Cincinnati.

L. W. Ensey, Troy, O., and bride, were here, last week, on their honeymoon.

A. Herman, of Herman & Loeb, spent Thanksgiving Day in Pomeroy, O., with friends.

M. J. Greenwald, the Arcade, has added new wall cases for cut glass, of which he has installed an extensive line.

Friends received word from C. M. Huntcutt, Rockville, Ind., that his business was entirely burned out recently.

The Herschede Hall Clock Co. is just getting its display ready for the furniture exhibit at Grand Rapids, Mich., next month.

Mrs. Eveslege, Ripley, O., notified friends here, last week, that thieves had entered the store recently and taken about \$100 worth of stock.

A party of Cincinnati jewelers, including Joseph Noterman, of Joseph Noterman & Co., and Ed. E. Croninger, took Thanksgiving dinner at White Villa, Ky.

A. C. Brodfuerher, formerly with the Diamond & Jewelry Credit Co., was here, last week, buying the opening stock for his new retail store at Louisville, Ky.

A few nights ago, a lively chase occurred in the Arcade, when one of the prominent jewelers therein pursued an intruder who had made an attempt at burglary in the store.

M. Benham, formerly of the old jewelry firm of Benham & Benham, at Rising Sun, Ind., is a member of the Bankers' First Proof Time Lock Co., lately located in the Lion building, 5th and Elm Sts., in this city.

Thieves succeeded in partially cutting a large diamond-shaped hole in the large plate glass window of George Simper's store, Vine St., recently, but were frightened away before they had broken through the glass.

The Cincinnati gymnasium football team, of which Leonard J. Fox, of the stove Fox Co., is captain, won the city Championship of Cincinnati. In eight games played, the team's opponents have not scored.

What might have proved to have been a disastrous fire for the Clemens Oskamp Co., at a very early hour one morning, last week, was extinguished by the fire department, which was promptly summoned. It is thought that the electric wires became crossed, thereby causing the blaze. The damage was slight.

Gus Schneider, one of the best known and most respected watchmakers here, died last week at the age of 40 years. Mr. Schneider spent the greater part of his business life with Thomas Lovell, deceased. At the time of his brief illness of pneumonia, he was connected with Oskamp, King & Co. A widow survives him.

Out-of-town jewelers who were here buying holiday goods, the past week, included: Albert J. Ward, Columbus, O.; J. W. Tufts, Loveland, O.; D. A. Lamb, Wilmington, O.; E. De Voss, Wilmington, O.; J. D. Ward, Rising Sun, Ind.; J. W. Sarks, Sabina, O.; J. F. Krohme, Clarksville, W. Va.; P. W. Starks, Manchester, O.; C. C. C. Faris, Marion, Ind.; Frank B. Mer, Harrison, O.; John Selbert, Frank-

fort, Ky.; J. E. Homrighous, Tuscola, Ill.; O. L. Botsel, London, O.; Mr. Scott, Batavia, O.; C. K. Weaver, Miamisburg, O.; M. O. De Voss, Springfield, O.; A. J. Carr, La Follette, Tenn.

A young man of about 23 years of age, giving his name as E. Clark Zimmerman, living at 831 Rockdale Ave., Avondale, called at the stores of the Frank Herschede Co., George H. Newstedt and the Oskamp Jewelry Co., last week, and asked to see some Masonic jewelry, and selected a 32-degree diamond set charm at each of the first two places, and a gold watch and chain at the last named place. These goods, which are valued at about \$275, he secured on memorandum, saying at each store that the piece selected was to be a presentation to a brother, but must first be approved by his mother. He said he would again call later in the day and settle. He did not call, and after investigation, the matter was reported to the police.

Omaha.

G. A. Starr, representing a Chicago jewelry house, was in this city, last week.

Sol Bergman is able to be about again, having just recovered from a four weeks' siege of typhoid fever.

Miss Myrta Porter, formerly with T. L. Combs & Co., has taken a position with J. L. Jacobson, as bookkeeper.

Mrs. William Copley, Superior, Nebr., was the guest of her son, Henry Copley, of this city, Thanksgiving Day.

John Henderson, of the P. E. Flodman Co., spent a few days, last week, at Beatrice, Nebr., visiting friends.

The Mawhinney & Ryan Co., has enlarged its diamond room and remodeled and improved its large side window.

Frank Finch was in this city, last week, and purchased the opening stock for a new store, which he expects to open at Pierre, S. Dak.

John Albright, David City, Nebr.; S. M. Thomas, Tabor, Ia.; Mr. Barnes, Avoca, Ia., and L. S. Robinson, Glenwood, Ia., were in this city, last week, replenishing stock.

The family of Abraham Mandelberg was awakened by the crashing of glass about 2:30 o'clock, Saturday morning, Nov. 24. The police, who were sent for, in company with Mr. Mandelberg, searched the house for thieves in vain. The officers were unable to discover the cause of the noise around the neighboring houses.

Pacific Northwest.

Walter B. Dean, Jr., Forsyth, Mont., was married, last week, to Miss Grace Marseys, of the same place.

I. Aronson, Portland, Ore., is the first merchant to get established in the new Sweetland building, in that city. His new quarters are now fully equipped for the transaction of business.

M. Q. Bradbury, Toppenish, Wash., has purchased the Stoddard building, which he will occupy in the future, sharing his quarters with the postoffice. Mr. Bradbury was burned out on the townsite recently.

O. D. Johnson, Wenatchee, Wash., has

begun to remodel his store building. The partition connecting the room now occupied with an adjoining building will be removed in order to relieve the congestion in the store.

Kansas City.

TRADE CONDITIONS.

According to reports from retailers the buyers are now coming in and ordering stock put away for them. This is taken to be a good indication of a large holiday business. All are well stocked and there is room for a very heavy business, even though stocks are not cleaned up.

W. E. Crellin, of the Ward & Crellin Jewelry Co., was in the city, last week.

Sherman Swartz, who recently moved from 12th St. to Westport Ave., has discontinued business.

J. S. Kelley, Marshall, Mo., who was in this city, last week, states that holiday trade has already opened up in his city.

Louis Meyer, president of the Meyer Jewelry Co., spent the greater part of last week in Chanute, Kans., visiting relatives.

Harry Paulson, formerly of the Kansas City Polytechnic Institute, who recently went to Texas, has taken a position in Stanford, Tex.

Leslie Burklund, of the material department of the Meyer Jewelry Co., has just returned from Osawatimie, where he went to spend Thanksgiving with relatives.

J. Levin, with Kionka & Kionka, has just returned from a trip through Iowa, and reports a good business. He will go out on other short trips before the holidays.

Maybell Mears, from the Kansas City Polytechnic Institute, has returned from Colorado and gone to St. Joseph to take a position as engraver with Alfred Wendover.

J. H. Whitney, of the Edwards & Sloane Jewelry Co., was in town for a short stay, last week, having just returned from his territory in northern Kansas and Nebraska.

L. Weixelbaum, whose jewelry manufacturing plant was located in the Missouri building, has moved to rooms directly over the jewelry store of J. R. Mercer, on 11th St.

The following out-of-town jewelers were in this city, last week: G. P. Venable, Lexington, Mo.; Ralph Campbell, Westphalia, Mo.; Roy R. Smithers, Cameron, Mo.; Ed. R. Kreyer, Fort Scott, Kans.; J. S. Kelly, Marshall, Mo.; J. B. Dickey, Newton, Kans.; Beddow & Rafter, Huntsville, Mo.; Mr. Lipscomb, Columbia, Mo.; Mrs. J. H. Whiteside, Liberty, Mo.; George A. Young, Moberly, Mo.; D. F. Carpenter, Moberly, Mo.; J. H. Gindrith, Moberly, Mo.; F. W. Hunt, Burlingame, Kans.; H. E. Moore, Vandalia, Mo.; A. F. Roeder, Higginsville, Mo.

F. H. Edwards, whose store at Tin Cup, Colo., was destroyed by fire, has resumed business at Pitkins, Colo.

Ellison Gift, 19 years old, of Warren, Ind., was recently arrested in Marion on a charge of stealing a hat pin from the store of J. H. Baber of the latter place. A fine of \$1 and costs, together with a jail sentence of 20 days, were imposed.

BAUMAN MASSA JEWELRY CO.

IMPORTERS AND MANUFACTURERS

ST. LOUIS, MO.

St. Louis.

J. H. Mednikow, of J. H. Mednikow & Co., New York, was a visitor here last week.

J. R. Mercer, one of Kansas City's leading retailers, was here last week, combining business with pleasure.

James J. Burke, president of the Brooks Jewelry & Optical Co., has returned from a business trip to Chicago.

Mr. Zelle, of the Zelle & Chamberlain Jewelry Co., who has been ill for some time, is now convalescent.

George C. Gibrill, treasurer of the Eisenstadt Mfg. Co., is back at his desk again, after an illness of several weeks.

J. G. Smith, Crane, Mo., who was here last week, buying stock, was appointed watch inspector for the Iron Mountain Railroad at that point.

F. J. Bross, Charles Lawrence Stange and Ellsworth Bauman, of the L. Bauman Jewelry Co., were in last week, and departed Monday for their respective territories.

F. J. Longden, Eastern representative of the Eisenstadt Mfg. Co., has returned from a trip through Indiana and Ohio, and reports favorable conditions existing in that territory.

The A. J. Wild Jewelry Co. has removed from 104 N. 6th St. to 508 Olive St. The concern will be in its present location until sometime next Spring, when the building will be torn down to make way for a new structure.

Among the out-of-town jewelers in this city last week not elsewhere mentioned were: T. H. Vineyard, Piedmont, Mo.; C. H. Jahns, Pacific, Mo.; J. Harvell, Mt. Pleasant, Ill.; R. G. Rutherford, Mt. Vernon, Ill.; O. J. Steele, of Steele Bros., Iowa, Nebr.; W. R. Haselwood, Bardwell, Mo.; John Koetting, Ste. Genevieve, Mo.; H. Krause, Greenville, Ill.; M. H. Mackie, Bunker Hill, Ill.

A green diamond on exhibition at the W. Drosten Jewelry Co. is attracting the attention of mineralogists and gem experts. The stone, which is very hard to distinguish from an emerald, is one of three green diamonds in the world. One is in Dresden and the other in Paris. The latter cannot be purchased at any price, and will be presented to the Louvre. Mr. Drosten purchased the diamond on his recent trip to Paris.

As evidence of the prosperity of St. Louis jewelers, the contributions to the Hospital Saturday and Sunday Association this year amounted to \$305, for which amount a check has been sent to the treasury by Morris Eisenstadt, chairman of the committee, while last year \$206 was the total amount of the collection. The following are the contributors among the jewelers: Eisenstadt Mfg. Co., \$50; Bauman & Massa Jewelry Co., \$25; St. Louis Clock & Silverware Co., William Weidlich & Sons, Hess & Culbertson Jewelry Co., F. W. Drosten Jewelry Co., Aller-Newman & James Jewelry Co., A. R. Brooks & Co., Weiss & Fassett, James R. Burke, president of the Brooks Jewelry & Optical Co.; W. Cary & Co., A. Kurtzeborn & Sons, L. Bauman Jewelry Co., S. Ruby, Herman Mauch, E. H. Kortkamp Jewelry Co., Zerweck-Frech Jewelry Co., F.

Dienstbier, Kennedy Jewelry Mfg. Co.; J. Bolland Jewelry Co. and Zach A. Oppenheimer Co., each \$10; J. P. Morgan Co., Whelan - Achle - Hutchinson Jewelry Co., George R. Stumpf, G. Eckhardt, Charles P. Hettel, Logan-Shipley Silver & Clock Co., J. C. McCoy each \$5; J. F. Dailey, \$3; E. Maritz Jewelry Co.; Morrison, Levy & Co.; Reeves Co., F. C. Blelock, Furstenwerth-Uhl Jewelry Co., \$2 each.

San Francisco.

Paul V. Garin has opened another store on Fillmore St., near Geary St.

M. Friedberger, Stockton, Cal., was in town the latter part of the week.

W. F. Wooster, of Tucson, Ariz., has arrived in San Francisco for a short visit.

W. G. Glindemann has just put up a 125-light electric sign, which is attracting the attention of passersby.

The F. Golden Jewelry Co.'s buyer spent the past week in this city ordering goods for the store in Carson City, Nev.

Nordman Bros., located in the Kamm Building, on Market St., have added several display cases to the main salesrooms.

The United Jewelry & Optical Co. has installed in its store at 1655 Fillmore St. two 5x2 feet show cases, two 8x2 feet show cases and three large wall cases.

The James A. Sorensen Co.'s store, 715 Market St., has put in three new show cases. Mr. Sorensen is also looking for additional help, but finds that competent men are scarce.

J. D. Duncan, a driver in the employ of Shreve & Co., was recently arrested on suspicion of having committed a series of thefts from the concern, which has missed several packages of jewelry within the past month.

J. S. Lehrberger & Co. are setting up new fixtures and making improvements in their new apartments in the Mutual Bank Building. This company has just received a handsome show case, which will be used for displaying special samples.

Other out-of-town visitors here recently included L. Machefert, San José, Cal.; Harry Morton, Oakland; R. W. Edwards, Oakland, Cal.; W. C. Lean, San José, Cal.; C. J. Klein, Santa Cruz, Cal.; J. C. Wahlen, Petaluma, Cal.; A. Albert, Lodi, Cal.

The California Jewelry Co., now in the rooms of the Morgan & Allen Co., in the Kamm Building, is making arrangements to obtain quarters in the Mutual Bank Building. Papers have not been finally signed to this effect, but there is little doubt that rooms in this building will be secured.

Selig Oppenheimer, a brother of J. T. Oppenheimer, a retail jeweler of Oakland, was badly burned last week in his father's store in that city. The store was also badly damaged at the same time. The trouble originated in an explosion either of gun powder or chemicals and resulted in a serious fire. Young Mr. Oppenheimer was immediately taken to a hospital, and is now believed to be out of danger.

Mr. Pennell, formerly with C. A. Leibrandt, Jr., Cameron, Mo., has resigned and formed a partnership with Harry Engel, Trenton, Mo.

Pacific Coast Notes.

F. B. King, Redlands, Cal., is having his store remodeled and improved.

B. Hosholt, Oakdale, Cal., has just returned from a buying trip to San Francisco.

Chas. W. Hayden, head watchmaker for Morton & Co., Oakland, Cal., has returned from an eastern trip.

Smith Bros., Visalia, Cal., have been given the contract to care for the timepieces of the Southern Pacific Railroad Co., in that locality.

A. S. Springborg, Redlands, Cal., is preparing to erect a handsome street clock in front of his store. Improvements are also being made in his store.

The American Amber Mica Co. has been incorporated at Los Angeles, Cal., with a capital stock of \$300,000, of which \$151,000 has been subscribed by C. D. York, H. L. Miller and T. M. Miller.

Rapid progress is reported in the construction of the jewelry factory of Powell, McKee & Co., Sacramento, Cal. The members of this firm were formerly in business in Kansas City, Mo.

S. Nordlinger & Son, Los Angeles, Cal., have incorporated their business with a capital stock of \$200,000. The incorporators were: Simon Nordlinger, L. S. Nordlinger and Melville Nordlinger.

Negotiations are being made between the New Pedrera Onyx Co., San Diego, Cal., and the Santa Fe Railroad Co., for a lease of Santa Fe ground for the erection of a factory building, to cost about \$25,000.

Brock & Feagans, Los Angeles, Cal., who recently leased the old Catalina Hotel building, at Los Angeles, are preparing to remodel and improve the entire building. The old front will be replaced with glazed terra cotta.

Wm. C. Guerth, Redlands, Cal., has received word from his old home in Baltimore, Md., that a building belonging to him in that city has been partially destroyed by fire. Mr. Guerth was burned out in the big Baltimore fire, a couple of years ago.

During the past few years, S. H. Bailey & Son, Santa Cruz, Cal., have been gradually turning their old wooden store into a handsome and enlarged brick building. This work has all been done without a removal or a cessation of business. New fixtures are being installed and a new workshop has been built in the rear of the store.

James & Leatart, manufacturing jewelers, Los Angeles, Cal., have just completed a large testimonial plaque, which has been presented by the employees of the Broadway Department Store, at Los Angeles, to Arthur Letts, proprietor of the store. The plaque is remarkable in that it is the most ambitious work of the sort that has yet been attempted in Los Angeles. It is of silver, 18 inches in diameter, and weighs over 10 pounds.

L. W. Keil, formerly engaged in the retail jewelry business at 7th St., Rockford, Ill., has been elected minority representative of the Colorado Legislature from the Pueblo district.

Watchmakers', Jewelers' and Engravers' Supplies.

Our new 432 double-size page catalogue containing 20,000 illustrations will be sent to you gratis (prepaid) on application.

FEATURES

"BLACK SHIELD" MAINSPRINGS are packed in the following manner:
 Each spring is wrapped separately in oiled paper, and placed in an individual envelope printed with the name and size of movement for which it is intended.
 Twelve envelopes, or one dozen mainsprings, are contained in a well-made strong box properly labeled.
 Useless handling of the springs is avoided, thereby preventing rust or mixing of stock.
 The name, "BLACK SHIELD" is scratched on every spring.

THE NEW MAINSPRING

"BLACK SHIELD"

MAIN-SPRINGS

FOR ALL AMERICAN WATCHES.

The Product of the Highest Attainment in Mainspring Making

TESTS

In selecting the "BLACK SHIELD" MAINSPRINGS, we were guided not alone by our own severe tests and judgment, but we distributed samples to dozens of expert watchmakers throughout the country.
 The opinion of all was that the "BLACK SHIELD" MAINSPRINGS are the finest ever introduced in this country. That they are even, properly tempered, carefully finished, correctly gaged, and tips and length positively accurate.
 They are of wine color, well polished, and will fit the respective movements without any fling or change whatsoever.

"Black Shield" Mainsprings are manufactured for us only by the oldest and most reputable maker in Switzerland
 Per Dozen, \$1.25 Per Gross, \$13.50

Fac-Simile of Box Containing One Dozen "Black Shield" Mainsprings

"Black Shield" Mainsprings are guaranteed in every respect. No better can be had at any price
 Per Gross, with 4-Drawer Cabinet (capacity, 48 dozen), \$15.00

CROWN HALL CLOCKS

Artistic designs, fine details, correct styles, attractive values, are some of the strong points of **Crown Hall Clocks**.

In the making of **Crown Hall Clock Cases**, the standard that we adhere to is the best that we can produce, and the best that we can make is the best that can be made. Our workmanship has stood the test.

Our famous **Crown Movements** are the **perfection** of quality, construction and finish. All our movements fitted with either fine gongs or tubular bells.

Our **Crown Symphony Tubes** (recently patented) are **superior** to any tubular bells on the market to-day in point of sweetness of tone and carrying power. Every set correctly tuned to concert pitch. New catalogue and price-list upon request.

Does the advantage of buying your Hall Clocks from manufacturers, who make them an **EXCLUSIVE SPECIALTY**—their only line—appeal to you?

If so, we can serve you best.

LEARN JEWELERS ENGRAVING

"The Engraving School that Graduates Experts."
A fascinating, high-salaried and easily learned trade, taught thoroughly and practically by correspondence. Your instructor is the foremost authority and master workman in the world. We will teach the beginner better engraving by correspondence than he can gain in years of rigid apprenticeship. We will improve the skill of any engraver one hundred per cent. and make him master of the trade. The demand for competent engravers far exceeds the supply.
Send for handsome, illustrated prospectus.

LAPIDARIES. PRECIOUS STONES
GEMS in Unique Cuttings

If You Know the Marks

you are not confined to the limitations of your stock, but will be able to supply any goods desired. Frequently a resident of a town or city will return from a visit to a larger city, bringing back an attractive novelty or piece of jewelry that greatly admired by her friends, who will probably want to obtain others like it. They will first call on a local jeweler and if he is not an up-to-date jeweler he will turn them away disappointed because he has not the articles in stock. If, however, he is a progressive dealer, he will examine the trade-mark on the article, identify the maker and send for a line on memorandum. He will tell his prospective customers that he has not the goods in stock just at present, but will have them in a few days. He will make a sale, and even sale counts. But more than this, he will agreeably surprise and please his patrons and will convince them that it is not necessary to go out-of-town to obtain the latest and best productions of the jeweler and silversmith.

"TRADE-MARKS OF THE JEWELRY AND KINDRED TRADES"

(Second Edition)

will enable the jeweler to identify the maker of any article embraced in the jewelry and kindred trades. It illustrates 4,000 marks and covers every branch of the trade. It also contains much interesting and valuable reading matter on the subject of trade-marks in general.

One jeweler, after having the book for a while wrote: "This book has been invaluable to me upon many occasions. Like the cowboy's pistol it is not required every day, but when needed it is wanted quite bad."

PRICE \$3.00,

UNITED STATES PATENTS.

ISSUE OF NOV. 27, 1906.

6,693. POCKETBOOK PROTECTOR. CECIL T. MARSHALL, Wetaskiwin, North-West Territories, Canada. Filed Aug. 18, 1904. Serial No. 221,233.
In a safety attachment for pocketbooks, a pair of plates provided with intumed edges at one end and hinged sections at the opposite end, a flat

being disposed between the plates and adapted to connect the same and serve as a hinge, and a member connected with the hinged sections of the plates and adapted to secure the device to the binding of the wearer.

4,699. COFFEE-POT, WILLIAM H. McLAREN, Hamilton, Ont., Can. Filed Feb. 5, 1906. Serial No. 299,423.

