WAT

# ONYX AND MARBLE MARTELL CLOCKS

---

The **STAR MOVEMENT**, used in Clocks shown on pages 3 to 50 inclusive, has Polished Plates, Patent Regulator by which the clock is regulated from the front without touching the pendulum, and a striking mechanism which connects the hands and the striking part in such a manner that the time will invariably be struck correctly. It also permits the hands to be turned backwards without injuring or disturbing the striking part. It is 8-Day, Half-hour, Slow Strike, with Cathedral Gong on Sounding Board.

## SIX INCH MANTEL CALENDAR DIAL

THIS CALENDAR IS RELIABLE AND  
CANNOT GET OUT OF ORDER.  
THE CALENDAR HAND CAN  
BE MOVED BACKWARD  
OR FORWARD WITH-  
OUT INJURY

We are prepared to furnish this Calendar from  
stock in the following styles :

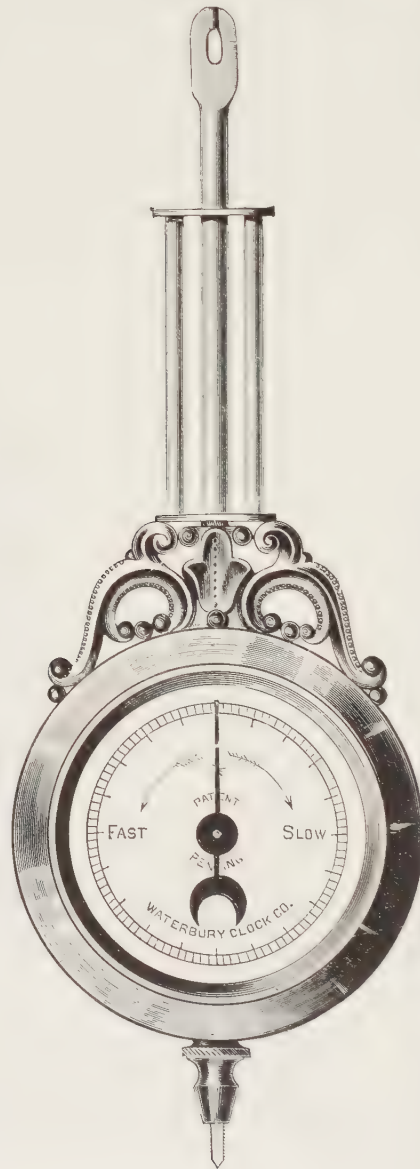

**HADLEY**, Oak or Walnut, see page 56.

**GIBSON**, Oak or Walnut, see page 56.

**BUFFALO**, Walnut, see page 59.

We can also supply the Calendar, in case lots, in  
other Eight Day Mantel Clocks, at short notice.

## INDICATOR PENDULUM

Mantel Visible Pendulum Clocks on pages  
57 to 59 and 63 and 64 inclusive, are, as  
a rule, fitted with assorted Pendulums  
in each box.

Any one of these can be supplied in case  
lots when designated as follows :

Indicator, as shown above.

Extra, Medallion Centre, as shown in **OAKLAND**, on page 59

Extra, Corrugated Centre, as shown in **BUFFALO**, on page 59

# METAL AND WOOD CASED LEVER CLOCKS

The **DUKE AND DUCHESS MOVEMENT** used in DUKE and DUCHESS, shown on page 68, is the smallest lantern pinion movement made. Also the most compact, being only  $15/32$  of an inch thick, including plates. Has patented winding arrangement with polished spring encased in barrel, giving maintaining power. Beats 24c per minute. Patented escapement. Second hand. Short wind. Practically dust proof. A compact, durable and reliable timekeeper. Weight,  $4\frac{1}{2}$  ounces. Case strengthened by a flanged cap and collar inside.

**SIMPLICITY OF CONSTRUCTION.**—By removing 3 screws the movement can be taken out without liability of derangement. No possibility of hair spring catching on any wheel or projection. Pinions have the needles held in place by a washer held friction tight to the shaft; by removing washer, bent or broken needles can be replaced without any danger of spoiling pinion. Needles are of polished steel wire, making a far better pinion than the ordinary steel cut pinion, which, while it may be made practically as perfect as this pinion, it can only be at a very great expense, the ordinary steel cut pinion is far inferior to this pinion. Light spring power required to run the train by reason of this smooth running pinion, resulting in accuracy of time and the least variation in power. Movement cap removed by unscrewing the two small screws. Patented Ratchet of unusual construction being threaded externally for the key and internally for the main arbor. By removing key, freeing click, ratchet will unscrew, leaving arbor free. Four turns wind movement for 24 hours; average power of spring will run movement about 36 hours.

#### PATENTED

January 15th, 1878.	May 6th, 1890.
December 23d, 1890.	January 13th, 1891

Other Patents applied for.

