid 35:64:1

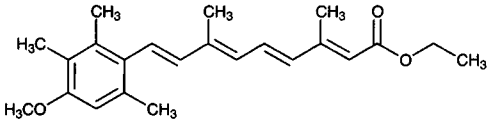
Etretinate



Molecular formula: $C_{23}H_{30}O_3$
Molecular weight: 354.49
CAS Registry No.: 54350-48-0
Merck Index: 3935

SAMPLE

Matrix: bile, blood, perfusate, tissue
Sample preparation: Homogenize 1 g tissue and 4 mL ice-cold pH 7.4 Krebs-Henseleit buffer. Dilute bile with an equal volume of 200 mM pH 5 sodium acetate buffer. 100 µL Plasma, perfusate, diluted bile, or tissue homogenate + 20 µL MeCN + 350 µL MeCN:1-butanol 50:50 + 20 µL 37.6 µg/mL retinyl acetate, vortex for 1 min, add 300 µL 1 g/mL K_2HPO_4 in water, vortex for 30 s, centrifuge at 13600 g for 3 min, inject a 200 µL aliquot of the organic layer. (Hydrolyze conjugates in bile as follows. 100 µL Diluted bile + 8 µL 100000 U/mL β-glucuronidase (Helix pomatia, Sigma), heat at 37° for 5 h.)

HPLC VARIABLES

Guard column: 10 mm long Supelcosil LC-18 guard column
Column: 250 × 4.6 5 µm Supelcosil LC-18
Mobile phase: Gradient. A was MeCN:buffer 20:80. B was MeCN. A:B 65:35 for 10 min, 31:69 for 17 min (step gradient), re-equilibrate for 6 min. (Buffer was 0.8 g ammonium acetate and 10 mL glacial acetic acid in 200 mL water.)
Column temperature: 50
Flow rate: 1.5
Injection volume: 200
Detector: UV 350

CHROMATOGRAM

Retention time: 21.5
Internal standard: retinyl acetate (25.0)
Limit of quantitation: 160 ng/mL

OTHER SUBSTANCES

Extracted: acitretin, cis-acitretin, metabolites

KEY WORDS

rat; liver; plasma; protect from light

REFERENCE

Decker,M.A.; Zimmerman,C.L. Simultaneous determination of etretinate, acitretin and their metabolites in perfusate, perfusate plasma, bile or hepatic tissue with reversed-phase high-performance liquid chromatography, *J.Chromatogr.B*, **1995**, *667*, 105–113.

SAMPLE

Matrix: blood
Sample preparation: 0.5-2 mL Plasma + 100 µL pH 7 phosphate buffer + 2 mL diethyl ether: ethyl acetate 50:50, vortex gently for 5 min, centrifuge at 2000 g for 10 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 30-100 µL MeOH, inject a 25 µL aliquot.

HPLC VARIABLES

Column: 250 × 4.6 5 µm Nucleosil C18
Mobile phase: MeOH:1% aqueous acetic acid 85:15
Flow rate: 1.5
Injection volume: 25
Detector: UV 350

CHROMATOGRAM

Retention time: 32

Limit of detection: 2 ng/mL

OTHER SUBSTANCES
Extracted: 13-cis-acitretin, tretinoin, 4-oxo-13-cis-retinoic acid, isotretinoin, acitretin
Noninterfering: antidepressants, benzodiazepines, psoralen

KEY WORDS
plasma; handle under yellow light

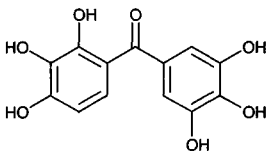
Exifone



Molecular formula: $C_{13}H_{10}O_7$
Molecular weight: 278.22
CAS Registry No.: 52479-85-3
Merck Index: 3958

SAMPLE

Matrix: blood, urine

Sample preparation: Plasma. 1 mL Plasma + 1 mL 100 mM citric acid + 8 mL diethyl ether, shake for 10 min, centrifuge at 4° at 2400 g for 5 min. Remove the organic layer and evaporate

it to dryness under a stream of nitrogen, reconstitute the residue in 200 μL mobile phase, inject a 20 μL aliquot. Urine. 1 mL Urine + 1 mL pH 7 phosphate buffer (Normadose, Prolabo) + 8 mL diethyl ether, shake for 10 min, centrifuge at 4° at 2400 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 250 μL mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: Guard-Pack C18 (Waters)
Column: 100 × 5 4 μm Novapak C18 RCM 8x10
Mobile phase: MeCN:300 mM orthophosphoric acid 15:85, final pH 2.2
Flow rate: 0.9
Injection volume: 20
Detector: E, Environmental Sciences Model 5100 A, ESA 5011 analytical cell, oxidative mode, cell II +0.30 V, cell I and guard cell not used

CHROMATOGRAM
Retention time: 8
Limit of quantitation: 1 nM

KEY WORDS

Factor VIII

CAS Registry No.: 9013-56-3
Merck Index: 3963

SAMPLE
Matrix: solutions
Sample preparation: Add 3 mL Factor VIII solution in water to a column of Sephadex G-25 (Pharmacia), elute with buffer, monitor at UV 280, all protein elutes in void volume, inject a 10 mL aliquot. (Buffer was 50 mM imidazole HCl, 150 mM NaCl, 0.02% sodium azide, pH 7.0.)

HPLC VARIABLES
Guard column: 75 × 25 37 mL TSK 6000PW (Toyo Soda)
Column: 600 × 25 300 mL bead size 17 μm TSK 5000PW (Toyo Soda)
Mobile phase: 50 mM imidazole HCl, 150 mM NaCl, 0.02% sodium azide, pH 7.0
Flow rate: 8.5
Injection volume: 10000
Detector: UV 254 or bioassay

CHROMATOGRAM
Retention time: 12

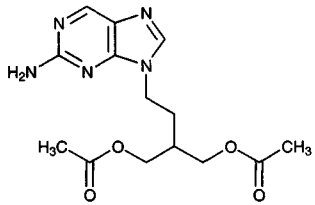
Famciclovir



Molecular formula: $C_{14}H_{19}N_5O_4$
Molecular weight: 321.34
CAS Registry No.: 104227-87-4
Merck Index: 3971

SAMPLE
Matrix: blood
Sample preparation: 200 μL Blood + 600 μL 16% trichloroacetic acid, centrifuge, inject an aliquot of the supernatant.

HPLC VARIABLES
Guard column: C18 Guard-Pak (Waters)
Column: 100 × 8 Nova-Pak C18 (in a Z module)
Mobile phase: Gradient. A was 50 mM sodium hydrogen phosphate. B was MeOH:water 80:20 containing 5 mM NaH_2PO_4. A:B 99:1 for 1.5 min, to 5:95 over 18.5 min, re-equilibrate at initial conditions for 10 min.
Flow rate: 1.6
Detector: UV 254

CHROMATOGRAM
Retention time: 13.5 (as penciclovir, the active metabolite)

Limit of detection: 200 ng/mL

OTHER SUBSTANCES
Extracted: acyclovir

KEY WORDS
mouse; pharmacokinetics

SAMPLE
Matrix: blood, urine
Sample preparation: Condition a Bond Elut SCX strong cation exchange SPE cartridge with 1 mL MeOH, 1 mL water, and 1 mL 1 mM pH 7.0 Na_2HPO_4 buffer. 1 mL 500 μL Plasma or 100 μL urine + 100 μL 20-50 μg/mL IS in water + 100-500 μL 16% trichloroacetic acid, add the supernatant to the SPE cartridge, wash with 1 mL MeOH:1 mM pH 7.0 Na_2HPO_4 buffer 20:80, elute with 1 mL MeOH:100 mM pH 11.0 K_2HPO_4 buffer 25:75, inject an aliquot.

HPLC VARIABLES
Column: 3 μm Apex 1 ODS
Mobile phase: Gradient. A was MeOH:10 mM pH 7.0 Na_2HPO_4 buffer 7:93. B was MeOH:10 mM pH 7.0 Na_2HPO_4 buffer 35:65. A:B from 100:0 to 0:100 over 4 min, maintain at 0:100 for 1.5 min, return to 0:100 over 1 min.
Flow rate: 2
Detector: UV 305

CHROMATOGRAM
Retention time: 6
Internal standard: 6-deoxy-9-(4-hydroxy-2-hydroxymethylbut-1-yl)guanine (BRL 44056) (2.8)
Limit of detection: 2000 ng/mL (urine), 500 ng/mL (plasma)

OTHER SUBSTANCES
Extracted: penciclovir, metabolites

KEY WORDS
plasma; human; rat; dog; SPE

REFERENCE

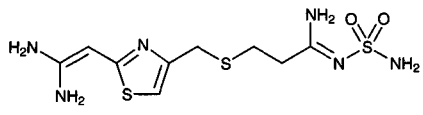
Famotidine



Molecular formula: $C_8H_{15}N_7O_2S_3$
Molecular weight: 337.45
CAS Registry No.: 76824-35-6
Merck Index: 3972
Lednicer No.: 2 37

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 202.8

CHROMATOGRAM
Retention time: 3.487

KEY WORDS
whole blood

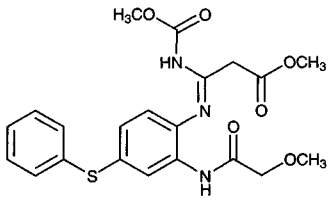
Febantel



Molecular formula: $C_{20}H_{22}N_4O_6S$
Molecular weight: 446.48
CAS Registry No.: 58306-30-2
Merck Index: 3982
Lednicer No.: 4 35

SAMPLE
Matrix: blood
Sample preparation: 4 mL Plasma + 2 mL pH 7.4 phosphate buffer + 20 mL diethyl ether, shake mechanically for 10 min, place in a freezer for 30 min, repeat the extraction. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 45°, reconstitute the residue in 200 μL DMF, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 250 × 4 10 μm RP 8
Mobile phase: Gradient. MeCN:1% phosphoric acid 20:80 to 60:40 over 10 min
Column temperature: 30
Flow rate: 2
Injection volume: 20
Detector: UV 290

CHROMATOGRAM
Retention time: 10.97
Limit of quantitation: 50 ng/mL

OTHER SUBSTANCES
Extracted: metabolites

KEY WORDS
plasma; sheep

SAMPLE
Matrix: blood
Sample preparation: 2 mL Plasma + 100 μL 10 μg/mL albendazole in MeOH + 200 μL 500 mM ammonium hydroxide (to adjust pH to 11) + 200 mg NaCl + 5 mL distilled diethyl ether, roll for 15 min, remove 4 mL supernatant, repeat extraction, remove 5 mL supernatant. Combine the organic layers and evaporate them to dryness under a stream of nitrogen, reconstitute the residue in 60 μL MeOH, sonicate for 2 min, inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: present but not specified
Column: 100 × 5 Nucleosil 5C18
Mobile phase: MeCN:1% acetic acid 43:57
Flow rate: 0.9
Injection volume: 20
Detector: UV 292

CHROMATOGRAM
Retention time: 6.2
Internal standard: albendazole (1.6)
Limit of detection: 25 ng/mL

OTHER SUBSTANCES
Extracted: fenbendazole, oxfendazole, oxfendazole sulfone

KEY WORDS
plasma; sheep

REFERENCE

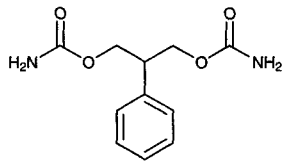
Felbamate



Molecular formula: $C_{11}H_{14}N_2O_4$
Molecular weight: 238.24
CAS Registry No.: 25451-15-4
Merck Index: 3988

SAMPLE
Matrix: CSF
Sample preparation: Dilute CSF with an equal volume of a 10 μg/mL solution of IS in MeCN: 30 mM pH 3.0 phosphate buffer 20:80, vortex, centrifuge at about 2000 g at 0° for 10 min, inject a 20 μL aliquot of the supernatant.

HPLC VARIABLES
Column: 150 × 4.6 3 μm Spherisorb ODS2
Mobile phase: MeCN:MeOH:30 mM pH 3.0 KH_2PO_4 12:6:82
Column temperature: 40
Flow rate: 1
Injection volume: 20
Detector: UV 210

CHROMATOGRAM
Retention time: 10.5
Internal standard: 2-phenyl-3-carbamoyl-3-oxypropyl allophanate (14.5)
Limit of quantitation: 195 ng/mL

OTHER SUBSTANCES
Extracted: metabolites

KEY WORDS
rat

REFERENCE

SAMPLE
Matrix: blood
Sample preparation: 100 μL Plasma or serum + 100 μL 100 μg/mL IS in MeCN, vortex, let stand for 10 min. Centrifuge at 15000 rpm for 5 min. Mix the supernatant with an equal volume of water and inject an aliquot.

HPLC VARIABLES
Column: 40 × 3.2 3 μm Brownlee VeloSep RP-18
Mobile phase: Gradient. A was MeCN. B was water. A:B from 0:100 to 22:78 over 11 min, to 100:0 over 1.5 min, maintain at 100:0 for 0.5 min, to 0:100 over 1 min, maintain at 0:100 for 6 min.
Flow rate: 0.8 for 11 min, to 1.5 over 2 min, to 0.8 over 6 min, hold at 0.8 for 1 min
Injection volume: 20
Detector: UV 210

CHROMATOGRAM
Retention time: 9.2
Internal standard: 2-methyl-2-phenyl-1,3-propanediol dicarbamate (10.8)

OTHER SUBSTANCES
Extracted: carbamazepine, carbamazepine-10,11-epoxide, clonazepam, ethosuximide, hexobarbital, ibuprofen, phenytoin, valproic acid
Simultaneous: phenobarbital, primidone

KEY WORDS
plasma; serum

Extracted: metabolites

KEY WORDS
plasma; rat; dog

REFERENCE
Romanyshyn,L.A.; Wichmann,J.K.; Kucharczyk,N.; Sofia,R.D. Simultaneous determination of felbamate and three metabolites in rat and dog plasmas by high-performance liquid chromatography, *J.Chromatogr.*, **1993**, *622*, 229–234.

SAMPLE
Matrix: blood
Sample preparation: 100 μL Serum + 200 μL 12 μg/mL acetoacetanilide in MeCN, centrifuge at 14000 g for 15 s, inject a 50 μL aliquot of the supernatant.

HPLC VARIABLES
Column: 125 × 4 5 μm C8 (Merck)
Mobile phase: MeCN:20 mM pH 6.1 phosphate buffer 12.5:87.5
Flow rate: 1.8
Injection volume: 50
Detector: UV 205

CHROMATOGRAM
Retention time: 12.5
Internal standard: acetoacetanilide (8.4)
Limit of detection: 3000 ng/mL

OTHER SUBSTANCES
Noninterfering: acetaminophen, N-acetylprocainamide, amikacin, carbamazepine, digoxin, disopyramide, ethosuximide, lidocaine, phenobarbital, phenytoin, primidone, procainamide, quinidine, salicylic acid, theophylline, valproic acid, vancomycin

KEY WORDS
serum; comparison with capillary electrophoresis

REFERENCE
Shihabi,Z.K.; Oles,K.S. Felbamate measured in serum by two methods: HPLC and capillary electrophoresis, *Clin.Chem.*, **1994**, *40*, 1904–1908.

SAMPLE
Matrix: blood
Sample preparation: 500 μL Serum + 50 μL 330 μg/mL IS in MeOH + 3 mL dichloromethane, rotate for 5 min, centrifuge for 5 min. Remove the organic layer and evaporate it to dryness under a stream of air at 40°, reconstitute the residue in 200 μL mobile phase, inject a 35 μL aliquot. Alternatively, condition a 6 mL C18 SPE cartridge (J.T.Baker) with 2 mL MeOH, 2 mL water, 1 mL 1 M KOH, and 1 mL water. 500 μL Serum + 50 μL 330 μg/mL IS in MeOH, add to the SPE cartridge, wash with 1 mL 100 mM pH 7.4 phosphate buffer, wash with 1 mL water, elute with 2 mL MeOH. Evaporate the eluate to dryness under a stream of nitrogen, reconstitute the residue in 200 μL mobile phase, inject a 35 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 Zorbax C18
Mobile phase: MeCN:MeOH:THF:buffer 5.25:10.25:12.5:72 (Buffer was 17 g KH_2PO_4 in 250 mL water, pH 7.4.)
Flow rate: 1.5
Injection volume: 35
Detector: UV 254

CHROMATOGRAM
Retention time: 4.98
Internal standard: 2-methyl-2-phenyl-1,3-propanediol dicarbamate (methyl felbamate) (7.0)
Limit of quantitation: 5 μg/mL

OTHER SUBSTANCES
Simultaneous: carbamazepine, carbamazepine epoxide, phenytoin
Noninterfering: amobarbital, butabarbital, butalbital, caffeine, lidocaine, pentobarbital, phenobarbital, primidone, secobarbital, theophylline

KEY WORDS
serum; SPE; valproic acid; comparison with GC

REFERENCE
Gur,P.; Poklis,A.; Saady,J.; Costantino,A. Chromatographic procedures for the determination of felbamate in serum, *J.Anal.Toxicol.*, **1995**, *19*, 499–503.

SAMPLE
Matrix: blood
Sample preparation: 200 μL Plasma or serum + 200 μL IS in MeCN, mix, let stand. centrifuge. Remove the supernatant and wash it with hexane, centrifuge, inject a aliquot.

HPLC VARIABLES
Column: μBondapak C18
Mobile phase: MeCN:phosphate buffer 20:80
Detector: UV 214

CHROMATOGRAM
Retention time: 3.0
Internal standard: W509 (4.5)
Limit of quantitation: 10 μg/mL

OTHER SUBSTANCES
Simultaneous: phenobarbital

KEY WORDS
serum; plasma

SAMPLE
Matrix: tissue
Sample preparation: Homogenize (Ultra-Turrax Tissuemizer) with four volumes of water for 1 min. 100 μL Homogenate + 100 μL 12.5 μg/mL IS in mobile phase + 2 mL water, vortex for 1 min, centrifuge at 600 g for 10 min. 2 mL Supernatant + 8 mL ethyl acetate, vortex for 1 min, centrifuge at 600 g for 10 min. Remove the organic layer and evaporate it to dryness under vacuum at about 50°, reconstitute the residue in 100 μL mobile phase, inject an 80 μL aliquot.

HPLC VARIABLES
Guard column: Resolve C18 (Waters)
Column: 300 × 3.9 5 μm Resolve C18 (Waters)
Mobile phase: MeCN:MeOH:buffer 15:5:80 (Buffer was 2.3 g $K_2HPO_4.3H_2O$ in 950 mL water, adjust pH to 6.8 with phosphoric acid, make up to 1 L with water.)
Column temperature: 50
Flow rate: 1
Injection volume: 80
Detector: UV 210

CHROMATOGRAM
Retention time: 11
Internal standard: 2-methyl-2-phenyl-1,3-propanediol dicarbamate (18)
Limit of quantitation: 195 ng/mL

OTHER SUBSTANCES
Extracted: metabolites

KEY WORDS
rat; brain; heart; pharmacokinetics

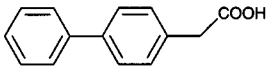
Felbinac



Molecular formula: $C_{14}H_{12}O_3$
Molecular weight: 212.25
CAS Registry No.: 5728-52-9
Merck Index: 3989
Lednicer No.: 4 32

SAMPLE
Matrix: blood
Sample preparation: Mix 1 mL plasma with 20 μL 20 μg/mL IS in MeOH. Vortex for 1 min with dichloromethane:diethyl ether 80:20, centrifuge at 1000 g for 10 min, separate the organic layer. Add 4 mL dichloromethane-diethyl ether 80:20, repeat the same extraction procedure twice, evaporate the organic phase to dryness under a stream of nitrogen, add 100 μL 10 mM NaOH to the residue, shake for 5 min, inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: 20 × 4.6 10 μm Vydac AXGU
Column: 250 × 4.6 5 μm Adsorbosphere SAX
Mobile phase: MeCN:100 mM pH 7.0 phosphate buffer 10:90
Flow rate: 1.2
Injection volume: 20
Detector: UV 280

CHROMATOGRAM
Retention time: 6.8
Internal standard: 2-[4-(2-furoyl)phenyl]propionic acid (3.9)
Limit of detection: 100 ng/mL

OTHER SUBSTANCES
Extracted: fenbufen, pefloxacin

KEY WORDS
plasma

REFERENCE

SAMPLE
Matrix: blood

Sample preparation: Mix 1 mL serum with 20 μL 20 μg/mL IS in MeOH and 100 μL 20 mM NaOH. Vortex for 1 min with 4 ml dichloromethane:diethylether 80:20, centrifuge at 2000 g for 10 min, remove 3 mL organic phase. Repeat the same extraction procedure twice. Combine organic layers, evaporate to dryness under a stream of nitrogen. Add 100 μL 20 mM NaOH to the residue, shake for 5 min, inject a 20 μL aliquot.

HPLC VARIABLES

Guard column: 20 × 4.6 10 μm Vydac AXGU
Column: 250 × 4.6 5 μm Supelcosil LC-SAX
Mobile phase: MeCN;100 mM pH 7.0 phosphate buffer 10:90
Flow rate: 1.2
Injection volume: 20
Detector: UV 280

CHROMATOGRAM

Retention time: 7.2
Internal standard: 2-[4-(2'-furoyl)phenyl]propionic acid (3.5)
Limit of detection: 30 ng/mL
Limit of quantitation: 200 ng/mL

OTHER SUBSTANCES

Extracted: fenbufen, lomefloxacin

KEY WORDS

plasma

REFERENCE

SAMPLE

Matrix: blood
Sample preparation: 50 μL Plasma + 1 mL 100 mM pH 7.0 K_2HPO_4 adjusted to pH 7.0 with 85% orthophosphoric acid + 100 μL 200 μg/mL N-phenylanthranilic acid in water + 3 mL dichloromethane:isoamyl alcohol 9:1, shake vigorously for 10 min, centrifuge at 2270 g for 10 min. Remove 2 mL of the organic phase and evaporate it to dryness under a stream of nitrogen at 40°. Reconstitute residue in 100 μL MeOH:50 mM NaOH 2:1, vortex, inject a 10 μL aliquot.

HPLC VARIABLES

Column: 150 × 4.6 5 μm Chemcosorb 5-ODS-H
Mobile phase: MeOH:5 mM sodium lauryl sulfate 2:1, adjusted to pH 2.5 with 85% phosphoric acid (Better separation obtained at pH 2.35, J.Chromatogr. 1990, 530, 186.)
Column temperature: 40
Flow rate: 0.6
Injection volume: 10
Detector: UV 275

CHROMATOGRAM

Retention time: 9.8
Internal standard: N-phenylanthranilic acid (15.0)
Limit of detection: 450 ng/mL

OTHER SUBSTANCES

Extracted: fenbufen, nalidixic acid, norfloxacin, ofloxacin, enoxacin

KEY WORDS

plasma; rat

SAMPLE
Matrix: blood
Sample preparation: 50 μL Plasma + 1 mL 100 mM pH 7.0 K_2HPO_4 adjusted to pH 7.0 with 85% orthophosphoric acid + 100 μL 300 μg/mL nalidixic acid in water + 3 mL dichloromethane: isoamyl alcohol 9:1, shake vigorously for 10 min, centrifuge at 2270 g for 10 min. Remove 2 mL of the organic phase and evaporate it to dryness under a stream of nitrogen at 40°. Reconstitute residue in 100 μL MeOH:50 mM NaOH 2:1, vortex, inject a 10 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 5 μm Chemcosorb 5-ODS-H
Mobile phase: MeOH:5 mM sodium lauryl sulfate 2:1, adjusted to pH 2.35 with 85% phosphoric acid
Column temperature: 40
Flow rate: 0.6
Injection volume: 10
Detector: UV 275

CHROMATOGRAM
Retention time: 10
Internal standard: nalidixic acid (5)
Limit of quantitation: 400 ng/mL

OTHER SUBSTANCES
Extracted: fenbufen, ciprofloxacin

KEY WORDS
plasma; rat; pharmacokinetics

REFERENCE

SAMPLE
Matrix: urine
Sample preparation: Condition a Sep-Pak C18 SPE cartridge with 10 mL ethyl acetate and dry by aspiration of air. Evaporate an aliquot of 100 μL 20 μg/mL IS in MeOH to dryness at 37°. Add 1 mL urine, vortex, add 250 μL 1 M pH 5.0 acetate buffer, vortex. Add 250 μL of the mixture to the SPE cartridge, dry by aspiration of air, elute with 3 mL ethyl acetate, evaporate the eluate to dryness under a stream of nitrogen at 37°, reconstitute the residue in 200 μL mobile phase, inject a 10-30 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 5 μm Inertsil ODS-2
Mobile phase: MeCN:50 mM pH 5.0 phosphate buffer 42:58
Flow rate: 0.9
Injection volume: 10-30
Detector: UV 230

CHROMATOGRAM
Retention time: 8
Internal standard: indomethacin (18.5)
Limit of quantitation: 50 ng/mL

OTHER SUBSTANCES
Extracted: diclofenac, ibuprofen, fenbufen, flurbiprofen, ketoprofen, loxoprofen, mefenamic acid, naproxen, piroxicam, sulindac

KEY WORDS
SPE

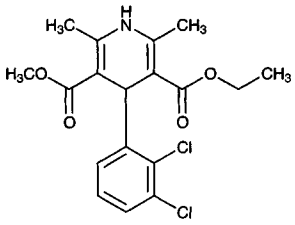
Felodipine



Molecular formula: $C_{18}H_{19}Cl_2NO_4$
Molecular weight: 384.26
CAS Registry No.: 72509-76-3
Merck Index: 3991
Lednicer No.: 4 106

SAMPLE
Matrix: bile, urine
Sample preparation: Dilute 20-200 μL bile or urine to 1 mL with water, adjust pH to 2.2 with 1 M phosphate buffer, extract twice with 6 mL ether with gentle inversion for 1 min. Remove the organic phases and evaporate them under a stream of nitrogen, dissolve the residue in 250 μL mobile phase A, inject the whole amount.

HPLC VARIABLES
Column: 60-5 Polygosil C18 (Macherey-Nagel)
Mobile phase: Gradient. A was MeOH:10 mM tetrapropylammonium hydrogen sulfate in 50 mM pH 5.0 phosphate buffer 5:95. B was MeOH:10 mM tetrapropylammonium hydrogen sulfate in 50 mM pH 5.0 phosphate buffer 2:1. A:B 100:0 for 2 min then to 0:100 over 35 min.
Flow rate: 1.2
Injection volume: 250
Detector: UV 254

OTHER SUBSTANCES
Simultaneous: metabolites

KEY WORDS
rat

REFERENCE
Sutfin,T.A.; Gabrielsson,M.; Regardh,C.G. Effects of biliary excretion on the disposition of felodipine and metabolites in the rat, *Xenobiotica*, **1987**, *17*, 1203–1214.

SAMPLE
Matrix: blood
Sample preparation: Adjust pH of 200-300 μL whole blood to 12 with 100 μL 1 M NaOH, add 150 μL 10% EtOH, extract with 4 mL diethyl ether for 30 min, freeze in dry ice. Remove the organic phase and evaporate it to dryness under a stream of nitrogen. Reconstitute the residue with 250 μL mobile phase, inject a 200 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.5 5 μm Nucleosil C-18
Mobile phase: MeOH:water 70:30 containing 20 mM perchloric acid and 80 mM sodium chlorate
Flow rate: 1.1
Injection volume: 200
Detector: UV 254

OTHER SUBSTANCES
Simultaneous: metabolites

KEY WORDS
whole blood

REFERENCE
Sutfin,T.A.; Gabrielsson,M.; Regardh,C.G. Effects of biliary excretion on the disposition of felodipine and metabolites in the rat, *Xenobiotica*, **1987**, *17*, 1203–1214.

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 50 μL 100 ng/mL IS in MeOH, mix, equilibrate for 10 min, add 25 μL 4 M NaOH, mix, add 4 mL n-pentane:dichloromethane 1:1, mix on a Sarstedt CM-9 whirl-mixer for 1 h, centrifuge at 2000 g for 5 min. Remove the organic layer and evaporate it to dryness under vacuum at 30°, dissolve the residue in 40 μL mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: 20 × 2 Perisorb RP-18 (Upchurch)
Column: 250 × 4.6 Chiralcel OJ (Daicel)
Mobile phase: n-Hexane:isopropanol 87.5:12.5
Column temperature: 37
Flow rate: 1
Injection volume: 20
Detector: UV 240

CHROMATOGRAM
Retention time: 15.9 (S), 21.9 (R)
Internal standard: 3-(2-hydroxy-2-methyl)ethyl-5-methyl-2,6-dimethyl-4-(2-nitrophenyl)-3,5-pyridine dicarboxylate (Bay r 9590)
Limit of detection: 0.1 ng/mL obtainable using off-line GC-ECD detection of HPLC column effluent, 5 ng/mL (UV)

OTHER SUBSTANCES
Simultaneous: metabolites, nitrendipine, nimodipine, nisoldipine, isradipine, niguldipine, nilvadipine, nicardipine

KEY WORDS
plasma; chiral

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30

Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM
Retention time: 24.423

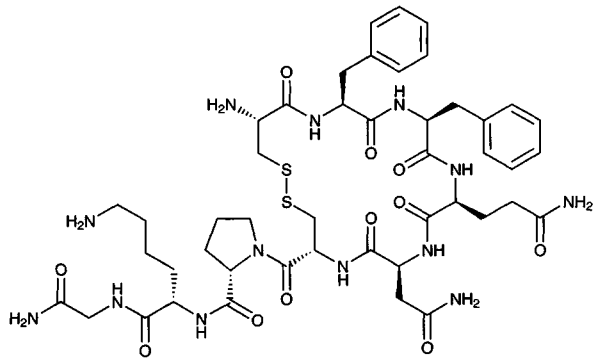
Felypressin

Molecular formula: $C_{46}H_{65}N_{13}O_{11}S_2$
Molecular weight: 1040.24
CAS Registry No.: 56-59-7
Merck Index: 3992



SAMPLE
Matrix: formulations
Sample preparation: Inject a 20 μL aliquot of the undiluted formulation onto column A and elute to waste with mobile phase A, after 14 min elute the contents of column A onto column B with mobile phase B, monitor the effluent from column B, after 9 min re-equilibrate column A with mobile phase A for 7 min.

HPLC VARIABLES
Column: A 25 × 4 4 μm Superspher 60 RP-8; B 50 × 4 4 μm Superspher 60 RP-8e
Mobile phase: A MeCN:50 mM pH 6.0 phosphate buffer 12:88; B MeCN:50 mM pH 6.0 phosphate buffer 20:80
Flow rate: 1
Injection volume: 20
Detector: F ex 390 em 470 following post-column reaction. The column effluent mixed with the reagent pumped at 0.25 mL/min and the mixture flowed through a 5 m × 0.5 mm ID knitted PTFE coil to the detector. (Reagent was 300 μg/mL fluorescamine in MeCN containing 0.1% Brij-35.)

CHROMATOGRAM
Retention time: 18
Limit of detection: 0.6 pmole

OTHER SUBSTANCES
Noninterfering: prilocaine

KEY WORDS
post-column reaction; injections; column-switching; rinse all glass and plastic ware with 1 M acetic acid and then water to minimize adsorption.

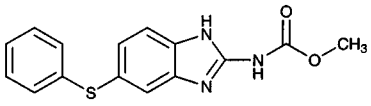
Fenbendazole



Molecular formula: $C_{15}H_{13}N_3O_2S$
Molecular weight: 299.35
CAS Registry No.: 43210-67-9
Merck Index: 4000
Lednicer No.: 3 176

SAMPLE
Matrix: abomasal fluid, blood, duodenal fluid, rumen fluid
Sample preparation: 4 mL Plasma, rumen fluid, abomasal fluid, or duodenal fluid + 4 mL pH 7.4 phosphate buffer + 20 mL ether, shake on a rotary mixer for 10 min, remove 16 mL of the ether layer, add 20 mL ether, shake on a rotary mixer for 10 min, remove 20 mL of the ether layer. Combine the ether layers and evaporate them under a stream of nitrogen at 60° to dryness, reconstitute in 50 μL MeOH, sonicate, inject a 5 μL aliquot.

HPLC VARIABLES
Column: 100 × 8 ODS Hypersil 10
Mobile phase: MeOH:50 mM ammonium carbonate 65:35
Flow rate: 1.5
Injection volume: 5
Detector: UV 292

CHROMATOGRAM
Retention time: 10
Limit of detection: 20 ng/mL

OTHER SUBSTANCES
Extracted: albendazole, oxfendazole, cambendazole, thiabendazole, mebendazole, oxibendazole, parbendazole

KEY WORDS
plasma; sheep

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 40 μL 10 μg/mL mebendazole in MeOH:DMF 99:1 + 1 mL 50 mM pH 8 borate buffer + 5 mL ethyl acetate, vortex for 20 s, centrifuge at 2500 g for 5 min. Remove 4 mL of the organic layer and evaporate it to dryness under a stream of nitrogen at 50° for about 50 min, reconstitute the residue in 200 μL mobile phase, inject an aliquot.

HPLC VARIABLES
Column: 125 × 4.6 5 μm Hypersil SAS
Mobile phase: MeCN:buffer 30:70 (Buffer was 5 mM phosphoric acid adjusted to pH 5.9 with tetraethylammonium hydroxide.)
Flow rate: 2
Injection volume: 100
Detector: UV 300

CHROMATOGRAM
Retention time: 8.6
Internal standard: mebendazole (3.2)
Limit of detection: 15 ng/mL

OTHER SUBSTANCES
Extracted: metabolites

KEY WORDS
plasma; sheep; pharmacokinetics

SAMPLE
Matrix: blood
Sample preparation: 2 mL Plasma + 100 μL 10 μg/mL albendazole in MeOH + 200 μL 500 mM ammonium hydroxide (to adjust pH to 11) + 200 mg NaCl + 5 mL distilled diethyl ether, roll for 15 min, remove 4 mL supernatant, repeat extraction, remove 5 mL supernatant. Combine the organic layers and evaporate them to dryness under a stream of nitrogen, reconstitute the residue in 60 μL MeOH, sonicate for 2 min, inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: present but not specified
Column: 100 × 5 Nucleosil 5C18

Mobile phase: MeCN:1% acetic acid 43:57
Flow rate: 0.9
Injection volume: 20
Detector: UV 292

CHROMATOGRAM
Retention time: 2.6
Internal standard: albendazole (1.6)
Limit of detection: 12.5 ng/mL

OTHER SUBSTANCES
Extracted: febantel, oxfendazole, oxfendazole sulfone

KEY WORDS
plasma; sheep

REFERENCE

SAMPLE
Matrix: blood, feces, tissue, urine
Sample preparation: Plasma or liver homogenate. 1 mL Plasma or liver homogenate (S9) + 20 μL concentrated ammonium hydroxide, vortex, add to a 1 mL Chem Elut SPE cartridge (Analytichem), rinse tube with 100 μL dichloromethane, add rinse to the SPE cartridge, elute SPE cartridge with two 4 mL portions of dichloromethane. Evaporate the eluate to dryness under a stream of nitrogen at 50°, reconstitute the residue in 100 μL mobile phase, inject a 20 μL aliquot. Urine. 1 mL Urine + 20 μL concentrated ammonium hydroxide, vortex, add to a 1 mL Chem Elut SPE cartridge (Analytichem), rinse tube with 100 μL dichloromethane, add rinse to the SPE cartridge, elute SPE cartridge with two 4 mL portions of dichloromethane. Evaporate the eluate to dryness under a stream of nitrogen at 50°, reconstitute the residue in 500 μL 2 M HCl and 1 mL benzene (Caution! Benzene is a carcinogen!), vortex, centrifuge at 2000 rpm for 5 min, wash twice more with benzene. Add the aqueous layer to 500 μL concentrated ammonium hydroxide, extract twice with 1 mL dichloromethane. Combine the extracts and wash them with 1 mL water. Evaporate the dichloromethane layer to dryness under a stream of nitrogen, reconstitute the residue in 100 μL mobile phase, inject a 10 μL aliquot. Feces. 2 g Feces + 8 mL water + 1 mL concentrated ammonia, homogenize by stirring, add to a 10 mL Chem Elut SPE cartridge (Analytichem) with a cotton ball on the top of the column, elute with two 12 mL portions of ethyl acetate. Evaporate the eluate to dryness under a stream of nitrogen at 50°, reconstitute the residue in 2 mL 2 M HCl and 4 mL benzene (Caution! Benzene is a carcinogen!), vortex, centrifuge at 2000 rpm for 5 min, wash three more times with benzene. Add the aqueous layer to 1 mL concentrated ammonium hydroxide, extract twice with 1 mL dichloromethane. Combine the extracts and wash them with 1 mL water. Evaporate the dichloromethane layer to dryness under a stream of nitrogen, reconstitute the residue in 500 μL mobile phase, inject a 5 μL aliquot.

HPLC VARIABLES
Column: 300 × 4 MicroPak MCH 10 octadecylsilane
Mobile phase: MeCN:0.05 N phosphoric acid 78:22
Flow rate: 0.35 for 14 min, increasing to 2 over 2 min, maintain at 2
Injection volume: 5-20
Detector: UV 290

CHROMATOGRAM
Retention time: 17
Limit of detection: 720 ng/g (goat feces), 200 ng/g (duck feces), 10 ng/mL (urine, plasma, tissue)

OTHER SUBSTANCES
Extracted: metabolites

SAMPLE

Matrix: milk
Sample preparation: Condition a 3 mL Bond Elut silica SPE cartridge with 2 mL dichloromethane. 10 g Milk + 5 mL 1 M sodium carbonate, mix, add 150 mL ethyl acetate, add 1 mL 10 mg/mL BHT in ethyl acetate, blend (tissuemizer) at high speed for 5 min, add 10 g anhydrous sodium sulfate, blend for 1 min, let settle for 2-3 min, filter (No. 41 paper), add another 150 mL ethyl acetate to the sodium sulfate, blend for 2 min, filter. Combine the filtrates and evaporate them to dryness under vacuum. Rinse out flask with two 10 mL portions of hexane and two 10 mL portions of 1 M phosphoric acid. Combine rinses, shake vigorously for 2 min, extract the hexane layer with two 10 mL portions of 1 mL phosphoric acid. Combine all the aqueous layers and wash them with 5 mL hexane, adjust the pH to 8-9 by slowly adding about 9 mL 10 M KOH (use an ice bath), add 50 mL ethyl acetate, shake vigorously for 2 min, repeat extraction. Filter the organic layers through 40 g anhydrous sodium sulfate, wash the sodium sulfate with 25 mL ethyl acetate. Combine the organic layers, add 200 μL 10 mg/mL BHT in ethyl acetate, evaporate to dryness under vacuum. Take up the residue in two 3 mL portions of dichloromethane and add them to the SPE cartridge, wash with 5 mL dichloromethane, elute with 5 mL dichloromethane:MeOH 75:25. Evaporate the eluate to dryness under nitrogen, reconstitute in 1 mL mobile phase, vortex, filter (0.2 μm), inject an aliquot.

HPLC VARIABLES

Guard column: 30 × 4.6 pellicular C18 (Alltech)
Column: 250 × 4.6 5 μm Hypersil ODS
Mobile phase: MeOH:buffer 70:30 (Buffer was 1.15 g $(NH_4)H_2PO_4$ in 950 mL water, adjust pH to 7.0 with dilute ammonia, make up to 1 L with water.)

SAMPLE

Matrix: tissue

Sample preparation: Condition a 1 g silica SPE cartridge with 6 mL ethyl acetate-hexane 20:80. 5 g tissue + 500 µL 4 M potassium carbonate, vortex for 10 s, add 10 mL ethyl acetate, vortex for 10 s, shake at 500 rpm for 10 min, centrifuge at 3400 g for 6 min. Decant the supernatant. Repeat the extraction with another 10 mL ethyl acetate. Combined extracts + 80 mL hexane + 2 g anhydrous sodium sulfate, shake, let stand until it becomes transparent. Filter over an S & S 589.1 filter paper circle. Add the filtrate to the SPE cartridge, dry the column in a stream of nitrogen for 10 min. Elute with 3 mL acetic acid:MeOH 3:97, evaporate to dryness under a stream of nitrogen at 37°. Dissolve the residue in 550 µL 50 mM ammonium phosphate, add 280 µL MeCN and 170 µL MeOH, sonicate for 5 min, centrifuge at 15800 g for at least 8 min. Inject a 50 µL aliquot.

HPLC VARIABLES

Guard column: 10 × 2.1 40 µm pellicular reversed phase stainless steel

Column: two 100 × 3.0 5 µm Lichrosorb RP8 glass columns in series

Mobile phase: MeCN:MeOH:50 mM pH 5.0 phosphate buffer 28:17:55 (Prepare buffer as follows. Dissolve 5.75 g ammonium phosphate in 950 mL water, adjust to pH 5.0 with 1 M NaOH. Make up to 1000 mL with water.)

Flow rate: 0.6

Injection volume: 50

Detector: UV 297

CHROMATOGRAM

Retention time: 15

Limit of detection: 500 pg (on column), 3.0 µg/kg (in muscle tissue)

SAMPLE
Matrix: tissue
Sample preparation: Wash 22 g bulk 40 μm 18% load end-capped C18 material (Analytichem) in a syringe barrel with 100 mL hexane, with 100 mL dichloromethane, and with 100 mL MeOH and dry under vacuum aspiration. Gently blend 2 g C18 material, 0.5 g liver, and 10 μL 40 μg/mL mebendazole in DMF in a glass pestle for 1 min until homogeneous in appearance. Place in a 10 mL syringe barrel plugged with filter paper (Whatman No. 1), cover with filter paper, compress to 4.5 mL, place a 100 μL pipette tip on the barrel to restrict flow, wash with 8 mL hexane, elute with 8 mL MeCN. Pass the eluate through 0.5 g activated alumina (EM Science Type F-20 80-200 mesh) between filter paper in a 10 mL syringe barrel (wash column with 4 mL MeCN just before use). Evaporate the eluate to dryness under a stream of nitrogen, reconstitute the residue in 100 μL MeOH and 400 μL 17 mM phosphoric acid, sonicate for 5-10 min, centrifuge at 17000 g for 5 min, filter the supernatant (0.45 μm), inject a 20 μL aliquot.

HPLC VARIABLES
Column: 300 × 4 10 μm Micro Pak ODS (Varian)

SAMPLE
Matrix: tissue
Sample preparation: Condition a 2.8 mL 500 mg 40 μm 60 Å Bond Elut silica SPE cartridge with 2 mL dichloromethane. 10 g Minced tissue + 5 mL 1 M sodium carbonate + 150 mL ethyl acetate + 1 mL 10 mg/mL BHT in ethyl acetate, blend (Waring) at high speed for 5 min, add 80 g anhydrous sodium sulfate, blend at low speed for 1 min. Decant the organic layer and filter it (No. 41 paper), add 150 mL ethyl acetate to material remaining in blender, blend at low speed for 2-3 min, filter, wash solid with 10 mL EtOH. Combine all the filtrates and evaporate them to dryness under vacuum at 30-35° (beware of bumping). Rinse out flask with two 10 mL portions of hexane and two 10 mL portions of 1 M phosphoric acid, combine rinses, shake vigorously for 2 min, allow to separate for 10 min, extract the hexane layer twice more with 10 mL portions of 1 M phosphoric acid. Combine all the aqueous layers and wash them with 10 mL hexane, adjust the pH of the aqueous layer to 8.5 ± 1.0 by slowly adding about 9 mL 10 M KOH while using an ice bath. Extract twice with 50 mL ethyl acetate (2 min shaking), pass ethyl acetate layers through 40 g anhydrous sodium sulfate, wash the sodium sulfate with 25 mL ethyl acetate. Combine the ethyl acetate layers, add 200 μL 10 mg/mL BHT in ethyl

acetate, evaporate to dryness under vacuum at 30-35° (beware of bumping). Rinse out flask with three 3 mL portions of dichloromethane, add rinses to the SPE cartridge, wash with 5 mL dichloromethane, elute with 5 mL dichloromethane:MeOH 75:25. Evaporate the eluate to dryness under a stream of nitrogen, reconstitute the residue in 1 mL mobile phase, vortex, filter (0.2 μm), inject a 50 μL aliquot.

HPLC VARIABLES
Guard column: 30 × 4.6 Brownlee RP-18 Spheri-10 MPLC
Column: 250 × 4.6 5 μm C18 (Alltech)
Mobile phase: MeOH:buffer 70:30 (Buffer was 1.15 g $(NH_4)H_2PO_4$ in 950 mL water, adjust pH to 7.0 with dilute ammonia, make up to 1 L with water.)

SAMPLE
Matrix: blood
Sample preparation: 2 mL Whole blood or plasma + 2 mL buffer + 5 mL chloroform:isopropanol: n-heptane 60:14:26, shake gently horizontally for 10 min, centrifuge at 2800 g for 10 min. Remove the lower organic layer and evaporate it to dryness under vacuum at 45°, reconstitute the residue in 100 μL mobile phase, centrifuge at 2800 g for 5 min, inject a 50 μL aliquot of the supernatant. (Buffer was saturated ammonium chloride solution 25% diluted with water, adjusted to pH 9.5 with 25% ammonia solution.)

HPLC VARIABLES
Column: 300 × 3.9 4 μm NovaPack C18
Mobile phase: MeOH:THF:buffer 65:5:30 (Buffer was 0.68 g/L (10 mM (sic)) KH_2PO_4 adjusted to pH 2.6 with concentrated orthophosphoric acid.) (At the end of each session wash the column with water for 1 h and MeOH for 1 h, re-equilibrate for 30 min.)
Column temperature: 30
Flow rate: 0.8
Injection volume: 50
Detector: UV 285

CHROMATOGRAM

Retention time: 5.44
Limit of detection: <120 ng/mL

KEY WORDS

whole blood; plasma; interferences may occur–compounds (all of which are extracted) elute in this order tenoxicam; iproniazid; methocarbamol; methotrexate; caffeine; nialamide; colchicine; cytarabine; benzoylecgonine; acetaminophen; diazoxide; dacarbazine; sulfinpyrazole; flumazenil; sulpride; morphine; atenolol; toloxatone; terbutaline; albuterol; phenobarbital; ranitidine; tiapride; phenol; chlormezanone; aspirin; metformin; ritodrine; codeine; sultopride; amisulpride; naltrexone; lisinopril; benzocaine; nizatidine; nalorphine; mephenesin; naloxone; sotalol; carteolol; procainamide; carbamazepine; bromazepam; nalbuphine; nadolol; procarbazine; dihydralazine; omeprazole; strychnine; acebutolol; glutethimide; chlorpropamide; glipizide; triazolam; prazosin; flunitrazepam; clonazepam; metoclopramide; melphalan; estazolam; tolbutamide; ephedrine; clonidine; pindolol; clobazam; minoxidil; disopyramide; nitrazepam; dextromethorphan; tofisopam; zopiclone; debrisoquine; sulindac; alprazolam; cycloguanil; lorazepam; methaqualone; ketamine; piroxicam; metoprolol; nifedipine; quinine; mephentermine; prilocaine; pentazocine; oxazepam; tiaprofenic acid; quinidine; celiprolol; ajmaline; yohimbine; lidocaine; secobarbital; viloxazine; mepivacaine; meperidine; doxylamine; labetalol; temazepam; amodiaquine; benperidol; droperidol; hydroxychloroquine; zolpidem; ketoprofen; alminoprofen; cicletanine; moclobemide; chloroquine; cocaine; timolol; nomifensine; ticlopidine; acenocoumarol; vindesine; mexiletine; dipyridamole; trazodone; pipamperone; pyrimethamine; benazepril; vincristine; metapramine; chlordiazepoxide; oxprenolol; warfarin; clorazepate; flecainide; phencyclidine; thiopental; fenfluramine; metipranolol; triprolidine; naproxen; buprenorphine; verapamil; buspirone; tianeptine; midazolam; bupivacaine; carbinoxamine; loprazolam; cetirizine; chlorpheniramine; moperone; cibenzoline; medifoxamine; astemizole; vinblastine; nicardipine; bisoprolol; diltiazem; glibornuride; reserpine; aconitine; nitrendipine; diazepam; mianserin; ramipril; haloperidol; tetracaine; alprenolol; acepromethazine; glibenclamide; chlorophenacinone; doxepin; nimodipine; diphenhydramine; cyclizine; histapyrrodine; phenylbutazone; demexiptiline; clozapine; proguanil; trifluperidol; medazepam; cyamemazine; bumadizone; suriclone; propranolol; acepromazine; dothiepin; dextromoramide; fenoprofen; dextropropoxyphene; loxapine; betaxolol; propafenone; promethazine; thioproperazine; methadone; amoxapine; quinupramine; opipramol; cyproheptadine; brompheniramine; mefenidramine; protriptyline; flurbiprofen; tetrazepam; zorubicin; prazepam; alimemazine; loperamide; imipramine; desipramine; levomepromazine; hydroxyzine; niflumic acid; penbutolol; fluvoxamine; pimozide; daunorubicin; indomethacin; maprotiline; tropatenine; etodolac; fluoxetine; amitriptyline; nortriptyline; tioclomarol; diclofenac; mefloquine; trimipramine; chlorambucil; lidoflazine; ibuprofen; floctafenine; alpidem; loratadine; chlorpromazine; clomipramine; carpipramine; thioridazine; fentiazac; clemastine; mefenamic acid; fluphenazine; prochlorperazine; penfluridol; bepridil; terfenadine; trifluoperazine

SAMPLE

Matrix: blood
Sample preparation: Condition a 1 mL Bond-Elut C18 SPE cartridge with 1 mL MeOH. 1 mL Serum + 6 μL 1 mg/mL ketoprofen in MeOH + 1 mL water + 20 μL saturated ammonium sulfate solution + 60 μL concentrated HCl, vortex for 3 min, add to the SPE cartridge, wash with three 1 mL portions of water, allow to dry for 3 min, elute with five 500 μL portions of MeOH. Evaporate the eluate to dryness under a stream of nitrogen, reconstitute the residue in 1 mL mobile phase, inject a 100 μL aliquot.

HPLC VARIABLES

Column: 100 × 4.6 5 μm Spheri-5 cyano
Mobile phase: MeCN:MeOH:water:phosphoric acid 21:22:56.5:0.5
Flow rate: 0.5
Injection volume: 100
Detector: F ex 248 em 335 (filter) following post-column reaction. The column effluent flowed through a knitted 7.9 m × 0.3 mm ID PTFE coil irradiated with an SC3-9 UV lamp (UVP, San Gabriel CA) and cooled with a fan to the detector.

CHROMATOGRAM
Retention time: 8.5
Internal standard: ketoprofen (6.5)
Limit of detection: 10 ng/mL

OTHER SUBSTANCES
Extracted: metabolites

KEY WORDS
post-column reaction; post-column photochemical derivatization; serum; SPE

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM
Retention time: 19.292

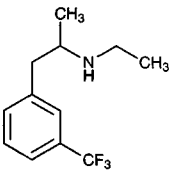
Fenfluramine



Molecular formula: $C_{12}H_{16}F_3N$
Molecular weight: 231.26
CAS Registry No.: 458-24-2, 404-82-0 (HCl)
Merck Index: 4015
Lednicer No.: 1 70

SAMPLE

Matrix: blood

Sample preparation: 1 mL Plasma + 1 mL 0.6 M pH 9.8 carbonate buffer + 40 µL 5 µg/mL maprotiline in 10 mM HCl + 5 mL 200 g/L ethyl acetate in n-heptane, mix by rocking for 10 min, centrifuge at 1500 g for 10 min. Remove organic layer and add it to 150 µL 100 mM HCl, mix 10 min, centrifuge at 1500 g for 10 min. Discard organic layer and evaporate aqueous layer at 45° in a vacuum centrifuge for 1 h. Take up residue in 50 µL 1 M pH 10.3 carbonate buffer and 25 µL 10 mg/mL dansyl chloride in MeCN, vortex, allow to react at room temper-

ature for 45 min, evaporate at 45° in a vacuum centrifuge for 20 min, reconstitute in 125 μL MeCN:water 75:25, vortex, centrifuge for 3-5 min, inject a 25-40 μL aliquot.

HPLC VARIABLES

Column: 250 × 4.6 5 μm Supelcosil LC-18
Mobile phase: MeCN:25 mM KH_2PO_4 75:25 + 500 μL/L orthophosphoric acid + 600 μL/L n-butylamine
Flow rate: 2
Injection volume: 25-40
Detector: F ex 235 em 470 (cut-off)

CHROMATOGRAM

Retention time: 8.21
Internal standard: maprotiline (12.8)

OTHER SUBSTANCES

Simultaneous: fluoxetine, propranolol, clovoxamine, fluvoxamine, amoxapine, desipramine, protriptyline, nortriptyline, sertraline, norfluoxetine
Noninterfering: amitriptyline, imipramine, clomipramine, trimipramine, mianserin, chlordiazepoxide, trazodone, cyclobenzaprine, nomifensine, bupropion, metoprolol, atenolol, pindolol, tranylcypromine, moclobemide, thioridazine, citalopram, clozapine, carbamazepine, doxepin, loxapine

KEY WORDS

plasma

SAMPLE

Matrix: blood
Sample preparation: 1 mL Plasma + 100 μL 1.25 μg/mL IS in water + 200 μL water, vortex, add 400 μL 1 M trichloroacetic acid, vortex, centrifuge at 2500 g for 10 min. Remove 900 μL of the supernatant and add it to 250 μL 1 M NaOH, add 2 mL reagent, vortex for 2 s, let stand for 90 min. Remove a 1 mL aliquot of the lower organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 200 μL dichloromethane, inject a 35 μL aliquot. (Reagent was 10 μM 3,5-dinitrophenylisocyanate in dichloromethane. Prepare as follows. Stir 6.40 g 3,5-dinitrobenzoyl chloride in 100 mL glacial acetic acid, add 1.80 g sodium azide in small increments, stir for 1 h, add 300 mL cold water. Filter off the 3,5-dinitrobenzyl azide precipitate and wash it with a small portion of water. Dry overnight in a vacuum desiccator. Reflux 25 mg 3,5-dinitrobenzyl azide dissolved in 5 mL toluene for 10 min, cool to room temperature, make up to 50 mL with dichloromethane, dilute an aliquot 1:200 with dichloromethane to give a 10 μM solution of 3,5-dinitrophenylisocyanate. Prepare fresh daily. CAUTION! 3,5-Dinitrobenzyl azide may be explosive and 3,5-dinitrophenylisocyanate may be toxic!)

HPLC VARIABLES

Column: 250 × 4.6 5 μm (R)-naphthylurea Chiral (Supelco)
Mobile phase: Hexane:isopropanol:MeCN 89:9:2
Flow rate: 1.2 for 15 min, 3.5 for 13 min, 1.2 for 7 min
Injection volume: 35
Detector: UV 235

CHROMATOGRAM

Retention time: 10 (d), 11.5 (l)
Internal standard: β-methylphenethylamine (20.7, first peak)
Limit of quantitation: 10 ng/mL

OTHER SUBSTANCES

Extracted: metabolites

KEY WORDS
plasma; conduct analyses under yellow light; chiral; pharmacokinetics; derivatization

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18

Column: 250 × 4.6 5 μm Symmetry C8 (Waters)

Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.

Column temperature: 30

Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)

Injection volume: 10-30

Detector: UV 207.5

CHROMATOGRAM

Retention time: 13.055

SAMPLE
Matrix: urine
Sample preparation: 2 mL Urine + 200 μL 5 μg/mL IS in water + 400 μL water, vortex for 5 s, add 400 μL 1 M NaOH, vortex, centrifuge at 2500 g for 10 min. Remove the supernatant and add it to 5 mL hexane:ethyl acetate 70:30, shake gently by hand for 1 min, let stand for 10 min. Remove 4 mL of the upper organic layer and evaporate it to about 30 μL under a stream of nitrogen, add 1 mL reagent, vortex for 2 s, let stand for 30 min, inject a 35 μL aliquot. (Reagent was 20 μM 3,5-dinitrophenylisocyanate in dichloromethane. Prepare as follows. Stir 6.40 g 3,5-dinitrobenzoyl chloride in 100 mL glacial acetic acid, add 1.80 g sodium azide in small increments, stir for 1 h, add 300 mL cold water. Filter off the 3,5-dinitrobenzyl azide precipitate and wash it with a small portion of water. Dry overnight in a vacuum desiccator. Reflux 25 mg 3,5-dinitrobenzyl azide dissolved in 5 mL toluene for 10 min, cool to room temperature, make up to 50 mL with dichloromethane, dilute an aliquot 1:100 with dichloromethane to give a 20 μM solution of 3,5-dinitrophenylisocyanate. Prepare fresh daily. CAUTION! 3,5-Dinitrobenzyl azide may be explosive and 3,5-dinitrophenylisocyanate may be toxic!)

HPLC VARIABLES
Column: 250 × 4.6 5 μm (R)-naphthylurea Chiral (Supelco)
Mobile phase: Hexane:isopropanol:MeCN 90.5:7.5:2 (d isomer) or 89:9:2 (l isomer)
Column temperature: ambient (l isomer), 35 (d isomer)
Flow rate: 1.2
Injection volume: 35
Detector: UV 235

CHROMATOGRAM
Retention time: 9.3 (d isomer), 10.7 (l isomer)
Internal standard: β-methylphenethylamine (19.5, first peak, d-isomer system) (18.8, l-isomer system, first peak)
Limit of quantitation: 25 ng/mL

SAMPLE

Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

Matrix: blood, urine
Sample preparation: 100 μL Urine or rat plasma or 500 μL human plasma + 50 μL MeOH:10 mM NaOH 10:90 + 200 μL 600 mM sulfuric acid + 3 mL isooctane:isopropanol 95:5, vortex for 30 s, centrifuge at 1800 g for 5 min. Remove the organic layer and evaporate it to dryness, reconstitute the residue in 200 μL 50 mM triethylamine in MeCN, add 50 μL 6 mM ethyl chloroformate in MeCN, vortex for 30 s, add 50 μL 500 mM R-(+)-α-phenylethylamine in MeCN: triethylamine 80:20, vortex briefly, let stand for 2 min, add 1 mL 250 mM HCl, add 3 mL chloroform, vortex for 30 s, centrifuge at 1800 g for 2 min. Remove the organic layer and evaporate it to dryness, reconstitute the residue in 200 μL mobile phase, inject a 10-150 μL aliquot.

HPLC VARIABLES
Guard column: 20 × 4.6 37-53 μm reversed-phase
Column: 100 × 4.6 5 μm C18 (Phenomenex)
Mobile phase: MeCN:water:acetic acid:triethylamine 46.5:53.5:0.1:0.03, pH 4.9
Flow rate: 1.6
Injection volume: 10-150
Detector: UV 225

CHROMATOGRAM
Retention time: 11.70, 13.40 (enantiomers)
Internal standard: fenoprofen

OTHER SUBSTANCES
Extracted: ibuprofen

KEY WORDS
derivatization; human; chiral; rat; fenoprofen is IS; plasma

REFERENCE
Wright,M.R.; Sattari,S.; Brocks,D.R.; Jamali,F. Improved high-performance liquid chromatographic assay method for the enantiomers of ibuprofen, *J.Chromatogr.*, **1992**, *583*, 259–265.

SAMPLE
Matrix: blood, urine
Sample preparation: Plasma. 500 μL Plasma + 100 μL 600 mM sulfuric acid + 4 mL 2,2,4-trimethylpentane:isopropanol 95:5, vortex for 10 s, centrifuge at 1800 g for 5 min. Remove the organic layer and evaporate it to dryness under reduced pressure, reconstitute the residue in 180 μL mobile phase, vortex for 10 s, inject a 100 μL aliquot. Urine. 500 μL Urine + 100 μL 600 mM sulfuric acid + 4 mL 2,2,4-trimethylpentane:isopropanol 95:5, vortex for 10 s, centrifuge at 1800 g for 3 min. Remove the organic layer and add it to 3 mL water, vortex for 10 s, centrifuge for 3 min. Remove the aqueous phase and add it to 200 μL 600 mM sulfuric acid and 3 mL chloroform, vortex for 10 s, centrifuge for 3 min. Remove the organic phase and evaporate it to dryness, reconstitute the residue in 180 μL mobile phase, vortex for 10 s, inject a 100 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 Chiralpak AD amylose carbamate (Chiral Technologies)
Mobile phase: Hexane:isopropanol:trifluoroacetic acid 80:19.9:0.1
Flow rate: 1
Injection volume: 100
Detector: UV 254

CHROMATOGRAM
Retention time: 5.3, 6.3 (enantiomers)
Internal standard: fenoprofen

OTHER SUBSTANCES
Extracted: ketoprofen

KEY WORDS
plasma; chiral; fenoprofen is IS

REFERENCE
Carr,R.A.; Caillé,G.; Ngoc,A.H.; Foster,R.T. Stereospecific high-performance liquid chromatographic assay of ketoprofen in human plasma and urine, *J.Chromatogr.B*, **1995**, *668*, 175–181.

SAMPLE
Matrix: blood, urine
Sample preparation: Plasma. 2 mL Plasma + 250 μL 1 M HCl + 50 μL prenazone solution, vortex briefly, extract twice with 5 mL portions of diethyl ether for 15 min each time. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 36°, reconstitute the residue in 200 μL MeCN:1% aqueous acetic acid 50:50, inject an aliquot. Urine. 500 μL Urine + 250 μL 1 M HCl + 50 μL prenazone solution, mix, extract with 5 mL diethyl ether for 15 min. Remove the organic layer and add it to 1 mL 1% sodium bicarbonate solution (freshly prepared), vortex. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 36°, reconstitute the residue in 200 μL MeCN:1% aqueous acetic acid 50:50, inject an aliquot. (To hydrolyze conjugates mix 500 μL urine, 100 μL 1 M pH 5.2 sodium acetate buffer, and 20 μL enzyme solution, heat at 56° for 2.5 h, cool, proceed as above. The enzyme solution was Suc Helix Pomatia containing 100 000 Fishman U/mL of β-glucuronidase and 1 000 000 Roy U/mL of arylsulfatase (IBF).)

HPLC VARIABLES
Column: 100 × 3 5 μm Nucleosil
Mobile phase: Gradient. MeCN:1% aqueous acetic acid 50:50 for 7 min, to 80:20 over 0.6 min, maintain at 80:20 for 3.4 min, re-equilibrate at initial conditions for 8 min. (For urine isocratic MeCN:1% aqueous acetic acid 50:50.)
Flow rate: 0.5
Injection volume: 20
Detector: UV 230

CHROMATOGRAM
Internal standard: prenazone
Limit of quantitation: 200 ng/mL (urine), 50 ng/mL (plasma)

KEY WORDS
horse; plasma; pharmacokinetics

REFERENCE

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM
Retention time: 21.16

KEY WORDS
whole blood

SAMPLE
Matrix: bulk
Sample preparation: 10 mg Compound + 10 mg 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride + 2 drops 3,5-dimethylaniline + 1.5 mL dichloromethane, mix, after 30 min add 1 mL 1 M HCl, shake vigorously. Remove the lower organic layer and dry it over anhydrous magnesium sulfate, inject an aliquot.

HPLC VARIABLES
Column: 250 × 4.6 5 μm D N-(3,5-dinitrobenzoyl)phenylglycine (Regis)
Mobile phase: Hexane:isopropanol 80:20
Flow rate: 2
Injection volume: 20
Detector: UV 254, UV 280

CHROMATOGRAM
Retention time: k' 2.50 (for first enantiomer)

OTHER SUBSTANCES
Also analyzed: carprofen, cicloprofen, etodolac, flurbiprofen, ibuprofen, ketoprofen, naproxen, pirprofen, tiaprofenic acid

KEY WORDS
derivatization; α = 1.25; chiral

SAMPLE
Matrix: cell suspensions
Sample preparation: Centrifuge cell suspension at 2000 g for 4 min. Remove a 2 mL aliquot of the supernatant and add it to 200 µL 100 µg/mL IS in DMF, mix, add 200 µL 5 M HCl, extract twice with 3 mL portions of toluene. Combine the organic layers and evaporate them to dryness under a stream of nitrogen, reconstitute the residue in 1 mL dichloromethane, add 20 µL 10 mg/mL 1-hydroxybenzotriazole in dichloromethane:pyridine 99:1, add 300 µL 10 mg/mL 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride in dichloromethane, add 300 µL 10 mg/mL (-)-(S)-α-methylbenzylamine in dichloromethane, let stand for 30 min, evaporate to dryness, reconstitute with 500 µL mobile phase, inject a 10 µL aliquot.

HPLC VARIABLES
Guard column: 10 mm long Techsphere ODS (HPLC Technology, Macclesfield UK)
Column: 250 × 5 5 µm Techsphere ODS (HPLC Technology, Macclesfield UK)
Mobile phase: MeCN:7.5 mM NaH_2PO_4 55:45, containing 5 mM sodium pentanesulfonate, pH adjusted to 2.8 with phosphoric acid
Flow rate: 1
Injection volume: 10
Detector: UV 254

CHROMATOGRAM
Retention time: k' 4.95, 5.42 (enantiomers)
Internal standard: (S)-naproxen (100 µg/mL)
Limit of detection: 5 µg/mL

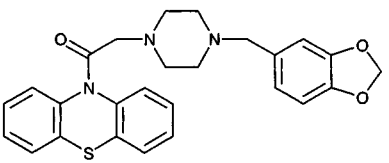
Fenoverine



Molecular formula: $C_{26}H_{25}N_3O_3S$
Molecular weight: 459.57
CAS Registry No.: 37561-27-6
Merck Index: 4023

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 µL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) µL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85: 15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM

SAMPLE
Matrix: formulations
Sample preparation: 100 μL Injection solution + 400 μL 2.5 μg/mL haloperidol in water, inject a 100 μL aliquot.