In a coffee-pot, a cylinder with open ends, one said ends extending into the pot and the opposite end extending above the pot, an annular bead on the cylinder, an interior bead on the inner edge of the cylinder, a strainer around the

annular bead and extending around the lower part of the cylinder a split ring secured in the strainer above the annular bead, and together with the strainer resting on said bead, and the bead, together with the strainer resting on the coffee-pot.

8,748. SALT-SHAKER, JULIA M. GALLISATH, Pittsburg, Pa. Filed March 13, 1906. Serial No. 305,810.

In a new article of manufacture the herein-described improved salt-shaker, embodying a reservoir, a cap two arranged for detachable connection with the reservoir and provided with flanges seven and eight on its interior side portions spaced from each other and with apertures in the top thereof for the egress of salt, and a rim four provided with a series of cross-bars and pins projecting therefrom and through the apertures in the top, said pins being provided with heads designed to fit over the apertures to close

the same, and the ring having a limited vertical play between the two annular flanges whereby in

the operation of shaking salt the pins will work through the apertures in the top and keep them cleared.

836,796. EYEGLASS-RETAINER, WALTER S. ANDERSON, U. S. Navy. Filed June 26, 1906. Serial No. 323,421.

The combination with a pair of eyeglasses, of a retainer associated therewith, comprising a flexible strand doubled to form a loop, said loop having one end secured to one edge of one of the lenses of the eyeglasses and being of a length approxi-

mately equal to the distance between said lens and the adjacent ear of the wearer of the eyeglasses.

836,837. NECKTIE-FASTENER, THEODOR SEILER, Geldern, Germany. Filed July 3, 1905. Serial No. 268,210.

In a device of the character described, the combination of a base-plate, a spring-catch directly secured to the said base-plate and consisting of a

pair of bent arms spaced apart to form a slot at their lower ends for the introduction of the collar-stud of the wearer, and an oval ring integral with said base-plate and projecting at a right angle therefrom to receive the strip of material.

836,861. JEWELER'S PLIERS, ELZIE C. CHAMBERLIN, Denison, Ia. Filed July 23, 1906. Serial No. 327,383.

A pair of jewelers' pliers comprising a pair of jaws, and a rotary adjustable setting-tool extending

through one of said jaws and having a pointed inner end and a flat inclined face disposed at an angle to the axis of the tool and approximately at right angles to the adjacent jaw.

836,900. CUFF-BUTTON, EZRA E. STANINGER, Chicago. Filed Nov. 6, 1905. Serial No. 286,106.

The herein-described cuff button or holder comprising the V-shaped body having the arms to lie on the outer side of the meeting edges of the cuff and provided on their inner sides with the in-

wardly extending triangular projections four, six, arranged reversely, with the outer angle of the

projection four opposite the intermediate portion of the opposing side of the projection six.

836,905. FOUNTAIN-PEN CAP AND BARREL, JOHN N. WHITEHOUSE, New York, assignor to the Le-White Mfg. Co., New York. Filed Jan. 16, 1906. Serial No. 296,270.

An improved fountain-pen cap or barrel composed of a plurality of layers or rolls of celluloid

forming a tube, one end of the tube being sealed, to form a head, whereby the tube is adapted for containing liquid.

836,906. SELF-FILLING FOUNTAIN-PEN, JOHN N. WHITEHOUSE, New York, assignor to the Le-White Mfg. Co., New York. Filed March 30, 1906. Serial No. 308,873.

A fountain-pen, comprising a barrel, a nozzle carried thereby, a collapsible sac or reservoir at-

tached to the nozzle, and means carried by said nozzle adapted to collapse the sac throughout the length thereof.

836,937. HAIR-PIN, CHARLES T. MINDER, Rock Falls, Ill. Filed Sept. 20, 1906. Serial No. 336,215.

In a hair-pin, the combination with the prongs one of the pin, and bar two connecting the same, of the jaw three, fixed to such bar, and provided

with the plate five; the jaw seven, pivoted on the bar two, and having the plate nine, integral therewith; the head six, fixed to the outer end of the plate five; and means for holding the jaws three and seven normally in contact with one another.

836,969. SAFETY JEWELRY-CATCH, JULIUS W. HANSEN, Princeton, Ind. Filed Feb. 19, 1906. Serial No. 301,970.

A keeper formed of a single blank, said blank having one end slotted to form sections, one of

said sections being curved, the opposite end portion of the blank being curved upon itself and terminating above the curved section of the blank.

837,004. AUTOMATICALLY-ADJUSTABLE BRACELET, BELT, ETC. JOHN J. SOMMER, North Attleboro, Mass. Filed July 30, 1906. Serial No. 328,428.

In a device of the character designated, the combination of a front lever formed with a central annular cup, a hollow fulcrum-eyellet fitting in and secured to said cup, a rear lever formed with a

central annular flange fitting into said hollow cup on the front lever and secured thereto by the turned edge of the hollow fulcrum-eyellet, and a coiled spring in said hollow fulcrum-eyellet, one end of said spring engaging with the fulcrum-eyellet and the other with the rear lever.

837,018. CIGAR-TIP CUTTER, JERE L. WENTZ, Bath, Pa. Filed Feb. 20, 1906. Serial No. 302,089.

A cigar-tip cutter having a casing in which is

formed an aperture to receive a cigar-tip and an aperture surrounded by the casing for receiving the finger of the user, and a sliding cutter mounted in a chamber within the casing having a cutting edge arranged to be moved across the aperture

for the cigar-tip, and having also a finger-aperture registering with the finger-aperture in the casing. whereby the finger of the user can move the cutter reciprocally in both directions, the cutter being entirely inclosed within the casing.

17,051. TIME-OPERATED KEY-HOLE GUARD. RIBOURNE W. GATEWOOD, Norfolk, Va. Filed May 22, 1906. Serial No. 318,147. An apparatus of the class described and in combination with a lock and its keyhole, a circular

plate, a plate-annulus mounted on the edge of said dial-plate, a keyhole in the annulus adapted to be placed in alignment with said keyhole in the dial-plate, and means for rotating said plate-annulus by said dial-plate.

17,064. SALT AND PEPPER SHAKER. GEORGE H. HODGSON, Pittsburg, Pa. Filed March 28, 1906. Serial No. 308,478.

A condiment-holder consisting of a body portion having two compartments formed therein, the top of said holder having contracted neck portions forming exits for said compartments, perforated as carried by said neck portions, a plate carried at the top of said holder and having upwardly extending arms, a slotted hood supported by said arms, a shaft journaled in said arms and bent intermediate to its ends to form a crank contained within said hood, a stem extending from said crank out through the slot in said hood, a lid or closure-disk carried by said stem and normally engaging one of said caps, and a spring connected at one end to said crank and at the other end to said plate for holding said cap in normal position.

17,081. EYEGLASSES. GEORGE A. LAYTON, London, England. Filed Oct. 10, 1904. Serial No. 227,851.

The combination, with an eyeglass-frame, of a guide-bar secured thereto, a nose-piece mounted on

the inner surface of said guide-bar and having a sliding connection with said guide-bar and means which prevent said nose-piece from turning.

337,206. SAFETY DEVICE FOR WATCHES. FRANK D. ELY, Salt Lake City, Utah. Filed Nov. 2, 1905. Serial No. 285,549.

A device of the character specified, comprising duplicate continuous tubular elastic rings, integrally joined together side by side, and adapted

to be mounted upon the rim of a watchcase, the said rings when in position extending beyond the sides of the periphery of the watchcase forming continuous pneumatic cushions.

337,219. SILVERSMITH'S STOCK. MARCUS T. GOLDSMITH, New York. Filed Jan. 6, 1906. Serial No. 294,915.

A silversmith's stock comprising interlocking members, each formed of a ring bent upon itself

into half-ring shape, with its ends or bent portions formed into loops.

DESIGNS.

38,320. LOCKET OR CHARM. ALMA C. FIELD, Providence, R. I., assignor to the T. E. Bennett Co., Providence, R. I. Filed Oct. 12, 1906. Serial No. 338,661. Term of patent 3 1/2 years.

38,321. WATCH-FOB. PATRICK FLAHERTY, Jerome, Ariz. Filed Sept. 25, 1906. Serial

No. 336,209. Term of patent 3 1/2 years.

38,322. WATCH-FOB. GEORGE W. PARSONS, Richmond, Va. Filed Oct. 6, 1906. Serial

No. 337,814. Term of patent 7 years.

38,323. HANDLE FOR SPOONS, FORKS, OR

SIMILAR ARTICLES. GUSTAVE F. KOLB,

Mount Vernon, N. Y., assignor to the Maurer Mfg. Co., New York. Filed Oct. 12, 1906.

Serial No. 338,662. Term of patent 7 years.

UNITED STATES TRADE-MARKS.

[The following trade-marks have been adjudged entitled to registration under the Act of Feb. 20, 1905, and are published in compliance with Section 6 of said act. Said section provides:

"Any person who believes he would be damaged by the registration of a mark may oppose the same by filing notice of opposition, stating the grounds therefor, in the Patent Office, within 30 days after the publication of the mark sought to be registered, which said notice of opposition shall be verified by the person filing the same before one of the officers mentioned in Section 2 of this act. If no notice of opposition is filed within said time the commissioner shall issue a certificate of registration therefore, as hereinafter provided for."

Marks which are stated to have been "Used 10 years" are registrable under the last proviso of Section 5 of said act, which is as follows:

"And provided further, that nothing herein shall prevent the registration of any mark used by the applicant or his predecessor, or by those from whom title to the mark is derived, in commerce with foreign nations or among the several States, or with Indian tribes, which was in actual and exclusive use as a trade-mark of the applicant or his predecessors from whom he derived title for 10 years next preceding the passage of this act."]

PUBLISHED NOV. 27, 1906.

57,747. TABLE AND POCKET KNIVES,

A SOUND ARGUMENT

THE only means a manufacturer can adopt to create a **continued** demand for his product is to produce the highest quality from the best material and workmanship. The price is a second consideration. This is the **U. S. Robert** method.

The demand for his make of mainsprings is continued, and increasing steadily. The O.K. stamp of the trade's approval cannot be put on an article by the mere say-so of the manufacturer. The U. S. Robert springs were put on the market in 1885 and from the first the policy of manufacture has been to adhere to a high ideal, to insist on a uniformity of material and workmanship in order to maintain the highest standard of perfection. This is done by U. S. Robert, whose ability is widely recognized and respected by the scientific and best-known makers of mainsprings. Such being the case, the price-lowering methods of competition cannot apply here. Made in 142 different sizes for all sizes and grades of American watches.

Price \$1.25 per doz. or \$13.50 per gross, less 6% for cash.

BRITISH PATENTS

ABSTRACTS OF SPECIFICATIONS, 1905, FROM *The Illustrated Official Journal.*

ISSUE OF NOV. 14, 1906

15,995. CUFF SUSPENDERS. **R. SCHULZER** Wandsbek, and **J. GRAFEL,** Hamburg, Germany. Filed July 21.

A cuff suspender, formed of a clip consisting of two plates *a, b*, preferably connected by a

clip all in one piece, and of two spring arms preferably of wire, the arms are bent at *m, n*, and are attached by ears *f, h* to the plate *b*. These arms enter a button-hole in the shirt sleeve or suitably engage loops *r, k* on a strip *o* sewn to sleeve.

15,999. SOVEREIGN PURSES. **J. YARDLEY,** Birmingham. July 21.

A round, square, or other shaped sovereign purse or like has a slot cut in its side through which coins may be withdrawn singly by means of a

tray *a* pivoted at *b2*. The tray is provided with small thumb-piece or catch *b3*, and has a projection *b4* on its inner edge which presses the coin upwards as the tray is turned. The coins are pressed against the tray by the spring *P* mounted on the cover *a2* which is opened to insert the coins. The tray may be pressed upon by a spring which forces the tray outwards immediately the retaining watch is released.

15,042. WATCHES. **F. FALLER,** Baden. July 21. Right to patent relinquished.

Keyless Mechanism, Hands, Setting by Keyless Mechanism Framework.—The construction of watches is simplified by making the case in two parts and winding up the watch by turning the cover *b*. This cover is fastened to lugs *e* on aatchet-wheel *d*, which is mounted on the frame *c* in the minute-wheel arbor *h*, the mainspring, wound by the hub *f*, being attached to one of the

lugs *e*. The frame *c* is inserted in the case *a* and fastened by the knob *p*. The hands are set by the rotation of a grooved plate *m*, which is fixed

on the rear end of the minute hand arbor *g*, and fits tightly in an opening in the case.

15,129. BRACELETS, ETC. **A. HERTINGHOFFER,** Esslingen, Germany. July 22.

Bracelets and the like are built up of hollow links, Figs. 1 and 6, connected together by pivots. Fig. 1 shows a link *a* provided at one end with a projection *f* recessed at *b* for the reception of a pin *e*, and at the other end with two fork-like projections *c* recessed in the same manner. The links are completed by a series of flat covers *d*, Fig. 2, which are attached by means of solder,

The soldering operation is effected by the aid of a device which consists of a strip of resilient material provided at one end with a hook which engages with holes in the opposite end. The links shown in Fig. 1 are curved slightly on the underside and lie tangentially on the strip so that no two links become attached together during the operation of soldering. A modified form of link is shown in Fig. 6, which consists of a series of hollow members *a* provided with cross-bars and pins *e* and united by intermediate links *k* shown also in side elevation. Flat cover plates are provided as before, and as these links are flat on the underside they may be soldered on a flat surface, without the aid of the device described above.

15,249. WATCHES. **A. P. JONES,** London. (Wachter Mfg. Co., Hartford, Conn.) July 25.

Bow; Pendants.—In watches, and more par-

ticularly in those with elongated or antique pendant heads, the partly or entirely spherical enlargements *f* of the bow *c* are inserted in sockets *d* of cup-shaped metal pieces, which are then turned, swaged, spun, etc., over the ends of the bow, to prevent their withdrawal. The narrow

necks *g* permit a swivelling movement of the bow. The tangs *e* are then screwed into apertures in the ends of the pendant *a*. In an alternative form, the sockets *d* are formed in the pendant head itself.

15,318. TELESCOPES, ETC. **C. HENSOLDT,** Wetzlar, Germany. July 25.

The usual erecting system, shown by Fig. 1, is modified, with the object of increasing its angular aperture and thus allowing of the use of a larger object-glass, by using a larger prism *I* and displacing it along the face *e* into the position shown

by Fig. 3. The inoperative quoin may be cut off. The prisms are enclosed in a mount *g*, which may be either pivoted to an extension *h* of the objective tube *i*, as shown in the right-hand portion of Fig. 4, or mounted so that the optical axis of the system can be moved parallel to itself, as shown in the left-hand portion of the figure. The prism system can also be rotated round the optical axis.

15,329. TIME-REGISTERS. **F. A. LANGEN,** Cöln-Riehl, Germany. July 26. (Date applied for under Patents Act, 1901, July 26, 1904.)

In a time-register having electrically actuated type wheels with types movable at right angles to the plane of the wheel, the type wheels *a, b* are arranged side by side so that the adjacent types can be struck by one hammer *i*, and electric means is provided for preventing simultaneous actuation of the typewheels and the hammer. The minute printing wheel *a* is set at five-minute intervals by means of a clock controlled electro-magnet *e*, and sets the hour-printing wheel *b* by means of a tooth *g*. The hammer *i* is actuated by means of an electro-magnet *k* energized by depressing a handle *m*, which, through a sliding strut *n*, depresses a pusher *l* carrying a bridge *p* for contacts *p1, p2* and *o1, o2*, the former in the circuit of the electro-magnet *e*, and the latter in the circuit of the electro-magnet *k*; the two circuits cannot therefore be closed simultaneously. The strut *n* slides off the pusher *l* as soon as the contacts *o1, o2* are closed. The hammer may be actuated by a mechanical connection with the lever *m*.

15,430. STYLOGRAPHIC PENS. **E. W. WARREN,** Sheffield. July 27.

Relates to stylographic fountain pens. Between the nozzle *a*, fitted to the barrel of the pen, and a conduit *b*, secured inside the nozzle, is formed an air chamber *b1*. Screw threads *b2* formed either on the conduit, as shown, or on the nozzle interior, provide an air communication between the space *b1* and the barrel. Through the writing-style *d*, fitted to the nozzle, works a needle *c*. The

latter is secured to a feed-rod *c1*, which itself is attached to a spring *c2* fixed to the upper end of the conduit or nozzle. A modification is described in which the lower end of the conduit wedges into

COMBINATION Self-Striking and Regular One Minute Gold Repeating Watch. It is the usual minute repeater, striking the minutes when slide is pushed, but has a further attachment, which, when set, rings the ¼, ½, ¾ and hour regularly every 24 hours until reversed.

to tapered portion of the nozzle, the latter in this case being perforated to provide an outlet to the amber *b*, while the style is fitted to the nozzle. Various methods of constructing the air passage between the barrel and the chamber *b* are described. This chamber serves as a container for carbon ink when the pen is first used, but, during continued writing, the ink passes back into the barrel.

5,440. POTTERY. A. G. H. JONES, Samian Pottery, Fenton, Stoke-on-Trent. July 27. Vases, flower-pots, pedestals, umbrella stands, ink cases, toilet ware, trinket sets, etc., are ornamented by forming upon them a pattern or order of Greek, Roman or Egyptian art by means of a die or engraved moulds, the ware being then fired, glossed and enameled and a lithograph lithograph applied on portions of the ware, after which the latter is fired. The pattern or border is colored either by penciling or aerographing in clay or biscuit state, or by penciling, grounding or aerographing in the glossed state. An alternate method of applying the patterns or orders consists in printing, tracing or penciling them in the underglaze, glossed, biscuit or enamel state.

Reference has been directed under Patent Act, 1902, to Specifications Nos. 15,878 and 22,983, A. 1903.)

452. ORNAMENTING. F. W. BUNDEY, London July 27.

Ornamenting Metal, Glass and Pottery Surfaces. Marbled effects are produced on glass, porcelain, etc., enameled iron and like surfaces by coloring with a powdered vitrifiable coloring substance, applying a flexible waterproof surface previously splashed with a solution of gummy substances in water, spirit, naphtha or other volatile liquid, removing the waterproof covering and allowing the irregularly wetted surface to dry. The face is then dusted with a fine camel-hair brush and the process repeated with other coloring substances. The article treated is then fired to vitrify colors. The firing may be dispensed with by employing plain glass and applying non-vitrifiable colors to the back by the process described and in protecting this back surface by varnish, paint or the like.

Complete specifications accepted Nov. 7, 1906. 1905.

Pittsburg.

TRADE CONDITIONS.

Business is so good in Pittsburg that certain wholesale houses have found it necessary to make appointments for clerks to sell goods to customers. The demand for all kinds of goods, especially watches, bracelets, purses and diamonds could hardly be better. One wholesaler said last week that he had been informed by a factory that no more orders could be taken for gold purses in time for delivery for the holiday trade. There has also been a very good demand for emblems, and a number of handsome ones, especially Elk charms, have been sold during the last few weeks. Retail business is splendid. Some of the stores will keep open Saturday nights until after the holiday season. The outlook is excellent for a big holiday rush. The United States Steel Corporation has served notice that it will advance wages, and 63,000 in the Pittsburg district alone will share in this prosperity.

Sam F. Sipe, last week, mailed to his customers a fine art calendar.

J. H. Wattles, of W. W. Wattles & Sons, spent last week at Sagerstown, resting before the holiday rush.

S. F. Roberts, of E. P. Roberts & Sons Co., spent most of last week in New York buying goods for the new store.

It was announced in Pittsburg, last week, that the stock of Davis Bros., Gallion, O., will be sold at public auction, Dec. 7.

The Bloomfield Board of Trade has nominated Frank T. Porter for president; J. Z. Yoest, secretary, and Henry E. Juergens, treasurer. The election will be held Jan. 8, 1907.

Vincent Washington was arrested, last week, while trying to pawn a watch, and the police are holding him, pending an investigation. The pawn shops of the city are being closely watched on account of a \$5,000 diamond robbery in this city, last week, and the reported \$50,000 jewelry robbery in Philadelphia. Descriptions of the stolen jewelry appeared in the local newspapers.

Henry A. Barrett, of the George B. Barrett Co., who has been seriously ill for almost a year, returned to Pittsburg last Friday from Atlantic City and Philadelphia, where he had been undergoing treatment, and his condition is said to be somewhat improved. He is not strong enough, however, to return to work, and it is thought that he will not be able to do so for some time.

Among the out-of-town buyers visiting

Pittsburg, last week, were the following: F. H. Hayes, Washington; J. E. Whitten, Mingo Junction; J. Frank Murphy, Dawson; S. S. Snyder, Dayton; F. H. Buxton, Grandville; Frank Murdock, Ligonier; H. S. Elliott, East Brady, and R. A. Noble and wife, Wellsville. Mr. and Mrs. E. H. Kennerdell, Tarentum, spent Thanksgiving with friends in this city.

Henry Sutmeyer Heineman, a son of Otto E. Heineman, Allegheny, Pa., died Thursday morning at 3 o'clock at the home of his parents, Rodgers Ave., Bellevue, aged 28 years. The young man had been in poor health ever since he was a child four or five years old, being afflicted with spinal trouble. He was the only son and his loss is keenly felt. The young man assisted his father in the store, when his health would permit it. The funeral services were held Saturday afternoon at the family residence.