The **CONDUCTOR MOVEMENT** used in CONDUCTOR, shown on page 70, is a fine running movement with a closely adjusted alarm part, and is the smallest made. Has emery finished frame, patented winding arrangement with Polished Spring encased in Barrel, giving maintaining power. Beats 240 per minute. Patented Escapement

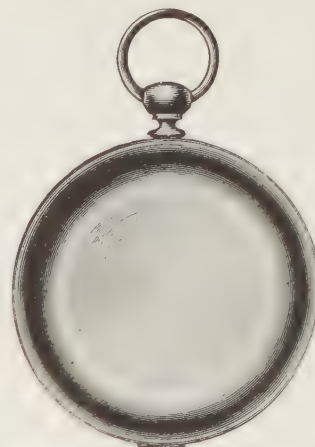

The **WASP MOVEMENT** used in Clocks shown on pages 69 to 72 inclusive, and in MASONIC TEMPLE, on page 73, has patented winding arrangement with Polished Spring encased in Barrel, giving maintaining power. Beats 240 per minute. Patented Escapement.

The **CRESCENT MOVEMENT** used in TOURIST and KEYSTONE, shown on page 79, has Polished Plates, Half-hour Strike, Single Polished Spring encased in Barrel, giving maintaining power, and Patent Turn Back, allowing the hands to be turned backward and always striking correctly.

The **DIAMOND MOVEMENT** used in SPOT ALARM and TURK ALARM, shown on pages 74 and 76, has Round Solid Plates. Beats 240 per minute. Single Polished Spring encased in Barrel, giving maintaining power. The Alarm is operated by pushing a button and, having once sounded, will be silent until the button is again pushed.

OAK OR CHERRY

STAINED

8 Day, Chain Weight, Strike, Gong.....\$40 00  
Dial, 12 inches. Height, 87¼ inches.

## REGULATORS

---

The **MOVEMENT No. 100**, as used in Regulators Nos. 7, 8, 12, 13, 15, 16, 51 and 52, is similar in character to the Imported Swiss Movement used so largely by our competitors, and used by us as well until we felt the desirability of substituting one of our own make. We invite the closest inspection of this Movement as a model of the highest grade of workmanship.

Some features of its construction are solid frames connected by extra heavy Brass Pillars, Cut Steel Pinions, Teeth and Pivots, carefully polished and hardened, Fine Pin Escapement, Maintaining Power and Single Weight. Every part is specially finished and fitted by itself, the whole Movement put together with the greatest care, and incased in an iron box for protection.

The **MOVEMENT No. 120**, as used in Regulators Nos. 5, 6, 9 and 10, is of same high grade as the above, but smaller in size and of not so heavy construction, though still a very strong and compact Movement, every part being hand finished, polished and fitted specially.

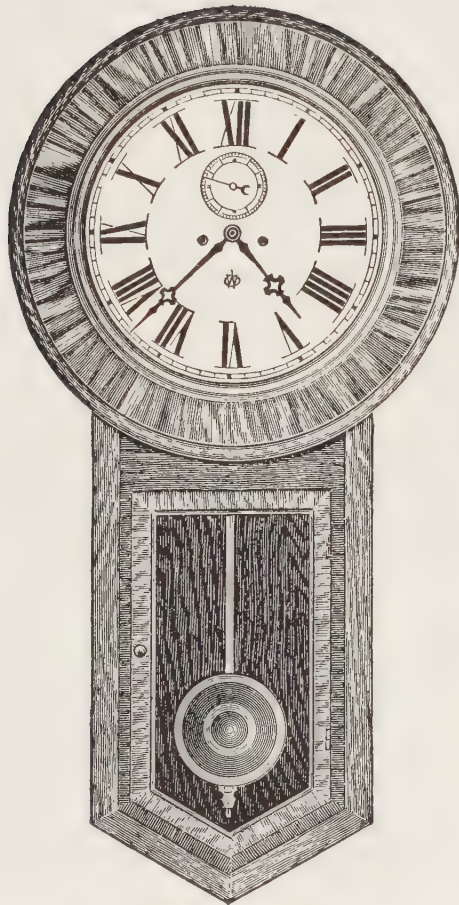

The **MOVEMENT No. 130**, also used in Regulators Nos. 5, 6, 9, 10 and 19, is a companion to No. 120, and is the first high grade Regulator Strike Movement ever offered by us to the Trade.

These Movements have solid hardened Steel Pinions, Dead Beat Escapement and Maintaining Power. All small attachments and lockwork are of Polished Steel blued.

# PERPETUAL CALENDAR CLOCKS

THESE CAN BE FURNISHED WITH MONTHS AND DAYS OF THE WEEK  
IN THE ENGLISH, SPANISH, PORTUGUESE, FRENCH, GERMAN,  
SWEDISH AND ITALIAN LANGUAGES

## DIRECTIONS FOR PERPETUAL CALENDARS

**TO SET IN MOTION.**—Hang the Clock in position by means of the hanger on the back, adjust it so the pendulum will swing evenly, and the tick will be regular, this will be the case if the Clock is hung plumb.

It would be advisable also to put an additional fastening through the lower part of the back to prevent any change of position. (For mantel clocks the above of course does not apply.)