HPLC VARIABLES
Column: 100 × 4.6 5 μm Brownlee C18
Mobile phase: MeCN:MeOH:10 mM NaH_2PO_4 24:31:45, pH adjusted to 5.0 with 2 M KOH
Flow rate: 1.7
Injection volume: 100
Detector: UV 210

CHROMATOGRAM
Retention time: 7.88
Internal standard: haloperidol (9.74)

OTHER SUBSTANCES
Extracted: sufentanil

KEY WORDS
injections

REFERENCE
Dewell,W.M.,Jr.; Khandaghabadi,M.; D'Souza,M.J.; Solomon,H.M. High-performance liquid chromatographic determination of fentanyl and sufentanil returned from the operating room, *Am.J.Hosp.Pharm.*, **1993**, *50*, 2374–2375.

SAMPLE
Matrix: formulations

Sample preparation: Dilute 5-fold with mobile phase, inject a 10 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 5 μm Spherisorb phenyl
Mobile phase: MeOH:buffer 65:35 (Buffer was 5 mM pH 4.8 KH_2PO_4 containing 1.4 mM tetrabutylammonium hydroxide.)
Flow rate: 1.5
Injection volume: 10
Detector: UV 229

CHROMATOGRAM
Retention time: 5.1

OTHER SUBSTANCES
Noninterfering: midazolam

KEY WORDS
injections; 5% dextrose; stability-indicating

SAMPLE
Matrix: microsomal incubations
Sample preparation: 500 μL Microsomal incubation + 500 μL DMSO, vortex, centrifuge, filter, inject an aliquot of the filtrate.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Spherisorb ODS-2
Mobile phase: Gradient. A was 1 M ammonium acetate. B was MeCN:MeOH:THF:1 M ammonium acetate 30:20:40:10. A:B from 100:0 to 35:65 over 40 min.
Flow rate: 1
Detector: UV 230

CHROMATOGRAM
Retention time: 40

OTHER SUBSTANCES
Extracted: metabolites

KEY WORDS
human; liver; pharmacokinetics

REFERENCE

SAMPLE
Matrix: solutions
Sample preparation: Dissolve in MeOH at a concentration of 1 mg/mL, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 250 × 5 Spherisorb S5W
Mobile phase: MeOH:buffer 90:10 (Buffer was 94 mL 35% ammonia and 21.5 mL 70% nitric acid in 884 mL water, adjust the pH to 10.1 with ammonia.)
Flow rate: 2
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 1.46

OTHER SUBSTANCES
Simultaneous: tranylcypromine, caffeine, fenethyline, phendimetrazine, methylphenidate, phenelzine, epinephrine, pipradol, phenylpropanolamine, fencamfamin, chlorphentermine, norpseudoephedrine, phentermine, fenfluramine, methylenedioxyamphetamine, amphetamine, normetanephrine, 4-hydroxyamphetamine, bromo-STP, STP, prolintane, 2-phenethylamine, tyramine, trimethoxyamphetamine, phenylephrine, pseudoephedrine, ephedrine, methylephedrine, dimethylamphetamine, methamphetamine, mescaline, mephentermine, nalorphine, phenazocine, norpipanone, levallorphan, hydroxypethidine, normethadone, meperidine, dipipanone, diamorphine, pentazocine, acetylcodeine, monoacetylmorphine, thebacon, oxycodone, thebaine, norlevorphanol, methadone, benzylmorphine, ethylmorphine, morphine-N-oxide, codeine, codeine-N-oxide, morphine, ethoheptazine, morphine-3-glucuronide, pholcodine, norpethidine, hydrocodone, dihydrocodeine, dihydromorphine, levorphanol, norcodeine, normorphine
Noninterfering: dopamine, levodopa, methyldopa, methyldopate, norepinephrine
Interfering: pemoline, benzphetamine, diethylpropion, mazindol, buprenorphine, dextromoramide, phenoperidine, etorphine, piritramide, noscapine, papaverine, naloxone, dextropropoxyphene

SAMPLE
Matrix: solutions
Sample preparation: Prepare a 10 μg/mL solution in MeOH, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 125 × 4.9 Spherisorb S5W silica
Mobile phase: MeOH containing 10 mM ammonium perchlorate and 1 mL/L 100 mM NaOH in MeOH, pH 6.7
Flow rate: 2
Injection volume: 20
Detector: E, LeCarbone, V25 glassy carbon electrode, + 1.2 V

CHROMATOGRAM
Retention time: 1.6

OTHER SUBSTANCES
Also analyzed: acebutolol, acepromazine, acetophenazine, N-acetylprocainamide, albuterol, alprenolol, amethocaine, amiodarone, amitriptyline, antazoline, atenolol, azacyclonal, bamethan, benactyzine, benperidol, benzethidine, benzocaine, benzoctamine, benzphetamine, benzquinamide, bromhexine, bromodiphenhydramine, bromperidol, brompheniramine, brompromazine, buclizine, bufotenine, bupivacaine, buprenorphine, butacaine, butethamate, chlorcyclizine,

chlorpheniramine, chlorphenoxamine, chlorprenaline, chlorpromazine, chlorprothixene, cimetidine, cinchonidine, cinnarizine, clemastine, clomipramine, clonidine, cocaine, cyclazocine, cyclizine, cyclopentamine, cyproheptadine, deserpidine, desipramine, dextromoramide, dextropropoxyphene, dicyclomine, diethylcarbamazine, diethylpropion, diethylthiambutene, dihydroergotamine, dimethindene, dimethothiazine, diphenhydramine, diphenoxylate, dipipanone, diprenorphine, dipyridamole, disopyramide, dothiepin, doxapram, doxepin, doxylamine, droperidol, ephedrine, ergocornine, ergocristine, ergocristinine, ergocryptine, ergometrine, ergosine, ergosinine, ergotamine, ethopropazine, etorphine, etoxeridine, fenethazine, fenfluramine, fenoterol, fentanyl, flavoxate, fluopromazine, flupenthixol, fluphenazine, flurazepam, haloperidol, hydroxyzine, hyoscine, ibogaine, imipramine, indapamine, iprindole, isothipendyl, isoxsuprine, ketanserin, laudanosine, lidocaine, lofepramine, loxapine, maprotiline, mecamylamine, meclophenoxate, meclozine, medazepam, mephentermine, mepivacaine, meptazinol, mepyramine, mesoridazine, metaraminol, methadone, methamphetamine, methapyrilene, methdilazene, methotrimeprazine, methoxamine, methoxyphenamine, methoxypromazine, methylephedrine, methylergonovine, methysergide, metoclopramide, metopimazine, metoprolol, mianserin, morazone, nadolol, nalorphine, naloxone, naphazoline, nicotine, nifedipine, nomifensine, nortriptyline, noscapine, orphenadrine, oxeladin, oxprenolol, oxymetazolin, papaverine, pargyline, pecazine, penbutolol, pentazocine, penthienate, pericyazine, perphenazine, phenadoxone, phenampromide, phenazocine, phenbutrazate, phendimetrazine, phenelzine, phenglutarimide, phenindamine, pheniramine, phenmetrazine, phenomorphan, phenoperidine, phenothiazine, phenoxybenzamine, phentolamine, phenylephrine, phenyltoloxamine, physostigmine, piminodine, pimozide, pindolol, pipamazine, pipazethate, piperacetazine, piperidolate, pipradol, pirenzepine, piritramide, pizotifen, practolol, pramoxine, prazosin, prenylamine, prilocaine, primaquine, proadifen, procainamide, procaine, prochlorperazine, procyclidine, proheptazine, prolintane, promazine, promethazine, pronethalol, properidine, propiomazine, propranolol, prothipendyl, protriptyline, proxymetacaine, pseudoephedrine, pyrimethamine, quinidine, quinine, ranitidine, rescinnamine, sotalol, tacrine, terazosin, terbutaline, terfenadine, thenyldiamine, theophylline, thiethylperazine, thiopropazate, thioproperazine, thioridazine, thiothixene, thonzylamine, timolol, tocainide, tolpropamine, tolycaine, tranylcypromine, trazodone, trifluoperazine, trifluperidol, trimeperidine, trimeprazine, trimethobenzamide, trimethoprim, trimipramine, tripelennamine, triprolidine, tryptamine, verapamil, xylometazoline

SAMPLE

Matrix: solutions
Sample preparation: Dissolve in mobile phase.

HPLC VARIABLES

Guard column: 15 × 3.2 7 μm Applied Biosystems pre-column
Column: 100 × 2 10 μm μPorasil
Mobile phase: MeCN:5 mM pH 3.75 sodium acetate 80:20
Flow rate: 1
Injection volume: 200
Detector: UV 214

CHROMATOGRAM

Retention time: 9.39
Limit of detection: 5.5 ng/mL

OTHER SUBSTANCES

Simultaneous: buprenorphine, nalbuphine, ethylmorphine, morphine, codeine, meperidine, tramadol
Noninterfering: thiopentone, succinylcholine, pancuronium, diazepam, atropine, neostigmine
Interfering: butorphanol

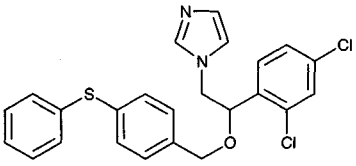
Fenticonazole



Molecular formula: $C_{24}H_{20}Cl_2N_2OS$
Molecular weight: 455.41
CAS Registry No.: 72479-26-6, 73151-29-8 (nitrate)
Merck Index: 4047
Lednicer No.: 4 93

SAMPLE

Matrix: formulations

Sample preparation: Tablets. Powder tablets, weigh out amount equivalent to about 30 mg, add 100 mL MeOH, sonicate for 5 min, filter. Add a 2 mL aliquot of filtrate to 5 mL of 100 μg/mL ketoconazole in MeOH, make up to 25 mL with MeOH, inject 20 μL aliquot. Cream. Condition a 500 mg Bond-Elut diol cartridge with 6 mL dichloromethane. Weigh out cream equivalent to about 5 mg of drug, add 30 mL dichloromethane, sonicate for 3 min, make up to 100 mL with dichloromethane, filter. Add a 2 mL aliquot to the cartridge, wash with 2 mL dichloromethane:methanol 4:1, wash with 2 mL dichloromethane, elute with 3 mL MeOH:buffer 85:15. Add eluate to 0.5 mL 100 μg/mL ketoconazole in MeOH, make up to 5 mL with MeOH,

inject 20 μL aliquot. (Buffer was 50 mM triethylamine adjusted to pH 7.0 with phosphoric acid.)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Spherisorb CN
Mobile phase: THF:buffer 30:70 (Buffer was 50 mM triethylamine adjusted to pH 3.0 with phosphoric acid.)
Flow rate: 1
Injection volume: 20
Detector: UV 230

CHROMATOGRAM
Retention time: 32
Internal standard: ketoconazole (7)

OTHER SUBSTANCES
Simultaneous: clotrimazole, ketoconazole, bifonazole, tioconazole, isoconazole, econazole, miconazole

KEY WORDS
tablets; creams

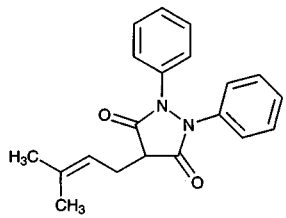
Feprazone

Molecular formula: $C_{20}H_{20}N_2O_2$
Molecular weight: 320.39
CAS Registry No.: 30748-29-9
Merck Index: 4053



SAMPLE
Matrix: blood, urine
Sample preparation: Plasma. 2 mL Plasma + 250 μL 1 M HCl + 5 mL diethyl ether, mix, centrifuge at 1100 g for 10 min. Remove the organic phase, repeat the extraction, combine the organic extracts, evaporate under nitrogen at 40°, reconstitute the residue in 200 μL mobile phase, vortex, inject a 20 μL aliquot. Urine. 1 mL Urine + 250 μL 1 M HCl + 5 mL diethyl ether, rotate for 15 min. Remove the organic layer, add 1 mL 1% sodium hydrogen carbonate, vortex for 1 min. Remove the organic layer and evaporate it under nitrogen at 40°, reconstitute the residue in 200 μL mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 100 × 3 5 μm Nucleosil
Mobile phase: MeCN:water:acetic acid 40:59.4:0.6
Flow rate: 0.8
Injection volume: 20
Detector: UV 245

CHROMATOGRAM
Retention time: 8.3
Internal standard: feprazone

OTHER SUBSTANCES
Extracted: tiaprofenic acid (UV 310)

Noninterfering: alclofenac, diclofenac, fenoprofen, flunixin, flurbiprofen, ibuprofen, indomethacin, naproxen, oxyphenbutazone, phenylbytazone, piroxicam

KEY WORDS
plasma; feprazone is IS

Fibrinolysin

Molecular weight: about 90000
CAS Registry No.: 9004-09-5, 9001-90-5
Merck Index: 7678

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 100 × 6 Asahipak GS-520-AHA-ABA (Prepare by suspending 10 g Asahipak-GS gel (Asahi Chemical Industry) in water, sonicate for 5 min, wash with 200 mL water, wash with 200 mL dioxane, suspend in 100 mL dioxane, add 3.24 g 1,1'-carbonyldiimidazole, stir gently for 15 min at room temperature, wash with 200 mL dioxane, suspend in 200 mL 1 M sodium bicarbonate containing 1 M 6-aminohexanoic acid, shake at 4° for 25 h, wash with 200 mL water, wash with 100 mL 1 M NaCl, wash with 200 mL water. Suspend 2 g of the gel in 15 mL 200 mM pH 4.752-(morpholino)ethanesulfonic acid/NaOH buffer, add 288 mg 1-ethyl-3-(3-dimethylaminopropyl)carbodiimide monohydrochloride, stir gently for 30 min, add 28.3 mg p-aminobenzamide monohydrochloride, adjust pH three times to 4.75 with 1 M HCl or 1 M NaOH at 30 min intervals, shake gently at room temperature for 24 h, wash with 150 mL water, wash with 100 mL 50 mM NaOH containing 1 M NaCl, wash with 100 mL 50 mM HCl containing 1 M NaCl, wash with water until washings are neutral. Caution! Dioxane is a carcinogen. It may be possible to use acetone instead.)
Mobile phase: Gradient. Buffer A, after 10 min buffer B, after 25 min buffer B containing 40 mM 6-hexanoic acid, after 40 min buffer B containing 40 mM 6-hexanoic acid and 1 M urea (step gradient). Buffer A was 50 mM pH 6.5 sodium phosphate. Buffer B was 50 mM pH 7.4 sodium phosphate containing 100 mM NaCl.
Flow rate: 1.8
Detector: F ex 285 em 340 (?)

CHROMATOGRAM
Retention time: 50

OTHER SUBSTANCES

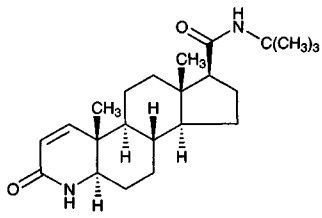
Finasteride



Molecular formula: $C_{23}H_{36}N_2O_2$
Molecular weight: 372.55
CAS Registry No.: 98319-26-7
Merck Index: 4125
Lednicer No.: 5 49

SAMPLE

Matrix: blood
Sample preparation: Condition a 6 mL 300 mg Carbograph SPE cartridge (Alltech) with 2 mL water and 4 mL MeOH. Add 100 µL 10 µg/mL IS to 1.0 mL plasma, briefly vortex, add the mixture to the SPE cartridge. Wash with 2 mL water and 4 mL MeOH:water 20:80. Elute with 2 mL MeOH:chloroform 20:80 (Caution! Chloroform is a carcinogen!). Centrifuge eluate at 1000 g for 10 min, filter through a WTP 500 nm filter, evaporate to dryness with a stream of nitrogen under vacuum. Reconstitute the residue in 1.0 mL mobile phase, vortex, inject a 50 µL aliquot.

HPLC VARIABLES

Guard column: 20 × 4.6 40 µm Pelliguard (Supelco)
Column: 250 × 4.6 5 µm reversed-phase Symmetry (Waters)
Mobile phase: MeCN:40 mM pH 4.0 orthophosphoric acid 45:55
Flow rate: 1.2
Injection volume: 50
Detector: UV 215

CHROMATOGRAM

Retention time: 14.6
Internal standard: 4-androstene-3,17-dione (9.8)
Limit of detection: 5 ng/mL
Limit of quantitation: 10 ng/mL

KEY WORDS

plasma; SPE

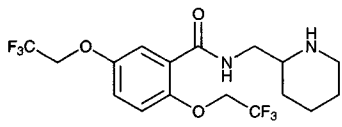
Flecainide



Molecular formula: $C_{17}H_{20}F_6N_2O_3$
Molecular weight: 414.35
CAS Registry No.: 54143-55-4, 54143-56-5 (acetate)
Merck Index: 4136
Lednicer No.: 3 59

SAMPLE

Matrix: blood
Sample preparation: Automated SPE by ASPEC system. Condition a C18 Clean-Up SPE cartridge (CEC 18111, Worldwide Monitoring) with 2 mL MeOH then 2 mL water. 1 mL Plasma + 1 mL 400 ng/mL protriptyline in water, vortex, add to column, wash with 3 mL water, wash with 3 mL 750 mL/L methanol. Elute with three aliquots of 300 µL 0.1 M ammonium acetate in MeOH. Add 0.5 mL 0.5 M NaOH and 4 mL 50 mL/L isopropanol in heptane to eluate, mix thoroughly. Allow 5 min for phase separation. Remove upper heptane phase and add it to 300 µL 0.1 M phosphoric acid (pH 2.5), mix, separate, inject a 100 µL aliquot of the aqueous phase.

HPLC VARIABLES

Guard column: LC-8-DB (Supelco)
Column: 150 × 4.6 LC-8-DB (Supelco)
Mobile phase: MeCN:buffer 35:65 (Buffer was 10 mL/L triethylamine in water adjusted to pH 5.5 with glacial acetic acid.)
Flow rate: 2
Injection volume: 100
Detector: UV 228

CHROMATOGRAM

Retention time: 3.1
Internal standard: protriptyline (4)

OTHER SUBSTANCES

Extracted: acetazolamide, amitriptyline, chlordiazepoxide, chlorimipramine, chlorpromazine, desipramine, dextromethorphan, diazepam, encainide, fluoxetine, flurazepam, hydroxyethylflurazepam, ibuprofen, imipramine, lidocaine, maprotiline, methadone, methaqualone, mexiletine, midazolam, norchlorimipramine, nordiazepam, norfluoxetine, nortriptyline, norverapamil, pentazocine, promazine, propafenone, propoxyphene, propranolol, protriptyline, quinidine, temazepam, trimipramine, verapamil
Noninterfering: acetaminophen, acetylmorphine, amiodarone, amobarbital, amphetamine, bendroflumethiazide, benzocaine, benzoylecgonine, benzthiazide, butalbital, carbamazepine, chlorothiazide, clonazepam, cocaine, codeine, cotinine, cyclosporine, cyclothiazide, desalkylflurazepam, diamorphine, dicumerol, ephedrine, ethacrynic acid, ethanol, ethchlorvynol, ethosuximide, furosemide, glutethimide, hydrochlorothiazide, hydrocodone, hydroflumethiazide, hydromorphone, lorazepam, mephentermine, meprobamate, methamphetamine, metharbital, methoxsalen, methoxyphenteramine, methsuximide, methylcyclothiazide, metoprolol, MHPG, monoacetylmorphine, morphine, normethsuximide, oxazepam, oxycodone, oxymorphone, pentobarbital, phencyclidine, phenteramine, phenylephrine, phenytoin, polythiazide, primidone, prochlorperazine, salicylic acid, sulfanilamide, THC-COOH, theophylline, thiazolam, thiopental, thioridazine, tocainide, trichloromethiazide, trifluoperazine, valproic acid, warfarin

Interfering: diphenhydramine, doxepin, fentanyl, haloperidol, nordoxepin, trazodone

SAMPLE

Matrix: blood, urine

Sample preparation: Dilute urine 1:100. 1 mL Plasma or diluted urine + 100 μL 4 μg/mL IS in water + 1 mL water + 1 mL 1 M NaOH + 8 mL distilled diethyl ether, shake for 15 min, centrifuge at 1000 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 1 mL freshly prepared 49 mM 1-[(4-nitrophenyl)sulfonyl]-L-prolyl chloride in ethyl acetate, add 100 μL 0.016% triethylamine in ethyl acetate, vortex for 5 s, heat at 80° for 2 h, cool, wash with 3 mL 600 mM HCl, centrifuge for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 200 μL mobile phase, inject a 40-180 μL aliquot. (Synthesis of 1-[(4-nitrophenyl)sulfonyl]-L-prolyl chloride is as follows. Stir 40-45 mmoles L-(-)-proline in 40 mL THF and 200 mL 10% potassium carbonate, add 37-43 mmoles 4-nitrophenylsulfonyl chloride in 40 mL THF dropwise, heat at 50° for 3 h and maintain at pH 8 or above, cool, acidify to pH 2 and extract into chloroform. Extract with 10% potassium carbonate, acidify the aqueous layer, extract into chloroform. Dry the chloroform extract, evaporate, recrystallize from petroleum ether and benzene (Caution! Benzene is a carcinogen!). Stir 15 mmoles of the 4-nitrophenylsulfonylproline in 100 mL benzene under reflux condenser fitted with a calcium sulfate drying tube, add dropwise a five-fold molar excess of thionyl chloride in 50 mL benzene, heat at 35-40° until formation of the acid chloride is complete (about 48 h, monitor by IR spectroscopy), evaporate, recrystallize product from HPLC-grade heptane (mp 110-110.5°).)

SAMPLE
Matrix: solutions
Sample preparation: Mix a 50 μL aliquot of a solution in MeOH:triethylamine 99:1 with 20 μL 0.1% FLOPIC in dry toluene, vortex briefly, let stand at room temperature in the dark for 30 min, add 50 μL 1% ethanolamine in MeOH, let stand at room temperature for 15 min, evaporate to dryness under reduced pressure, reconstitute with 100 μL mobile phase, sonicate for 30 s, inject a 20 μL aliquot. (FLOPIC is (-)-(S)-flunoxaprofen isocyanate; synthesis is as follows. Dissolve 1 g (+)-(S)-flunoxaprofen in 30 mL acetone, cool to 0°, add a solution of 500 μL triethylamine in 2 mL acetone dropwise, add a solution of 370 μL ethyl chloroformate in 2 mL acetone dropwise, stir at 0° for 15 min, add a solution of 250 mg sodium azide in 1 mL water dropwise (Caution! Sodium azide is highly toxic!), stir for 1 h, pour into 60 mL ice water, stir for 10 min, filter, wash the solid with two 50 mL aliquots of ice-water, dry under reduced pressure to obtain flunoxaprofen azide. Dissolve 100 mg flunoxaprofen azide in 3 mL dry toluene, reflux for 10-15 min, cool to room temperature, filter. Evaporate the filtrate to dryness under reduced pressure and dry under reduced pressure to obtain FLOPIC as a crystalline solid (mp 93-94°), store in a desiccator under reduced pressure.)

HPLC VARIABLES
Column: 150 × 3.9 4 μm Nova Pak C18 (A) or 200 × 4.6 5 μm Nucleosil cyano (B)
Mobile phase: MeOH:water:THF 62:35:3 (A) or n-hexane:isopropanol:diethylamine 95:5:0.05 (B)
Flow rate: 1
Injection volume: 20
Detector: F ex 296 em 356

CHROMATOGRAM
Retention time: 29.0 (R (A)), 31.0 (S (A)), 22.2 (R (A)), 26.8 (S (B))

SAMPLE
Matrix: solutions
Sample preparation: Mix 20 µL of a 1 mM solution in MeOH or water with 50 µL pH 8 borate buffer and 50 µL 18 mM 2-(6-methoxy-2-naphthyl)-1-propyl chloroformate in acetone, vortex, let stand at room temperature for 30 min, add 100 µL 10 mM trans-4-hydroxy-L-proline in water, mix, let stand for 2 min, add 2 mL dichloromethane, vortex for 30 s. Remove the organic layer and evaporate it to dryness under reduced pressure, reconstitute the residue in 100 µL mobile phase, inject an aliquot. Prepare 2-(6-methoxy-2-naphthyl)-1-propyl chloroformate as follows. Stir 1.5 mmoles lithium aluminum hydride in THF, slowly add 2 mmoles (S)-naproxen in 20 mL anhydrous THF, reflux for 1 h, evaporate most of the solvent, cautiously add water with stirring, acidify with 6 N HCl, extract three times with diethyl ether. Combine the organic layers and dry them over anhydrous sodium sulfate, evaporate to dryness, chromatograph on silica gel with dichloromethane:MeOH 100:2 (flash chromatography), evaporate eluate to dryness, dry under vacuum over KOH to give 2-(6-methoxy-2-naphthyl)propanol as a white solid (mp 92-3°). Stir 0.5 mmoles 2-(6-methoxy-2-naphthyl)propanol and 0.5 mmoles triethylamine in 10 mL dry toluene at 0°, add 1 mL 20% phosgene in toluene (Caution! Phosgene is highly toxic, perform reaction in a chemical fume hood!) (Fluka), stir for 4 h, filter, evaporate to dryness under reduced pressure, dry under vacuum to give 2-(6-methoxy-2-naphthyl)-1-propyl chloroformate (mp 60°). Store under vacuum over phosphorus pentoxide at room temperature.)

HPLC VARIABLES
Column: 250 × 4 5 µm Zorbax-SIL

SAMPLE

Matrix: blood, urine
Sample preparation: Plasma. 200 μL Plasma + 1 mL 50 ng/mL IS1 in MeCN:water 95:5, vortex, centrifuge at 14° at 1000 g for 10 min. Remove the supernatant and evaporate it to dryness under a stream of nitrogen at 38°, reconstitute the residue in 200-400 μL mobile phase, inject a 20-30 μL aliquot onto column A and column B in series, after 1.5 min remove column A from the circuit and backflush it to waste, elute column B with mobile phase and monitor the effluent. Urine. 100 μL Urine + 100 μL 100 μg/mL IS2 in water + 5 mL mobile phase, inject a 20 μL aliquot onto column A and column B in series, after 1.5 min remove column A from the circuit and backflush it to waste, elute column B with mobile phase and monitor the effluent.

HPLC VARIABLES

Column: A 10 × 4 Nucleosil 5-C18 (replaced every 60-80 samples); B 250 × 4.6 5 μm TSK ODS-120T (Toyo Soda)
Mobile phase: MeOH:buffer 28:72, pH adjusted to 2.6 with 40% phosphoric acid (Buffer was 50 mM KH_2PO_4 containing 10 mM tetrabutylammonium hydrogen sulfate.)
Column temperature: 28
Flow rate: 1
Injection volume: 20-30
Detector: F ex 290 em 450

CHROMATOGRAM

Retention time: 7.7
Internal standard: IS1 6-fluoro-1-(2-fluoroethyl)-1,4-dihydro-7-(4-methyl-1-piperazinyl)-4-oxo-3-quinoline carboxylic acid (AM-735) (13.0), IS2 pipemidic acid (6.0)
Limit of detection: 1 ng/mL (plasma)
Limit of quantitation: 1000 ng/mL (urine), 10 ng/mL (plasma)

OTHER SUBSTANCES

Extracted: metabolites
Noninterfering: ciprofloxacin, norfloxacin, pefloxacin

KEY WORDS
plasma; column-switching; protect from light; pharmacokinetics

REFERENCE

SAMPLE
Matrix: cells
Sample preparation: Incubate cells in 2 mL 100 mM pH 3.0 glycine-HCl buffer for 2 h at room temperature, centrifuge at 5600 g for 5 min, inject an aliquot.

HPLC VARIABLES
Column: Bondapak C18
Mobile phase: MeCN:25 mM phosphoric acid adjusted to pH 3.0 with tetrabutylammonium hydroxide 25:75
Flow rate: 1.5
Detector: F ex 340 em 425

OTHER SUBSTANCES
Also analyzed: ciprofloxacin, lomefloxacin, norfloxacin, ofloxacin, temafloxacin

REFERENCE

SAMPLE
Matrix: milk
Sample preparation: Milk + pipemidic acid + phosphate buffer, extract with dichloromethane: isopropanol 70:30, centrifuge. Remove an aliquot of the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in mobile phase, add n-hexane, mix thoroughly, centrifuge, inject an aliquot of the aqueous phase.

HPLC VARIABLES
Column: 250 × 4.6 5 μm ODS-120T (Toyo Soda)
Mobile phase: MeOH:5 mM tetrabutylammonium hydrogen sulfate 28:72
Flow rate: 0.8
Detector: F ex 290 em 450

CHROMATOGRAM
Internal standard: pipemidic acid
Limit of quantitation: 100 ng/mL

KEY WORDS
protect from light; pharmacokinetics

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 125 × 4.6 3 μm ODS-Hypersil
Mobile phase: MeOH:THF:670 mM pH 3.0 phosphate buffer 20:0.8:79.2 plus 2 g/L tetrabutylammonium hydrogen sulfate and 2 mL/L 85% phosphoric acid
Flow rate: 1
Injection volume: 20

Detector: UV 278

CHROMATOGRAM
Retention time: 4.94

OTHER SUBSTANCES
Simultaneous: photodegradation products, ofloxacin
Interfering: ciprofloxacin

REFERENCE

SAMPLE
Matrix: urine
Sample preparation: 250 μL Urine + 20 μL 30 μg/mL pipemidic acid + 250 μL 500 mM pH 7.5 phosphate buffer, vortex, add 3.5 mL chloroform, shake at low speed for 10 min, centrifuge at 1155 g for 10 min. Remove the lower organic layer and add it to 200 μL 1/15 M pH 12.5 sodium phosphate, shake fast for 20 min, centrifuge at 1155 g for 10 min, inject a 150 μL aliquot of the aqueous layer.

HPLC VARIABLES
Column: 10 μm Nucleosil C18
Mobile phase: MeCN:MeOH:10 mM phosphate buffer containing 5 mM tetrabutylammonium hydrogen sulfate 13:6:81
Flow rate: 1
Injection volume: 150
Detector: F ex 274

CHROMATOGRAM
Internal standard: pipemidic acid
Limit of detection: 50 ng/mL

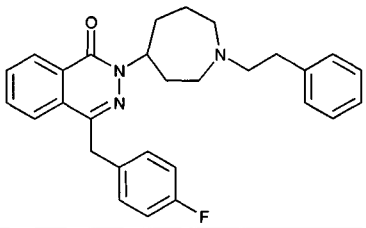
Flezelastine



Molecular formula: $C_{29}H_{30}FH_3O$
Molecular weight: 416.58
CAS Registry No.: 135381-77-0

SAMPLE
Matrix: microsomal incubations
Sample preparation: Adjust pH of 750 μL microsomal incubation to 10 with 100 mM NaOH, add 3 mL cyclohexane:ethyl acetate 80:20, shake mechanically for 10 min, centrifuge at 2500 g for 10 min, repeat the extraction. Combine the organic layers and evaporate them to dryness under a stream of nitrogen, reconstitute with a solution of azelastine in MeOH, evaporate to dryness under a stream of nitrogen, reconstitute with 200 μL MeOH, inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: 4 × 4 5 μm LiChrospher Si-60
Column: 250 × 4 5 μm LiChrospher Si-60
Mobile phase: MeOH containing 0.033% perchloric acid
Flow rate: 0.5 for 17 min then 0.9
Injection volume: 20
Detector: F ex 210 em 360

CHROMATOGRAM
Retention time: 15
Internal standard: azelastine (27)
Limit of detection: 125 μg/mL

OTHER SUBSTANCES
Extracted: metabolites

KEY WORDS
human; rat; cow; pig; liver

REFERENCE

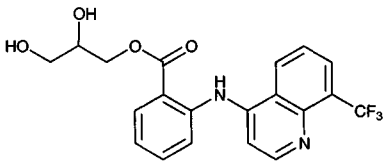
Floctafenine



Molecular formula: $C_{20}H_{17}F_3N_2O_4$
Molecular weight: 406.36
CAS Registry No.: 23779-99-9
Merck Index: 4140
Lednicer No.: 3 184

SAMPLE
Matrix: blood

Sample preparation: 2 mL Whole blood or plasma + 2 mL buffer + 5 mL chloroform:isopropanol: n-heptane 60:14:26, shake gently horizontally for 10 min, centrifuge at 2800 g for 10 min. Remove the lower organic layer and evaporate it to dryness under vacuum at 45°, reconstitute the residue in 100 µL mobile phase, centrifuge at 2800 g for 5 min, inject a 50 µL aliquot of the supernatant. (Buffer was saturated ammonium chloride solution 25% diluted with water, adjusted to pH 9.5 with 25% ammonia solution.)

HPLC VARIABLES

Column: 300 × 3.9 4 µm NovaPack C18
Mobile phase: MeOH:THF:buffer 65:5:30 (Buffer was 0.68 g/L (10 mM (sic)) KH_2PO_4 adjusted to pH 2.6 with concentrated orthophosphoric acid.) (At the end of each session wash the column with water for 1 h and MeOH for 1 h, re-equilibrate for 30 min.)
Column temperature: 30
Flow rate: 0.8
Injection volume: 50
Detector: UV 353

CHROMATOGRAM

Retention time: 10.73
Limit of detection: <120 ng/mL

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 µL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) µL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 µm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 209.9

CHROMATOGRAM
Retention time: 17.177

SAMPLE
Matrix: blood

Sample preparation: 100 μL Serum + 5 μL 42 μM 5-chlorouracil in acetone, mix, let stand at room temperature for 3 min, add 500 μL 100 mM pH 3.5 potassium phosphate buffer, add 2 mL ethyl acetate, vortex for 2 min, centrifuge at 1000 g for 5 min. Remove a 1.4 mL aliquot of the organic layer and evaporate it to dryness under reduced pressure. Add 20 mg solid potassium bicarbonate:anhydrous sodium sulfate 1:7 to the residue, add 50 μL 1.3 mM 3-bromomethyl-6,7-dimethoxy-1-methyl-2(1H)-quinoxalinone in acetone, add 50 μL 1.5 mM 18-crown-6 in acetone, heat at 50° for 20 min, cool, inject a 10 μL aliquot. (Silanize all glassware. Synthesize 3-bromomethyl-6,7-dimethoxy-1-methyl-2(1H)-quinoxalinone as follows. Stir 483 g veratrole in 1.45 L acetic acid at 15° for 1 h, add 683 g concentrated nitric acid (d 1.05) over 1 h (maintain the temperature below 40° by cooling and regulating the rate of addition of the nitric acid). Continue stirring and add 2.127 L fuming nitric acid (d 1.50) over 1 h while maintaining the temperature below 30°, let stand for 2 h, pour into a large volume of cold water, filter, wash the solid with water until the washings are neutral, recrystallize from EtOH to give 4,5-dinitroveratrole (mp 129.5-130.5°) (J. Am. Chem. Soc. 1946, 68, 1536). Reflux 5 g 4,5-dinitroveratrole in 200 mL benzene (Caution! Benzene is a carcinogen!), add 100 g 60 mesh iron powder and 20 mL concentrated HCl in small portions over 1 h, reflux for 4 h, add 10 mL water, reflux for 2 h, cool, make alkaline with 2.5 M NaOH, extract several times with 200 mL portions of benzene. Combine the organic layers and evaporate them to dryness, add 10 mL concentrated HCl, recrystallize from EtOH to give 1,2-diamino-4,5-dimethoxybenzene monohydrochloride as very slightly pink needles (mp 240°) (Anal. Chim. Acta 1982, 134, 39). Heat 2.5 mmoles 1,2-diamino-4,5-dimethoxybenzene hydrochloride and 2.4 mmoles pyruvic acid in 30 mL 500 mM HCl on a boiling water bath for 2 h, cool with ice-water, filter. Wash the precipitate with water and dry it under vacuum, recrystallize from MeOH:water 90:10 to give 6,7-dimethoxy-3-methyl-2(1H)-quinoxalinone as yellow needles (mp 255°) (Chem. Pharm. Bull. 1985, 33, 3493). Treat 1 g 6,7-dimethoxy-3-methyl-2(1H)-quinoxalinone dissolved in 50 mL anhydrous MeOH with a solution of diazomethane in ether, evaporate to dryness under reduced pressure, dissolve the residue in 5 mL ethyl acetate, chromatograph on a 250 × 35 column filled with 130 g 70-230 mesh silica gel 60 (Merck) using n-hexane:ethyl acetate 25:75 to give 6,7-dimethoxy-1,3-dimethyl-2(1H)-quinoxalinone as yellow needles (mp 170-171°). Dissolve 350 mg 6,7-dimethoxy-1,3-dimethyl-2(1H)-quinoxalinone in 3 mL acetic acid, add 350 mg anhydrous sodium acetate, add 2 mL 1.5 M bromine in acetic acid, heat at 100° for 15 min, cool, add 10 mL ether, filter, wash the solid 2 or 3 times with small portions of ether. Combine the filtrate and washings and evaporate them to dryness, dissolve the residue in 5 mL ethyl acetate, chromatograph on a 250 × 35 column filled with 130 g 70-230 mesh silica gel 60 (Merck) using ether, evaporate the main fraction to dryness, recrystallize the residue from n-hexane:ethyl acetate 50:50 to give 3-bromomethyl-6,7-dimethoxy-1-methyl-2(1H)-quinoxalinone as yellow needles (mp 161-163°) (J. Chromatogr. 1985, 346, 227). 3-Bromomethyl-6,7-dimethoxy-1-methyl-2(1H)-quinoxalinone is also available from Dojindo Molecular Technologies, Inc., 3 Bethesda Metro Center, Suite 700, Bethesda MD 20814; (301) 664-8448; www.dojindo.co.jp.)

HPLC VARIABLES

Column: 100 × 8 10 μm Radial Pak C18 (Waters) (Wash with MeOH at 2 mL/min for 20 min at the end of each day.)
Mobile phase: Gradient. MeOH:water 35:65 for 15 min, 50:50 for 25 min (step gradient), re-equilibrate at initial conditions for 20 min.
Flow rate: 1.5
Injection volume: 10
Detector: F ex 370 em 455

CHROMATOGRAM

Retention time: 28.1
Internal standard: 5-chlorouracil (32.5)
Limit of detection: 25 ng/mL

OTHER SUBSTANCES

Extracted: 5-fluorouracil

SAMPLE
Matrix: blood
Sample preparation: Add 250 μL serum to a 20 × 7 DEAE-Cellulofine AM anion-exchange column (Seikagaku Tokyo), elute with 3.5 mL 1 mM HCl, discard the first 0.5 mL eluate, collect the next 3 mL eluate. Evaporate the eluate to 0.5 mL under reduced pressure, add 15 mL ethyl acetate, shake, centrifuge. Remove the organic layer and evaporate it to dryness, reconstitute the residue in 800 μL anhydrous acetone, add 100 μL 750 μg/mL 4-bromomethyl-6,7-dimethoxycoumarin in acetone, add 100 μL 250 μg/mL 18-crown-6 in acetone, add 1.5 mg anhydrous potassium carbonate, heat at 70° for 15 min (protect from atmospheric moisture with a calcium chloride drying tube), cool, inject an aliquot

HPLC VARIABLES
Column: 200 × 4 5 μm Nucleosil 5 C18
Mobile phase: MeOH:water 60:40
Flow rate: 0.8
Detector: F ex 340 em 420

CHROMATOGRAM
Retention time: 5
Limit of quantitation: 100 ng/mL

OTHER SUBSTANCES
Extracted: ftorafur, 5-fluorouracil

von Heeren,F.; Tanner,R.; Theurillat,R.; Thormann,W. Determination of fluconazole in human plasma by micellar electrokinetic capillary chromatography with detection at 190 nm, *J.Chromatogr.A*, **1996**, *745*, 165–172.

SAMPLE
Matrix: blood, dialysate
Sample preparation: Plasma. Extract 100 μL plasma with 5 mL dichloromethane, centrifuge at 1000 g for 15 min. Evaporate the organic to dryness under a stream of nitrogen. Reconstitute the residue with 100 μL mobile phase, inject a 20 μL aliquot. Dialysate. Inject a 10 μL aliquot directly.

HPLC VARIABLES
Column: 200 × 2.1 5 μm HP ODS

Mobile phase: MeCN:buffer 13:87 (Buffer was 20 mm ammonium monobasic phosphate, adjusted to pH 7 with 5 M NaOH.)
Flow rate: 0.5
Injection volume: 10-20
Detector: UV 210

CHROMATOGRAM
Internal standard: UK-51,060 (plasma)

KEY WORDS
plasma; pharmacokinetics

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

SAMPLE
Matrix: blood
Sample preparation: Isolate mononuclear cells from 10 mL blood by a standard step-gradient density centrifugation procedure. Wash once with PBS, resuspend in 500 μL water, add 500 μL 800 mM perchloric acid, centrifuge at 400 g for 5 min, wash the pellet with 500 μL 400 mM perchloric acid, centrifuge at 400 g for 5 min. Combine supernatants, neutralize with 10 M KOH, bring to pH 7 with 1 M KOH (Universal indicator paper), cool in ice, centrifuge at 400 g for 5 min, inject a 50-2000 μL aliquot of the supernatant. (PBS was 8.1 g NaCl, 0.22 g KCl, 1.14 g $NaHPO_4$ (sic), 0.27 g KH_2PO_4 in 1 L water, pH 7.4.)

HPLC VARIABLES
Column: 250 × 4.6 10 μm Partisil 10 SAX
Mobile phase: Gradient. A was 5 mM pH 2.8 $(NH_4)H_2PO_4$. B was 750 mM pH 3.5 $(NH_4)H_2PO_4$. A:B from 70:30 to 0:100 over 30 min (concave gradient, Waters no. 9). (At the start of each day pump through 20 mL 2 M $(NH_4)H_2PO_4$ then inject 100 μL 100 mM disodium EDTA into the initial mobile phase.)
Flow rate: 3
Injection volume: 50-2000
Detector: UV 262

CHROMATOGRAM
Retention time: 29 (as triphosphate, Fara-ATP)

SAMPLE
Matrix: urine
Sample preparation: Equilibrate a Sephadex G-25M column with 100 mM pH 7.0 phosphate buffer. Condition a Bond-Elut C18 SPE cartridge with 1 mL MeCN, 4 mL acetone:water 20:80, and 4 mL water. 2 mL Urine + 500 μL 500 mM pH 5.0 acetate buffer + 50 μL MeOH + 160 μL 100000 Fishmann U/mL β-glucuronidase and 800000 Roy U/mL arylsulfatase (from Helix pomatia, Boehringer Mannheim), heat at 37° for 24 h, filter (0.45 μm), add to the Sephadex column, wash with three 2 mL portions of 100 mM pH 7.0 phosphate buffer, elute with four 2 mL portions of 100 mM pH 7.0 phosphate buffer. Add the eluate to the SPE cartridge, wash with 4 mL water, wash with 4 mL acetone:water 20:80, elute with 1 mL MeCN. Evaporate the eluate to dryness under a stream of nitrogen, reconstitute the residue in 100 μL MeOH, add 20 μL cupric acetate solution, let stand at room temperature for 1 h, add 100 μL reagent, heat at 60° for 40 min, cool, centrifuge briefly at 1000 g, inject a 100 μL aliquot of the supernatant. (Cupric acetate solution was 0.7 g cupric acetate in water diluted to 100 mL with MeOH. Reagent was 7 mM 1,2-diamino-4,5-methylenedioxybenzene in water containing 200 mM β-mercaptoethanol and 250 mM sodium hydrosulfite, store in the dark at 4°, stable for at least 2 weeks. Prepare 1,2-diamino-4,5-methylenedioxybenzene as follows. Add 5 g 1,2-(methylenedioxy)-4-nitrobenzene to 37.5 mL concentrated nitric acid and 12.5 mL glacial acetic acid, pour the yellow-colored solution into water, recrystallize the 1,2-dinitro-4,5-methylenedioxybenzene from EtOH (Rec.Trav.Chim.Pays-Bas 1930, 49, 45). Dissolve 5 g 1,2-dinitro-4,5-methylenedioxybenzene in 200 mL benzene (Caution! Benzene is a carcinogen!), add 100 g 80 mesh iron powder, add 20 mL concentrated HCl in small portions over 1 h while heating the mixture under reflux. Reflux for 4 h, add 10 mL water, reflux for 2 h, cool, make alkaline with 2.6 M NaOH, extract three times with 200 mL portions of benzene. Combine the extracts, evaporate to dryness to give 1,2-diamino-4,5-methylenedioxybenzene, mix with 10 mL concentrated HCl, recrystallize from EtOH to give 1,2-diamino-4,5-methylenedioxybenzene dihydrochloride, mp 176-9° (Chem.Pharm.Bull. 1987, 35, 687).)

HPLC VARIABLES
Column: 250 × 4.6 5 μm L-Column ODS (Chemicals Inspection and Testing Institute, Tokyo)
Mobile phase: MeOH:MeCN:500 mM ammonium acetate 50:10:40 (After each injection wash with MeOH:water 80:20 for 20 min for 20 min, re-equilibrate for 20 min.)
Flow rate: 1
Injection volume: 100
Detector: F ex 350 em 390

CHROMATOGRAM
Retention time: 35.6
Internal standard: fludrocortisone

OTHER SUBSTANCES
Extracted: hydrocortisone, tetrahydroaldosterone, aldosterone
Noninterfering: cortisone, corticosterone, hydroxycorticosteroids

KEY WORDS
SPE; derivatization; fludrocortisone is IS

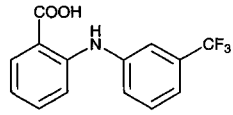
Flufenamic acid



Molecular formula: $C_{14}H_{10}F_3NO_2$
Molecular weight: 281.23
CAS Registry No.: 530-78-9
Merck Index: 4167
Lednicer No.: 1 110

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 40 μL 100 μg/mL mefenamic acid in MeOH + 1 mL 1 M hydrochloric acid + 6 mL dichloromethane, shake mechanically for 20 min. Centrifuge at 2000 g for 5 min, evaporate organic phase to dryness under a gentle stream of nitrogen at 40°. Reconstitute the residue with 50 μL MeOH, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 5 μm Nucleosil C18
Mobile phase: MeOH:water 77:23
Flow rate: 0.8
Injection volume: 20
Detector: UV 280

CHROMATOGRAM
Retention time: 7.2
Internal standard: mefenamic acid (8.6)
Limit of detection: 100 ng/mL
Limit of quantitation: 500 ng/mL

KEY WORDS
plasma; rat; pharmacokinetics

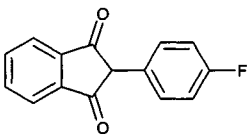
Fluindione



Molecular formula: $C_{15}H_9FO_2$
Molecular weight: 240.23
CAS Registry No.: 957-56-2
Merck Index: 4168

SAMPLE
Matrix: blood
Sample preparation: Add 100 μL plasma to a siliconized tube containing 50 μL 2 μg/mL IS in MeOH and 100 μL MeCN. Vortex for 30 s, centrifuge at 3000 g for 10 min. Mix a 150 μL aliquot of the supernatant with 150 μL 0.9% NaCl, inject a 100 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Supelcosil LC-18
Mobile phase: MeCN:67 mM Na_2HPO_4 buffer adjusted to pH 7.2 with orthophosphoric acid 23:77 (At the end of each chromatographic session rinse the HPLC system with 200 mL MeCN:water 50:50.)
Flow rate: 1.5

Injection volume: 100
Detector: UV 280

CHROMATOGRAM
Retention time: 4.2
Internal standard: coumarin (8.5)
Limit of quantitation: 25 ng/mL

OTHER SUBSTANCES
Also analyzed: acenocoumarol, brodifacoum, bromadiolone, chlorphacinone, coumatetralyl, difenacoum, diphenadione, ethyl biscoumacetate, phenidione, warfarin

KEY WORDS
plasma

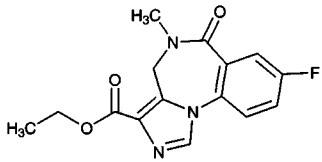
Flumazenil



Molecular formula: $C_{15}H_{14}FN_3O_3$
Molecular weight: 303.29
CAS Registry No.: 78755-81-4
Merck Index: 4169
Lednicer No.: 4 220

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 25 μL EtOH + 25 μL 3 μg/mL IS1 and 7.6 μg/mL IS2 in EtOH + 1 mL 100 mM Na_2HPO_4 adjusted to pH 10.5 with NaOH + 5 mL diethyl ether:dichloromethane 60:40, vortex for 30 s, centrifuge at 4° at 2000 g for 10 min. Remove the organic phase and add it to 1 mL 100 mM Na_2HPO_4 adjusted to pH 10.5 with NaOH, vortex for 30 s, centrifuge at 4° at 2000 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue in 50 μL mobile phase, inject a 1-15 μL aliquot.

HPLC VARIABLES
Column: 100 × 4.6 3 μm CP-Microspher C18 (Chrompack)
Mobile phase: Gradient. A was MeOH:buffer 1:2. B was MeOH:water 80:20. A:b 93.8:6.2 for 5.5 min, to 60:40 over 0.15 min, maintain at 60:40 for 11.3 min, to 2.5:97.5 over 0.5 min, maintain at 2.5:97.5 for 3.5 min, return to initial conditions over 0.5 min (Buffer was 6 g/L NaH_2PO_4 and 1 mL/L triethylamine adjusted to pH 7.00 with NaOH.)
Column temperature: 40
Flow rate: 1.5
Injection volume: 1-15
Detector: UV 220

CHROMATOGRAM
Retention time: 5.0
Internal standard: IS1 ethyl 7-chloro-5,6-dihydro-5-methyl-6-oxo-4H-imidazo[1,5-a][1,4]benzodiazepine-3-carboxylate (Ro 15-305) (6.4), IS2 climazolam (17.0)
Limit of detection: 0.3 ng/mL

OTHER SUBSTANCES
Extracted: midazolam

KEY WORDS
plasma; pharmacokinetics

REFERENCE
Vletter,A.A.; Burm,A.G.L.; Breimer,L.T.M.; Spierdijk,J. High-performance liquid chromatographic assay to determine midazolam and flumazenil simultaneously in human plasma, *J.Chromatogr.*, **1990**, *530*, 177–185.

SAMPLE
Matrix: blood
Sample preparation: 1 mL Serum or plasma + 1 mL saturated Na_2HPO_4 + 100 µL 10 µg/mL IS + 5 mL diisopropyl ether:isopropanol 95:5 (Caution! Diisopropyl ether readily forms explosive peroxides!), shake for 5 min, centrifuge. Remove the organic layer and evaporate it to dryness at 35°, reconstitute the residue in 50 µL mobile phase, vortex, inject a 20 µL aliquot.

HPLC VARIABLES
Column: 100 × 3 Chrompack CP spher C8
Mobile phase: MeCN:50 mM NaH_2PO_4 70:30 adjusted to pH 2.2 with 85% orthophosphoric acid
Flow rate: 0.8
Injection volume: 20
Detector: UV 210

CHROMATOGRAM
Retention time: 2.1
Internal standard: N-6-dimethyl-2-(4-methylphenyl)-N-propylimidazo[1,2-α]pyridine-3-acetamide methanesulfonate (Synthelabo France) (6.4)

OTHER SUBSTANCES
Extracted: prothipendyl, zolpidem

KEY WORDS
serum; plasma; pharmacokinetics

REFERENCE

SAMPLE
Matrix: blood
Sample preparation: Condition a Sep-Pak C18 SPE cartridge with water, MeOH, and 100 mM ammonium acetate. Add 200 µL plasma to the SPE cartridge, wash with 100 mM ammonium acetate, elute with MeOH:100 mM ammonium acetate 3:1. Evaporate the eluate to dryness under reduced pressure, dissolve the residue in 200 µL mobile phase, inject a 20 µL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 Hitachi gel 3056 octadecylsilica
Mobile phase: MeOH:100 mM ammonium acetate 60:40
Flow rate: 1
Injection volume: 20
Detector: MS, Hitachi M1000, APCI, nebulizer 260°, vaporizer 399

CHROMATOGRAM
Retention time: 2.7
Limit of detection: 0.5-2.5 ng/mL

OTHER SUBSTANCES
Simultaneous: atipamezole, atropine, butorphanol, ketamine, medetomidine, midazolam, xylazine

KEY WORDS
plasma; SPE; dog

SAMPLE
Matrix: tissue
Sample preparation: Homogenize 1 g tissue with 5 mL acetone, centrifuge, decant and save the supernatant, repeat the extraction. Add 2 mL acetone, 3 mL hexane, and 6 mL 3% NaCl to the combined supernatants, extract, centrifuge, discard the hexane layer. Add the extract to 25 mL chloroform (Caution! Chloroform is a carcinogen!), mix, separate the phases, add 2.5 mL 100 mM pH 9.0 Na_3PO_4 buffer and one drop 1 M NaOH to the chloroform phase, mix, separate the phases, discard the chloroform layer. Wash the aqueous layer with 2.5 mL chloroform, centrifuge the aqueous layer. Dialyze a 740 μL aliquot of the supernatant (in 2 portions) against 3.9 mL 20 mM pH 5.0 sodium phosphate buffer pumped at 0.6 mL/min using a Cuprophan 15000 MW cut-off cellulose acetate membrane. After washing column A with 500 μL MeCN:water 50:50 and 500 μL 20 mM pH 5.0 Na_3PO_4 buffer the dialysate flowed through column A to waste. Wash column A with 500 μL 20 mM pH 5.0 sodium phosphate buffer, elute the contents of column A onto column B with mobile phase, elute with mobile phase, monitor the effluent from column B. (Wash the donor channel with 2 mL 0.01% Triton X-100 in 20 mM pH 5.0 sodium phosphate buffer. Wash the acceptor channel with 3 mL 20 mM pH 5.0 sodium phosphate buffer. Regenerate the membrane with 2 mL 100 mM pH 9.0 sodium phosphate buffer (donor channel) and 3 mL 20 mM pH 5.0 sodium phosphate buffer (acceptor channel).)

HPLC VARIABLES
Column: A 5.8 × 4.6 Hypersil ODS; B 150 × 4.6 PLRP-S (Polymer Labs., UK)
Mobile phase: MeCN:THF:20 mM pH 5.0 Na_3PO_4 buffer 20:15:65
Flow rate: 0.6
Detector: F ex 318 em 364

CHROMATOGRAM
Retention time: 12
Limit of detection: 5 ng/g

OTHER SUBSTANCES
Extracted: oxolinic acid

KEY WORDS
column switching; chicken; liver; dialysis

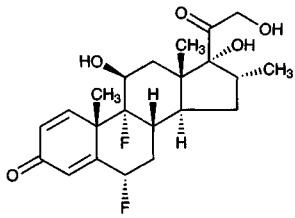
Flumethasone



Molecular formula: $C_{22}H_{28}F_2O_5$
Molecular weight: 410.46
CAS Registry No.: 2135-17-3, 2002-29-1 (pivalate)
Merck Index: 4173
Lednicer No.: 1 200

SAMPLE

Matrix: blood
Sample preparation: Add 1 mL serum to a Sep Pak C18 SPE cartridge, wash with 4 mL water, elute with 4 mL MeOH, evaporate to dryness under vacuum, reconstitute in 50 μL MeCN:water 30:70, inject whole sample.

HPLC VARIABLES

Column: 250 × 4.6 5 μm Ultrasphere ODS
Mobile phase: MeCN:water 30:70
Flow rate: 1
Injection volume: 50
Detector: enzyme immunoassay of fractions

CHROMATOGRAM

Retention time: 18
Limit of detection: 0.3 pg

OTHER SUBSTANCES

Extracted: dexamethasone, betamethasone, triamcinolone
Noninterfering: endogenous steroids

KEY WORDS

serum; SPE; horse

SAMPLE

Matrix: solutions

HPLC VARIABLES

Column: 250 × 4.6 Zorbax RX

Mobile phase: Gradient. A was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 1 L water. B was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 200 mL water, make up to 1 L with MeCN. A:B from 100:0 to 0:100 over 30 min, maintain at 0:100 for 5 min.

Column temperature: 30

Flow rate: 2

Detector: UV 210

OTHER SUBSTANCES

Also analyzed: acepromazine, acetaminophen, acetophenazine, albuterol, aminophylline, amitriptyline, amobarbital, amoxapine, amphetamine, amylocaine, antipyrine, aprobarbital, aspirin, atenolol, atropine, avermectin, barbital, benzocaine, benzoic acid, benzotropine, benzphetamine, berberine, bibucaine, bromazepan, brompheniramine, buprenorphine, buspirone, butabarbital, butacaine, butethal, caffeine, carbamazepine, carbromal, chloramphenicol, chlordiazepoxide, chloroquine, chlorothiazide, chloroxylenol, chlorphenesin, chlorpheniramine, chlorpromazine, chlorpropamide, chlortetracycline, cimetidine, cinchonidine, cinchonine, clenbuterol, clonazepam, clonixin, clorazepate, cocaine, codeine, colchicine, cortisone, coumarin, cyclazocine, cyclobenzaprine, cyclothiazide, cyheptamide, cymarin, danazol, danthron, dapsone, debrisoquine, desipramine, dexamethasone, dextromethorphan, dextropropoxyphene, diamorphine, diazepam, diclofenac, diethylpropion, diethylstilbestrol, diflunisal, digitoxin, digoxin, diltiazem, diphenhydramine, diphenoxylate, diprenorphine, dipyrone, disulfiram, dopamine, doxapram, doxepin, dronabinol, ephedrine, epinephrine, epinine, estradiol, estriol, estrone, ethacrynic acid, ethosuximide, etonitazene, etorphine, eugenol, famotidine, fenbendazole, fen-

camfamine, fenoprofen, fenproporex, fentanyl, flubendazole, 5-fluorouracil, fluoxymesterone, fluphenazine, furosemide, gentisic acid, gitoxigenin, glipizide, glunixin, glutethimide, glybenclamide, guaiacol, halazepam, haloperidol, hydrochlorothiazide, hydrocodone, hydrocortisone, hydromorphone, hydroxyquinoline, ibogaine, ibuprofen, iminostilbene, imipramine, indomethacin, isocarbostyril, isocarboxazid, isoniazid, isoproterenol, isoxsuprine, ivermectin, ketamine, ketoprofen, kynurenic acid, levorphanol, lidocaine, lorazepam, lormetazepam, loxapine, mazindol, mebendazole, meclizine, meclofenamic acid, medazepam, mefenamic acid, megestrol, mepacrine, meperidine, mephentermine, mephenytoin, mephesin, mephobarbital, mepivacaine, mescaline, mesoridazine, methadone, methamphetamine, methapyrilene, methaqualone, methazolamide, methocarbamol, methoxamine, methsuximide, methyl salicylate, methyldopa, methyldopamine, methylphenidate, methylprednisolone, methyltestosterone, methyprylon, metoprolol, mibolerone, morphine, nadolol, nalorphine, naloxone, naltrexone, naphazoline, naproxen, nefopam, niacinamide, nicotine, niacin, nifedipine, niflumic acid, nitrazepam, norepinephrine, nortriptyline, noscapine, nylidrin, oxazepam, oxycodone, oxymorphone, oxyphenbutazone, oxytetracycline, papaverine, pargyline, pemoline, pentazocine, pentobarbital, persantine, phenacetin, phenazocine, phenazopyridine, phencyclidine, phendimetrazine, phenelzine, pheniramine, phenobarbital, phenothiazine, phensuximide, phentermine, phenylbutazone, phenylephrine, phenylpropanolamine, piperocaine, prazepam, prednisolone, primidone, probenecid, progesterone, propiomazine, propranolol, propylparaben, pseudoephedrine, puromycin, pyrilamine, pyrithyldione, quazepam, quinaldic acid, quinidine, quinine, ranitidine, recinnamine, reserpine, resorcinol, saccharin, albuterol, salicylamide, salicylic acid, scopolamine, scopoletin, secobarbital, strychnine, sulfacetamide, sufadiazine, sulfadimethoxine, sulfaethidole, sulfamerazine, sulfamethazine, sulfamethoxizole, sulfanilamide, sulfapyridine, sulfasoxizole, sulindac, tamoxifen, temazepam, testosterone, tetracaine, tetracycline, tetramisole, thebaine, theobromine, theophylline, thiabendazole, thiamine, thiamylal, thiobarbituric acid, thioridazine, thiosalicylic acid, thiothixene, thymol, tolazamide, tolazoline, tobutamide, tolmetin, tranylcypromine, triamcinolone, tribenzylamine, trichloromethiazide, trifluoperazine, trihexyphenidyl, trimethoprim, tripelennamine, triprolidine, tropacocaine, tyramine, verapamil, vincamine, warfarin, yohimbine, zoxazolamine

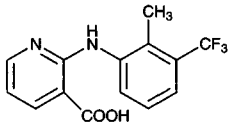
Flunixin



Molecular formula: $C_{14}H_{11}F_3N_2O_2$
Molecular weight: 296.25
CAS Registry No.: 38677-85-9, 42461-84-7 (meglumine salt)
Merck Index: 4182
Lednicer No.: 2 281

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma or serum + 4 mL 250 ng/mL naproxen in MeCN, vortex for 30 s, centrifuge at 1000 g for 15 min. Remove 4 mL of the supernatant and evaporate it to dryness under a stream of nitrogen at 37°, reconstitute the residue in 500 μL mobile phase, inject a 50 μL aliquot.

HPLC VARIABLES
Guard column: 50 mm long 30 μm pellicular ODS
Column: 250 mm long 5 μm Spherisorb ODS I
Mobile phase: MeCN:MeOH:1% pH 3.0 acetate buffer 30:20:50
Flow rate: 1.2
Injection volume: 50
Detector: UV 254

CHROMATOGRAM
Retention time: 9.0

Internal standard: naproxen (7.7)
Limit of detection: 50 ng/mL

OTHER SUBSTANCES
Extracted: phenylbutazone, oxyphenbutazone

SAMPLE
Matrix: blood, milk
Sample preparation: Plasma. 1 mL Plasma + 10 μL 6 μg/mL IS + 1 mL 1 M HCl + 3 mL water, add to a Clin Elut SPE cartridge, elute with two 8 mL portions of dichloromethane. Evaporate the eluate to dryness under a stream of nitrogen at 50°, reconstitute the residue in 200 μL MeOH, vortex for 30 s, inject a 50 μL aliquot. Milk. 25 mL Milk + 2.5 mL 1 M HCl, mix briefly, centrifuge at 10000 rpm in a refrigerated centrifuge for 10 min. Remove the supernatant and wash the pellet with 15 mL 1 M HCl, centrifuge at 10000 rpm in a refrigerated centrifuge for 10 min. Combine the supernatants, add a 5 mL aliquot to 150 μL 10 μg/mL IS and 5 mL hexane, rotate for 5 min, centrifuge at 1000 g for 5 min, add the aqueous phase to a Clin Elut SPE cartridge, elute with two 8 mL portions of dichloromethane. Evaporate the eluate to dryness under a stream of nitrogen at 50°, reconstitute the residue in 200 μL MeOH, vortex for 30 s, inject a 50 μL aliquot.

SAMPLE
Matrix: milk
Sample preparation: Condition a 3 mL C18 Bakerbond SPE cartridge with 5 mL ethyl acetate and 5 mL water. 5 mL Milk + 200 μL 4000 U/mL β-glucuronidase (type IX-A, Sigma) in 100 mM pH 6.8 phosphate buffer, heat at 37° for 2 h, cool, acidify to pH 3.0-3.5 with about 350-450 μL 1 M HCl, while vortexing gently, add 5.4-5.6 g 60-200 mesh silica gel (Baker No. 3405-1), mix thoroughly for 2 min, place in a 300 × 25 glass column on top off 0.5-1 g untreated silica gel, place 0.5-1 g untreated silica gel on the top of the column, wash with 50 mL water-saturated dichloromethane:hexane 30:70, elute with 50 mL ethyl acetate. Wash the eluate with 25 mL pH 3.5 HCl for 15 s, extract ethyl acetate layer twice with NaOH solution by shaking for 15 s. Combine the aqueous extracts and adjust the pH to 5.0-5.5 with 1 M HCl, add to the SPE cartridge, elute with 5 mL ethyl acetate. Evaporate the eluate to dryness under a stream of nitrogen at 50-55°, reconstitute the residue in 500 μL MeOH:buffer 50:50, sonicate briefly, filter (0.45 μm), inject a 100 μL aliquot of the filtrate. (NaOH solution was 15 mL 100 mM

NaOH and 1 mL 1 M NaOH. Buffer was 2.5 mL 1 M tetrabutylammonium dihydrogen phosphate and 10 mL 100 mM NaOH made up to 500 mL with water, pH 6.)