Charles Foster Zugschwert, a son of John F. Zugschwert, died at the home of his parents in Carnegie, Nov. 27, aged 22 years. The son, as well as the father, was in the jewelry business at Carnegie, Pa., having just recently opened a store there. A few weeks ago he was stricken with typhoid fever, from which he did not recover. He was an exceedingly bright young man and popular with the people and the business men of his home city. The funeral services were held Wednesday evening in the First Methodist Episcopal Church at Carnegie, of which the young man was a member. The interment took place the following day at Coshocton, O.

Captain of Detectives James W. Eagan, of this city, has received several letters from New York jewelers, inquiring about Fred Hayes, the jewelry thief who sawed his way out of the Haysborough jail several weeks ago, as told in THE CIRCULAR-WEEKLY last week. The jewelers writing to Captain Eagan said that they had read the account of the escape and wanted a description of the man, which has been furnished. Captain Eagan says that his department has received a large number of communications recently from jewelers all over the country, as a result of the arrest of jewelry thieves and swindlers in this city. The local department is anxious to get information and to give it, and Captain Eagan is pleased that jewelers take interest enough in these matters to make inquiries, as this not only aids the merchant in giving him protection, but is also of service to the local police department.

A Remarkable Charity.

THE famous Bowery Mission Bread Line, now in its fourth year, at which every morning at one o'clock, during the Winter months, 1,000 homeless and destitute men and boys are provided with a breakfast of hot coffee and rolls, will resume operations at New York, Thanksgiving, midnight, and continue to Easter morning, 1907. Last year 144,000 were thus assisted, and altogether over half a million have had a weary night's tramp agreeably interrupted by this inexpensive, yet very welcome refreshment.

The directors of the Bowery Mission have appointed John C. Earl, 222 Bible House, New York, financial secretary, succeeding Dr. Simon Trenwith, lately deceased.

*The Great Driving Wheel of a
LOCOMOTIVE* traveling a mile a minute,
makes 403,361 revolutions in twenty-four hours:

*The Tiny Balance Wheel of a
WALTHAM WATCH* makes 432,000
vibrations in the same time:

to fully meet the most exacting requirements.

The Balance of Business

Indispensable to modern life, the Elgin Watch is ever in increasing demand—and the balance of business goes to the store that carries a full stock of Elgin Watches.

See Jobbers' list for prices or write the Company.

Every dealer is invited to send for the Elgin Art Booklet, "Timemakers and Timekeepers," illustrating the history and development of the watch.

ELGIN NATIONAL WATCH COMPANY

Factories, Elgin, Illinois, U. S. A.
General Offices, 131 Wabash Ave., Chicago.

New York Office, 11 John Street.
San Francisco Office, 704 Market St.

erval comprised between two consecutive pins corresponds, with reference to the angular course of the pin I, with the height of one degree of the hour snail.

During all the time that the push-piece is lowered the action of the regulating fly, of the striking part is suspended.

When the push-piece is left to itself, the pieces resume their initial position under the action of the springs, which bring them back instantly, and the train becomes free.

The mechanism described above is arranged for obtaining the repetition of the hours and quarters. But the striking part acts only by making use of the push-piece.

To obtain at a given moment the repetition of the striking, pressure is therefore applied to the push-piece. This impedes the fly and liberates the pin-wheel and the toothed sector.

When the push-piece is left to itself, the wheel turns in the direction of the arrow, the hour-pins actuate the pin-wheel, and a blow is struck, on the passage of each of them, on the hour-gong. The sector, impelled by the pinion, returns to its point of departure, energizing its spring.

15 minutes have not yet passed after the hour indicated by the hands, the striking passes after the last stroke, because the beak K of the large lever slides during all the time over a part of the snail of the quarters, which holds the figure D so near to the pin-wheel that the tooth 0 is arrested on the passage before the pins a and c have passed, one over the pin H, and the other over the pin Q.

When the first quarter has passed and the half-hour has not arrived the beak K passes over a projection of the quarter snail, which removes the finger further from the wheel, and if in the course of this period pressure is applied to the push-piece, the effects are reproduced, but the tooth 0 passes beyond the finger and the pins a and b actuate one after the other in the lever of their hammer.

Tooth 1 then stops against the finger; therefore, a double blow is struck.

After the half-hour, and up to 45 minutes, the manipulation of the push-piece would cause two double strokes, under the action of the pins a, d and b, e, cause the finger D, further removed than previously, would allow tooth 1 to pass and would stop tooth 2 at the proper time.

The case would be the same for the striking of the three-quarters, which would give three double strokes and cause an encounter of tooth 3 with the finger D, which a new displacement has removed still further.

If it is desired to make of this traveling clock a full striking clock, it would be sufficient to produce automatically for the hours and the quarters the pressing-in of the push-piece by a suitable mechanism.

It will be seen from what precedes that there have not been too pronounced in speaking of the simplicity of the Baveux clock.

It may be added that all the functions being accomplished by means of a single pin, cleaning and repairs are less complicated.

It will be seen from what precedes that there have not been too pronounced in speaking of the simplicity of the Baveux clock.

It may be added that all the functions being accomplished by means of a single pin, cleaning and repairs are less complicated.

W. F. Kirkpatrick, of W. F. Kirkpatrick & Co., St. Joseph, Mo., designed the gold medal which was presented to Arthur W. Taylor, the band master, by St. Joseph acquaintances, recently.

The Chatelain Escapement.

ALBANY, N. Y. Nov. 28, 1906.

Editor THE JEWELERS' CIRCULAR-WEEKLY:

Will you kindly give us some information regarding the Chatelain escapement. We have heard it mentioned in the course of a horological discussion, and would like to know something of its functions.

J. D. & Co.

ANSWER:—This escapement, which was described some time ago in the *Deutsche Uhrmacher Zeitung*, is of the Robin class. Fig. 1 is a copy as originally drawn about

FIG. 1.

50 years ago by E. F. Chatelain, who was master of the escapement class at the Geneva Horological School at the time. It resembles the lever escapement in some ways, but the fork operates only an action of disengagement. The essential function, the impulse, is given directly by the wheel, as in the chronometer escapement.

The mechanism is composed of a wheel, R, having pointed teeth; of a piece, A, of lever form, with locking pallets, a, a'; of a fork, F, furnished with a finger-piece; of a roller, P, carrying an impulse plane, I; a vertical disengaging pin, C, and, finally, a roller, p, guarding against overbanking.

The escapement is at the dead point. If the wheel is supposed to revolve in the direction of the arrow, the tooth r will enter into contact with the impulse plane, I, and the fork will be moved in the same direction by the unlocking pin, C. At the same time the tooth, r', will advance until it rests

on the locking face a', which will have penetrated into the wheel, in consequence of the movement of the lever by the fork. The wheel will thus remain locked during the supplementary arc of the balance, and on the return the pin, C, actuating the fork in the opposite direction, the pallet, a', will unlock the tooth of the wheel, and the pallet a', will, in its turn, come to receive the tooth, r', which will have passed over a very small arc.

There is, therefore, in this escapement only one impulse for every two vibrations, as in the chronometer and the duplex escapements, which allows the distribution by twos in a division of the seconds, with 240 vibrations to the minute.

Fig. 2 illustrates a movement by Kuko-witz, of Brussels, and shows the form of the escapement-wheel, which is similar to that of the timepieces, called Chinese watches, made by Bovet, of Fleurier, but its action is quite different. It is a part of a detached escapement, a modification of

FIG. 2.

that described above, and of the original of this class, invented by Robin in the 18th century, and similar in principle to the first detached escapement of Pierre Leroy. The hand in this modification makes each second four leaps, of which three small and one large are produced by three successive disengagements and by the impulse.

Weary Watches.

"I SUPPOSE," said the watchmaker, "you do not know that watches, like human beings, sometimes don't 'go' for the very good reason that they are tired."

"Sometimes a watch is brought to me which is all right. Nothing about it is out of order, and it is fairly clean. When it becomes sulky and refuses to go except by fits and starts the best thing to do is to lay it aside and give it a rest. The mechanism in a 'tired' watch seems to be in perfect condition, but it won't work. The fact is that long and faithful service has thrown it slightly out of adjustment in perhaps 10 different places. Scraping and cleaning and readjusting a fine watch is the worst thing that could be done to it. A month's rest will, instead, cause the works slowly to readjust themselves, and at the end of that time, after careful oiling, the watch will go as cheerfully as ever."—*Washington Star*.

Betsy Ross Ladies' Watches

embody a rare amount of quality when you consider their selling price. With a 7 jewel pendant set nickel movement in a **Jas. Boss** 20 year hunting or open face case, they offer to the retailer the best proposition in O-size watches.

Their time-keeping values have been proven, and no ladies' watch is their equal for the price.

We have an interesting folder on Betsy Ross Watches for the consumer, and telling how and where Betsy Ross made the first U. S. flag. Your name on a quantity for the asking. Write us and send business card.

A Simple Star-Wheel Wrench.

BOSTON, Mass., Nov. 28, 1906

Editor THE JEWELERS' CIRCULAR-WEEKLY:

The removal of the star-wheel in Waltham patent regulators is, to many watch-makers, a matter of real difficulty, as attested by deep scratches, etc., frequently seen in the star-wheel recess.

We are referring to the type of regulator to which the star-wheel is attached to the balance cock by a screw and spring washer underneath the cock, the end of the screw projecting above the star-wheel and having serrations to engage the internal serrations in the arc slot of the regulator.

Although these regulators have been in use for years, curiously enough no tool has been provided for the removal and replace-

FIG. 1.

ment of the star-wheels. The writer early devised the simple wrench described hereafter, and can say it does the work satisfactorily.

In Fig. 1, a is a stick of boxwood, about 1 cm. square, and of any convenient length, say 10 cm.; d is a hole, large and deep enough to freely admit the serrated end of the star-wheel screw; b, c are brass pins projecting about equal to the depth of the star-wheel recess in a balance cock. The

FIG. 2.

distance from the hole d to the nearest end of stick a should be less than the distance between the serrated screw and the dome of the balance cock.

TO REMOVE A STAR-WHEEL.

Place the balance cock with the regulator removed, bottom side up, upon the stick a, with the dome projecting over the end and the end of serrated screw projecting into the hole d. Now, if we turn the screw the star-wheel teeth immediately engage the pins b, c, its motion is arrested, and the screw is easily removed without injury to any of the parts.

TO REPLACE THE WHEEL.

Lay it upon the wrench as shown in Fig. 1, place the cock over it in the same position as to remove the wheel, apply the ring washer, and the screw may be inserted and turned home with absolute comfort and security. The center distance of the pins should be: 18 size 5.8 mm., diameter of pins .9 mm.; 16 size 4.6 mm., diameter of pins .8 mm.; 12 and 6 size 3.3 mm., diameter of pins .7 mm.; 0 size 2.8 mm., diameter of pins .6 mm.

A pair of pins may be fitted to all four holes of the boxwood stick, thus combining the four sizes in one tool. If desired, the pins in the three smaller sizes may be made

all the same diameter, and the sides slightly flattened after being driven into the wood, as may be necessary to admit the star-wheels and to clear the walls of recess in balance cock. F. R. C.

Result of Competative Trial in Paris of Torpedo Boat Watches.

John Burns, director in the Buffalo Cut Glass Co., Batavia, N. Y.; died recently at the home of his parents in Honesdale, Pa., aged 34 years. Death was caused by Bright's disease. The deceased was one of the founders of the cut glass company, and went to Batavia with the concern in June, 1905. He is survived by his parents and several brothers and sisters.

A quarter of a century sale was recently held by M. E. Nabstedt & Sons Co., Davenport, Ia., the occasion being the celebration of the 25th anniversary of the concern's business career in Davenport. The business was begun by M. E. Nabstedt, who subsequently admitted as partners into the business J. Fred and Jacob M. Nabstedt, his sons. The firm was incorporated in 1903, when it assumed its present name.

Horological Notes.

AMONG the modern features noticed at the new Knickerbocker Hotel, New York is a perfected electric clock system which has been installed in the building. Downstairs in the engine room stands a large clock of the old grandfather shape, and to it all the other clocks throughout the building are attached by electric wires. This master clock works and regulates the others so that exact uniformity of time is the result. The chef in the kitchen knows

that his clock is the same to the minute as that in the dining room. The dilatory servant will not be able to plead a slow clock as a reason for his tardiness. The system, too, does away with all the old-time trouble caused by clocks getting out of order or forgotten to be wound. The smaller clocks run on without any necessity for supervision or regulating, and they are guaranteed always to give the correct time. The large or master clock has an automatic winding attachment, so that it also requires no looking after. The pendulum is of Paris invar steel which is not affected by change of temperature, and has been found to give better results than the quicksilver form. One of the chief features of the new system is the abolition of batteries and contact points which have hitherto been causes of trouble and expense in electric clock installations. Instead of these the dynamo principle is now applied, which, it is claimed, gives a stronger current and is more reliable. The system has also been installed in the new Belmont, St. Regis and other prominent hotels in New York and elsewhere.

According to an eminent authority at Washington the earliest timepiece of which a record is preserved is the water clock of Hwang-ti, a Chinese living three centuries before Christ.

“And It’s a New England”

A CHRISTMAS watch must give delight, but genuine satisfaction follows upon finding that it will give real service during the years to come—upon finding that “It’s a *New England*”—an accurate time keeper built to give the highest degree of watch-satisfaction—and guaranteed to do it.

This Christmas you, too, have the opportunity to give genuine delight by accepting from us a Christmas guide to worthy presents—the new New England Blue Book of Watches for Ladies or Red Book of Watches for Men. The coupon below, if filled out today, will bring you free the book you want; will give you hundreds of graceful designs and styles to choose from—each a little gem of artistic beauty combining the maximum of service.

No. 1363
363

THE SCOUT—Nickel Silver

The Scout nickel silver is made with two grades of movements, Nos. 363 and 369 being fitted with our regular Series G movement, 14 size, bridge construction, plain balance, gilded plates and two jewels. The movement has been thoroughly tested as a timekeeper. Nos. 363 and 369 have no extra finish.

Nos. 1363 and 1369 are fitted with the Improved Scout movement. In addition to the finer movement, Nos. 1363 and 1369 are finished with gold filled crown, gold hands and gold mat. This makes a most effective and stylish watch.

THE PADISHAH

Nickel Silver
Snap Case

No. 10

THE PADISHAH

Is Our Low
Priced Watch

Carefully and elegantly finished, it is absolutely guaranteed in every respect. The Padishah should in no way be confused with the cheap "clock" watches so prevalent on the market. It is a watch in every detail.

It is fitted with our regular Series I movement, 18 size, full gilded plates, plain balance and two jewels. The Padishah, if given ordinary care, will last a lifetime.

Ample Provision for Watch Demands

IT SOMETIMES HAPPENS that the extra pressure of Holiday demands overtaxes the facilities of supply, causing confusion and delay in the filling of orders. This is all the more annoying when the orders are marked "Rush," and there is a time limit on the availability of the object for the consumer's purpose. If it comes too late he does not want it.

It is important that the Trade should realize that these Offices make the fullest and most ample provision for all Watch demands, and are prepared for every exigency.

OPTICAL DEPARTMENT

The Optometrist's Catechism.

A SERIES OF QUESTIONS AND ANSWERS ON ELEMENTARY OPTICS, IN CATECHETICAL FORM.

By E. Le Roy Ryer.

Copyright, 1903, by THE JEWELERS' CIRCULAR PUBLISHING CO.

(Continued from issue of Oct. 31.)

Q.—(679) How may the power of any intermediate meridian of a cylindrical lens be ascertained?

A.—To estimate this mathematically requires the employment of complicated formulae, and as the optometrist seldom needs to know exactly the power of any but the principal meridians an approximation of the intermediate meridians will suffice. To obtain these approximations of the values of the intermediate meridians the following diagrammatic method may be used with security and convenience.*

Let the numerals at the bottom of Fig. 103 represent the nominal strength of the cylindrical lenses from 1.00 D. to 10.00 D., and the numerals on the right the values of intermediate meridians. In each case let the solid lines represent whole and the dotted lines the half dioptries. The figures on the left represent the various intermediate degrees between the axis and the meridian of greatest power. The solid oblique lines show the 15-degree graduations and the dotted lines between show the five-degree graduations. It will be noticed that this method of graduating the degrees coincides with that used on the regulation trial frame, whereon each 15-degree division is designated by a number, while two plain, unnumbered lines mark the five-degree divisions between each 15-degree graduation. It should also be noted that the five-degree and 85-degree lines are entirely omitted because the former is so near the axis and the latter so near the meridian of greatest power as to make their respective difference in value of no practical importance. Again, the oblique lines do not continue beyond the 1.00 D. upright line because were they made to do so they would be so close as to become indistinguishable. This, however, does not prevent calculating the values of the intermediate meridians of a lens lower in power than one dioptre, as will be shown further on.

The method of using the diagram, Fig. 103, is as follows: Suppose we had an 8.00 D. cylinder and wished to know its strength in a meridian 30 degrees distant from the axis. First find 8, representing 2.00 D., at the bottom of the diagram, follow this

line vertically upward until it intersects the oblique line that starts from 30, representing the degree, on the left. This point of intersection falls on the horizontal line marked 2 on the right, representing the value of the intermediate power. Therefore 2.00 D. is the strength of the 30-degree meridian of an 8.00 D. cylindrical lens.

Again suppose we desired to know the value of the 70-degree meridian of a 2.50 D. cylin-

FIG. 103.

drical lens. We now use the vertical dotted line midway between 2 and 3 representing the full dioptric strength of the lens. Following this line vertically upwards until it intersects the oblique line, starting from 70 degrees, we find that the point of intersection lies midway between the solid 2 line and the dotted 2.50 line running horizontal and numbered on the right, and hence we estimate that the value of the 2.50 D. cylindrical lens in the 70-degree meridian is 2.25 D.

We spoke above of estimating the intermediate powers of a lens whose highest power was less than 1.00 D., for which we have no oblique lines on the diagram. For

instance, suppose the value of the 70-degree meridian of a .62 D. cylindrical lens is sired; first multiply .62 by 10, which gives us 6.25. We now follow the imaginary midway between 6 and 6.50 vertically upward until it intersects the oblique line starting from 70, which point of intersection lies on the horizontal line 5.50; then dividing 5.50 by 10 we have .55, which represents the value of a .62 D. cylindrical lens in 70-degree meridian.

So far we have considered only lenses whose axes were horizontal, but in many cases we would like to know the values of certain intermediate meridians of lenses whose axes were not horizontal. For instance, suppose we wished to know the value in the 90-degree meridian of a +2.00 D. Cyl. axis 60 degrees. The vertical meridian is 30 degrees distant from the axis in this case, so by using the diagram from this point on, as in the above cases, we would find that the 2.00 D. vertical line intersects the 30-degree meridian at the 5.00 horizontal, and .50 D. is therefore the value of the vertical or 90-degree meridian of 2.00 D. Cyl. axis 60 degrees.

Q.—(680) How can the value of intermediate meridian of a sphero-cylindrical lens be ascertained?

A.—The same diagram, Fig. 103, may be used for this purpose by considering the cylindrical part only while using it afterwards adding the spherical part to the results obtained with the diagram. Thus having a lens +1.00 D. Sph. \ominus +2.00 D. Cyl. axis 70 degrees, and desiring to know the total powers in the vertical and horizontal meridians, we would proceed as follows: The vertical or 90-degree meridian is 20 degrees from the axis of the 2.00 D. cylindrical lens, and starting from 2 on the diagram we find that by going vertically upward this line will intersect the oblique line starting from 20 midway between the 0 and .50 horizontal lines, that its power in that meridian is .25. Now adding the spherical to this we know that the power of the combination in the vertical meridian is +1.25 D. As the horizontal meridian is 70 degrees from the axis of the cylindrical lens, we start from 70 and go vertically upward until it intersects the oblique line starting from 70, which intersection takes place about midway between the 1.50 and 2 horizontal lines, showing the strength of the horizontal meridian of this 2.00 D. Cyl. axis 70 degrees to be +1.75 D., and by adding the 1.00 D. for the spherical part we find that +2.75 D. is the total value of the horizontal meridian of the entire combination.

Q.—(681) How may the power of

*Walter Gribben in the *Journal of Ophthalmology, Otology and Laryngology*.

Optical Department.

intermediate meridian of a cross-cylindrical lens be ascertained?

A.—Suppose we wished to know the value of the vertical meridian of the following cross cylindrical combination $+2.00$ D. Cyl. axis 70° \ominus $+4.00$ D. Cyl. axis 160° degrees. We would proceed as follows, using the accompanying diagram, Fig 103: The vertical or 90° -degree meridian of the 2.00 D. lens is 20° degrees from the 70° -degree meridian or axis, so starting from 20° go vertically upward until this line intersects the oblique line starting from 20° , which is a point representing $+ .25$ D., being midway between the 0 and the $.50$ horizontal lines; the vertical or 90° -degree meridian of the $+4.00$ D. lens is 70° degrees from the 90° -degree meridian or axis, so start from 90° and go vertically upward until this line intersects the oblique line starting from 70° . This intersection takes place at a point exactly midway between the 3 and 4 horizontal lines, which shows $+3.50$ to be the power of the 4.00 D. Cyl. axis 160° degrees in the vertical meridian. Now the 2.00 D. lens having $+ .25$ D. power in the vertical and the $+4.00$ D. lens having $+3.50$ D. power in the vertical gives us 3.75 D. as the power in the vertical meridian of the above cross cylindrical combination.

(To be continued.)

A Neglected Duty.

JAMES BRANCH TAYLOR, M.D., in the *Ophthalmic Record*.

HERE is in many cases an obligation of the ophthalmologist to his patients which is neglected. I am referring to the winning away of the patient from glasses which have been needed temporarily, and which can again be replaced by Nature's powers, much to the advantage and convenience of the patient.