**TO SET THE CALENDAR.**—The Calendar is now set at 10.55 P.M., the year being indicated on label accompanying each clock.

First, by means of the long or minute hand, move the hands forward to 12 o'clock, when the Calendar will change.

Underneath the Calendar dial in the center is a small round metal weight attached to the Calendar connecting rod. Raise the weight up as far as it will go and let it drop quickly. This action will cause the Calendar to change.

Repeat this till the desired *day of the week* appears, disregarding for the time, the position of the Calendar hand. There is also beneath the Calendar dial, to the left of the small weight, a wire with push button attached.

Having obtained the desired *day of the week*, raise this button up as far as it will go, which unlocks the Calendar hand and allows it to be moved forward. Holding the button pushed up, turn the Calendar hand forward till the proper *month* and finally proper *day of the month* is reached, then release the button, slightly feel of the Calendar hand to see that it is securely locked, and then set the clock to the proper time of the day.

In doing this, bear in mind that the clock must be set with reference to its Calendar connection, and if the time of setting should be *after-noon*, the clock should be set forward 12 hours, and *then* forward to the proper time.

The Calendar if properly set will correctly change for Leap-Year, hence should the date desired be more than a year from indicated date, the hand should be turned around 12 months, and *then* forward to the proper month.

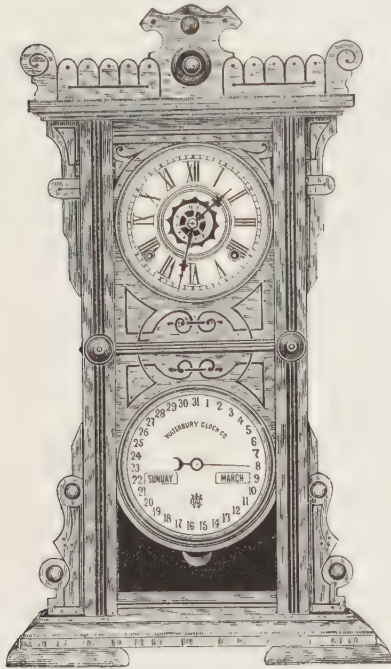

The Calendar can be changed or set at any time during the first 12 hours of the day, except during the month of February. No harm will come from attempting to set it, at *any* time, but if it does not change easily, simply turn the hand forward to midnight as directed and *then* set the Calendar.

Should the clock stop, the day of the week, whatever it may be, agreeing properly with the day of the month, adjust it by means of the weight rather than the push button. Never move the hour hand; should the hands be taken off, replace them with reference to the changing of Calendar, which time should be 12 o'clock.

# WATERBURY CLOCKS

## The Complete Illustrated Catalog of 1893

by

### Waterbury Clock Company

There was a time in our great-grandfathers' day when a Waterbury clock stood on the mantel of every respectable home in America and many a home in England. The Waterbury watch, a pocket clock, was the joy of every small boy before the turn of the century. So renowned were these timepieces that references to them frequently turn up in operettas, books and plays of the late nineteenth century. Though the heyday of the Waterbury clock has passed, there remains for connoisseurs of antique home decoration a treasure of well-made, distinctively American clocks. These delightful time-keeping devices, now coveted by clock and antique collectors, are lovingly hung on walls of homes and offices.

The many fans of Waterbury clocks will appreciate this handsome and rare catalog—the Waterbury Clock Company Catalogue No. 137 of 1893—reprinted here as it originally appeared, complete with illustrations and prices. Anyone interested in American life in the late nineteenth century will enjoy this look at popular clocks for the typical home of the period.

Over 400 timepieces of all descriptions—grandfather clocks; pocket watches; alarm clocks; wall clocks; and the inevitable, distinguished mantel clocks—are shown in black-and-white photographs and wood engravings. These handsome machines in onyx, marble, enameled iron, silver, bronze, oak, cherry, walnut and imitation woods will dazzle the eye of the beholder. Many are carved and decorated with columns, wreaths, statuettes and elaborate interlacings. All are described: sizes, features and alternate choices in dial are given. Prices—incredibly low by today's standards, ranging from \$6 to \$60—are also given. An onyx specimen sold at \$24 in 1893 is now worth over \$5000.

Not only is this Waterbury Clock Company Catalogue an invaluable reference tool for the collector interested in identifying antique pieces, it is a delight for Americana buffs and anyone who simply wishes to admire timepieces of a bygone era. Artists, designers and craftspeople will welcome this volume as a member of the Dover pictorial archive providing a source of inspiration and copyright-free illustration.

Unabridged republication of the edition first published by the Waterbury Clock Company, Waterbury, Connecticut, 1893. Indexes. 494 illustrations. 128pp. 9¾ x 12¼. Paperbound.

#### A DOVER EDITION DESIGNED FOR YEARS OF USE!

We have made every effort to make this the best book possible. Our paper is opaque, with minimal show-through; it will not discolor or become brittle with age. Pages are sewn in signatures, in the method traditionally used for the best books, and will not drop out, as often happens with paperbacks held together with glue. Books open flat for easy reference. The binding will not crack or split. This is a permanent book.