HPLC VARIABLES
Guard column: 20 × 4 5 μm Hypersil C18 ODS

SAMPLE
Matrix: urine
Sample preparation: Condition a 3 mL Bond Elut Certify II (C8 plus strong anion exchanger) SPE cartridge with 3 mL MeOH and 3 mL water. Adjust pH of urine to 7 with 1 M NaOH or 1 M HCl, centrifuge at 500 g for 15 min. Add 3 mL of the supernatant to the SPE cartridge at 0.2 mL/min, wash with two 2.5 mL portions of water, wash with two 2 mL portions of MeOH, dry for 20 min under full vacuum, wash with two 2 mL portions of hexane, elute with two 2 mL portions of hexane:acetic acid 90:10, add 2 μg ketoprofen. Evaporate to dryness under a stream of nitrogen, reconstitute in 100 μL hexane:isopropanol 50:50, inject an aliquot.

HPLC VARIABLES
Column: 100 × 2 5 μm Hypersil SI
Mobile phase: Gradient. Hexane:isopropanol containing 5% water from 98:2 to 70:30 over 8 min, to 0:100 over 4 min, maintain at 0:100 for 1 min, re-equilibrate at initial conditions for 5 min.
Column temperature: 45
Flow rate: 0.4
Injection volume: 3
Detector: UV 280 or MS, Hewlett-Packard HP5989A quadrupole, HP 59980B PB interface at 65° with helium pressure of 275 kPa, 10 kV high energy dynode, source 275°, particle beam, EI, CI (methane)

CHROMATOGRAM
Retention time: 4.53
Internal standard: ketoprofen (3.84)
Limit of detection: 10 ng/mL

OTHER SUBSTANCES
Extracted: metabolites
Simultaneous: alclofenac, aminoantipyrine, bumadizone, clonixin, diclofenac, diflunisal, dipyrone, famprofazone, fenbufen, fenclofenac, fenoprofen, floctafenine, flufenamic acid, flurbiprofen, ibufenac, ibuprofen, indomethacin, indoprofen, isopyrin, isoxepac, ketorolac, meclofenamic acid, naproxen, nefopam, niflumic acid, oxaprozin, phenazone, phenazopyridine, phenylbutazone, piroxicam, propyphenazone, salicylamide, sulindac, suprofen, tenoxicam, tiaprofenic acid, tolmetin, zomepirac

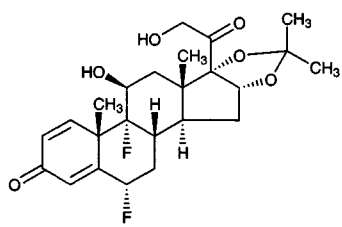
Fluocinolone acetonide



Molecular formula: $C_{24}H_{30}F_2O_6$
Molecular weight: 452.20
CAS Registry No.: 67-73-2
Merck Index: 4185
Lednicer No.: 1 202; 3 94

SAMPLE
Matrix: blood

Sample preparation: 100 μL Plasma + 1.2 mL dichloromethane, shake 1 min, repeat extraction. Combine organic layers and evaporate a 2 mL aliquot under reduced pressure below 40°. Dissolve the residue in 100 μL MeCN, add 10 μL reagent 1, add 10 μL reagent 2, heat at 70° for 20 min, cool to room temperature, add 100 μL water, add 200 μL MeOH:water 1:1, apply to a Sep-Pak C18 cartridge, wash vial into cartridge with 2 mL MeOH:water 1:1, wash cartridge with 40 mL MeOH:water 1:1, elute with 5 mL MeOH. Concentrate eluate to 500 μL by evaporation under reduced pressure below 40°, inject 20 μL aliquot. (Reagent 1 was 30 mg 2-(4-carboxyphenyl)-5,6-dimethylbenzimidazole in 3 mL pyridine, add 700 mg 4-piperidinopyridine, dilute to 10 mL with MeCN. Reagent 2 was 700 mg 1-isopropyl-3-(3-dimethylaminopropyl)carbodiimide perchlorate in 10 mL MeCN. Prepare 2-(4-carboxyphenyl)-5,6-dimethylbenzimidazole as follows. Add 13 g 4-carboxybenzaldehyde (terephthalaldehydic acid) in 400 mL EtOH dropwise to 4,5-dimethyl-1,2-phenylenediamine in 400 mL EtOH in an ice bath, after 1 h reflux for 8 h, cool to room temperature, collect the precipitate, recrystallize three times from MeOH:water 50:50 to give 2-(4-carboxyphenyl)-5,6-dimethylbenzimidazole as a white amorphous product (mp >300°) (J.Chromatogr. 1991, 585, 219). 4-Piperidinopyridine is not commercially available but 4-dimethylaminopyridine or 4-pyrrolidinopyridine can be used instead although interferences are greater (J. Chromatogr. 1991, 585, 219). Alternatively 4-piperidinopyridine can be synthesized as follows. Add 200 mmoles piperidine dropwise with stirring to 15 g phosphorus pentoxide and 9.51 g 4-hydroxypyridine, heat at 250° for 7 h, cautiously pour onto 200 g ice, add 400 mL 1 M NaOH, add 200 mL ether. Remove the ether layer and extract the aqueous layer three times with 100 mL portions of ether. Combine the organic layers and dry them over anhydrous potassium carbonate, evaporate, distil the residue, recrystallize from petroleum ether (bp 80-100°) to give 4-piperidinopyridine (bp 167-170°/11 mm Hg; mp 79-80°) (Synthesis 1978, 844). Alternatively, add 1.94 g 4-bromopyridine hydrochloride to 5 mL 50% NaOH, add 5 mL piperidine, add 2.72 g benzyltriethylammonium bromide, heat at 100° for 5 h, remove excess piperidine by distillation, add 25 mL water, extract four times with 25 mL portions of benzene. Combine the organic layers and dry them over anhydrous sodium sulfate, boil the residue with petroleum ether to give 4-piperidinopyridine (mp 80°) (Syn. Commun. 1979, 9, 251). Prepare 1-isopropyl-3-(3-dimethylaminopropyl) carbodiimide perchlorate as follows. Stir 1.41 moles isopropylisocyanate in 750 mL dichloromethane at 5°, add 144 g 3-dimethylaminopropylamine (N,N-dimethyl-1,3-propanediamine) in 250 mL dichloromethane at such a rate that the temperature does not exceed 10°, add 500 mL triethylamine, add 300 g p-toluenesulfonyl chloride in 300 mL dichloromethane at such a rate that the temperature does not exceed 10°, reflux for 3 h, add 400 g anhydrous sodium carbonate, add 3.5 L ice water, stir vigorously for 30 min, remove the organic phase. Extract the aqueous phase three times with 500 mL portions of dichloromethane. Combine the organic layers and dry them over anhydrous sodium sulfate, evaporate under reduced pressure, distil the residue to give 1-isopropyl-3-(3-dimethylaminopropyl)carbodiimide (bp 91-92°/10 mm Hg (Ber. 1941, 74B, 1285)) (cf. Org. Syn. 1973, Coll. Vol. V, 555). Prepare pyridine perchlorate from pyridine and 20% perchloric acid, crystallize from EtOH (Ber. 1926, 59, 446). Add 18 g pyridine perchlorate in portions to 100 mmoles 1-isopropyl-3-(3-dimethylaminopropyl)carbodiimide stirred in 200 mL dichloromethane at 0°, let stand for 30 min, filter, add 200 mL anhydrous diethyl ether to the filtrate. Filter off the precipitate and recrystallize it from dichloromethane/diethyl ether to give 1-isopropyl-3-(3-dimethylaminopropyl)carbodiimide perchlorate (mp 88-90°) (Chem. Pharm. Bull. 1985, 33, 5375).)

HPLC VARIABLES
Guard column: 50 × 4.6 7 μm Zorbax ODS
Column: 250 × 4.6 7 μm Zorbax ODS
Mobile phase: MeOH:water 75:25 containing 5 mM tetramethylammonium hydrogen sulfate
Flow rate: 0.4

Detector: UV 260 for 22 min then UV 236

CHROMATOGRAM
Retention time: 8 (fluocinolone acetonide)
Internal standard: norethindrone (12)

OTHER SUBSTANCES
Simultaneous: procinonide, ciprocinonide, fluocinonide

KEY WORDS
creams; column-switching

REFERENCE
Conley,D.L.; Benjamin,E.J. Automated high-performance liquid chromatographic column switching technique for the on-line clean-up and analysis of drugs in topical cream formulations, *J.Chromatogr.*, **1983**, *257*, 337–344.

SAMPLE
Matrix: formulations
Sample preparation: 11.25 g Cream + 100 mL cyclohexane + 50 mL MeOH, shake vigorously for 3 min, let stand for 15 min. Remove the lower layer and add it to 140 mL water and 100 mL chloroform, shake for 3 min, allow phases to separate. Remove a 3 mL aliquot of the chloroform layer and add it to 300 μL 0.028% hydrocortisone in EtOH, add 1 mL 3 mg/mL acenaphthene-5-sulfonyl hydrazine in EtOH:toluene 10:90, evaporate to dryness under reduced pressure at 60°, reconstitute with 200 μL mobile phase, inject an aliquot. (Preparation of acenaphthene-5-sulfonyl hydrazine is as follows. Dissolve 20 g acenaphthene in 100 g nitrobenzene, cool to 0°, add 9 mL chlorosulfonic acid dropwise with stirring, maintain the temperature below 5°, when the addition is complete allow the temperature to rise to 20° over 30 min, add 500 mL water. Remove the aqueous layer and neutralize it with solid sodium carbonate, heat and add NaCl until precipitation occurs, cool in an ice bath for 1 h, filter, heat at 140° to remove traces of water and nitrobenzene to give acenaphthene-5-sulfonic acid sodium salt as a pale yellow solid (mp >300°). Grind 10 g acenaphthene-5-sulfonic acid sodium salt with 3.5 g phosphorus pentachloride in a mortar for 3 min, add ice and water, extract with 100 mL ethyl acetate. Wash the ethyl acetate layer with 5% sodium bicarbonate and with water until neutral, dry over anhydrous sodium sulfate, evaporate the ethyl acetate under a stream of nitrogen, chromatograph on a 300 × 20 column of silica gel H with toluene to give acenaphthene-5-sulfonyl chloride (mp 98-101°) as the first yellow band to elute. Cool a solution of 1 g acenaphthene-5-sulfonyl chloride in 3 mL THF to 10° and pass nitrogen through the solution, add 400 μL 85% hydrazine hydrate dropwise with stirring, maintain the temperature between 10° and 15°, stir for a further 15 min. Filter the upper THF layer through Celite, wash the Celite with 1 mL THF. Stir the filtrate vigorously and add two 10 mL portions of water, cool in a refrigerator for 1 h, filter the precipitate, wash with water, dry, recrystallize from EtOH to give acenaphthene-5-sulfonyl hydrazine (mp 132-4°).)

HPLC VARIABLES
Column: 500 × 1 10 μm silica
Mobile phase: Toluene:dioxane 90:10 (Caution! Dioxane is a carcinogen!)
Detector: F ex 230 em 350

CHROMATOGRAM
Internal standard: hydrocortisone

SAMPLE
Matrix: blood

Sample preparation: 100 μL Serum + 5 μL 42 μM 5-chlorouracil in acetone, mix, let stand at room temperature for 3 min, add 500 μL 100 mM pH 3.5 potassium phosphate buffer, add 2 mL ethyl acetate, vortex for 2 min, centrifuge at 1000 g for 5 min. Remove a 1.4 mL aliquot of the organic layer and evaporate it to dryness under reduced pressure. Add 20 mg solid potassium bicarbonate:anhydrous sodium sulfate 1:7 to the residue, add 50 μL 1.3 mM 3-bromomethyl-6,7-dimethoxy-1-methyl-2(1H)-quinoxalinone in acetone, add 50 μL 1.5 mM 18-crown-6 in acetone, heat at 50° for 20 min, cool, inject a 10 μL aliquot. (Silanize all glassware. Synthesize 3-bromomethyl-6,7-dimethoxy-1-methyl-2(1H)-quinoxalinone as follows. Stir 483 g veratrole in 1.45 L acetic acid at 15° for 1 h, add 683 g concentrated nitric acid (d 1.05) over 1 h (maintain the temperature below 40° by cooling and regulating the rate of addition of the nitric acid). Continue stirring and add 2.127 L fuming nitric acid (d 1.50) over 1 h while maintaining the temperature below 30°, let stand for 2 h, pour into a large volume of cold water, filter, wash the solid with water until the washings are neutral, recrystallize from EtOH to give 4,5-dinitroveratrole (mp 129.5-130.5°) (J. Am. Chem. Soc. 1946, 68, 1536). Reflux 5 g 4,5-dinitroveratrole in 200 mL benzene (Caution! Benzene is a carcinogen!), add 100 g 60 mesh iron powder and 20 mL concentrated HCl in small portions over 1 h, reflux for 4 h, add 10 mL water, reflux for 2 h, cool, make alkaline with 2.5 M NaOH, extract several times with 200 mL portions of benzene. Combine the organic layers and evaporate them to dryness, add 10 mL concentrated HCl, recrystallize from EtOH to give 1,2-diamino-4,5-dimethoxybenzene monohydrochloride as very slightly pink needles (mp 240°) (Anal. Chim. Acta 1982, 134, 39). Heat 2.5 mmoles 1,2-diamino-4,5-dimethoxybenzene hydrochloride and 2.4 mmoles pyruvic acid in 30 mL 500 mM HCl on a boiling water bath for 2 h, cool with ice-water, filter. Wash the precipitate with water and dry it under vacuum, recrystallize from MeOH:water 90:10 to give 6,7-dimethoxy-3-methyl-2(1H)-quinoxalinone as yellow needles (mp 255°) (Chem. Pharm. Bull. 1985, 33, 3493). Treat 1 g 6,7-dimethoxy-3-methyl-2(1H)-quinoxalinone dissolved in 50 mL anhydrous MeOH with a solution of diazomethane in ether, evaporate to dryness under reduced pressure, dissolve the residue in 5 mL ethyl acetate, chromatograph on a 250 × 35 column filled with 130 g 70-230 mesh silica gel 60 (Merck) using n-hexane:ethyl acetate 25:75 to give 6,7-dimethoxy-1,3-dimethyl-2(1H)-quinoxalinone as yellow needles (mp 170-171°). Dissolve 350 mg 6,7-dimethoxy-1,3-dimethyl-2(1H)-quinoxalinone in 3 mL acetic acid, add 350 mg anhydrous sodium acetate, add 2 mL 1.5 M bromine in acetic acid, heat at 100° for 15 min, cool, add 10 mL ether, filter, wash the solid 2 or 3 times with small portions of ether. Combine the filtrate and washings and evaporate them to dryness, dissolve the residue in 5 mL ethyl acetate, chromatograph on a 250 × 35 column filled with 130 g 70-230 mesh silica gel 60 (Merck) using ether, evaporate the main fraction to dryness, recrystallize the residue from n-hexane: ethyl acetate 50:50 to give 3-bromomethyl-6,7-dimethoxy-1-methyl-2(1H)-quinoxalinone as yellow needles (mp 161-163°) (J. Chromatogr. 1985, 346, 227). 3-Bromomethyl-6,7-dimethoxy-1-methyl-2(1H)-quinoxalinone is also available from Dojindo Molecular Technologies, Inc., 3 Bethesda Metro Center, Suite 700, Bethesda MD 20814; (301) 664-8448; www.dojindo.co.jp.)

HPLC VARIABLES
Column: 100 × 8 10 μm Radial Pak C18 (Waters) (Wash with MeOH at 2 mL/min for 20 min at the end of each day.)

Mobile phase: Gradient. MeOH:water 35:65 for 15 min, 50:50 for 25 min (step gradient), re-equilibrate at initial conditions for 20 min.

Flow rate: 1.5

Injection volume: 10

Detector: F ex 370 em 455

CHROMATOGRAM
Retention time: 28.1
Internal standard: 5-chlorouracil (32.5)
Limit of detection: 12.5 ng/mL

SAMPLE
Matrix: blood
Sample preparation: Add 250 μL serum to a 20 × 7 DEAE-Cellulofine AM anion-exchange column (Seikagaku Tokyo), elute with 3.5 mL 1 mM HCl, discard the first 0.5 mL eluate, collect the next 3 mL eluate. Evaporate the eluate to 0.5 mL under reduced pressure, add 15 mL ethyl acetate, shake, centrifuge. Remove the organic layer and evaporate it to dryness, reconstitute the residue in 800 μL anhydrous acetone, add 100 μL 750 μg/mL 4-bromomethyl-6,7-dimethoxycoumarin in acetone, add 100 μL 250 μg/mL 18-crown-6 in acetone, add 1.5 mg anhydrous potassium carbonate, heat at 70° for 15 min (protect from atmospheric moisture with a calcium chloride drying tube), cool, inject an aliquot

HPLC VARIABLES
Column: 200 × 4 5 μm Nucleosil 5 C18
Mobile phase: MeOH:water 60:40
Flow rate: 0.8
Detector: F ex 340 em 420

CHROMATOGRAM
Retention time: 10
Limit of quantitation: 60 ng/mL

OTHER SUBSTANCES
Extracted: floxuridine, ftorafur

KEY WORDS
derivatization; serum; protect from light

REFERENCE

SAMPLE
Matrix: blood
Sample preparation: Condition a 1 mL LC-SCX Supelclean strong cation-exchange SPE cartridge (Supelco) with 2 mL MeOH, 1 mL 100 mM copper(II) sulfate solution, and 3 mL 50 mM pH 7 phosphate buffer, do not allow to dry. 300 μL Serum + 5-bromouracil, add to the SPE cartridge, wash with 2 mL 50 mM pH 7 phosphate buffer, wash with 2 mL MeOH, elute with 700 μL 1.7 M ammonia solution, add 70 μL glacial acetic acid to the eluate, mix thoroughly, inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: 20 × 4.6 5 μm Supelguard LC-18-S (Supelco)
Column: 250 × 4.6 5 μm Supelcosil LC-18-S ODS

Mobile phase: Gradient. A was MeOH:50 mM pH 6.5 phosphate buffer 60:40. B was 50 mM pH 6.5 phosphate buffer.
Flow rate: 1
Injection volume: 20
Detector: UV 269

CHROMATOGRAM
Retention time: 6.5
Internal standard: 5-bromouracil (12)
Limit of detection: 200 ng/mL

OTHER SUBSTANCES
Extracted: doxifluridine, floxuridine, 5-fluorouridine monophosphate, metabolites

KEY WORDS
serum; SPE

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 100 μL 100 μg/mL niacinamide, add 2 mL MeCN dropwise, centrifuge at 3000 g for 30 min. Remove the supernatant and evaporate it to dryness, reconstitute the residue in 1 mL saturated ammonium sulfate, add 5 mL diethyl ether:isopropanol 80:20, shake for 15 min, centrifuge at 3000 g for 15 min, repeat the extraction. Combine the organic phases and evaporate them to dryness, reconstitute the residue in 1 mL mobile phase, inject an aliquot.

HPLC VARIABLES
Guard column: 5 μm LiChrosorb RP-18
Column: 250 × 4 5 μm LiChrosorb RP-18
Mobile phase: pH 7.0 phosphate buffer (μ = 0.05)
Flow rate: 1
Injection volume: 100
Detector: UV 265

CHROMATOGRAM
Retention time: 5
Internal standard: niacinamide
Limit of quantitation: 690 ng/mL

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject

a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 204

CHROMATOGRAM
Retention time: 3.433

KEY WORDS
whole blood

SAMPLE
Matrix: formulations

Sample preparation: Condition a 500 mg SCX Tech-Elut strong cation exchange SPE cartridge (HPLC Technology) with 6 mL MeOH and five 2 mL portions of buffer. Tablets. Powder tablets, weigh out amount equivalent to 500 mg flucytosine, add 50 mL water, stir for 15 min, filter. 1 mL Filtrate + 1.5 mL 27 μg/mL thymine in buffer, make up to 10 mL with buffer, add 2 mL to the SPE cartridge, wash with 1 mL buffer, collect all the eluates, inject an aliquot. Injections. Dilute with water to a drug concentration of 10 mg/mL. 1 mL Sample + 1.5 mL 27 μg/mL thymine in buffer, make up to 10 mL with buffer, add 2 mL to the SPE cartridge, wash with 1 mL buffer, collect all the eluates, inject an aliquot. (Buffer was 70 mM KH_2PO_4 adjusted to pH 3.0 with HCl.) (To measure flucytosine as well as fluorouracil omit the SPE step.)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Spherisorb CN
Mobile phase: 9 mM Sodium heptanesulfonate adjusted to pH 2.8 with phosphoric acid
Flow rate: 0.8
Injection volume: 20
Detector: UV 266

CHROMATOGRAM
Retention time: 4.0
Internal standard: thymine (4.85)

OTHER SUBSTANCES
Simultaneous: flucytosine (when SPE is omitted)

SAMPLE

Matrix: tissue

Sample preparation: Homogenize (Ultra-Turrax) 1 g tissue with 0.05-1 μg IS and 15 mL ice-cold MeCN, rinse homogenizer with 10 mL ice-cold MeCN, centrifuge at 6000 rpm for 15 min, remove the supernatant, wash the pellet with 5 mL MeCN, centrifuge for 5 min. Combine the supernatants, remove a 5 mL aliquot, evaporate to dryness under a stream of nitrogen at room temperature, reconstitute the residue in 50 μL n-hexane:ethyl acetate:water 40:80:1, chromatograph on a 125 × 4 5 μm Spherisorb Si column (A) and a 200 × 4.6 5 μm Spherisorb Si column (B) with n-hexane:ethyl acetate:water 40:80:1 at 1 mL/min using column-switching. Initially elute the columns in series, after 3 min (after 5-fluorouracil has eluted from column A to column B) elute only column B, monitor the effluent from column B at 266 nm, collect the appropriate fraction. (Backflush column A to waste for 6 min before the next injection.) Evaporate the eluate to dryness under a stream of nitrogen, reconstitute with 10 μL acetone, add 1 mg freshly-powdered potassium carbonate, add 5 μL 200 μg/mL 18-crown-6 in acetone, add 20 μL 750 μg/mL 4-bromomethyl-7-methoxycoumarin in acetone, heat at 70° for 25 min, inject a 1 μL aliquot.

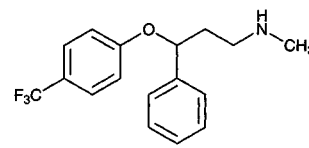
Fluoxetine



Molecular formula: $C_{17}H_{18}F_3NO$
Molecular weight: 309.33
CAS Registry No.: 54910-89-3, 59333-67-4 (HCl)
Merck Index: 4222
Lednicer No.: 3 32

SAMPLE

Matrix: blood

Sample preparation: Add 250 μL 2 M sodium carbonate to 500 μL plasma. Add 100 μL 1 μg/mL IS in MeOH, extract with 10 mL n-hexane. Shake for 30 min and centrifuge at 3000 g for

10 min. Cool in a dry ice-acetone bath. Add 200 μL 0.3% phosphoric acid to upper organic layer. Shake for 10 min and centrifuge at 3000 g for 10 min. Separate the organic layer. Inject a 100 μL aliquot of the acidic aqueous layer.

HPLC VARIABLES
Column: 250 × 4.6 5 μm C18 Symmetry (Waters Millipore, USA)
Mobile phase: MeCN:67 mM potassium phosphate buffer adjusted to pH 3.0 with phosphoric acid 35:65 (After each chromatographic session wash the column with 200 mL MeCN:water 50:50.)
Flow rate: 1.2
Injection volume: 100
Detector: UV 226, UV 254, UV 400

CHROMATOGRAM
Retention time: 15.50
Internal standard: clovoxamine (6.5)
Limit of quantitation: 5 ng/mL (UV 226, UV 400); 7 ng/mL (UV 254)

OTHER SUBSTANCES
Extracted: metabolites, amitriptyline, clomipramine, desipramine, imipramine, maprotiline, nortriptyline
Simultaneous: amineptine, carbamazepine, chlordiazepoxide, clorazepate, clozapine, cyamemazine, desmethylmaproptiline, desmethylvenlafaxine, doxepin, flunitrazepam, fluvoxamine, haloperidol, levomepromazine, lorazepam, loxapine, mianserine, sulpiride, trimipramine, venlafaxine, viloxazine, zolpidem, zopiclone
Noninterfering: diazepam, valproic acid
Interfering: chlorpromazine, clonazepam

KEY WORDS
plasma

SAMPLE
Matrix: blood
Sample preparation: Mix 1 mL plasma with 400 μL 50 μg/mL IS in MeOH, make up to 2 mL with MeOH, centrifuge at 1100 g for 10 min. Remove a 1 mL aliquot of the supernatant, add 2 mL 1 M NaOH and 2 mL diethyl ether, shake for 10 min, repeat the extraction. Combine the ether extracts and dry them over anhydrous sodium sulfate. Evaporate to dryness under a stream of nitrogen and reconstitute the residue in 1 mL MeOH. Inject a 20 μL aliquot.

HPLC VARIABLES
Column: 200 × 4 10 μm LiChrosorb RP-18
Mobile phase: MeCN:pH 2.7 phosphate buffer 90:10
Flow rate: 1.0
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 2.53
Internal standard: chlorprothixene (5.20)
Limit of detection: 100 ng/mL

OTHER SUBSTANCES
Simultaneous: amitriptyline, azathioprine, diazepam, doxepin, fludarabine, imipramine, mercaptopurine,
Interfering: methadone, pentazocine, piritramide, tramadol

KEY WORDS
plasma

REFERENCE

SAMPLE
Matrix: solutions
Sample preparation: Prepare a 0.5 mg/mL solution in MeOH, inject a 5 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 Zorbax RX
Mobile phase: Gradient. A was 150 mM phosphoric acid and 50 mM triethylamine. B was MeCN:water 80:20 containing 150 mM phosphoric acid and 50 mM triethylamine. A:B 100:0 for 2.2 min then to 0:100 over 30 min.
Column temperature: 30
Flow rate: 2
Injection volume: 5
Detector: UV 210

CHROMATOGRAM
Retention time: 19.6

OTHER SUBSTANCES
Simultaneous: acetaminophen, aprobarbital, butabarbital, chlordiazepoxide, chloroxylenol, chlorpromazine, clenbuterol, cortisone, danazol, diflunisal, doxapram, estrone, mefenamic acid, methyltestosterone, nicotine, oxazepam, phentermine, phenylpropanolamine, progesterone, sulfamethazine, sulfanilamide, testosterone, testosterone propionate, tranylcypromine, tripelennamine
Interfering: 2-naphthoxyacetic acid

KEY WORDS
details for purification of triethylamine in paper

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 250 × 4.6 Zorbax RX
Mobile phase: Gradient. A was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 1 L water. B was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 200 mL water, make up to 1 L with MeCN. A:B from 100:0 to 0:100 over 30 min, maintain at 0:100 for 5 min.
Column temperature: 30
Flow rate: 2
Detector: UV 210

OTHER SUBSTANCES
Also analyzed: acepromazine, acetaminophen, acetophenazine, albuterol, aminophylline, amitriptyline, amobarbital, amoxapine, amphetamine, amylocaine, antipyrine, aprobarbital, aspirin, atenolol, atropine, avermectin, barbital, benzocaine, benzoic acid, benzotropine, benzphetamine, berberine, bibucaine, bromazepan, brompheniramine, buprenorphine, buspirone, butabarbital, butacaine, butethal, caffeine, carbamazepine, carbromal, chloramphenicol, chlordiazepoxide, chloroquine, chlorothiazide, chloroxylenol, chlorphenesin, chlorpheniramine, chlorpromazine, chlorpropamide, chlortetracycline, cimetidine, cinchonidine, cinchonine, clenbuterol, clonazepam, clonixin, clorazepate, cocaine, codeine, colchicine, cortisone, coumarin, cyclazocine, cyclobenzaprine, cyclothiazide, cyheptamide, cymarin, danazol, danthron, dapsone, debrisoquine, desipramine, dexamethasone, dextromethorphan, dextropropoxyphene, diamorphine, diazepam, diclofenac, diethylpropion, diethylstilbestrol, diflunisal, digitoxin, digoxin, diltiazem, diphenhydramine, diphenoxylate, diprenorphine, dipyrone, disulfiram, dopamine, doxapram, doxepin, dronabinol, ephedrine, epinephrine, epinine, estradiol, estriol, estrone, ethacrynic acid, ethosuximide, etonitazene, etorphine, eugenol, famotidine, fenbendazole, fencamfamine, fenoprofen, fenproporex, fentanyl, flubendazole, flufenamic acid, flunitrazepam, fluphenazine, furosemide, gentisic acid, gitoxigenin, glipizide, glunixin, glutethimide, glybenclamide, guaiacol, halazepam, haloperidol, hydrochlorothiazide, hydrocodone, hydrocortisone, hydromorphone, hydroxyquinoline, ibogaine, ibuprofen, iminostilbene, imipramine, indomethacin, isocarbostyril, isocarboxazid, isoniazid, isoproterenol, isoxsuprine, ivermectin, ketamine, ketoprofen, kynurenic acid, levorphanol, lidocaine, lorazepam, lormetazepam, loxapine, mazindol, mebendazole, meclizine, meclofenamic acid, medazepam, mefenamic acid, megestrol, mepacrine, meperidine, mephentermine, mephenytoin, mephesin, mephobarbital, mepivacaine, mescaline, mesoridazine, methadone, methamphetamine, methapyrilene, methaqualone, methazolamide, methocarbamol, methoxamine, methsuximide, methyl salicylate, methyldopa, methyldopamine, methylphenidate, methylprednisolone, methyltestosterone, methyprylon, metoprolol, mibolerone, morphine, nadolol, nalorphine, naloxone, naltrexone, naphazoline, naproxen, nefopam, niacinamide, nicotine, niacin, nifedipine, niflumic acid, nitrazepam, norepinephrine, nortriptyline, noscapine, nylidrin, oxazepam, oxycodone, oxymorphone, oxyphenbutazone, oxytetracycline, papaverine, pargyline, pemoline, pentazocine, pentobarbital, persantine, phenacetin, phenazocine, phenazopyridine, phencyclidine, phendimetrazine, phenelzine, pheniramine, phenobarbital, phenothiazine, phensuximide, phentermine, phenyl-

butazone, phenylephrine, phenylpropanolamine, piperocaine, prazepam, prednisolone, primidone, probenecid, progesterone, propiomazine, propranolol, propylparaben, pseudoephedrine, puromycin, pyrilamine, pyrithyldione, quazepam, quinaldic acid, quinidine, quinine, ranitidine, recinnamine, reserpine, resorcinol, saccharin, albuterol, salicylamide, salicylic acid, scopolamine, scopoletin, secobarbital, strychnine, sulfacetamide, sufadiazine, sulfadimethoxine, sulfaethidole, sulfamerazine, sulfamethazine, sulfamethoxizole, sulfanilamide, sulfapyridine, sulfasoxizole, sulindac, tamoxifen, temazepam, testosterone, tetracaine, tetracycline, tetramisole, thebaine, theobromine, theophylline, thiabendazole, thiamine, thiamylal, thiobarbituric acid, thioridazine, thiosalicylic acid, thiothixene, thymol, tolazamide, tolazoline, tobutamide, tolmetin, tranylcypromine, triamcinolone, tribenzylamine, trichloromethiazide, trifluoperazine, trihexyphenidyl, trimethoprim, tripelennamine, triprolidine, tropacocaine, tyramine, verapamil, vincamine, warfarin, yohimbine, zoxazolamine

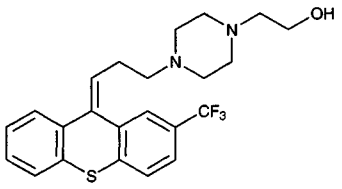
Flupentixol



Molecular formula: $C_{23}H_{25}F_3N_2OS$
Molecular weight: 434.53
CAS Registry No.: 2709-56-0, 30909-51-4 (decanoate), 2413-38-9 (2.HCl)
Merck Index: 4224

SAMPLE

Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 228.7

CHROMATOGRAM

Retention time: 17.358

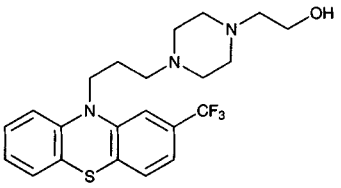
Fluphenazine



Molecular formula: $C_{22}H_{26}F_3N_3OS$
Molecular weight: 437.53
CAS Registry No.: 69-23-8, 146-56-5 (di HCl), 2746-81-8 (enanthate)
Merck Index: 4226
Lednicer No.: 1 383

SAMPLE

Matrix: blood
Sample preparation: 1-5 mL Plasma + 1 mL 1 M NaOH + hexanes, extract for 30 min, centrifuge. Remove a 9 mL aliquot of the organic phase and evaporate it to dryness at 30° under a stream of nitrogen. Dissolve the residue in 100 μL mobile phase, inject a 50 μL aliquot.

HPLC VARIABLES

Column: 10 μm Micropak CN (Varian)

Mobile phase: MeCN:5 mM ammonium acetate 90:10
Flow rate: 2.5
Injection volume: 50
Detector: UV 254

CHROMATOGRAM
Retention time: 8.7
Limit of detection: 10 ng/mL

OTHER SUBSTANCES
Simultaneous: acetophenazine, amitriptyline, benztropine, butaperazine, carphenazine, chlorpromazine, promethazine, haloperidol, imipramine, mesoridazine, nortriptyline, orphenadrine, piperacetazine, promazine, thioridazine, thiothixene, trifluoperazine, triflupromazine, trihexyphenidyl, trimeprazine, metabolites

KEY WORDS
plasma

Sample preparation: Prepare a 10 μg/mL solution in MeOH, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 125 × 4.9 Spherisorb S5W silica
Mobile phase: MeOH containing 10 mM ammonium perchlorate and 1 mL/L 100 mM NaOH in MeOH, pH 6.7
Flow rate: 2
Injection volume: 20
Detector: E, LeCarbone, V25 glassy carbon electrode, + 1.2 V

CHROMATOGRAM
Retention time: 2.0

OTHER SUBSTANCES
Also analyzed: acebutolol, acepromazine, acetophenazine, N-acetylprocainamide, albuterol, alprenolol, amethocaine, amiodarone, amitriptyline, antazoline, atenolol, azacyclonal, bamethan, benactyzine, benperidol, benzethidine, benzocaine, benzoctamine, benzphetamine, benzquinamide, bromhexine, bromodiphenhydramine, bromperidol, brompheniramine, brompromazine, buclizine, bufotenine, bupivacaine, buprenorphine, butacaine, butethamate, chlorcyclizine, chlorpheniramine, chlorphenoxamine, chlorprenaline, chlorpromazine, chlorprothixene, cimetidine, cinchonidine, cinnarizine, clemastine, clomipramine, clonidine, cocaine, cyclazocine, cyclizine, cyclopentamine, cyproheptadine, deserpidine, desipramine, dextromoramide, dextropropoxyphene, dicyclomine, diethylcarbamazine, diethylpropion, diethylthiambutene, dihydroergotamine, dimethindene, dimethothiazine, diphenhydramine, diphenoxylate, dipipanone, diprenorphine, dipyridamole, disopyramide, dothiepin, doxapram, doxepin, doxylamine, droperidol, ephedrine, ergocornine, ergocristine, ergocristinine, ergocryptine, ergometrine, ergosine, ergosinine, ergotamine, ethopropazine, etorphine, etoxeridine, fenethazine, fenfluramine, fenoterol, fentanyl, flavoxate, fluopromazine, flupenthixol, flurazepam, haloperidol, hydroxyzine, hyoscine, ibogaine, imipramine, indapamine, iprindole, isothipendyl, isoxsuprine, ketanserin, laudanosine, lidocaine, lofepramine, loxapine, maprotiline, mecamylamine, meclophenoxate, meclozine, medazepam, mephentermine, mepivacaine, meptazinol, mepyramine,

mesoridazine, metaraminol, methadone, methamphetamine, methapyrilene, methdilazene, methotrimeprazine, methoxamine, methoxyphenamine, methoxypromazine, methylephedrine, methylergonovine, methysergide, metoclopramide, metopimazine, metoprolol, mianserin, morazone, nadolol, nalorphine, naloxone, naphazoline, nicotine, nifedipine, nomifensine, nortriptyline, noscapine, orphenadrine, oxeladin, oxprenolol, oxymetazolin, papaverine, pargyline, pecazine, penbutolol, pentazocine, penthienate, pericyazine, perphenazine, phenadoxone, phenampromide, phenazocine, phenbutrazate, phendimetrazine, phenelzine, phenglutarimide, phenindamine, pheniramine, phenmetrazine, phenomorphan, phenoperidine, phenothiazine, phenoxybenzamine, phentolamine, phenylephrine, phenyltoloxamine, physostigmine, piminodine, pimozide, pindolol, pipamazine, pipazethate, piperacetazine, piperidolate, pipradol, pirenzepine, piritramide, pizotifen, practolol, pramoxine, prazosin, prenylamine, prilocaine, primaquine, proadifen, procainamide, procaine, prochlorperazine, procyclidine, proheptazine, prolintane, promazine, promethazine, pronethalol, properidine, propiomazine, propranolol, prothipendyl, protriptyline, proxymetacaine, pseudoephedrine, pyrimethamine, quinidine, quinine, ranitidine, rescinnamine, sotalol, tacrine, terazosin, terbutaline, terfenadine, thenyldiamine, theophylline, thiethylperazine, thiopropazate, thioproperazine, thioridazine, thiothixene, thonzylamine, timolol, tocainide, tolpropamine, tolycaine, tranylcypromine, trazodone, trifluoperazine, trifluperidol, trimeperidine, trimeprazine, trimethobenzamide, trimethoprim, trimipramine, tripelennamine, triprolidine, tryptamine, verapamil, xylometazoline

SAMPLE

Matrix: solutions
Sample preparation: Inject 1 mL onto column A. Elute column A onto column B with mobile phase for 30 s then remove it from the circuit. Elute column B with mobile phase and monitor the effluent.

HPLC VARIABLES

Column: A 10 × 6 packed with 40 μm material from a Bond Elut cartridge (cat. no. 620303); B 100 × 4 3 μm Spherisorb ODS Superpac
Mobile phase: MeCN:85% phosphoric acid:triethylamine:water 49.55:0.225:0.225:50
Flow rate: 0.65
Injection volume: 1000
Detector: UV 238

CHROMATOGRAM

Retention time: 3.35

OTHER SUBSTANCES

Simultaneous: alprazolam, amitriptyline, chlorpromazine, chlorprothixene, clomipramine, desclomipramine, desmethylimipramine, diazepam, flunitrazepam, imipramine, levomepromazine, maprotiline, nortriptyline, perphenazine, promethazine, thioridazine sulfoxide, thioridazine, thioridazine sulfone, trimipramine, zimeldine
Noninterfering: carbamazepine, clonazepam, lorazepam, nitrazepam, oxazepam, phenytoin
Interfering: haloperidol, protriptyline, zuclopenthixol

KEY WORDS

column-switching

SAMPLE

Matrix: solutions

HPLC VARIABLES

Column: 250 × 4.6 Zorbax RX
Mobile phase: Gradient. A was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 1 L water. B was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 200 mL water, make up to 1 L with MeCN. A:B from 100:0 to 0:100 over 30 min, maintain at 0:100 for 5 min.
Column temperature: 30
Flow rate: 2
Detector: UV 210

OTHER SUBSTANCES

Also analyzed: acepromazine, acetaminophen, acetophenazine, albuterol, aminophylline, amitriptyline, amobarbital, amoxapine, amphetamine, amylocaine, antipyrine, aprobarbital, aspirin, atenolol, atropine, avermectin, barbital, benzocaine, benzoic acid, benzotropine, benzphetamine, berberine, bibucaine, bromazepan, brompheniramine, buprenorphine, buspirone, butabarbital, butacaine, butethal, caffeine, carbamazepine, carbromal, chloramphenicol, chlordiazepoxide, chloroquine, chlorothiazide, chloroxylenol, chlorphenesin, chlorpheniramine, chlorpromazine, chlorpropamide, chlortetracycline, cimetidine, cinchonidine, cinchonine, clenbuterol, clonazepam, clonixin, clorazepate, cocaine, codeine, colchicine, cortisone, coumarin, cyclazocine, cyclobenzaprine, cyclothiazide, cyheptamide, cymarin, danazol, danthron, dapsone, debrisoquine, desipramine, dexamethasone, dextromethorphan, dextropropoxyphene, diamorphine, diazepam, diclofenac, diethylpropion, diethylstilbestrol, diflunisal, digitoxin, digoxin, diltiazem, diphenhydramine, diphenoxylate, diprenorphine, dipyrone, disulfiram, dopamine, doxapram, doxepin, dronabinol, ephedrine, epinephrine, epinine, estradiol, estriol, estrone, ethacrynic acid, ethosuximide, etonitazene, etorphine, eugenol, famotidine, fenbendazole, fencamfamine, fenoprofen, fenproporex, fentanyl, flubendazole, flufenamic acid, flunitrazepam, 5-fluorouracil, furosemide, gentisic acid, gitoxigenin, glipizide, glunixin, glutethimide, glybenclamide, guaiacol, halazepam, haloperidol, hydrochlorothiazide, hydrocodone, hydrocortisone, hydromorphone, hydroxyquinoline, ibogaine, ibuprofen, iminostilbene, imipramine, indomethacin, isocarbostyril, isocarboxazid, isoniazid, isoproterenol, isoxsuprine, ivermectin, ketamine, ketoprofen, kynurenic acid, levorphanol, lidocaine, lorazepam, lormetazepam, loxapine, mazindol, mebendazole, meclizine, meclofenamic acid, medazepam, mefenamic acid, megestrol, mepacrine, meperidine, mephentermine, mephenytoin, mephesin, mephobarbital, mepivacaine, mescaline, mesoridazine, methadone, methamphetamine, methapyrilene, methaqualone, methazolamide, methocarbamol, methoxamine, methsuximide, methyl salicylate, methyldopa, methyldopamine, methylphenidate, methylprednisolone, methyltestosterone, methyprylon, metoprolol, mibolerone, morphine, nadolol, nalorphine, naloxone, naltrexone, naphazoline, naproxen, nefopam, niacinamide, nicotine, niacin, nifedipine, niflumic acid, nitrazepam, norepinephrine, nortriptyline, noscapine, nylidrin, oxazepam, oxycodone, oxymorphone, oxyphenbutazone, oxytetracycline, papaverine, pargyline, pemoline, pentazocine, pentobarbital, persantine, phenacetin, phenazocine, phenazopyridine, phencyclidine, phendimetrazine, phenelzine, pheniramine, phenobarbital, phenothiazine, phensuximide, phentermine, phenylbutazone, phenylephrine, phenylpropanolamine, piperocaine, prazepam, prednisolone, primidone, probenecid, progesterone, propiomazine, propranolol, propylparaben, pseudoephedrine,

puromycin, pyrilamine, pyrithyldione, quazepam, quinaldic acid, quinidine, quinine, ranitidine, recinnamine, reserpine, resorcinol, saccharin, albuterol, salicylamide, salicylic acid, scopolamine, scopoletin, secobarbital, strychnine, sulfacetamide, sufadiazine, sulfadimethoxine, sulfaethidole, sulfamerazine, sulfamethazine, sulfamethoxizole, sulfanilamide, sulfapyridine, sulfasoxizole, sulindac, tamoxifen, temazepam, testosterone, tetracaine, tetracycline, tetramisole, thebaine, theobromine, theophylline, thiabendazole, thiamine, thiamylal, thiobarbituric acid, thioridazine, thiosalicylic acid, thiothixene, thymol, tolazamide, tolazoline, tobutamide, tolmetin, tranylcypromine, triamcinolone, tribenzylamine, trichloromethiazide, trifluoperazine, trihexyphenidyl, trimethoprim, tripelennamine, triprolidine, tropacocaine, tyramine, verapamil, vincamine, warfarin, yohimbine, zoxazolamine

SAMPLE
Matrix: blood, urine

Sample preparation: 500 μL Plasma or urine + 50 μL MeOH + 1 mL 100 mM pH 9 sodium phosphate buffer + 4 mL dichloromethane:diethyl ether 60:40, shake at 45 rpm for 15 min, centrifuge at 10° at 1870 g for 10 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue in 80 μL MeOH, inject a 30 μL aliquot. (Deconjugate urine as follows. 250 μL Urine + 750 μL pH 5.4 acetate buffer + 500 U β-glucuronidase, heat at 37° for 18 h, add 20 μL 5 M NaOH, centrifuge, proceed as above using 5 mL dichloromethane:diethyl ether.)

HPLC VARIABLES

Guard column: 30 × 4.6 30 μm C8
Column: 100 × 8 4 μm Nova Pak C18
Mobile phase: MeCN:40 mM sodium phosphate buffer 32:68 containing 1 mL/L triethylamine, final pH 7.2
Flow rate: 1.5
Injection volume: 30
Detector: UV 220

CHROMATOGRAM

Retention time: 18.5
Internal standard: flurazepam

OTHER SUBSTANCES

Extracted: flumazenil, midazolam, 4-hydroxymidazolam, 1-hydroxymethylmidazolam
Noninterfering: alfentanil, atropine, bupivacaine, lignocaine, neostigmine

KEY WORDS

plasma; flurazepam is IS

SAMPLE

Matrix: solutions
Sample preparation: Prepare a 10 μg/mL solution in MeOH, inject a 20 μL aliquot.

HPLC VARIABLES

Column: 125 × 4.9 Spherisorb S5W silica
Mobile phase: MeOH containing 10 mM ammonium perchlorate and 1 mL/L 100 mM NaOH in MeOH, pH 6.7
Flow rate: 2
Injection volume: 20
Detector: E, LeCarbone, V25 glassy carbon electrode, + 1.2 V

CHROMATOGRAM

Retention time: 2.3

OTHER SUBSTANCES

Also analyzed: acebutolol, acepromazine, acetophenazine, N-acetylprocainamide, albuterol, alprenolol, amethocaine, amiodarone, amitriptyline, antazoline, atenolol, azacyclonal, bamethan, benactyzine, benperidol, benzethidine, benzocaine, benzoctamine, benzphetamine, benzquinamide, bromhexine, bromodiphenhydramine, bromperidol, brompheniramine, brompromazine, buclizine, bufotenine, bupivacaine, buprenorphine, butacaine, butethamate, chlorcyclizine, chlorpheniramine, chlorphenoxamine, chlorprenaline, chlorpromazine, chlorprothixene, cimetidine, cinchonidine, cinnarizine, clemastine, clomipramine, clonidine, cocaine, cyclazocine, cyclizine, cyclopentamine, cyproheptadine, deserpidine, desipramine, dextromoramide, dextropropoxyphene, dicyclomine, diethylcarbamazine, diethylpropion, diethylthiambutene, dihydroergotamine, dimethindene, dimethothiazine, diphenhydramine, diphenoxylate, dipipanone, diprenorphine, dipyridamole, disopyramide, dothiepin, doxapram, doxepin, doxylamine, droperidol, ephedrine, ergocornine, ergocristine, ergocristinine, ergocryptine, ergometrine, ergosine, ergosinine, ergotamine, ethopropazine, etorphine, etoxeridine, fenethazine, fenfluramine, fenoterol, fentanyl, flavoxate, fluopromazine, flupenthixol, fluphenazine, haloperidol, hy-

droxyzine, hyoscine, ibogaine, imipramine, indapamine, iprindole, isothipendyl, isoxsuprine, ketanserin, laudanosine, lidocaine, lofepramine, loxapine, maprotiline, mecamylamine, meclophenoxate, meclozine, medazepam, mephentermine, mepivacaine, meptazinol, mepyramine, mesoridazine, metaraminol, methadone, methamphetamine, methapyrilene, methdilazene, methotrimeprazine, methoxamine, methoxyphenamine, methoxypromazine, methylephedrine, methylergonovine, methysergide, metoclopramide, metopimazine, metoprolol, mianserin, morazone, nadolol, nalorphine, naloxone, naphazoline, nicotine, nifedipine, nomifensine, nortriptyline, noscapine, orphenadrine, oxeladin, oxprenolol, oxymetazolin, papaverine, pargyline, pecazine, penbutolol, pentazocine, penthienate, pericyazine, perphenazine, phenadoxone, phenampromide, phenazocine, phenbutrazate, phendimetrazine, phenelzine, phenglutarimide, phenindamine, pheniramine, phenmetrazine, phenomorphan, phenoperidine, phenothiazine, phenoxybenzamine, phentolamine, phenylephrine, phenyltoloxamine, physostigmine, piminodine, pimozide, pindolol, pipamazine, pipazethate, piperacetazine, piperidolate, pipradol, pirenzepine, piritramide, pizotifen, practolol, pramoxine, prazosin, prenylamine, prilocaine, primaquine, proadifen, procainamide, procaine, prochlorperazine, procyclidine, proheptazine, prolintane, promazine, promethazine, pronethalol, properidine, propiomazine, propranolol, prothipendyl, protriptyline, proxymetacaine, pseudoephedrine, pyrimethamine, quinidine, quinine, ranitidine, rescinnamine, sotalol, tacrine, terazosin, terbutaline, terfenadine, thenyldiamine, theophylline, thiethylperazine, thiopropazate, thioproperazine, thioridazine, thiothixene, thonzylamine, timolol, tocainide, tolpropamine, tolycaine, tranylcypromine, trazodone, trifluoperazine, trifluperidol, trimeperidine, trimeprazine, trimethobenzamide, trimethoprim, trimipramine, tripelennamine, triprolidine, tryptamine, verapamil, xylometazoline

SAMPLE

Matrix: urine

Sample preparation: 500 μL Urine + N-ethylnordiazepam + chlorpheniramine + 100 μL buffer, centrifuge at 11000 g for 30 s, inject a 500 μL aliquot onto column A with mobile phase A, after 0.6 min backflush column A with mobile phase A to waste for 1.6 min, elute column A with 250 μL mobile phase B, with 200 μL mobile phase C, and with 1.15 mL mobile phase D. Elute column A to waste until drugs start to emerge then elute onto column B. Elute column B to waste until drugs started to emerge, then elute onto column C. When all the drugs have emerged from column B remove it from the circuit, elute column C with mobile phase D, monitor the effluent from column C. Flush column A with 7 mL mobile phase E, with mobile phase D, and mobile phase A. Flush column B with 5 mL mobile phase E then with mobile phase D. (Buffer was 6 M ammonium acetate adjusted to pH 8.0 with 2 M KOH.)

HPLC VARIABLES

Column: A 10 × 2.1 12-20 μm PRP-1 spherical poly(styrene-divinylbenzene) (Hamilton); B 10 × 3.2 11 μm Aminex A-28 (Bio-Rad); C 25 × 3.2 5 μm C8 (Phenomenex) + 150 × 4.6 5 μm silica (Macherey-Nagel)

Mobile phase: A 0.1% pH 8.0 potassium borate buffer; B 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid; C MeCN:buffer 40:60 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.); D MeCN:buffer 33:67 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.); E MeCN: buffer 70:30 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.)

Column temperature: ambient (column A), 40 (columns B and C)

Flow rate: A 5; B-E 1

Injection volume: 500

Detector: UV 210, UV 235

CHROMATOGRAM

Retention time: k' 4.2

Internal standard: N-ethylnordiazepam (k' 2.1), chlorpheniramine (k' 5.9)

Limit of detection: 300 ng/mL

OTHER SUBSTANCES
Extracted: morphine, codeine, hydromorphone, hydrocodone, caffeine, cotinine, benzoylecgonine, secobarbital, oxazepam, phenobarbital, nordiazepam, diazepam, phenylpropanolamine, phentermine, amphetamine, phenmetrazine, lidocaine, ephedrine, pentazocine, methamphetamine, desipramine, nortriptyline, diphenhydramine, methadone
Interfering: imipramine, amitriptyline

SAMPLE
Matrix: blood
Sample preparation: 500 μL Plasma + 1 mL water + ibuprofen (15 μg per 100 μL) + 2 mL 10% trichloroacetic acid, mix, add 5 mL hexane, mix for 15 min, centrifuge at 800 g for 5-10 min, repeat extraction. Combine hexane layers and evaporate them under a stream of nitrogen at 37-40°. Reconstitute with 300 μL chloroform, add 200 μL 65 mg/mL 1,1'-carbonyldiimidazole in chloroform, let stand 5-10 min at room temperature, add 10 μL glacial acetic acid, vortex briefly, let stand 5-10 min at room temperature, add 50 μL S-(α)-methylbenzylamine, mix briefly, let stand for 30 min at room temperature, add 3 mL 0.5 M ammonium hydroxide, add 5 mL hexane, mix gently for 15 min. Remove hexane and wash it with 3 mL 1 M HCl, 3 mL 0.5 M ammonium hydroxide, and 3 mL 1 M HCl (with 15 min mixing each time). Evaporate hexane under a stream of nitrogen at 37°, dissolve in 150 μL mobile phase, inject 25 μL aliquot.

SAMPLE
Matrix: blood
Sample preparation: 100 μL Plasma + + 25 μL 2 M HCl, vortex for 15 s, add 2 mL isooctane:isopropanol 85:15, rotate for 5 min, centrifuge at 3000 rpm for 10 min. Remove the upper organic layer and evaporate it to dryness under a stream of nitrogen at 45°, reconstitute the residue in 25 μL 5 mg/mL 5-bromoacetyl acenaphthene in MeCN, add 10 μL 3% triethylamine in MeCN, vortex for 30 s, heat at 75° for 5 min, evaporate to dryness under reduced pressure, reconstitute with 25 μL MeCN, inject a 20 μL aliquot. (Prepare 5-bromoacetyl acenaphthene as follows. Add 43 g bromoacetyl chloride to 43 g acenaphthene dissolved in 200 mL dichloroethane, cool to -5° in an ice/salt bath, stir vigorously and add 38 g aluminum chloride in small portions over 90 min, do not allow temperature to go above 3°, place under reduced pressure for 30 min, add an excess of crushed ice. Separate the dichloroethane layer and wash it with two 100 mL portions of dilute HCl, wash with 100 mL 5% sodium carbonate solution. Dry the organic layer over anhydrous magnesium sulfate, remove the solvent under reduced pressure, allow the oily residue to solidify, remove liquid by blotting with filter paper. Purify the solid by chromatography on a 300 × 20 column of 60-120 mesh silica gel, elute with toluene, unreacted acenaphthene elutes first followed by 5-bromoacetyl acenaphthene (mp 87-90°).)

SAMPLE
Matrix: cell suspensions
Sample preparation: Centrifuge cell suspension at 2000 g for 4 min. Remove a 2 mL aliquot of the supernatant and add it to 200 μL 200 μg/mL IS in DMF, mix, add 200 μL 5 M HCl, extract

twice with 3 mL portions of toluene. Combine the organic layers and evaporate them to dryness under a stream of nitrogen, reconstitute the residue in 1 mL dichloromethane, add 20 μL 10 mg/mL 1-hydroxybenzotriazole in dichloromethane:pyridine 99:1, add 300 μL 10 mg/mL 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride in dichloromethane, add 300 μL 10 mg/mL (-)-(S)-α-methylbenzylamine in dichloromethane, let stand for 30 min, evaporate to dryness, reconstitute with 500 μL mobile phase, inject a 10 μL aliquot.

HPLC VARIABLES
Guard column: 10 mm long Techsphere ODS (HPLC Technology, Macclesfield UK)
Column: 250 × 5 5 μm Techsphere ODS (HPLC Technology, Macclesfield UK)
Mobile phase: MeCN:7.5 mM NaH_2PO_4 60:40, containing 5 mM sodium pentanesulfonate, pH adjusted to 2.8 with phosphoric acid
Flow rate: 1
Injection volume: 10
Detector: UV 254

CHROMATOGRAM
Retention time: k' 4.75, 5.35 (enantiomers)
Internal standard: (S)-naproxen (k' 3.15)
Limit of detection: 500 ng/mL

SAMPLE
Matrix: solutions
Sample preparation: Mix 100 μL of a 1-200 μM solution of carboxylic acid in dichloromethane with 100 μL 800 μM (-)-APMB in dichloromethane, 100 μL 1.6 mM 2,2'-dipyridyl disulfide in dichloromethane, and 100 μL 1.6 mM triphenylphosphine in dichloromethane, let stand at

room temperature for 20 min. Evaporate to dryness under a stream of nitrogen, reconstitute the residue in 400 μL mobile phase, inject a 10 μL aliquot. ((-)-APMB is (-)-2-[4-(1-aminoethyl)phenyl]-6-methoxybenzoxazole. Synthesis is as follows. Hydrogenate 5-methoxy-2-nitrophenol in EtOH over platinum oxide to give 2-amino-5-methoxyphenol (J. Org. Chem. 1957, 22, 220). It should be possible to prepare ethyl 4-acetylbenzimidate hydrochloride ($CH_3COC_6H_4C(=NH)OC_2H_5.HCl$) by passing dry hydrogen chloride into a mixture of 4-acetylbenzonitrile and 1.2-1.5 equivalents EtOH in an inert solvent (e.g., benzene, chloroform, dioxane, ether, nitrobenzene (Caution! Benzene, chloroform, and dioxane are carcinogens!) at 0-5°, the benzimidate should crystallize from the mixture in 7-10 days (J. Chem. Soc. 1942, 103). Add a solution of 5.5 g 2-amino-5-methoxyphenol in 200 mL MeOH to 9 g ethyl 4-acetylbenzimidate hydrochloride, stir at 60-70° for 4 h, evaporate to dryness under reduced pressure, recrystallize from EtOH to give 4-(6-methoxy-2-benzoxazolyl)acetophenone as fine orange-yellow crystals (mp 167°) (J. Chromatogr. 1990, 532, 65). Add 7.0 g hydroxylamine hydrochloride and 8.2 g sodium acetate to 10.1 g 4-(6-methoxy-2-benzoxazolyl)acetophenone in 500 mL EtOH:water 95:5, reflux for 1 h, pour into ice-water, filter, recrystallize from EtOH:water 90:10 to give 4-(6-methoxy-2-benzoxazolyl)acetophenone oxime as faint reddish needles (mp 212°). Dissolve 4.7 g 4-(6-methoxy-2-benzoxazolyl)acetophenone oxime in 300 mL MeOH, add 3 g 10% palladium on charcoal, add 10.5 g ammonium formate, reflux for 30 min, filter, evaporate the filtrate to dryness under reduced pressure. Take up the residue in 100 mL 5% HCl and wash the aqueous phase with 100 mL ethyl acetate. Adjust the pH of the aqueous layer to 13-14 with 10% NaOH and extract with 200 mL ethyl acetate. Wash the organic layer with 100 mL water and dry it over anhydrous sodium sulfate, evaporate to dryness under reduced pressure to give racemic 2-[4-(1-aminoethyl)phenyl]-6-methoxybenzoxazole. Dissolve 3.6 g racemic 2-[4-(1-aminoethyl)phenyl]-6-methoxybenzoxazole in 50 mL EtOH and add 3.5 g (S)-(-)-α-methoxy-α-trifluoromethylphenylacetic acid, allow to stand overnight at 5°. Collect the precipitate and fractionally crystallize it from EtOH 4 times. Take up the final product in 5% NaOH and extract it with ethyl acetate, wash the organic layer with water, dry over anhydrous sodium sulfate, evaporate to dryness under reduced pressure, recrystallize from EtOH to give (-)-2-[4-(1-aminoethyl)phenyl]-6-methoxybenzoxazole as pale yellow crystals (mp 74°).)

Kondo,J.; Imaoka,T.; Kawasaki,T.; Nakanishi,A.; Kawahara,Y. Fluorescence derivatization reagent for resolution of carboxylic enantiomers by high-performance liquid chromatography, *J.Chromatogr.*, **1993**, *645*, 75–81.

SAMPLE

Matrix: solutions
Sample preparation: Mix 100 μL of a solution of the carboxylic acid in MeCN with 100 μL 2 mM (S)-1-(4-dansylaminophenyl)ethylamine in MeCN, add 100 μL 3 mM 2,2'-dipyridyl disulfide (Aldrithiol-2) in MeCN, add 100 μL 3 mM triphenylphosphine in MeCN, vortex, let stand at room temperature for 3 h, inject a 5 μL aliquot. (Synthesis of (S)-1-(4-dansylaminophenyl)ethylamine is as follows. Add 2.2 g di-tert-butyl dicarbonate dropwise to a stirred solution of 2 g (S)-α-methyl-4-nitrobenzylamine hydrochloride ((S)-1-(4-nitrophenyl)ethylamine hydrochloride) and 1.1 g triethylamine in 20 mL MeCN at 0°, stir at room temperature for 1 h, evaporate to dryness under reduced pressure. Dissolve the residue in 50 mL ethyl acetate and wash with 10% aqueous citric acid, wash with water, dry over anhydrous sodium sulfate,

evaporate to dryness under reduced pressure to give (S)-N-tert-butoxycarbonyl-1-(4-nitrophenyl)ethylamine as white crystals (mp 86-89°). Add 200 mg 5% PdC to a solution of 2 g (S)-N-tert-butoxycarbonyl-1-(4-nitrophenyl)ethylamine in 40 mL MeOH, stir, hydrogenate at room temperature for 3 h, filter, evaporate the filtrate to dryness to obtain (S)-N-tert-butoxycarbonyl-1-(4-aminophenyl)ethylamine. Stir 1.4 g (S)-N-tert-butoxycarbonyl-1-(4-aminophenyl) ethylamine in 10 mL MeCN and 50 mL 100 mM pH 9.0 sodium bicarbonate, add a solution of 1.9 g dansyl chloride in 30 mL MeCN dropwise while maintaining the pH of the solution at 9.0 with 1 M NaOH, stir at room temperature for 20 min, stir at 45° for 2 h, cool to room temperature, extract three times with 30 mL portions of ethyl acetate. Combine the organic layers and evaporate them to dryness under reduced pressure, recrystallize the residue from benzene/hexane to obtain (S)-N-tert-butoxycarbonyl-1-(4-dansylaminophenyl)ethylamine as pale-yellow crystals (mp 97-101°) (Caution! Benzene is a carcinogen!). Add 2 mL concentrated HCl to a solution of 1.5 g (S)-N-tert-butoxycarbonyl-1-(4-dansylaminophenyl)ethylamine in 10 mL MeOH, stir at room temperature for 30 min, evaporate to dryness under reduced pressure. Dissolve the residue in 30 mL water and adjust the pH to 8.0 with sodium bicarbonate, extract three times with 30 mL portions of ethyl acetate. Combine the organic layers and evaporate them to dryness under reduced pressure, recrystallize the residue from EtOH to obtain (S)-1-(4-dansylaminophenyl)ethylamine as pale-yellow crystals (mp 157-160°; $[\alpha]_D^{28}$ -11.1° (c = 0.2 in MeCN)). (The (R)-enantiomer can be prepared in an exactly analogous fashion.))

CHROMATOGRAM
Retention time: 17 (S), 19 (R)
Internal standard: ibuprofen (24 S, 27 R)
Limit of detection: 10 ng/mL
Limit of quantitation: 25 ng/mL

OTHER SUBSTANCES
Simultaneous: metabolites

KEY WORDS
derivatization; chiral

REFERENCE
Knadler,M.P.; Hall,S.D. High-performance liquid chromatographic analysis of the enantiomers of flurbiprofen and its metabolites in plasma and urine, *J.Chromatogr.*, **1989**, *494*, 173–182.

SAMPLE
Matrix: urine
Sample preparation: Dilute urine 20-fold with 100 mM pH 2.0 phosphate buffer, extract twice with two volumes of ethyl acetate, centrifuge at 5000 g for 5 min. Combine the organic layers and evaporate them to dryness under a stream of nitrogen below 30°. Reconstitute in 0.2-1 mL mobile phase, inject an aliquot.

HPLC VARIABLES
Guard column: 4 × 4 5 μm LiChrospher 100 RP-18
Column: 250 × 4 5 μm LiChrospher CH-18

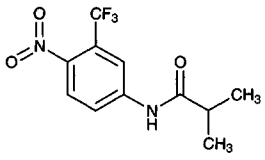
Mobile phase: MeOH:10 mM pH 6.0 phosphate buffer 80:20 containing 2.5 mM cethexonium bromide (Rinse with 100 mL MeOH:EtOH:water 50:25:25 at the end of the day.)
Flow rate: 1
Injection volume: 10
Detector: UV 273

CHROMATOGRAM
Retention time: k' 4.1

OTHER SUBSTANCES
Extracted: glucuronides, pirprofen

REFERENCE
Liu,H.-F.; Leroy,P.; Nicolas,A.; Magdalou,J.; Siest,G. Evaluation of a versatile reversed-phase high-performance liquid chromatographic system using cethexonium bromide as ion-pairing reagent for the analysis of glucuronic acid conjugates, *J.Chromatogr.*, **1989**, *493*, 137–147.

Flutamide



Molecular formula: $C_{11}H_{11}F_3N_2O_3$
Molecular weight: 276.22
CAS Registry No.: 13311-84-7
Merck Index: 4242
Lednicer No.: 3 57

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 µL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) µL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 µm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM
Retention time: 22.248

KEY WORDS
whole blood

SAMPLE
Matrix: microsomal incubations
Sample preparation: Vigorously mix 500 μL microsomal incubation with 5 mL dichloromethane. Evaporate the dichloromethane layer under a stream of nitrogen at 30°. Reconstitute the residue in 100 μL MeOH. Inject an aliquot.