Not speaking of the advancing steps of a disease which cannot be retraced, it is now, in a sense which will be understood, a fortunately established fact that many younger people are the victims of insufficiency or defects of refraction, producing symptoms which can only be corrected by proper use of glasses. The recognition and wise use of this fact have brought humanity much relief. But back of this is the great fact of Nature's endurance and her ability to carry abnormal things for herself; and the wisdom in many cases of letting her carry them.

The observing practitioner soon realizes that there are a great many non-standard eyes in the world which are causing no bad symptoms. There is a unanimity of practice to let these eyes alone. The desirability of letting Nature carry the extra burden, with the one provision that she does so without irritation, is conceded. All that is desired is that she keep up the equilibrium. But our duty to bring her back to this equilibrium, in many cases where she has lost it, and where she can resume it, is not sufficiently recognized.

In an asthenic girl or a tired student, each of practically normal refraction, comes to the oculist with blurring vision or pain at-

tending close work. It is probably wise in the given case to fill the gap with a pair of lenses. To avoid arrearage and probably greater future trouble, the student must go on with his work. It may be wise conservatism to give the girl glasses, to afford her entertainment during a somewhat long interval, and so help the mental causes of recovery. It is just as clearly the duty of the oculist prescribing the glasses to watch over the cases, and help them lay aside their crutches under better conditions. A warning and a preparation for this plan should be part of the prescription.

Under some favorable conditions a hyperopia or an astigmatism comes to light and becomes manifest, which was previously latent and carried. The patient may need constant wear of lenses for the time, in order to afford the crutch for which Nature is crying out; but the conscientious problem with the physician should be whether, all things considered, the demand may not be temporary, and whether he may not by a graded and wise process bring the patient back to the condition where Nature will carry her burdens even handed.

This is, of course, a careful problem in which pros and cons and possibilities need to be carefully weighed. There are cases in which sufficient trial and demonstration have already been had, and in which under such tests and proofs hope of the redemption process is absolutely shut out. There is a set of cases in which departure from normal structure and balance is such that a wise construction closes the case at once, and sees that Nature demands the help without appeal and without return. The aberration is too great to attempt to safely carry it.

On the other hand, there is a middle class of cases, and one which figures to a percentage of considerable importance in a man's practice, in which the question of winning the patient back is a matter both of professional obligation and professional opportunity.

Not only in cases which have lost normal function—cases of what we may call normal asthenopia—but in cases which have lost super-normal or adapted function—the extra power which Nature builds up to meet abnormal refraction—there is often the chance, with care and patience, of putting things back on their old footing, and relieving the patient from the artificial burden of glasses.

When the history of former normal function or former tolerance of abnormal refraction leads the practitioner to believe that the patient may be restored to the advantages of single-handed combat without the use of glasses, there are certain points of management which he must apply and use with the proper discretion:

He must improve his patient's tone and environment in so far as these are or have been faulty. Many a person, by reason of untoward circumstances or reduced general tonicities, has fagged in the use of his eyes to the point of needing glasses, who may throw these crutches away when he has been "renewed as to the inner man" by proper hygiene or medicine, or come into better circumstances. The duty of the thoughtful oculist is to watch for or help to these better conditions, and then put the

party on his former vantage ground. How many oculists proceed to build up available patients—those in this class—to the point where they can dispense with glasses, and then help them to dispense with them? Why is the principle not as clear-cut here as in the application of crutches in any other class? That is, where it can be done it ought to be done.

(To be continued.)

The Pupillary Distance Often the Cause of Unsatisfactory Reading Glasses.

OF all frame measurements this is the most important from the optical standpoint.

The stronger the lenses the more important is their relative positions with regard to the pupillary centers. Frames for reading lenses should have a narrower pupillary distance than the distance frames and to obtain the proper measurements the patient's gaze should be fixed upon a distant object while being measured for distance glasses, and at a point about 14 inches from him while being measured for reading glasses.

In many presbyopic cases, where it is safe to assume that a lack of converging power accompanies the loss of accommodation, it is found that by decentering the lenses in much comfort is given the wearer.

To have the pupillary distance of a spectacle too great causes a strain on the recti muscles that invariably produces asthenopia. Should a patient present him or herself with the complaint that the eyes tire after using the reading lenses, and if the reading lenses seem about right in power, note carefully the relative positions of the eyes and lenses while reading, and if the centers of the lenses are outside the centers of the eyes narrow the pupillary distance of the frame.

It is reasonably safe to make the pupillary distance of all reading frames somewhat less (about one-eighth of an inch) than the distance between the centers of the eyes when they are looking at the reading point.

Do not use too large lenses in the reading lenses else it will be difficult to obtain proper agreement between their centers and the centers of the eyes.

Remember, and act accordingly, that a pair of plus spheres whose centers are further apart than the centers of the eyes produce the effect of prisms base out. Minus lenses in a frame that is too wide produce the effect of prisms base in, and as the internal recti are apt to need help in hyperopic cases and the external in myopic it is always better to have the frames too narrow than too wide, and often it is better to have the pupillary distance of the frames narrower than the actual pupillary distance of the eyes.

Frederick J. Bleiler, a salesman in the employ of Walter M. Hatch & Co., Marquette, Mich., was arrested recently, accused of misappropriating \$100 worth of stock and \$200 in cash from the concern. It is alleged that Bleiler took rings and other articles from new lots as they came in.

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan which they are utilizing in connection with their business.

The Hiring of Proficient Jewelry Clerks

Written Expressly for The Jewelers' Circular-Weekly by FRANK FARRINGTON

IT is easy to get clerks of a sort; clerks who will agree to work for you and who will draw their pay every week and keep sober while at work. There is no end of clerks looking for positions, but there is no end of positions looking for better clerks; clerks who will do more than just enough work to hold the job; who will keep sober even when not on duty and work more than they are paid to work, if occasion demands.

In hiring clerks, do not have more than are ever all kept busy at once. When the business of the store gets large enough so that once in a while a customer goes out without being waited on, then another clerk is needed. When you have more clerks than are ever really required at once, then more business is needed.

It is easier to get more clerks than it is to get more business; but even so, it is easier to get more business than it is to get one more *good* clerk. The clerk proposition is the great proposition with the storkeepers of to-day.

Judgment is the only thing that will decide how many clerks you need. Use your best judgment in the matter, and if you are well posted on your own business, you will judge correctly.

In choosing a clerk, remember that first impressions are often wrong impressions. When a man is applying for a job, he is at his best. If a man cannot present a good appearance then, he never can; but because a man does present a good appearance then is no sign that he ever will again.

Every merchant has hired clerks who came to him looking as if they had just stepped out of a hand-box, but after they had been in the store a week they looked as if they were working in a foundry. A clerk who cannot keep up his personal appearance will never be of much value behind the counter. There are too many ladies to be waited on who are particular and who would be readily offended by an unkempt clerk.

The clerk in applying for a position will often be profuse in his protestations of honesty, sobriety, temperance and ability. If he is too profuse, beware! A man may

easily give his claims the lie by being over-enthusiastic about his own virtues.

If an applicant appears to be satisfactory, the only way that he can be proved so or discovered to be otherwise is by trying him. Take no unknown or anybody else for a long time without a previous probationary period. You cannot afford to buy a pig in a poke.

If a man is worth having he will come "on trial." If he is not, you do not want him at any price.

A new broom sweeps clean and you cannot judge a clerk by the first few days or the first week. Keep him going till the novelty wears off from the situation. Then you can tell something about the stuff he's made of.

There is a difference between the looks of a man who is habitually cleanly dressed and neat in attire and that of the chap who is fixed up to look well when he asks for a job. A little experience in the hiring of men will make you an expert in telling which is which. All else being equal, it is better to get a fastidious clerk who will spend all his wages on his clothes than one who will go shabby.

As to wages, of course, there is no definite rule for all cases, but where the salary is a stipulated sum without percentages, the custom of the store, the custom of the town, the rates of living in the town, the scarcity or plentitude of help all contribute to influence the rate.

It is estimated by many experienced merchants that the cost of selling is 5 per cent. Some find it to be 6 per cent.; some more yet. Firms which have put their help on a strict percentage basis are in some cases paying salesmen $7\frac{1}{2}$ per cent. and saleswomen 6 per cent.

In figuring out the hire of the clerk, there are more things to be taken into consideration than simply selling ability. Courteous handling of customers, stockkeeping ability, social standing, etc., are all of consequence. Probably, roughly speaking, girls may be considered worth from \$5 per week up and men from \$8, but the matter must be figured out with great care in every store, the

sales of each department being considered and the per cent. of profits on the various lines, too.

The judgment of most experienced merchants, especially in the larger stores, is in favor of married men and unmarried women as the best help. A married man is more steady and has something to keep him at his work and earning. He realizes the necessity of being on hand to hold his position, and he realizes the desirability of bettering his salary by making himself worth more money to his employer. He has a home which he does not want to have to change by going to another town, nor sacrifice by taking the chances of losing his place.

The youngster who is not married to booze and gamble and become a good sport without being held responsible for it, or feeling that he is injuring one but himself. The married man can do that sort of thing without hearing in his headquarters at both ends of the route.

Girls as clerks are most desirable, unless you get the sort who are "snippy" with customers. That kind is a damage to your store. The girl who takes an interest in her work and wants to please the trade can do as much to help build up the business as any one in the store.

One of the first things to be considered in hiring is the honesty of the clerk. Your money is to be trusted to his handling, and whatever precautions you may take to protect yourself you cannot afford to risk in the hands of any one whose fingers are sticky.

The previous reputation of a man goes a good way in vouching for his honesty. His habits go further. Know the habits of the fellow who goes behind your counter. If you are posted on them, too. The fact that a man is irreproachable when you hire will not keep him so under temptation to do different.

Every employer should keep posted on what his employes do after hours; not in the light of a spy upon their movements, but as a matter of interest in their welfare and, indirectly, his own welfare.

Do all you can do to make men of boys in the store. Set them a good example and help them to live up to it. Let a fellow feel that when he comes to work for you, you take a personal interest in him and what he can make of himself.

Some merchants take delight in humbling the spirit of a clerk the first days and making him do the worst kind of work there is in the store. That's not as

Storekeeping Department.

so as it used to be, and in the big stores it is little apt to be that way. It's hardly a fair deal, and isn't apt to make the man think any more of his employer or his job, though it may, if he shows good grit, make the employer think more of the clerk.

Start a man in at just that sort of thing that he is likely to have to do regularly. Do not leave out the bitter, nor over-emphasize the sweet. There is no better criterion in the treatment of a clerk than to think of yourself as in his position. Probably you were in that position once, and when if you were misused then, it's no way for you to try and get even with some one else just because you have the opportunity. Be careful that you don't tempt a clerk to terrate himself when you are hiring him. The young fellow who is anxious to appear well before you would promise many things and claim many qualities that he could not make good in confirming. It's just as well to leave a little to appear in the actions of a man later as to let him tell such a good story about himself that you are going to be disappointed in the future.

If he says too much of his own accord, let him to draw in a little milder and come nearer to living up to it. Every clerk that you ever have will have imperfections. You must expect them. It's poor policy to jump them at sight. Think it over first and maybe those little mistakes that look so big at first sight will shrink in thinking them over.

In choosing clerks or store employes, don't make the mistake of hiring men who are simply honest and steady, not if you can do better. Honesty and steadiness are good. They are necessary, but a man can be perfectly reliable and square-toed in every respect and yet fall far short of being a success behind the counter. What you want is a salesman, not merely a clerk. You can get clerks at \$4 a week. A salesman might cost five times that and be the cheaper man. A real salesman will increase your business while the clerk isn't even holding it. A salesman will sell goods that are not needed for; goods that are new and desirable. He will bring them to the attention of every customer he waits on, and it will do you a lot of good. While he takes the pains to do all this the simply honest fellow will be handing out just what the customer needed for, with no comments and small returns. (To be continued.)

The New Store of Shreve & Co., San Francisco, Cal.

TWO views of the new establishment of Shreve & Co., at the northwest corner of Van Ness Ave. and Sacramento St., San Francisco, Cal., risen triumphant from the ashes and flames, are shown on this page. Shreve & Co., like many other enterprising concerns of the Queen City of the Pacific Coast, lost no time in rebuilding what had been demolished, and the present structure, while unpretentious compared to the former magnificent building, is spacious and serviceable.

The store proper has a frontage of 72 feet 8 inches on Van Ness Ave., and 137 feet 6 inches on Sacramento St. The factory is a continuation of the building on the latter street. The exterior is finished in sanded cement, the front and both sides being one continuous line of windows. Besides all this window space there are four large skylights, making a finely lighted salesroom.

The interior of the store is finished in stained Flemish oak. A large gallery extends around three sides, where are located the designers, reserve room, mail order department, etc.

Show Window Gossip.

MANY of the jewelers of Omaha, Nebr., made elaborate window displays recently, the occasion being the Horse Show. A particularly good window was that of Albert Edholm. The floor had a covering of white, in the center of which was a tall cut glass vase filled with American beauties, red and white being the Horse Show colors. Arranged artistically were imported salad plates, silver spoons, knives and forks, cut glass, chafing dishes and a champagne bucket containing a bottle of wine, with a large card bearing the words, "After the Horse Show."

Displayed in the show window in the store of Wm. Hunt, Uniontown, Pa., recently, was a violin said to have been brought to America in 1767. The violin was played in 1852 at the opening of Atlantic City, N. J., as a Summer resort.

A fire which started in the store of Mr. Heimarks, Battle Lake, Minn., recently, destroyed the entire business section of that town. A strong wind scattered the burning embers and a heavy snow storm greatly hampered the efforts of the firemen to subdue the blaze.

What Some Jewelers Say.

THE Pleasures of a Gold Watch.—That is something that one really appreciates— not one that fails in its time requirements or is not modern in its mechanism. But the timepiece that is selected, after long experience, and sold upon its merits, with an absolute guarantee. Our stock offers all this and more. Very interesting prices for the best of value-giving.—A. & C. Feldenheimer, Portland, Ore.

It's time that watch of yours was cleaned. Don't think that a watch needs cleaning only once or twice in a lifetime. It should be cleaned at least one a year. Its delicate mechanism is soon injured by the tiny particles of dust that are sure to collect inside of it. Because the works are so delicate and intricate the cleaning should be done by an expert. We have the best equipped watch repairing department in the State and skilled men to do the work. Jewelry repairing also a specialty.—C. L. Bryant, Danbury, Conn.

Diamonds are attractive alike to all classes of humanity. Your wife or your daughter would enjoy the pleasure of possession, but would not ask for them. Why not surprise her before the price of diamonds is again advanced? If 36 years' business prestige in this city is not sufficient inducement for your confidence our guarantee to refund in one year should be enough.—J. B. Trickey Co., Lincoln, Nebr.

Appear prosperous if you are so—"look the part." Wear a diamond—not large enough to make you look ridiculous, but one in good style. Diamonds are always in fashion, always good investments, because prices are increasing continually. In diamonds and other gems and everything in the jewelry line we are the recognized leaders in low prices.—C. A. Trefethen, Manchester, N. H.

In time, jewels or jewelry signified rank, power, and royalty. No person was allowed to wear jewelry without the permission of the Emperor. But civilization has advanced. To-day jewels are prized even more for their artistic value and the finishing touches they will add to any costume. My stock comprises an infinite variety of artistic and inexpensive, as well as artistic and expensive designs, exquisitely and carefully made. A welcome extended to all callers. L. W. Folsom, Sumter, S. C.

[Answers are also solicited from our readers to the questions published on this page.]

QUESTION No. 1719.—Watch Crystal Notations.—Kindly let me know how the notations on watch crystals are computed and also why sixteenths and eighths are used with relation to their size. Also let me know why there are three sets of gauges—20 2-16, 20 2-8 and 5. I can understand that the five means the height, but do not know whether the other two, 20 2-16, 20 2-8, are for two different gauges or not. If you can answer the above questions you will be doing me a great favor.
T. R.

ANSWER:—The notation on watch crystals is computed from a standard known as French line. There are 12 lines in a French inch. Marks on tags are graduated to sixteenths of a French line. As an illustration—20 2-16 would read 20 2-16 French line. Sixteenths and eighths are used with relation to their size because the glasses are sold both in Europe and in the United States, and the old measurement used in Europe divides into eighths and quarters instead of sixteenths as in the United States. As to the difference in the gauges, would say that in the first case (the 20 2-16), the 10 line is the zero of the starting point from which the lower numbers are taken and each number represents half a line. As an illustration of that, 11 1-16 would be marked below 1-8; now the 20 2-16 would indicate that the measurement had been taken from the zero as line, that is, one measurement as zero at the 10 line and the other measurement as zero at the line.

QUESTION No. 1720.—Women's Collars spoiled by Jewelry.—We have had several complaints lately about solid gold jewelry spoiling a lady's collar and waist. Can you tell us the cause of this? We of course know that a solid gold cuff button or stud wears a mark on cuff or shirt front, but we can hardly account for a brooch smutting a lady's collar, or, if the collar is very thin, smutting the neck. As before stated, we would like to know the cause; also if there is a remedy.
D. B. & S.

ANSWER:—The smutting of ladies' collars and waists is not only caused by the contact with solid gold jewelry, but principally by the evaporation of moisture from the pores of the skin, or from the surrounding atmosphere, when such moistures absorb foreign substances which are always present, in the shape of dust, etc., which may also be conducted by contact with the sharp corners and uneven surfaces of the different articles handled. Retail jewelers have the same complaint when opening the finest of jewelry in satin or silk-lined cases. Besides this explanation, must be borne in mind that articles not

pure gold will suffer from tarnish, superinduced by galvanic action, excited by fluids contained in the atmosphere. This tarnish may also add to the nuisance by acting on the alloys contained in the gold. An occasional washing of jewelry in soap and warm water with a soft brush and a little rouge will prevent the annoyance.

QUESTION No. 1721.—Lap Wheels.—I recently made a lap wheel, two-thirds of which was lead and one-third tin, but it would not finish without scratching. Will you please tell me how to make one that will finish without scratching the work?
J. H.

ANSWER:—A jeweler's metallic lap is composed of two-thirds pure tin and one-third pure lead. In melting these two metals, which must be absolutely pure and clean, the lead must be melted first, as it requires more heat than the tin. A lap made of these two metals will scratch a gold surface if they contain any impurity, such as dust or other foreign substance. The substances to be used for polishing are rotten stone, Vienna lime or rouge, mixed with sperm oil. A circular motion should be made without much pressure. Practice is required. Artistic jewelers also use a lap composed of copper, arsenic, tin and lead. The preparations used can be obtained only with difficulty, as they are not generally known.

QUESTION No. 1722.—"Japanned" Tin.—A customer of mine has a small tin horn which he wishes "Japanned"; that is, made black. Will you kindly inform me how to proceed to do the work? Is it done by a special process? He wishes the horn to be made like the tin horns on graphophones.
S. C. K.

ANSWER:—A fine black can be produced on tin or sheet iron by painting over with Sherwin & Williams' black stove pipe enamel. Paint the tin over very evenly and place where there is no dust. Allow it to dry for a few days. This will produce a better black than can be produced by the more expensive Japans and varnishes.

QUESTION No. 1723.—Oxidized Jewelry.—Can you give me a recipe or instructions how to oxidize solid gold jewelry a dead black?
C. H. C.

ANSWER:—The oxidizing of solid gold jewelry is rarely done, and a simple way to do this is not generally known. To produce a dead black on the gold it would be necessary to deposit a flash of copper or silver and then make use of the sulphuret solution, which would produce any shade desired, according to the length of time immersed. To make an arrangement for the purpose of oxidizing a small Smee battery for the current and a solution composed of water,

one quart; cyanide of potassium, three ounces; nitrate of silver, five drops and a small piece of silver for the anode are necessary. The solution may be placed in a porcelain or a glass vessel. After a light deposit of silver the piece is rinsed off and then immersed in a solution composed of sulphuret (sulphite of potassium), dissolved in warm water; immerse until black and rinse. The outfit for the depositing can be purchased from any platers' supply establishment. A very economical way to do this is to have the deposit of silver or copper put on at a plating establishment. The oxidizing can then be easily done with the sulphuret, as described above.

Sterling Silver for Enameling.

THE growth of enameled jewelry and silverware has brought about a difficulty in enameling which frequently perplexes the manufacturer. Complaints are often heard that the sterling silver is not uniform. In one instance, the enamel adheres well and a good color is obtained, while in another the enamel cracks or a delicate color cannot be maintained.

The difficulty in these instances is in the pickling of the silver. It is customary in the manufacture of sterling silver sheet to pickle the sheet after it has been annealed, in a hot, dilute sulphuric acid solution. The sheet manufacturer is not anxious to overpickle his sheet as it means both a loss of time and loss of silver. All that he wishes to do is to produce a sheet of good appearance.

In pickling sterling silver in hot, dilute sulphuric acid the copper is dissolved from the surface and pure silver is left. In sheet which has been underpickled the surface contains copper which colors the enamel and also causes cracking, particularly when it contains "fire." It has been found that sterling silver which has been well pickled for some time in hot, dilute sulphuric acid gives good results in enameling, while underpickled metal often causes trouble.

It is well, therefore, for the manufacturer of enameled silverware to repickle the silver in order to be certain that the copper is removed from the surface. A pickle composed of one part of sulphuric acid to 16 parts of water is the best for the purpose.—*The Brass World.*

Alzen, a New Metal.