HPLC VARIABLES
Column: 300 × 3.9 CP-18 μBondapak
Mobile phase: Gradient. A was MeOH:water 60:40. B was MeOH. A:B from 100:0 to 60:40 over 40 min, flush column with MeOH for 10 min, re-equilibrate at initial conditions
Flow rate: 1
Detector: UV; Radioactivity (Radiometer Flo-1)

CHROMATOGRAM
Retention time: 18.3

OTHER SUBSTANCES
Extracted: metabolites

KEY WORDS
radiolabeled

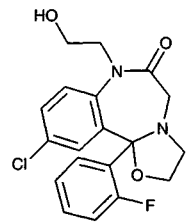
Flutazolam



Molecular formula: $C_{19}H_{18}ClFN_2O_3$
Molecular weight: 376.81
CAS Registry No.: 27060-91-9
Merck Index: 4243

SAMPLE
Matrix: blood
Sample preparation: 500 μL Serum + 20 μL 20 μg/mL IS + 200 μL 1 M potassium carbonate + 3 mL chloroform, mix for 2 min, centrifuge at 1200 g for 5 min, aspirate aqueous phase. Evaporate the organic phase in a water bath under a stream of nitrogen at 40°. Dissolve residue in 100 μL mobile phase, inject a 20 μL aliquot. (Caution! Chloroform is a carcinogen!)

HPLC VARIABLES
Column: 100 × 4.6 2 μm TSK gel Super-ODS (A) or 100 × 4.6 5 μm Hypersil ODS-C18 (B)
Mobile phase: MeCN:5 mM pH 6 NaH_2PO_4 45:55
Flow rate: 0.65
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 32.2 (A), 97.4 (B)
Internal standard: diazepam (29.8 (A), 77.5 (B))
Limit of quantitation: 10 ng/mL (A)

OTHER SUBSTANCES
Extracted: bromazepam, chlordiazepoxide, clonazepam, estazolam, etizolam, haloxazolam, lorazepam, nitrazepam, oxazolam, triazolam
Simultaneous: alprazolam

Noninterfering: barbital, carbamazepine, cloxazolam, ethosuximide, hexobarbital, mexazolam, oxazepam, pentobarbital, phenobarbital, phenytoin, primidone, trimethadione

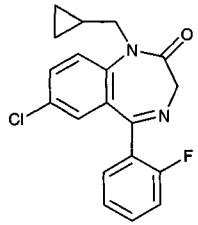
Flutoprazepam



Molecular formula: $C_{15}H_{16}ClFN_2O$
Molecular weight: 342.80
CAS Registry No.: 25967-29-7
Merck Index: 4245

SAMPLE
Matrix: blood
Sample preparation: 200 μL Plasma + 25 μL 1 μg/mL o-chlorodiazepam in MeOH, vortex gently, extract twice with 1 mL portions of benzene (Caution! Benzene is a carcinogen!) with shaking. Combine the extracts evaporate them to dryness under a stream of nitrogen at 30-35°, reconstitute the residue in 100 μL mobile phase, inject a 10-90 μL aliquot.

HPLC VARIABLES
Column: 300 × 3.9 10 μm μBondapak C18
Mobile phase: MeCN:10 mM KH_2PO_4 50:50 adjusted to pH 4.5 with orthophosphoric acid
Flow rate: 1.2
Injection volume: 10-90
Detector: UV 229

CHROMATOGRAM
Retention time: 16
Internal standard: o-chlorodiazepam
Limit of detection: 25 ng/mL

OTHER SUBSTANCES
Extracted: metabolites

KEY WORDS
plasma; rat; pharmacokinetics

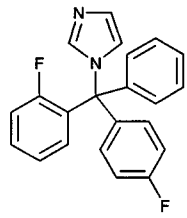
Flutrimazole



Molecular formula: $C_{22}H_{16}F_2N_2$
Molecular weight: 346.38
CAS Registry No.: 119006-77-8
Merck Index: 4247

SAMPLE
Matrix: formulations, tissue
Sample preparation: Formulations. 500 mg Cream + 30 mL EtOH, heat mixture to 50° to melt it, cool, dilute to 50 mL, filter through a 0.45 μm filter. Inject a 25 μL aliquot of the filtrate. Tissue. Add 3 mL MeOH to cleaned and cut skin, sonicate for 15 min, inject an aliquot.

HPLC VARIABLES
Guard column: 10 μm μBondapak C18
Column: 10 μm μBondapak C18
Mobile phase: MeOH:pH 7.0 phosphate buffer 80:20
Flow rate: 1
Injection volume: 25
Detector: UV 225

CHROMATOGRAM
Limit of quantitation: 50 ng/mL

KEY WORDS
cream; skin

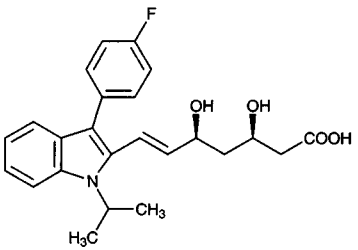
Fluvastatin



Molecular formula: $C_{24}H_{26}FNO_4$
Molecular weight: 411.47
CAS Registry No.: 93957-54-1, 93957-55-2 (sodium salt)
Merck Index: 4250
Lednicer No.: 5 105

SAMPLE
Matrix: blood
Sample preparation: Mix 500 μL plasma with 500 μL MeCN and 500 μL pH 6.0 phosphate buffer, extract with 5 mL MTBE by shaking for 30 min, centrifuge at 1200 g for 5 min, evaporate the organic phase under nitrogen. Dissolve the residue in 400 μL MeCN:water 40:60, vortex 3 times for 30 s, inject a 20-300 μL aliquot.

HPLC VARIABLES
Guard column: 15 × 3.2 7 μm Brownlee Si
Column: 250 × 4.6 10 μm Chiralcel OD-R (Daicel Chemical Industries, Japan)
Mobile phase: MeCN:buffer 40:60 (Buffer was pH 2.5 phosphate buffer (I = 0.04).)
Column temperature: 15
Flow rate: 0.5

Injection volume: 100
Detector: F ex 305 em 390

CHROMATOGRAM
Retention time: 28.0 (3S, 5R), 30.0 (3R, 5S)
Limit of quantitation: 5 nM

KEY WORDS
chiral; plasma

REFERENCE

SAMPLE
Matrix: blood
Sample preparation: Mix 500 μL plasma with 100 μL 500 nM IS, 500 μL MeCN, and 500 μL pH 6.0 phosphate buffer, extract with 5 mL MTBE by shaking for 30 min, centrifuge at 1200 g for 5 min, evaporate the organic phase under nitrogen. Dissolve the residue in 400 μL mobile phase, vortex 3 times for 30 s, inject an aliquot.

HPLC VARIABLES
Guard column: 15 × 3.2 7 μm Brownlee CN
Column: 150 × 4.6 5 μm Zorbax Rx-C8
Mobile phase: MeOH:pH 6.0 phosphate buffer:100 mM tetrabutylammonium fluoride 60:25:15
Column temperature: 40
Flow rate: 1
Injection volume: 50
Detector: F ex 305 em 390 following post-column photolysis. The column effluent flowed through a knitted 10 m × 0.3 mm PTFE coil irradiated at 254 nm to the detector.

CHROMATOGRAM
Retention time: 15.0
Internal standard: Sandoz compound 63-267 ([R,S,-(E)-] (±)-7-(3-(4-fluorophenyl)-1-(1-methylethyl)-1H-indol-2yl)-(3,5-dihydroxy-6-methyl)-6-heptenoic acid, monosodium salt) (20.5)
Limit of quantitation: 500 pM

OTHER SUBSTANCES
Extracted: metabolites

SAMPLE
Matrix: blood
Sample preparation: Condition a 1 mL BondElut C18 SPE cartridge with 1 mL 1 M HCl, 1 mL MeOH, 1 mL water, and 1 mL 1% potassium carbonate. 700 μL Serum + 50 μL 5 μg/mL trimipramine in 5% potassium bicarbonate + 700 μL MeCN, vortex, centrifuge at 1500 g for 5 min, add supernatant to SPE cartridge (at ca. 1 mL/min). Wash with 2 mL water and 1 mL MeCN, elute with 250 μL MeOH:35% perchloric acid 20:1 by gravity (10 min) then centrifuge for 20 s to remove rest of eluant, inject a 50 μL aliquot of the eluate.

HPLC VARIABLES
Guard column: 15 mm 7 μm Brownlee RP-8
Column: 150 × 4.6 5 μm Ultrasphere Octyl
Mobile phase: MeCN:water 37.5:62.5 containing 0.5 g/L tetramethylammonium perchlorate and 0.5 mL/L 7% perchloric acid
Flow rate: 1.5
Injection volume: 50
Detector: UV 215

CHROMATOGRAM
Retention time: 6.8
Internal standard: trimipramine (9.6)
Limit of quantitation: 5 ng/mL

OTHER SUBSTANCES
Extracted: amitriptyline, clomipramine, doxepin, fluoxetine, maprotiline, nortriptyline
Interfering: desmethylmaprotiline, desipramine, imipramine, protriptyline

KEY WORDS
serum; SPE

SAMPLE
Matrix: formulations

HPLC VARIABLES
Column: 100 × 4 3 μm Hypersil BDS-C18
Mobile phase: Gradient. MeCN:water adjusted to pH 2.1 from 0.3:99.7 to 25:75 over 11 min
Flow rate: 0.5
Detector: UV 220

CHROMATOGRAM
Retention time: 8

OTHER SUBSTANCES
Simultaneous: biotin, caffeine, citric acid, niacinamide, niacin, pantothenic acid, riboflavin, saccharin, thiamine, pyridoxine, vitamin B12, ascorbic acid

KEY WORDS
tablets

REFERENCE
Hewlett Packard Leaflet 12-5091-7351 EUS, **1993**.

SAMPLE
Matrix: formulations
Sample preparation: Dilute liquid multivitamin formulations, filter (0.45 μm), inject an aliquot.

HPLC VARIABLES
Column: 250 × 4 5 μm Lichrosorb RP-8
Mobile phase: Gradient. A was 10 mM KH_2PO_4 containing 5 mM sodium hexanesulfonate adjusted to pH 2.8 with phosphoric acid. B was MeOH. A:B from 90:10 to 71.8:28.2 over 4 min, maintain at 71.8:28.2 for 1.5 min, to 50:50 over 6.5 min, maintain at 50:50 for 5 min, return to initial conditions over 5 min
Flow rate: 1
Injection volume: 5
Detector: UV 272

CHROMATOGRAM
Retention time: 10.49
Internal standard: theobromine (8)
Limit of detection: 0.465 ng

OTHER SUBSTANCES
Simultaneous: niacin, niacinamide, thiamine, riboflavin, pyridoxine (UV 290)

KEY WORDS
liquid multivitamins; degas solutions with helium; protect from light

SAMPLE
Matrix: solutions

HPLC VARIABLES
Guard column: 30 × 4.6 10 μm octadecylsilica (Brownlee)
Column: 300 × 3.9 10 μm μBondapak phenyl
Mobile phase: Gradient. MeCN:33 mM pH 2.3 sodium phosphate buffer from 7.2:92.8 to 11.3:88.7 over 15 min. (At the end of each day flush system with water then 50-75 mL MeOH. Place a column of 37-53 μm silica (Whatman) between pump and injection valve.)
Flow rate: 1
Injection volume: 100
Detector: F ex 365 em >415 (filter) following post-column reaction. The column effluent mixed with the reagent pumped at 0.23 mL/min and the mixture flowed through a 5 m × 0.8 mm ID coil of PTFE tubing at 60° to the detector. (Reagent was 0.005% calcium hypochlorite (HTH dry chlorine, Olin, Overland KS) in 100 mM K_2HPO_4 containing 200 mM NaCl.)

CHROMATOGRAM
Retention time: 22

Sample preparation: Dissolve in mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES

Column: 250 × 4.6 10 μm Chiralcel OJ
Mobile phase: EtOH:heptane 30:70
Injection volume: 20
Detector: UV 365

CHROMATOGRAM

Retention time: k' 1.38 ((RR)-(+)), k' 2.00 ((SS)-(-))

KEY WORDS

chiral

REFERENCE

Francotte,E.R.; Richert,P. Applications of simulated moving-bed chromatography to the separation of the enantiomers of chiral drugs, *J.Chromatogr.A*, **1997**, *769*, 101–107.

SAMPLE

Matrix: bulk
Sample preparation: Dissolve 10 μmole compound (as free base or hydrochloride) in 500 μL MeCN, add 250 μL 5% sodium carbonate (for hydrochlorides only), add 500 μL 100 mM reagent in MeCN, vortex for 1 min, heat at 60° for 2 h, add 100 μmole L-proline, heat at 60° for 30 min. Remove a 100 μL aliquot and dilute it with mobile phase, neutralize with acetic acid, inject a 10 μL aliquot. Prepare the reagent ((R,R)-N-(3,5-dinitrobenzoyl)-2-aminocyclohexylisothiocyanate) as follows. Add 0.7 mL carbon disulfide to 6 mL (1R,2R)-(-)-1,2-diaminocyclohexane, 12 mL water, and 12 mL EtOH, heat the oil bath to 80°, add 2.8 mL carbon disulfide dropwise (making sure that the product does not start to precipitate), when addition is complete reflux for 1 h, acidify with 500 μL 5 M HCl, reflux for 12 h, cool, filter, wash the solid with a

little cold EtOH to give trans-4,5-tetramethyleneimidazolidine-2-thione as a white fluffy solid (mp 148-150°) (Tetrahedron 1993, 49, 4419). Stir 7.97 g 3,5-dinitrobenzoyl chloride in 30 mL dichloroethane at 50°, add a solution of 6 g trans-4,5-tetramethyleneimidazolidine-2-thione in 120 mL dichloroethane containing a catalytic amount of 4-(dimethylamino)pyridine over 15 min, reflux for 2 h, remove the crystals of (R,R)-N-(3,5-dinitrobenzoyl)-2-aminocyclohexylisothiocyanate by filtration, evaporate the filtrate to dryness and dissolve the residue in 60 mL dichloroethane, reflux for 16 h to obtain more (R,R)-N-(3,5-dinitrobenzoyl)-2-aminocyclohexylisothiocyanate (mp >250°, $[\alpha]_{546}$ = -133° (c = 1) in MeCN).

HPLC VARIABLES

Column: 125 × 4 5 μm Lichrospher 60 RP Select B
Mobile phase: MeCN:20 mM ammonium acetate 55:45
Flow rate: 1
Injection volume: 10
Detector: UV 254

CHROMATOGRAM

Retention time: k' 2.52, k' 3.69 (enantiomers)

OTHER SUBSTANCES

Also analyzed: acebutolol, alprenolol, atenolol, carazolol, carvedilol, methamphetamine, metipranolol, metoprolol, nifenanol, nitrilo atenolol, oxprenolol, pindolol, propranolol, xamoterol

KEY WORDS

derivatization; chiral

SAMPLE

Matrix: urine
Sample preparation: Condition a 100 mg silica SPE cartridge with 3 mL MeOH and 3 mL ethyl acetate. Briefly vortex 1 mL urine with 100 μL 2.5 mg/mL IS in MeOH and 100 μL 250 mM pH 8.0 phosphate buffer, add 3 mL ethyl acetate, tumble at 25 rpm for 30 min, centrifuge at 4000 rpm for 10 min. Remove the organic layer and add it to the SPE cartridge, wash with 1 mL ethyl acetate, wash with 10 mL 5% isopropanol in water, centrifuge at 4000 rpm for 10 min. Elute with 3 mL MeOH, evaporate the eluate to dryness at 30° under a stream of nitrogen, reconstitute the residue with 100 μL mobile phase, inject a 100 μL aliquot.

HPLC VARIABLES

Guard column: 10 × 4 Chiral AGP (Baker, Deventer, Netherlands)
Column: 100 × 4 Chiral AGP (Baker, Deventer, Netherlands)
Mobile phase: Isopropanol:50 mM pH 7.0 phosphate buffer 1.5:100, containing 1 mM KCl and a small quantity of EDTA (sic)
Flow rate: 0.9
Injection volume: 100
Detector: E, Waters EC 460, glassy carbon electrode +0.63 V, Ag/AgCl reference electrode

CHROMATOGRAM

Retention time: 8.7 (R,R), 11.3 (S,S)
Internal standard: diastereomeric formoterol (Either R,S or S,R, prepared by preparative HPLC, details in paper) (15.5)
Limit of detection: 60 pmol/L (R,R), 75 pmol/L (S,S)

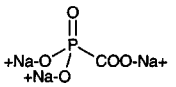
Foscarnet sodium



Molecular formula: CNa_3O_5P
Molecular weight: 191.95
CAS Registry No.: 63585-09-1
Merck Index: 4277

SAMPLE

Matrix: blood, CSF, urine

Sample preparation: Plasma. 100 μL Plasma + 900 μL 10 mM pyrophosphoric acid + 25 mg charcoal, after 30 s filter (Amicon MPS-1 with YMT membrane or Centricon 30 Microcencentrator) while centrifuging at 1000-2000 g for 15 min, dilute the ultrafiltrate 10-fold with 1 mM pyrophosphoric acid, inject a 20 μL aliquot. (For high concentrations of foscarnet charcoal may be omitted.) Urine. 100 μL Urine + 900 μL 10 mM pyrophosphoric acid + 25 mg charcoal, vortex for 30 s, filter (Millipore SJHVL04NS), dilute the filtrate 10-fold with 1 mM pH 5.8 pyrophosphoric acid, inject a 20 μL aliquot. CSF. Dilute CSF 100-fold with 1 mM pH 5.8 pyrophosphoric acid, inject a 20 μL aliquot.

HPLC VARIABLES

Column: 100 × 4.6 3 μm UltroPac C18 (LKB)

Mobile phase: MeOH:pH 5.8 57 mM phosphate buffer 25:75 containing 1 mM tetrahexylammonium hydrogen sulfate and 0.2 mM pyrophosphoric acid

Flow rate: 1

Injection volume: 20

Detector: E, Environmental Sciences 5100 Coulochem, 5020 guard cell +0.75 V (placed after injector), 5010 analytical cell, cell 1 +0.75 V, cell 2 +0.90 V (monitored)

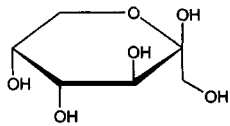
Fructose



Molecular formula: $C_6H_{12}O_6$
Molecular weight: 180.16
CAS Registry No.: 57-48-7
Merck Index: 4295

SAMPLE
Matrix: beverages, plants
Sample preparation: Beverages. Dilute 50-fold, filter (0.22 μm), inject an aliquot of the filtrate. Plants. Heat 1 g barley leaves and 10 mL EtOH:water 80:20 at 100° in a sealed tube for 15-30 min. Evaporate the liquid phase to dryness, reconstitute with water, pass through Analytichem trimethylaminopropyl and cyclohexyl SPE cartridges, inject an aliquot.

HPLC VARIABLES
Column: 300 × 6.5 Sugar-Pak I (Waters)
Mobile phase: water
Column temperature: 70
Flow rate: 0.4
Injection volume: 10
Detector: F ex 360 em 470 following post-column reaction. The effluent from the column passed through a 75 × 3.8 reactor containing Dowex 50 W × 2 sulfonic-acid type styrene divinylbenzene copolymer at 100° and mixed with 30 mM benzamidine in 1 M KOH pumped at 1 mL/min. This mixture flowed through a 530 μL reaction coil (Varian PCR-1) at 100° to the detector.

CHROMATOGRAM
Retention time: 22.77
Limit of detection: 60 pmole

OTHER SUBSTANCES
Extracted: dextrose, sucrose

KEY WORDS
barley; SPE; post-column reaction

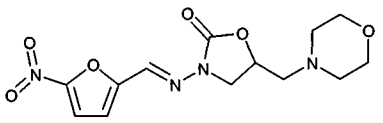
Furaltadone



Molecular formula: $C_{13}H_{16}N_4O_6$
Molecular weight: 324.29
CAS Registry No.: 139-91-3
Merck Index: 4315
Lednicer No.: 1 229

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 347.4

CHROMATOGRAM
Retention time: 8.927

KEY WORDS
whole blood

SAMPLE
Matrix: egs, milk, tissue
Sample preparation: Centrifuge milk at 2000 g for 10 min, freeze at -20° for 15 min, dilute a 10 mL aliquot with 10 mL saline, add 2 mL 1% sodium azide. Blend (Stomacher) 10 g homogenized tissue with 30 mL saline for 3 min, centrifuge at 2000 g, mix 20 mL of the supernatant with 2 mL 1% sodium azide. Dilute 10 mL homogenized egg with 10 mL saline, add 3 mL 10% sodium azide solution. Dialyze sample using a Cuprophan membrane (10000-15000 dalton cutoff) against water pumped at 0.36-1.44 mL/min for 3-9 min, pass the water through column A, flush the column with pure water for 8 min, backflush the contents of column A onto column B with mobile phase, after 5 min remove column A from the circuit, elute column B with mobile phase, monitor the effluent from column B. To increase sensitivity a number of sample batches can be dialyzed before the contents of column A are analyzed. (Caution! Sodium azide is carcinogenic, mutagenic, and highly toxic! Do not discharge to the sink!)

HPLC VARIABLES
Column: A 60 × 4.6 37-50 μm Bondapak C18/Corasil; B 250 × 4.6 5 μm Hypersil ODS

SAMPLE
Matrix: tissue
Sample preparation: Homogenize (Waring blender) 10 g muscle, liver, or kidney in 100 mL EtOH for 5 min, let stand for 5 min, filter through 10 g Celite 545 on top of a sintered glass filter, rinse blender with 100 mL EtOH and filter rinse. Add 25 mL 3.6% aqueous metaphosphoric acid to the combined filtrates, evaporate to 25 mL under reduced pressure at 45°. Remove residue, rinse out flask with 5 mL hexane and 3 mL water, combine, centrifuge at 0° at 27000 g for 30 min, discard hexane, rinse surface with 5 mL hexane, discard hexane. Remove aqueous layer, rinse out tube twice with 3 mL portions of water, combine, add 10 mL 1 M KH_2PO_4, make up to 100 mL with water, extract three times for 5 min with 50 mL ethyl acetate. Combine the extracts and dry them over 15 g anhydrous sodium sulfate, filter through glass wool, evaporate to dryness under reduced pressure at 45°. Take up residue in 3 mL ethyl acetate and add to alumina column, rinse flask with 2 mL ethyl acetate and add rinse to column. Elute with 20 mL EtOH:MeOH:ethyl acetate 10:10:80 and combine all the eluate. Evaporate to dryness under reduced pressure at 45°, reconstitute in 500 μL mobile phase, inject a 100 μL aliquot. (Prepare alumina column by slurrying 1 g aluminum oxide (Baker) in 20 mL ethyl acetate and adding to a 200 × 6 glass chromatographic column.)

SAMPLE
Matrix: tissue
Sample preparation: Condition a 500 mg Bond Elut C18 SPE cartridge with 5 mL MeOH and 10 mL water. Homogenize 5 g tissue with 100 mL MeOH:0.2% metaphosphoric acid 40:60 for 2 min, filter through a 1 mm layer of Hyflo Super-Cel. Evaporate the filtrate under reduced pressure at 40° to 10 mL, add the residue to the SPE cartridge, wash with 10 mL water, elute with 10 mL MeOH. Evaporate the eluate to dryness under reduced pressure, take up the residue in 1 mL mobile phase, inject a 10 μL aliquot.

HPLC VARIABLES
Guard column: 15 × 3.2 Newguard RP-8
Column: 150 × 4.6 5 μm Inertsil ODS
Mobile phase: MeCN:5 mM oxalic acid 45:55
Flow rate: 0.5
Injection volume: 10
Detector: UV 265

CHROMATOGRAM
Retention time: 7
Limit of detection: 50 ng/g

OTHER SUBSTANCES
Extracted: sulfamonomethoxine, sulfadimethoxine, sulfisozole, nalidixic acid, oxolinic acid, piromidic acid, sodium nifurstyrenate

KEY WORDS
fish; SPE

SAMPLE
Matrix: tissue
Sample preparation: Homogenize (Ultra-Turrax TP 18/2) 3 g ground muscle + 200 μL 1 μg/mL nitrofurazone in water + 6.8 mL MeCN for 6 s, centrifuge at 5000 rpm for 5 min. Remove 6.5 mL of the supernatant and add it to 2 mL 5 M NaCl, shake vigorously for 10 s, centrifuge at 3000 rpm for 2 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 43°, reconstitute the residue in 250 μL MeCN:buffer 20:80, add 1 mL hexane, mix (Whirlimixer), centrifuge for 4 min, discard the hexane layer, filter (Costar Spin-X 0.22 μm cellulose acetate) while centrifuging at 5600 g for 4 min, inject a 20 μL aliquot of the filtrate. (Buffer was 20 mM sodium 1-heptanesulfonate and 10 mM Na_2HPO_4, pH adjusted to 6.0 with phosphoric acid.)

HPLC VARIABLES
Guard column: 20 × 4.6 5 μm Supelcosil LC-ABZ
Column: 250 × 4.6 5 μm Supelcosil LC-ABZ
Mobile phase: MeCN:buffer 25:75 (Buffer was 4.45 g sodium 1-heptanesulfonate and 9.5 g $Na_3PO_4.12H_2O$ in 750 mL water, adjust pH to 2.5 with 5 M phosphoric acid, make up to 1 L with water.)

Flow rate: 1
Injection volume: 20
Detector: UV 365

CHROMATOGRAM
Retention time: 7.5
Internal standard: nitrofurazone (5.5)
Limit of quantitation: 3 ng/g

SAMPLE
Matrix: tissue
Sample preparation: Condition a 500 mg Bond-Elut NH_2 SPE cartridge with 20 mL chloroform: MeOH 70:30 and 10 mL hexane. Homogenize 2 g pulverized tissue with 40 mL MeOH:buffer 30:70 for 1 min, centrifuge at 2000 rpm for 15 min, evaporate to about 15 mL under reduced pressure at 40°, add 25 mL dichloromethane, shake gently for 1 min, centrifuge at 1500 rpm for 10 min. Remove the lower organic layer and evaporate it to near dryness under reduced pressure at 30°. Resuspend the residue in 2 mL dichloromethane and 6 mL hexane, add to the SPE cartridge, wash with 5 mL hexane:dichloromethane 50:50, elute with 5 mL chloroform: MeOH 70:30. Evaporate the eluate to dryness under a stream of nitrogen at 50°, reconstitute the residue in 100 μL mobile phase, inject a 50 μL aliquot. (Buffer was 23 g Na_2HPO_4 and 14.2 g citric acid in 1 L water, pH 3.6.)

HPLC VARIABLES
Guard column: RP18 4-4 (Merck)
Column: 125 × 4 5 μm Lichrospher RP18 (end-capped)
Mobile phase: MeCN:100 mM ammonium acetate 25:75

Molecular weight: 171.24
CAS Registry No.: 60142-96-3
Merck Index: 4343

SAMPLE
Matrix: blood
Sample preparation: Condition a 100 mg Bond Elut C18 SPE cartridge with 1 mL MeOH and 1 mL buffer, do not allow to go dry. Condition an Empore C18 SPE membrane by adding 500 μL MeOH, force through three drops, discard MeOH remaining in reservoir, add 500 μL water, force through three drops, discard water remaining in reservoir. Add 200 μL 3 μg/mL IS in buffer to the SPE cartridge, add 200 μL serum and force through at 1 drop/s, add 200 μL buffer, force all liquid through, elute with 500 μL MeOH. Add 100 μL saturated sodium tetraborate solution and 50 μL 5% 2,4,6-trinitrobenzenesulfonic acid in water to the eluate, mix, heat at 50° for 10 min, add 500 μL 250 mM acetic acid, centrifuge at 12500 g for 2 min, add the supernatant to the SPE membrane, force through using a syringe or by centrifuging at 100-120 g for 5 min, wash with 500 μL MeCN:water 20:80, elute with 75 μL MeCN then 125 μL water, mix the eluates, inject a 50 μL aliquot. (Buffer was saturated sodium tetraborate solution diluted with three volumes of water.)

HPLC VARIABLES
Guard column: 20 × 2 30 μm Permaphase ETH (DuPont)
Column: 250 × 4.6 Ultrasphere C18
Mobile phase: MeCN:water:acetic acid:n-butylamine 52:48:0.1:0.01 (pH should not exceed 4.5) (Connect a 150 × 4.6 37-53 μm silica (Whatman) column between pump and injector.)
Column temperature: 50
Flow rate: 1.2
Injection volume: 50
Detector: UV 340

CHROMATOGRAM
Retention time: 10
Internal standard: 1-(aminomethyl)cycloheptaneacetic acid (13)
Limit of detection: 50 ng/mL

OTHER SUBSTANCES
Noninterfering: acetaminophen, N-acetylprocainamide, amikacin, caffeine, carbamazepine epoxide, carbamazepine, chlordiazepoxide, demoxepam, desalkylflurazepam, desmethylchlordiazepoxide, desmethyldiazepam, diazepam, disopyramide, ethosuximide, flurazepam, gentamicin, lidocaine, phenobarbital, phenytoin, primidone, procainamide, quinidine, theophylline, tobramycin, valproic acid, vancomycin

KEY WORDS
SPE; derivatization; pharmacokinetics

SAMPLE
Matrix: blood

Sample preparation: 100 μL Plasma + 100 μL 2 M perchloric acid, vortex for 10 s, centrifuge at 15000 g for 3 min. Remove a 50 μL aliquot and add it to 200 μL MeOH, add 200 μL buffer, add 50 μL reagent, mix, let stand at room temperature for 5 min, inject a 20 μL aliquot. (Prepare buffer weekly by adjusting the pH of 500 mM boric acid to 9.5 with 1 M NaOH. Prepare reagent weekly by dissolving 50 mg o-phthalaldehyde in 4.5 mL MeOH, add 500 μL buffer, add 50 μL 3-mercaptopropionic acid.)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Ultrasphere octadecyl
Mobile phase: MeCN:MeOH:buffer 30:30:40 (Prepare the buffer by diluting 7.5 mL glacial acetic acid to 400 mL with water, adding 40 mg EDTA, and adjusting the pH to 3.7 with 3 M NaOH.)
Flow rate: 1.5
Injection volume: 20
Detector: F ex 330 em 440

CHROMATOGRAM
Retention time: 11.5
Internal standard: 1-(aminomethyl)cycloheptaneacetic acid (Parke-Davis) (15)
Limit of quantitation: 500 ng/mL

OTHER SUBSTANCES
Noninterfering: alanine, arginine, aspartic acid, carbamazepine, clobazam, clonazepam, cysteine, felbamate, glutamic acid, glycine, histidine, isoleucine, lamotrigine, leucine, lysine, methionine, oxcarbazepine, phenobarbital, phenylalanine, phenytoin, primidone, proline, remacemide, serine, threonine, tiagabine, tyrosine, valine, valproic acid, vigabatrin

SAMPLE
Matrix: blood
Sample preparation: 500 μL Serum + 500 μL IS solution + 1 mL MeCN, vortex for 5 min, centrifuge for 15 min. Mix 6 μL buffer, 6 μL reagent, and 6 μL supernatant, let stand for 1 min, inject the whole amount. (Prepare IS solution by dissolving 100 mg gamma-phenyl-gamma-aminobutyric acid and 10 mg 1-(aminomethyl)cycloheptane acetic acid in 500 mL MeCN and 500 mL water. Prepare buffer by dissolving 15.5 mg boric acid in 500 mL water and adjusting to pH 9.5 with concentrated NaOH. Prepare reagent by mixing 100 mg o-phthaldialdehyde, 9 mL MeOH, 1 mL buffer, and 100 μL mercaptoethanol.)

HPLC VARIABLES
Column: 250 × 4 5 μm BANsil C18 (ASMT, Enger, Germany)
Mobile phase: Gradient. A was MeCN:MeOH:0.1% pH 2 phosphoric acid 10:10:80. B was MeCN:MeOH 50:50. A:B 90:10 for 1 min, to 30:70 over 25 min, maintain at 30:70 for 3 min, return to initial conditions over 0.1 min, re-equilibrate for 3.9 min.
Column temperature: 40
Flow rate: 1
Injection volume: 18
Detector: F ex 235 em 435

CHROMATOGRAM
Retention time: 27.0
Internal standard: gamma-phenyl-gamma-aminobutyric acid (Marion Merrel Dow) (23.4), 1-(aminomethyl)cycloheptane acetic acid (Gö-3609, Parke Davis) (28.3)
Limit of detection: 100 ng/mL
Limit of quantitation: 500 ng/mL

SAMPLE
Matrix: blood, urine
Sample preparation: Add 50 μL serum or urine (diluted between 1:50 and 1:200) to 1 mL MeOH containing 3.4 μg γ-phenyl-γ-amino-n-butyric acid, vortex for 15 s, centrifuge at 2000 g for 10 min, mix 6 μL of the supernatant with 3 μL reagent, inject an aliquot. (Reagent was 10 mL 30 mg/mL o-phthaldialdehyde and 200 μL 2-mercaptoethanol made up to 50 mL with 400 mM pH 9.5 borate buffer (Ther. Drug Monit. 1991, 13, 251).)

HPLC VARIABLES
Column: 125 × 3 5 μm Superspher 60 RP-Select B (Merck)
Mobile phase: Gradient. A was MeCN. B was 20 mM KH_2PO_4 buffer. A:B from 22:78 to 37:63 in 12 min, from 37:63 to 55:45 in 6 min, from 55:45 to 80:20 in 1.5 min, maintain at 80:20 for 2 min
Column temperature: 35
Flow rate: 0.7
Detector: F ex 230 em 455

CHROMATOGRAM
Retention time: 17.3
Internal standard: γ-phenyl-γ-amino-n-butyric acid (14.8)
Limit of detection: 500 nM

OTHER SUBSTANCES
Extracted: vigabatrin

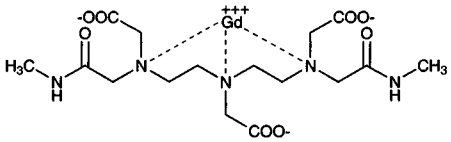
Gadodiamide



Molecular formula: $C_{16}H_{26}GdN_5O_8$
Molecular weight: 573.66
CAS Registry No.: 122795-43-1
Merck Index: 4345

SAMPLE

Matrix: blood, urine
Sample preparation: Serum. Filter (Millipore Ultrafree-MC, type PTGC, 10 000 NMWL Filter unit) serum while centrifuging at 4° at 5000 g for 1 h, inject a 10 μL aliquot of the ultrafiltrate. Urine. Centrifuge urine at 4° at 15000 g for 10 min, dilute a 100 μL aliquot of the supernatant with 400 μL water, inject a 10 μL aliquot.

HPLC VARIABLES

Guard column: 20 × 2.1 5 μm Supelguard LC-19-DB (Supelco)
Column: 250 × 2.1 5 μm Supelcosil LC-19-DB
Mobile phase: 10 mM Triethylammonium acetate containing 2 mM EDTA, pH adjusted to 6.5-7.0 with 1 M acetic acid or 1 M NaOH
Column temperature: 30
Flow rate: 0.3
Injection volume: 10
Detector: UV 658 following post-column reaction with the reagent pumped at 0.3 mL/min. (Reagent was 100 mM nitric acid containing 0.15 mM Arsenazo III and 10 mM urea, filter (0.45 μm), sonicate, discard after 2 days.)

CHROMATOGRAM

Retention time: 4
Limit of detection: 1.1 μM (urine), 0.3 μM (serum)
Limit of quantitation: 10 μM (urine), 2 μM (serum)

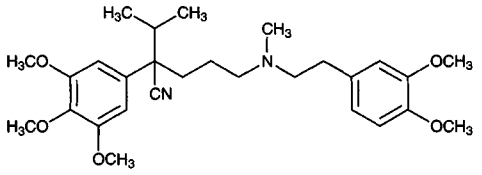
Gallopamil



Molecular formula: $C_{28}H_{40}N_2O_5$
Molecular weight: 484.64
CAS Registry No.: 16662-47-8
Merck Index: 4369

SAMPLE
Matrix: blood
Sample preparation: Condition column A with two 995 μL portions of mobile phase at 3 mL/min and then with 995 μL solution B. Wash the donor channel of the dialyser (Gilson ASTED XL fitted with a Cuprophan cellulose acetate membrane with a molecular mass cut-off of 15000) with 2 mL solution A at 3 mL/min and wash the acceptor channel with 2 mL solution B. Dialyze 370 μL plasma against 9 mL solution B is pumped through the acceptor channel at 1 mL/min. Pass the dialysate through column A, backflush the contents of column A onto column B with mobile phase, elute with mobile phase, monitor the effluent from column B. (Solution A was 10 mM pH 3 acetate buffer containing 0.01% Triton X-100 and 50 μg/mL sodium azide. Solution B was 10 mM pH 3 acetate buffer containing 50 μg/mL sodium azide.)

HPLC VARIABLES
Column: A 30 μm Nucleosil CN; B 5 μm LiChrospher 100 RP-18 guard column + 4 μm Superspher 100 RP-18
Mobile phase: MeCN:2-aminoheptane:buffer 25:0.5:75 (Buffer was 10 mM sodium acetate adjusted to pH 3.0 with acetic acid.)
Column temperature: 35
Flow rate: 0.9
Detector: F ex 275 em 310

CHROMATOGRAM
Retention time: 15
Internal standard: gallopamil

OTHER SUBSTANCES
Simultaneous: norverapamil, verapamil

KEY WORDS
dialysate; column-switching; plasma; gallopamil is IS

SAMPLE

Matrix: blood
Sample preparation: 1 mL Plasma + 1 mL 0.9% NaCl + 120 μL 2 M NaOH + 5 mL n-hexane, vortex for 30 s, mix for 10 min, centrifuge at 2500 g for 20 min, repeat extraction with 4 mL n-hexane. Combine the organic phases and evaporate them to dryness, rinse walls with 1 mL n-hexane, evaporate to dryness, dissolve residue in 50 μL isopropanol, inject a 25 μL aliquot.

HPLC VARIABLES

Guard column: 50 × 4.6 Chiralpak AD (Baker)
Column: 250 × 4.6 Chiralpak AD (Baker)
Mobile phase: n-Hexane:isopropanol 90:10 with 0.1% diethylamine
Flow rate: 1
Injection volume: 25
Detector: F ex 223 no emission filter

CHROMATOGRAM

Retention time: 11 (S-(-)), 14 (R-(+))
Limit of quantitation: 30 ng/mL

OTHER SUBSTANCES

Simultaneous: norverapamil
Also analyzed: verapamil

KEY WORDS

plasma; chiral

REFERENCE

Fieger,H.; Blaschke,G. Direct determination of the enantiomeric ratio of verapamil, its major metabolite norverapamil, and gallopamil in plasma by chiral high-performance liquid chromatography, *J.Chromatogr.*, **1992**, *575*, 255–260.

SAMPLE

Matrix: solutions
Sample preparation: Dissolve a sample in water, mix a 1 mL aliquot with 100 μL 13.36 μg/m IS, inject an aliquot.

HPLC VARIABLES

Column: 100 × 4.0 5 μm Chiral-AGP (Baker)
Mobile phase: MeCN:pH 6.8 (I = 0.01) ammonium acetate 11:89 (Buffer was adjusted to pH 6.8 with ammonium hydroxide or acetic acid)
Column temperature: 22
Flow rate: 0.9
Injection volume: 20
Detector: UV 225; MS, Finnigan MAT SSQ 710A, interface particle beam, desolvation chamber 45°, nebulizing gas helium, electron impact mode 70 eV, source 250°, filament current 200 μA, electron multiplier 1500 V, m/z 45-400

CHROMATOGRAM

Retention time: 9.39 ((2R)-(+)), 14.26 ((2S)-(-))
Internal standard: procaine hydrochloride (5.09)
Limit of detection: 154 ng/mL ((2R)-(+)), 163 ng/mL ((2S)-(-))

OTHER SUBSTANCES

Also analyzed: verapamil

KEY WORDS

chiral

REFERENCE

SAMPLE

Matrix: solutions
Sample preparation: Dissolve a sample in water and inject an aliquot.

HPLC VARIABLES

Column: 100 × 4.0 5 μm Chiral-AGP (Baker)
Mobile phase: Gradient. A was MeCN. B was isopropanol. C was pH 6.8 (I = 0.01) ammonium acetate adjusted to pH 6.8 with ammonium hydroxide or acetic acid. A:B:C from 11:1:88 to 7:1:92 over 1.5 min, maintain at 7:1:92 for 35 min, to 11:1:88 over 5 min
Column temperature: 22
Flow rate: 0.9
Injection volume: 20
Detector: UV 225

CHROMATOGRAM

Retention time: 11 ((2R)-(+)), 22 ((2S)-(-))

OTHER SUBSTANCES

Simultaneous: verapamil

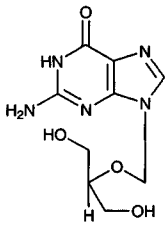
Ganciclovir



Molecular formula: $C_9H_{13}N_5O_4$
Molecular weight: 255.23
CAS Registry No.: 82410-32-0, 107910-75-8 (sodium salt)
Merck Index: 4374
Lednicer No.: 5 146

SAMPLE
Matrix: blood
Sample preparation: Add 10 μL 200 μg/mL acyclovir in MeOH to 500 μL plasma, add 1 mL MeCN, vortex briefly, centrifuge at 2000 g for 3 min, add 2 mL chloroform (Caution! Chloroform is a carcinogen!) to the supernatant, vortex. Remove the aqueous supernatant layer, remove traces of the organic solvent under a stream of nitrogen at 80° for 3 min, inject an aliquot.

HPLC VARIABLES
Column: 250 × 4 5 μm LiChrocart RP8
Mobile phase: MeCN:10 mM pH 5 ammonium acetate buffer 2:98
Flow rate: 1
Injection volume: 30
Detector: UV 254

CHROMATOGRAM
Retention time: 6
Internal standard: acyclovir (7)
Limit of detection: 3 ng/mL
Limit of quantitation: 10 ng/mL

KEY WORDS
plasma

REFERENCE

SAMPLE
Matrix: blood
Sample preparation: 500 μL Plasma + 2 μg 9-methylxanthine + 50 μL 35% perchloric acid, centrifuge at 4° at 2000 g for 15 min, inject a 20 μL aliquot of the supernatant.

HPLC VARIABLES
Column: 150 × 4.6 3 μm Hypersil ODS
Mobile phase: 20 mM pH 3.50 KH_2PO_4
Flow rate: 1.5
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 7
Internal standard: 9-methylxanthine (4.5)
Limit of detection: 0.5 ng

OTHER SUBSTANCES
Noninterfering: acyclovir, allopurinol, azathioprine, caffeine, guanine, guanosine, hypoxanthine, mercaptopurine, oxypurinol, theophylline, uric acid, xanthine

KEY WORDS
plasma

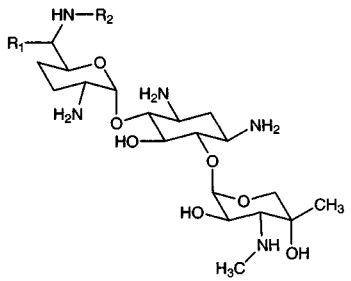
Gentamicin

Molecular formula: $C_{19}H_{39}N_5O_7$
Molecular weight: 449.55
CAS Registry No.: 1403-66-3, 1405-41-0 (sulfate)
Merck Index: 4398



Gentamicin C_1 $R_1 = R_2 = CH_3$

Gentamicin C_2 $R_1 = CH_3$, $R_2 = H$

Gentamicin C_{1a} $R_1 = R_2 = H$

SAMPLE
Matrix: blood
Sample preparation: Prepare a column of 150 mg dry silicic acid in a Pasteur pipette plugged with glass wool (10 mm height) and treat with 1 mL water. 500 μL Serum + 1.5 mL water, add to the column, rinse the tube with 1 mL water, add this water to the column, discard the eluate, add 500 μL reagent, let stand for 30 s, elute, discard the eluate, elute with 1.5 mL MeOH. Vortex the eluate, centrifuge, protect from light, inject a 20 μL aliquot. (Elution was performed under positive pressure from a rubber bulb. Reagent was prepared by dissolving 1 g of boric acid in 38 mL water, adjust pH to 10.4 with 450 g/L KOH, add 2 mL 100 mg/mL o-phthalaldehyde in MeOH, add 400 μL 2-mercaptoethanol. Prepare fresh each week.)

HPLC VARIABLES
Guard column: 23 × 3.9 μBondapak C18/Porasil B
Column: 300 × 3.9 10 μm μBondapak
Mobile phase: MeOH:buffer 21:79 (Buffer was 1% triethylamine adjusted to pH 6.2 ± 0.1 with phosphoric acid.)
Flow rate: 2
Injection volume: 25
Detector: F ex 260 em 418

CHROMATOGRAM
Retention time: 4.8 (C1), 6.8 (C1a), 8.6 (C2)
Limit of detection: 80 ng/mL (C1a, C2), 20 ng/mL (C1)

SAMPLE
Matrix: blood, dialysate, urine
Sample preparation: Plasma. Condition a 3 mL Baker cyanopropylsilane CN SPE cartridge with 2 mL MeOH, 2 mL water, and 2 mL buffer. 1 mL Plasma + 100 μL 100 μg/mL dibekacin in water, vortex for 15 s, add 1 mL buffer, vortex for 15 s, centrifuge at 3100 g at 4° for 7 min, add to SPE cartridge, wash with 500 μL water, wash with 250 μL mobile phase, elute to dryness. Elute with 250 μL mobile phase, inject an aliquot of the eluate. Urine, dialysate. Dilute 1:100 with water, add 100 μL 100 μg/mL dibekacin per 1 mL of sample, mix well, inject a 100 μL aliquot. (Buffer was 0.94 g sodium hexanesulfonate in 300 mL water, add 500 μL glacial acetic acid, dilute to 500 mL with water.)

HPLC VARIABLES
Guard column: 10 × 4.6 5 μm Hypersil C18
Column: 150 × 4.6 5 μm Hypersil C18
Mobile phase: MeOH:buffer 15:85 (Buffer was 3.48 g sodium hexanesulfonate + 28.4 g sodium sulfate in 2 L water, acidify to pH 3.4 with 2 mL glacial acetic acid.)
Column temperature: 25
Flow rate: 1.1
Injection volume: 100
Detector: F ex 338 em 418 (bandpass filter) following post-column reaction. The column effluent mixed with the reagent pumped at 0.4 mL/min and the mixture flowed through a 3 m × 0.05 mm i.d. knitted PTFE reaction coil at 25° to the detector (Derivatizing reagent was 0.4 g o-phthalaldehyde in 3 mL MeOH added to 390 mL buffer, add 2 mL β-mercaptoethanol, make up to 500 mL with water, store at 4°. Buffer was 1 M pH 10.4 borate from equal volumes of 1 M KOH and boric acid.)

CHROMATOGRAM
Retention time: 11, 17, 17.5, 22
Internal standard: dibekacin

OTHER SUBSTANCES
Simultaneous: kanamycin, isepamicin, tobramycin, netilmicin

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

SAMPLE
Matrix: formulations
Sample preparation: Mix 2 g cream with 3 mL n-butanol, add 5 mL 2% sulfuric acid, mix thoroughly. Separate lower aqueous layer and re-extract the organic layer with another portion of sulfuric acid. Combine the aqueous layers and make up to 100 mL with water. Filter a portion of the extract through a 0.45 μm Nylon 66 syringe filter. Dilute the filtrate with water, inject a 10 μL. aliquot.

HPLC VARIABLES
Column: 250 × 4.6 Metachem Inertsil C8
Mobile phase: 200 mM Sodium sulfate containing0.3 mM sodium 1-heptanesulfonate and 0.1% acetic acid
Flow rate: 1
Injection volume: 10

Detector: F ex 340 em 440 following post-column reaction. The column effluent mixed with reagent pumped at 1.0 mL/min and this mixture flowed through a 9 m × 0.25 mm I.D. stainless steel coil to the detector. (Reagent was 800 mg o-phthalaldehyde and 1 mL mercaptoethanol in 10 mL MeOH diluted to 1 L with 2.5% boric acid and adjusted to pH 10 with 2.5% KOH.)

CHROMATOGRAM
Retention time: 22.0
Limit of detection: 10 ng

OTHER SUBSTANCES

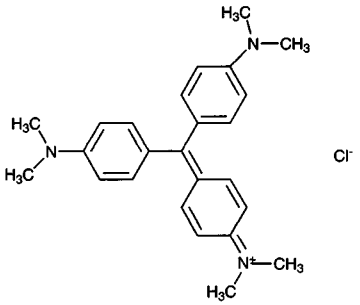
Gentian violet

Molecular formula: $C_{25}H_{30}ClN_3$
Molecular weight: 407.99
CAS Registry No.: 548-62-9
Merck Index: 4401



SAMPLE

Matrix: feed

Sample preparation: Prepare a Sephadex column by slurrying 5 g Sephadex LH-20 with 100 mL MeOH:water 90:10 in a beaker, let stand for 4 h, add to a 300 × 19 column, wash out beaker with MeOH:water 90:10 and add this to the column. Grind feed to pass 1 mm sieve and mix for at least 24 h on a revolving mixer. 10 g Ground feed + 50 mL MeOH:1 M HCl (99:1), shake vigorously on a mechanical shaker for 20 min, centrifuge at 2000 rpm for 15 min, decant, repeat extraction. Combine the extracts, mix well, evaporate an aliquot containing 5 μg gentian violet to dryness under reduced pressure at 48-50°. Reconstitute the residue in 2 mL MeOH:water 90:10, add to the Sephadex column, rinse the flask three times with 2 mL portions and once with a 6 mL portion of MeOH:water 90:10, add the rinses to the column, discard the eluates, elute with 6-6.5 mL MeOH:water 90:10, wash the column tip with 1 mL MeOH:water 90:10, evaporate the eluate to 500 μL under a stream of nitrogen at 48-50°, add 2 mL EtOH, evaporate to dryness under a stream of nitrogen at 48-50°, repeat process, reconstitute the residue in 1 mL MeOH, inject a 3 μL aliquot.

HPLC VARIABLES

Guard column: pellicular C18 (Alltech)
Column: 150 × 3.9 4 μm Nova-Pak RP-C18
Mobile phase: MeOH:buffer 85:15 (Buffer was 10 mM KH_2PO_4 adjusted to pH 3.0 with phosphoric acid.)
Flow rate: 0.75
Injection volume: 3
Detector: UV 588

SAMPLE
Matrix: tissue
Sample preparation: Condition a 6 mL neutral alumina SPE cartridge (J.T. Baker) and a 2.8 mL 500 mg Bond Elut PRS SPE cartridge with 5 mL MeCN. Place the alumina SPE cartridge on the top of the PRS SPE cartridge using a Bond Elut adapter. Mix 3 mL 250 mg/mL hydroxylamine hydrochloride in water with 5 mL 50 mM p-toluene sulfonic acid, 20 mL 100 mM ammonium acetate adjusted to pH 4.5 with glacial acetic acid, and 20 g fish tissue. Homogenize at 20000 rpm for 1 min (Ultra-Turrax T25 Tissuemizer, Tekmar, USA). Add 90 mL MeCN to the sample and homogenize for 10 s. Shake vigorously by hand for 1 min. Add 20 g basic alumina (Brockman activity I), shake for 1 min. Centrifuge, decant the supernatant. Add 30 mL MeCN to the residue, extract, combine the supernatants. Add 100 mL water, 50 mL dichloromethane, and 20 mL diethylene glycol to the supernatants, shake vigorously, separate the bottom layer. Again add 50 mL dichloromethane, shake for 1 min, combine the separated dichloromethane layers. Concentrate to 2-3 mL under reduced pressure at 65°. Add 2 mL dichloromethane and 5 mL MeCN then add the mixtures to the SPE cartridges. Rinse the flask twice with 5 mL portions of MeCN and add the rinses to the SPE cartridges. Wash with 5 mL MeCN to waste. Remove the alumina cartridge. Wash the PRS cartridge with 2 mL water and with 1 mL MeCN:100 mM ammonium acetate buffer 50:50 adjusted to pH 4.5 with glacial acetic acid. Elute with 2 mL MeCN:100 mM ammonium acetate buffer 50:50 adjusted to pH 4.5 with glacial acetic acid and collect in a tube containing 500 μL 2.5 mg/mL hydroxylamine hydrochloride in water. Inject a 100 μL aliquot.

HPLC VARIABLES
Guard column: 20 × 2.0 pellicular C18
Column: 150 × 4.6 5 μm SynChropak SCD-100 (SynChrom)
Mobile phase: MeCN:buffer 55:45 (Buffer was 400 mg ammonium acetate and 1 mL triethylamine in 400 mL water, adjusted to pH 3.0 with glacial acetic acid, and made up to 450 mL with water.)
Flow rate: 2.0

Injection volume: 100
Detector: E, ESA Coulochem Model, oxidative electrochemical cell (EC) +900 mV; UV 588; F ex 265 em 360

CHROMATOGRAM
Retention time: 7.9
Limit of detection: 10 ng/mL

OTHER SUBSTANCES
Extracted: metabolites, malachite green

KEY WORDS
SPE; catfish; trout

SAMPLE
Matrix: tissue
Sample preparation: Prepare an alumina column by adding 5 g alumina (Alcoa type F-20, 80-200 mesh, activated chromatographic grade) to a 75 × 16 column. Condition a Bond Elut disposable LRC carboxylic acid SPE cartridge with 10 mL MeCN. 25 g Ground tissue + 100 mL MeCN:buffer 80:20, shake vigorously for 1 min, let stand for 30 min, shake for 1 min, protect from light, let stand overnight, centrifuge at 2000 rpm for 15 min, filter (paper) the supernatant, add 100 mL MeCN:buffer 80:20 to the residue, shake vigorously for 15 s, protect from light, let stand for 1 h, centrifuge, filter (paper). Combine the filtrates, add 25 mL water, add 2 mL diethylene glycol, extract with 100 mL dichloromethane. Evaporate the dichloromethane extract just to dryness, add 5 mL MeCN to the residue, add to the alumina column, rinse flask three times with 5 mL portions of MeCN, add the rinses to the column, elute with 10 mL MeCN, call all the eluates and evaporate them just to dryness. Reconstitute the residue in 25 mL dichloromethane, add 15 mL citrate buffer, shake vigorously for 30 s, remove the organic layer, extract the aqueous layer with two 25 mL portions of dichloromethane. Combine the organic layers and evaporate them just to dryness. Reconstitute with 10 mL MeCN, add a 5 mL aliquot to the SPE cartridge, wash with 5 mL MeCN, discard all eluates, elute with two 2 mL portions of acidic MeOH, evaporate eluate under a stream of nitrogen at 40° to 1 mL, inject a 20 μL aliquot. (Citrate buffer (pH 6-7) was prepared fresh just before use from 1 part 1 M HCl and 2 parts saturated sodium citrate. Acidic MeOH was 95 mL, 5 mL water and 2 mL concentrated HCl, dilute a 1 mL aliquot of this solution to 100 mL with MeOH.)

HPLC VARIABLES
Column: 250 × 4.6 5 μm CN (Alltech)
Mobile phase: MeCN:buffer 50:50 (Buffer was 100 mM sodium acetate adjusted to pH 4.5 with acetic acid containing 50 mg/L EDTA.)
Flow rate: 1
Injection volume: 20
Detector: E, Bioanalytical Systems LC-4B, glassy carbon electrode 1.000 V, Ag/AgCl reference electrode

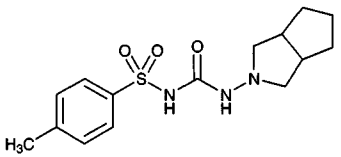
Gliclazide



Molecular formula: $C_{15}H_{21}N_3O_3S$
Molecular weight: 323.42
CAS Registry No.: 21187-98-4
Merck Index: 4448

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM
Retention time: 20.5

KEY WORDS
whole blood

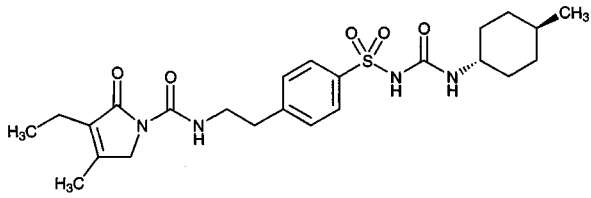
Glimepiride

Molecular formula: $C_{24}H_{34}N_4O_5S$
Molecular weight: 490.62
CAS Registry No.: 93479-97-1
Merck Index: 4449



SAMPLE
Matrix: blood
Sample preparation: 1 mL Serum + 40 μL 10 μg/mL IS1 in MeOH containing 10 μg/mL IS2 + 1 mL 50 mM pH 1 HCl/KCl buffer + 5 mL diethyl ether, shake for 20 min, centrifuge at 2500 g for 5 min. Remove 4 mL of the organic layer and evaporate it to dryness under a stream of nitrogen at 30°, reconstitute the residue in 100 μL reagent, heat at 100° for 20 min, evaporate to dryness under a stream of nitrogen at 60°, reconstitute with 200 μL initial mobile phase, inject a 100 μL aliquot. (Prepare reagent by dissolving 30 μL 2,4-dinitrofluorobenzene in 10 mL n-butyl acetate.)

HPLC VARIABLES
Column: 125 × 4.6 5 μm Spherisorb ODS
Mobile phase: Gradient. MeCN:50 mM perchloric acid 40:60 for 6 min, to 58:42 (step gradient), maintain at 58:42 for 8 min, re-equilibrate at initial conditions for 2 min.
Flow rate: 2
Injection volume: 100
Detector: UV 350

CHROMATOGRAM
Retention time: 11.3
Internal standard: IS1 (1-[4-[2-(3-ethyl-4-methyl-2-oxo-3-pyrroline-1-carboxamido)ethyl]phenylsulfonyl]-3-(4-ethylcyclohexyl)urea) (13.4), IS2 (1-[4-[2-(5-chloro-2-methoxyphenyl-1-carboxamido)ethyl]phenylsulfonyl]-3-(4-hydroxycyclohexyl)urea) (3.4)
Limit of detection: 5 ng/mL

OTHER SUBSTANCES
Extracted: metabolites
Simultaneous: glibornuride, glyburide, tolbutamide

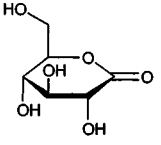
Gluconolactone



Molecular formula: $C_6H_{10}O_6$
Molecular weight: 178.14
CAS Registry No.: 90-80-2
Merck Index: 4465

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 250 × 4.1 PRP-X300 (Hamilton)
Mobile phase: 50 mM pH 4.5 NaH_2PO_4
Flow rate: 0.5
Detector: UV 200

CHROMATOGRAM
Retention time: 5.3

OTHER SUBSTANCES
Simultaneous: gluconic acid, dextrose

REFERENCE
Baxter Scientific Products Catalog, 1990-1, p. 123.

SAMPLE
Matrix: urine
Sample preparation: Lyophilize a 5 mL aliquot of urine at -50° for 18 h, reconstitute the residue in 5 mL DMF, centrifuge at 3000 g for 10 min. 1 mL Supernatant + 300 μL phenylisocyanate, heat at 100° for 1 h, cool, add 500 μL MeOH, inject an aliquot.

HPLC VARIABLES
Column: 220 × 4.6 5 μm ODS 224 RP18 (Brownlee)
Mobile phase: MeCN:water 60:40
Flow rate: 2
Injection volume: 10
Detector: UV

CHROMATOGRAM
Retention time: 9
Limit of detection: 0.4 ng

OTHER SUBSTANCES
Extracted: galactonolactone, galactitol
Simultaneous: dextrose, galactose, allose, myoinositol, sorbitol, mannitol

KEY WORDS
derivatization

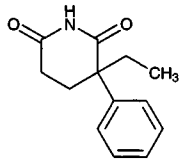
Glutethimide



Molecular formula: $C_{13}H_{15}NO_2$
Molecular weight: 217.27
CAS Registry No.: 77-21-4
Merck Index: 4485
Lednicer No.: 1 257

SAMPLE
Matrix: blood
Sample preparation: 200 μL Serum + 200 μL 50 μg/mL hexobarbital in MeCN + 25 μL glacial acetic acid, vortex for 10 s, centrifuge for 1 min, inject a 30-100 μL aliquot of the supernatant.

HPLC VARIABLES
Column: μBondapak C18
Mobile phase: Gradient. MeCN:7.5 g/L NaH_2PO_4 adjusted to pH 3.2 with phosphoric acid 5:95 to 22:78 over 24 min, to 45:55 over 10 min, maintain at 45:55 for 5 min. Re-equilibrate with 5:95 for 5 min.

Column temperature: 50
Flow rate: 3
Injection volume: 30-100
Detector: UV 210

CHROMATOGRAM
Retention time: 24.3
Internal standard: hexobarbital (20.6)
Limit of detection: 200-2000 ng/mL

OTHER SUBSTANCES
Extracted: acetaminophen, amobarbital, butabarbital, butalbital, chlordiazepoxide, diazepam, ethchlorvynol, flurazepam, methaqualone, methyprylon, nitrazepam, pentobarbital, phenobarbital, phenytoin, primidone, salicylic acid, secobarbital, theophylline
Simultaneous: amitriptyline, caffeine, clomipramine, codeine, desipramine, ethotoin, imipramine, lidocaine, mesantoin, methsuximide, nirvanol, nortriptyline, oxazepam, procainamide, phenylpropanolamine, propranolol, quinidine

SAMPLE
Matrix: blood
Sample preparation: Prepare an SPE cartridge by plugging the end of a 1 mL disposable pipette tip with glass wool and adding about 100 mg Chromosorb P/NAW. Add 50 μL plasma then 50 μL 10 μg/mL tolylphenobarbital in 200 mM HCl to the SPE cartridge, let stand for 2 min, elute with 1 mL chloroform:isopropanol 6:1. Evaporate the eluate to dryness under a stream of nitrogen at 30°, reconstitute the residue in 100 μL mobile phase, inject a 15 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 5 μm Supelcosil-LC-8
Mobile phase: MeCN:water 20:80
Flow rate: 3.3
Injection volume: 15
Detector: UV 208

CHROMATOGRAM
Retention time: 11.91
Internal standard: tolylphenobarbital (7.57)
Limit of detection: 50-100 ng/mL

OTHER SUBSTANCES
Extracted: theophylline, caffeine, barbital, ethosuximide, primidone, carbamazepinediol, phenacemide, methyprylon, nirvanol, phenobarbital, chloramphenicol, butabarbital, carbamazepine epoxide, mephenytoin, pentobarbital, amobarbital, carbamazepine, phenytoin, secobarbital, methaqualone
Noninterfering: acetaminophen, amikacin, amitriptyline, clonazepam, cyclosporine, desipramine, diazepam, digoxin, disopyramide, gentamicin, imipramine, lidocaine, methotrexate, N-acetylprocainamide, netilmicin, nortriptyline, procainamide, quinidine, salicylic acid, sulfamethoxazole, tobramycin, trimethoprim, valproic acid, p-hydroxyphenobarbital, vancomycin

SAMPLE

Matrix: blood

Sample preparation: 2 mL Whole blood or plasma + 2 mL buffer + 5 mL chloroform:isopropanol: n-heptane 60:14:26, shake gently horizontally for 10 min, centrifuge at 2800 g for 10 min. Remove the lower organic layer and evaporate it to dryness under vacuum at 45°, reconstitute the residue in 100 μL mobile phase, centrifuge at 2800 g for 5 min, inject a 50 μL aliquot of the supernatant. (Buffer was saturated ammonium chloride solution 25% diluted with water, adjusted to pH 9.5 with 25% ammonia solution.)

HPLC VARIABLES

Column: 300 × 3.9 4 μm NovaPack C18

Mobile phase: MeOH:THF:buffer 65:5:30 (Buffer was 0.68 g/L (10 mM (sic)) KH_2PO_4 adjusted to pH 2.6 with concentrated orthophosphoric acid.) (At the end of each session wash the column with water for 1 h and MeOH for 1 h, re-equilibrate for 30 min.)

Column temperature: 30

Flow rate: 0.8

Injection volume: 50

Detector: UV 259

CHROMATOGRAM

Retention time: 3.83

Limit of detection: <120 ng/mL

HPLC VARIABLES
Column: 250 × 4.6 Zorbax RX
Mobile phase: Gradient. A was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 1 L water. B was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 200 mL water, make up to 1 L with MeCN. A:B from 100:0 to 0:100 over 30 min, maintain at 0:100 for 5 min.
Column temperature: 30
Flow rate: 2
Detector: UV 210

OTHER SUBSTANCES
Also analyzed: acepromazine, acetaminophen, acetophenazine, albuterol, aminophylline, amitriptyline, amobarbital, amoxapine, amphetamine, amylocaine, antipyrine, aprobarbital, aspirin, atenolol, atropine, avermectin, barbital, benzocaine, benzoic acid, benzotropine, benzphetamine, berberine, bibucaine, bromazepan, brompheniramine, buprenorphine, buspirone, butabarbital, butacaine, butethal, caffeine, carbamazepine, carbromal, chloramphenicol, chlordiazepoxide, chloroquine, chlorothiazide, chloroxylenol, chlorphenesin, chlorpheniramine, chlorpromazine, chlorpropamide, chlortetracycline, cimetidine, cinchonidine, cinchonine, clenbuterol, clonazepam, clonixin, clorazepate, cocaine, codeine, colchicine, cortisone, coumarin, cyclazocine, cyclobenzaprine, cyclothiazide, cyheptamide, cymarin, danazol, danthron, dapsone, debrisoquine, desipramine, dexamethasone, dextromethorphan, dextropropoxyphene, diamorphine, diazepam, diclofenac, diethylpropion, diethylstilbestrol, diflunisal, digitoxin, digoxin, diltiazem, diphenhydramine, diphenoxylate, diprenorphine, dipyrone, disulfiram, dopamine, doxapram, doxepin, dronabinol, ephedrine, epinephrine, epinine, estradiol, estriol, estrone, ethacrynic acid, ethosuximide, etonitazene, etorphine, eugenol, famotidine, fenbendazole, fencamfamine, fenoprofen, fenproporex, fentanyl, flubendazole, flufenamic acid, flunitrazepam, 5-fluorouracil, fluoxymesterone, fluphenazine, furosemide, gentisic acid, gitoxigenin, glipizide, glybenclamide, guaiacol, halazepam, haloperidol, hydrochlorothiazide, hydrocodone, hydrocortisone, hydromorphone, hydroxyquinoline, ibogaine, ibuprofen, iminostilbene, imipramine, indomethacin, isocarbostyril, isocarboxazid, isoniazid, isoproterenol, isoxsuprine, ivermectin, ketamine, ketoprofen, kynurenic acid, levorphanol, lidocaine, lorazepam, lormetazepam, loxapine, mazindol, mebendazole, meclizine, meclofenamic acid, medazepam, mefenamic acid, megestrol, mepacrine, meperidine, mephentermine, mephenytoin, mephesin, mephobarbital, mepivacaine, mescaline, mesoridazine, methadone, methamphetamine, methapyrilene, methaqualone, methazolamide, methocarbamol, methoxamine, methsuximide, methyl salicylate, methyldopa, methyldopamine, methylphenidate, methylprednisolone, methyltestosterone, methyprylon, metoprolol, mibolerone, morphine, nadolol, nalorphine, naloxone, naltrexone, naphazoline, naproxen, nefopam, niacinamide, nicotine, niacin, nifedipine, niflumic acid, nitrazepam, norepinephrine, nortriptyline, noscapine, nylidrin, oxazepam, oxycodone, oxymorphone, oxyphenbutazone, oxytetracycline, papaverine, pargyline, pemoline, pentazocine, pentobarbital, persantine, phenacetin, phenazocine, phenazopyridine, phencyclidine, phendimetrazine, phenelzine, pheniramine, phenobarbital, phenothiazine, phensuximide, phentermine, phenylbutazone, phenylephrine, phenylpropanolamine, piperocaine, prazepam, prednisolone, primidone, probenecid, progesterone, propiomazine, propranolol, propylparaben, pseudoephedrine, puromycin, pyrilamine, pyrithyldione, quazepam, quinaldic acid, quinidine, quinine, ranitidine, recinnamine, reserpine, resorcinol, saccharin, albuterol, salicylamide, salicylic acid, scopolamine, scopoletin, secobarbital, strychnine, sulfacetamide, sufadiazine, sulfadimethoxine, sul-

faethidole, sulfamerazine, sulfamethazine, sulfamethoxizole, sulfanilamide, sulfapyridine, sulfasoxizole, sulindac, tamoxifen, temazepam, testosterone, tetracaine, tetracycline, tetramisole, thebaine, theobromine, theophylline, thiabendazole, thiamine, thiamylal, thiobarbituric acid, thioridazine, thiosalicylic acid, thiothixene, thymol, tolazamide, tolazoline, tobutamide, tolmetin, tranylcypromine, triamcinolone, tribenzylamine, trichloromethiazide, trifluoperazine, trihexyphenidyl, trimethoprim, tripelennamine, triprolidine, tropacocaine, tyramine, verapamil, vincamine, warfarin, yohimbine, zoxazolamine

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30

Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

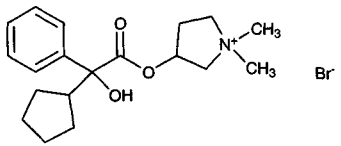
Glycopyrrolate



Molecular formula: $C_{19}H_{28}BrNO_3$
Molecular weight: 398.34
CAS Registry No.: 596-51-0
Merck Index: 4511

SAMPLE
Matrix: formulations
Sample preparation: Inject a 20 μL aliquot.

HPLC VARIABLES
Column: 100 × 4.6 Spheri-5 RP-8
Mobile phase: MeCN:buffer 45:55 (Buffer was 10 mM KH_2PO_4 adjusted to pH 4.0 with 1 M KOH.)
Flow rate: 1
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 11.0
Limit of detection: 6.9 μg/mL

OTHER SUBSTANCES
Simultaneous: ondansetron
Noninterfering: degradation products

KEY WORDS
injections; saline

SAMPLE
Matrix: urine
Sample preparation: Condition a 500 mg 14 mL 40 μm CCX-2 cation-exchange SPE cartridge (Worldwide Monitoring) with two 2.5 mL aliquots of MeOH, two 2.5 mL aliquots of water, and two 2.5 mL aliquots of 100 mM pH 7.00 phosphate buffer, do not allow to dry. 5 mL Urine + 3 mL 100 mM pH 7.00 phosphate buffer + 12.5 ng mepenzolate + 5 mL water, centrifuge at 800 g for 5 min, add to the SPE cartridge, wash with 5 mL MeOH, wash with 5 mL water, dry under vacuum for 5 min, elute with 4 mL MeOH:500 mM pH 3.00 ammonium acetate 95:5 (all flow rates were 1-2 mL/min). Evaporate the eluate under a stream of nitrogen at 60°, reconstitute in 100 μL MeOH, inject a 10 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.1 10 μm LiChroma (Chromatographic Specialties)
Mobile phase: MeOH:50 mM pH 3.0 ammonium acetate 80:20
Flow rate: 0.8
Injection volume: 10
Detector: MS, Sciex API III triple quadrupole, ion spray interface, split column effluent 95:5 before entering detector, nebulizing gas air at 550 kPa, collision gas argon, curtain gas nitrogen, positive-ion mode, m/z 318 and 116

CHROMATOGRAM
Retention time: 2.3
Internal standard: mepenzolate (m/z 340 and 130) (2.1)
Limit of detection: 0.25 ng/mL

KEY WORDS
SPE; horse

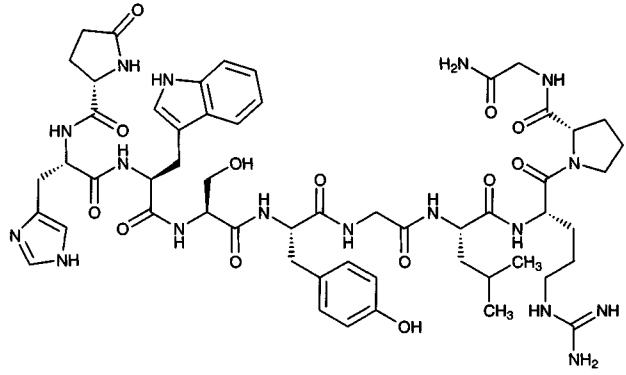
Gonadorelin

Molecular formula: $C_{55}H_{75}N_{17}O_{13}$
Molecular weight: 1182.31
CAS Registry No.: 33515-09-2, 51952-41-1 (HCl), 52699-48-6 (sulfate)
Merck Index: 5500



SAMPLE
Matrix: blood
Sample preparation: Condition a 1 mL Analytichem weak cation-exchange (carboxymethylhydrogen form, CBA) SPE cartridge with 1 mL 1% trifluoroacetic acid in MeOH, 1 mL MeOH, and 2 mL water. Add 1 mL plasma to the SPE cartridge, rinse the tube with 1 mL water, add the rinse to the SPE cartridge, wash with 1 mL 1% trifluoroacetic acid in water, wash with 2 mL water, wash with 2 mL MeOH, elute with 2 mL 1% trifluoroacetic acid in MeOH. Evaporate the eluate to dryness under a stream of nitrogen, reconstitute the residue in 100 μL MeOH:buffer 50:50, inject a 5-75 μL aliquot. (Buffer was 5.7 g monochloroacetic acid, 2.0 g NaOH, and 0.2 g disodium EDTA in 1 L water, pH 3.2.) [Procedure was not necessarily validated for this compound.]; SPE

HPLC VARIABLES
Column: 250 × 2 5 μm Ultrasphere octyl
Mobile phase: Gradient. A was MeOH containing 10 mM sodium octanesulfonate. B was buffer containing 10 mM sodium octanesulfonate. A:B from 45:55 to 70:30 over 30 min, maintain at 70:30 for 1 h. (Buffer was 5.7 g monochloroacetic acid, 2.0 g NaOH, and 0.2 g disodium EDTA in 1 L water, pH 3.2.)
Column temperature: 60
Flow rate: 0.3
Injection volume: 5-75

Detector: F ex 390 em 470 following post-column reaction. The column effluent mixed with 400 mM NaOH pumped at 0.15 mL/min and 0.05% ninhydrin pumped at 0.05 mL/min and the mixture flowed through a 12 m × 0.33 mm i.d. reaction coil at 70° to the detector.

CHROMATOGRAM
Retention time: 22
Limit of detection: 100 fmole

OTHER SUBSTANCES
Simultaneous: adrenocorticotropin, angiotensin I, angiotensin II, angiotensin III, atrial natriuretic peptide, bombesin, bradykinin, somatoliberin, vasopressin

KEY WORDS
plasma; SPE; post-column reaction

SAMPLE

Matrix: tissue

Sample preparation: Condition a Bond Elut C18 SPE cartridge with 3 mL water and 3 mL MeCN (in this order ?). Homogenize 400 mg brain tissue with 2 mL 100 mM HCl, add 20 μL 10 μM IS, add 2 mL acetone, mix, centrifuge at 2450 g for 15 min. Remove the supernatant and add it to 220 μL 1 M sodium bicarbonate and 500 μL 100 mM disodium EDTA, centrifuge at 2450 g for 15 min. Remove the supernatant and evaporate it to remove the acetone, dilute the aqueous residue with 2 mL water, add to the SPE cartridge. wash with 1 mL water, wash with 3 mL 100 mM HCl, wash with two 3 mL portions of dichloromethane, wash with 1 mL water, wash with 2 mL 100 mM pH 8.0 phosphate buffer, wash with 2 mL water, elute with 2 mL MeCN:100 mM pH 2.3 phosphate buffer 70:30. Evaporate the eluate under reduced pressure, make up to 400 μL with water, inject a 100 μL aliquot.

HPLC VARIABLES

Column: 200 × 4 5 μm TSKgel ODS-120T (Tosoh)

Mobile phase: Gradient. A was MeCN:300 mM pH 2.3 sodium phosphate buffer:water 1:20:79. B was MeCN:300 mM pH 2.3 sodium phosphate buffer:water 60:20:20. A:B from 90:10 to 55:45 over 33 min, maintain at 55:45 for 7 min, to 0:100 (step gradient), maintain at 0:100.

Flow rate: 1

Injection volume: 100

Detector: F ex 325 em 435 following post-column reaction. The column effluent mixed with 2 mM benzoin in 1.6 M KOH containing 700 mM 2-mercaptoethanol and this mixture flowed through a 15 m × 0.33 mm ID PTFE coil at 76 ± 1°. The effluent from this coil mixed with 500 mM Tris containing 2.1 M HCl pumped at 0.4 mL/min and this mixture flowed to the detector.

CHROMATOGRAM

Retention time: 29.2

Internal standard: [D-Phe^{11}]-neurotensin (40.0)

Limit of detection: 0.5 pmole

OTHER SUBSTANCES

Extracted: bradykinin, dynorphin 1-8, kallidin, leucine enkephalin-Arg, methionine enkephalin-Arg-Gly-Leu, methionine enkephalin-Arg-Phe, α-neoendorphin, β-neoendorphin, neurotensin, substance P, vasopressin

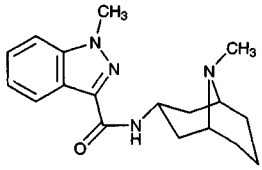
Granisetron



Molecular formula: $C_{18}H_{24}N_4O$
Molecular weight: 312.41
CAS Registry No.: 109889-09-0, 107007-99-8 (HCl)
Merck Index: 4557
Lednicer No.: 5 118

SAMPLE
Matrix: blood
Sample preparation: Filter (Amicon Centricon-10 microconcentrator, 10000 daltons molecular weight cutoff) 150 μL plasma while centrifuging at 5° at 5000 g for 100 min, inject a 10 μL aliquot of the ultrafiltrate.

HPLC VARIABLES
Column: 100 × 4.6 5 μm Spheri-5 silica
Mobile phase: MeCN:25 mM pH 4.2 sodium acetate 40:60
Flow rate: 1
Injection volume: 10
Detector: UV 305

CHROMATOGRAM
Retention time: 3.4
Limit of detection: 19 ng/mL

KEY WORDS
plasma; guinea pig; ultrafiltrate

REFERENCE
Capacio,B.R.; Byers,C.E.; Jackson,T.K.; Matthews,R.L. An HPLC method for the determination of granisetron in guinea pig plasma, *J.Anal.Toxicol.*, **1993**, *17*, 151–155.

SAMPLE
Matrix: blood
Sample preparation: Condition a 100 mg Bond Elut C2 SPE cartridge with two 1 mL portions of MeOH, 1 mL water, and two 1 mL portions of buffer. 1 mL Plasma + 100 μL 40 ng/mL IS in water + 500 μL buffer, add to the SPE cartridge, wash with 1 mL MeCN:water 40:60, remove all wash solvent, elute with 800 μL MeOH. Evaporate the eluate to dryness under a stream of nitrogen at 50°. Add 30 μL 10% trimethylsilyldiazomethane in hexane and 30 μL 2% N,N-diisopropylethylamine in MeOH to the residue, heat at 50° for 20 min, cool to room temperature, evaporate to dryness under a stream of nitrogen at 50°, reconstitute in 300 μL MeOH:water 10:90, centrifuge at 1700 g for 5 min, inject a 150 μL aliquot. (Phosphate buffer was 4.33 g Na_2HPO_4 and 3.04 g $NaH_2PO_4.2H_2O$ in 50 mL water.)

HPLC VARIABLES
Guard column: 15 × 3.2 NewGuard RP-18
Column: 250 × 4.6 5 μm Develosil ODS-5 (Nomura Chemical)
Mobile phase: MeOH:buffer 30:70 (Buffer was 15.4 g ammonium acetate and 20 mL tetra-n-butylammonium hydroxide in 1.7 L water, adjust pH to 4.70 with glacial acetic acid, make up to 2 L with water.)
Column temperature: 45
Flow rate: 1
Injection volume: 150
Detector: F ex 310 em 420

CHROMATOGRAM
Retention time: 9.5
Internal standard: 2-methyl-M-(endo-9-methyl-9-azabicyclo[3.3.1]non-3-yl)-2H-indazole-3-carboxamide hydrochloride (6)
Limit of detection: 42 pg/mL

OTHER SUBSTANCES
Extracted: metabolites

KEY WORDS
plasma; SPE; derivatization

REFERENCE

SAMPLE
Matrix: blood
Sample preparation: Condition a C2 SPE cartridge (Analytichem) with 1 mL MeOH, 1 mL water, and 1 mL 1 M pH 7.0 phosphate buffer. 1 mL Plasma + 50 μL water + 50 μL 100 ng/mL IS in water + 500 μL 1 M pH 7.0 phosphate buffer, add immediately to SPE cartridge, wash with 1 mL water, wash with 1 mL MeCN:water 40:60, remove wash solvent completely, elute with 1 mL MeOH, elute with 1 mL MeOH:trifluoroacetic acid 99:1. Combine the eluates and evaporate them to dryness under a stream of nitrogen at 40°, reconstitute the residue in 200 μL MeOH:water 10:90, vortex for 30 s, centrifuge at 2000 g for 5 min, transfer to a fresh vial, centrifuge at 2000 g for 5 min, inject a 10-65 μL aliquot.

HPLC VARIABLES
Guard column: 30 × 2.1 C8 (ABI Instruments)
Column: 150 × 2.1 Zorbax Rx C8
Mobile phase: MeCN:buffer 19:81 (Buffer was 0.95 g sodium hexanesulfonate in 405 mL 100 mM pH 4.7 acetate buffer.)
Column temperature: 30
Flow rate: 0.3
Injection volume: 10-65
Detector: E, ESA, E1 0.15 V, E2 0.35 V (measuring electrode), guard cell 0.4 V (before injector) followed by F ex 305 em 360

CHROMATOGRAM
Retention time: 17 (F)
Internal standard: 8-methyl-8-azabicyclo[3.2.1]oct-3-yl 1-methyl-1H-indazole-3-carboxylate (BRL 43704) (21) (F)
Limit of quantitation: 0.1 ng/mL

OTHER SUBSTANCES
Extracted: metabolites

KEY WORDS
plasma; SPE; fluorescence detection for granisetron and some metabolites; electrochemical detection for other metabolites

SAMPLE

Matrix: blood

Sample preparation: 500 μL Plasma + 7 μg IS, vortex for 10 s, add 1.5 mL toluene, add 250 μL buffer, shake for 20 min, centrifuge at 3000 g for 10 min. Remove 1 mL of the organic layer and evaporate it to dryness under a stream of nitrogen at 37°, reconstitute the residue in 40 μL mobile phase, vortex for 10 s, inject a 20 μL aliquot.

HPLC VARIABLES

Column: 250 × 4.6 10 μm Spherisorb CN

Mobile phase: MeCN:buffer 15:85 (Buffer was 100 mM NaH_2PO_4 adjusted to pH 4.5 with orthophosphoric acid.)

Flow rate: 2

Injection volume: 20

Detector: F ex 305 em 365

CHROMATOGRAM

Retention time: 6.64

Internal standard: N-(1-naphthyl)ethylenediamine dihydrochloride (3.60)

Limit of detection: 0.1 ng/mL

Limit of quantitation: 0.3 ng/mL

OTHER SUBSTANCES

Noninterfering: metabolites, anthracyclines, cimetidine, cisplatin, dexamethasone, etoposide, fluorouracil, methotrexate, methylprednisolone, ondansetron

KEY WORDS

plasma

SAMPLE

Matrix: blood, pleural effusion, urine

Sample preparation: Mix 500 μL serum, pleural effusion, or urine with 100 μL IS solution and 400 μL pH 9.0 ammonium acetate. Add to an Extrelut-1 SPE cartridge. After 15 min, elute with 3 mL and 4 mL portions of dichloromethane. Evaporate the eluate to dryness under a stream of nitrogen at 40°, reconstitute the residue with 100 μL mobile phase, inject an aliquot.

HPLC VARIABLES

Column: 250 × 4.6 10 μm LiChroCART LiChrospher 100 CN

Mobile phase: MeCN:100 mM pH 3.5 acetate buffer 30:70

Column temperature: 40

Flow rate: 1

Injection volume: 20

Detector: F ex 290 em 365

CHROMATOGRAM

Retention time: 11.3

Internal standard: BRL 43693A (Smith Kline Beecham) (9.5)

Limit of detection: 250 pg/mL

Limit of quantitation: 2 ng/mL

OTHER SUBSTANCES

Extracted: etoposide

Simultaneous: domperidone, metoclopramide, ondansetron

Noninterfering: cisplatin, carboplatin, dexamethasone

KEY WORDS
serum; SPE; pharmacokinetics

SAMPLE
Matrix: blood, urine
Sample preparation: 1 mL Plasma or urine + 100 μL IS in water + 500 μL 100 mM pH 12 phosphate buffer + 3 mL toluene, shake mechanically for 30 min, centrifuge. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 60°, reconstitute the residue in 100 μL mobile phase, inject an 80 μL aliquot.

HPLC VARIABLES
Guard column: 50 mm long unspecified
Column: 250 X 4.5 10 μM Apex CN
Mobile phase: MeOH:buffer 97:3 (Buffer was 50 mM sodium acetate containing 0.25% triethylamine adjusted to pH 6.0.)
Flow rate: 1
Injection volume: 80
Detector: F ex 305 em 360

CHROMATOGRAM
Retention time: 13.5
Internal standard: endo-1-methyl-O-(9-methyl-9-azabicyclo(3,3,1)non-3-yl)-1H-indazole-3-carboxylate (BRL 43704) (19.2)
Limit of detection: 0.1 ng/mL

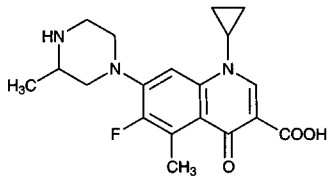
Grepafloxacin



Molecular formula: $C_{19}H_{22}FN_3O_3$
Molecular weight: 359.40
CAS Registry No.: 119914-60-2, 146863-02-7 (±), 161967-81-3 ((±) HCl)
Merck Index: 4567

SAMPLE
Matrix: blood
Sample preparation: Extract 200 µL plasma with dichloromethane:n-butanol 95:5 and evaporate to dryness. Treat the organic layer residue with Mosher's acid chloride (R-(-)- or S-(+)-α-methoxy-α -trifluoromethylphenylacetic acid chloride) and triethanolamine in dichloromethane for 1 hr. Reconstitute, inject an aliquot.

HPLC VARIABLES
Column: 150 × 3.2 5µm ODS
Mobile phase: MeCN:0.2% phosphoric acid 70:30
Column temperature: 35
Detector: F ex 290 em 470

CHROMATOGRAM
Retention time: 12.7 (S-(-)), 13.5 (R-(+))
Internal standard: ciprofloxacin (7.4)
Limit of quantitation: 25 ng/mL

KEY WORDS
derivatization; chiral; plasma

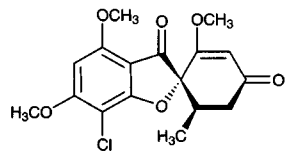
Griseofulvin



Molecular formula: $C_{17}H_{17}ClO_6$
Molecular weight: 352.8
CAS Registry No.: 126-07-8
Merck Index: 4571
Lednicer No.: 1 314

SAMPLE
Matrix: blood
Sample preparation: 100 µL Plasma + 100 µL p-phenylphenol in MeCN, vortex, centrifuge, inject a 20 µL aliquot of the supernatant.

HPLC VARIABLES
Column: 150 mm long 5 µm Novapack
Mobile phase: MeCN:0.1 M acetic acid, pH 3.5 45:55
Flow rate: 1
Injection volume: 20
Detector: UV 290

CHROMATOGRAM
Retention time: 3.0

Internal standard: p-phenylphenol (4.5)
Limit of detection: 50 ng/mL

KEY WORDS
rat; plasma; pharmacokinetics

SAMPLE
Matrix: blood, CSF, gastric contents, urine
Sample preparation: 200 μL Serum, urine, CSF, or gastric fluid + 300 μL reagent. Flush column A to waste with 500 μL 500 mM ammonium sulfate, inject sample onto column A, flush column A to waste with 500 μL 500 mM ammonium sulfate, backflush the contents of column A onto column B with mobile phase, monitor the effluent from column B. (Reagent was 8.05 M guanidine HCl and 1.02 M ammonium sulfate in water.)

HPLC VARIABLES
Column: A 40 μm preparative grade C18 (Analytichem); B 75 × 2.1 pellicular C18 (Whatman) + 250 × 4.6 5 μm C8 end-capped (Whatman)
Mobile phase: Gradient. A was 50 mM pH 4.5 KH_2PO_4. B was MeCN:isopropanol 80:20. A:B 90:10 for 1 min, to 30:70 over 20 min.
Column temperature: 50
Flow rate: 1.5
Detector: UV 220

CHROMATOGRAM
Retention time: 13.51
Internal standard: heptanophenone (19)

OTHER SUBSTANCES
Extracted: acetaminophen, allobarbital, azinphos, barbital, brallobarbitone, bromazepam, butethal, caffeine, carbamazepine, carbaryl, cephaloridine, chloramphenicol, chlordiazepoxide, chlorothiazide, chlorvinphos, clothiapine, cocaine, coomassie blue, desipramine, diazepam, diphenhydramine, dipipanone, ethylbromphos, flufenamic acid, formothion, indomethacin, lidocaine, lorazepam, malathion, medazepam, midazolam, oxazepam, paraoxon, penicillin G, pentobarbital, prazepam, propoxyphene, prothiophos, quinine, salicylic acid, secobarbital, strychnine, sulfamethoxazole, theophylline, thiopental, thioridazine, trimethoprim

KEY WORDS
serum; column-switching

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18

Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 292.6

CHROMATOGRAM
Retention time: 18.392

KEY WORDS
whole blood

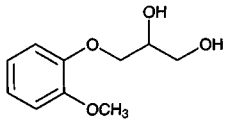
Guaifenesin



Molecular formula: $C_{10}H_{14}O_4$
Molecular weight: 198.22
CAS Registry No.: 93-14-1
Merck Index: 4582
Lednicer No.: 1 118

SAMPLE
Matrix: blood
Sample preparation: 500 μL Plasma + 100 μL 2.5 mg/mL O-desmethylnaproxen in MeOH + 400 μL acetone, homogenize for 10 min, centrifuge at 1000 g for 15 min. Remove supernatant and evaporate it to dryness under a stream of air at 35°. Take up residue in 500 μL mobile phase, inject 10 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 5 μm LiChrosorb RP-18
Mobile phase: MeOH:10 mM pH 6.5 citrate buffer 10:90
Column temperature: 35
Flow rate: 2
Injection volume: 10
Detector: F ex 230 em 306

CHROMATOGRAM
Retention time: 37
Internal standard: O-desmethylnaproxen (26)

OTHER SUBSTANCES
Simultaneous: metabolites

KEY WORDS
plasma; horse

Ketelaars,H.C.; Peters,J.G.; Anzion,R.B.; Van Ginneken,C.A. Isolation, partial identification and quantitative determination of four guaiphenesin glucuronides in plasma and urine of the horse by high-performance liquid chromatography, *J.Chromatogr.*, **1984**, *288*, 423–429.

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)

Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM
Retention time: 11.435

KEY WORDS
whole blood

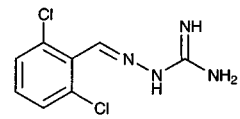
Guanabenz



Molecular formula: $C_8H_8Cl_2N_4$
Molecular weight: 231.08
CAS Registry No.: 5051-62-7, 23256-50-0 (acetate)
Merck Index: 4585
Lednicer No.: 2 123

SAMPLE
Matrix: formulations
Sample preparation: Finely powder tablets, weigh out amount equivalent to 30 mg guanabenz acetate, add 190 mL MeCN, sonicate for a few minutes, make up to 200 mL with MeCN, filter. Remove a 14-59 mL aliquot and add it to 9 mL 1 mg/mL carbamazepine in MeCN, make up to 100 mL with MeCN, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 10 μm octadecylsilane (Perkin-Elmer)
Mobile phase: MeCN:buffer 35:65 (Buffer was 4 mM KH_2PO_4 adjusted to pH 3.25 with phosphoric acid.)
Flow rate: 2.5
Injection volume: 20
Detector: UV 265

CHROMATOGRAM
Retention time: 2
Internal standard: carbamazepine (3)

OTHER SUBSTANCES
Simultaneous: mefruside, impurities

KEY WORDS
tablets

SAMPLE
Matrix: formulations
Sample preparation: Dilute a 500 μL aliquot of syrup with water to give a clonidine concentration of 5 μg/mL, filter (0.22 μm), inject a 15 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Zorbax TMS trimethylsilyl
Mobile phase: MeOH:buffer 65:35 (Buffer was 2.2 mM KH_2PO_4 and 16 mM Na_2HPO_4, pH 7.9.)
Flow rate: 1
Injection volume: 15
Detector: UV 254

CHROMATOGRAM
Retention time: 7
Internal standard: guanabenz

OTHER SUBSTANCES
Simultaneous: clonidine

KEY WORDS
syrup; guanabenz is IS

REFERENCE

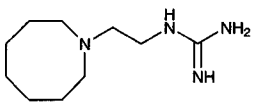
Guanethidine



Molecular formula: $C_{10}H_{22}N_4$
Molecular weight: 198.31
CAS Registry No.: 55-65-2, 645-43-2 (monosulfate), 60-02-6 (sulfate)
Merck Index: 4589
Lednicer No.: 1 282

SAMPLE

Matrix: blood
Sample preparation: Inject 200 μL serum onto column A and elute to waste with mobile phase A, after 2 min elute the contents of column A onto column B with mobile phase B, after another 3 min remove column A from the circuit, elute column B with mobile phase B, monitor the effluent from column B. Flush column A with mobile phase C for 10 min, re-equilibrate with mobile phase A for 7 min.

HPLC VARIABLES

Column: A 35 × 4.6 10 μm TSK precolumn BSA-ODS (Tosoh); B 150 × 4.6 5 μm TSKgel ODS-80TM (Tosoh)
Mobile phase: A 50 mM NaH_2PO_4 adjusted to pH 3.0 with 50 mM phosphoric acid; B MeCN:buffer 30:70, containing 7 g/L sodium 1-octanesulfonate (Buffer was 50 mM NaH_2PO_4 adjusted to pH 3.0 with 50 mM phosphoric acid.); C MeCN:water 50:50.
Flow rate: 1
Injection volume: 200
Detector: F ex 39 em 500 following post-column reaction. The effluent from column B mixed with 1 M NaOH pumped at 0.3 mL/min and with 6 g/L ninhydrin in water pumped at 0.3 mL/min and the mixture flowed through a 10 m × 0.5 mm ID PTFE coil at 56° to the detector.

CHROMATOGRAM

Retention time: 16
Limit of detection: 1 ng/mL
Limit of quantitation: 3.1 ng/mL

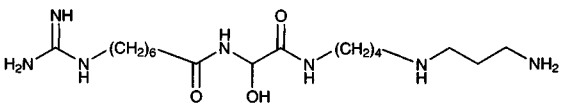
Gusperimus



Molecular formula: $C_{17}H_{37}N_7O_3$
Molecular weight: 387.53
CAS Registry No.: 104317-84-2, 84937-45-1 ((-)-form tri HCl), 85468-01-5 (tri HCl)
Merck Index: 4610

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 10 μg IS, mix well, make up to 10 mL with water, add to a 50 × 6 column of CM-Sephadex C-25, wash with 10 mL 300 mM NaCl, elute with 10 mL 400 mM NaCl, add the eluate to a Sep-Pak C18 SPE cartridge, wash with 5 mL water, elute with 10 mL MeOH. Evaporate the eluate to dryness under reduced pressure, reconstitute the residue in 200 μL mobile phase, vortex, inject a 50 μL aliquot.

HPLC VARIABLES
Guard column: Guard Pak C18 (Waters)
Column: 150 × 4.6 Cosmosil 5C18-P (Nacalai Tesque)
Mobile phase: MeCN:buffer 9:91 (Buffer was 10 mM pH 3 phosphate buffer containing 5 mM sodium pentanesulfonate.)
Flow rate: 1
Injection volume: 50
Detector: UV 205

CHROMATOGRAM
Retention time: 8.6
Internal standard: 1-amino-20-guanidino-11-hydroxy-4,9,12-triazaeicosane-10,13-dione (Heat 33.7 mmole 8-guanidinooctanamide, 30.7 mmole glyoxylspermidine hydrochloride, 33.7 mmole glutaric acid, and 2 g water at 60° for 8 h, dilute with water, chromatograph on CM-Sephadex C-25(Na^+) using gradient elution with water and 1 M NaCl. Evaporate the eluate fraction containing the product to dryness, extract the residue with MeOH, chromatograph the extract on Sephadex LH-20 with MeOH, evaporate the eluate to dryness to get the compound.) (18.6)
Limit of quantitation: 50 ng/mL

KEY WORDS
dog; plasma; SPE; pharmacokinetics

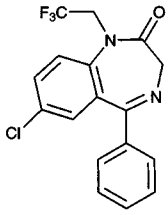
Halazepam



Molecular formula: $C_{17}H_{12}ClF_3N_2O$
Molecular weight: 352.74
CAS Registry No.: 23092-17-3
Merck Index: 4619

SAMPLE
Matrix: blood
Sample preparation: Condition a Bond-Elut C8 SPE cartridge with 2 mL MeOH and 2 mL water, do not allow to dry. Add 100 μL 5 ng/mL diazepam in 1 M pH 10.5 glycine buffer then 1 mL plasma to the SPE cartridge, wash with 2 mL water, wash with 50 μL MeOH, elute with three 200 μL aliquots of MeOH. Combine the eluates and evaporate them to dryness under a stream of nitrogen at 37°, reconstitute the residue in 100 μL mobile phase, inject a 50-80 μL aliquot.

HPLC VARIABLES
Column: 100 × 4.6 3 μm Adsorbosphere C8
Mobile phase: MeOH:20 mM pH 4.0 phosphate buffer 60:40
Flow rate: 1
Injection volume: 50-80
Detector: UV 240

CHROMATOGRAM
Retention time: 9.31
Internal standard: diazepam (7.76)
Limit of quantitation: 1 ng/mL

OTHER SUBSTANCES
Extracted: nordiazepam
Simultaneous: alprazolam, chlordiazepoxide, clonazepam, desmethyldiazepam, 3-hydroxyhalazepam, lorazepam, methylclonazepam, oxazepam, prazepam, quazepam, temazepam, triazolam

KEY WORDS
SPE; plasma; pharmacokinetics

SAMPLE

Matrix: tissue

Sample preparation: Homogenize brain in 100 mM NaOH (5 mL/g) by sonication. Add 250 μL homogenate (ca. 50 mg tissue equivalent) to 250 μL 100 mM pH 13 NaOH, vortex thoroughly. Add 2 mL toluene, mix (50 inversions), centrifuge at 15000 rpm at 4° for 20 min. Dry the organic phase under a stream of nitrogen. Add 2 mL toluene to the aqueous phase and repeat the extraction. Combine the organic layers and dry under a stream of nitrogen. Reconstitute the residue in 100 μL mobile phase, inject a 40 μL aliquot.

HPLC VARIABLES

Column: 100 × 4.6 3 μm Rainin C8 Microsorb
Mobile phase: MeCN:MeOH:25 mM potassium phosphate buffer 18.5:16.5:65
Flow rate: 0.9
Injection volume: 40
Detector: UV 240

CHROMATOGRAM

Retention time: 6.2
Internal standard: halazepam

OTHER SUBSTANCES

Extracted: midazolam

SAMPLE
Matrix: blood
Sample preparation: Dried blood. Allow 500 μL blood to dry on a strip of filter paper. Store at room temperature, protect from dust and sunlight. Add 15 μL 10 μg/mL IS in water to each strip and allow to dry at 37° for 30 min. Cut strip into small pieces, add 1 mL 10 mM perchloric acid, vortex, let stand at room temperature for 5 min, add 2 mL MeCN, vortex at high speed for 30 s, add 1 mL ammonia, mix thoroughly, add 5 mL hexane, vortex at moderate speed for 1 min, centrifuge at 2000 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 37°, reconstitute the residue in 120 μL mobile phase, inject a 50 μL aliquot. Whole blood, plasma. 500 μL Whole blood or plasma + 15 μL 10 μg/mL IS in water + 2 mL MeCN, vortex for 30 s, centrifuge at 2000 g for 5 min. Remove the supernatant and add it to 500 μL ammonia, vortex, add 5 mL hexane:diethyl ether 50:50, vortex for 1 min, centrifuge at 2000 g for 5 min. Remove the organic layer and evaporate it to dryness under a

stream of nitrogen at 37°, reconstitute the residue in 120 μL mobile phase, inject a 50 μL aliquot.

HPLC VARIABLES
Guard column: 10 × 4.6 5 μm CN precolumn RP-18 endcapped (Merck)
Column: 250 × 4.6 Hypersil 5 ODS
Mobile phase: MeCN:water:triethylamine 65:35:1 adjusted to pH 4 with orthophosphoric acid
Flow rate: 2
Injection volume: 50

Molecular formula: $C_{21}H_{23}ClFNO_2$
Molecular weight: 375.87
CAS Registry No.: 52-86-8, 74050-97-8 (decanoate)
Merck Index: 4629
Lednicer No.: 1 306

SAMPLE
Matrix: blood
Sample preparation: Mix 0.5 mL plasma with 25 μL 1 μg/mL IS in MeOH . Vortex for 30 s, add 5 mL ether and 3 mL 100 mM HCl, vortex for 1 min, centrifuge at 3000 rpm for 3 min. Remove the aqueous phase, add 7 mL chloroform (Caution! Chloroform is a carcinogen!) and 500 μL 1 M NaOH. Shake the mixture for 2 min, remove the chloroform phase, evaporate it to dryness under vacuum at 45°. Reconstitute the residue with 500 μL mobile phase, vortex for 1 min, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 150 × 3.9 5 μm Resolve C18 (Waters)
Mobile phase: MeOH:buffer 55:45 (Buffer was water containing 200 mM ammonium acetate, adjusted to pH 7.1-7.3 with acetic acid.)
Column temperature: 38
Flow rate: 1.5
Injection volume: 20
Detector: UV 249

CHROMATOGRAM
Retention time: 6.3
Internal standard: diazepam (5.1)
Limit of detection: 5 ng/mL

KEY WORDS
plasma; pharmacokinetics

SAMPLE
Matrix: blood
Sample preparation: 1 mL Serum + 500 μL 600 mM pH 10 sodium carbonate/bicarbonate buffer + 8 mL heptane:isoamyl alcohol 98:2, shake at 250 cycles/min for 5 min, centrifuge at 1500 g for 10 min. Freeze the aqueous layer, evaporate the heptane layer to dryness under a gentle stream of nitrogen at 60°. Dissolve the residue in 75 μL mobile phase, inject a 65 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 LiChroCart
Mobile phase: MeOH:40 mM pH 7.0 ammonium acetate buffer 90:10
Flow rate: 1
Injection volume: 65
Detector: UV 280

CHROMATOGRAM
Retention time: 5.10
Internal standard: haloperidol

OTHER SUBSTANCES
Simultaneous: amitriptyline, citalopram, chlorprothixene, clomipramine, clozapine, desipramine, desmethylcitalopram, desmethylclomipramine, desmethylsertraline, diltiazem, fluoxetine, fluphenazine, 10-hydroxyamitriptyline, 8-hydroxyclomipramine, 8-hydroxydesmethylclomipramine, 10-hydroxynortriptyline, hydroxyzine, imipramine, methotrimeprazine sulfoxide, mianserine, norfluoxetine, nortriptyline, paroxetine, perphenazine, sertraline, zuclopenthixol
Noninterfering: carbamazepine, clonazepam, flunitrazepam, nitrazepam, oxazepam, oxcarbazepine

KEY WORDS
serum; haloperidol is IS

SAMPLE
Matrix: blood
Sample preparation: After each extraction or wash step, centrifuge the sample at 2000 g for 5 min. 2 mL Plasma + 50 μL 500 ng/mL IS + 500 μL 2 M NaOH + 8 mL n-hexane:isoamyl alcohol 99:1, extract gently for 20 min on rotator in a horizontal position, centrifuge at 2000 g for 5 min. Extract the organic layer with 1 mL 200 mM HCl for 15 min by vigorous shaking, discard the organic layer, wash the aqueous layer with 5 mL n-hexane:isoamyl alcohol 99:1, discard the organic layer. Add 500 μL 2 M NaOH, extract with 7 mL n-hexane:isoamyl alcohol 99:1 for 15 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 37°, reconstitute the residue in 50 μL mobile phase, inject a 1 μL aliquot.

HPLC VARIABLES
Column: 150 × 1 5 μm Nucleosil C18
Mobile phase: MeCN:2 mM ammonium formate 45:55 adjusted to pH 3.0 with formic acid
Flow rate: 50 μL/min
Injection volume: 1
Detector: MS, API 100 Sciex, electrospray, nitrogen as the nebulizing and curtain gas, orifice voltages 20, 60, 120, m/z 376.2

CHROMATOGRAM
Retention time: 6.6
Internal standard: chlorohaloperidol (8.7)
Limit of detection: 75 pg/mL
Limit of quantitation: 100 pg/mL

SAMPLE

Matrix: blood

Sample preparation: 10 mL Plasma or whole blood + 1 mL 1 M NaOH, extract twice with 10 mL hexane for 30 min. Remove the organic layers and evaporate them to dryness under a stream of nitrogen, reconstitute the residue in 1 mL 100 mM HCl, add 5 mL chloroform, vortex for 1 min, centrifuge. Remove a 4.5 mL aliquot of the organic layer and evaporate it to dryness, reconstitute the residue in 100 μL mobile phase, inject a 50 μL aliquot. (It is implied, but not explicitly stated in the paper, that this extraction procedure works for this compound.)

HPLC VARIABLES

Column: 10 μm Micropak CN (Varian)
Mobile phase: MeCN:20 mM ammonium acetate 90:10
Flow rate: 2.5
Injection volume: 50
Detector: UV 254

CHROMATOGRAM

Retention time: 5.1
Limit of detection: 10 ng/mL

OTHER SUBSTANCES

Simultaneous: acetophenazine, amitriptyline, benztropine, butaperazine, carphenazine, chlorpromazine, imipramine, mesoridazine, nortriptyline, orphenadrine, piperacetazine, promazine, promethazine, thioridazine, thiothixene, trifluoperazine, triflupromazine, trihexyphenidyl, trimeprazine
Interfering: fluphenazine

SAMPLE
Matrix: blood

Sample preparation: 1 mL Plasma + 100 μL 200 ng/mL IS in MeOH + 1 mL 50 mM pH 10 borate buffer, vortex briefly, add to an Extrelut 3 SPE cartridge, let stand for 5 min, elute with 15 mL hexane:dichloromethane 50:50. Add the eluate to 3 mL 50 mM sulfuric acid, mix for 10 min, centrifuge at 3000 g for 10 min. Remove the aqueous layer and add it to 6 mL hexane: dichloromethane 50:50, wash for 5 min, centrifuge. Make the aqueous layer basic with 150 μL 28% ammonia, extract twice with 3 mL hexane:dichloromethane 50:50. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 60°, reconstitute the residue in 100 μL mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES

Guard column: 30 × 4.6 5 μm Spherisorb cyano
Column: 250 × 4.6 5 μm Ultrasphere cyano
Mobile phase: MeCN:buffer 60:40 (Buffer was 50 mM KH_2PO_4 adjusted to pH 6.5 with 28% ammonia.)
Flow rate: 1
Injection volume: 20
Detector: E, 5100 A Coulochem, 5020 guard cell 1.00 V, 5011 analytical cell, detector 1 0.55 V, detector 2 0.80 V, output of detector 2 is monitored

CHROMATOGRAM

Retention time: 21.1 (haloperidol), 14.9 (reduced haloperidol)
Internal standard: methylrisperidone (R68808) (14.3)

OTHER SUBSTANCES

Extracted: chlorpromazine, clomipramine, cyamemazine, desipramine, droperidol, flunitrazepam, imipramine, pipamperone, risperidone, trihexyphenidyl
Noninterfering: alprazolam, bromazepam, carbamazepine, chlorazepate, diazepam, diphenylhydantoin, estazolam, ethylbenzatropine, oxazepam, phenobarbital, triazolam, valproic acid

SAMPLE
Matrix: blood
Sample preparation: Automated SPE by ASPEC system. Condition a C18 Clean-Up SPE cartridge (CEC 18111, Worldwide Monitoring) with 2 mL MeOH then 2 mL water. 1 mL Plasma + 1 mL 400 ng/mL protriptyline in water, vortex, add to column, wash with 3 mL water, wash with 3 mL 750 mL/L methanol. Elute with three aliquots of 300 μL 0.1 M ammonium acetate in MeOH. Add 0.5 mL 0.5 M NaOH and 4 mL 50 mL/L isopropanol in heptane to eluate, mix thoroughly. Allow 5 min for phase separation. Remove upper heptane phase and add it to 300 μL 0.1 M phosphoric acid (pH 2.5), mix, separate, inject a 100 μL aliquot of the aqueous phase.

HPLC VARIABLES
Guard column: LC-8-DB (Supelco)
Column: 150 × 4.6 LC-8-DB (Supelco)
Mobile phase: MeCN:buffer 35:65 (Buffer was 10 mL/L triethylamine in water adjusted to pH 5.5 with glacial acetic acid.)
Flow rate: 2
Injection volume: 100
Detector: UV 228

CHROMATOGRAM
Retention time: 3.4 (haloperidol), 2.5 (reduced haloperidol)
Internal standard: protriptyline (4)

OTHER SUBSTANCES
Extracted: acetazolamide, amitriptyline, chlordiazepoxide, chlorimipramine, chlorpromazine, desipramine, diazepam, encainide, fluoxetine, flurazepam, hydroxyethylflurazepam, ibuprofen, imipramine, lidocaine, maprotiline, methadone, methaqualone, mexiletine, midazolam, norchlorimipramine, nordiazepam, norfluoxetine, nortriptyline, norverapamil, pentazocine, promazine, propafenone, propoxyphene, propranolol, protriptyline, quinidine, temazepam, trimipramine, verapamil
Noninterfering: acetaminophen, acetylmorphine, amiodarone, amobarbital, amphetamine, bendroflumethiazide, benzocaine, benzoylecgonine, benzthiazide, butalbital, carbamazepine, chlorothiazide, clonazepam, cocaine, codeine, cotinine, cyclosporine, cyclothiazide, desalkylflurazepam, diamorphine, dicumerol, ephedrine, ethacrynic acid, ethanol, ethchlorvynol, ethosuximide, furosemide, glutethimide, hydrochlorothiazide, hydrocodone, hydroflumethiazide, hydromorphone, lorazepam, mephentermine, meprobamate, methamphetamine, metharbital, methoxsalen, methoxyphenteramine, methsuximide, methylcyclothiazide, metoprolol, MHPG, monoacetylmorphine, morphine, normethsuximide, oxazepam, oxycodone, oxymorphone, pentobarbital, phencyclidine, phenteramine, phenylephrine, phenytoin, polythiazide, primidone, prochlorperazine, salicylic acid, sulfanilamide, THC-COOH, theophylline, thiazolam, thiopental, thioridazine, tocainide, trichloromethiazide, trifluoperazine, valproic acid, warfarin
Interfering: dextromethorphan, diphenhydramine, doxepin, fentanyl, flecainide, nordoxepin, trazodone

SAMPLE
Matrix: blood, gastric contents, tissue, urine
Sample preparation: 1 mL Blood, urine, or gastric contents or 1 g tissue homogenate + 500 μL buffer + 8 mL n-hexane:ethyl acetate 70:30, mix on a rotary mixer for 10 min, centrifuge at 3000 g for 8 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 100 μL 12.5 mM NaOH in MeOH:water 50:50, inject a 50 μL aliquot. (Buffer was 13.8 g potassium carbonate in 100 mL water, pH adjusted to 9.5 with concentrated HCl.)

HPLC VARIABLES
Guard column: 4 × 4 30 μm LiChrocart Aluspher RP-select B (Merck)
Column: 125 × 4 5 μm Aluspher RP-select B (Merck)
Mobile phase: Gradient. A was 12.5 mM NaOH in MeOH. B was 12.5 mM NaOH in water. A:B 10:90 for 5 min, to 90:10 over 15 min, maintain at 90:10 for 5 min, return to initial conditions over 1 min, re-equilibrate for 5 min.
Flow rate: 1
Injection volume: 50
Detector: UV 230, 254

CHROMATOGRAM
Retention time: 17

OTHER SUBSTANCES

Extracted: alprenolol, amitriptyline, bromazepam, carbamazepine, chlordiazepoxide, chlorpromazine, clonazepam, desipramine, diazepam, flunitrazepam, nitrendipine, nordiazepam, nortriptyline, pindolol, zolpidem

Also analyzed: acebutolol, acetaminophen, alprazolam, amphetamine, atenolol, betaxolol, brotizolam, caffeine, camazepam, captopril, chloroquine, clobazam, clomipramine, clothiapine, clotiazepam, cloxazolam, cocaine, codeine, diclofenac, dihydralazine, dihydrocodeine, dihydroergotamine, diphenhydramine, domperidone, doxepin, droperidol, ergotamine, ethyl loflazepate, fenethylline, fluoxetine, flupentixol, flurazepam, furosemide, gliclazide, hydrochlorothiazide, hydroxyzine, ibuprofen, imipramine, ketazolam, loprazolam, lorazepam, lormetazepam, maprotiline, medazepam, mepyramine, methadone, methaqualone, methyldopa, methylphenidate, metoclopramide, metoprolol, mexiletine, mianserin, midazolam, minoxidil, morphine, nadolol, nitrazepam, oxprenolol, papaverine, pentazocine, phenprocoumon, phenylbutazone, pipamperone, piritramide, practolol, prazepam, prazosin, promazine, promethazine, propoxyphene, propranolol, prothipendyl, quinine, sotalol, sulpride, thioridazine, trazodone, triazolam, trimipramine, tripelennamine, tyramine, verapamil, yohimbine

SAMPLE

Matrix: blood, tissue

Sample preparation: Blood or serum. 1 mL Blood or serum + 1 μg cianopramine + 1 mL water, vortex, add 1 mL 200 mM sodium carbonate, vortex, add 6 mL hexane:1-butanol 95:5, gently agitate for 30 min, centrifuge at 2500 g for 5 min. Remove the organic layer and add it to 100 μL 0.2% phosphoric acid, agitate gently for 30 min, centrifuge for 5 min. Remove the organic layer and inject a 30 μL aliquot of the aqueous layer. Liver homogenate. 0.5 mL Liver homogenate + 10 μg cianopramine + 500 μL 2% sodium tetraborate + 8 mL hexane:1-butanol 95:5, gently agitate for 30 min, centrifuge at 2500 g for 5 min. Remove the organic layer and add it to 400 μL 0.2% phosphoric acid, agitate gently for 30 min, centrifuge for 5 min. Remove the organic layer and inject a 30 μL aliquot of the aqueous layer.

HPLC VARIABLES

Guard column: 15 × 3.2 7 μm RP-18 Newguard (Applied Biosystems)
Column: 100 × 4.6 5 μm Brownlee Spheri-5 RP-18
Mobile phase: MeCN:100 mM NaH_2PO_4:diethylamine 40:57.5:2.5
Flow rate: 2
Injection volume: 30
Detector: UV 220

CHROMATOGRAM

Retention time: 4.80
Internal standard: cianopramine (8.93)

OTHER SUBSTANCES

Simultaneous: amitriptyline, amoxapine, benztropine, brompheniramine, chlorpheniramine, chlorpromazine, clomipramine, cyproheptadine, desipramine, diphenhydramine, dothiepin, doxepin, fluoxetine, imipramine, loxapine, maprotiline, mesoridazine, methadone, metoclopramide, mianserin, moclobemide, nomifensine, nordoxepin, norfluoxetine, nortriptyline, pentobarbital, pheniramine, promethazine, propoxyphene, propranolol, protriptyline, quinidine, quinine, sulforidazine, thioridazine, thiothixene, tranylcypromine, trazodone, trihexyphenidyl, trimipramine, triprolidine

Noninterfering: dextromethorphan, norphetidine, phenoxybenzamine, prochlorperazine, trifluoperazine

Interfering: meperidine, norpropoxyphene, northiaden

KEY WORDS

serum; whole blood; liver

REFERENCE
McIntyre,I.M.; King,C.V.; Skafidis,S.; Drummer,O.H. Dual ultraviolet wavelength high-performance liquid chromatographic method for the forensic or clinical analysis of seventeen antidepressants and some selected metabolites, *J.Chromatogr.*, **1993**, *621*, 215–223.

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM
Retention time: 14.415

KEY WORDS
whole blood

Retention time: k' 8.91

OTHER SUBSTANCES
Also analyzed: amoxicillin, antipyrine, carbamazepine, chlorpheniramine, chlorpromazine, clonidine, codeine, desipramine, diphenhydramine, dipyridamole, ephedrine, flufenamic acid, hydroxyzine, imipramine, indomethacin, lidocaine, megestrol acetate, metoprolol, nabumetone, nadolol, phenobarbital, phenol, promazine, propranolol, pyrilamine, quinidine, ropinirole, testosterone, thioridazine, tolfenamic acid, verapamil
Noninterfering: acetaminophen, aspirin, azathioprine, caffeine, carprofen, chlorambucil, cimetidine, fenoterol, flurbiprofen, ibuprofen, ketoprofen, ranitidine, salicylic acid, sulfamethoxazole, theophylline, thioguanine, tiaprofenic acid, trimethoprim, valproic acid

KEY WORDS
comparison with capillary electrophoresis

REFERENCE
Hanna,M.; de Biasi,V.; Bond,B.; Salter,C.; Hutt,A.J.; Camilleri,P. Estimation of the partitioning characteristics of drugs: A comparison of a large and diverse drug series utilizing chromatographic and electrophoretic methodology, *Anal.Chem.*, **1998**, *70*, 2092–2099.

SAMPLE
Matrix: tissue
Sample preparation: Condition a Sep-Pak C18 SPE cartridge with 5 mL MeOH and 5 mL water. Homogenize kidney with a kitchen grinder. Weigh out a 5 g sample and add 20 mL MeCN with continuous gentle mixing, mix vigorously on a vibromixer at 1500 rpm for 30 s, sonicate for 2 min, centrifuge at 4000 g for 5 min. Mix 7.5 mL sample extract and 40 mL 10% NaCl and add to SPE cartridge, wash with 1 mL 10 mM sulfuric acid, wash with 2 mL air, elute with 2 mL acidic MeCN. Place eluate in a washed tube and evaporate to 300 μL at 70° under a stream of nitrogen, mix gently, add 1 mL n-hexane, mix on a vibromixer for 30 s, centrifuge at 2000 g, inject a 50 μL aliquot of the aqueous phase. (Acidic MeCN was 1 mL 50 mM sulfuric acid and 100 mL MeCN. The washed tube was prepared by rinsing with concentrated ammonia, water, and acetone and drying under a stream of nitrogen.)

HPLC VARIABLES
Guard column: 10 × 2.1 37-50 μm Bondapak C18
Column: 300 × 3.9 Bondapak C18
Mobile phase: MeCN:water 55:45 containing 2.46 g/L anhydrous sodium acetate, pH adjusted to 6.5 with acetic acid
Flow rate: 1.2
Injection volume: 50

Detector: UV 240

CHROMATOGRAM
Retention time: 8
Limit of detection: 2 ng/g

OTHER SUBSTANCES
Extracted: azaperol, carazolol, acepromazine, xylazine, azaperone, propiomazine, chlorpromazine

KEY WORDS
SPE; pig; kidney

SAMPLE
Matrix: tissue
Sample preparation: Condition a Bond-Elut C18 SPE cartridge with 5 mL MeOH and 5 mL water. Cut pig kidney or liver into small pieces and homogenize. 5 g Homogenate + 10 mL MeCN, shake, vortex for 30 s, sonicate for 3 min, vortex for 30 s, sonicate for 3 min, centrifuge at 10000 g for 20 min. Add 7.5 mL supernatant + 40 mL 10% NaCl to the SPE cartridge at about 1 mL/min, do not allow cartridge to dry out, wash with 850 μL 10 mM sulfuric acid, dry with air, elute with 3.5 mL acidic MeCN. Evaporate the eluate to dryness under a stream of nitrogen at 50°, reconstitute the residue in 300 μL 10 mM sulfuric acid, vortex briefly, add 1 mL hexane, vortex for 30 s, centrifuge at 2000 g for 5 min, inject an aliquot of the aqueous layer. (Acidic MeCN was 1 mL 50 mM sulfuric acid in 100 mL MeCN.)

HPLC VARIABLES
Guard column: Hypersil 5 μm SAS C1
Column: 250 mm long 5 μm Hypersil SAS C1
Mobile phase: MeCN:water 50:50 containing 0.77 g/L ammonium acetate
Flow rate: 2
Detector: E, ESA Model 5100A Coulochem, first electrode +0.4 V, second electrode (which was monitored) +0.7 V, Model 5020 guard cell after pump but before injector at +0.75 V

CHROMATOGRAM
Retention time: 12.5
Limit of detection: 2 ng/g

Halothane

Molecular formula: $C_2HBrClF_3$
Molecular weight: 197.38
CAS Registry No.: 151-67-7
Merck Index: 4634

SAMPLE
Matrix: solutions
Sample preparation: Mix 50 μL phosphate buffer containing isoflurane and 50 μL 0.05 mM toluene in MeOH, inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: RCSS Guard-Pak μBondapak C18 precolumn cartridge
Column: 100 × 8 4 μm Nova-Pak C18 Radial Compression Module
Mobile phase: MeOH:water 50:50
Flow rate: 3.5
Injection volume: 20
Detector: UV 203

CHROMATOGRAM
Retention time: 6
Internal standard: toluene (12)
Limit of detection: 0.001 mM

OTHER SUBSTANCES
Simultaneous: enflurane, isoflurane

KEY WORDS
buffer

REFERENCE

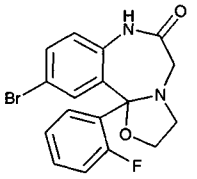
Haloxazolam



Molecular formula: $C_{17}H_{14}BrFN_2O_2$
Molecular weight: 377.21
CAS Registry No.: 59128-97-1
Merck Index: 4635

SAMPLE
Matrix: blood
Sample preparation: 500 μL Serum + 20 μL 20 μg/mL IS + 200 μL 1 M potassium carbonate + 3 mL chloroform, mix for 2 min, centrifuge at 1200 g for 5 min, aspirate aqueous phase. Evaporate the organic phase under a stream of nitrogen at 40°. Dissolve the residue in 100 μL mobile phase, inject a 20 μL aliquot. (Caution! Chloroform is a carcinogen!)

HPLC VARIABLES
Column: 100 × 4.6 2 μm TSK gel Super-ODS (A) or 100 × 4.6 5 μm Hypersil ODS-C18 (B)
Mobile phase: MeCN:5 mM pH 6 NaH_2PO_4 45:55
Flow rate: 0.65
Injection volume: 20

Detector: UV 254

CHROMATOGRAM
Retention time: 41.5 (A), 100.6 (B)
Internal standard: diazepam (29.8 (A), 77.5 (B))
Limit of quantitation: 50 ng/mL (A)

OTHER SUBSTANCES
Extracted: bromazepam, chlordiazepoxide, clonazepam, estazolam, etizolam, flutazolam, lorazepam, nitrazepam, oxazolam, triazolam
Simultaneous: alprazolam
Noninterfering: barbital, carbamazepine, cloxazolam, ethosuximide, hexobarbital, mexazolam, oxazepam, pentobarbital, phenobarbital, phenytoin, primidone, trimethadione

KEY WORDS
serum

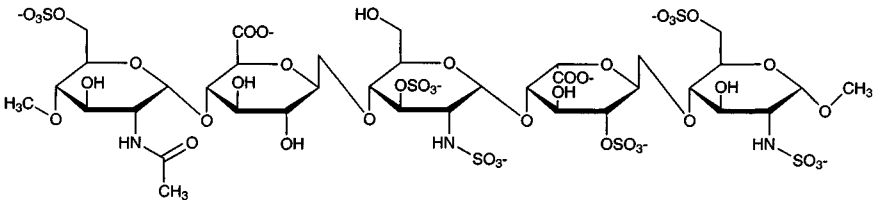
Heparin

Molecular weight: 6000-30000
CAS Registry No.: 9005-49-6, 9041-08-1 (Na salt)
Merck Index: 4685



SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 500 μL 10 M NaOH, shake on a slow rotatory mixer for 5 min, add 5 mL diethyl ether, rotomix 10 min, centrifuge at 700 g for 5 min, repeat extraction. Combine organic layers, evaporate to dryness under a stream of nitrogen at 37°, dissolve in 250 μL mobile phase, inject aliquot.

HPLC VARIABLES
Column: 150 × 3.9 4 μm Novapack C18
Mobile phase: MeCN:MeOH:buffer 35:15:50 (Buffer was 50 mM KH_2PO_4 adjusted to pH 3.6 with phosphoric acid.)
Flow rate: 1.6
Injection volume: 50
Detector: E, Waters Model 464 pulsed electrochemical detector, + 1 V versus Ag/AgCl

CHROMATOGRAM
Retention time: 0.99
Limit of detection: 50 pg/mL

OTHER SUBSTANCES
Simultaneous: ethinylestradiol, estrone, estriol, estradiol
Noninterfering: pentobarbital

KEY WORDS
plasma; rabbit

SAMPLE
Matrix: urine
Sample preparation: Mix 9 mL urine with 600 μL 5% hexadecylpyridinium chloride, keep at 0° for 4 h. Centrifuge at 2300 g for 15 min, wash the precipitate twice with 1.5 mL 0.1% hexadecylpyridinium chloride. Dissolve the precipitate in 1 mL 2.5 M NaCl. Centrifuge at 2300 g for 15 min. Add 11 mL EtOH:water 85:15 to he supernatant, keep overnight at 0°. Centrifuge at 2300 g for 15 min at 4°. Dry the precipitate under reduced pressure, re-dissolve in 50 μL 200 mM pH 8.0 Tris-HCl buffer. Add 10 μL of an aqueous solution containing 0.1 U chondroitinase ABC, incubate at 37°. for 3 h. Add 250 μL EtOH, keep overnight at 4 dg. Centrifuge at 4° at 2300 g for 15 min. Wash the precipitate with three 1 mL portions of EtOH:water 75:25., dry under reduced pressure. Redissolve in 50 μL 100 mM acetate buffer containing 10 mM pH 7.0 calcium acetate. Mix 10 μL sample with 10 μL 100 mM acetate buffer containing 10 mM pH 7.0 calcium acetate and 30 μL aqueous heparin lyase solution, incubate at 37° for 12 h. Inject a 2 μL aliquot. (The heparin lyase solution contained 4 mU heparin lyase I, 0.4 mU heparin lyase II, and 0.4 mU heparin lyase III.)

HPLC VARIABLES
Column: 150 × 2.0 5 μm TSK gel Amide-80 column (TOSOH, Japan)
Mobile phase: MeCN:water:200 mM pH 7.0 sodium phosphate buffer:3.0 M ammonium chloride 32:10:1:1
Column temperature: 60
Flow rate: 0.4
Injection volume: 2
Detector: F ex 346 em 410 following post-column reaction. The column effluent mixed with 1% 2-cyanoacetamide solution containing 500 mM NaOH pumped at 0.25 mL/min and this mixture flowed through a 10 m × 0.5 mm reaction coil at 110° and a 2 m × 0.25 mm cooling coil to the detector.

CHROMATOGRAM
Retention time: 7.1 (δ UA-GlcNAc), 8.5 (δ UA-GlcNAc6S), 10.5 (δ UA2S-GlcNac6S), 11.0 (δ UA-GlcNS), 8.9 (δ UA2S-GlcNS), 16.1 (δ UA-GlcNS6S), 21.2 (δ UA2s-GlcNS6S)
Limit of detection: 2 pmol

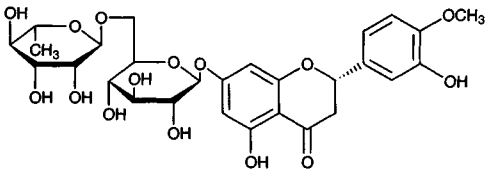
Hesperidin



Molecular formula: $C_{28}H_{34}O_{15}$
Molecular weight: 610.57
CAS Registry No.: 520-26-3
Merck Index: 4705

SAMPLE

Matrix: blood, urine
Sample preparation: Split each plasma and urine sample into two fractions. Mix 3 mL 1 M pH 4.5 sodium acetate buffer with one 3 mL plasma portion or one 10 mL urine portion, incubate at 37° for 20 h with 10,000 U β-glucuronidase (Helix Pomatia, Sigma). Condition a Sep-Pak C18 SPE cartridge with 6 mL EtOH:water 95:5 and 10 mL water. Add the sample to the SPE cartridge. Wash with 4 mL MeOH:water 10:90, elute the flavanones with 3 mL MeOH, reduce the plasma eluent volume to 500 μL under a stream of nitrogen. Inject 25 or 50 μL aliquots.

HPLC VARIABLES

Column: 250 × 4.6 Zorbax ODS
Mobile phase: MeOH:water:glacial acetic acid 47:50.5:2.5
Flow rate: 1
Injection volume: 25-50
Detector: UV 280

CHROMATOGRAM

Retention time: 6.5
Limit of quantitation: 1 μg/mL

OTHER SUBSTANCES

Extracted: hesperitin, naringenin, naringin, narirutin

KEY WORDS

plasma; SPE

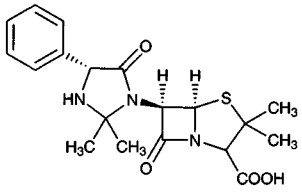
Hetacillin



Molecular formula: $C_{19}H_{23}N_3O_4S$
Molecular weight: 389.48
CAS Registry No.: 3511-16-8, 5321-32-4 (K salt)
Merck Index: 4706
Lednicer No.: 1 414

SAMPLE
Matrix: milk
Sample preparation: 500 μL Milk + 500 μL MeCN:MeOH:water 40:20:40, vortex for 10-15 s, filter (Centricon-10, molecular mass cut-off filter 10000 daltons) with centrifuging at 2677 g for 30 min, inject a 10-100 μL aliquot of the ultrafiltrate.