ALZEN is the name given to a new metal, which is composed of two parts of aluminum and one part of zinc, writes Consul-General Guenther from Frankfort. It is said to equal cast iron in strength, but is much more elastic.

Alzen is superior because it does not rust as easily as does iron, and it takes a high polish. Besides being very strong, this new metal is capable of filling out the most delicate lines and figures of forms in casting.

The residence of F. W. Tescher, a former jeweler of Milwaukee, Wis., and now a resident of Chicago, was recently sold to Charles J. Dickson. The price paid was \$16,000.

The Coalport China Works: Their History and Present Quarters.

THAT Coalport on the picturesque Severn, England, is practically made up of the Coalport China Works is known to everybody in the china trade. Nearly everyone in the town is either employed in the works or connected with somebody who is. An interesting description is given by a writer in a recent issue of *The Pottery Gazette* of London, as follows:

The present Coalport China Works are the outcome of several predecessors at other places, some of them historically famous. About 1750 a small factory was founded at Caughley, on a hill at the other side of the river, and about a mile distant from the present works. Mr. Brown, of Caughley Hall, the founder, disposed of it, and after passing through several hands it was acquired by Thomas Turner, son of the Vicar of Norton.

Mr. Turner was a chemist, an artist and an engraver, who had at one time been connected with the Worcester Porcelain Works. Under his direction the productions of Caughley became noted for their excellence. Mr. Turner visited France, and brought home with him some French workmen, who gave him practical suggestions or the improvement of his productions.

Several men who afterwards became famous were trained at these works under Mr. Turner. Among them were John Rose, Thomas Minton, Martin Randall, and others. It was Thomas Minton, who was an engraver apprentice under Mr. Turner, who engraved the famous "willow pattern" from an original Chinese plate. This pattern made the fame of Caughley, and has perhaps never been equaled as a selling pattern by any other ornamentation. Mr. Turner also brought out the famous "Broseley Blue Dragon," and these two patterns, though now used by other makers, are for all time associated with Caughley.

John Rose, an apprentice at Caughley, founded the present Coalport works, and shortly afterwards he purchased the old works at Caughley, and carried on both factories under the name of John Rose & Co. In 1815 the Caughley works were abandoned, and the business of both works concentrated at Coalport. In 1820 the Swansea porcelain works were discontinued, and Rose & Co. bought up the moulds, plates and other accessories.

Soon after this the firm acquired another pottery—the famous Welsh manufactory of Nantgarw, which was also absorbed by that of Coalport. Nantgarw was established by William Dillingsley, the famous flower painter of

Derby. It is admitted that this factory, though a small one, produced porcelain as fine in body and texture as any ever made. When the pottery was purchased the proprietor was bound over for a period of seven years to make the same body at Coalport as had been made at Nantgarw.

John Rose died in 1841, and several changes in proprietorship took place until 1889, when the business was incorporated as a private company by the present proprietors under the style of the Coalport China Co. (John Rose & Co.), Ltd. Charles C. Bruff is the chairman of the company; he and his brother-in-law, A. N. Bruff-Garrett, are joint managing directors, J. C. Cheadle is the secretary, and J. T. Bott is the art director. Mr. Bott's father has done some fine work at Worcester, and he himself has for a long time been engaged in ceramic design and ornamentation.

It was the writer's good fortune to meet all these gentlemen on a recent visit to Coalport, and Charles C. Bruff was kind enough to show me over the works and to give me the details I sought. Mr. Bruff is a perfect compendium of information on all that pertains to the factory and the productions of Coalport.

The works have been greatly enlarged, and a considerable portion of them has been rebuilt, and new and improved machinery and appliances have been introduced since the incorporation of the company. Every provision seems to be made for the health, convenience and comfort of the employes. The artists and decorators work under most pleasant conditions. Light and well-ventilated work rooms look over the river Severn to the woodland scenery on the opposite banks. Every place and every person looks clean and fresh.

There are about 500 employed altogether. The young women and girls had more the appearance of holiday makers than of workpeople in the middle of an ordinary working day. The ancient and the modern mingle at Coalport in the most harmonious fashion. There are old cottages, some inhabited, and others converted into workshops, and in line with them there are the substantial show rooms and artists' rooms built but a few years ago.

The entrance hall to these new premises is handsomely appointed. The floor is artistically tessellated. The initials and trademark of the company are introduced into the mosaics, while the trade-marks of the Caughley, Nantgarw and Swansea pottery are similarly reproduced. The new premises are neat in appearance and conveniently arranged and fitted.

A little distance away there are some new

ovens built in the most effective modern style, and in the midst of them there is an oven of quite another stamp. It is claimed that this is the oldest pottery oven now working, and it looks it.

The company is self-reliant to a very great extent. The members prepare their own raw materials, even the calcining and grinding of bone. The river runs close to their premises, and they have a siding connecting with the railway.

A large number of visitors call to inspect the works, and many distinguished ones have been among them. In July, 1900, they were honored by a visit from the Duchess of York, now Princess of Wales, and her Royal Highness and the members of her suite signed the visitors' book. An interesting circumstance to which my attention was drawn was the number of old employes engaged on the works.

As an evidence of the good feeling that exists between the principals and their employes, there was a remarkable demonstration to welcome the managing director, Charles C. Bruff, on his return from a visit to the United States. The whole was the spontaneous work of the employes themselves, who arranged it as a surprise to their principal.

Notes of International Expositions.

A FRANCO-BRITISH exposition relating to sciences, arts and industries is to take place in London in 1908. The project was first proposed by the French Chamber of Commerce in London, and has received fine support, including that of the French government. The Duke of Argyle recently presided over a meeting of Englishmen where the proposal to hold the exhibition was unanimously adopted.

An international exhibition of fashions and a congress of fashions will take place next year in Vienna under the presidency of Oscar Von Hoefft, chairman of the Vienna Fashion Academy, and with the support of the Austrian minister of commerce and the mayor of Vienna. The exhibition will be held during March and April.

The proposal is under consideration by Barcelona, Spain, for the holding of an international exhibition there in 1910.

The proposed British South African exhibition will open in London on Feb. 13 next and remain open until March 18, after which, if successful, it will be removed to the greater provinces of Great Britain. The scheme has received the financial support of all the governments of the South African colonies. The management will be a State matter, consisting of an executive composed of a representative from each colony.

Where Jewelers Get the Gold With Which They Do Their Work.

REFINERIES, old jewelry and banks are the sources from which the jewelers draw their gold supply. From the refiner the gold comes to the factory in the form of buttons or granules. The refineries take the waste of the jewelry shops and the sweepings, and by burning off the material portions and proper treatment of the residue recover the gold that otherwise would have been lost. That this saving of even the infinitesimal particles of gold dust is worth the time and labor is attested by the number of refineries here. The output from the refineries alone amounts to figures in a year that would enable an ordinary man to retire from active work with a fortune.

The Government, however, provides the greater part of the raw gold for the use of the manufacturer. For a long term of years there was a steady drain on the gold coin in circulation, caused by the using of the coin by jewelers as raw material. The fact that the Government turned out a coin that, after passing through the Government assay office, was of 22 karat fineness, only 50 karat below the pure gold standard, and which also had been worked over, the silver and copper forming the alloy, thoroughly mixed in the gold before the coin was minted, made the gold coin particularly inviting to the jeweler.

There was no trouble to the manufacturer when the gold coin was used, as the alloy had always been combined with the metal and all that was necessary was, if needed, to alloy sufficiently to bring the gold down to the point required.

Then, too, it did away with considerable bookkeeping and the tying up of a considerable amount of money by the small manufacturer in the raw material. There was some difference between having \$40 or \$50 represented by two or three double eagles in stock and having a bar or brick of gold worth from \$200 to \$500, according to size.

It meant working with a small stock, it is true, but considerable space can be filled by a \$20 gold piece, and the Government as a never-failing source of additional supply. Later the Government made up the pure gold in brick or bar form, and it is that shape that the greater bulk of the supply is now found.

Thousands of dollars pass between the banks and the manufacturing jewelers in New England in the form of bars of gold. The banks handling the bars for the benefit of their customers. The bricks vary in value, according to weight, from \$200 to \$500, and come with the Government assay office stamp as a guarantee of purity and fineness marked upon them.

The handling of this valuable supply, however, is not conducted with any ostentatious display of guards in going to and from the banks. A \$500 bar of gold can be stowed safely away in the coat pocket, wherein it is comparatively inconspicuous, though a trifle weighty.

The United States Sub-Treasury sends a considerable amount of gold bars direct to the manufacturing jeweler. The express companies often have a large fortune in their care, transporting bricks to the value

of many thousands of dollars to the large establishments.

The amount of old gold that finds its way into the jewelry shops would be astonishing if the total could be ascertained. It is impossible to obtain definite figures relative to sources of supply, but one manufacturer stated that there is a large amount of old jewelry utilized each year, he himself handling old jewelry valued in the thousands.

The imperishable nature of gold with its steady standard of value is exemplified in the disposal of stolen jewelry by thieves to "fences," as the receivers of the proceeds of burglaries and robberies are styled. A few hours in a crucible after the stones have been wrenched from ring or brooch finds the golden circlet or elaborately designed breastpin melted into a shapeless, unrecognizable mass that is easily disposed of through any one of many different ways.—*Attleboro (Mass.) Sun.*

Recent Reappraisements of China.

REAPPRAISEMENTS of Japanese china, blown glass ware and decorated china were recently announced by the Board of United States General Appraisers as follows:

JAPANESE CHINA.—From various exporters, Kobe, exported Dec. 30, 1905, and June 21, 1906, entered at New York (File Nos. 40075 and 41745; invoice Nos. 22938 and 14357); findings of Hay, G. A.: Cups and saucers, 24130, entered at 1.44 yen per dozen; hair boxes, 21938, entered at .085 yen each; bowls, 24080, entered at .34 yen each; comport, 24124, entered at .20 yen each; bowl, 24122, entered at .22 yen each; mustards, 23686, entered at .48 yen per dozen; salt and peppers, 23636, entered at .41 yen per dozen; Imari red plate, 1321/5, entered at .18 yen each; Moriagi jardiniere, entered at 2 yen per set Avata vases, 53506/4, 21 inch, entered at 1.50 yen each; Foriagi vases, 21 inch, 53526 1/4, entered at 1.50 yen each; sugar and cream, 24092, entered at .16 yen per set; tea, sugar and cream, entered at .38 yen per set (32000); jewel trays, 24106, entered at .075 yen each. Add similar goods. Advanced 10 per cent. Add packing, etc.

BLOWN GLASS WARE.—From Herrman Holzner, Karlsbad, exported Feb. 17, 1906, entered at New York (File No. 40534, invoice No. 9346); findings of Board No. 2: Prices as published in reappraisal No. 7811, Aug. 3, 1906. Reappraised value affirmed.

DECORATED CHINA.—From A. A. Vantine & Co., Nagoya, exported June 26, 1906, entered at New York (File No. 41748, invoice No. 11741); findings of Hay, G. A.: Seyi tea pot, 2850/T, entered at .111, advanced to .124 yen each; blue and white tea cups and saucers, 2852/T, entered at 1.305, advanced to 1.45 yen per dozen; Seyi saucers, 2864/T, entered at .041, advanced to .045 yen each; blue and white tea cups and saucers, L/S, 2853 T, entered at 1.359, advanced to 1.51 yen per dozen; glazed mug, 2868/S, entered at .12, advanced to .15 yen each. Add cases and packing.

Decision of the Board of United States General Appraisers relative to duties on glass ware, electroliers and kindred lines have been announced in the last week as follows:

BOTTLES WITH CUT-GLASS STOPPERS.—Protests of George E. Evans *et al.* against the assessment of duty by the Collector of Customs at New York. The protests related to bottles with stoppers cut for ornamental purposes, which the Board held to have been properly classified as cut glass under Par. 100, Tariff Act of 1897.

ELECTROLIERS, MANUFACTURES OF METAL.—Protest of T. M. James & Sons against the assessment of duty by the Surveyor of Customs, Kansas City. The protest related to electroliers of metal and glass which the Board held as claimed by importer should have been classified as manufactures of metal.

NEW STYLES OF ENGLISH CHINA.

ATTRACTIVE lines of Cauldon china have been provided for the holiday trade by Edward Bootc, 46 W. Broadway, New York. The acid gold borders are in varied patterns, and the raised gold decorative effects are most pleasing. Acid gold medallion decorations are seen on some articles. Fancy vases in mother-of-pearl, iridescent, dark green and other effects, are among the features in the art glass department. There is a choice assortment in rock crystal effects.

A HANDSOME CANDELABRA OF ART GLASS.

AMONG the offerings of cut glass in the salesrooms of the Pairpoint Corporation, 38 Murray St., New York, is a handsome candelabrum 21 inches in height. The base is of thick rounded crystal and supports a hollow standard, cut in diamond pattern, from which five bent glass arms branch. At the ends of the arms are silver plated candle holders in cup shapes. The decorative work is of clever execution, having the sunburst as a central figure. Among the other attractions is a vase, admirably cut in Egyptian style, with hexagonal base, flaring neck and scalloped top.

ATTRACTIVE NOVELTIES IN GLASS AND METAL.

A NEW and attractive line of glass ware, engraved and ornamented in gold, is on exhibition in the salesrooms of L. W. Levy & Co., 580 Broadway, New York. In this collection are bonbon dishes, champagne glasses, vases, and other articles. Punch bowl sets of different shapes and sizes, engraved with gold and natural fruit color decorations, are shown. Strawberries in natural colors and fern leaf effects predominate in the designs. Smokers' sets made of brass and copper in many shapes are offered. Some of the trays are supported by a tripod effect. Other designs have a single brass rod support. Hand-painted china and glass bottoms are employed to some extent. Smokers' novelties in antique and grotesque designs and American spread eagle effects are included in the lines. A carefully selected assortment of white marbles comprising a large number of subjects has been received for the present season's trade. THE RAMBLER.

The Carl N. Heglund Co. is the firm style of the business formerly conducted by Carl N. Heglund, in Jackson, Mich., James Anderson having been recently admitted as a member of the concern. The store at 108 S. Mechanic St. will be entirely renovated.

**You Can Easily Operate
This Typewriter
Yourself**

Don't worry your correspondent.

Don't write him anything by hand that takes him time to make out—that may leave him in doubt—that he can't easily read.

And don't fill out legal papers or card memos—or make out accounts or hotel menus in your own handwriting.

It looks bad, reflects on your standing, makes people think you can't afford a stenographer, and is sometimes ambiguous.

You can write out your letters—make out an abstract—fill in an insurance policy—enter your card memos—make out your accounts, or a hotel menu—or do any kind of writing you need, on any kind, size or thickness of paper, and space any way you want on

The **OLIVER**
Typewriter

The Standard Visible Writer

You can write any of these things yourself if you do not happen to have a stenographer.

For you can easily learn, with a little practice, to write just as rapidly, and as perfectly, as an expert operator on the OLIVER. Because the OLIVER is the simplified typewriter. And you can see every word you write. About 80% more durable than any other typewriter, because it has about 80% less wearing points than most other typewriters.

80% easier to write with than these other complicated, intricate machines that require "humoring"—technical knowledge—long practice and special skill to operate.

Than machines which cannot be adjusted to any special space—with which it is impossible to write abstracts, insurance policies, or odd-sized documents except you buy expensive special attachments requiring experts to operate.

You can adjust the OLIVER to any reasonable space—you can write on any reasonable size and thickness of paper, right out to the very edge, without the aid of any expensive attachment or special skill, and your work will be neat appearing, legible and clear.

For the OLIVER is the typewriter for the doctor, the lawyer, the insurance agent, the merchant, the hotel proprietor—or any man who does his own writing.

Write us now for our booklet on the simplified features of the OLIVER.

The OLIVER Typewriter Co.

310 Broadway
NEW YORK CITY, N. Y.

ALVIN SILVER

JUST THE THING to show for the Holiday Trade—Our New Pattern Sterling Silver Toilet Set, No. 2401. A handsome floral pattern, made of heavy silver, embodying the new style of low relief. Light gray finish. Best grade of English bristles used in all Brushes. Send your orders now to ensure prompt shipment.

ALVIN MFG. CO.

Silversmiths, NEW YORK

Fahys three graces:

“MONTAUK” “BRISTOL” “PERMANENT”
 20 Year 25 Year Permanent Guarantee

All made in the Senior style case—the thinnest filled case made for an American movement.

Made in 12 and 16 sizes only.

Every improvement that is known to the case maker's art is embodied in the Senior style case.

The difference between the three grades is the price, and that is regulated by the amount and quality of gold used in each instance.

JOSEPH FAHYS & CO.

Best Value

THIS IS THE POINT!

It's a point that shines
very clearly, too.

It's a point to be considered
most carefully. "Best Value" is
the point we pin our faith on.

Many thousand jewelers know
we give "Best Value." We will gladly
prove it to you the next time you need
any diamonds.

The
Wadsworth
25-Year
“Pilot”
Watch
Case

A
QUARTER
OF
A
CENTURY

TWENTY-FIVE YEARS is the period most people have in mind in buying a Watch Case. Cases guaranteed for that time are the most popular on the market. Among the many makes offered in this class it is simply a problem of selection. Wise selection can only be made after intelligent examination and comparison, balancing values and prices.

Here is the Case that has won pre-eminence in the 25-year field. The WADSWORTH “PILOT” has forged to the front on its points of merit alone—unaided by any fictitious considerations. Right in designs, models, workmanship and price.

Dueber

is the name most intimately known to the Watch Trade of the United States as associated with the Watch Case industry. The name "Dueber" on any Watch Case is an absolute guarantee of good quality, artistic conception and fine workmanship.

Hampden

stands for what is peerless in American Watch Movements. For twenty-five years the name has borne an unrivaled reputation, and the Hampden high-grade movement has been a standard for imitators to work from.

Watches

are an essential part of every retail jeweler's stock, and to have the right kind of watches should be the care of every dealer. The more consideration given to this subject the more sure are Dueber-Hampden Watches to be chosen.

Hat Pins as Gifts

THE HOLIDAY SALES of our Hat Pins every year prove them to be exceptionally popular as gifts.

They have the felicitous artistic touch which appeals to feminine fancy, while doing justice to the donor who finds them easily within his means.

Many of our Hat Pin designs have been notable successes in past seasons. History is again repeating itself.

They are a specialty with us, and a leading one. They will prove to be leaders in your Holiday stock.

FACT.

Krementz

ONE PIECE

Collar

Buttons

and Studs

The Standard American Collar Button

have been selling better and better each day since they were born.

CAUSE.

They started with the Highest Quality and Best Construction, and because that High Standard has been continuously maintained.

RESULT.

The "KREMENTZ" stamp on a Collar Button is as much a guarantee of QUALITY as the GOVERNMENT stamp on a bar of gold.

The several qualities of **Krementz One-Piece Collar Buttons** are stamped as follows, **ON BACK:**

KREMENTZ COLLAR BUTTONS are sold by most all reliable jobbers. In case your jobber will not supply you, send to us and we will.

Send for Booklet, "The Story of a Collar Button"

Should you wish to utilize this booklet to increase your collar button business we will, on receipt of your order, print your card upon and send you a quantity of them prepaid.

All **Krementz Collar Buttons**—of every quality—are manufactured by

KREMENTZ & CO.

To make your Holiday Stock complete you will require a good assortment of

The Rosary in Fine Jewels

Five years ago the sale of the Rosary was by Catholic periodical stores only. We advised that they should form part of the staple stock of every Jeweler, and those who added this special line to their stocks have been pleased with the results.

We have a splendid variety in real and imitation stones, popular selling sizes and colors, nicely mounted in gold and rolled gold-plate.

We will, on request, send illustrated list and if you wish, we will also send a package on selection, containing a good assortment of the different grades.

The Iridescent Beauty of the Egyptian Pearl

As shown in our newest creations, is beyond comparison. These goods excel the usual in gold jewelry as holiday gifts. The present and latest fad is the button shape pearl, mounted in the French clutch earscrew for unpierced ears, as shown in the illustration. All of our mountings are of 10K. gold.

WE CAN SUPPLY YOUR XMAS WANTS WITH AN IMMEDIATE DELIVERY

Prices range from \$20.00 to \$36.00 per doz. pairs—plain screw; and from \$27.00 to \$45.00 per doz. pairs in the French clutch.

We have just received a large consignment of Coral and have mounted the choicest pieces in the same style gold mountings as shown in the illustration, offering a line of

Genuine Coral Earrings

in a variety of colors, showing the popular round button shape, that is one of the leading features of the present season. Prices on these Coral goods range from \$3.00 to \$9.00 per pair.

Send your orders to-day by mail or telegraph.

Tiffany & Co. Defeated on Appeal

Pearl Case in Which Government Sued for Additional Duties After Reliquidation, is Decided Adversely to Importer on a Question of Law

TIFFANY & CO., New York, have been defeated in the case pending in the courts for four years, involving the duty on 59 pearls sold by the Paris branch of the house to Morris Guggenheim, of the American Smelting & Refining Co., and delivered to him after being strung as a necklace in the company's New York store. The question whether the pearls were dutiable at 10 per cent. as pearls in their natural condition, or at 60 per cent. under the jewelry clause, is decided in favor of the higher duty on a technicality by the United States Circuit Court of Appeals, Second District, in a decision handed down last Wednesday. In arriving at this conclusion, however, the court did not take into consideration the merits of the original question, as to the rate of duty, but decided against the importers because they had not followed the procedure laid down in the Customs Administration Act.