HPLC VARIABLES
Column: 220 × 2.1 5 μm Spheri-5 phenyl microbore (UV detection) or 220 × 4.6 5 μm Spheri-5 phenyl microbore (MS detection)
Mobile phase: MeCN:85% phosphoric acid:triethylamine:water 20:0.4:0.4:79.2 containing 5 mM dodecanesulfonate (UV) or isopropanol:acetic acid in 200 mM ammonium acetate:water 10:2:88 (MS)
Column temperature: 50
Flow rate: 0.2-0.45 (UV) or 0.8-1.2 (MS)

Injection volume: 10-100
Detector: UV 220 or MS, Finnigan MAT 4800 quadrupole, thermospray, source 320°, vaporizer 120°, pulsed positive ion negative ion

CHROMATOGRAM
Retention time: 8.3 (UV), 14.5 (MS) [as ampicillin]
Limit of detection: 200 ng/mL (MS), 75 ng/mL (100)

OTHER SUBSTANCES
Also analyzed: cloxacillin, amoxicillin

KEY WORDS
ultrafiltrate; LC-MS; hetacillin is rapidly converted to ampicillin

REFERENCE

SAMPLE
Matrix: solutions
Sample preparation: React the antibiotic, triethylamine, and 1-(2,5-dihydroxyphenyl)-2-bromoethanone in a 1:2:4 molar ratio in DMF at 45° for 2 h (use 18-crown-6 to make the potassium salt soluble), inject a 10 μL aliquot. (Preparation of 1-(2,5-dihydroxyphenyl)-2-bromoethanone is as follows. Stir 27.6 g 1,4-dimethoxybenzene and 28 mL bromoacetyl bromide at 0°, add 53.4 g aluminum bromide over 10 min (an exothermic reactions ensues), let stand at room temperature for 12 h, add 100 mL 48% HBr, add 100 g ice, stir for 1 h, extract twice with 200 mL portions of diethyl ether. Combine the extracts and wash them 3 times with 200 mL portions of water, dry over 40 g anhydrous magnesium sulfate, evaporate to dryness, recrystallize the product 3 times from EtOH to yield 1-(2,5-dihydroxyphenyl)-2-bromoethanone monobromoacetate (mp 105-107°). Dissolve 11 g 1-(2,5-dihydroxyphenyl)-2-bromoethanone monobromoacetate in 200 mL warm dry MeOH saturated with HBr, stir for 18 h, add 200 mL water, cool to -10°. Collect the yellow solid and dry it under vacuum at 50° for 48 h, recrystallize from toluene: heptane 50:50 then toluene to obtain 1-(2,5-dihydroxyphenyl)-2-bromoethanone as yellow needles (mp 117-119°).)

HPLC VARIABLES
Column: 250 × 4 7 μm RP-18 LiChrocart (Merck)
Mobile phase: MeOH:100 mM pH 6.5 sodium acetate 58:42
Flow rate: 1
Injection volume: 10
Detector: E, Bioanalytical Systems Model LC4B, glassy carbon electrode 0.8 V, Ag/AgCl reference electrode

CHROMATOGRAM
Retention time: 7.8

OTHER SUBSTANCES
Simultaneous: carbenicillin, cephapirin, cloxacillin, dicloxacillin, methicillin, nafcillin, oxacillin, penicillin G

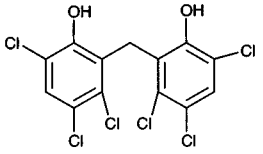
Hexachlorophene



Molecular formula: $C_{13}H_6Cl_6O_2$
Molecular weight: 406.91
CAS Registry No.: 70-30-4
Merck Index: 4716

SAMPLE
Matrix: solutions
Sample preparation: Dissolve 4-20 μg in 1 mL 5% NaOH, add 30 μL p-anisoyl chloride, vortex for 1 min, let stand at room temperature for 20 min, add 9 mL water, vortex for 2 min, extract three times with 10 mL portions of hexane. Combine the extracts and evaporate them to dryness under a stream of nitrogen, reconstitute the residue in 1 mL butyl chloride, inject a 10 μL aliquot.

HPLC VARIABLES
Column: 610 × 2.3 36-40 μm Sil-X silica (Nester-Faust)
Mobile phase: Hexane:n-butyl chloride 55:45
Flow rate: 0.7
Injection volume: 10
Detector: UV 254

CHROMATOGRAM
Retention time: 10.5
Limit of detection: 30 ppb

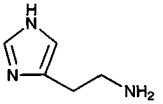
Histamine



Molecular formula: $C_5H_9N_3$
Molecular weight: 111.15
CAS Registry No.: 51-45-6, 51-74-1 (phosphate)
Merck Index: 4756

SAMPLE
Matrix: bacterial culture
Sample preparation: Prepare a column by filling a 1 mL pipette tip with 200 mg Extrelut, condition with 250 µL buffer. Add 10 µL bacterial culture and 10 µL IS solution to the column, elute with 1.3 mL ethyl methyl ketone:isopropanol 90:10 (prepared just prior to use) or with 1.3 mL ethyl methyl ketone. Add 200 µL reagent to the eluate, vortex for 15 s, let stand for 30 min, dilute 1 volume of the supernatant with 1 volume of MeOH and 2 volumes of water, inject an aliquot. (Prepare buffer by dissolving 50 mmoles ascorbic acid and 50 mmoles Na_2HPO_4 in 80 mL 1 M NaOH with stirring, adjust pH to 12.5 with 10 mM NaOH, make up to 100 mL with water, store in completely filled vials. Prepare the IS solution by adding 12 µL pentylamine to 100 mL 100 mM HCl. Purify ethyl methyl ketone by passing 20 mL through 4 g acidic aluminum oxide (Merck). Prepare reagent each day by dissolving 10 mg o-phthaldialdehyde and 50 µL ethanethiol in 1 mL MeOH and adding 9 mL 400 mM pH 9.5 sodium borate buffer.)

HPLC VARIABLES
Column: 125 × 2 Superspher 100 RP-18 (Merck)
Mobile phase: MeOH:buffer 85:15 (Buffer was 7% triethylamine adjusted to pH 7.5 with acetic acid.)
Flow rate: 0.2
Injection volume: 1
Detector: F ex 340 em 450

CHROMATOGRAM
Retention time: 2.56
Internal standard: pentylamine (7.45)

OTHER SUBSTANCES
Extracted: cadaverine, isobutylamine, phenethylamine, putrescine, tryptamine, tyramine

KEY WORDS
SPE; derivatization

SAMPLE

Matrix: blood
Sample preparation: Chill 20 mL whole blood in ice water, add 1 mL reagent, invert several time, centrifuge at 4° at 4000 g for 10 min. Remove the plasma and make it 0.4 M in perchloric acid by adding concentrated perchloric acid, mix, let stand at 4° for 15 min, centrifuge at 4° at 20000 g for 20 min. Remove a 2 mL aliquot and adjust the pH to 7.0 ± 0.2 with 0.5 M KOH, add 400 μL reagent, add 2 g NaCL, add 2 mL ethyl acetate, shake for 1 min, centrifuge at 3400 g, repeat the extraction. Combine the organic layers, add 2 mL 35 mM pH 10.0 ± 0.1 Na_2HPO_4 buffer, shake for 1 min, centrifuge at 3400 g, repeat the wash, evaporate the ethyl acetate layer to 100 μL with a stream of nitrogen, inject a 10-50 μL aliquot. (Prepare reagent as follows. Dissolve 500 mg boric acid in 19 mL water, adjust the pH to 10.40 ± 0.02 with 450 g/L KOH, add 17.5 mg o-phthalaldehyde dissolved in 200 μL MeOH, add 40 μL fresh 2-mercaptoethanol, store under nitrogen at 5°, stable for 7 days (J.Chromatogr. 1979, 162, 293).)

SAMPLE
Matrix: bulk
Sample preparation: Mix 0.5-5 nmole histamine with 50 nmole luminarin 2 in 500 μL acetone, add 100 μL 100 mM dimethylaminopyridine in acetone, evaporate to dryness, let stand in the dark for 1.5 h,reconstitute with 200 μL acetone, inject an aliquot. (Dry acetone over 0.4 nm molecular sieve. Luminarin 2, N-[6-[(2,5-dioxo-1-pyrrolidinyl)oxy]-6-oxohexyl]-2,3,6,7-tetrahydro-11-oxo-1H,5H,11H-[1]benzopyrano[6,7,8-ij]quinolizine-9-acetamide, may be obtained from Eurobio, Les Ulis, France. Synthesis is as follows. Reflux (with protection from moisture and with stirring) 2.12 g 8-hydroxyjulolidine, 2.22 g diethyl 1,3-acetonedicarboxylate (oxo-3-glutaric acid ethyl ester, Fluka), 1.71 g anhydrous zinc chloride, and 6 mL EtOH for 24 h, cool, add to 200 mL water, extract with 200 mL ethyl acetate, extract with 100 mL ethyl acetate. Combine

the organic layers and wash them with water, dry over magnesium sulfate, evaporate to dryness, recrystallize from 5 parts ethyl acetate to give ethyl 2,3,6,7-tetrahydro-11-oxo-1H,5H,11H-[1]benzopyrano[6,7,8-ij]quinolizine-9-acetate. Heat 2 g of this compound with 42 mL 1.2% NaOH in water and 40 mL MeOH at 45° for 1 h, cool, wash with 50 mL chloroform, wash with 40 mL chloroform. Degas the aqueous phase and acidify it with 16 mL 3 M HCl, stir for 15 min, adjust pH to 6.5 with 13 mL 2.5 M NaOH, filter. Wash the precipitate with water and dry it to obtain 2,3,6,7-tetrahydro-11-oxo-1H,5H,11H-[1]benzopyrano[6,7,8-ij]quinolizine-9-acetic acid. React 30 g potassium carbonate with 30 g methyl 6-aminohexanoate hydrochloride (Fluka) for 30 h, filter. Stir 11.26 g of 2,3,6,7-tetrahydro-11-oxo-1H,5H,11H-[1]benzopyrano[6,7,8-ij]quinolizine-9-acetic acid, 10.62 g disuccinimidyl oxalate (dihydroxysuccinimide carbonate), 3.81 g anhydrous triethylamine, and 560 mL dry MeCN protected from moisture at room temperature for 1 h, stir at 35-40° for 1 h, add the methyl 6-aminohexanoate filtrate, stir for 8 h, add 20 g ethanolamine, stir for 30 min, filter, wash with water, remove the solvent, chromatograph on a silica gel column with dichloromethane, dichloromethane:THF 85:15, dichloromethane:THF 75:25, recrystallize from ethyl acetate to give methyl N-(2,3,6,7-tetrahydro-11-oxo-1H,5H,11H-[1]benzopyrano[6,7,8-ij]quinolizine-9-yl)acetyl-6-aminohexanoate (yield 36%). Heat 1.25 g of this compound with 42 mL 1.2% NaOH in water and 40 mL MeOH at 45° for 1 h, cool, wash with 50 mL chloroform, wash with 40 mL chloroform. Degas the aqueous phase and acidify it with 16 mL 3 M HCl, stir for 15 min, adjust pH to 6.5 with 13 mL 2.5 M NaOH, filter. Wash the precipitate with water and dry it to obtain N-(2,3,6,7-tetrahydro-11-oxo-1H,5H,11H-[1]benzopyrano[6,7,8-ij]quinolizine-9-yl)acetyl-6-aminohexanoic acid. React 750 mg of this acid with 912 mg triethylamine and 512 mg disuccinimidyl oxalate (dihydroxysuccinimide carbonate) in 27 mL MeCN for 6 h, filter, evaporate, chromatograph on a silica gel column with dichloromethane, dichloromethane:THF 85:15, and dichloromethane:THF 75:25 to obtain Luminarin 2 (yield 19%) (World Pat. 89 12,052; Chem. Abstr. 1990, 113, 23889n).)

SAMPLE

Matrix: cell suspensions
Sample preparation: 500 μL Cell suspension in buffer A containing 0.1% bovine serum albumin + 1.5 mL ice cold buffer A, centrifuge at 4° at 250 g for 10 min, remove the supernatant, add 2 mL buffer A to the pellet, boil this mixture for 3 min, cool on ice, centrifuge at 4° at 500 g for 10 min, remove the supernatant. Dry a 50-200 μL aliquot of each supernatant in a vacuum centrifuge and reconstitute the residue with 100 μL buffer B, add 20 μL reagent, inject an aliquot. (Buffer A contained 150 mM NaCl, 4 mM KCl, 1 mM calcium chloride, 1.2 mM magnesium sulfate, 2.46 mM Na_2HPO_4, 0.615 mM KH_2PO_4, 5.6 mM glucose, and 10 mM HEPES, pH 7.4. Buffer B was THF:100 mM pH 9.5 sodium tetraborate buffer 30:70. The reagent was prepared by mixing equal volumes of 3.8 mM o-phthaldialdehyde in MeOH (freshly prepared) and 2.5 mL/L mercaptoethanol in MeOH.)

HPLC VARIABLES
Column: 100 × 3.2 3 μm Phase-II ODS (Bioanalytical Systems)
Mobile phase: MeCN:MeOH:buffer 14:16:70 containing 1 mM disodium EDTA (Buffer was 100 mM sodium phosphate buffer containing 0.4% triethylamine, pH 6.4.)
Flow rate: 0.6
Detector: E, Bioanalytical Systems Model LC4B, LC17A thin-layer electrochemical cell, glassy carbon working electrode +0.5 V, Ag/AgCl reference electrode

CHROMATOGRAM
Retention time: 10
Limit of detection: <0.1 pmole

SAMPLE
Matrix: cheese, tissue
Sample preparation: Add 1,7-diaminopentane as IS. Homogenize (Polytron) 10 g cheese with two 20 mL portions of 100 mM HCl. Homogenize (Polytron) 10 g tissue with three 15 mL portions of 5% trichloroacetic acid. Saturate the extracts with NaCl, adjust the pH to 11.5. Remove a 5 mL aliquot and add it to 5 mL butanol (cheese) or butanol:chloroform 50:50 (tissue) vortex for 5 min, repeat extraction twice more. Combine the organic extracts and remove a 1 mL aliquot, add 2 drops 1 M HCl, evaporate to dryness under reduced pressure, reconstitute the residue in 1 mL 100 mM HCl, add 0.5 μL saturated sodium bicarbonate, add 1 mL 5 mg/mL dansyl chloride, heat at 40° for 1 h, evaporate to dryness under reduced pressure, reconstitute with MeCN, inject an aliquot.

HPLC VARIABLES
Column: 150 × 1.6 3 μm Spherisorb 3S TG
Mobile phase: Gradient. MeCN:water 65:35 for 1 min, to 80:20 over 4 min, to 90:10 over 1 min.
Flow rate: 0.8
Injection volume: 10
Detector: UV 254

CHROMATOGRAM
Retention time: 3.7
Internal standard: 1,7-diaminopentane (4.2)

OTHER SUBSTANCES
Extracted: cadaverine, 2-phenylethylamine, putrescine, spermidine, spermine, tryptamine, tyramine

KEY WORDS
derivatization; fish; salmon; tuna; salami

SAMPLE
Matrix: fish, food, wine
Sample preparation: Filter (0.45 μm) wine, fruit juice or vegetable juice, dilute 1:5 or 1:20. 50 μL Diluted wine, diluted juice, fish extract, or cheese extract (neutralize strongly acidic samples if necessary) + 200 μL 200 mM boric acid adjusted to pH 8.5 with 30% KOH + 200 μL 3 mM 9-fluorenylmethyl chloroformate in acetone, mix for 3 min at room temperature, add 50 μL reagent, mix for 3 min. Remove an 80 μL aliquot and add it to 320 μL initial mobile phase,

inject a 20 μL aliquot. (Reagent was 3 mL heptylamine in 15 mL MeCN, adjusted to pH 7-8 with 175 mL 100 mM HCl. Extract fish as follows. Homogenize 20 g fish and 10 mL 100 mM HCl, add 40 mL 100 mM HCl, centrifuge, decant, extract residue with two 40 mL and one 20 mL portions of 100 mM HCl, filter, make up the extracts to 100 (?) mL with 100 mM HCl. Extract cheese as follows. Homogenize 25 g cheese and 18.75 mL 100 mM HCl, suspend with 40 mL 100 mM HCl, centrifuge, extract the residue twice with 20 mL portions of 100 mM HCl. Combine and filter the extracts, make up to 100 mL with 100 mM HCl.)

HPLC VARIABLES

Column: 250-4 Supersphere 60 RP-8 (Merck)
Mobile phase: Gradient. A was MeCN:100 mM pH 4.4 sodium acetate buffer 50:50. B was MeCN. A:B 100:0 for 7 min, to 90:10 over 5 min, to 70:30 over 15 min, maintain at 70:30 for 6 min, to 10:90 over 7 min, to 0:100 over 3 min, maintain at 0:100 for 9 min, return to 100:0 over 1 min, re-equilibrate for 7 min.
Column temperature: 40
Flow rate: 1.2 (0.05 when not in use)
Injection volume: 20
Detector: F ex 265 em 315

CHROMATOGRAM

Retention time: 27.8
Limit of detection: <20 ng/mL

OTHER SUBSTANCES

Extracted: cadaverine, phenylethylamine, putrescine, spermidine, spermine, tyramine

KEY WORDS

wine; fruit juice; vegetable juice; fish; cheese; derivatization

SAMPLE

Matrix: food
Sample preparation: Add 10 mL light petroleum to 5 g natural canned tuna or tuna canned in oil, extract, centrifuge at about 13 g for 15 min, discard the organic layer, extract the remaining solid with two or more 10 mL portions of light petroleum. Homogenize the defatted sample with 10 mL 600 mM perchloric acid, filter, add 10 mL 100 mM NaOH, extract with five 25 mL portions of butanol. Combine the organic layers and extract with 20 mL light petroleum and five 10 mL portions of 100 mM HCl, dilute sample to 50 mL with water. Add 1 mL 1 M NaOH to 2 mL aliquot of the diluted sample, let stand for 5 min, add 1 mL derivatizing solution, let stand 5-10 min until the solution reaches a brown color, add 500 mg NaCl, extract with two 3 mL portions of ethyl acetate, centrifuge, evaporate the organic layer under nitrogen to 100 μL, make up to 2 mL with mobile phase, inject a 20 μL aliquot within 30-40 min. (Prepare the derivatizing solution as follows: Mix 1 g sodium tetraborate heptahydrate, 50 mg o-phthalaldehyde, 50 μL β-mercaptoethanol, and 1 mL MeOH, dilute to 50 mL with 1 M NaOH (pH 10).)

HPLC VARIABLES

Column: 250 × 4.6 5 μm Spherisorb ODS2 RP-18
Mobile phase: MeCN:buffer 30:70 (Buffer was 20 mM KH_2PO_4 adjusted to pH 4.0 with 85% H_3PO_4.)
Column temperature: 34-35
Flow rate: 0.8
Injection volume: 20
Detector: F ex 315 em 415

CHROMATOGRAM

Retention time: 7.5
Limit of detection: 5 μg/g

OTHER SUBSTANCES

Extracted: histidine

SAMPLE
Matrix: food
Sample preparation: Cheese, chocolate. Homogenize (stomacher) 5 g ground cheese or chocolate with 45 mL 70 mM trisodium citrate at 45° for 5 min. Remove a 3 mL aliquot and add it to 3 mL 600 mM trichloroacetic acid, mix, centrifuge at 4° at 10000 g for 10 min, suspend the pellet in 3 mL 300 mM trichloroacetic acid, centrifuge. Combine the supernatants, filter (0.45 μm), make up the filtrate to 10 mL with water, inject an aliquot. Wine. 3 mL Wine + 3 mL 600 mM trichloroacetic acid, centrifuge, filter the supernatant, inject an aliquot of the filtrate. Fish, sauerkraut. Blend 200 g fish or sauerkraut with 200 mL water for 3 min. Remove a 3 mL aliquot and add it to 3 mL 600 mM trichloroacetic acid, centrifuge, filter the supernatant, inject an aliquot of the filtrate.

HPLC VARIABLES
Guard column: 30 × 3 Corasil C18
Column: 100 × 8 10 μm Nucleosil C18 radial-compression
Mobile phase: DMSO:buffer 47:53 (Prepare mobile phase by dissolving 16 g ninhydrin and 1.2 g hydrindantin in 322 mL DMSO with sonication for 10 min, add 350 mL 1.8 M pH 5.00 sodium acetate buffer, add 2 g sodium dodecyl sulfate dissolved in a mixture of 618 mL DMSO and 710 mL water, flush constantly with nitrogen. Flush column with DMSO:water 50:50 at the end of each day.)
Column temperature: 29
Flow rate: 1
Detector: UV 546 following post-column reaction. The column effluent flowed through a 10 m × 0.25 mm PTFE tube coiled in a figure 8 at 145° to the detector.

CHROMATOGRAM
Retention time: 16
Limit of detection: 800 ng/g (sauerkraut), 300 ng/g (wine)

OTHER SUBSTANCES
Extracted: cadaverine, phenylethylamine, putrescine, tryptamine, tyramine

SAMPLE
Matrix: tissue
Sample preparation: Prepare SPE (A) column by washing 100-200 mesh Dowex 50 W with excess 2 M HCl, with water, with 2 M NaOH, and with water. Equilibrate the resin with 200 mM pH 6.5 sodium phosphate buffer and pack in a 16 × 5 glass column. Prepare SPE (B) column by washing cellulose-phosphate fibrous cation-exchanger (Sigma) in a 13 × 17 glass column with excess 100 mM NaOH, with water, with 100 mM HCl, and with water until the pH reaches 5-6. Homogenize (glass homogenizer) rat brain hypothalamus with 500 μL ice-cold 3% perchloric acid, rinse homogenizer 3 times with 500 μL portions of 3% perchloric acid. Combine the homogenate and rinses, add IS, centrifuge at 4° at 10000 g for 30 min, add the supernatant to SPE column (A), wash with 5 mL water, wash with 4 mL 2 M HCl, elute with 2.5 mL 3.5 M HCl. Evaporate the eluate to dryness, reconstitute the residue in 800 μL water, add 150 μL buffer, add 100 μL 20 mM sulfosuccinimidyl-3-(4-hydroxyphenyl)propionate (sulfo B-H, Pierce) in water, vortex for 30 s, adjust pH to 5.5-6.0 with 100 mM HCl, add to SPE column (B), wash with 5 mL water, wash with 6 mL 1 mM HCl, elute with 2.5 mL 100 mM HCl. Discard the first 500 μL eluate, evaporate the next 200 μL to dryness, reconstitute with 1 volume water, add 9 volumes water to a total volume of 0.11-1 mL, inject a 100 μL aliquot. (Prepare buffer by mixing 100 mM sodium carbonate and 100 mM sodium bicarbonate in a 10:1 ratio.)

HPLC VARIABLES
Guard column: μBondapak C18/Corasil
Column: 250 × 4.6 Ultrasphere ODS
Mobile phase: MeCN:140 mM sodium acetate 73:17 containing 3.89 M (sic) 1-octanesulfonic acid and 56 mg/L (?) EDTA, adjusted to pH 3.48 with glacial acetic acid

Flow rate: 1
Injection volume: 100
Detector: E, ESA Coulochem 5100A, Model 5011 analytical cell, cell 1 0.47 V, cell 2 (monitored) 0.56 V, oxidative screen mode

CHROMATOGRAM
Retention time: 8.4
Internal standard: N^{α}-methylhistamine (11.6)
Limit of detection: 0.1 pmole

OTHER SUBSTANCES
Extracted: N^{tau}-methylhistamine
Simultaneous: histidine, spermidine

KEY WORDS
derivatization; rat; brain; SPE

SAMPLE
Matrix: tissue
Sample preparation: Homogenize (Polytron) 200 mg tissue with 5 volumes of 1 M perchloric acid, centrifuge at 10000 g for 20 min. Neutralize the supernatant with 10 M KOH, centrifuge at 10000 g for 20 min, remove a 20 μL aliquot of the supernatant and add it to 10 μL reagent, mix well, add 30 μL 10% sodium carbonate in EtOH:water 5:95, mix well, inject a 10 μL aliquot. (Prepare reagent prior to use by mixing equal volumes of 20 mM sulfanilic acid in 1 M HCl and 200 mM sodium nitrite solution.)

HPLC VARIABLES
Column: 250 × 4.6 5 μm TSK-ODS (Toso)
Mobile phase: Gradient. A was EtOH:150 mM pH 6.0 sodium acetate buffer 5:95. B was MeCN:water 60:40. A:B from 100:0 to 55:45 over 30 min.
Column temperature: 40

Flow rate: 1
Injection volume: 10
Detector: UV 420

CHROMATOGRAM
Retention time: 14.58
Limit of detection: <7 nmole/g

OTHER SUBSTANCES
Extracted: carnosine, histidine, tyrosine
Noninterfering: anserine, 1-methylhistidine

KEY WORDS
derivatization; fish; muscle; mackerel

REFERENCE

SAMPLE
Matrix: tissue
Sample preparation: 10 g Homogenized fish + 15 mL 600 mM perchloric acid, stir magnetically for 10 min, centrifuge at 3000 rpm for 10 min, remove the supernatant, add 10 mL 600 mM perchloric acid to the residue, stir magnetically for 10 min, centrifuge at 3000 rpm for 10 min. Combine the supernatants, make up to 25 mL with 600 mM perchloric acid, filter (0.45 μm), inject a 20 μL aliquot of the filtrate.

HPLC VARIABLES
Column: 150 × 3.9 4 μm Nova Pak C18
Mobile phase: Gradient. A was 100 mM sodium acetate containing 10 mM sodium octanesulfonate, adjusted to pH 5.20 with acetic acid. B was MeCN:buffer 66:34 (Buffer was 200 mM sodium acetate containing 10 mM sodium octanesulfonate, adjusted to pH 4.50 with acetic acid.) A:B from 80:20 to 20:80 over 50 min, maintain at 20:80 for 2 min, return to initial conditions over 2 min, re-equilibrate for 10 min.
Flow rate: 1
Injection volume: 20
Detector: F ex 340 em 445 following post-column reaction. The column effluent mixed with the reagent pumped at 0.5 mL/min, the mixture flowed through a 200 cm × 0.25 mm i.d. coil of stainless steel tubing to the detector. (Prepare reagent by dissolving 15.5 g boric acid and 13.1 g KOH in 500 mL water, adjust pH to 10.5-11 with 30% KOH (if necessary), add 1.5 mL 30% Brij-35, add 1.5 mL mercaptoethanol, add 2.5 mL 40 μg/mL o-phthalaldehyde in MeOH, mix. Protect from light, prepare fresh daily.)

CHROMATOGRAM
Retention time: 35
Limit of detection: 250 ng/g

OTHER SUBSTANCES
Extracted: agmatine, cadaverine, creatinine, β-phenylethylamine, putrescine, serotonin, spermidine, spermine, tryptamine, tyramine

SAMPLE
Matrix: tissue

Sample preparation: Homogenize (Ultraturrax) 5 g fish, 10 mL 200 mM perchloric acid, and 100 μL 800 μg/mL 1,3-diaminopropane dihydrochloride in water at -20° and 20000 rpm and centrifuge at 2° at 2500 g for 20 min. Remove a 100 μL aliquot of the supernatant and add it to 200 μL saturated sodium bicarbonate solution, add 400 μL 7.5 mg/mL dansyl chloride in acetone, agitate, heat at 60° in the dark for ?, add 100 μL 100 mg/mL L-proline in water, agitate, let stand in the dark at room temperature for 30 min, add 500 μL toluene, agitate. Remove the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 300 μL MeCN, filter, inject an aliquot.

HPLC VARIABLES

Guard column: 30 × 4.6 5 μm Brownlee C18
Column: 250 × 4.6 5 μm Kromasil C18
Mobile phase: Gradient. MeCN:water from 60:40 to 75:25 over 6 min, maintain at 75:25 for 2 min, to 95:5 over 5 min, maintain at 95:5 for 7 min, re-equilibrate at initial conditions for 10 min.
Column temperature: 25
Flow rate: 1
Detector: UV 254

CHROMATOGRAM

Retention time: 14.7
Internal standard: 1,3-diaminopropane (12.5)

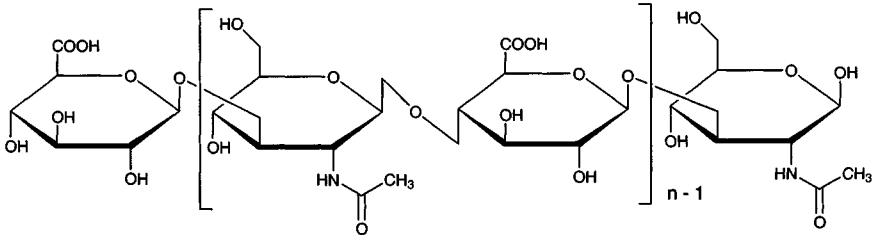
Hyaluronic acid

CAS Registry No.: 9004-61-9
Merck Index: 4793



SAMPLE

Matrix: bulk

Sample preparation: Mix 100 μL of a 1-500 μg/mL solution of hyaluronic acid in water with 40 μL 100 mM pH 5.2 citrate/phosphate buffer, add 10 500 U/mL hyaluronate 4-glycanohydrolase (sheep testis, Type V, Sigma) in water, heat at 37° for 5 h, heat in a boiling water bath for 3 min, evaporate to dryness. Reconstitute with 20 μL 300 mM NaOH, add 20 μL 500 mM 1-(4-methoxy)phenyl-3-methyl-5-pyrazolone in MeOH, heat at 70° for 20 min, add 20 μL 300 mM HCl, add 200 μL water, add 200 μL ethyl acetate saturated with water, shake vigorously, discard the organic phase, repeat the ethyl acetate wash twice more. Evaporate the aqueous phase to dryness and reconstitute the residue in 200 μL MeCN:water 15:85, inject a 20 μL aliquot. (Synthesis of 1-(4-methoxy)phenyl-3-methyl-5-pyrazolone is as follows. Reflux 5.6 g 4-methoxyphenylhydrazine hydrochloride, 5.45 g sodium acetate trihydrate, and 4.16 g ethyl acetoacetate in 40 mL EtOH for 2 h, cool, evaporate to dryness, dissolve the residue in 10 mL EtOH, filter, evaporate the filtrate to dryness, dissolve the residue in a small volume of benzene:ethyl acetate 80:20 (Caution! Benzene is a carcinogen!), chromatograph on a column of 150 g silica gel 60 (Merck) equilibrated with benzene:ethyl acetate 80:20, collect 5 mL fractions (monitor by TLC using Merck silica gel 60 F_{254} eluted with benzene:ethyl acetate 80:20, UV detection, R_f 0.41). Combine the appropriate fractions and evaporate them to dryness, recrystallize the residue from MeOH to give 1-(4-methoxy)phenyl-3-methyl-5-pyrazolone (Anal. Biochem. 1991, 199, 256).)

HPLC VARIABLES

Column: 150 × 6 Cosmosil 5C18-AR
Mobile phase: MeCN:100 mM pH 7.0 phosphate buffer 15:85

Molecular formula: $C_8H_8N_4$
Molecular weight: 160.18
CAS Registry No.: 86-54-4, 304-20-1 (HCl)
Merck Index: 4800

SAMPLE
Matrix: blood
Sample preparation: Add 8-12 mL blood to 125 IU lithium heparin in ice-cold tubes, centrifuge at 8000 g for 30 s, add 1 mL plasma to 75 μL 50% sodium nitrite in a tube kept on ice, add 150 μL 16.7 μM 4-methylhydralazine in 10 mM HCl, add 2 mL 20 mM HCl (perform the preceding procedure as rapidly as possible), vortex briefly, allow to stand at 20 ± 1° for 10.0 min, add 1 mL 1 M NaOH/0.6 M sodium tetraborate buffer (pH 10), add chloroform, shake at 110 rpm for 5 min, centrifuge at 1100 g for 10 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 45°, reconstitute the residue in 500 μL mobile phase, inject a 50 μL aliquot.

HPLC VARIABLES
Column: 10 μm μBondapak phenyl
Mobile phase: MeCN:1.5 mM aqueous phosphoric acid 15:85
Column temperature: 50
Flow rate: 2
Injection volume: 50
Detector: F ex 250 em 360 (cut-off filter)

CHROMATOGRAM
Retention time: 6.7
Internal standard: 4-methylhydralazine (10)
Limit of detection: 1 ng/mL

OTHER SUBSTANCES
Simultaneous: metabolites, propranolol, quinidine

KEY WORDS
plasma; derivatization; pharmacokinetics

REFERENCE

SAMPLE

Matrix: blood

Sample preparation: 3 mL Whole blood + 20 μL p-anisaldehyde + 8 μL 5 μg/mL 4-methylhydralazine in 10 mM HCl, vortex for 15 s, let stand at room temperature for 10 min, add 10 mL hexane, shake horizontally at 180 strokes/min for 10 min, centrifuge at 1000 g for 10 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 100 μL MeOH, inject the whole amount.

HPLC VARIABLES

Column: 300 × 3.9 μBondapak CN
Mobile phase: MeCN:150 mM pH 3.0 sodium acetate buffer 70:30
Flow rate: 2
Injection volume: 100
Detector: UV 365

CHROMATOGRAM

Retention time: 3.5
Internal standard: 4-methylhydralazine (6)
Limit of quantitation: 1 ng/mL

OTHER SUBSTANCES

Noninterfering: propranolol, furosemide, hydrochlorothiazide, digoxin, nitroglycerin

KEY WORDS

whole blood; derivatization

SAMPLE

Matrix: blood

Sample preparation: 1 mL Plasma + 1 mL 20 mM disodium EDTA + 1 mL 500 mM HCl + 1 mL 10 mM 2-hydroxy-1-naphthaldehyde, vortex for 15 s, keep at 25° for 90 min, add 50 μL 1 μg/mL methyl red, add 7 mL dichloromethane, vortex for 5 min, centrifuge at 4500 rpm for 15 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 50°, reconstitute the residue in 100 μL MeCN, inject a 20 μL aliquot.

HPLC VARIABLES

Column: 250 × 4 3 μm Spherisorb ODS-2
Mobile phase: MeCN:buffer 80:20, pH 3 (Buffer was 0.75% phosphoric acid and 0.5% triethylamine in water.)
Flow rate: 0.7
Injection volume: 20
Detector: UV 406

CHROMATOGRAM

Retention time: 6.4
Internal standard: methyl red (6)
Limit of detection: 1 ng/mL

OTHER SUBSTANCES

Extracted: dihydralazine

KEY WORDS

SAMPLE
Matrix: formulations
Sample preparation: Injections. Dilute 1.5 mL of a 20 mg/mL injection to 100 mL with water, remove a 10 mL aliquot and add it to 3 mL 0.2% hydrochlorothiazide, make up to 100 mL with water, inject a 20 μL aliquot. Tablets. Grind tablets to a fine powder, weigh out amount equivalent to about 10 mg hydralazine, mix thoroughly with 2 mL 500 mM HCl, make up to 100 mL with water, shake for 2-3 min, filter, discard first 15 mL. 15 mL Filtrate + 1.5 mL 0.2% hydrochlorothiazide, make up to 50 mL with water, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 300 × 3.9 μBondapak phenyl
Mobile phase: MeOH:15 mM KH_2PO_4:glacial acetic acid 0.5:99.4:0.1
Flow rate: 3
Injection volume: 20
Detector: UV 256

CHROMATOGRAM
Retention time: 5
Internal standard: hydrochlorothiazide (8)

OTHER SUBSTANCES
Simultaneous: phenylpropanolamine

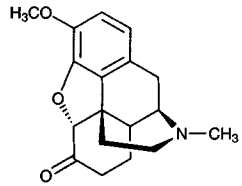
Hydrocodone



Molecular formula: $C_{18}H_{21}NO_3$
Molecular weight: 299.37
CAS Registry No.: 125-29-1, 34195-34-1 (bitartrate hydrate), 143-71-5 (bitartrate)
Merck Index: 4826
Lednicer No.: 1 288

SAMPLE
Matrix: formulations
Sample preparation: 500 µL or 1.0 mL Sample + 1.0 mL water + 500 µL 1 M NaOH + 15 mL dichloromethane, shake at 100 cpm for 20 min. Centrifuge at 2500 rpm for 5 min, evaporate organic layer to dryness under a gentle stream of nitrogen at 35 to 40°. Dissolve residue in 5 mL MeOH, inject a 20 to 80 µL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 10 µm Alltech C8

Mobile phase: MeCN:pH 4.5 buffer 18:82 (Buffer was 10 mM KH_2PO_4 and 50 mM potassium nitrate.)
Flow rate: 1.4
Injection volume: 20-80
Detector: UV 280

CHROMATOGRAM
Retention time: 14

OTHER SUBSTANCES
Noninterfering: chorpheniramine

KEY WORDS
suspensions

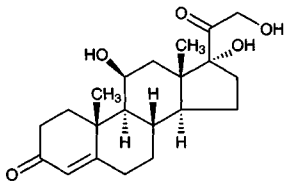
Hydrocortisone



Molecular formula: $C_{21}H_{30}O_5$
Molecular weight: 362.47
CAS Registry No.: 50-23-7, 13609-67-1 (butyrate), 57524-89-7 (valerate), 50-03-3 (acetate), 3863-59-0 (phosphate), 6000-74-4 (sodium phosphate), 125-04-2 (21-sodium succinate), 508-96-3 (tebutate), 74050-20-7 (aceponate), 72590-77-3 (buteprate), 508-99-6 (cypionate), 83784-20-7 (hemisuccinate monohydrate), 2203-97-6 (hemisuccinate), 2203-97-6 (succinate), 5752489-7 (valerate)
Merck Index: 4828
Lednicer No.: 1 190

SAMPLE
Matrix: blood
Sample preparation: Condition a Sep-Pak C18 SPE cartridge. Mix 1 mL plasma with 134.0 ng hydrocortisone-d_5 and 74.56 ng cortisone-d_5. Add the sample to the SPE cartridge, wash with 8 mL water, elute with 4 mL ethyl acetate, evaporate the eluate to dryness at 70° under a stream of nitrogen, dissolve the residue in 30 μL mobile phase, filter (0.45 μm), inject a 20 μL aliquot.

HPLC VARIABLES
Column: 125 × 4.0 4 μm LiChroCART Superspher 100
Mobile phase: A MeOH:THF:50 mM ammonium formate 17:53:180; B MeCN:50 mM ammonium formate 35:65
Flow rate: 0.6 (A); 1.3 (B)
Injection volume: 20
Detector: MS, Shimadzu LCMS-QP1000EX Model 750 B, thermospray, vaporizer control 155°, vaporizer tip 195°, vapor 274°, ion source block 295°, tip heater 305°, m/z 363

CHROMATOGRAM
Retention time: 13 (A)
Internal standard: hydrocortisone-d_5, cortisone-d_5
Limit of detection: 0.25 ng

OTHER SUBSTANCES
Extracted: cortisone, prednisolone, prednisone

KEY WORDS
plasma; SPE

REFERENCE

SAMPLE

Matrix: blood

Sample preparation: Add 100 µL MeOH and 50 µL 1 µg/mL fluocortolone in MeOH to 1 mL plasma. Add 500 µL 100 mM NaOH and 2 mL dichloromethane, shake for 10 min, centrifuge at 2500 g for 10 min, evaporate a 1.9 mL aliquot of the supernatant under a stream of nitrogen at 45°. Reconstitute the residue in 50 µL MeOH, inject 17 µL aliquot.

HPLC VARIABLES

Guard column: 10 × 4 5 µm LiChrospher RP 18
Column: 250 × 4 5 µm Lichrospher RP 18
Mobile phase: MeOH:THF:water 110:2.5:100
Flow rate: 1
Injection volume: 17
Detector: UV 252

CHROMATOGRAM

Internal standard: fluocortolone
Limit of quantitation: 2 ng/mL

OTHER SUBSTANCES

Extracted: triamcinolone

KEY WORDS

plasma

SAMPLE

Matrix: blood, urine

Sample preparation: Condition a 3 mL 500 mg Sep-Pak Vac C18 SPE cartridge with 3 mL MeOH and 3 mL water. 1 mL Serum or urine + 500 µL 200 mM pH 3.85 acetate buffer (serum only) + 400 µL 2.5 µM IS in mobile phase, mix, centrifuge. Add the supernatant to the SPE cartridge, wash with 3 mL acetone:water 20:80, 3 mL water, and 3 mL hexane. Elute with 3 mL diethyl ether into tubes containing 1 mL 200 mM NaOH, vortex, centrifuge. Dry the organic layer under a stream of nitrogen. Reconstitute the residue in 250 µL mobile phase, mix for 5 min. Inject a 60 µL aliquot.

HPLC VARIABLES

Column: 250 × 4.6 5 µm Spherex C18 (Phenomenex USA)
Mobile phase: MeOH:THF:water 3:25:72
Flow rate: 1.0
Injection volume: 60
Detector: UV 254

CHROMATOGRAM

Retention time: 12.85
Internal standard: fludrocortisone (15.9)
Limit of detection: 5 nM

OTHER SUBSTANCES

Extracted: 11-deoxycortisol, dexamethasone, methylprednisolone, prednisolone

KEY WORDS

serum; SPE

REFERENCE
McWhinney,B.C.; Ward,G.; Hickman,P.E. Improved HPLC method for simultaneous analysis of cortisol, 11-deoxycortisol, prednisolone, methylprednisolone, and dexamethasone in serum and urine, *Clin.Chem.*, **1996**, *42*, 979–981.

SAMPLE
Matrix: blood, urine
Sample preparation: Condition a Sep-Pak Plus C18 SPE cartridge with 7 mL MeOH and 14 mL water. Add 40 ng 6β-hydroxycortisone to 400 μL plasma or urine, add the mixture to the SPE cartridge, wash with 6 mL water, 3 mL MeOH:water 12:88, and 3 mL petroleum ether, elute with 5 mL ethyl acetate. Dry the eluate under reduced pressure at 40°, add 200 μL MeCN: triethylamine 90:10 and MeCN:0.1% quinuclidine 20:80 to the residue, vortex. Add 200 μL 0.02% 9-anthroyl nitrile and a few molecular sieves (4A), let stand for 30 min, evaporate under reduced pressure at 40°, dissolve the residue in 200 μL acetone, dilute with 2 mL n-hexane. Add the mixture to a Sep-Pak Plus Silica SPE cartridge, wash with 14 mL 1,2-dichloroethane, elute with 5 mL ethyl acetate. Evaporate the eluate under reduced pressure at 40°, reconstitute the residue in 200 μL mobile phase, inject a 30-60 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Cosmosil 5SL (Nacalai Tesque, Japan)
Mobile phase: Dioxane:ethyl acetate:chloroform:n-hexane:pyridine 58.1:11.6:11.6:16.3:2.4 (Caution! Dioxane and chloroform are carcinogens!)
Flow rate: 1 for 45 min, to 1.2 over 5 min
Injection volume: 30-60
Detector: F ex 360 em 460

CHROMATOGRAM
Retention time: 24
Internal standard: 6β-hydroxycortisone (86)
Limit of detection: 100 pg/mL

OTHER SUBSTANCES
Extracted: cortisone, 6β-hydroxycortisol, 6β-hydroxyprednisolone, prednisolone, prednisone

KEY WORDS
derivatization; plasma; urine; SPE; normal phase

REFERENCE

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85: 15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)

Injection volume: 10-30
Detector: UV 242.9

CHROMATOGRAM
Retention time: 17.735

KEY WORDS
whole blood

Detector: UV 230, UV 275

CHROMATOGRAM

Retention time: 8.3 (A), 9.4 (B)
Internal standard: β-hydroxyethyltheophylline (3.7 (A), 4.4 (B))
Limit of detection: 500 ng/mL

OTHER SUBSTANCES

Extracted: furosemide, metolazone, amiloride, acetazolamide, chlorothiazide, hydrochlorothiazide, quinethazone, triamterene, chlorthalidone, dichlorphenamide, trichloromethiazide, methyclothiazide, benzthiazide, cyclothiazide, polythiazide, bendroflumethiazide, ethacrynic acid, bumetanide, probenecid, spironolactone, canrenone, flumethiazide
Noninterfering: acetaminophen, aspirin, caffeine, diflunisal, fenoprofen, ibuprofen, indomethacin, methocarbamol, naproxen, phenylbutazone, sulindac, tetracycline, theobromine, theophylline, tolmetin, trimethoprim, verapamil

REFERENCE

SAMPLE

Matrix: urine
Sample preparation: 1 mL Urine + 1 mL buffer + 200 μL water + 6 mL ethyl acetate, shake for 5 min, centrifuge at 900 g for 5 min. Remove 5 mL organic layer and evaporate at 37° under a stream of nitrogen. Reconstitute with 100 μL mobile phase, inject a 20 μL aliquot. (Buffer was 0.38 g ammonium acetate in 500 mL water and acidified to pH 5.0 with glacial acetic acid.)

HPLC VARIABLES

Guard column: 40 × 4 35-50 μm C18 Corasil
Column: 125 × 4 5 μm Nucleosil 100-5 C18
Mobile phase: MeCN:acetic acid:water 120:1:880
Flow rate: 1
Injection volume: 20
Detector: UV 280

CHROMATOGRAM

Retention time: 10.0
Internal standard: hydroflumethiazide

OTHER SUBSTANCES

Extracted: hydrochlorothiazide
Noninterfering: amiloride, acebutolol, acenocoumarol, acetaminophen, aspirin, allopurinol, ambroxol amoxicillin, atenolol, bendroflumethiazide, benzbromarone, bezafibrate, biperiden, bisacodyl, bromazepam, butizide, caffeine, captopril, cimetidine, ciprofloxacin, clobutinol, clonidine, cotinine, diazepam, diclofenac, digitoxin, digoxin, dihydrocodeine, dihydroergotamine,

diltiazem, doxepin, doxycycline, enalapril, erythromycin, fenoterol, furosemide, glibenclamide, heparin, hypoxanthine, ibuprofen, indomethacin, isosorbide mononitrate, lisinopril, lovastatin, maprotiline, methyldigoxin, methyldopa, metoclopramide, metoprolol, metronidazole, midazolam, naloxone, nifedipine, nicotine, oxazepam, oxipurinol, penicillin V, pentoxyfylline, phenacetin, phenazone, propyphenazone, phenprocoumon, ranitidine, salicylic acid, sotalol, sulfamethoxazole, trimethoprim, terbutaline, theophylline, tilidine, timolol, triamterene, uric acid, verapamil, ascorbic acid, warfarin, xanthine, purine and pyrimidine bases, nucleosides, nucleotides

Interfering: norfloxacin and ofloxacin

Hydrogen peroxide

Molecular formula: H_2O_2
Molecular weight: 34.01
CAS Registry No.: 7722-84-1
Merck Index: 4839

SAMPLE
Matrix: beverages
Sample preparation: Mix 3.45 mL 500 mM pH 5.0 potassium phosphate buffer, 250 μL MeOH, and 100 μL antifoaming reagent, pass nitrogen gas through the mixture for a few min, add 1 mL beverage, add 100 μL 1000 U/mL catalase (Boehringer Mannheim) in water (purge with nitrogen before use), add 100 μL 100 mg/mL 4-amino-3-penten-2-one (Fluoral-P, Eastman) in MeCN, bubble nitrogen at 200 mL/min through the mixture, heat at 30° for 10 min, add to a Sep-Pak C18 SPE cartridge, wash with a little water, elute with 5 mL MeCN:water 50:50, inject a 20 μL aliquot of the eluate. (Prepare antifoaming reagent by diluting concentrated silicon polymer (Sigma) with water to give a 0.1% suspension.)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Zorbax ODS
Mobile phase: MeCN:water 50:50
Flow rate: 1
Injection volume: 20
Detector: F ex 410 em 510

CHROMATOGRAM
Retention time: 3.5
Limit of detection: 50 ppb

OTHER SUBSTANCES
Noninterfering: ascorbic acid

KEY WORDS
derivatization; SPE

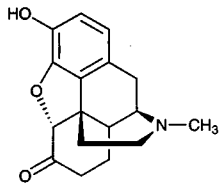
Hydromorphone



Molecular formula: $C_{17}H_{19}NO_3$
Molecular weight: 285.34
CAS Registry No.: 466-99-9, 71-68-1 (HCl)
Merck Index: 4847
Lednicer No.: 1 288

SAMPLE

Matrix: bile, blood, tissue
Sample preparation: 250 μL Bile, 3 mL blood, or 5 mL tissue homogenate + 1 mL 200 μg/mL nalorphine in water + 2 mL 200 mM pH 8.9 sodium borate buffer + 5 (bile) or 10 (blood, tissue) mL chloroform:isopropanol 90:10, rotate gently for 20 min, centrifuge at 2000 rpm for 10 min. Remove the organic layer and add it to 2 mL 500 mM HCl, rotate for 20 min, centrifuge for 5 min. Remove 1.8 mL of the upper aqueous phase, adjust to pH 8.6 ± 0.2 by carefully adding powdered ammonium carbonate until the solution was saturated, add 5 mL ethyl acetate: isopropanol 90:10, rotate for 20 min, centrifuge for 5 min. Remove 4.8 mL of the upper organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue in 50 μL MeOH, vortex for 30 s, inject a 20 μL aliquot.

HPLC VARIABLES

Guard column: 30 × 4.6 5 μm RP-18 Spheri-5
Column: 250 × 4.6 5 μm Ultrasphere ODS
Mobile phase: MeOH:50 mM pH 7 phosphate buffer 40:60 Place a 70 × 2 30-38 μm Co-Pell ODS column before the injection valve.)
Column temperature: 50
Flow rate: 2
Injection volume: 20
Detector: E, Environmental Sciences Associates Model 5100, porous graphite electrode W1 900 mV W2 400 mV, difference in electrolysis current monitored

CHROMATOGRAM

Retention time: 5
Internal standard: nalorphine (14.72)
Limit of detection: 5 ng/mL

OTHER SUBSTANCES

Extracted: codeine, morphine, norcodeine, normorphine
Simultaneous: acetaminophen, atropine, epinephrine, ethylmorphine, hydrocodone, hydroxyzine, naloxone, oxycodone, pentazocine, phenylpropanolamine, pseudomorphine, scopolamine, secobarbital
Noninterfering: brompheniramine, chloroprocaine, dextromethorphan, diazepam, diphenhydramine, fentanyl, flurazepam, meperidine, methadone, neostigmine, propoxyphene

SAMPLE
Matrix: urine
Sample preparation: 500 μL Urine + N-ethylnordiazepam + chlorpheniramine + 100 μL buffer, centrifuge at 11000 g for 30 s, inject a 500 μL aliquot onto column A with mobile phase A, after 0.6 min backflush column A with mobile phase A to waste for 1.6 min, elute column A with 250 μL mobile phase B, with 200 μL mobile phase C, and with 1.15 mL mobile phase D. Elute column A to waste until drugs start to emerge then elute onto column B. Elute column B to waste until drugs started to emerge, then elute onto column C. When all the drugs have emerged from column B remove it from the circuit, elute column C with mobile phase D, monitor the effluent from column C. Flush column A with 7 mL mobile phase E, with mobile phase D, and mobile phase A. Flush column B with 5 mL mobile phase E then with mobile phase D. (Buffer was 6 M ammonium acetate adjusted to pH 8.0 with 2 M KOH.)

HPLC VARIABLES
Column: A 10 × 2.1 12-20 μm PRP-1 spherical poly(styrene-divinylbenzene) (Hamilton); B 10 × 3.2 11 μm Aminex A-28 (Bio-Rad); C 25 × 3.2 5 μm C8 (Phenomenex) + 150 × 4.6 5 μm silica (Macherey-Nagel)
Mobile phase: A 0.1% pH 8.0 potassium borate buffer; B 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phos-

phoric acid; C MeCN:buffer 40:60 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.); D MeCN:buffer 33:67 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.); E MeCN: buffer 70:30 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.)
Column temperature: ambient (column A), 40 (columns B and C)
Flow rate: A 5; B-E 1
Injection volume: 500
Detector: UV 210, UV 235

CHROMATOGRAM
Retention time: k' 7.0
Internal standard: N-ethylnordiazepam (k' 2.1), chlorpheniramine (k' 5.9)
Limit of detection: 300 ng/mL

OTHER SUBSTANCES
Extracted: caffeine, cotinine, benzoylecgonine, secobarbital, oxazepam, phenobarbital, nordiazepam, diazepam, phenylpropanolamine, phentermine, amphetamine, phenmetrazine, lidocaine, ephedrine, pentazocine, methamphetamine, desipramine, nortriptyline, diphenhydramine, methadone, imipramine, flurazepam, amitriptyline, morphine, codeine, hydrocodone

KEY WORDS
column-switching

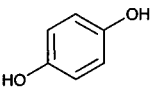
Hydroquinone



Molecular formula: $C_6H_6O_2$
Molecular weight: 110.11
CAS Registry No.: 123-31-9
Merck Index: 4853

SAMPLE
Matrix: air
Sample preparation: Condition a Sep Pak silica SPE cartridge with 10 mL dichloromethane and dry with helium at 5 L/min. Pull air through a 0.80 μm cellulose ester membrane filter and the SPE cartridge at 2 L/min for 1 h, desorb the filter with 5 mL 1% acetic acid with sonication for 10 min, elute the SPE cartridge with 5 mL 1% acetic acid, inject aliquots of the eluates.

HPLC VARIABLES
Guard column: 30 × 4.6 Spheri-5 RP-18
Column: 250 × 4.6 5 μm Ultrasphere ODS
Mobile phase: Gradient. A was 1% acetic acid. B was MeCN:acetic acid 99:1. A:B from 0:100 to 90:10 over 10.5 min, to 78:22 to 24.5 min, to 0:100 (step gradient), maintain at 0:100 for 5 min, re-equilibrate for 12 min.
Flow rate: 2
Injection volume: 200
Detector: F ex 304 em 338 for 6.3 min, ex 280 em 325 for 7.7 min, ex 257 em 330 for 5.3 min, ex 342 em 464 for 4.7 min, ex 285 em 310 for 11 min

CHROMATOGRAM
Retention time: 5

Limit of detection: 0.16 μg/cu.m.

OTHER SUBSTANCES
Simultaneous: catechol, cresol, 3-methylcatechol, phenol, scopoletin

KEY WORDS
SPE

REFERENCE

SAMPLE
Matrix: formulations
Sample preparation: Emulsion. 500 μL Emulsion + 10 mL 400 μg/mL hydroquinone in MeOH + 40 mL 0.1% Tween 80, shake until homogeneous, inject a 10 μL aliquot. Drug release medium. 1 mL Drug release medium + 200 μL 100 μg/mL hydroquinone, mix, inject a 50 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 10 μm Cosmosil 10 C18 (Nacalai Tesque)
Mobile phase: Gradient. MeCN:10 mM pH 3.0 phosphate buffer 2:98 for 1 min, to 45:55 over 5.5 min, maintain at 45:55 for 2 min, return to initial conditions over 1 min.
Flow rate: 2
Injection volume: 10-50
Detector: UV 220

CHROMATOGRAM
Retention time: 4.2
Internal standard: hydroquinone
Limit of detection: 100 ng/mL

OTHER SUBSTANCES
Simultaneous: carboplatin, epirubicin, iomeprol, mitomycin C

KEY WORDS
emulsions; drug release medium; injections; hydroquinone is IS

SAMPLE
Matrix: solutions
Sample preparation: Aqueous food simulants. Pipette 1.0 mL 200 mg/L IS in MeOH into a 25 mL volumetric flask and dilute to the mark with the food simulant obtained from migration experiment, shake. Repeat the procedure to obtain a duplicate sample, filter a portion through a 200 nm membrane filter, inject a 20 μL aliquot. Olive oil simulants. Weigh 25 g olive oil food simulant obtained from migration experiment into a beaker, pour oil into a separating funnel, allow beaker to drain for 30 s. Rinse it with 25 mL hexane and add washes to separating funnel. Add 1.0 mL 200 mg/L IS in MeOH into funnel and mix. Add 10 mL water, shake vigorously by hand for 30 s, allow to stand for 5 min. Collect aqueous phase and reextract oil with a 10 mL water. Combine aqueous extracts, make up to 25 with water, filter the extracts through a small cotton plug to remove any entrained oil. Repeat the procedure to obtain a duplicate sample. Inject a 20 μL aliquot. (Aqueous food simulants were: distilled water, 3% acetic acid in water; EtOH:water 15:85.)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Hypersil ODS

Mobile phase: MeCN:buffer 15:85 (Prepare mobile phase as follows. Dissolve 7.5 g sodium dihydrogen orthophosphate in 800 mL water, add 150 mL MeCN and adjust to pH 3.6 with glacial acetic acid. Make up to 1000 mL with water.)
Flow rate: 1
Injection volume: 20
Detector: UV 280

CHROMATOGRAM
Retention time: 4.2
Internal standard: 2-methyl-1,3-dihydroxybenzene (7.4)
Limit of detection: 300-500 ng/g

OTHER SUBSTANCES
Extracted: pyrocatechol, resorcinol

KEY WORDS
aqueous food simulants; olive oil simulants

REFERENCE

SAMPLE
Matrix: urine
Sample preparation: Condition a 500 mg Bond Elut SAX SPE cartridge with 3 mL MeOH and 3 mL water. Dilute 125 μL urine to 4 mL with water, adjust to pH 4.5 with ascorbic acid, add 12.5 μL enzyme solution, heat at 37° for 48 h, add to the SPE cartridge, wash with 3 mL 5 mM pH 7 phosphate buffer. Acidify the eluate to pH <3 with concentrated HCl, add 5 mL ether, vortex, repeat the extraction twice. Combine the organic layers and evaporate them to dryness under reduced pressure at 30°, reconstitute the residue in 1 mL 1% aqueous phosphoric acid, inject a 20 μL aliquot. (The enzyme solutions used to deconjugate glucuronides and sulfate esters were β-glucuronidase/arylsulfatase (Merck, 4114), arylsulfatase (Sigma, S 1629), and β-glucuronidase diluted 1:6 with water (Boehringer, 127051).)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Nucleosil ODS
Mobile phase: MeOH:5 mM pH 3.4 phosphate buffer 30:70
Flow rate: 1
Injection volume: 20
Detector: UV 270

CHROMATOGRAM
Retention time: 3.2
Limit of detection: 60 μg/mL

OTHER SUBSTANCES
Extracted: catechol, phenol

SAMPLE

Matrix: blood, erythrocytes, urine

Sample preparation: Condition a 3 mL Bond Elut C8 SPE cartridge with 2 mL MeOH and 2 mL buffer. Hemolyze erythrocytes in water 1:3. Dilute urine with water 1:99. Add 1 mL plasma, hemolyzed erythrocytes, or diluted urine to the SPE cartridge, wash with 4 mL buffer, wash with 2 mL MeOH:buffer 50:50, elute with 3 mL MeOH:ammonia 99:1. Evaporate the eluate to dryness under a stream of nitrogen at 30°, reconstitute the residue in the initial mobile phase, vortex, inject a 50 μL aliquot. (Prepare buffer by mixing equal volumes of 100 mM ammonium formate and 100 mM ammonia solution, pH 9.2.)

HPLC VARIABLES

Guard column: 10 × 4 Inertsil
Column: 250 × 4 5 μm Inertsil
Mobile phase: Gradient. A was MeCN. B was MeOH:25% ammonia solution 92.5:7.5. A:B 78:22 for 3 min, then to 65:35 over 2 min (Waters curve no. 3), maintain at 65:35 for 20 min, return to 78:22 over 5 min (Waters curve no. 3).
Flow rate: 0.85
Injection volume: 50
Detector: F ex 325 em 375

CHROMATOGRAM

Retention time: 11.5
Internal standard: hydroxychloroquine

OTHER SUBSTANCES

Extracted: chloroquine, quinine, monodesethylchloroquine, bidesethylchloroquine
Simultaneous: halofantrine, quinidine
Noninterfering: proguanil, cycloguanil, 4-chlorophenylbiguanide, amodiaquine, mefloquine, pyrimethamine, sulfadoxine, cinchonine, cinchonidine

KEY WORDS

SPE; hydroxychloroquine is IS; plasma

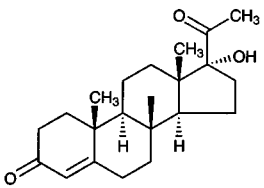
Hydroxyprogesterone



Molecular formula: $C_{21}H_{30}O_3$
Molecular weight: 330.47
CAS Registry No.: 68-96-2
Merck Index: 4886
Lednicer No.: 1 176

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 100 μL 2 μg/mL dexamethasone in EtOH:water 10:90 + 100 μL 250 mM NaOH + 7 mL ether:dichloromethane 60:40, vortex for 30 s, centrifuge at 2000 rpm for 5 min. Remove 6 mL of the organic layer and evaporate it to dryness under a stream of air at 40°, reconstitute the residue in 100 μL dichloromethane:EtOH:water 95:4:1, inject a 50 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.5 5 μm Partisil silica
Mobile phase: Dichloromethane:EtOH:water 95:4:1
Flow rate: 1.5
Injection volume: 50
Detector: UV 239

CHROMATOGRAM
Retention time: 2.5 (17-hydroxyprogesterone)
Internal standard: dexamethasone (11.5)
Limit of quantitation: 25 ng/mL

OTHER SUBSTANCES
Extracted: corticosterone, 11-deoxycortisol, hydrocortisone, 6α-methylprednisolone, prednisolone, prednisone, progesterone

KEY WORDS
plasma; normal phase

SAMPLE
Matrix: blood
Sample preparation: 100 μL Serum + 500 μL water + 100 μL 10 μg/mL 3,7-dimethoxyflavone in EtOH + 8 mL diethyl ether, shake, centrifuge at 4° at 1000 g for 5 min, freeze in acetone/dry ice. Remove the organic layer and dry it over anhydrous sodium sulfate, evaporate to dryness under a stream of nitrogen, reconstitute the residue in 100 μL MeOH:water 40:60, inject a 50 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 3 μm NS-Gel C18
Mobile phase: Gradient. MeOH:water from 40:60 to 55:45, maintain at 55:45 for 24 min, to 80:20 over 25 min
Column temperature: 50
Flow rate: 1
Injection volume: 50
Detector: UV 210, UV 240

CHROMATOGRAM
Retention time: 36.52
Internal standard: 3,7-dimethoxyflavone (47)

OTHER SUBSTANCES
Extracted: aldosterone, androstenedione, dehydroepiandrosterone, deoxycorticosterone, 11-deoxycortisol, estradiol, estrone, hydrocortisone, pregnenolone, progesterone

KEY WORDS
serum

SAMPLE
Matrix: blood
Sample preparation: 1 mL Serum + 100 μL water containing 5 μg/mL 2,3-diaminonaphthalene and 3.5 μg/mL 18-hydroxy-11-deoxycorticosterone + 1 mL 250 mM NaOH + 7 mL diethyl ether, shake on a rotary shaker for 15 min, repeat extraction. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 30-40°, reconstitute the residue in 70 μL MeOH:100 mM perchloric acid 50:50, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 150 × 3.9 4 μm Nova-Pak C18
Mobile phase: Gradient. A was 58 mM NaH_2PO_4 containing 6 mM sodium heptanesulfonate, adjusted to pH 3.1 with concentrated phosphoric acid. B was MeCN:MeOH 85:15. A:B from 100:0 to 78:22 over 5 min, to 70:30 over 12 min, maintain at 70:30 for 4 min, to 65:35 over 9 min.
Flow rate: 1
Injection volume: 20
Detector: UV 245, 256, 343

CHROMATOGRAM
Retention time: 29.26 (17δ-hydroxyprogesterone)
Internal standard: 2,3-diaminonaphthalene (10.71), 18-hydroxy-11-deoxycorticosterone (15.85)
Limit of detection: 1-10 ng/mL (245 nm)

OTHER SUBSTANCES
Extracted: betamethasone, chloroquine, corticosterone, cortisone, dexamethasone, fluendrenolide, fluocinolone acetonide, fluorometholone, fluprednisolone, hydrocortisone, hydroxychloroquine, meprednisone, methylprednisolone, methylprednisolone acetate, paramethasone, prednisolone, prednisone, progesterone, triamcinolone
Noninterfering: aspirin, ibuprofen, indomethacin, phenylbutazone, pregnenolone

KEY WORDS
serum

Das Gupta,V. Quantitation of hydroxyprogesterone caproate, medroxyprogesterone acetate, and progesterone by reversed-phase high-pressure liquid chromatography, *J.Pharm.Sci.*, **1982**, *71*, 294–297.

SAMPLE
Matrix: formulations
Sample preparation: Injections. 1 mL Injection (200 μg/mL) + 300 mg NaCl + 200 μL 10% ammonia + 5 mL dichloromethane, shake vigorously for 10 min, let stand for a few min. Remove 4 mL of the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 4 mL water, mix an aliquot with an equal volume of 30 μg/mL 17α-hydroxyprogesterone in MeOH, inject a 20 μL aliquot. Tablets. Weigh out amount of powdered tablets equivalent to about 200 μg compound, add 1 mL water, sonicate for 2 min, add 300 mg NaCl, add 200 μL 10% ammonia, add 5 mL dichloromethane, shake vigorously for 10 min, let stand for a few min. Remove 4 mL of the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 4 mL water, mix an aliquot with an equal volume of 30 μg/mL 17α-hydroxyprogesterone in MeOH, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 150 × 4 5 μm LiChrosorb RP-18
Mobile phase: MeCN:50 mM pH 3.5 acetate buffer 40:60 containing 1.5 mM triethylamine
Column temperature: 30
Flow rate: 1
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 12
Internal standard: 17α-hydroxyprogesterone

OTHER SUBSTANCES
Simultaneous: benzyl alcohol, ergonovine, methylergonovine
Noninterfering: ascorbic acid

Hydroxypropyl methylcellulose

CAS Registry No.: 9004-65-3
Merck Index: 4889

SAMPLE
Matrix: formulations
Sample preparation: Dilute with an equal volume of MeOH:water 40:60, inject an 80 μL aliquot.

HPLC VARIABLES
Column: 300 × 7.8 Ultrahydrogel 250 250 Å cross-linked methacrylate gel (waters)
Mobile phase: MeOH:buffer 20:80 (Buffer was 95 mM boric acid containing 10 mM KCl, 13 μM sodium borate, and 1.5 mM dextrose.) (At the end of each set of analyses rinse instrument and column with 0.5% sodium azide. (Caution! Sodium azide is carcinogenic, highly toxic, and can form explosive heavy metal azides. Do not discharge to the plumbing system!)
Column temperature: 35
Flow rate: 1
Injection volume: 80
Detector: RI

CHROMATOGRAM
Retention time: 10.6

OTHER SUBSTANCES
Simultaneous: PEG 400

KEY WORDS
ophthalmic solutions; SEC

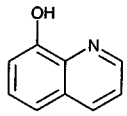
Hydroxyquinoline



Molecular formula: C_9H_7NO
Molecular weight: 145.16
CAS Registry No.: 148-24-3
Merck Index: 4890

SAMPLE

Matrix: solutions

HPLC VARIABLES

Column: 250 × 4.6 Zorbax RX
Mobile phase: Gradient. A was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 1 L water. B was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 200 mL water, make up to 1 L with MeCN. A:B from 100:0 to 0:100 over 30 min, maintain at 0:100 for 5 min.
Column temperature: 30
Flow rate: 2
Detector: UV 210

OTHER SUBSTANCES

Also analyzed: acepromazine, acetaminophen, acetophenazine, albuterol, aminophylline, amitriptyline, amobarbital, amoxapine, amphetamine, amylocaine, antipyrine, aprobarbital, aspirin, atenolol, atropine, avermectin, barbital, benzocaine, benzoic acid, benzotropine, benzphetamine, berberine, bibucaine, bromazepan, brompheniramine, buprenorphine, buspirone, butabarbital, butacaine, butethal, caffeine, carbamazepine, carbromal, chloramphenicol, chlordiazepoxide, chloroquine, chlorothiazide, chloroxylenol, chlorphenesin, chlorpheniramine, chlorpromazine, chlorpropamide, chlortetracycline, cimetidine, cinchonidine, cinchonine, clenbuterol, clonazepam, clonixin, clorazepate, cocaine, codeine, colchicine, cortisone, coumarin, cyclazocine, cyclobenzaprine, cyclothiazide, cyheptamide, cymarin, danazol, danthron, dapsone, debrisoquine, desipramine, dexamethasone, dextromethorphan, dextropropoxyphene, diamorphine, diazepam, diclofenac, diethylpropion, diethylstilbestrol, diflunisal, digitoxin, digoxin, diltiazem, diphenhydramine, diphenoxylate, diprenorphine, dipyrone, disulfiram, dopamine, doxapram, doxepin, dronabinol, ephedrine, epinephrine, epinine, estradiol, estriol, estrone, ethacrynic acid, ethosuximide, etonitazene, etorphine, eugenol, famotidine, fenbendazole, fencamfamine, fenoprofen, fenproporex, fentanyl, flubendazole, flufenamic acid, flunitrazepam, 5-fluorouracil, fluoxymesterone, fluphenazine, furosemide, gentisic acid, gitoxigenin, glipizide, glunixin, glutethimide, glybenclamide, guaiacol, halazepam, haloperidol, hydrochlorothiazide, hydrocodone, hydrocortisone, ibogaine, ibuprofen, iminostilbene, imipramine, indomethacin, isocarbostyril, isocarboxazid, isoniazid, isoproterenol, isoxsuprine, ivermectin, ketamine, ketoprofen, kynurenic acid, levorphanol, lidocaine, lorazepam, lormetazepam, loxapine, mazindol, mebendazole, meclizine, meclofenamic acid, medazepam, mefenamic acid, megestrol, mepacrine, meperidine, mephentermine, mephenytoin, mephesin, mephobarbital, mepivacaine, mescaline, mesoridazine, methadone, methamphetamine, methapyrilene, methaqualone, methazolamide, methocarbamol, methoxamine, methsuximide, methyl salicylate, methyldopa, methyldopamine, methylphenidate, methylprednisolone, methyltestosterone, methyprylon, metoprolol, mibolerone, morphine, nadolol, nalorphine, naloxone, naltrexone, naphazoline, naproxen, nefopam, niacinamide, nicotine, niacin, nifedipine, niflumic acid, nitrazepam, norepinephrine, nortriptyline, noscapine, nylidrin, oxazepam, oxycodone, oxymorphone, oxyphenbutazone, oxytetracycline, papaverine, pargyline, pemoline, pentazocine, pentobarbital, persantine, phenacetin, phenazocine, phenazopyridine, phencyclidine, phendimetrazine, phenelzine, pheniramine, phenobarbital, phenothiazine, phensuximide, phentermine, phenylbutazone, phenylephrine, phenylpropanolamine, piperocaine, prazepam, prednisolone, primidone, probenecid, progesterone, propiomazine, propranolol, propylparaben, pseudoephedrine, puromycin, pyrilamine, pyrithyldione, quazepam, quinaldic acid, quinidine, quinine, ranitidine, recinnamine, reserpine, resorcinol, saccharin, albuterol, salicylamide, salicylic acid, scopolamine, scopoletin, secobarbital, strychnine, sulfacetamide, sufadiazine, sulfadimethoxine, sulfaethidole, sulfamerazine, sulfamethazine, sulfamethoxizole, sulfanilamide, sulfapyridine, sulfasoxizole, sulindac, tamoxifen, temazepam, testosterone, tetracaine, tetracycline, tetramisole, thebaine, theobromine, theophylline, thiabendazole, thiamine, thiamylal, thiobarbituric acid, thioridazine, thiosalicylic acid, thiothixene, thymol, tolazamide, tolazoline, tobutamide, tol-

metin, tranylcypromine, triamcinolone, tribenzylamine, trichloromethiazide, trifluoperazine, trihexyphenidyl, trimethoprim, tripelennamine, triprolidine, tropacocaine, tyramine, verapamil, vincamine, warfarin, yohimbine, zoxazolamine

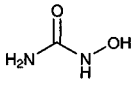
Hydroxyurea



Molecular formula: $CH_4N_2O_2$
Molecular weight: 76.06
CAS Registry No.: 127-07-1
Merck Index: 4896

SAMPLE

Matrix: blood
Sample preparation: Mix 500 μL serum, 20 μL 70% perchloric acid, and 20 μL 15.5 mM methylurea, centrifuge at 12000 g for 5 min. Mix 200 μL supernatant with 700 μL BUN acid reagent (No. 535-3, Sigma) and 600 μL BUN color reagent (No. 535-5, Sigma), place the mixture in a boiling water bath to form colored complexes. After 10 min cool the mixture in ice water, inject a 25-100 μL aliquot of the colored solution.

HPLC VARIABLES

Column: 300 × 3.9 Bondclone 10 C18 (Phenomenex)
Mobile phase: MeCN:water 13:87
Flow rate: 1.7
Injection volume: 25-100
Detector: UV 449

CHROMATOGRAM

Retention time: 6.5
Internal standard: methylurea (12.2)

KEY WORDS

serum; derivatization

REFERENCE

Manouilov,K.K.; McGuire,T.R.; Gwilt,P.R. Colorimetric determination of hydroxyurea in human serum using high-performance liquid chromatography, *J.Chromatogr.B*, **1998**, *708*, 321–324.

SAMPLE

Matrix: blood
Sample preparation: Vortex plasma with two volumes of 5% trichloroacetic acid for 30 s, centrifuge at 7000 g for 5 min, inject a 5 μL aliquot of the supernatant.

HPLC VARIABLES

Column: 100 × 3.2 3 μm Phase-II ODS (Bioanalytical Systems)
Mobile phase: 50 mM sodium acetate containing 5 mM tetrabutylammonium hydroxide, adjusted to pH 6.75 ± 0.02 with 50 mM acetic acid
Flow rate: 0.5
Injection volume: 5
Detector: E, Bioanalytical Systems LC-4B, glassy carbon electrode + 800 mV, Ag/AgCl reference electrode

CHROMATOGRAM

Retention time: 1.1 (elute for 5 min to remove plasma components)

Limit of detection: 20 μM

OTHER SUBSTANCES
Noninterfering: acetaminophen, caffeine, carbamazepine, ethosuximide, morphine, phenobarbital, phenytoin, salicylic acid, valproic acid

KEY WORDS
plasma

REFERENCE
Havard,J.; Grygiel,J.; Sampson,D. Determination by high-performance liquid chromatography of hydroxyurea in human plasma, *J.Chromatogr.*, **1992**, *584*, 270–274.

SAMPLE
Matrix: blood
Sample preparation: 100 μL Serum + 200 μL trichloroacetic acid, vortex for 30 s, centrifuge at 5000 g for 5 min, pass the supernatant through a 1 mL Bond Elut C18 SPE cartridge, inject an aliquot of the eluate.

HPLC VARIABLES
Guard column: 20 mm long Supelguard LC 18 (Supelco)
Column: 150 × 4.6 Supelcosil LC 18
Mobile phase: 50 mM Sodium acetate adjusted to pH 6.75 with acetic acid
Flow rate: 0.8
Detector: E, ESA Coulochem II, Model 5020 guard cell 650 mV, Model 5011 analytical cell 600 mV

CHROMATOGRAM
Limit of detection: 600 nM
Limit of quantitation: 1.3 μM

KEY WORDS
pharmacokinetics; serum; SPE

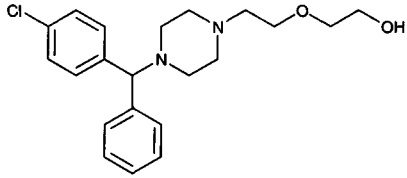
Hydroxyzine



Molecular formula: $C_{21}H_{27}ClN_2O_2$
Molecular weight: 374.91
CAS Registry No.: 68-88-2, 2192-20-3 (di HCl), 10246-75-0 (pamoate)
Merck Index: 4897
Lednicer No.: 1 59, 4 118

SAMPLE
Matrix: blood
Sample preparation: 1 mL Serum + 100 μL 1 μg/mL triprolidine + 250 μL 10% KOH + 5 mL ether, vortex, centrifuge. Remove ether layer and add it to 100 μL 0.5% phosphoric acid, vortex, centrifuge, remove most of ether layer and discard it, remove traces of ether by nitrogen at room temperature for 2-3 min, inject all of aqueous layer.

HPLC VARIABLES
Column: Waters CN reverse-phase radial compression

Mobile phase: MeCN:buffer 27:73 (Buffer was 75 mM pH 3.0 phosphate buffer containing 20 mM dibutylamine and 50 ng/mL triprolidine.)
Flow rate: 1
Injection volume: 100
Detector: UV 229

CHROMATOGRAM
Retention time: 6.9
Internal standard: triprolidine (3.6)
Limit of detection: 3 ng/mL

KEY WORDS
serum

REFERENCE
Simons,F.E.R.; Simons,K.J.; Frith,E.M. The pharmacokinetics and antihistaminic of the H_1 receptor antagonist hydroxyzine, *J.Allerg.Clin.Immunol.*, **1984**, *73*, 69–75.

SAMPLE
Matrix: blood
Sample preparation: 1 mL Serum + 50 μL 3 μg/mL IS + 1 mL 1 M pH 5.0 sodium citrate buffer + 3 mL ethyl acetate, vortex 1 min, centrifuge at 4000 rpm for 15 min, remove organic layer, repeat extraction. Combine organic layers and add 200 μL 1.7% phosphoric acid, vortex 1 min, centrifuge 5 min, remove and discard ethyl acetate layer, remove traces of ethyl acetate from aqueous layer using a stream of nitrogen, inject.

HPLC VARIABLES
Column: radial 4 μm NovoPak C18 radial compression
Mobile phase: MeCN:buffer 46:54 (Buffer was 10 mM pH 2.9 KH_2PO_4 + 20 mM sodium 1-decanesulfonate.)
Flow rate: 1.4
Detector: UV 229

CHROMATOGRAM
Retention time: 3.6
Internal standard: P-265, an ethoxy derivative of cetirizine (6.8)
Limit of detection: 1 ng/mL

OTHER SUBSTANCES
Simultaneous: cetirizine

KEY WORDS
serum

SAMPLE
Matrix: blood
Sample preparation: 2 mL Whole blood or plasma + 2 mL buffer + 5 mL chloroform:isopropanol: n-heptane 60:14:26, shake gently horizontally for 10 min, centrifuge at 2800 g for 10 min. Remove the lower organic layer and evaporate it to dryness under vacuum at 45°, reconstitute the residue in 100 μL mobile phase, centrifuge at 2800 g for 5 min, inject a 50 μL aliquot of the supernatant. (Buffer was saturated ammonium chloride solution 25% diluted with water, adjusted to pH 9.5 with 25% ammonia solution.)

HPLC VARIABLES
Column: 300 × 3.9 4 μm NovaPack C18
Mobile phase: MeOH:THF:buffer 65:5:30 (Buffer was 0.68 g/L (10 mM (sic)) KH_2PO_4 adjusted to pH 2.6 with concentrated orthophosphoric acid.) (At the end of each session wash the column with water for 1 h and MeOH for 1 h, re-equilibrate for 30 min.)

Column temperature: 30
Flow rate: 0.8
Injection volume: 50
Detector: UV 230

CHROMATOGRAM

Retention time: 8.62
Limit of detection: <120 ng/mL

SAMPLE

Matrix: solutions
Sample preparation: Prepare a 1 mg/mL solution in MeOH, inject a 5 μL aliquot.

HPLC VARIABLES

Column: 250 × 4.6 5 μm Lichrosphere cyanopropyl
Mobile phase: Carbon dioxide:MeOH:isopropylamine 90:10:0.05
Column temperature: 50
Flow rate: 3
Injection volume: 5
Detector: UV 220

CHROMATOGRAM

Retention time: 2.42

OTHER SUBSTANCES
Simultaneous: benactyzine, buclizine, perphenazine, thioridazine, amitriptyline, desipramine, imipramine, nortriptyline, protriptyline

Molecular formula: $C_{17}H_{25}NO_4$
Molecular weight: 307.39
CAS Registry No.: 66195-31-1
Merck Index: 4921

SAMPLE

Matrix: blood
Sample preparation: 500 µL Plasma + 500 µL pH 7.4 phosphate buffer, mix, add 9 mL dioxane (Caution! Dioxane is a carcinogen!), mix, centrifuge at high speed for 30 s, inject a 20 µL aliquot of the supernatant.

HPLC VARIABLES

Guard column: µBondapak C18 Guard-Pak
Column: 150 × 3.9 Nova-Pak C18
Mobile phase: Dioxane:buffer 35:65 (Caution! Dioxane is a carcinogen!) (Buffer was 100 mM NaH_2PO_4 containing 0.11 mM 9,10-dimethoxyanthracene-2-sulfonate and 0.11 mM 1-heptanesulfonic acid, pH adjusted to 3 with phosphoric acid. Purify 9,10-dimethoxyanthracene-2-sulfonate (Fluka) by Soxhlet extraction with dichloroethane before use.)
Flow rate: 0.5
Injection volume: 20
Detector: F ex 380 em 452 following post-column extraction. The column effluent mixed with dichloroethane pumped at 1 mL/min and the mixture flowed through a 1 m × 0.25 mm i.d. stainless steel coil to a phase separator (Anal. Chim. Acta 1987, 192, 267) then the organic phase flowed through the detector.

CHROMATOGRAM

Retention time: k' 3.3
Limit of detection: 10 ng

OTHER SUBSTANCES

Also analyzed: dibenzoyl dopamine, dibudop, dipivaloyl dopamine

KEY WORDS
plasma; post-column extraction; post-column reaction

SAMPLE
Matrix: blood, urine
Sample preparation: Plasma. 2 mL Plasma + 10 μL 10 μg/mL dihydroxybenzylamine in 200 mM acetic acid + 40 mg alumina (Bioanalytical Systems) + 2 mL tris buffer, vortex, shake on a wrist action shaker for 15 min. Discard the liquid, add 1 mL water to the alumina, vortex for 2 min, discard the liquid, repeat the wash. Add 500 μL 200 mM acetic acid to the alumina, vortex for 15-20 min, inject a 50 μL aliquot of the liquid. Urine. Dilute urine 1:20 with water. Remove a 250 μL aliquot and add it to 10 μL 20 μg/mL α-ethyldopamine in 200 mM acetic acid, add 20 mg alumina (Bioanalytical Systems), add 500 μL tris buffer, vortex, shake on a wrist action shaker for 15 min. Discard the liquid, add 1 mL water to the alumina, vortex for 2 min, discard the liquid, repeat the wash. Add 500 μL 200 mM acetic acid to the alumina, vortex for 15-20 min, inject a 50 μL aliquot of the liquid. (To deconjugate mix 650 μL plasma or urine, 500 μL acetate buffer, 50 μL 40 mg/mL penicillamine in water, and 250 μL sulfatase, heat at 37° for 16 h. Remove a 250 μL aliquot and add 10 μL 10 μg/mL dihydroxybenzylamine in 200 mM acetic acid (plasma) or 20 μg/mL α-ethyldopamine in 200 mM acetic acid (urine), add 20 mg alumina, add 500 μL tris buffer, proceed as above. Tris buffer was 60.5 g tris in 250 mL water, pH adjusted to 8.6 with phosphoric acid. Acetate buffer was 27.2 g sodium acetate trihydrate and 11.6 mL glacial acetic acid in 1 L water, pH 4.7. To prepare sulfatase solution first condition a Sep-Pak C18 SPE cartridge with 15 mL water. Prepare a solution of 15000 U sulfatase H-5 (Sigma) in 2 mL water, add to the SPE cartridge, elute with 3 mL water, collect 5 mL effluent and use this solution.)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Ultrasphere C18 IP
Mobile phase: MeCN:buffer 1 3:97 (plasma) or MeCN:buffer 2 18:82 (urine) (Buffer 1 was 28.3 g monochloroacetic acid, 9.35 g NaOH, 1.0 g disodium EDTA, and 50 mg sodium octyl sulfate in 2 L water, adjust pH to 3.0 with monochloroacetic acid. Buffer 2 was 22.0 g sodium acetate, 21.0 g citric acid, 9.8 g NaOH, 0.67 g disodium EDTA, and 75 mL glacial acetic acid in 2 L water, adjust pH to 5.0 with 5 M NaOH.)
Flow rate: 1
Injection volume: 50
Detector: E, BAS LC-4B, TL-5 thin-layer glassy-carbon electrode +0.65 V, Ag/AgCl reference electrode

CHROMATOGRAM
Retention time: 23 (plasma), 13 (urine) (of epinine, the active metabolite)
Internal standard: dihydroxybenzylamine (9), α-ethyldopamine (10)
Limit of detection: 0.5 ng/mL

SAMPLE
Matrix: solutions
Sample preparation: Mix 50 μL of a 0.001-5 mM solution in MeCN with 50 μL 1 mM DNS-APy in MeCN containing 50 mM 2,2'-dipyridyl disulfide and 50 mM triphenylphosphine, let

stand at room temperature for 30 min. Remove a 10 μL aliquot and dilute it to 100 μL with MeCN, inject a 2 μL aliquot. (Synthesis of DNS-APy, 1-(5-dimethylamino-1-naphthalenesulfonyl)-(S)-3-aminopyrrolidine, is as follows. Cool a solution of 16.4 g (R)-(+)-1-benzyl-3-pyrrolidinol in 164 mL pyridine to +5°, add 19.35 g p-toluenesulfonyl chloride, stir at +10° for 48 h, evaporate to dryness, chromatograph using dichloromethane:acetone 95:5 to obtain (3R)-3-[(4-tolylsulfonyl)oxy]-1-(phenylmethyl)pyrrolidine (mp 68°). Heat a solution of (3R)-3-[(4-tolylsulfonyl)oxy]-1-(phenylmethyl)pyrrolidine in 200 mL anhydrous DMF to 65°, add 33.5 g sodium azide (Caution! Sodium azide is highly toxic!), stir at 60° for 7 h, filter, evaporate the filtrate to dryness under reduced pressure, dissolve the residue in ethyl acetate, wash twice with water, dry over anhydrous magnesium sulfate, evaporate to obtain (3S)-3-azido-1-(phenylmethyl)pyrrolidine as an oil. Add 3.5 g 10% palladium on carbon under nitrogen to a solution of 7.05 g (3S)-3-azido-1-(phenylmethyl)pyrrolidine in 34.8 mL 1 M HCl in water and 245 mL EtOH, hydrogenate at atmospheric pressure for 30 min, add 3.5 g catalyst, hydrogenate for 2 h, filter, add 34.8 mL 1 M HCl to the filtrate, evaporate to dryness under reduced pressure, take up the residue in 70 mL EtOH, filter, evaporate the filtrate to dryness under reduced pressure, repeat this operation twice, crystallize with the minimum amount of EtOH to obtain (3S)-(+)-3-aminopyrrolidine dihydrochloride (J. Med. Chem. 1992, 35, 4205). (3S)-(+)-Aminopyrrolidine dihydrochloride is also reported to be available from Tokyo Kasei. Stir 800 mg (3S)-(+)-3-aminopyrrolidine dihydrochloride and 2 mL triethylamine in 800 mL MeCN at 0-10°, add a solution of 440 mg dansyl chloride in 80 mL MeCN dropwise, stir in the dark for 30 min, evaporate to dryness under reduced pressure, dissolve the residue in 200 mL 5% HCl, wash twice with 40 mL portions of dichloromethane. Adjust the pH of the organic layer to 13-14 with 5% NaOH, extract twice with 10 mL portions of dichloromethane. Combine the organic layers and wash them with 80 mL water. Dry the organic layer over anhydrous sodium sulfate, evaporate to dryness under reduced pressure, dissolve the residue in dichloromethane:MeOH 90:10, chromatograph on silica gel with dichloromethane:MeOH 90:10. Collect the greenish-yellow fluorescent band and evaporate it under reduced pressure to obtain DNS-APy as a greenish-yellow oil.)

HPLC VARIABLES

SAMPLE
Matrix: urine
Sample preparation: Condition an Isolute HAX SPE cartridge (International Sorbent Technology, UK) with 3 mL MeOH, 3 mL water, and 3 mL 100 mM pH 2.0 acetate buffer. Add 1 mL 100 mM pH 2.0 acetate buffer to 1 mL urine, mix, add to the SPE cartridge. Wash with 2 mL water, 2 mL MeOH:water 40:60, 2 mL hexane containing 10% triethylamine, and 2 mL hexane, elute with 1 mL MeOH containing 10 mM HCl. Evaporate the eluate to dryness under a stream of nitrogen at 50°, reconstitute the dry residue with 50 μL MeOH, add 100 μL reagent. Add 10 μL diethyl phosphorocyanidate and let stand for 5 min at room temperature. Add 40 μL water and inject a 10 μL aliquot. (The reagent was 28 mM Nepsilon-dansyl-O-methyl-L-lysine in MeOH. Preparation is as follows. Dissolve 53.2 mg Nepsilon-dansyl-L-lysine in 2 mL MeOH, add 8 mL benzene and 400 μL 10% trimethylsilyldiazomethane in hexane, stir for 30 min at room temperature, evaporate to dryness under a stream of nitrogen at 40°. Reconstitute the dry residue in 5 mL MeOH to a final concentration of 28 mM. (Caution! Benzene is a carcinogen!) The free amino group of the reagent reacts with the free carboxylic acid group of ibuprofen.)

SAMPLE

Matrix: blood

Sample preparation: Basify 1 mL serum with 500 mM pH 10 carbonate buffer, extract with 1-chlorobutane. Extract the organic layer with 37.5 mM sulfuric acid. Basify the sulfuric acid layer (?) and extract it with 1-chlorobutane. Evaporate the organic layer to dryness, add 50 µL

130 ng/mL IS, add 50 μL 0.1% triethylamine in MeCN, evaporate to dryness, add 10 μL 0.1% acetic acid in MeCN, add 100 μL 220 μL/L naphthylisocyanate in MeCN, heat at 30° for 10 min, evaporate to dryness, reconstitute with 100 μL MeCN, use a column-switching technique during the first 6 min.

HPLC VARIABLES
Column: 100 × 4.6 3 μm 100 Å D-phenylglycine Pirkle column
Mobile phase: MeOH:triethylamine:trifluoroacetic acid 100:0.038:0.038
Flow rate: 1
Detector: F ex 224 em 340

CHROMATOGRAM
Retention time: 10.5 (+), 11.6 (-)
Internal standard: U-71175
Limit of quantitation: 0.5 ng/mL

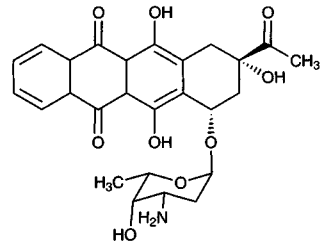
Idarubicin



Molecular formula: $C_{26}H_{27}NO_9$
Molecular weight: 497.50
CAS Registry No.: 58957-92-9, 57852-57-0 (HCl)
Merck Index: 4931
Lednicer No.: 5 47

SAMPLE
Matrix: blood
Sample preparation: Condition a 6 mL Bondelut C18 SPE cartridge with 3 mL MeOH and 3 ml MeOH:phosphate buffer 1:2. 1 mL Plasma + 10-100 μL 1 μg/mL daunorubicin hydrochloride in water + 1 mL 10 mM pH 8 phosphate buffer containing 600 nM tetrabutylammonium bromide + 1 mL MeOH, add to the SPE cartridge, wash with 4 mL MeOH:water 25:75, elute with 3 mL 30 mM phosphoric acid in MeOH. Add the eluate to 100 μL 100 mM KH_2PO_4, evaporate to 100-400 μL under vacuum at 25°, inject a 10-100 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Supelcosil LC-CN
Mobile phase: Gradient. A was MeCN:10 mM KH_2PO_4 22:78. B was MeCN:10 mM KH_2PO_4 containing 6 mM phosphoric acid 70:30. A:B from 90:10 to 80:20 over 9 min.
Injection volume: 10-100
Detector: F ex 470 em 580

CHROMATOGRAM
Retention time: 12.1
Internal standard: daunorubicin (10.1)
Limit of detection: 0.2 ng/mL

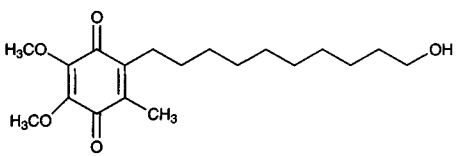
Idebenone



Molecular formula: $C_{19}H_{30}O_5$
Molecular weight: 338.44
CAS Registry No.: 58186-27-9
Merck Index: 4932

SAMPLE
Matrix: blood, tissue
Sample preparation: Serum. 100 μL serum + 100 μL 100 ng/mL vitamin K3 in EtOH, shake, add 4 mL cyclohexane:benzene 20:80 (Caution! Benzene is a carcinogen!), vortex for 2 min, centrifuge at 1500 g for 10 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 100 μL EtOH, filter (0.45 μm), inject a 20 μL aliquot. Tissue. 50-100 mg Brain tissue + 500 μL 100 mM perchloric acid + 20 μL 100 ng/mL vitamin K3 in EtOH, homogenize in a glass homogenizer at 4°, add 6 mL cyclohexane:benzene 80:20 (Caution! Benzene is a carcinogen!), vortex for 2 min, centrifuge at 1500 g for 10 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 100 μL EtOH, filter (0.45 μm), inject a 20 μL aliquot.

HPLC VARIABLES
Column: 150 × 6 5 μm Shim-pack CLC-ODS (Shimadzu)
Mobile phase: MeOH:water 85:15 containing 50 mM sodium perchlorate
Flow rate: 1
Injection volume: 20
Detector: E, EICOM ECD 100, glassy carbon working electrode +0.7 V, Ag/AgCl reference electrode following post-column catalytic reduction. The column effluent flowed through a 10 × 4.6 column packed with 10 μm 5% platinum on alumina catalyst (Toa Electronics) to the detector. (Purge catalyst column with water at 10 mL/min for 5 min before use.)

CHROMATOGRAM
Retention time: 7.8
Internal standard: vitamin K3 (4.9)
Limit of detection: 5 pg

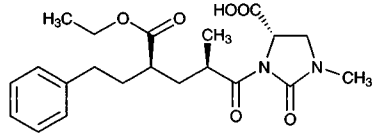
Imidapril



Molecular formula: $C_{20}H_{27}N_3O_6$
Molecular weight: 405.45
CAS Registry No.: 89271-37-9
Merck Index: 4947

SAMPLE
Matrix: blood, urine
Sample preparation: Condition a 100 mg Bond Elut C18 SPE cartridge with 3 mL MeOH, with 3 mL water, and with 1 mL 100 mM HCl. Condition a 100 mg Bond Elut SI silica SPE cartridge with 1 mL acetone and 3 mL n-hexane. Plasma. 1 mL Plasma + 200 μL 2 M HCl + 200 μL water + 10 mL acetone, shake for 10 min, centrifuge at 1500 g for 10 min. Remove 10 mL of the supernatant and evaporate it to dryness under reduced pressure at 45°, reconstitute the residue in 1 mL 100 mM HCl, add 10 mL diethyl ether, shake for 5 min, centrifuge at 1500 g for 5 min. Add the aqueous layer to the C18 SPE cartridge, wash with 2 mL 100 mM HCl, wash with 1 mL MeOH:100 mM HCl 20:80, elute with 1 mL MeOH:100 mM HCl 60:40. Evaporate the eluate to dryness, reconstitute in 200 μL MeOH:100 mM HCl 60:40, evaporate to dryness into a vial, reconstitute in 25 μL water and 25 μL acetone, sonicate for 10 min, add

50 μL 0.2% IS1 in acetone, heat at 40° for 1 h, evaporate to dryness under reduced pressure at 45°, dissolve in 50 μL acetone and 1 mL hexane, add to the silica SPE cartridge, wash with 1 mL n-hexane:ethyl acetate 70:30, elute with 1 mL n-hexane:ethyl acetate 50:50, evaporate the eluate to dryness, reconstitute in 300 μL 20 ng/mL 9-anthrylmethyl myristate in MeCN:water 80:20, inject a 200 μL aliquot. Urine. 1 mL Urine + 200 μL water + 200 μL IS2 + 15 mL 500 mM Na_2HPO_4, make up to 25 mL with water, remove a 2 mL aliquot and add it to 10 mL diethyl ether, shake for 5 min, centrifuge at 1500 g for 5 min, discard the organic layer, add 10 mL chloroform, shake for 5 min, centrifuge at 1500 g for 5 min. Add 1 mL of the aqueous layer to the C18 SPE cartridge, wash with 2 mL 100 mM HCl, wash with 1 mL MeOH:100 mM HCl 20:80, elute with 1 mL MeOH:100 mM HCl 60:40. Evaporate the eluate to dryness, reconstitute in 200 μL MeOH:100 mM HCl 60:40, evaporate to dryness into a vial, reconstitute in 25 μL water and 25 μL acetone, sonicate for 10 min, add 50 μL 0.2% 9-anthryldiazomethane in acetone, heat at 40° for 1 h, evaporate to dryness under reduced pressure at 45°, dissolve in 50 μL acetone and 1 mL hexane, add to the silica SPE cartridge, wash with 1 mL n-hexane:ethyl acetate 70:30, elute with 1 mL n-hexane:ethyl acetate 50:50, evaporate the eluate to dryness, reconstitute in 250 μL MeCN:water 80:20, inject a 25 μL aliquot. (Synthesis of 9-anthryldiazomethane is as follows. Stir 8.8 g 9-anthraldehyde and 8.5 g 80% hydrazine hydrate in 150 mL EtOH at room temperature for 3 h, filter off the solid 9-anthraldehyde hydrazone and dry under vacuum (mp 124-6°) (Bull. Chem. Soc. Jpn. 1967, 40, 691). Dissolve 220 mg 9-anthraldehyde hydrazone in 100 mL anhydrous ether, add 800 mg activated manganese dioxide, follow the reaction by reverse-phase HPLC using MeCN at 0.4 mL/min and UV 254. At the end of the reaction filter off the manganese and wash it with 20 mL ether, evaporate the filtrate to obtain 9-anthryldiazomethane (mp 64-6°) (Anal.Biochem. 1980, 107, 116 and 1983, 132 456). Prepare activated manganese dioxide as follows. Stir a solution of 20 g potassium permanganate in 250 mL water at room temperature, add 10 g activated carbon (Nuchar C-190 or C-190N), stir for 16 h, filter (Buchner funnel), wash 4 times with 50 mL portions of water, dry in air, dry in an oven at 105-110° for 8-24 h (J.Org.Chem. 1970, 35, 3971).)

HPLC VARIABLES

Guard column: 4 × 4 5 μm Lichrosorb Si60
Column: 250 × 4 5 μm Hypersil MOS-5 dimethyloctyl
Mobile phase: MeCN:0.02% triethylamine 80:20, pH adjusted to 3.0 with 10% phosphoric acid

SAMPLE
Matrix: formulations
Sample preparation: Grind tablets, weigh out amount equivalent to 25 mg imidapril, add 40 mL MeOH:water 40:60, shake vigorously for 10 min, make up to 50 mL with MeOH:water 40:60, filter (0.45 μm), inject a 20 μL aliquot of the filtrate.

HPLC VARIABLES
Column: 150 × 4.6 5 μm Nucleosil 5C8
Mobile phase: MeOH:10 mM pH 2.7 phosphate buffer 40:60
Column temperature: 40
Flow rate: 1
Injection volume: 20
Detector: UV 215

CHROMATOGRAM
Retention time: 4 (SRR, RSS), 6 (SSR, RRS), 7 (SRS, RSR)
Limit of detection: 0.05% for each diastereomer

OTHER SUBSTANCES
Simultaneous: degradation products, imidaprilat

KEY WORDS
tablets

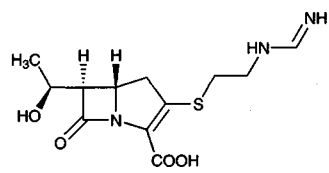
Imipenem



Molecular formula: $C_{12}H_{17}N_3O_4S$
Molecular weight: 317.37
CAS Registry No.: 64221-86-9, 74431-23-5 (monohydrate)
Merck Index: 4954
Lednicer No.: 4 181

SAMPLE
Matrix: blood

Sample preparation: Filter (Ultrafree MC) plasma at 6000 g for 10 min, inject a 10 μL aliquot of the ultrafiltrate.

HPLC VARIABLES
Column: 150 × 3.9 4 μm Nova Pak C18
Mobile phase: 200 mM pH 7.2 borate buffer (Prepare the buffer by dissolving 12.4 g boric acid in 1 L water and adjusting pH to 7.2 with 1 M NaOH.)
Flow rate: 1
Injection volume: 10
Detector: UV 300

CHROMATOGRAM
Retention time: 4.44
Limit of detection: 30 ng/mL
Limit of quantitation: 80 ng/mL

KEY WORDS
pharmacokinetics; plasma

SAMPLE
Matrix: blood
Sample preparation: 2 mL Plasma + 1600 ng clomipramine in MeOH + 2 mL 1 M NaOH + 5 mL hexane:isoamyl alcohol 99:1, shake mechanically for 15 min, centrifuge at 1686 g for 5 min. Remove the organic phase and add it to 200 μL 0.05% orthophosphoric acid, shake for 15 min, centrifuge for 5 min, inject a 50 μL aliquot of the aqueous phase.

HPLC VARIABLES
Guard column: μBondapak/Porasil
Column: μBondapak C18
Mobile phase: MeCN:buffer 40:60 (Buffer was 13.68 g KH_2PO_4 in 2 L water, adjusted to pH 4.7 with dilute KOH.)
Column temperature: 50
Flow rate: 2
Injection volume: 50
Detector: UV 254

CHROMATOGRAM
Retention time: 5
Internal standard: clomipramine (7.5)
Limit of detection: 0.6 ng

OTHER SUBSTANCES
Extracted: amitriptyline, desipramine, nortriptyline
Simultaneous: chlordiazepoxide, chlorpromazine, cimetidine, clomipramine, diazepam, doxepin, flurazepam, lorazepam, oxazepam, pentobarbital, perphenazine, phenobarbital, phenytoin, prochlorperazine, propoxyphene, secobarbital, thioridazine, trifluoperazine
Noninterfering: acetaminophen, codeine, meperidine

SAMPLE

Matrix: blood

Sample preparation: 10 mL Plasma or whole blood + 1 mL 1 M NaOH, extract twice with 10 mL hexane for 30 min. Remove the organic layers and evaporate them to dryness under a stream of nitrogen, reconstitute the residue in 1 mL 100 mM HCl, add 5 mL chloroform, vortex for 1 min, centrifuge. Remove a 4.5 mL aliquot of the organic layer and evaporate it to dryness, reconstitute the residue in 100 μL mobile phase, inject a 50 μL aliquot. (It is implied, but not explicitly stated in the paper, that this extraction procedure works for this compound.)

HPLC VARIABLES

Column: 10 μm Micropak CN (Varian)
Mobile phase: MeCN:20 mM ammonium acetate 90:10
Flow rate: 2.5
Injection volume: 50
Detector: UV 254

CHROMATOGRAM

Retention time: 10.1
Limit of detection: 10 ng/mL

OTHER SUBSTANCES

Simultaneous: acetophenazine, amitriptyline, benztropine, butaperazine, carphenazine, chlorpromazine, fluphenazine, haloperidol, mesoridazine, nortriptyline, orphenadrine, piperacetazine, promethazine, thioridazine, trifluoperazine, triflupromazine, trihexyphenidyl, trimeprazine
Interfering: promazine, thiothixene

KEY WORDS

plasma; whole blood

SAMPLE

Matrix: blood

Sample preparation: 1 mL Serum + 200 μL 10 μg/mL protriptyline in water + 200 μL 80 g/L $NaHCO_3$ + 5 mL hexane, vortex for 15 s, centrifuge for 5 min. Remove the hexane layer and evaporate it in a stream of nitrogen at 60°. Reconstitute in 100 μL mobile phase, vortex for 15 s, inject a 50 μL aliquot.

HPLC VARIABLES

Column: 300 × 4 10 μm μBondapak CN
Mobile phase: MeCN:MeOH:5 mM phosphate buffer 60:15:25, adjusted to pH 7.0
Flow rate: 2
Injection volume: 50
Detector: UV 254

CHROMATOGRAM

Retention time: 3.62
Internal standard: protriptyline (12.20)
Limit of detection: 6 ng/mL

OTHER SUBSTANCES

Simultaneous: trimipramine, doxepin, amitriptyline, desmethyldoxepin, nortriptyline, desipramine, chlorpromazine, procainamide, thioridazine, propranolol, propoxyphene, disopyramide, maprotiline

Noninterfering: caffeine, theophylline, salicylic acid, chlordiazepoxide, methaqualone, diazepam, acetaminophen, trifluoperazine

KEY WORDS
serum

Koteel,P.; Mullins,R.E.; Gadsden,R.H. Sample preparation and liquid-chromatographic analysis for tricyclic antidepressants in serum, *Clin.Chem.*, **1982**, *28*, 462–466.

SAMPLE
Matrix: blood
Sample preparation: Condition a Bond-Elut C18 column with 2 volumes MeOH then 2 volumes water. Add 1 mL serum then 200 μL 700 ng/mL promazine in MeOH:0.1 M HCl 13:87 to each column, wash with 2 volumes water, wash with 2 volumes 0.1 M acetic acid, wash with MeOH/water, add 200 μL 10 mM ammonium acetate in MeOH, wait for 30 s, elute with vacuum, repeat elution process two more times. Combine eluates and evaporate them to dryness at 56-8° under compressed air. Reconstitute with 200 μL mobile phase, vortex 10 s, inject 75-100 μL aliquot. (MeOH/water was 500 mL MeOH:water 65:35 plus 25 μL concentrated HCl.)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Supelco silica
Mobile phase: EtOH:MeCN:t-butylamine 98:2:0.05 (Mix 1 gallon EtOH with 77 mL MeCN and 1.9 mL t-butylamine.)
Flow rate: 2
Injection volume: 75-100
Detector: UV 254

CHROMATOGRAM
Retention time: 4.0
Internal standard: promazine (5.2)
Limit of detection: 2 ng/mL

OTHER SUBSTANCES
Extracted: amitriptyline, desipramine, desmethyldoxepin, doxepin, nortriptyline, protriptyline
Simultaneous: procainamide, zimeldine, morphine, codeine, trifluoperazine, desmethyldisopyramide, 10-hydroxynortriptyline, prochlorperazine, oxaprotiline, 2-hydroxydesipramine, chlorpheniramine, maprotiline, norzimeldine, iminostilbene, desmethylchlordiazepoxide, buprion, diazepam, demoxepam, chlordiazepoxide, propoxyphene, dextropropoxyphene, cocaine, oxapam, trimipramine, mianserin, trimeprazine, loxepin, fluphenazine, methadone, trifluopromazine, phenteramine, chlorimipramine, perphenazine, quinidine, thioridazine, hydroxyamoxapine, meperidine, chlorpromazine, disopyramide, amphetamine, 2-hydroxyimipramine
Noninterfering: thiopropazine
Interfering: iprindole, pyrilamine, promethazine, prolixin, amoxapine, N-acetylprocainamide

KEY WORDS
serum; normal phase; SPE

SAMPLE
Matrix: blood

Sample preparation: Inject 200 μL serum onto column A and elute with mobile phase A for 10 min then back-flush column A onto column B with mobile phase B for 4 min. Elute column B with mobile phase B and monitor the effluent. Remove column A from circuit and wash with MeCN:water 60:40 for 6 min then with mobile phase A for 10 min.

HPLC VARIABLES

Column: A 40 × 4 TSKprecolumn PW (Tosoh); B 150 × 4 TSKgel ODS-80TM (Tosoh)
Mobile phase: A 50 mM pH 7.5 potassium phosphate; B MeCN:100 mM pH 2.7 potassium phosphate 32.5:67.5, containing 0.2 g/L sodium 1-heptanesulfonate
Flow rate: 1
Injection volume: 200
Detector: UV 210

CHROMATOGRAM

Retention time: 15
Limit of detection: 10 ng/mL

OTHER SUBSTANCES

Simultaneous: amitriptyline, amoxapine, clomipramine, doxepin, desipramine, maprotiline, trimipramine
Interfering: nortriptyline

KEY WORDS

serum; column-switching; use gradient to determine metabolites

REFERENCE

SAMPLE

Matrix: blood
Sample preparation: 2 mL Plasma + 100 μL 10 mM HCl + 200 μL 10% ammonium carbonate (final pH 8.7), vortex gently, add 5 mL MTBE, extract (Vibrax VXR2) for 20 min, centrifuge at 4° at 1720 g for 10 min, remove the organic layer. Add 5 mL dichloromethane to the aqueous layer, shake for 20 min on a reciprocating shaker, centrifuge at 0° at 1720 g for 10 min. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 50°, reconstitute the residue in 100 μL 10 mM HCl, wash with 2 mL MTBE, wash with 2 mL hexane, inject a 3-20 μL aliquot of the aqueous layer.

HPLC VARIABLES

Column: 250 × 4.6 5 μm Ultrasphere-ODS C18
Mobile phase: MeCN:MeOH:40 mM ammonium acetate 24:40:36 containing 0.04% triethylamine, pH adjusted to 7.3 with glacial acetic acid
Flow rate: 1.2
Injection volume: 3-20
Detector: UV 237

CHROMATOGRAM

Retention time: 17.9
Internal standard: imipramine

OTHER SUBSTANCES

Extracted: diltiazem
Simultaneous: alprazolam, amitriptyline, desipramine, loxapine, nortriptyline
Noninterfering: clomipramine

KEY WORDS

plasma; imipramine is IS

SAMPLE

Matrix: blood

Sample preparation: 1 mL Plasma + 10 μL 1 mg/mL 8-hydroxychloroimipramine + 500 μL 0.6 M pH 10.4 carbonate buffer + 5 mL ethyl acetate:heptane 20:80, shake for 2.5 min, centrifuge at 3000 g for 10 min. Remove organic layer and add it to 125 μL pH 2.4 25 mM KH_2PO_4, shake for 2.5 min, centrifuge at 3000 g for 10 min. Remove the aqueous layer and put it in a rotary evaporator for 25 min to remove traces of organic solvent. Inject a 50 μL aliquot.

HPLC VARIABLES

Column: 120 × 4.6 5 μm Nucleosil C18
Mobile phase: MeCN:buffer 30:70 (Buffer was 10 Mm KH_2PO_4 + 5 mM tetramethylammonium chloride adjusted to pH 2.4 with concentrated phosphoric acid.)
Flow rate: 1
Injection volume: 50
Detector: E, ESA Coulochem Model 5100A, detector 1 +0.2 V, detector 2, +0.68 V, guard cell 0.70 V, gain 12 × 10, response time 0.4 s; UV 215

CHROMATOGRAM

Retention time: 9.39
Internal standard: 8-hydroxychloroimipramine (6.35)
Limit of detection: 0.5 ng/mL (electrochemical)
Limit of quantitation: 15 ng/mL (UV)

OTHER SUBSTANCES

Simultaneous: 2-hydroxydesipramine, 2-hydroxyimipramine, desipramine, chlorodesipramine, chloroimipramine, mesoridazine
Noninterfering: doxepin, nordoxepin, amitriptyline, fluoxetine, norfluoxetine, triazolam, alprazolam

SAMPLE
Matrix: blood
Sample preparation: For each 1 mL plasma or serum add 10 μL 14 μg/mL trimipramine in MeOH. Inject serum or plasma directly onto column A with mobile phase A, elute with mobile phase A to waste. After 15 min elute column A onto column B (foreflush) with mobile phase B. After 2 min remove column A from the circuit, elute column B with mobile phase B, monitor the effluent from column B. Re-equilibrate column A with mobile phase A.

HPLC VARIABLES
Column: A 20 × 4.6 10 μm Hypersil MOS C8; B 20 × 4.6 5 μm Hypersil CPS CN + 250 × 4.6 5 μm Nucleosil 100 CN
Mobile phase: A MeOH:water 5:95; B MeCN:MeOH:buffer 578:188:235 (Buffer was 10 mM K_2HPO_4 adjusted to pH 6.8 with 85% phosphoric acid.)
Flow rate: 1.5
Injection volume: 100
Detector: UV 214

CHROMATOGRAM
Retention time: 9.65

Internal standard: trimipramine (6.5)
Limit of detection: 1 ng/mL (with three injections onto column A before switching), 5-10 ng/mL

OTHER SUBSTANCES
Extracted: metabolites, amitriptyline, clomipramine, desipramine, doxepin, fluvoxamine, maprotiline, nortriptyline
Noninterfering: chlordiazepoxide, clobazam, clozapine, diazepam, flurazepam, fluspirilene, haloperidol, nitrazepam, oxazepam, perazine, pimozide, spiroperidol, trifluperidol

KEY WORDS
plasma; serum; column-switching

SAMPLE
Matrix: blood
Sample preparation: Condition a 1 mL BondElut C18 SPE cartridge with 1 mL 1 M HCl, 1 mL MeOH, 1 mL water, and 1 mL 1% potassium carbonate. 700 µL Serum + 50 µL 5 µg/mL trimipramine in 5% potassium bicarbonate + 700 µL MeCN, vortex, centrifuge at 1500 g for 5 min, add supernatant to SPE cartridge (at ca. 1 mL/min). Wash with 2 mL water and 1 mL MeCN, elute with 250 µL MeOH:35% perchloric acid 20:1 by gravity (10 min) then centrifuge for 20 s to remove rest of eluant, inject a 50 µL aliquot of the eluate.

HPLC VARIABLES
Guard column: 15 mm 7 μm Brownlee RP-8
Column: 150 × 4.6 5 μm Ultrasphere Octyl
Mobile phase: MeCN:water 37.5:62.5 containing 0.5 g/L tetramethylammonium perchlorate and 0.5 mL/L 7% perchloric acid
Flow rate: 1.5
Injection volume: 50
Detector: UV 215

CHROMATOGRAM
Retention time: 7.1
Internal standard: trimipramine (9.6)
Limit of quantitation: 5 ng/mL

OTHER SUBSTANCES
Extracted: amitriptyline, clomipramine, desipramine, doxepin, fluoxetine, maprotiline, protriptyline
Interfering: desmethylmaprotiline, fluvoxamine, nortriptyline

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 100 μL 200 ng/mL IS in MeOH + 1 mL 50 mM pH 10 borate buffer, vortex briefly, add to an Extrelut 3 SPE cartridge, let stand for 5 min, elute with 15 mL hexane:dichloromethane 50:50. Add the eluate to 3 mL 50 mM sulfuric acid, mix for 10 min, centrifuge at 3000 g for 10 min. Remove the aqueous layer and add it to 6 mL hexane: dichloromethane 50:50, wash for 5 min, centrifuge. Make the aqueous layer basic with 150 μL 28% ammonia, extract twice with 3 mL hexane:dichloromethane 50:50. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 60°, reconstitute the residue in 100 μL mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: 30 × 4.6 5 μm Spherisorb cyano
Column: 250 × 4.6 5 μm Ultrasphere cyano
Mobile phase: MeCN:buffer 60:40 (Buffer was 50 mM KH_2PO_4 adjusted to pH 6.5 with 28% ammonia.)
Flow rate: 1
Injection volume: 20
Detector: E, 5100 A Coulochem, 5020 guard cell 1.00 V, 5011 analytical cell, detector 1 0.55 V, detector 2 0.80 V, output of detector 2 is monitored

CHROMATOGRAM
Retention time: 19.7
Internal standard: methylrisperidone (R68808) (14.3)

OTHER SUBSTANCES
Extracted: chlorpromazine, clomipramine, cyamemazine, desipramine, droperidol, flunitrazepam, haloperidol, pipamperone, risperidone
Noninterfering: alprazolam, bromazepam, carbamazepine, chlorazepate, diazepam, diphenylhydantoin, estazolam, ethylbenzatropine, oxazepam, phenobarbital, triazolam, valproic acid
Interfering: trihexyphenidyl

SAMPLE
Matrix: blood
Sample preparation: Automated SPE by ASPEC system. Condition a C18 Clean-Up SPE cartridge (CEC 18111, Worldwide Monitoring) with 2 mL MeOH then 2 mL water. 1 mL Plasma + 1 mL 400 ng/mL protriptyline in water, vortex, add to column, wash with 3 mL water, wash with 3 mL 750 mL/L methanol. Elute with three aliquots of 300 μL 0.1 M ammonium acetate in MeOH. Add 0.5 mL 0.5 M NaOH and 4 mL 50 mL/L isopropanol in heptane to eluate, mix thoroughly. Allow 5 min for phase separation. Remove upper heptane phase and add it to 300 μL 0.1 M phosphoric acid (pH 2.5), mix, separate, inject a 100 μL aliquot of the aqueous phase.

HPLC VARIABLES
Guard column: LC-8-DB (Supelco)
Column: 150 × 4.6 LC-8-DB (Supelco)
Mobile phase: MeCN:buffer 35:65 (Buffer was 10 mL/L triethylamine in water adjusted to pH 5.5 with glacial acetic acid.)
Flow rate: 2
Injection volume: 100
Detector: UV 228

CHROMATOGRAM
Retention time: 4.6
Internal standard: protriptyline (4)

OTHER SUBSTANCES
Extracted: acetazolamide, amitriptyline, chlordiazepoxide, chlorimipramine, chlorpromazine, desipramine, dextromethorphan, diazepam, diphenhydramine, doxepin, encainide, fentanyl, flecainide, fluoxetine, flurazepam, haloperidol, hydroxyethylflurazepam, ibuprofen, lidocaine, methadone, methaqualone, mexiletine, midazolam, norchlorimipramine, nordiazepam, nordoxepin, norfluoxetine, norverapamil, pentazocine, promazine, propafenone, propoxyphene, propranolol, protriptyline, quinidine, temazepam, trazodone, trimipramine
Noninterfering: acetaminophen, acetylmorphine, amiodarone, amobarbital, amphetamine, bendroflumethiazide, benzocaine, benzoylecgonine, benzthiazide, butalbital, carbamazepine, chlorothiazide, clonazepam, cocaine, codeine, cotinine, cyclosporine, cyclothiazide, desalkylflurazepam, diamorphine, dicumerol, ephedrine, ethacrynic acid, ethanol, ethchlorvynol, ethosuximide, furosemide, glutethimide, hydrochlorothiazide, hydrocodone, hydroflumethiazide, hydromorphone, lorazepam, mephentermine, meprobamate, methamphetamine, metharbital, methoxsalen, methoxyphenteramine, methsuximide, methylcyclothiazide, metoprolol, MHPG, monoacetylmorphine, morphine, normethsuximide, oxazepam, oxycodone, oxymorphone, pentobarbital, phencyclidine, phenteramine, phenylephrine, phenytoin, polythiazide, primidone, prochlorperazine, salicylic acid, sulfanilamide, THC-COOH, theophylline, thiazolam, thiopental, thioridazine, tocainide, trichloromethiazide, trifluoperazine, valproic acid, warfarin
Interfering: maprotiline, nortriptyline, verapamil

HPLC VARIABLES
Column: 125 × 4 5 μm Lichrospher RP select B
Mobile phase: MeCN:0.1% pH 4 diethylamine in water 40:60
Flow rate: 1.5
Injection volume: 30
Detector: UV 254

CHROMATOGRAM
Retention time: 13.85
Internal standard: desmethylclomipramine chlorhydrate (6.85)
Limit of detection: 25 ng/mL

OTHER SUBSTANCES
Extracted: metabolites, desipramine

KEY WORDS
rat; serum; brain; pharmacokinetics

REFERENCE
Besret,L.; Debruyne,D.; Rioux,P.; Bonvalot,T.; Moulin,M.; Zarifian,E.; Baron,J.-C. A comprehensive investigation of plasma and brain regional pharmacokinetics of imipramine and its metabolites during and after chronic administration in the rat, *J.Pharm.Sci.*, **1996**, *85*, 291–295.

SAMPLE
Matrix: blood, tissue
Sample preparation: Serum. 1 mL Serum + 800 ng nortriptyline + 4 mL MeOH + 5 mL 2.5% perchloric acid, shake vigorously, centrifuge at 11000 g for 15 min. Add supernatant to 1 mL 4 M KOH, centrifuge. Add supernatant (9 mL) to 10 mL diethyl ether:ethyl acetate 85:15, shake for 15 min. Remove 8 mL of organic phase and evaporate it to dryness under a stream of nitrogen. Dissolve residue in 200 μL mobile phase buffer:MeOH 9:1, inject 100 μL aliquot. Tissue. 2 g Brain tissue + 10 mL 2.5% perchloric acid + 8 mL MeOH + 1.6 μg nortriptyline,

homogenize, centrifuge at 11000 g for 15 min. Add supernatant to 4 mL 4 M KOH, centrifuge. Add supernatant to 20 mL diethyl ether:ethyl acetate 3:1, shake for 15 min. Remove 8 mL of organic phase and evaporate it to dryness under a stream of nitrogen. Dissolve residue in 200 μL mobile phase buffer:MeOH 9:1, inject 100 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Cosmosil 5C18
Mobile phase: MeOH:THF:buffer 45:17:88 (Buffer was 1% triethylamine adjusted to pH 3.0 with phosphoric acid.)
Column temperature: 40
Flow rate: 1
Injection volume: 100
Detector: UV 254

CHROMATOGRAM
Retention time: 11.2
Internal standard: nortriptyline (14.2)
Limit of detection: 10 ng/g (tissue)

OTHER SUBSTANCES
Simultaneous: desipramine

KEY WORDS
serum; rat

SAMPLE
Matrix: blood, tissue
Sample preparation: Blood or serum. 1 mL Blood or serum + 1 μg cianopramine + 1 mL water, vortex, add 1 mL 200 mM sodium carbonate, vortex, add 6 mL hexane:1-butanol 95:5, gently agitate for 30 min, centrifuge at 2500 g for 5 min. Remove the organic layer and add it to 100 μL 0.2% phosphoric acid, agitate gently for 30 min, centrifuge for 5 min. Remove the organic layer and inject a 30 μL aliquot of the aqueous layer. Liver homogenate. 0.5 mL Liver homogenate + 10 μg cianopramine + 500 μL 2% sodium tetraborate + 8 mL hexane:1-butanol 95:5, gently agitate for 30 min, centrifuge at 2500 g for 5 min. Remove the organic layer and add it to 400 μL 0.2% phosphoric acid, agitate gently for 30 min, centrifuge for 5 min. Remove the organic layer and inject a 30 μL aliquot of the aqueous layer.

HPLC VARIABLES
Guard column: 15 × 3.2 7 μm RP-18 Newguard (Applied Biosystems)
Column: 100 × 4.6 5 μm Brownlee Spheri-5 RP-18
Mobile phase: MeCN:100 mM NaH_2PO_4:diethylamine 40:57.5:2.5
Flow rate: 2
Injection volume: 30
Detector: UV 220

CHROMATOGRAM
Retention time: 17.9
Internal standard: cianopramine (8.93)
Limit of detection: 50 ng/mL

OTHER SUBSTANCES
Simultaneous: amitriptyline, amoxapine, benztropine, brompheniramine, chlorpheniramine, chlorpromazine, clomipramine, cyproheptadine, desipramine, diphenhydramine, dothiepin, doxepin, fluoxetine, haloperidol, loxapine, maprotiline, meperidine, mesoridazine, methadone, metoclopramide, mianserin, moclobemide, nomifensine, nordoxepin, norfluoxetine, norpropoxyphene, northiaden, nortriptyline, pentobarbital, pheniramine, promethazine, propoxyphene, propranolol, protriptyline, quinidine, quinine, sulforidazine, thioridazine, tranylcypromine, trazodone, trihexyphenidyl, trimipramine, triprolidine

Noninterfering: dextromethorphan, norphetidine, phenoxybenzamine, prochlorperazine, trifluoperazine
Interfering: thiothixene

KEY WORDS
serum; whole blood; liver

SAMPLE
Matrix: blood, tissue, urine
Sample preparation: Serum, urine. 500 μL Serum or urine + 100 μL 2 μg/mL diazepam + 200 μL 20% sodium carbonate + 500 μL water + 3 mL n-hexane:isoamyl alcohol 98.5:1.5, mix for 2 min, centrifuge at 1200 g for 5 min. Remove the organic phase and evaporate it under a gentle stream of nitrogen at about 40°. Dissolve the residue in 100 μL mobile phase, inject a 10 μL aliquot. Tissue. Homogenize 1 g sample with 9 mL 100 mM HCl and 100 μL 20 μg/mL diazepam, centrifuge at 15000 g for 10 min. Add 500 μL 20% sodium carbonate and 4 mL n-hexane:isoamyl alcohol 98.5:1.5 to 1 mL of the supernatant, mix for 5 min. Remove the organic phase and evaporate it under a gentle stream of nitrogen at about 40°. Dissolve the residue in 100 μL mobile phase, filter by microconcentrator (Microcon-30, Grace). Inject a 10 μL aliquot.

HPLC VARIABLES
Column: 100 × 4.6 2 μm TSK gel Super-Octyl (A) or 100 × 4.6 5 μm Hypersil MOS-C8 (B), (Yokogawa, Japan)
Mobile phase: MeOH:20 mM pH 7 KH_2PO_4 60:40
Flow rate: 0.6
Injection volume: 10
Detector: UV 254

CHROMATOGRAM
Retention time: 12.8 (A), 23.8 (B)
Internal standard: diazepam (4.4, A)
Limit of quantitation: 50 ng/mL (serum, urine) (A), 500 ng/mL (tissue) (A)

OTHER SUBSTANCES
Extracted: amitriptyline, amoxapine, clomipramine, desipramine, dothiepin, doxepin, maprotiline, melitracen, mianserin, nortriptyline
Noninterfering: barbital, carbamazepine, ethosuximide, hexobarbital, lofepramine, pentobarbital, phenobarbital, phenytoin, primidone, sulpiride, trimethadione, trimipramine

KEY WORDS
serum; brain; liver

SAMPLE
Matrix: blood, urine
Sample preparation: 1 mL Plasma or urine + 20 μL 10 μg/mL pericyazine in MeOH, mix, add 0.2 mL 1 M sodium carbonate buffer to adjust pH to 9.6. Add 10 mL distilled diethyl ether, shake on an automatic shaker for 10 min, centrifuge at 1000 g for 10 min in a refrigerated centrifuge. Remove the upper organic layer and add 100μL 100 mM orthophosphoric acid. Shake for 10 min and centrifuge at 1000 g for 10 min. Discard the top layer and inject a 50 μL aliquot of the acid layer.

HPLC VARIABLES
Guard column: 40 × 4.6 10 μm RP-18

Column: 300 × 3.9 Bondclone 10 C18 (Phenomenex)
Mobile phase: MeCN:100 mM K_2HPO_4, adjust pH to 6.0 with orthophosphoric acid
Flow rate: 2
Injection volume: 50
Detector: E, EDT Chromajet, oxidation cell +1.00 V

CHROMATOGRAM
Retention time: 12.3
Internal standard: pericyazine (6.2)
Limit of detection: 3 ng/mL

OTHER SUBSTANCES
Extracted: metabolites, desipramine

SAMPLE
Matrix: blood, urine
Sample preparation: 1 mL Plasma or urine + 1 mL 600 mM pH 11.3 K_2CO_3 + 100 μL 5 (plasma) or 20 (urine) μM 2-hydroxydesmethylclomipramine in EtOH + 5 mL heptane:MTBE 1:1 + 5% n-butanol, vortex 1 min, centrifuge at 1400 g for 10 min, freeze at -50° (dry ice/ethanol). Remove organic layer and add it to 1 mL 20 mM HCl, vortex 1 min, centrifuge at 1400 g for 10 min, freeze at -50° (dry ice/ethanol). Discard organic layer. Thaw out aqueous layer and make alkaline (pH 11) by adding 500 μL 600 mM pH 11.3 K_2CO_3. Add 3 mL heptane:MTBE 1:1 + 5% n-butanol, vortex 1 min, centrifuge at 1400 g for 10 min, freeze at -50° (dry ice/ethanol). Remove organic layer and evaporate it to dryness at 50° under a stream of nitrogen. Dissolve residue in 100 μL mobile phase, vortex for 5 s, centrifuge at 1400 g for 1 min, inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: 20 × 4 7 μm 120 Å Nucleosil
Column: 250 × 4 5 μm 100 Å Nucleosil RP-phenyl
Mobile phase: MeCN:buffer 30:70 (Buffer was 14.05 g sodium perchlorate and 1.6 mL 60% perchloric acid in 5 L water, pH 2.5.)
Column temperature: 30
Flow rate: 1
Injection volume: 20
Detector: UV 220

CHROMATOGRAM
Retention time: 16.62
Internal standard: 2-hydroxydesmethylclomipramine (10.02)
Limit of detection: 10 nM (urine), 5 nM (plasma)

OTHER SUBSTANCES
Simultaneous: desipramine, metabolites

KEY WORDS
plasma

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM
Retention time: 15.113

Matrix: solutions

HPLC VARIABLES
Column: 150 × 4.6 5 μm Adsorbosphere C18 (PEEK column) (retention times are longer and peaks broader with stainless steel column)
Mobile phase: MeCN:20 mM pH 3.2 KH_2PO_4 23.4:76.6 containing 0.05% nonylamine
Flow rate: 1.2
Detector: UV 214

CHROMATOGRAM
Retention time: 11

OTHER SUBSTANCES
Simultaneous: amitriptyline, desmethyldoxepin, desipramine, doxepin, loxapine, maprotiline, nortriptyline, trazodone

REFERENCE
Supelco Catalog, **1993**, p. 440.

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 250 × 4.6 Econosil C8
Mobile phase: MeCN:buffer 30:70 (Buffer was 20 mM KH_2PO_4 and 14 mM triethylamine adjusted to pH 3.0 with phosphoric acid.)

Injection volume: 20
Detector: UV 210

CHROMATOGRAM
Retention time: 8.3
Limit of quantitation: < 1000 ng/mL

OTHER SUBSTANCES
Simultaneous: amitriptyline, amoxapine, carbamazepine, nortriptyline
Also analyzed: doxepin, desipramine, protriptyline, cyclobenzaprine, maprotiline

SAMPLE
Matrix: urine

Sample preparation: 500 μL Urine + N-ethylnordiazepam + chlorpheniramine + 100 μL buffer, centrifuge at 11000 g for 30 s, inject a 500 μL aliquot onto column A with mobile phase A, after 0.6 min backflush column A with mobile phase A to waste for 1.6 min, elute column A with 250 μL mobile phase B, with 200 μL mobile phase C, and with 1.15 mL mobile phase D. Elute column A to waste until drugs start to emerge then elute onto column B. Elute column B to waste until drugs started to emerge, then elute onto column C. When all the drugs have emerged from column B remove it from the circuit, elute column C with mobile phase D, monitor the effluent from column C. Flush column A with 7 mL mobile phase E, with mobile phase D, and mobile phase A. Flush column B with 5 mL mobile phase E then with mobile phase D. (Buffer was 6 M ammonium acetate adjusted to pH 8.0 with 2 M KOH.)