The pearls were admitted in 1902 promptly after their arrival, on the payment of the 10 per cent. duty. After the delivery of the necklace to Mr. Guggenheim the government reliquidated the entry and demanded 60 per cent. duty, or an additional sum of \$8,122. The importers refused to pay this amount and the government brought suit in the courts to recover it.

At the trial in the lower court the importers made the claim that the condition of the pearls at the time of importation placed them, under the similitude clause, in the class of pearls in their natural condition. While denying this, the government claimed that the question as to proper rate was not before the courts. It was argued that if the importers desired to raise this question they were obliged first to pay the additional duty in order to bring a protest in the usual way before the Board of United States General Appraisers; that the courts should not be called to pass upon such an issue until after the Board had first rendered its decision. It is on this latter point that the higher court decided against the importers.

The United States Circuit Court of Appeals declares that exclusive jurisdiction of issues as to the classification of imports is vested in the Board of General Appraisers, subject to review by the courts. As the importers did not take the prescribed course for bringing their case before the Board, the action of the Collector is declared to be final. It is held that the lower court erred in not directing a verdict in accordance with the ruling of the Collector, and without any reference to questions as to rate and classification.

J. Osgood Nichols, Assistant United States Attorney, argued before the United States Circuit Court of Appeals this case, which has resulted in the first victory won by the government in the long line of pearl cases. While Mr. Nichols raised the technical point on which the importers have been defeated, he also submitted an argument on the merits of the case, claiming that the pearls in the condition in which they arrived were properly dutiable as a

necklace under the clause for jewelry.

The expectation is that similar points will be made in the Citroen and other pending cases. Mr. Nichols especially emphasized the claim that these pearls, having been selected and pierced, came within the meaning of the jewelry clause of the tariff law when it speaks of "unfinished" jewelry and parts thereof. He claimed that the pearls were, if not a complete necklace, at least an unfinished necklace. As to the similitude clause, he argued that the pearls were closer to a necklace or article of jewelry than to pearls in their natural condition, keeping in view the purpose for which they were intended. He declared that the purpose is made important in the language of the similitude clause, and in order to carry out this idea collections of pearls such as those in this case should be classified as necklaces or jewelry.

The opinion of the Appellate Court, which consisted of Judges Wallace, Lacombe and Townsend, is written by Judge Lacombe, and is as follows:

The opinion of the court, which was written by Judge Lacombe, follows:

The corporation of Tiffany & Co., in 1902, made consumption entry at the Custom House of certain pearls upon which duty was liquidated on a basis of 10 per cent. ad valorem. Subsequently, on May 7, 1903, for reasons which it is not necessary to state, a reliquidation was made on the basis of 60 per cent. ad valorem.

Against the classification made upon the reliquidation, the reporters duly protested in writing within the 10 days limited by the statute for such protest. They failed, however, to pay the additional amount of duties ascertained to be due upon such reliquidation. Thereupon the Government brought an action to recover the same from defendant, July 1, 1903.

The cause came duly on for trial; testimony was introduced tending to show whether the articles were "pearls in their natural state not strung or set," or "articles commonly known as jewelry and parts thereof . . . including . . . pearls set or strung" and, the case being given to the jury, verdict was rendered for the defendant. The plaintiff duly excepted to the admission of such testimony, and to a denial of a motion to direct a verdict in its favor on the ground that the action of the collector was final and conclusive.

The language of Section 14 of the Customs Administrative Act of 1890 is clearly determinative of this cause. That act made a radical change in the entire subject of customs administration by wholly eliminating as triers of the facts in controversies as to classification of imported articles for duty, and by creating a special tribunal—the Board of General Appraisers—to deal with all such questions. Exclusive jurisdiction thereof (subject to review by the courts) is conferred upon the Board by Sec. 14 of the Act of 1890 which (as amended by Act of July 24, 1897) provides that:

"The decision of the collector as to the rate and amount of duties chargeable upon imported merchandise . . . shall be final and conclusive against all persons interested therein, unless the owner, importer . . . etc., . . . shall within 10 days after but not before such ascertainment and liquidation of duties . . . give notice in writing to the collector, setting forth therein . . . the reason for his objections thereto, and if the merchandise is entered for consumption shall pay the full amount of the duties and charges ascertained to be due thereon. Upon such notice and payment the collector shall transmit the invoice and all the papers and exhibits . . . to the Board of three General Appraisers, etc."

Unless review is secured as provided in the section just quoted, the decision of the collector remains final and conclusive; and it is essential to

the securing of such review that the owner, importer, etc., "shall pay the full amount of the duties and charges ascertained to be due." In the case at bar no such payment was made, therefore the collector's decision never came before the Board of General Appraisers for review. And, since the necessary steps to obtain such review were not taken such decision was final and conclusive.

When, therefore, it appeared upon the trial that the collector had made a decision, reliquidating the duty the Government became entitled to a disposition of the cause in conformity with such decision without any reference of questions as to rate and classification to the jury, and it was error to refuse the request to direct a verdict in favor of plaintiff for the unpaid duties in the amount ascertained by the collector.

The importer refers to U. S. vs. Goldenberg 168 U. S. 95, but there is nothing in that authority which indicates any different conclusion. It merely holds that the 10 days limitation does not apply to the payment as well as to the protest, which indeed is manifest on the face of the statute.

The judgment is reversed.

It is understood that D. Macon Webster, attorney for the importers, will now endeavor to bring the case before the Board of General Appraisers, in the form of a protest after payment of the additional duties.

Salesman Who Robbed Washington, D. C., Jewelers, Sent to Prison for Two Years and Three Months.

WASHINGTON, D. C., Dec. 7.—The climax in a long-drawn-out case was reached when Walter H. Lydick, formerly an outside salesman for Harris & Co., one of the leading jewelry firms of the city, was sentenced to two years and three months in the Moundsville penitentiary. Lydick disposed of a quantity of jewelry belonging to the firm named, both by selling and by pawning it.

After his thefts he went west, was caught, brought back to Washington, and again went out west while he was out on bail. He was apprehended and brought back to the city for the second time some two weeks ago.

Previous to his sentence Lydick withdrew his plea of not guilty and admitted that he had misappropriated the jewelry.

Handsome Cup Recently Presented to the King of Roumania.

ON the occasion of the recent jubilee of King Carol of Roumania, celebrating the 40th anniversary of his accession to the throne, the Roumanian Government entrusted to the court goldsmith, Paul Telg, of Berlin, the execution of a cup for presentation to the King. The piece is shown in the illustration on the front cover of this issue, is about three feet in height, encased all over and decorated with painting in enamel and other rich ornamentation.

The style used is the Gothic, but without a slavish adherence to old models. A certain freedom as regards outward form was necessitated by the character of the relief encircling the cup, designed to do honor to the prince. It shows Roumanians in national costume amid characteristic landscape. In the foreground is the figure of the King himself; a female figure strews flowers before him, and another hands him a goblet of wine, typifying the purpose of the cup. Upon the cup appear the coat-of-arms of 30 districts of the country, and in the center the arms of the kingdom, which on the cover are the shields of Moldavia, Wallachia, Craioba and Bessarabia. The enamel paintings were done by Frida Bantier, of Berlin.

Here is a masterpiece of the goldsmith art, which does the greatest credit to its creator and affords new proof that the old styles still retain the freshness of youth in spite of the domination of the modern schools. The antique shape of the cup is better than any which offer only novelty and originality, without attaining the perfect suitability to the intended purpose possessed by the old and tried forms.

Interesting Exhibition of Ancient Gold and Silver to Be Held at Vienna, Austria.

A MOST interesting exhibition of gold and silver will be held in Vienna, Austria, next February, which promises to be both unique and instructive. It will include specimens of all kinds of gold and silversmiths' work, excepting jewelry, from the Middle Ages down to 1850.

Austria is particularly rich in such treasures, and many of the ancient and wealthy monasteries, convents and churches possess magnificent plate, both ecclesiastical and profane. The country would have been much richer in this direction but for the Napoleonic wars, during which many costly treasures of art disappeared.

The exhibition is being arranged by the Austrian Museum of Art and Industry, which is sending representatives abroad to beg the loan of choice gold and silver objects from foreign collectors. It will be open three months.

The business of J. A. L. Waldman, Little Falls, Minn., will hereafter be conducted under the firm name of Waldman & Co.

Consul J. C. McNally writes from London that there is a growing sentiment in the Belgian city against the municipal pawnshop. This institution is gradually losing its importance, due to the growing prosperity.

Nominations to be Presented at the Annual Meeting of the Jewelers' League of New York.

The regular monthly meeting of the Executive Committee of the Jewelers' League of New York was held at the organization's office on Wednesday, Dec. 5, the following being present: President Street, Vice-presidents Karsch and Wormser, Messrs. Gough, Sloan, Levy, Bowden, of the committee, and Secretary Marsellus. The usual routine of business was transacted, such as approving the treasurer's report, granting changes of beneficiaries, etc. Payments to beneficiaries of deceased members whose deaths occurred in October were authorized, amounting to \$25,000.

Members were admitted from the following States: New York, New Jersey, Minnesota and Missouri.

The regular annual meeting of the full membership of the League will be held at Assembly Hall, United Charities building, E. 22d St., on Tuesday evening, Jan. 22, 1907, at which meeting the election of officers will take place. Following is the ticket presented by the Nominating Committee: President, George W. Street, of G. O. Street & Sons; first vice-president, J. R. Greason, of J. R. Greason & Co.; second vice-president, Leo Wormser, of Julius King Optical Co.; third vice-president, G. H. Hodenpyl, of Hodenpyl & Walker; fourth vice-president, Bernard Karsch. For Executive Committee: Stephen B. Kent, of Kent & Woodland; Samuel H. Levy, of L. & N. Kahn & Co.; M. L. Bowden, of J. B. Bowden & Co.; C. R. Jung, of Jung, Staiger & Klitz. For Advisory Board: George W. Parks, of F. W. Parks Co.; F. L. Wood, of Ludwig Nissen & Co.; S. A. Baldwin, of Fessenden & Co.; R. A. Breidenbach, of 51 Maiden Lane, New York; Henry Freund, of Henry Freund & Bro.; E. B. Eaton, of L. Stern & Co.; F. H. Dana, of H. A. Kirby; C. C. Champenois, of Champenois & Co.; M. Lisauer, of Ingomar Goldsmith & Co.

Burglars Enter Home of New York Gem Dealer and Get Away With Jewelry Valued at \$7,500.

The home of Lippman Tannenbaum, of Tannenbaum & Co., 52 Nassau St., New York, was entered, Dec. 4, by a burglar, and jewelry valued at \$7,500 was stolen. Entrance to the house, which is at 3 W. 121st St., Manhattan, was gained while the family was at dinner. The robber first broke into an adjoining vacant house, and from the third floor rear reached a window on the same floor of the Tannenbaum residence. In the room of Mr. Tannenbaum's daughter the burglar forced a locked bureau drawer and stole a case containing a collection of jewels which Mr. Tannenbaum had given to his daughter, also a pocket-book containing \$23 in cash. Detectives have thus far failed to find the burglar.

Following is a list and description of the property.

Pearl and diamond La Valliere (diamonds set in platinum, 29 grain pearl drops); diamond bar pin, set in gold; antique precious stone necklace tones carved as grapes, with gold leaves); round old amethyst brooch, surrounded with pearls; round broochstone, surrounded with pearls; emerald daisy pin, set with diamonds; emerald and diamond snake pin (bar pin); dagger pin, diamond, emeralds and pearls; pearl and sapphire Columbia pin; carved

National Monthly Import and Export Statistics.

Involuntary Petition Filed.

Bankruptcy Proceedings Begun Against J. F. Dailey & Co., Chicago—J. F. Dailey, St. Louis, Denies He Is Interested.

CHICAGO, Dec. 8.—A petition in involuntary bankruptcy against J. F. Dailey & Co., installment jewelers, was filed in the United States District Court here Wednesday by New York and St. Louis creditors, presenting claims amounting to \$10,000. The petitioners are Leopold Stern, Signature Stern and August Goldsmith, business as Stern Bros. & Co., New York; Brown Jewelry Co., St. Louis; Julius Oppenheimer, Henry S. Oppenheimer, Gust Oppenheimer, George H. Oppenheimer, Berthold Smauer, Otto Smauer and Isaac V. Veith, co-partners as Oppenheimer Bros. & Veith, of New York.

On the following days Stern Bros. & Co., their attorneys, Moses, Rosenthal & Condy, filed a petition for a receiver, setting forth that J. F. Dailey & Co. were indebted for goods to the amount of \$30,000, with assets aggregating but \$20,000, of which \$7,000 was in bills and accounts and \$3,000 was in stock; that about Oct. 21 H. Aylesworth, the president of the company, offered the larger creditors 50 per cent of their claims in cash in eight days. The offer was never been carried out; on the contrary, the company has been collecting any of the out-standing accounts and converting the merchandise into cash rapidly; that it has paid none of the creditors with the exception of a claim to a certain bank which had the personal guarantee of Aylesworth and the salaries of the officers of the company.

Immediately upon the appointment of the mercantile Trust and Savings Bank as receiver a petition was filed by the attorneys for Stern Bros. & Co. in behalf of the receiver setting up that from information obtained from employes of Dailey & Co. it was the belief that a portion of the property had been hypothecated with either Willis Melville, the company's attorney, or with the L. Bauman Jewelry Co., or with the L. Bauman Loan Co., or with Edward Bauman the value of \$13,500, and received \$8,000 cash. The petition then asked that the several persons and firms named be restrained from disposing of the property so hypothecated; also asking that Aylesworth, the attorney, Willis Melville, or J. F. Dailey & Co., be restrained from disposing of property in a safety deposit vault in the Security Trust & Deposit Co.'s vaults.

J. F. Dailey & Co. are located at 68 Washington St. and do a retail jewelry business. A. H. Aylesworth, a salesman for a Cincinnati brewery, is president; J. F. Dailey was treasurer, and R. W. Wilson secretary. Mr. Dailey is engaged in business in St. Louis.

It is the intention of the receiver to continue the business at least through the holiday season.

St. Louis, Dec. 8.—J. F. Dailey, jeweler 6th St. and Washington Ave., former secretary and general manager of J. F. Dailey & Co., Chicago, stated to a representative of THE CIRCULAR-WEEKLY in St.

Louis that he has not in any way been connected with the management of the corporation since July 26 last. On the date named, he says, he bought from the corporation all the fixtures, good will, etc., of the St. Louis business, and severed his connection with the company to manage his own business.

He makes the further statement that at the time he turned over the management of the corporation of J. F. Dailey & Co. was in good condition, and he had every reason to look for a continuation of its success. He said that he was in no way responsible for any conditions or acts that have caused the present situation, and wants to assure his friends that his business in St. Louis is in no way affected by the proceedings brought in Chicago.

Arthur Weinreb and Simon Merker Flee and Order of Arrest Is Not Yet Served Upon Them.

Arthur Weinreb and Simon Merker, who were members of Weinreb & Merker, bankrupt jewelry manufacturers at 10 Maiden Lane, New York, have not been served with an order of arrest issued about three weeks ago by Judge Holt, of the United States District Court, on an application to punish the partners for contempt of court in not turning over to the trustee in bankruptcy \$18,200, as they were directed to do by a prior order of the court.

Joseph Rosensweig, who has represented the trustee in the energetic prosecution of the creditors' case during three years of litigation, said yesterday that the bankrupts, according to information he had received, are now in Toronto, Can., so that there is no immediate prospect of their being placed under arrest. At one of the hearings in the case one of the partners is said to have boasted that they would never be brought to jail.

The creditors who stood back of the trustee in refusing several offers of settlement did not conceal the fact that they would prefer to have the partners punished rather than to accept partial payment. Mr. Rosensweig said yesterday that as the two members of the firm had left the country he considered this punishment quite as satisfactory as if they had been placed under arrest.

For some time Messrs. Weinreb and Merker have managed the business of the Merker-Weinreb Co., which had formed since the failure of the old firm. One of the offers which they made in court was to turn over this business to the trustee. They claimed that the capital back of the business was furnished by friends, but said that the latter were willing to have the business transferred to the creditors as a settlement. The rooms occupied by the Merker-Weinreb Co. at 102 Fulton St., New York, were vacated several days ago. All the machinery and other effects were moved.

The order to turn over \$18,200 to the trustee was issued after Judge Holt declared that assets to this amount had been fraudulently concealed by the bankrupts at the time of their failure. He also said that there was a further deficiency of assets amounting to \$60,000, and there were reasons for thinking that some or all of it had been concealed, but as to this the evi-

dence was not conclusive. The total liabilities of the company amounted to \$90,000. At the time of the failure the firm was carrying on a business amounting to \$100,000 a year or thereabouts.

Games Rolled by the Jewelers' Bowling League of New York.

Games played recently in the tournament of the Jewelers' Bowling League of New York resulted as follows:

E. M. Bracher, Well Known Jobber, Adjudicated a Bankrupt at Philadelphia.

PHILADELPHIA, Pa., Dec. 5.—Emil M. Bracher, formerly a Newark, N. J., manufacturing jeweler, but of recent years a jobber of this city, with offices at 920 Chestnut St. and later on at 10th and Chestnut Sts., which office he abandoned some months ago, was last week adjudged a voluntary bankrupt. His liabilities are estimated in the court records at \$20,677.27, and his assets at \$5,000.

It is reported that most of the creditors are New York and New England houses. Mr. Bracher has been widely known in the trade in this city and New York, and is personally popular. An itemized statement of liabilities has not yet been given publicity.

Providence Jeweler Commits Suicide in His Shop by Swallowing Poison.

PROVIDENCE, R. I., Dec. 8.—H. R. C. Lindemann, a metal spinner, committed suicide in his shop at 102 Friendship St. Thursday by swallowing some cyanide of potassium. His son, W. C. Lindemann, and a workman were in the shop at the time, but knew nothing of his act until the former discovered his father's dead body.

Mr. Lindemann was in his 59th year, and long-continued illness is believed to have made him despondent. The funeral was held from his late home, 59 Algonquin St., to-day at 2:30 o'clock. Only the immediate relatives and friends were present, the service being a very simple one.

Death of Martin H. Brown.

MERIDEN, Conn., Dec. 6.—Martin H. Brown, for several years superintendent of the E. A. Bliss Co., of this place, died at his home, 11 Camp St., yesterday morning. Death was caused by a complication of ear disease and kidney trouble. Mr. Brown had been in ill health for over a year, but had recuperated somewhat after a northern trip, and his condition was not considered critical until a couple of months ago. His loss will be keenly felt in his home and at the factory, where he was beloved and respected both by his employers and subordinates. Besides a widow the deceased is survived by three daughters, three others and two sisters.

Mr. Brown was born at Sydney, Cape Breton, Nov. 11, 1846, and at an early age

THE LATE MARTIN H. BROWN.

moved with his parents to Attleboro, Mass., where, when 15 years old, he engaged as an apprentice boy with the S. Richardson Co., working at that time for 40 cents a day. He held different positions until 1882, when he helped to organize the J. R. Nichols Co. He became identified with the E. A. Bliss Co. in 1885, when the concern was located in North Attleboro, and in January of the following year he was made superintendent of the concern, which, in July, 1890, moved to this place. The deceased and E. A. Bliss, president of the E. A. Bliss Co., had been associated for 40 years, the latter being traveling representative for Whitney & Rice when Mr. Brown was foreman. Mr. Brown was a member of the A. O. U. W., of the city, and of the Jewelers' League of New York.

MERIDEN, Conn., Dec. 8.—The funeral of Martin H. Brown, late superintendent of the E. A. Bliss Co., was held yesterday afternoon at St. Joseph's Church, one-half of the body of which was reserved and occupied by 350 employes of the E. A. Bliss Co. The pallbearers were Mayor Thomas L.

Reilly, Henry T. Downs, John McWeeney, M. G. Reynolds, M. Keating, Thomas King, Capt. James J. Laidrigan and John A. Hurley, of Bridgeport. Among the floral tributes was a standing wreath and anchor from the employes of the E. A. Bliss Co.

Death of William Osmond Clark.

PROVIDENCE, R. I., Dec. 10.—In the death of William Osmond Clark, of the firm of Clark & Coombs, manufacturing jewelers, the city loses another of its well-known manufacturers. Mr. Clark's death, which was caused by peritonitis, occurred early Friday morning at his home, 36 Park St. Mr. Clark had not been in the best of health for some time, never having fully recovered from a sunstroke which he sustained in Chicago about 20 years ago.

Mr. Clark was a native of North Attleboro, being born in that town Jan. 1, 1857. He received his education in the public schools of his native town, graduating from the North Attleboro High School when he was 15 years old. After leaving school he went into the employ of Fred. Stanley & Co., North Attleboro, as a traveling salesman.

In 1882 Mr. Clark joined his father in business in the firm of Clark & Coombs, which had been established in North Attleboro 20 years before. March 27, 1903, the firm was incorporated with three of the Clark family as members, these including William, Jr., the father, William O. and Arthur L., two sons. In 1890 the company moved to this city and located at 86 W. Exchange St., the present location.

Mr. Clark leaves a widow and also a father, mother and one brother. He was a member of several Masonic organizations, and also of the United Workmen. The funeral was held Sunday morning at his late residence, the interment being at North Attleboro.

Members of Rochester Retail Jewelers' Association Hold Interesting Meeting—Free Engraving Abolished.

ROCHESTER, N. Y., Dec. 6.—The regular monthly meeting of the Rochester Retail Jewelers' Association was held in the rooms of B. B. Clark, Triangle building, on Tuesday. President Sunderlin not being present, the meeting was called to order by E. J. Scheer. Several plans for the betterment of the trade in general were discussed, but were not made public, as they have not been thoroughly formulated. A price list has been adopted by the association, and it is believed much good will result from it.

At a recent meeting the jewelers decided to do away with the free engraving which has become quite a nuisance. Hereafter only the first name or three initials and the date 1906 will be engraved free, or, if preferred, one old English initial will be engraved free.

In an informal discussion before the meeting the jewelers expressed their views as to the value of the association. Most of the jewelers have already raised the price of some of the articles which heretofore they have sold at a small profit. In most every case it was said that there was no trouble in getting the better price. The meeting was well attended and enthusiastic throughout.

Death of William Kerr.

BOSTON, Mass., Dec. 8.—William Kerr, one of the old-time jewelers of this city, has passed away at the advanced age of 77 years. He was ill but a brief time, an attack of bronchitis ultimately proving fatal.

Mr. Kerr was born March 21, 1830, at Thornhill, Dumfriesshire, Scotland. He came to this country more than half a century ago, locating first in New York, and subsequently removing to Boston. Here he began business on Hanover St., in a small way, gradually building up a snug trade in books and fancy goods, which developed later into the jewelry establishment with which for upward of 40 years his name was identified.

In 1876 he opened a store on Washington

THE LATE WILLIAM KERR.

St., near Essex St., but remained in that location only two years, returning to Hanover St., which he deemed a better section wherein to hold the custom which he had acquired by careful attention to the details of his growing business. In 1888 his son, Albert R. Kerr, was admitted to partnership, the firm name becoming William Kerr & Son, and on the retirement of the senior member in 1904 his son succeeded him in the business.

Mr. Kerr was always mindful of the land from which he came, as well as loyal to the country of his adoption. He was one of the founders of the Caledonian Club, and was identified with the Scots Charitable Society. He was also a Mason and member of the Royal Arcanum. Among his associates and friends in business and social circles he was regarded most highly as a man of sterling character, whose devotion to the Methodist Church, of which he was an active member, was exemplified by practical Christianity in his daily life.

The funeral took place on Wednesday, services being held at the St. Mark's Methodist Church in his home town of Brookline, attended by many friends. Mr. Kerr leaves a daughter and three sons.

Suit to Declare Forfeit Alleged Smuggled Emeralds Postponed at Request of Colombian Government.

In the case of emeralds brought into New York by Manuel Suarez, of Colombia, who failed to mention them in his declaration made to the custom officials, there has been a postponement, due to the interposition of the government of his country. It was expected that the action begun at New York for the purpose of having the stones forfeited would be placed upon the calendar of the United States Circuit Court for December. At the request of the Colombian government, however, the United States District Attorney has held over the case until the February term.

The Colombian government did not explain its reasons for asking for the delay. It is reported, however, that the cause was found in the suspicion on the part of the Colombian officials that the emeralds were taken out of the country in violation of its laws. The rumors that were published from time to time in the daily press with reference to the theft of packets of emeralds en route from the Muzo mines to the sea coast, and from an express company, have, in the opinion of the officials, nothing to do with the present action of the Colombian government. No facts have been brought out indicating that there was any real basis for the reports that the Suarez emeralds are from a stolen packet. The government at Bogota, which owns a large part of the Muzo mines, has placed strict regulations as to the exportation of emeralds, on which it depends for a substantial part of its revenue. The suspicions of the Colombians, it is believed, is that Mr. Suarez disregarded one of these regulations when he took his emeralds out of the country with the purpose of selling them.

At the office of Louis S. Phillip, counsel for Suarez, it was said that the request of the Colombian government for 35 days' postponement came after the authorities at Washington had sent a cable message to Bogota, asking if any claims were to be made. The attorneys said that if the Colombian government should decide to put a claim it would be obliged to do so by appearing in the usual way as a party to the court proceedings in this country. It would have no standing except that of private litigant.

The authorities at New York have already returned to Mr. Suarez the uncut emeralds, as no claim for duty on uncut stones is made. The fact that the rough stones were returned to Suarez suggests that the Colombian government can scarcely make a strong claim upon the stones; if it could, it would, doubtless, comprise rough stones as well as those that are uncut. The uncut stones that are now retained are said to be worth about \$5,000. There were less than 500 carats of both classes. While some were of good quality, others were of cheap grades, with fissures and imperfections of various kinds.

Mr. Suarez has remained in New York since early in October, when he was arrested for smuggling. The smuggling charge is being held in abeyance, and, according to a stipulation made by lawyers,

will be dismissed on the termination of the civil case for the forfeiture of the stones.

Some New York importers who have been watching the case with care are a little suspicious as to the good faith of the Colombian government in interposing. They say that governments of South American countries have before now tried to interfere when one of their subjects gets into trouble with customs authorities in order to assist him.

Bold Thief Shoots at Plainfield, N. J., Jeweler, in His Store and Escapes With Four Diamond Rings.

PLAINFIELD, N. J., Dec. 8.—Remarkable boldness characterized a robbery which occurred Monday night in the jewelry store of Leo Slonim, when a fairly well dressed young man stole three or four diamond rings valued at \$300 to \$400, shot the jeweler in the arm, and, after knocking down Mrs. Slonim, made his escape.

About 10 o'clock the stranger, who is described as a rather good-looking man about five feet six inches in height, entered the store and said that he wished to buy an engagement ring, as he was about to marry a wealthy young lady of this city. The jeweler showed him a lot of rings. The young man seemed to be exceedingly particular in making up his mind, and explained that much depended on producing a favorable impression with this gift. Thus considerable time was spent in the examination of the rings, and the jeweler was getting impatient, as the hour for closing his store had already passed.

The young man had one of the rings on his finger, and the jeweler had just said something as to its quality when suddenly the stranger grabbed several rings from the tray and ran for the door. The jeweler rushed around the counter in time to grapple with the thief. The latter drew a revolver and in the struggle shot three times. One bullet hit the jeweler in the right arm, just under the shoulder. The second crashed through the glass of a show case, and the third went into the floor, at the end of the counter. The jeweler succeeded in throwing the young man, but the latter freed himself and, dropping the revolver and his hat, ran into the street.

Mrs. Slonim, who had hurried to the front of the store, tried to stop the thief, but he threw her down and continued his flight. The jeweler and his wife ran to the street calling for the police. Patrolmen Messler and Flynn heard the cries and hurried to the scene, but the thief had gone by that time. All the police in the city were notified, but no arrest has as yet been made.

The thief had a somewhat florid complexion. He was dressed in a long gray cravenette, a blue sweater with a red collar, and a soft black hat, the latter having been dropped in his flight. The revolver was a .38 caliber weapon.

The home of Edmund Spencer, a retail jeweler of Hudson, N. Y., was recently entered by burglars and robbed of \$400 worth of valuables, while the family were attending services at church. The thieves gained entrance by fitting a key to the rear door in the basement.

Woman Accused of Larceny Sentenced to Prison for More Than a Year.

BINGHAMTON, N. Y., Dec. 5.—In the Supreme Court, Monday, Judge Gladding sentenced Mary Hennessey, the woman arrested last May in connection with Frank Kelley, to a maximum of one year and 10 months and a minimum of one year and 10 days in the Auburn prison. Although the prisoner was taken into custody on the charge of being an accomplice of Kelley, who is now serving on the charge of stealing rings from the store of Judson S. Newington, and was indicted on this charge, the indictment on which she was sentenced was grand larceny in the second degree, found

MARY HENNESSEY CONVICTED OF LARCENY.

on the complaint of J. A. Merrill & Co., Portland, Me., from whom it is alleged she obtained a diamond ring fraudulently.

After Kelley and Mary Hennessey were indicted the latter was released on a \$4,000 bail, and when Kelley was called to trial late in October her bail was forfeited, but she appeared later and explained her absence. The fact that one indictment was dismissed as well as the lightness of the sentence given to the prisoner caused a report to the effect that Mary Hennessey had given the authorities valuable information which may develop into something sensational. None concerned with the case would give any information on this subject, except to say that Judge Gladding had dismissed the second indictment because he considered the evidence insufficient to sustain the charge.

Simple Methods by Which Imitation Emeralds May be Quickly Discovered.

An interesting communication on the subject of Imitation Emeralds, now the market, was recently received from Hopkins, 58A, Hatton Garden, London, well known authority of England. He

Having noticed in an article of the CIRCULAR-WEEKLY of Oct. 31, references to imitations of emeralds, perhaps the following facts may be of service to those dealing in precious stones. At the present time there are two good imitation emeralds on the market. One known as 'soudées' is made from pale pieces of the genuine stone, and after being cut through the girdle the surfaces are polished and the two portions joined together, generally with Canada balsam mixed with coloring matter to produce dark-colored stones. This is an old dodge, but as a considerable quantity has been seen lately I thought perhaps it would be worth while mentioning it, as they have natural feathers and markings, and if viewed under the joint is difficult to see. Under magnifying glass air bubbles can generally be seen between the two surfaces, the one will stand very little heat, and if held over the flame will come apart. Acids will also dissolve the balsam.

The hardness of the other variety on the market is nearly that of the genuine emerald, therefore a file is not a very efficient test. In most specimens small glassy bubbles permeate the substance. The specific gravity varies considerably (2.50-2.65), and is lower than that of the emerald, as can be seen readily with the tubes containing methylene iodide mentioned in my CIRCULAR-WEEKLY, Sept. 12. The refractive index is rather lower (1.56-1.58), but the best test is the dichroscope. In the genuine emerald, when pale, the two tints can be seen very distinctly, although the darker the specimen the better the result will be, one is being a yellowish green and the other a bluish green, while those of the imitation are both of the same hue.

In the article, published Sept. 12, particularly for manipulating the dichroscope were given for those who have not yet used this instrument, in order to get the best results. It came to my notice recently in which the owners wished to prove that emeralds do not all possess dichroism. Reference was made to a work by the Abbé Haüy 'Suite des Caractères physiques des pierres précieuses.' As the Abbé was one of the earliest to classify minerals, especially concerning their crystallography, naturally errors occurred. The book was published in 1817, and as a few (?) works on the same subject have appeared since the reference was not very convincing. It is a fact, however, that in some specimens from Sierra the dichroism is not so apparent as in the Columbian stone, but it is always there, even if not so pronounced.

On inspecting a parcel of the imitations offered the peculiar shade of color immediately attracts one's notice, many of the pieces having a color midway between an

olivine (demantoid) and an emerald; however, there are a few, especially among the paler colors that are very misleading, as they possess a tint very close to the well-known emerald green.

"Some months ago a printed list was sent to me with prices of 'reconstructed' rubies, and in the column adjoining a list, also per carat, of 'reconstructed' emeralds (?) varying from \$2 to \$12 per carat. On lightly touching the latter with a file they proved to be pastes, pure and simple.

"Therefore, with the aid of the dichroscope, a file, and perhaps the specific gravity tubes, there need be no reason why the dealer should be misled as to the genuineness of any specimen. These are simple tests, cost only a few dollars and can be applied in a few moments."

Attleboro Manufacturers Enjoying a Busy Christmas Season.

CHRISTMAS is so close at hand that the tired jewelry manufacturers, with heads full of the cares of their business, are clearing little corners of their brains to study up what they will do in the way of celebrating. They have been so busy making the gifts with which others will observe the holiday that they are almost the last ones to think of Christmas except as a goal in a strenuous game. They must get the Christmas orders out in time to be sold in the retail stores before Christmas, and that word *must* is spelled with big, red capitals and dances before the mental vision of every manufacturer. Nevertheless, the first fact remains that this important holiday is nearly here, and it will mark the practical close of the enormous business done in 1906.

Since no victories are ever won tomorrow that were not planned yesterday, so the jewelry manufacturer is already peering beyond the holiday into the first days of 1907, for he sees there a continuation of the same strenuous business. Inquiry among the leading jewelers finds them far from talkative, but they condescend to stop long enough to say that the outlook for next year is fully as good as it was for the season drawing to a close. For the jeweler the arrival of the new year is like the checking station to the long-distance cyclist—a minute for rest, and then away again on the next part of the course.

An ingenious young man, after talking with many jewelers, has figured it out that \$2,000,000 will be coming into Attleboro early in January to pay for goods now being shipped on credit.

The Sad Tale of a Sport, a Philadelphia Jeweler and a Rented Diamond.

AS the result of a sporting man's passion to make a "splurge," especially to outdo the sporting men of New York City, Charles H. Dean, a diamond dealer, 715 Sanson St., runs a fair chance of being \$2,500 out of pocket. It happened, so far as can be learned, in this manner: A promoter of boxing bouts and other strenuous pastimes, was especially anxious to be able to flourish the biggest diamond ring at a meeting recently of noted pugilists and their friends in the Quaker City. For the occasion he rented a 17-carat ring from Mr. Dean, agreeing to pay \$10 a day for its use. With this diamond were two others—three altogether—set horizontally, and their luster was dazzling in the extreme.

The promoter made the hit of the evening. But when it came time to return the ring, he modestly reported to the anxious Mr. Dean that he had lost it. But he offered \$500 reward for the return of the ring, while Mr. Dean consulted his attorney. The promoter was obliged to retain an attorney. At a conference of the attorneys it was decided that the buyer should be given some days of grace in which to return the ring. Failing to do so at the expiration of this time, Mr. Dean declared he will cause this customer's arrest.

While the story of the rented diamond was given wide publicity in the Philadelphia papers, recently, there are some in the trade uncharitable enough to intimate that it may be simply another of a sporting man's self-advertisement schemes. However, much of this kind of speculation will be ended when the ring is either recovered or the promoter is sued or arrested. Mr. Dean declares that the ring is one of his most valuable pieces, and one out of which he has made a handsome income renting it to prize-fighters at as high as \$20 a night. Concerning the disappearance of the "sparkler," Mr. Dean says:

"This man came to me and said that he would have a number of New York sporting men at his club that night, and, as he put it, he wanted to show the New Yorkers that the Philadelphia sports were as hot as they. It was nothing unusual for me to rent diamonds to this man, although he had never handled one of mine that was as expensive, and he always paid the price for their use that was agreed to, and always returned them promptly. Consequently, I had no hesitancy in letting him have the ring he wanted. It contained three large stones, each worth \$1,000, and as he put it on his finger he said to me with delight: 'This is certainly a great sparkler, and maybe it won't make some of those New York "mugs" sick to get in the radius of it.' Afterward he came to me almost in tears and told me that he had lost it during the boxing exhibition. Of course, I feel sorry for him, but the story that he lost it does not go with me, as I want my ring or the money that it cost me. The matter has about reached out-time limit. It may be hard luck for him, but that is his lookout, not mine."

At the Pen and Pencil Club, the newspapermen's organization, the "story of the rented diamond" is regarded as worthy of "Jim" Bagley in his palmiest days.

Our Traveling Representatives

Carl Platte, with Reed & Barton, was in San Francisco, Cal., recently. Herbert Richman is in San Francisco, Cal., representing Joseph H. Fink & Co., New York. A. J. Howell left San Francisco, Cal., for Portland Ore., last week, in the interests of J. A. King & Co.

Paul A. Farber, representing the Dueber Watch Case Mfg. Co., has just left San Francisco, Cal., for the southern part of the State.

Edward Innes has just returned from a successful trip south for the Henry M. Abrams Co., San Francisco, Cal. Mr. Innes' wife accompanied him and the couple made a short trip to the Grand Canyon of the Colorado.

The following traveling representatives called on the trade in Kansas City, Mo., during the past week. Fred. D. Smith, Reeves & Browne; Walter Strauss, Jacob Strauss & Sons; F. C. Allen, Mansbury & Nellis; Edgar Huhn, Potter & Buffington Co.; Henry H. Jacobson, Jacobson Bros.; George Perry, F. H. Sadler Co.

Among the traveling representatives in Omaha, Neb., last week, were: Ira C. Jones, Chas. L. Bout & Co.; F. K. Horton, Carter, Howe & Co.; David Beer, Bernheim & Beer; Julius Herrmann, Herrmann & Co.; Moses Wolfe, M. Wolfe & Nelson Hagnauer, Eisenstadt Mfg. Co., and D. Wilkins, Ostby & Barton Co.

Traveling representatives who called on the Cincinnati, O., trade, during the past week, included: Harry Higham; T. S. Sturgis, Perley Bros.; Fred Allen, D. Wilcox & Co.; J. M. Morrow; John Moffitt, Battin & Co.; F. C. Allen, Sansbury & Sons; Thomas E. Rogers, Riker Bros.; C. L. Angler, Mandeville, Carrow & Crane; Walter R. Kuhn, Kohn & Co.; Harry H. Miller, Hutchinson & Huestis.

Lancaster, Pa., was, recently, visited by the following representatives: Enos McGue, William Kerr Co.; Charles F. Sweazy, Champenois & Co.; L. A. Burt, R. Wallace & Sons Mfg. Co.; B. Ehlers, Ehlers & Co.; H. A. Wintermute, William Bennis Co.; Sol. Sickles, M. Sickles & Sons; W. D. Hicks, Jr., J. A. Whaley & Co.; J. Frank Rebeck, Gillette Sales Co.; T. A. Brennan, Witsenhausen; Mark A. Holland, E. Howard Hatch Co.

Among the traveling representatives who called on the trade in St. Louis, Mo., were: Edgar Huhn, Potter & Buffington Co.; Thomas E. Rogers, Riker Bros.; F. R. Horton, Carter, Howe & Co.; F. Samuelson, Towle Mfg. Co.; Wallace E. Elch, Hoyt, Obrig & Geiger Co.; Mr. Hartshorn, Rementz & Co.; William Matsehe, A. Joralemon Son; Henry H. Jacobson, Jacobson Bros.; F. C. Len, Sansbury & Nellis; Fred D. Smith, Reeves Brown.

Among the traveling representatives who visited the trade in Pittsburg, Pa., last week, were the following: T. S. Sturgis, Perley Bros.; E. A. Reed, Reed & Barton; Charles T. Dougherty, Wm. L. Weston & Co.; L. H. Smith, Bippart, Griscom & Horn; A. J. Sherrard, Enos Richardson & Co.; T. Griffith, Jr., Carter, Howe & Co.; Wallace E. Elch, Hoyt, Obrig & Geiger Co.; Maurice John, Silbermann, Kohn & Wallenstein; L. Rauss, C. P. Goldsmith & Co.

Traveling representatives who visited Denver, Colo., during the past week, included the following: A. Rosenberg, Alling & Co.; Louis Freund, Henry Freund & Bro.; Sig. Thiem, J. Swartz & Co.; Zach. A. Oppenheimer, Zach. A. Oppenheimer Co.; John O. Slemmons, J. B. Bowden & Co.; Lancel Stone, Shafer & Douglas; H. J. Perl, Wagner Mfg. Co.; E. Lake, Elgin National Watch Co.; H. H. Jacobson, Jacobson Bros.; Joseph Scher, Alvin Mfg. Co.; George Brown, Carter, Howe & Co.; S. H. Sheffel, Providence Stock Co. Traveling men visiting Boston, Mass., during the week, included: Charles F. Duffy, Enos Richardson & Co.; C. H. Crane, Strobell & Crane; Frank Locklin, Battin & Co.; W. H. Allardyce, Edward Todd & Co.; John D. Dalzell, J. D. Dalzell

& Co.; A. G. Van Houten, C. Sydney Smith & Co.; L. Henry Juergens, Snow & Westcott; George A. Neumann, Alling & Co.; F. T. Sloan, Sloan & Co.; D. Tomkins, Mabie, Todd & Bard; J. R. Scofield, T. W. Adams & Co.; V. S. Chapman, Osmond-Parker Mfg. Co.; H. B. Rogers, Thiery & Rogers; William H. Sparks, Seth Thomas Clock Co.

General Appraiser Sustains, in Part, Advances on a Shipment of Drilled Pearls.

Under a decision announced last Thursday by the Board of United States General Appraisers, New York, 30 drilled and unmounted pearls shipped here by Golay Fils & Stahl, Geneva, Switzerland, were increased in valuation for customs purposes from 18,000 francs, the invoice figure, to 21,600 francs. The importers are accordingly called upon to pay in additional duty and penalties nearly \$1,000 before the pearls are released from the custody of the customs authorities.

The 30 pearls are part of a necklace, and 60 more, it is understood, are now in Paris. The necklace was sold to a person not in trade, whose name is not revealed. The shipment was made by the Geneva company to a forwarding agency at New York. Appraiser Fowler ordered an advance of 50 per cent. just inside the line of forfeiture.

An appeal was taken to the General Appraisers, who took the testimony of a number of merchants as to the value of the pearls.

While the case was pending the Board received a letter from the Geneva firm admitting that the pearls were worth more than the amount stated in the invoice. The Swiss dealers said that they had bought the pearls about nine months before the shipment was made, and during this time pearls went up in price. The dealers said that they did not understand the requirement of the American tariff law as to giving actual value at the time of shipment. They said that they had given the prices which they actually paid, supposing that this was sufficient.

No question was raised as to the right of the shipper to send in the articles as pearls in the natural condition, dutiable at 10 per cent. The fact that the pearls were once part of a necklace and that the other parts may be shipped later was not taken into consideration.

General Appraiser Sharretts, on whose finding the Board announced its decision, said that he had valued the pearls, as to their individual worth, without any regard as to whether or not they ever had been a part of a necklace or are to be used as such again. The original advance of 50 per cent. ordered by the appraiser is reduced to 20 per cent. by the Board's decision.

A prominent importer said that while the 30 pearls could not be classified as a necklace, yet if the others are imported there is nothing to prevent Uncle Sam from re-liquidating the present entry and claiming a 60 per cent. duty on the entire collection. In view of recent developments, some doubt is expressed as to whether or not the other pearls will be brought here.