HPLC VARIABLES

Column: A 10 × 2.1 12-20 μm PRP-1 spherical poly(styrene-divinylbenzene) (Hamilton); B 10 × 3.2 11 μm Aminex A-28 (Bio-Rad); C 25 × 3.2 5 μm C8 (Phenomenex) + 150 × 4.6 5 μm silica (Macherey-Nagel)
Mobile phase: A 0.1% pH 8.0 potassium borate buffer; B 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid; C MeCN:buffer 40:60 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.); D MeCN:buffer 33:67 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.); E MeCN:buffer 70:30 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.)
Column temperature: ambient (column A), 40 (columns B and C)
Flow rate: A 5; B-E 1
Injection volume: 500
Detector: UV 210, UV 235

CHROMATOGRAM

Retention time: k' 4.2
Internal standard: N-ethylnordiazepam (k' 2.1), chlorpheniramine (k' 5.9)
Limit of detection: 300 ng/mL

OTHER SUBSTANCES

Extracted: morphine, codeine, hydromorphone, hydrocodone, caffeine, cotinine, benzoylecgonine, secobarbital, oxazepam, phenobarbital, nordiazepam, diazepam, phenylpropanolamine, phentermine, amphetamine, phenmetrazine, lidocaine, ephedrine, pentazocine, methamphetamine, desipramine, nortriptyline, diphenhydramine, methadone
Interfering: flurazepam, amitriptyline

KEY WORDS

column-switching

SAMPLE

Matrix: vitreous humor
Sample preparation: 600 μL Vitreous humor + 3 mL 0.1 M NaCl + 50 μL 4 μg/mL desmethylclomipramine in water, mix for a few s, add to a C18 SepPak attached to a 5 mL syringe, allow to flow through (10-15 min). Wash with 1 mL 0.1 M NaCl, wash with 1 mL water, wash 3 mL reagent by gravity. Elute with 3 mL MeOH and push air through to remove as much as possible. Evaporate in vacuum at 37°, vortex with 50 μL mobile phase for 1 min, inject 25 μL aliquot. (Reagent was isopropanol:n-heptane:1 M sulfuric acid 40:320:1.)

HPLC VARIABLES

Guard column: 50 × 4.6 30 μm Permaphase ETH
Column: 250 × 4.6 5-6 μm Zorbax cyanopropyl
Mobile phase: MeCN:0.5 M acetic acid:n-butylamine 40:60:0.0022
Flow rate: 2.5
Injection volume: 25
Detector: UV 254

CHROMATOGRAM
Retention time: 22
Internal standard: Desmethylclomipramine
Limit of detection: 16.7 ng/mL

OTHER SUBSTANCES
Simultaneous: amitriptyline, doxepin, nortriptyline, metabolites
Noninterfering: acetaminophen, N-acetylprocainamide, amikacin, caffeine, carbamazepine, chloramphenicol, clonazepam, cyclosporine, diazepam, digoxin, disopyramide, ethosuximide, flurazepam, gentamicin, haloperidol, kanamycin, lidocaine, meprobamate, methapyriline, methaqualone, methotrexate, methyprylon, netilmicin, pentazocine, pentobarbital, phenobarbital, phenytoin, prazepam, primidone, procainamide, propranolol, quinidine, salicylic acid, secobarbital, streptomycin, theophylline, tobramycin, tocainide, valproic acid, vancomycin.

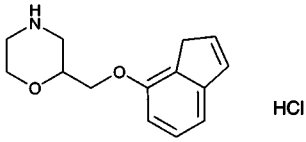
Indeloxazine hydrochloride

Molecular formula: $C_{14}H_{18}ClNO_2$
Molecular weight: 267.76
CAS Registry No.: 65043-22-3
Merck Index: 4972
Lednicer No.: 4 59



SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 1 mL 300 ng/mL viloxazine in water + 500 μL 200 mM ammonium hydroxide + 4 mL ether, extract, centrifuge. Remove the organic layer and evaporate it to dryness at 45°, reconstitute the residue in 100 μL 3 mg/mL sodium bicarbonate and 200 μL 125 μg/mL dansyl chloride in acetone, heat at 45° for 20 min, cool, add 4 mL ether. Wash the ether solution twice with 3 mL water and evaporate it to dryness at 45°. Take up the residue in 100 μL n-heptane, inject a 3-5 μL aliquot.

HPLC VARIABLES
Column: 150 × 4 5 μm LiChrosorb SI-60
Mobile phase: n-Heptane:ethyl acetate 20:3
Flow rate: 1.5
Injection volume: 3-5
Detector: F ex 365 em 505

CHROMATOGRAM
Retention time: 3
Internal standard: viloxazine (4)
Limit of detection: 5 ng/mL

KEY WORDS
plasma; normal phase; derivatization

SAMPLE
Matrix: blood
Sample preparation: Add 50 μL 1 μg/mL IS in MeCN:water 50:50 to 1 mL plasma and vortex. Add 1 mL 100 mM pH 9.5 borate buffer, vortex, add 8 mL isopropanol:chloroform 1:15 (Caution! Chloroform is a carcinogen!), mix on a flat-bed shaker for 15 min, centrifuge at 1500 g for 5 min. Remove the lower organic layer and evaporate it under a stream of nitrogen at 45°. Reconstitute the residue in 1 mL mobile phase, inject a 50 μL aliquot.

HPLC VARIABLES
Column: 50 × 3.9 5 μm Symmetry C8
Mobile phase: MeCN:water 40:60 containing 2 mM ammonium acetate
Flow rate: 1
Injection volume: 50
Detector: MS, PE-SCIEX API IIIplus triple quadrupole, heated nebulizer, corona discharge needle (+4.5 μA), nebulizer 500°, collision gas argon at 260 × 10^{12} atoms/cm^2, nebulizing gas nitrogen at 80 psi and 0.6 mL/min, orifice +75 V, electron multiplier -4.0 kV, dwell time 400 ms with a 30 ms pause time between scans, Q1 at m/z 523, Q2 at m/z 512, Q3 at m/z 273

CHROMATOGRAM
Retention time: 1.5
Internal standard: structure given in paper
Limit of quantitation: 5 ng/mL

OTHER SUBSTANCES
Extracted: metabolites

KEY WORDS
plasma

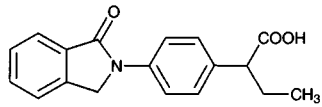
Indobufen



Molecular formula: $C_{16}H_{17}NO_3$
Molecular weight: 295.34
CAS Registry No.: 63610-08-2
Merck Index: 4991

SAMPLE
Matrix: blood
Sample preparation: 0.5-1 mL Plasma + 500 μL water + 100 μL 600 mM sulfuric acid + 40 mg NaCl + 4 mL diethyl ether, extract on a rotamixer, centrifuge at 1200 g. Remove the organic layer and evaporate it to dryness under a stream of air at 30°, add 5 drops toluene, evaporate to dryness under a stream of air at 30°, reconstitute the residue in 200 μL 50 mM triethylamine in MeCN, add 100 μL 60 mM ethyl chloroformate in MeCN, after 30 s add 100 μL 1 M l-leucinamide hydrochloride in MeOH containing 1 M triethylamine, after 2 min add 500 μL 250 mM HCl, extract with 4 mL ethyl acetate. Evaporate the organic layer to dryness under a stream of air at 30°, reconstitute the residue with 500 μL MeOH, inject a 10 μL aliquot.

HPLC VARIABLES
Guard column: 30 × 4 Perisorb RP-18 (Merck)
Column: 250 × 4 7 μm LiChroCart RP-18 (Merck)
Mobile phase: MeCN:10 mM pH 6.5 phosphate buffer 38:62
Flow rate: 2
Injection volume: 10
Detector: UV 275

CHROMATOGRAM
Retention time: 6 (-), 8 (+) (assignment tentative)
Internal standard: indobufen

OTHER SUBSTANCES
Extracted: indoprofen

KEY WORDS

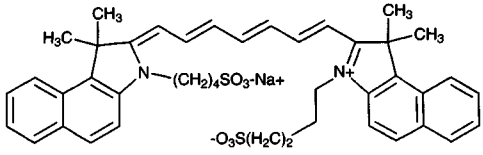
Indocyanine green



Molecular formula: $C_{43}H_{47}N_2NaO_6S_2$
Molecular weight: 774.98
CAS Registry No.: 3599-32-4
Merck Index: 4992

SAMPLE

Matrix: blood
Sample preparation: 0.5 mL Plasma +10 μL 250 μg/mL 1-acetamidopyrene in MeOH + 200 μL 1 M ammonium sulfate + 800 μL cold MeCN, vortex for 30 s, store at -20° for at least 30 min, vortex, centrifuge at 1500 g for 30 min. Remove 400 μL of the upper organic layer and evaporate it under a stream of nitrogen. Reconstitute with 100 μL mobile phase, vortex for 30 s, inject a 75 μL aliquot.

HPLC VARIABLES

Column: 300 × 3.9 10 μm μBondapak C18
Mobile phase: MeCN:buffer 47:53 (Buffer was 6.805 g potassium monophosphate in 1 L water, adjust pH to 6.00 with 10 M NaOH.)
Flow rate: 1
Injection volume: 75
Detector: UV 214

CHROMATOGRAM

Retention time: 7.2
Internal standard: 1-acetamidopyrene (9.7)
Limit of detection: 39 ng/mL

OTHER SUBSTANCES

Simultaneous: lorazepam, antipyrine
Noninterfering: adenosine, albuterol, alphenal, aspirin, caffeine, carbamazepine, cefazolin, cephalexin, cephalothin, cimetidine, ciprofloxacin, claforan, desipramine, enoxacin, fleroxacin, furosemide, hydralazine, hydrochlorothiazide, minoxidil, norfloxacin, phenytoin, propafenone, sulindac, teicoplanin, theophylline, vancomycin

SAMPLE
Matrix: bile, blood, gastric contents, urine
Sample preparation: Plasma. 300 μL Plasma + 1 mL MeCN, vortex for 30 s, centrifuge at 3500 rpm. Remove the supernatant and evaporate it to 100 μL under a stream of nitrogen at 50°, inject a 20 μL aliquot. Urine, bile, gastric fluid. 300 μL Urine, bile, or gastric fluid + 100 μL 5 M NaOH, let stand at room temperature for 15 min, adjust the pH with 100 μL 28.3% phosphoric acid, add 1 (urine, bile) or 1.5 (gastric fluid) mL MeCN, vortex for 30 s, centrifuge at 3500 rpm. Remove the supernatant and evaporate it to 100 μL under a stream of nitrogen at 50°, inject a 20 (urine), 35 (bile), or 40 (gastric fluid) μL aliquot. (Borate buffer was 12.4 g boric acid and 10 mL 1 M NaOH made up to 1 L with water, pH 7.2.)

HPLC VARIABLES
Guard column: Microguard reverse-phase (Bio-Rad)
Column: 100 × 8 Radial-PAK C18 in a radial compression module
Mobile phase: MeCN:buffer 70:30 (Buffer was 6.8 g/L KH_2PO_4 adjusted to pH 3.0 with 85% phosphoric acid.)
Flow rate: 2
Injection volume: 20-40
Detector: UV 340

CHROMATOGRAM
Retention time: 13
Internal standard: indomethacin

OTHER SUBSTANCES
Extracted: sulindac

SAMPLE
Matrix: blood
Sample preparation: Mix 500 μL serum with 100 μL MeOH:50 mM pH 3 sodium phosphate buffer 50:50, vortex for 5 s. Add 1 mL MeCN, vortex for 1 min. Centrifuge the mixture at 14000 rpm for 5 min, decant the clear upper layer. Add 500 μL MeCN to the pellet, mix, centrifuge at 14000 rpm for 5 min. Combine the upper layers and evaporate at 40°. Reconstitute the

residue with 300 μL MeOH:50 mM pH 3.0 sodium phosphate buffer 40:60 containing 0.5% sodium metabisulfate (sic). Vortex for 30 s and inject a 20 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 5 μm Techsil C18 (HPLC Technology, Macclesfield)
Mobile phase: MeCN:50 mM phosphate buffer 46:63, adjusted to pH 3.0 with NaOH
Flow rate: 1.2
Injection volume: 20
Detector: UV 280

CHROMATOGRAM
Retention time: 7.17
Internal standard: indomethacin

OTHER SUBSTANCES
Extracted: sulindac

SAMPLE
Matrix: blood, urine
Sample preparation: Plasma. 1 mL Plasma + 50 μL 500 ng/mL mefenamic acid + 1 mL 100 mM HCl + 10 mL dichloromethane, rotate for 10 min, centrifuge at 1500 g for 15 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 45°. Redissolve the residue in mobile phase, inject a 20 μL aliquot. Urine. 50 μL Urine + 1 mL mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 75 × 4.6 3 μm Supelcosil LC-8
Mobile phase: MeCN:50 mM phosphoric acid 45:55
Flow rate: 1
Injection volume: 20
Detector: UV 235

CHROMATOGRAM
Retention time: 5
Internal standard: mefenamic acid (8)
Limit of detection: 50-250 ng/mL

OTHER SUBSTANCES
Simultaneous: naproxen, flunixin, thiosalicylic acid, ethacrynic acid, phenylbutazone

KEY WORDS
plasma

REFERENCE
Singh,A.K.; Jang,Y.; Mishra,U.; Granley,K. Simultaneous analysis of flunixin, naproxen, ethacrynic acid, indomethacin, phenylbutazone, mefenamic acid and thiosalicyclic acid in plasma and urine by high-performance liquid chromatography and gas chromatography-mass spectrometry, *J.Chromatogr.*, **1991**, *568*, 351–361.

SAMPLE
Matrix: blood, urine
Sample preparation: Plasma. 100 μL Plasma + 400 μL 200 mM perchloric acid, centrifuge at 3000 g, inject a 20 μL aliquot of the supernatant. Urine. Dilute 1:1 with water, inject a 20 μL aliquot.

HPLC VARIABLES

Guard column: 75 × 2.1 pellicular reverse phase (Chrompack no. 28653)
Column: 250 × 4.6 5 μm Cp Spherisorb ODS (Chrompack)
Mobile phase: Gradient; MeCN:5 g/L orthophosphoric acid from 80:20 to 60:40 (sic, probably 20:80 to 40:60) over 30 min then stay there for 5 min, then to initial conditions over 5 min, equilibrate for 2 min before next injection
Flow rate: 1.2
Injection volume: 20
Detector: UV 254

CHROMATOGRAM

Retention time: 28.13
Limit of detection: 5.3 ng/mL
Limit of quantitation: 146 ng/mL (urine), 60 ng/mL (plasma)

OTHER SUBSTANCES

Simultaneous: metabolites, glucuronides

KEY WORDS

plasma; pharmacokinetics; also details of preparative procedure

REFERENCE

Vree,T.B.; Van den Biggelaar-Martea,M.; Verwey-van Wissen,C.P.W.G.M. Determination of indomethacin, its metabolites and their glucuronides in human plasma and urine by means of direct gradient high-performance liquid chromatographic analysis. Preliminary pharmacokinetics and effect of probenecid, *J.Chromatogr.*, **1993**, *616*, 271–282.

SAMPLE

Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 201.7

CHROMATOGRAM

Retention time: 21.748

KEY WORDS

whole blood

SAMPLE
Matrix: bulk
Sample preparation: 500 μL Plasma + 100 μL 5 mg/mL indomethacin in MeOH, filter (Sartorius SM 13243 ultrafiltration unit at 4000 g for 30 min). Add filtrate to a dry Chem Elut column (modified diatomaceous earth), leave 3 to 5 min, elute with 6 mL diethyl ether, evaporate eluant under a stream of nitrogen at room temperature, sonicate residue with 100 μL MeOH for 10 min, vortex, inject 20 μL aliquot.

HPLC VARIABLES
Column: 300 × 3.9 10 μm μBondapak C18
Mobile phase: MeOH:100 mM pH 4.0 sodium acetate buffer 55:45
Flow rate: 1
Injection volume: 20
Detector: E, ESA Coulochem 5100A dual electrode with an ESA guard cell, + 0.65 V

CHROMATOGRAM
Retention time: 11.74
Internal standard: indomethacin

OTHER SUBSTANCES
Simultaneous: dipyridamole

KEY WORDS
plasma; indomethacin is IS

REFERENCE

SAMPLE

Matrix: solutions
Sample preparation: Sample + 400 μL 5 mM DBD-PZ + 70 mM diethylphosphorocyanidate in MeCN, react for 6 h, inject a 1 μL aliquot. (Synthesis of 4-(N,N-dimethylaminosulfonyl)-7-N-piperazino-2,1,3-benzoxadiazole (DBD-PZ) is as follows. Dissolve 0.5 g magnesium sulfate heptahydrate and 6 g NaOH in 60 mL water, throughout the reaction keep the flask at about 20° with cold water cooling, add 15 mL 30% hydrogen peroxide, add 75 mL MeOH, add 12.1 g powdered benzoyl peroxide in one go, stir for 10 min, pour into 150 mL 20% sulfuric acid, extract three times with 50 mL portions of chloroform, determine peroxybenzoic acid concentration by iodometric titration (Tetrahedron 1967, 23, 3327). Slowly add 110 mL 1 M peroxybenzoic acid in chloroform to 7 g 2,6-difluoroaniline dissolved in 100 mL chloroform, stir at room temperature, when reaction is complete (iodometric titration) wash with 2% sodium thiosulfate, wash with 5% sodium carbonate, wash with water, dry over anhydrous sodium sulfate, evaporate to dryness under reduced pressure, recrystallize 2,6-difluoronitrosobenzene form EtOH (mp 108.5-109.5). Stir 8.5 g 2,6-difluoronitrosobenzene in 85 mL DMSO at room temperature and add a solution of 3.91 g sodium azide in 85 mL DMSO dropwise, let stand for about 1 h, add to a large volume of water, extract with ether, dry the extracts over anhydrous sodium sulfate, evaporate to dryness under reduced pressure and distil to give 4-fluoro-2,1,3-benzoxadiazole as a colorless oil (bp 83°/12 mm Hg) (J.Chem.Soc.(C) 1970, 1433). Add 11 mL chlorosulfonic acid dropwise to 3 g 4-fluoro-2,1,3-benzoxadiazole in 10 mL chloroform at 0-10° (use a calcium chloride drying tube), stir at room temperature for 1 h, reflux for 2 h, cool, slowly pour into ice water, remove the organic layer, extract the aqueous layer with chloroform, combine the organic layer, wash, dry over anhydrous magnesium sulfate, evaporate under reduced pressure, take up the residue in 5 mL benzene (Caution! Benzene is a carcinogen!), chromatograph on a 150 × 30 column of silica gel (100-200 mesh Kanto Chemical) with n-hexane:benzene 50:50, evaporate the appropriate fractions to give 4-(chlorosulfonyl)-7-fluoro-2,1,3-benzoxadiazole (CBD-F) as pale yellow needles (mp 64-66°) (Anal. Chem. 1984. 56, 2461). Stir 0.76 g CBD-F in 70 mL MeCN at 0-10° and add 1 g dimethylamine hydrochloride in 10 mL 100 mM pH 10 borax dropwise, adjust pH to 5 with 1 M HCl, concentrate to about 10 mL under reduced pressure, extract three times with 200 mL portions of diethyl ether, wash with water, dry over anhydrous magnesium sulfate, evaporate under reduced pressure, chromatograph on a 500 × 20 column of silica gel with chloroform, isolate the appropriate fraction and re-chromatograph on the same column with ethyl acetate:benzene 1:2 to give 4-(N,N-dimethylaminosulfonyl)-7-fluoro-2,1,3-benzoxadiazole (DBD-F) as white needles (mp 124-125°) (yield = 1% !). On a Merck no. 5714 $60F_{254}$ tlc plate eluted with chloroform DBD-F has Rf 0.32 and lies between two other reaction products (Analyst 1989, 114, 413). It is also reported that DBD-F can be purchased from Tokyo Kasei (TCI America, Portland OR). Add 123 mg 4-(N,N-dimethyl-

aminosulfonyl)-7-fluoro-2,1,3-benzoxadiazole in 20 mL MeCN dropwise to 129 mg piperazine in 20 mL MeCN at room temperature, stir for 30 min, evaporate under reduced pressure, dissolve residue in 50 mL 5% HCl, wash three times with 20 mL ethyl acetate, discard ethyl acetate extracts, adjust pH of aqueous solution to 13-14 with 5% NaOH, extract five times with 50 mL ethyl acetate, combine extracts, wash with 20 mL water, dry over anhydrous sodium sulfate, evaporate under vacuum to give 4-(N,N-dimethylaminosulfonyl)-7-N-piperazino-2,1,3-benzoxadiazole as orange crystals (mp 121-2°).)

HPLC VARIABLES

Column: 150 × 4.6 5 μm Inertsil ODS-2
Mobile phase: MeCN:water 65:35
Column temperature: 40
Flow rate: 1
Injection volume: 1
Detector: F ex 437 em 561

CHROMATOGRAM

Retention time: 8
Limit of detection: 3.9 fmol

OTHER SUBSTANCES

Simultaneous: ibuprofen

SAMPLE
Matrix: solutions
Sample preparation: Inject a 20 μL aliquot of a 100-500 μg/mL solution in mobile phase.

HPLC VARIABLES
Column: 100 × 4.6 5 μm Hypersil C8 MOS 100A coated with phosphatidylcholine (95% pure soybean lecithin, Epikuron, Lucas Meyer & Co.) (Coat column by recycling a 1 mM solution of phosphatidylcholine in MeOH:water 80:20 for 24 h.)
Mobile phase: MeCN:35 mM pH 7.4 sodium phosphate buffer 40:60
Flow rate: 0.5–2

Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: k' 0.58

OTHER SUBSTANCES
Also analyzed: amoxicillin, antipyrine, carbamazepine, chlorpheniramine, chlorpromazine, clonidine, codeine, desipramine, diphenhydramine, dipyridamole, ephedrine, flufenamic acid, haloperidol, hydroxyzine, imipramine, lidocaine, megestrol acetate, metoprolol, nabumetone, nadolol, phenobarbital, phenol, promazine, propranolol, pyrilamine, quinidine, ropinirole, testosterone, thioridazine, tolfenamic acid, verapamil
Noninterfering: acetaminophen, aspirin, azathioprine, caffeine, carprofen, chlorambucil, cimetidine, fenoterol, flurbiprofen, ibuprofen, ketoprofen, ranitidine, salicylic acid, sulfamethoxazole, theophylline, thioguanine, tiaprofenic acid, trimethoprim, valproic acid

KEY WORDS
comparison with capillary electrophoresis

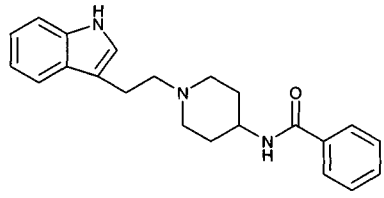
Indoramin



Molecular formula: $C_{22}H_{25}N_3O$
Molecular weight: 347.46
CAS Registry No.: 26844-12-2
Merck Index: 5000
Lednicer No.: 2 344

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM
Retention time: 12.533

KEY WORDS
whole blood

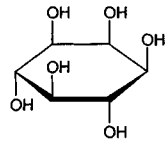
Inositol



Molecular formula: $C_6H_{12}O_6$
Molecular weight: 180.16
CAS Registry No.: 87-89-8, 573-35-3 (monophosphate)
Merck Index: 5008

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 300 × 8.7 Aminex HPX-87C Ca^{++} (Bio-rad)
Mobile phase: Water
Column temperature: 50
Flow rate: 0.6
Detector: E, pulsed amperometric detector (Dionex ?), E1 0.1 V, T1 300 ms, E2 0.6 V, T2 120 ms, E3 -0.8 V, T3 300 ms, following post-column reaction. The column effluent mixed with 100 mM NaOH pumped at 0.2 mL/min and the mixture flowed to the detector.

CHROMATOGRAM
Retention time: 13.64 (myo-inositol), 14.16 (chiro-inositol), 11.16 (scyllo-inositol), 19.58 (neo-inositol)

OTHER SUBSTANCES
Also analyzed: 2-deoxygalactitol, 2-deoxyribositol, dextrose, fucitol, fucose, galactitol, galactose, mannitol, mannose, perseitol, sorbitol

KEY WORDS
post-column reaction

Insulin

Molecular formula: $C_{257}H_{383}N_{65}O_{77}S_6$(human)
Molecular weight: 5807.69 (human)
CAS Registry No.: 9004-10-8 (injection), 8049-62-5 (zinc suspension), 11061-68-0 (human), 12584-58-6 (pig), 11070-73-8 (cow), 9004-14-2 (neutral insulin), 8049-62-5 (isophane insulin), 9004-17-5 (protamine zinc suspension)
Merck Index: 5011

SAMPLE
Matrix: formulations

HPLC VARIABLES
Column: 250 × 4 5 μm Nucleosil RP18
Mobile phase: MeCN:buffer 24:76 (w/w) (Prepare buffer by dissolving 9.8 g 85% phosphoric acid and 28.4 g sodium sulfate in 1 L water.)
Column temperature: 40
Flow rate: 1
Injection volume: 20
Detector: UV 214

CHROMATOGRAM
Retention time: 10.89

OTHER SUBSTANCES
Simultaneous: degradation products

KEY WORDS
comparison with capillary electrophoresis

Interferon

Molecular formula: $C_{860}H_{1353}N_{227}O_{255}S_9$
Molecular weight: 19241.28
CAS Registry No.: 76543-88-9 (αA), 99210-65-8 (α2B), 98059-61-1 (gamma-1B)
Merck Index: 5015
Lednicer No.: 4 1

SAMPLE
Matrix: solutions
Sample preparation: Terminate the enzymatic hydrolysis by adding 10 μL 1% trifluoroacetic acid, 100 μL 8 M guanidine hydrochloride, inject an aliquot of the enzymatic digests.

HPLC VARIABLES
Column: 150 × 4.6 5 μm Vydac C18
Mobile phase: Gradient. A was 0.1% trifluoroacetic acid. B was MeCN:water 90:10 containing 0.1% trifluoroacetic acid. A:B from 52:48 to 45:55 in 45 min, to 20:80 over 2.5 min.
Flow rate: 0.6
Detector: UV 214

CHROMATOGRAM
Retention time: 20

OTHER SUBSTANCES
Simultaneous: impurities

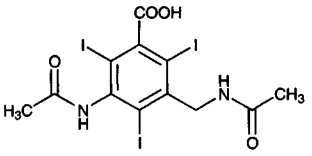
Iodamide



Molecular formula: $C_{12}H_{11}I_3N_2O_4$
Molecular weight: 627.94
CAS Registry No.: 440-58-4, 18656-21-8 (meglumine salt)
Merck Index: 5031

SAMPLE

Matrix: blood, urine
Sample preparation: Plasma. 1 mL Plasma + 100 µL 500 µg/mL iodopyracet in water + 5 mL MeOH, centrifuge at 1500 g for 20 min. Remove the supernatant and evaporate it to dryness under a stream of air at 65°, reconstitute the residue in 300 µL MeOH:water 90:10, let stand for 10 min, inject a 10 µL aliquot. Urine. 100 µL Urine + 900 µL mobile phase + 100 µL 500 µg/mL iodopyracet in water, inject a 10 µL aliquot.

HPLC VARIABLES

Column: 100 × 4.6 5 µm LiChrosorb RP-8
Mobile phase: MeOH:water 85:15 containing 10 mM tetrabutylammonium hydrogen sulfate and 10 mM Tris
Flow rate: 1.5
Injection volume: 10
Detector: UV 254

CHROMATOGRAM

Retention time: 8
Internal standard: iodopyracet (11)
Limit of detection: 200 ng/mL

KEY WORDS

plasma

SAMPLE

Matrix: blood, urine
Sample preparation: Plasma. 0.5-1 mL Plasma + 1 mL 1 M HCl + 5 mL ethyl acetate, shake for 10 min, centrifuge, repeat extraction. Combine the organic layers and evaporate them under a stream of nitrogen at 60°, add 3 mL 100 mM NaOH, shake for 10 min, centrifuge, discard the organic layer. Remove the aqueous layer and add it to 500 µL 1 M HCl, add 5 mL ethyl acetate, shake for 10 min, centrifuge, repeat extraction. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 60°, reconstitute the residue in 100 µL mobile phase, inject a 10-20 µL aliquot. Urine. 100 µL Urine + 1 mL 1 M HCl + add 5 mL ethyl acetate, shake for 10 min, centrifuge, repeat extraction. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 60°, reconstitute the residue in 400 µL mobile phase, inject a 10-20 µL aliquot.

HPLC VARIABLES

Column: 250 × 2.6 10 µm ODS-HC Sil-X-1 (Perkin-Elmer)
Mobile phase: MeCN:water:85% phosphoric acid 4:96:0.03
Flow rate: 1
Injection volume: 10-20
Detector: UV 235

CHROMATOGRAM

Retention time: 2.5
Internal standard: iodamide

OTHER SUBSTANCES
Extracted: o-iodohippurate, iothalamate

KEY WORDS
plasma; iodamide is IS

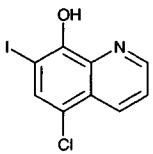
Iodochlorhydroxyquin



Molecular formula: C_9H_5ClINO
Molecular weight: 305.50
Merck Index: 5052

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 100 μL concentrated perchloric acid, vortex for 30 s, centrifuge at 15° at 5000 rpm for 15 min. Remove 500 μL of the supernatant and add it to 5 mL ether, vortex for 10 s, centrifuge at 15° for 10 min, repeat extraction. Add 10 mL ether to the original precipitate, vortex for 1 min, centrifuge at 15° at 5000 rpm for 15 min. Combine the extracts and dry them over anhydrous sodium sulfate, evaporate to dryness under a stream of nitrogen at 38°, reconstitute the residue in 500 μL mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: 40 × 5 RP-18-MPLC (Brownlee)
Column: 250 × 2.6 ODS-HC-SIL-X-I (Perkin-Elmer)

Mobile phase: MeOH:50 mM phosphoric acid 80:20 (Flush column with MeOH at the end of each day.)
Column temperature: 40
Flow rate: 1
Injection volume: 20
Detector: UV 256

CHROMATOGRAM
Retention time: 5
Limit of quantitation: 1 μg/mL

OTHER SUBSTANCES
Noninterfering: hydrocortisone

KEY WORDS
plasma

SAMPLE
Matrix: bulk, formulations
Sample preparation: Weigh out 30 mg of bulk drug or an amount of cream equivalent to 30 mg iodochlorhydroxyquin, add 70 mL THF, shake vigorously until the cream has dissolved, make up to 100 mL with THF. Remove a 5 mL aliquot and add it to 1 mL pyridine and 1 mL acetic anhydride, heat at 60° for 15 min, cool, add 15 mL 450 μg/mL testosterone acetate in 94:6 butyl chloride:THF, mix thoroughly. Remove a 3 mL aliquot and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue in 15 mL mobile phase with gentle warming and vigorous shaking, inject an aliquot.

HPLC VARIABLES
Column: 300 × 4 10 μm μPorasil
Mobile phase: Butyl chloride:water-saturated butyl chloride:THF:glacial acetic acid 55:55:3:2
Flow rate: 2-3
Detector: UV 254

CHROMATOGRAM
Retention time: 6
Internal standard: testosterone acetate (8)

OTHER SUBSTANCES
Simultaneous: impurities

KEY WORDS
cream; normal phase; derivatization; acetylation

SAMPLE
Matrix: formulations
Sample preparation: Ointment. 50 mg Ointment + 10 mL ether, vortex until dissolved. Remove a 200 μL aliquot and add phenyl salicylate in mobile phase, evaporate to dryness under a stream of nitrogen at 40°, reconstitute the residue in 10 mL mobile phase, warm for 1 min on a steam bath, vortex for 1 min, cool. Remove an aliquot, dilute with mobile phase, inject an aliquot. Cream. Suspend 50 mg cream in 10 mL mobile phase by vortexing. Remove an aliquot and add phenyl salicylate in mobile phase, evaporate to dryness under a stream of nitrogen at 40°, suspend the residue in 10 mL mobile phase, warm for 1 min on a steam bath, vortex for 1 min, cool. Remove an aliquot, dilute with mobile phase, inject an aliquot.

HPLC VARIABLES
Guard column: 40 × 5 RP-18-MPLC (Brownlee)
Column: 250 × 2.6 ODS-HC-SIL-X (Perkin-Elmer)
Mobile phase: MeOH:50 mM phosphoric acid 70:30 (Flush column with MeOH at the end of each day.)
Column temperature: 40
Flow rate: 1
Injection volume: 20
Detector: UV 256

CHROMATOGRAM
Retention time: 7.5
Internal standard: phenyl salicylate (5.25)

OTHER SUBSTANCES

SAMPLE
Matrix: feces, tissue, urine
Sample preparation: Urine. 1-5 mL Urine + 1-5 mL diethyl ether, vortex for 10 s, centrifuge at 15° at 3000 g for 10 min. Remove the organic layer and dry it over anhydrous sodium sulfate, evaporate to dryness under a stream of nitrogen at 40°, reconstitute the residue in mobile phase, inject a 20 μL aliquot. (Hydrolyze conjugates by adjusting pH to 5 with 1 M acetate buffer. add β-glucuronidase (Sigma) to a final concentration of 200 U/mL, heat at 37° for 2 h, neutralize with 3 M NaOH, add 1-5 mL diethyl ether, vortex for 10 s, centrifuge at 15° at 3000

g for 10 min. Remove the organic layer and dry it over anhydrous sodium sulfate, evaporate to dryness under a stream of nitrogen at 40°, reconstitute in 500 μL benzene (Caution! Benzene is a carcinogen!), add to an alumina column, wash with 2 mL benzene:pyridine 7:1, wash with 2 mL acetone, wash with 2 mL 100 mM acetic acid in MeOH, wash with 2 mL MeOH. Remove the alumina and add it to 1 mL saturated aqueous sodium fluoride, extract twice with 5 mL diethyl ether. Combine the extracts and evaporate them to dryness, reconstitute the residue in mobile phase, inject a 20 μL aliquot.) Tissue. Homogenize (Potter-Elvehjem) 1 g liver and 2 mL mobile phase, place homogenate in another tube, rinse original tube with 1 mL mobile phase, add rinse to homogenate, add 5 mL diethyl ether, vortex for 1 min, centrifuge at 3000 g for 10 min, repeat extraction twice. Combine the organic layers and evaporate them to dryness, reconstitute in 500 μL benzene (Caution! Benzene is a carcinogen!), add to an alumina column, wash with 2 mL benzene:pyridine 7:1, wash with 2 mL acetone, wash with 2 mL 100 mM acetic acid in MeOH, wash with 2 mL MeOH. Remove the alumina and add it to 1 mL saturated aqueous sodium fluoride, extract twice with 5 mL diethyl ether. Combine the extracts and evaporate them to dryness, reconstitute the residue in mobile phase, inject a 20 μL aliquot. Feces. Homogenize (Potter-Elvehjem) 1 g feces and 5 mL mobile phase, adjust pH to 5 with 1 M acetate buffer, add β-glucuronidase (Sigma) to a final concentration of 200 U/mL, heat at 37° for 2 h, neutralize with 3 M NaOH, add 1-5 mL diethyl ether, vortex for 10 s, centrifuge at 15° at 3000 g for 10 min. Remove the organic layer and dry it over anhydrous sodium sulfate, evaporate to dryness under a stream of nitrogen at 40°, reconstitute in 500 μL benzene (Caution! Benzene is a carcinogen!), add to an alumina column, wash with 2 mL benzene:pyridine 7:1, wash with 2 mL acetone, wash with 2 mL 100 mM acetic acid in MeOH, wash with 2 mL MeOH. Remove the alumina and add it to 1 mL saturated aqueous sodium fluoride, extract twice with 5 mL diethyl ether. Combine the extracts and evaporate them to dryness, reconstitute the residue in mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES

Guard column: 40 × 5 RP-18-MPLC (Brownlee)
Column: 250 × 2.6 ODS-HC-SIL-X-I (Perkin-Elmer)
Mobile phase: MeOH:50 mM phosphoric acid 70:30 (Flush column with MeOH at the end of each day.)
Column temperature: 40
Flow rate: 1
Injection volume: 20
Detector: UV 256

CHROMATOGRAM

Retention time: 7.5
Limit of detection: 200 ng
Limit of quantitation: 250 ng/g (feces), 500 ng/g (liver), 200 ng/mL (urine)

KEY WORDS

liver; dog; SPE

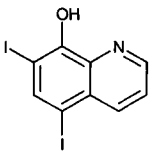
Iodoquinol



Molecular formula: $C_9H_5I_2NO$
Molecular weight: 396.95
CAS Registry No.: 83-73-8
Merck Index: 5063

SAMPLE

Matrix: bulk, formulations
Sample preparation: Cream, bulk. Weigh out cream or bulk drug containing 20 mg of iodoquinol, add 40-50 mL THF, dissolve with heating, make up to 100 mL with THF. Remove a 5

mL aliquot and add it to 1 mL 10 mg/mL nickel chloride in MeOH, add 3 mL 0.4 mg/mL diphenylamine in MeOH, make up to 50 mL with MeOH, filter, inject an aliquot. Tablets. Finely powder tablets, weigh out amount equivalent to 200 mg iodoquinol, add 150 mL THF, haet on a steam bath for a few min, shake mechanically for 30 min, make up to 250 mL with THF. Remove a 25 mL aliquot and make up to 100 mL with THF. Remove a 5 mL aliquot and add it to 1 mL 10 mg/mL nickel chloride in MeOH, add 3 mL 0.4 mg/mL diphenylamine in MeOH, make up to 50 mL with MeOH, filter, inject an aliquot.

HPLC VARIABLES
Column: 300 × 3.9 μBondapak phenyl
Mobile phase: MeCN:MeOH:water 30:20:50 containing 1 mM $NiCl_2$
Flow rate: 1.2
Detector: UV 273

CHROMATOGRAM
Retention time: 9
Internal standard: diphenylamine (11)

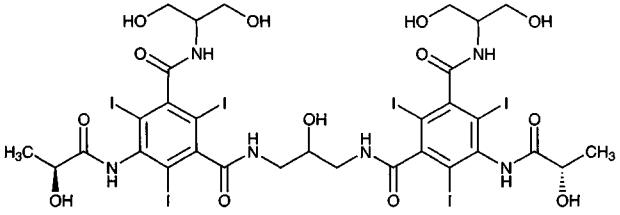
Iofratol

Molecular formula: $C_{31}H_{36}I_6N_6O_{13}$
Molecular weight: 1462.09
CAS Registry No.: 141660-63-1



SAMPLE
Matrix: blood, urine
Sample preparation: Plasma. Add 30 μL 2 mg/mL IS in water to 100 μL plasma. Add 30 μL 35% perchloric acid. Agitate and centrifuge at 3500 g for 10 min. Inject a 10 μL aliquot of the clear supernatant. Urine. Dilute 1 mL urine with 2 mL water, centrifuge at 4500 g for 15 min. Add 100 μL 5 mg/mL IS, 100 μL glacial acetic acid, and an ion-exchange resin mixture (1 g Duolite A-30B + 900 mg Amberlite IR-120). Dilute the suspension to 5 mL with water. Agitate for 30 min and centrifuge at 3500 g for 5 min. Inject a 10 μL aliquot of the supernatant.

HPLC VARIABLES
Guard column: 30 × 4 7 μm LiChrosorb RP-8
Column: 250 × 4.6 5 μm LiChrosorb RP-8
Mobile phase: MeCN:5 mM pH 4.5 potassium dihydrogen phosphate 5:95
Column temperature: 45
Flow rate: 1
Injection volume: 10
Detector: UV 242

CHROMATOGRAM
Retention time: 12.0
Internal standard: iopamidol (4.1)
Limit of detection: 75 ng/mL (plasma), 430 ng/mL (urine)

SAMPLE
Matrix: blood, tissue
Sample preparation: Plasma. 50 μL Plasma + 150 μL buffer, centrifuge at 1000 g at 0° for 10 min, inject a 10 μL aliquot. Tissue. Weigh 2 testes, add 5 mL buffer, homogenize (Kinematica type PT 10/35, setting 7.5) for 1 min, vortex, centrifuge at 1000 g at 0° for 10 min. Remove a 50 μL aliquot of the supernatant and add it to 150 μL buffer, centrifuge at 1000 g at 0° for 10 min, inject a 10 μL aliquot. (Buffer was 5 mM metaphosphoric acid and 5 mM disodium EDTA.)

HPLC VARIABLES
Guard column: C18 Bondapak guard column
Column: 300 × 3.9 10 μm μBondapak C18
Mobile phase: MeCN:buffer 2.5:97.5–5:95 (Buffer was 100 mM NaH_2PO_4 and 0.2 mM Na_2EDTA adjusted to pH 3.1 with orthophosphoric acid.)
Flow rate: 1
Injection volume: 10
Detector: UV 254

CHROMATOGRAM
Retention time: 7.5 (two isomers seen)
Limit of detection: 670 ng/mL

OTHER SUBSTANCES
Also analyzed: iopamidol, diatrizoate

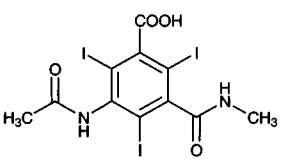
Iothalamate



Molecular formula: $C_{11}H_9I_3N_2O_4.C_7H_{17}NO_5$ (meglumine), $C_{11}H_8I_3N_2NaO_4$ (sodium salt)
Molecular weight: 809.13 (meglumine), 635.90 (sodium salt)
CAS Registry No.: 13087-53-1, 2276-90-6 (iothalamic acid), 6284-40-8 (meglumine), 17692-74-9 (^{125}I radioactive agent), 15845-98-4 (^{131}I radioactive agent), 1225-20-3 (sodium salt)

SAMPLE
Matrix: blood, urine
Sample preparation: Dilute urine 10-fold with water. Add 200 μL MeCN containing 20 μg/mL p-aminobenzoic acid to 100 μL diluted urine, vortex briefly, centrifuge at 12000 g for 4 min, inject a 20 μL aliquot of the supernatant.

HPLC VARIABLES
Guard column: 5 μm Ultrasphere C18
Column: 250 mm 5 μm Primesphere C18 (Torrance, USA)
Mobile phase: MeOH:buffer 18:82 (Buffer was 50 mM NaH_2PO_4 with 0.5 mM tetrabutyl ammonium hydrogen sulfate with an unadjusted pH of 4.11.)
Flow rate: 0.8
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 13
Internal standard: p-aminobenzoic acid (9.8)

OTHER SUBSTANCES
Extracted: p-aminohippuric acid

KEY WORDS
serum

SAMPLE
Matrix: blood, urine
Sample preparation: Plasma. 0.5-1 mL Plasma + 18 μg iodamide + 2 μg hippuric acid + 1 mL 1 M HCl + 5 mL ethyl acetate, shake for 10 min, centrifuge, repeat extraction. Combine the organic layers and evaporate them under a stream of nitrogen at 60°, add 3 mL 100 mM NaOH, shake for 10 min, centrifuge, discard the organic layer. Remove the aqueous layer and add it to 500 μL 1 M HCl, add 5 mL ethyl acetate, shake for 10 min, centrifuge, repeat extraction. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 60°, reconstitute the residue in 100 μL mobile phase, inject a 10-20 μL aliquot. Urine. 1 mL Urine + 10 μL 10% iodamide in water, mix. Remove a 100 μL aliquot and add it to 1 mL 1 M HCl, add 5 mL ethyl acetate, shake for 10 min, centrifuge, repeat extraction. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 60°, reconstitute the residue in 400 μL mobile phase, inject a 10-20 μL aliquot.

HPLC VARIABLES
Column: 250 × 2.6 10 μm ODS-HC Sil-X-1 (Perkin-Elmer)
Mobile phase: MeCN:water:85% phosphoric acid 4:96:0.03
Flow rate: 1
Injection volume: 10-20
Detector: UV 235

CHROMATOGRAM
Retention time: 2.0
Internal standard: iodamide (2.5), hippuric acid (5.6)
Limit of detection: 500 ng/mL

OTHER SUBSTANCES
Extracted: o-iodohippurate

KEY WORDS
plasma; pharmacokinetics

REFERENCE

SAMPLE
Matrix: blood, urine
Sample preparation: 200 μL Plasma + 200 μL 100 mM NaH_2PO_4 + 400 μL MeCN, mix for 5 s, let stand at 4° for 15 min, centrifuge at 10500 g for 1 min. Remove the supernatant and add it to 2 mL dichloromethane, mix for 5 min, centrifuge at 4800 g for 10 min, inject a 5-50 μL aliquot of the upper aqueous phase. Urine. Centrifuge urine at 4800 g for 10 min, dilute 1:10 with 50 mM NaH_2PO_4, inject an aliquot.

HPLC VARIABLES
Column: 125 × 4 5 μm LiChrosorb RP-18
Mobile phase: MeCN:water 7.5:92.5 containing 5.50 g/L $NaH_2PO_4.H_2O$, 1.80 g/L $Na_2HPO_4.2H_2O$, and 20 mg/L tetrabutylammonium bromide, pH 6.4 (plasma) or MeCN:water 5:95 containing 5.50 g/L $NaH_2PO_4.H_2O$, 1.80 g/L $Na_2HPO_4.2H_2O$, and 22.5 mg/L tetrabutylammonium bromide, pH 6.4 (urine)
Flow rate: 1
Injection volume: 5-50
Detector: UV 254

CHROMATOGRAM
Retention time: 2.3 (plasma), 2.7 (urine)
Limit of detection: 1000 ng/mL

OTHER SUBSTANCES
Extracted: cefotetan (UV 280)

KEY WORDS
plasma; pharmacokinetics

SAMPLE
Matrix: formulations
Sample preparation: 2 mL Sample + 1 mL 200 μg/mL emetine hydrochloride in water, make up to 10 mL with mobile phase, filter (0.45 μm), inject a 50-100 μL aliquot.

HPLC VARIABLES
Column: 100 × 4.6 5 μm Technosphere RP C-8 (HPLC Technology)
Mobile phase: MeCN:40 mM tetramethylammonium bromide:1 M acetic acid 80:15:5 (apparent pH 4.5)

Flow rate: 1.5
Injection volume: 50-100
Detector: UV 260

CHROMATOGRAM
Retention time: 1.83
Internal standard: emetine

OTHER SUBSTANCES
Simultaneous: benzalkonium (C12, C14, C16), tetrahydrozoline, naphazoline

KEY WORDS
nasal; ophthalmic; emetine is IS

REFERENCE

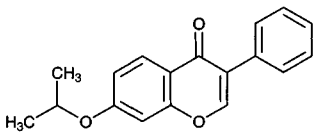
Ipriflavone



Molecular formula: $C_{18}H_{16}O_3$
Molecular weight: 280.32
CAS Registry No.: 35212-22-7
Merck Index: 5090

SAMPLE
Matrix: bulk
Sample preparation: Inject a 10 μL aliquot of a solution in MeOH.

HPLC VARIABLES
Column: 30 × 4.6 3 μm ODS C18 (Perkin-Elmer)
Mobile phase: MeCN:buffer 50:50 (Buffer was 10 mM triethylamine adjusted to pH 2.5 with orthophosphoric acid.)
Flow rate: 1.2
Injection volume: 10
Detector: UV 225

CHROMATOGRAM
Retention time: 3.4

OTHER SUBSTANCES
Simultaneous: impurities

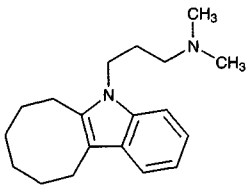
Iprindole



Molecular formula: $C_{19}H_{28}N_2$
Molecular weight: 284.44
CAS Registry No.: 5560-72-5, 20432-64-8 (HCl)
Merck Index: 5091
Lednicer No.: 1 318

SAMPLE
Matrix: solutions
Sample preparation: Prepare a 10 μg/mL solution in MeOH, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 125 × 4.9 Spherisorb S5W silica
Mobile phase: MeOH containing 10 mM ammonium perchlorate and 1 mL/L 100 mM NaOH in MeOH, pH 6.7
Flow rate: 2
Injection volume: 20
Detector: E, LeCarbone, V25 glassy carbon electrode, + 1.2 V

CHROMATOGRAM
Retention time: 4.5

OTHER SUBSTANCES
Also analyzed: acebutolol, acepromazine, acetophenazine, N-acetylprocainamide, albuterol, alprenolol, amethocaine, amiodarone, amitriptyline, antazoline, atenolol, azacyclonal, bamethan, benactyzine, benperidol, benzethidine, benzocaine, benzoctamine, benzphetamine, benzquinamide, bromhexine, bromodiphenhydramine, bromperidol, brompheniramine, brompromazine, buclizine, bufotenine, bupivacaine, buprenorphine, butacaine, butethamate, chlorcyclizine, chlorpheniramine, chlorphenoxamine, chlorprenaline, chlorpromazine, chlorprothixene, cimetidine, cinchonidine, cinnarizine, clemastine, clomipramine, clonidine, cocaine, cyclazocine, cyclizine, cyclopentamine, cyproheptadine, deserpidine, desipramine, dextromoramide, dextropropoxyphene, dicyclomine, diethylcarbamazine, diethylpropion, diethylthiambutene, dihydroergotamine, dimethindene, dimethothiazine, diphenhydramine, diphenoxylate, dipipanone, diprenorphine, dipyridamole, disopyramide, dothiepin, doxapram, doxepin, doxylamine, droperidol, ephedrine, ergocornine, ergocristine, ergocristinine, ergocryptine, ergometrine, ergosine, ergosinine, ergotamine, ethopropazine, etorphine, etoxeridine, fenethazine, fenfluramine, fenoterol, fentanyl, flavoxate, fluopromazine, flupenthixol, fluphenazine, flurazepam, haloperidol, hydroxyzine, hyoscine, ibogaine, imipramine, indapamine, isothipendyl, isoxsuprine, ketanserin, laudanosine, lidocaine, lofepramine, loxapine, maprotiline, mecamylamine, meclophenoxate, meclozine, medazepam, mephentermine, mepivacaine, meptazinol, mepyramine, mesoridazine, metaraminol, methadone, methamphetamine, methapyrilene, methdilazene, methotrimeprazine, methoxamine, methoxyphenamine, methoxypromazine, methylephedrine, methylergonovine, methysergide, metoclopramide, metopimazine, metoprolol, mianserin, morazone, nadolol, nalorphine, naloxone, naphazoline, nicotine, nifedipine, nomifensine, nortriptyline, noscapine, orphenadrine, oxeladin, oxprenolol, oxymetazolin, papaverine, pargyline, pecazine, penbutolol, pentazocine, penthienate, pericyazine, perphenazine, phenadoxone, phenampromide, phenazocine, phenbutrazate, phendimetrazine, phenelzine, phenglutarimide,

phenindamine, pheniramine, phenmetrazine, phenomorphan, phenoperidine, phenothiazine, phenoxybenzamine, phentolamine, phenylephrine, phenyltoloxamine, physostigmine, piminodine, pimozide, pindolol, pipamazine, pipazethate, piperacetazine, piperidolate, pipradol, pirenzepine, piritramide, pizotifen, practolol, pramoxine, prazosin, prenylamine, prilocaine, primaquine, proadifen, procainamide, procaine, prochlorperazine, procyclidine, proheptazine, prolintane, promazine, promethazine, pronethalol, properidine, propiomazine, propranolol, prothipendyl, protriptyline, proxymetacaine, pseudoephedrine, pyrimethamine, quinidine, quinine, ranitidine, rescinnamine, sotalol, tacrine, terazosin, terbutaline, terfenadine, thenyldiamine, theophylline, thiethylperazine, thiopropazate, thioproperazine, thioridazine, thiothixene, thonzylamine, timolol, tocainide, tolpropamine, tolycaine, tranylcypromine, trazodone, trifluoperazine, trifluperidol, trimeperidine, trimeprazine, trimethobenzamide, trimethoprim, trimipramine, tripelennamine, triprolidine, tryptamine, verapamil, xylometazoline

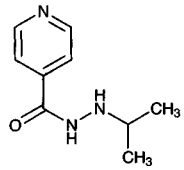
Iproniazid



Molecular formula: $C_9H_{13}N_3O$
Molecular weight: 179.22
CAS Registry No.: 54-92-2, 305-33-9 (phosphate)
Merck Index: 5094
Lednicer No.: 1 254

SAMPLE

Matrix: blood
Sample preparation: 2 mL Whole blood or plasma + 2 mL buffer + 5 mL chloroform:isopropanol: n-heptane 60:14:26, shake gently horizontally for 10 min, centrifuge at 2800 g for 10 min. Remove the lower organic layer and evaporate it to dryness under vacuum at 45°, reconstitute the residue in 100 µL mobile phase, centrifuge at 2800 g for 5 min, inject a 50 µL aliquot of the supernatant. (Buffer was saturated ammonium chloride solution 25% diluted with water, adjusted to pH 9.5 with 25% ammonia solution.)

HPLC VARIABLES

Column: 300 × 3.9 4 µm NovaPack C18
Mobile phase: MeOH:THF:buffer 65:5:30 (Buffer was 0.68 g/L (10 mM (sic)) KH_2PO_4 adjusted to pH 2.6 with concentrated orthophosphoric acid.) (At the end of each session wash the column with water for 1 h and MeOH for 1 h, re-equilibrate for 30 min.)
Column temperature: 30
Flow rate: 0.8
Injection volume: 50
Detector: UV 264

CHROMATOGRAM

Retention time: 3.00
Limit of detection: <120 ng/mL

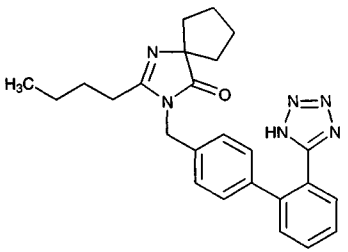
Irbesartan

Molecular formula: $C_{25}H_{28}N_6O$
Molecular weight: 428.54
CAS Registry No.: 138402-11-6
Merck Index: 5097



SAMPLE

Matrix: blood, urine

Sample preparation: Condition a 3 mL 100 mg Isolute Cyano SPE cartridge (Jones Chromatography) with 2 mL MeOH and 2 mL 0.85% phosphoric acid. Plasma. Mix 1.0 mL 0.85% phosphoric acid and 100 µL 1 µg/mL IS in 0.85% phosphoric acid with 250 µL plasma. Pass the mixture slowly through the SPE cartridge, wash with 3 mL 0.85% phosphoric acid, wash with 1 mL hexane. Elute with 1 mL of mixture MeOH:0.85% phosphoric acid 50:50. Inject a 20 µL aliquot of the eluate. Urine. Mix 1.0 mL 0.85% phosphoric acid and 100 µL 1 µg/mL IS in 0.85% phosphoric acid with 250 µL urine. Pass the mixture slowly through the SPE cartridge, wash with 4 mL 0.85% phosphoric acid. Elute with 1 mL of mixture MeOH:0.85% phosphoric acid 50:50. Inject a 20 µL aliquot of the eluate.

HPLC VARIABLES

Column: 150 × 4.6 5 µm YMC-ODS-AQ
Mobile phase: MeCN:buffer 50:50 (Prepare buffer by adding 1 mL triethylamine to 1 L water, adjust pH to 3.5 with 85% phosphoric acid.)
Flow rate: 0.8
Injection volume: 20
Detector: F ex 250 em 371

CHROMATOGRAM
Retention time: 6.6
Internal standard: BMS-190462 (9.4)
Limit of quantitation: 1 ng/mL

KEY WORDS
plasma; urine; SPE; pharmacokinetics

SAMPLE
Matrix: blood, feces, urine
Sample preparation: Plasma, urine. Thaw frozen plasma or urine sample in a waterbath, vortex, add 250 μL plasma or 250 μL plasma:diluted urine 50:50 to 500 μL MeOH:5% (w/v) aqueous perchloric acid 50:50. Mix for 5 min, centrifuge at 24000 g for 5 min, dilute the upper aqueous layer from plasma and urine extracts 2-fold and 10-fold, respectively, with mobile phase, inject a 100-200 μL aliquot. Feces. Homogenize feces with 5 volumes of 5% (w/v) perchloric acid in water using five 1 min bursts from an Ystral X1020 tissue homogenizer at 20500 r.p.m. Centrifuge at 24000 g for 10 min, dilute with one volume of drug-free human plasma, and process further as described for the urine sample.

HPLC VARIABLES
Guard column: 4 × 4 LiChroCart endcapped RP-18 Merck
Column: 100 × 4.6 5 μm Hypersil ODS
Mobile phase: MeOH:100 mM ammonium acetate containing 10 mM tetrabutylammonium sulphate 30:70, pH adjusted to 5.3 with HCl
Column temperature: 50
Flow rate: 1.0
Injection volume: 100-200
Detector: F ex 355 em 515

CHROMATOGRAM
Retention time: 16.1
Limit of quantitation: 10 ng/mL (plasma), 100 ng/mL (feces, urine)

OTHER SUBSTANCES
Extracted: metabolites

KEY WORDS
pharmacokinetics; plasma

REFERENCE

SAMPLE
Matrix: blood, tissue
Sample preparation: Condition an Analytichem C18 SPE cartridge with 1.5 mL MeOH and 1.5 mL water. Homogenize (PTFE homogenizer) tissue with four volumes ice-cold 150 mM KCl, centrifuge at 2° at 9000 g for 20 min. Dilute plasma, serum, or tissue homogenate supernatant 10-fold with 100 mM HCl, add to the SPE cartridge, elute the contents of the SPE cartridge on to the column with the mobile phase.

HPLC VARIABLES
Guard column: RP-18
Column: 250 × 4 LiChrosorb RP-18
Mobile phase: MeCN:EtOH:0.8% ammonium carbonate 50:25:25
Column temperature: 50
Flow rate: 1

Detector: F ex 373 em 428

CHROMATOGRAM
Retention time: 6.6
Limit of detection: 1 ng

KEY WORDS

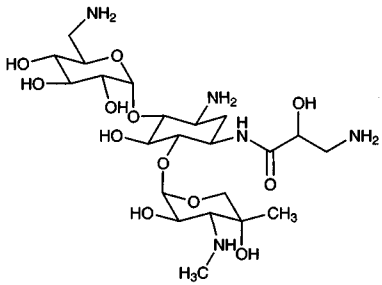
Isepamicin



Molecular formula: $C_{22}H_{43}N_5O_{12}$
Molecular weight: 569.61
CAS Registry No.: 58152-03-7, 67814-76-0 (sulfate)
Merck Index: 5121

SAMPLE
Matrix: blood
Sample preparation: Mix 1 mL plasma with 0.5-5.0 μg IS and 2 mL EtOH. Add 7 mL dichloromethane and 1 mL water, mix, centrifuge. Inject an aliquot of the aqueous supernatant onto column A, elute to waste with mobile phase A, after 4 min elute the contents of column A onto column B with mobile phase B, elute column B with mobile phase B. Mix the effluent from column B with o-phthalaldehyde at 0.2 mL/min and monitor.

HPLC VARIABLES
Column: A 3.9 × 4.0 10 μm Guard Pak Cyano (Waters); B 150 × 4.6 5 μm Shandon Hypersil C18
Mobile phase: A 17 mM acetic acid containing 10 mM hexanesulfonic acid; B 17 mM acetic acid containing 10 mM hexanesulfonic acid, 100 mM sodium acetate, and 3.53 M MeOH
Detector: F ex 338 em 450 (cut-off filter) following post-column reaction. The column effluent mixed with o-phthalaldehyde pumped at 0.2 mL/min and the mixture flowed to the detector.

CHROMATOGRAM
Retention time: 7.4
Internal standard: dibekacin (9.5)
Limit of quantitation: 100 ng/mL

OTHER SUBSTANCES
Simultaneous: aspirin, caffeine, chlorpheniramine, gentamicin, neomycin, netilmicin, sisomicin

KEY WORDS
plasma; pharmacokinetics; comparison with RIA and microbiological assay; post-column reaction; column-switching

SAMPLE
Matrix: blood

Sample preparation: Dry blood on gauze, soak gauze in 500 μL 500 mM Na_2HPO_4 at 35° for 30 min, inject a 50 μL aliquot.

HPLC VARIABLES
Column: 300 × 3.9 5 μm μBondapak C18
Mobile phase: 16 mM Sodium sulfate containing 5 mM 1-heptanesulfonic acid (PIC B-7)
Flow rate: 0.6
Injection volume: 50
Detector: F ex 360 em 440 following post-column reaction. The column effluent was mixed with reagent pumped at 0.3 mL/min and flowed through a 5 m × 0.25 mm i.d. coil of PTFE tubing to the detector. (Prepare reagent by dissolving 300 mg o-phthalaldehyde in 500 mL MeOH, add 1.25 mL β-mercaptoethanol, add 500 mL 400 mM pH 10.4 potassium borate buffer.)

CHROMATOGRAM
Retention time: 12
Limit of detection: 100 ng/mL

KEY WORDS
post-column reaction; dried blood

SAMPLE
Matrix: blood
Sample preparation: 50 μL Plasma + 20 μL 10 mg/mL gentamicin C1a in water + 50 μL buffer, vortex for 15 s, add 200 μL MeCN, vortex for 20 s, centrifuge at 2000 g for 5 min. Filter (Millex-HV4) the supernatant. Heat 200 μL filtrate and 20 μL 250 mg/mL 1-fluoro-2,4-dinitrobenzene in MeCN at 80° for 1 h, cool, inject a 50 μL aliquot. (Buffer was 3.81 g disodium tetraborate decahydrate in water, adjust pH to 10 with NaOH, make up to 100 mL with water.)

HPLC VARIABLES
Guard column: 25 × 4 10 μm LiChroCART RP 18
Column: 250 × 4 5 μm LiChrosorb RP 18
Mobile phase: MeCN:water 70:30 containing 1 mL/L acetic acid
Flow rate: 2
Injection volume: 50
Detector: UV 365

CHROMATOGRAM
Retention time: 13.0
Internal standard: gentamicin C1a (10.0)
Limit of quantitation: 500 ng/mL

OTHER SUBSTANCES
Noninterfering: ampicillin, aspirin, captopril, cefazolin, cefotaxime, ceftazidime, ceftriaxone, cephalosporins, chlorpromazine, diazepam, heparin, propranolol, sulfamethoxazole, sulpiride, trimethoprim, verapamil

KEY WORDS
plasma; guinea pig; human; derivatization

Dionisotti,S.; Bamonte,F.; Scaglione,F.; Ongini,E. Simple measurement of isepamicin, a new aminoglycoside antibiotic, in guinea pig and human plasma, using high-performance liquid chromatography with ultraviolet detection, *Ther.Drug Monit.*, **1991**, *13*, 73–78.

SAMPLE
Matrix: blood, dialysate, urine

Sample preparation: Plasma. Condition a 3 mL Baker cyanopropylsilane CN SPE cartridge with 2 mL MeOH, 2 mL water, and 2 mL buffer. 1 mL Plasma + 100 μL 100 μg/mL dibekacin in water, vortex for 15 s, add 1 mL buffer, vortex for 15 s, centrifuge at 3100 g at 4° for 7 min, add to SPE cartridge, wash with 500 μL water, wash with 250 μL mobile phase, elute to dryness. Elute with 250 μL mobile phase, inject an aliquot of the eluate. Urine, dialysate. Dilute 1:100 with water, add 100 μL 100 μg/mL dibekacin per 1 mL of sample, mix well, inject a 100 μL aliquot. (Buffer was 0.94 g sodium hexanesulfonate in 300 mL water, add 500 μL glacial acetic acid, dilute to 500 mL with water.)

HPLC VARIABLES

Guard column: 10 × 4.6 5 μm Hypersil C18
Column: 150 × 4.6 5 μm Hypersil C18
Mobile phase: MeOH:buffer 10:90 (Buffer was 3.76 g sodium hexanesulfonate + 28.4 g sodium sulfate in 2 L water, acidify to pH 3.4 with 2 mL glacial acetic acid.)
Column temperature: 25
Flow rate: 1.1
Injection volume: 100
Detector: F ex 338 em 418 (bandpass filter) following post-column reaction. The column effluent mixed with the reagent pumped at 0.4 mL/min and the mixture flowed through a 3 m × 0.05 mm i.d. knitted PTFE reaction coil at 25° to the detector (Derivatizing reagent was 0.4 g o-phthalaldehyde in 3 mL MeOH added to 390 mL buffer, add 2 mL β-mercaptoethanol, make up to 500 mL with water, store at 4°. Buffer was 1 M pH 10.4 borate from equal volumes of 1 M KOH and boric acid.)

CHROMATOGRAM

Retention time: 6.7
Internal standard: dibekacin (17)
Limit of quantitation: 100 ng/mL

OTHER SUBSTANCES

Simultaneous: kanamycin, gentamicin, tobramycin, netilmicin

KEY WORDS

post-column reaction; SPE; plasma