W. W. Wilcox, formerly at Hesperia, Mich., has gone to Fremont, Mich.

Newell & Fisher Mfg. Co. Make a General Assignment at Providence.

PROVIDENCE, R. I., Dec. 10.—A general assignment for the benefit of all creditors was made by the jewelry firm known as the Newell & Fisher Mfg. Co., with a factory at 14 Blount St., Saturday. The assignment followed closely an attachment placed on the property last Friday by Bliss & Walsh, attorneys, for Rudolph G. Grode & Co. The amount of the liabilities is said to be between \$8,000 and \$10,000. The concern making the attachment claimed that \$187.31 was due for work done in gilding jewelry.

According to one of the attorneys representing Mr. Grode, the Newell & Fisher concern has been making attempts to arrange with creditors so as to get more time and continue business. Lewis A. Waterman, who is the assignee, said to-day that the assignment was a temporary step taken to prevent the preferment of any one creditor over another, and that the business probably would be continued.

Dr. John L. Fisher, who is one of the members of the firm, said in an interview: "Ever since Harry Arabian was taken into the firm about six months ago we have been making good. Before he came we had been running into a hole. The business was mismanaged, things were ordered which were never used, and debts contracted which were a heavy burden to the firm. We finally found that there would have to be some change, and after looking around for a practical man found Mr. Arabian. He is putting the firm on its feet.

"In the last six months we have met all obligations that have been contracted in that time, and we intend, and I am confident of our ability, to pay every cent we owe. The outlook was never so bright as it is now, and I believe that our book accounts will demonstrate that clearly. We are not going to cheat any of our creditors. We are going to put a fair proposition before them, and if they will give us time we will pay them. They all came down on us at once for payment and we simply could not pay them at one time, that's all."

It is understood that the bill which Grode & Co. pressed for settlement was made last March.

The firm of Newell & Fisher was established about three years ago, the members of the firm consisting of A. C. Newell, Alvah A. Fisher and Dr. John L. Fisher. The partnership was terminated some little time ago, and Mr. Newell was succeeded in the concern by Mr. Arabian and the present style adopted.

A meeting of the creditors will be held in the office of the assignee Wednesday afternoon.

An unusual diamond robbery occurred at Gray, Gibben & Gray's store, Indianapolis, Ind., last week, when a man about 40 years of age walked out of the place with a \$350 unset stone. The man called for several uncut diamonds, and, although he apparently did not handle any of those put before him, one was missing when he left. The clerk who waited on the customer thinks he used wax to stick the diamond to his finger as he pointed to it.

"GEMFINDER" takes a melancholy pleasure in referring the trade to his advertisement of April 25th last, in the "Jewelers' Circular." Unfortunately, his prophecy has been fulfilled. Not only have Precious Stones advanced, but the end has not yet been reached. Sapphires have gone up at least 25 per cent. in the last six months, and they will go still higher.

"Gemfinder" again warns prospective buyers not to delay. All kinds of Precious Stones are scarce and prices on some may become prohibitive.

New Stores and Enterprises.

W. T. Marcuson is a new jeweler in West Point, Nebr.

Ward O'Neil opened a store at Ashland, Nebr., last week.

T. B. Gasser is about to open a new store on Dayan St., Lowville, N. Y.

A Kuentzler opened a retail store at 16 Lexington Ave., Passaic, N. J., Dec. 10.

Riley Jones, formerly of Phoenix, Ariz., has started in business in Pasadena, Cal.

The Land da La Selle Co. is the name of a new jewelry concern at Mission and 22d Sts., San Francisco, Cal.

P. Reber is a new jeweler at Angels Camp, Cal. Mr. Reber will also carry an extensive line of cut glass and china.

The Essex Optical Co. was recently incorporated in Lynn, Mass., with a capital stock of \$10,000, to engage in the optical business. The officers are: President, A. Hayes, Lynn; treasurer, E. P. Ordway, Boston.

The Beckwith Employees Time Register Co. has been incorporated in East Peoria, Ill., with a capital stock of \$16,000. The officers are: President, C. E. Beckwith; vice-president, John W. Kinross; treasurer, J. A. Angle; secretary, W. G. Felton; superintendent, F. Feldt.

Rochester.

At the annual meeting of the Rochester Credit Men's Association held a few days ago at the Chamber of Commerce rooms the following officers were elected for the coming year: President, Philip Present; vice-president, W. B. Conkling; treasurer, Lee Richmond; executive committee, J. H. Empert, W. T. Connor and C. S. Bradt. Edward Weter is the permanent secretary of the organization. The treasurer's report showed receipts of \$2,061.36 for the year and disbursements of \$2,058.79. Secretary Weter reported that the association now had a membership of 185, an increase of 11 during the year. The address of the evening was delivered by Prof. Geo. M. Forbes on "The Banker's Secret."

Sneak thieves entered the jewelry store and pawnshop of Isidore Davis, State St., early Sunday morning, and after taking 20 silver watches, a number of gold and silver rings and a quantity of other jewelry left by a rear window. The value of the booty secured by the thieves is in the neighborhood of \$300. The robbery was not discovered until Sunday afternoon, when a son of Mr. Davis went to the office for his keys. The police were notified at once and are now on the track of the thieves. It was found that two, possibly three, men were implicated in the robbery. The store is on the second floor above an express office. The tracks of the men were found in the roofs of the buildings in the rear of the store.

Columbus, O.

The Simmons Optical Co. has gone out of business.

James E. Curran, Zanesville, O., who was adjudicated a bankrupt Aug. 17 last, as applied to the United States Court for discharge of all his debts, and a hearing on his petition will be had in the Federal

Court in this city Dec. 14, at 9 A. M., at which creditors are asked to appear and show cause, if they have any, why the discharge should not be granted.

New Orleans, La.

Henry Roder has enlarged his place of business in Chartres St., near Bienville St.

The auction at the A. M. Hill's establishment still continues, and the sales have been so large that most of the stock has been disposed of.

The handsome prizes awarded for the championship skating contests at the Audubon Park Rink were furnished by M. Scooler. The prizes were on exhibition in the show windows of his store for a week past, and attracted much attention.

Benjamin G. Barton, known as Father Time's first lieutenant, who for 50 years regulated the city's clocks and saw to the curfew bell, died at his residence here Thursday night, having reached a great age. Mr. Barton was well known in his capacity of guardian of city clocks, and the office, now that he is gone, descends to his son. Mr. Barton was born in Saratoga, N. Y., and during the Civil War served with great distinction in the Confederate Army.

News from the Optical Trade.

J. F. Haselton, optician, Philadelphia, Pa., recently opened an office in the Hub block, Shenandoah, Pa.

L. A. Dolliver, representing the Chimm-Beretta Optical Co., San Francisco, Cal., is making a tour of the San Joaquin Valley in behalf of his company.

The optical department window of the Macey Jewelry Co., San Francisco, Cal., has lately been beautified by the addition of several new plate glass shelves.

The San Francisco Optical Co. has opened another store at 1613 Fillmore St., San Francisco, Cal. This store contains two large show cases, two dark rooms and two parlors.

The Hirsch & Kaiser Optical Co., at 1757 Fillmore St., San Francisco, Cal., has just installed two large show cases. This company has again secured the service of its old optician, Dr. K. Knuttsen.

Many prominent residents of Nunda, N. Y., are anxious to learn the whereabouts of a man who recently defrauded some of the people in that town by professing to be an expert optician and securing exorbitant prices for his eyeglasses. He assumed the name of a well-known optician of Perry, N. Y.

The optical department of the United Jewelry & Optical Co., San Francisco, Cal., has almost been completely crowded out by the jewelry department. At present the company is looking for special rooms for the optical department, and it is believed quarters can be obtained on an upper floor of the same building with the jewelry department in the near future.

Adolph Roth, a watchmaker and diamond expert, Syracuse, N. Y., recently purchased the business of the late George E. Wilkins, of that city, by whom he had been employed for 22 years. Mr. Roth will continue the store on Vanderbilt Sq. without change.

ELSIE BEE'S FASHIONS.

NOVELTIES SEEN IN A LADY'S RAMBLES AMONG THE JEWELERS.

THE appearance of simplicity has been worked up to a fine art, as instanced among costly toilet accessories. To those who have the exceptional privilege of possessing always the irreproachable, a solid gold set comprising 13 pieces of convenient adjuncts to the toilet table will be of interest. The brushes have concave backs and the entire set is in perfectly plain, bright finish.

*

One of the very thin watches has the case of plain, dark blue enamel with a very narrow band of white between the blue and the gold rim.

*

It appears that a quiet effort is being made to bring some adaptable articles of jewelry more in accord with the pronounced picturesque effects now in vogue for dress.

*

A new and fetching design is the turnover collar effect, as seen in an exquisite creation in fine diamond work, edging the top of a black or white velvet band for the neck.

*

Pearls of great price and beauty have been much worn the past season. They are the daintiest of ornaments, and are always permissible when colored jewels are, possibly, tabooed.

*

That very fine but heavy gold work which is richly set with gems is bidding for favor is shown in brooches, pendants, chains and some other articles giving expression to new patterns in this style.

*

For those who are somewhat economically inclined, and who desire dark, rich coloring, garnets are very much in evidence for necklaces with pendants, for bracelets and brooches in very decorative designs.

*

Some new effects, quite out of the ordinary, are shown in color schemes, the principle of which is applied even in inexpensive articles. A pretty trifle is a cross composed entirely of aquamarines showing the different colored stones in an attractive arrangement.

*

As novelties in the line of bracelets the following designs may be mentioned: The top of a gold band inset with a spider's web in gold wire, upon which rests a gold and diamond spider. An open lattice work pattern set with stones at the intersection of the lines, and an extremely wide and heavy band of rounded plain, bright gold.

*

Of strikingly unique design is a pendant brooch having a chic center of rare pink coral, which clever art has framed about with yellow gold that is further enriched with emeralds, pearls and diamonds, in a daring color scheme. The pendant of pink coral is finished in a style to correspond in successfully completing this attractive and very picturesque creation.

Lancaster, Pa.

Homer Boyd has gone to Asheville, S. C., for his health.

G. William Reisner, manufacturing jeweler, has just been elected to a post of honor in Charles M. Howell Lodge of Masons.

Oscar M. Lowrie, formerly of this city, now with Faust & Co., Allentown, Pa., visited Lancaster recently for a short visit.

If nothing unforeseen occurs the Hamilton Watch Co. will begin the manufacture of an O-size movement early in the new year.

E. J. Guilford, a department foreman at the Hamilton Watch Co.'s factory, was last Thursday elected Chancellor of Lancaster Council, Knights of Columbus.

F. A. Peters, of the H. S. Meiskey Co., was in New York last week for a few days. Charles Reisner, representing this firm, has returned from an extended trip.

Levi J. Miller, an Ephrata jeweler, has just purchased a farm of 118 acres, and will occupy it in April, retiring from the jewelry business, in which he was engaged for many years.

Jerome J. Fanning, a Cincinnati jeweler, who was recently laid up at the Stevens House here for a couple of weeks by an illness, left for his home last Saturday, though he was still in very feeble health.

Among the jewelers visiting Lancaster last week were Howard Kege, with H. R. Yerger, Columbia; Henry Foehl, Columbia; H. F. Andrews, Strasburg; Jacob Fisher, Elizabethtown; Mr. Hoover, of E. G. Hoover, Harrisburg; H. L. Oberlin, Oberlin Bros., Columbia.

John J. Bowman, of Ezra F. Bowman's Sons, spent several days of last week in Philadelphia. L. G. Snell, Waltham, Mass., has entered the Ezra F. Bowman Technical School as a student in watchmaking. Jerome De Lancy Clark, Batavia, N. Y., has entered the school as a student in engraving.

The jewelers, with other merchants, will keep their stores open for Christmas trade from Dec. 15 to 24, though the jewelers demanded two weeks of night trade. As they have no organization, they were unable to make their influence properly felt, so the dry goods organization set the time. This is not the first time the local jewelers have felt the need of organization.

Boston.

The stock of Geo. T. Geer, 387 Washington St., was recently sold out under foreclosure proceedings.

The funeral of Charles A. Easton, who died at Hyde Park recently, was held last week from his home, 27 Central Ave. Rev. S. L. Elberfeld, pastor of the First Unitarian Church, officiated. There was also a Masonic burial service. The interment was at Fair View Cemetery.

A lady's gold watch was presented to the fair at Franklin Sq. by Ezra C. Fitch, president of the Waltham Watch Co. The proceeds of the sale of the watch will go toward the fund being raised. Albert Metalf, of the Dennison Mfg. Co., presented the paper decoration for the fair booths.

Marshall Thompson, receiver for the T. Tuttle Silver Co., has filed his petition

to sell all the assets at auction, and creditors and other persons interested are cited to appear in the Superior Court at the equity session, Wednesday, Dec. 26, and show cause, if any they have, why the petition of the receiver should not be granted.

News Gleanings.

E. W. Smith, Tingley, Ia., is now at Gravity, Ia.

R. E. Stacy moved recently from Waynesboro to Elberton, Ga.

Wilber H. Reeves, Mondamin, Ia., has removed to Manila, Ia.

F. W. Thomas, formerly of Panora, Ia., is now at Gregor, S. Dak.

G. W. White has removed his stock from Cherokee to Mulberry, Kans.

Edward C. Draper, formerly of St. Anne, Ill., is now at Rochester, Ind.

Myron W. Wiard, Carson City, Nev., recently moved to San Diego, Cal.

E. R. Welker has sold his business in Liberal, Mo., to Rhodes & Drake.

George D. Gardner, Petoskey, Mich., has given a chattel mortgage for \$1,500.

Buhn Bros., Sedro-Woolley, Wash., have opened a branch store in Everson, Wash.

Cramer & Koch is the firm style of the business now carried on by Mrs. Amelia Cramer, Effingham, Ill.

The third meeting of Local No. 21 of the International Jewelers' Union, Seattle, Wash., was held at the Labor Temple, in that city, about a week ago.

W. H. Finck, Seattle, Wash., recently filed plans for a \$30,000 apartment house on the southwest corner of Boylston Ave. and East Olive St. His present residence will be moved to the next lot on the south.

A. Krugman was found guilty recently in Seattle, Wash., by Judge Gordon, of misrepresenting the quality of a watch which he sold to J. Lewis at auction. He was fined \$100, after which he gave notice of appeal. Krugman was also found guilty on the same charge by a jury in the Superior Court several days ago.

Walter A. Whitney, Brushton, N. Y., recently purchased the business conducted by Leopold Schneider, of the same town. Mr. Whitney will remove his stock to the store occupied by Mr. Schneider. Charles Chaffee, until recently with a large jewelry house in New Orleans, has been engaged by Mr. Whitney in his repair department.

A plate glass window in the store of Frank Holt & Co., Newark, N. J., was broken by a brick hurled through it Monday afternoon, and Joseph Sands, homeless but known to the police, was immediately nabbed by the police. It is said that Sands threw the brick, and was arrested before he had time to thrust his hands inside for the purpose of grabbing any jewelry. He was committed to jail in default of \$500.

At the last meeting of the Advisory Council of the New England Manufacturing Jewelers & Silversmiths' Association, of which Harry Cutler is chairman, Harry Mays, of the George W. Dover Co., gave an interesting talk on the formation and progress of the Jewelers' Finding Board of Trade, which was organized some time ago in this city. The meeting was unusually well attended, and its educational nature was much appreciated.

Savannah, Ga.

M. Sternberg has opened a store at 149 Bull St.

A dividend of 2 per cent. was recently paid in the M. Sternberg bankrupt case by Trustee John E. Schwarz.

S. E. Theus, of Theus & Co., is chairman of the entertainment committee of Aloe Temple, Mystic Shriners of Savannah, and will be in charge of an oyster roast at Thunderbolt, Dec. 17, in compliment to the visiting Shriners who will attend the annual meeting and ceremonial session of Aloe Temple. Mr. Theus was also chairman of the entertainment committee during the reunion of Confederate veterans recently held in Savannah.

Trans-Atlantic Voyagers.

TO EUROPE.

O. T. Jonassohn, New York, sailed recently on *La Savoie*.

Emil Lewy, of Lewy & Cohen, New York, sailed last Wednesday on the *Vaderland*.

Henry Bodenheimer and Samuel Jaskow, both of Bodenheimer & Jaskow, New York, sailed last Wednesday on the *Oceanic*.

On *La Lorraine*, sailing last Thursday, were C. August Windels, of Powers & Mayer, New York, and Harry C. Adler, of Charles Adler & Sons, New York.

Sailing recently on *La Provence* were E. Arnstein, of Arnstein Bros. & Co., New York; B. Hyman, of Hirsch & Hyman, New York; H. E. Oppenheimer, of Henry E. Oppenheimer & Co., New York, and Emanuel Jacobson, of Jacobson Bros., New York.

Death of William J. Beecher.

VASSAR, Mich., Dec. 5.—William J. Beecher, a jeweler of Sandusky, died in this town at the home of his father-in-law, M. C. Graves, also a jeweler, this morning of consumption.

Deceased was born in 1862, and received his education in the local public schools, after which he learned the printing business. He remained there for some time, and in June, 1904, was married to Miss Lena Graves, of this place. Beecher then went to Bad Axe, where he learned the jewelry business, and one year ago started in business at Sandusky, Sanilac County.

Three months ago Mr. Beecher was compelled on account of his ill health to give up his business, and returned to Vassar, but he continued to steadily grow worse until death. He is survived by his widow, father and mother, and a brother and sister.

Two of the Men Arrested for Robbing Utica, N. Y., Jeweler, Plead Guilty and Are Sentenced to Prison.

UTICA, N. Y., Dec. 10.—John Bliss and Albert Young, two of the men arrested for stealing about 25 diamonds in the jewelry store of Joseph Wineburgh & Sons, in July last, changed their pleas in County Court this afternoon and instead of standing trial the man acknowledged the robbery. Bliss was sent to Auburn prison for one year and Young for three years and nine months.

Thomas Hayes, the other man under indictment here, refused to alter his plea. He says he had nothing to do with the job and will stand trial.

Diamonds Set Without Cost

means a lot of money saved during the year.

This you can do very easily if you put the above assertion to the test. Bring me a platinum mounting with the requisite number of diamonds, and after I have set the article you will admit that through my skilful and artistic setting the diamonds have gained in brilliancy and quality, and that as a result your mounting has improved greatly and has enhanced three times the value you paid for the setting. At the same time your customers are satisfied with all the orders you turn out. You can also compete with all those who are slow to grasp the importance of these facts.

A trial will convince you of the above. I can refer you to the most reliable houses in the jewelry trade, who will testify to my reliability and to the skilful manner in which I execute my settings on fine.

Providence.

A number of local jewelers visited the automobile show in New York last week.

Edwin Evans, of Waite, Matthewson Co., 15 Chestnut St., leaves for St. Augustine, Fla., this week with Mrs. Evans.

A new firm of stone setters has begun business in the new Lederer building on Washington St. under the style of Hansen & Millard.

Fair prices as a rule were obtained at the auction sale of the jewelry manufacturing plant of Albro & Kettlety, who recently made an assignment. The machinery, etc., were sold in small lots.

Henry Tilden, of the Tilden-Thurber Co., who is seriously ill at his home in this city, as reported at last accounts to have improved somewhat, his condition being such as to offer slight encouragement to his family, although he is still a very sick man.

William Loeb, who has withdrawn from the firm formerly known as William Loeb & Co., will hereafter devote his energies to the Rhode Island Ring Co. Before settling down to an aggressive business campaign for Loeb will enjoy a 60 to 90 day ocean trip.

A jury before Judge Baker in the Superior Court last week returned a verdict for the plaintiff for \$4,500 in the suit of Louis Afremoff against the Cutler Comb Co. The amount of damages claimed in the suit was \$5,000, the plaintiff claiming that as a result of an explosion of celluloid dust at the company's factory about a year ago he lost his right eye. It is understood that the loss will fall, if the verdict is sustained, on the Employers' Liability Insurance Co., and not on the defendant company.

The Washington Real Estate Co.'s building on Sabin St., in which a number of manufacturing jewelry firms are located, was purchased at auction last Tuesday by Isaac Kahn, who has for some time been agent of the building. The price paid was \$12,000 over and above a mortgage of \$100,000 held by the Citizens' Savings Bank, of this city. There are upwards of 25 firms engaged in the jewelry business, or allied industries, in the building, and the deal is one of the most important of its kind that has taken place here in some time.

Fire which broke out Friday evening in a block on Westminster St. caused considerable loss to various firms in the building, among them F. M. Silva, optician, who had his place on the second floor, and R. H. Whitman, stone setter and jeweler, who had quarters on the third floor. Mr. Silva estimated his loss at \$1,500, while Mr. Whitman thought \$300 would cover his. Mr. Whitman succeeded in removing a considerable quantity of his goods, including about 4,000 worth of diamonds which he did not care to intrust to the safe.

The A. C. Messler Co. has discontinued the manufacture of celluloid combs, having disposed of that department of its plant to the C. H. Eden Co., Attleboro. Owing to the stringent requirements of the local Insurance Association, the A. C. Messler Co. found it impracticable to continue this particular branch of the business in its present quarters. The concern has taken advantage of the extra space formerly occupied by the comb plant to extend its jewelry facilities, and has added a line of

bracelets and link buttons to its regular line.

Following the announcement of impending changes in the firm of William Loeb & Co., 101 Sabin St., came the formal announcement last week that the concern will hereafter be known as the Lyons Mfg. Co., Louis Lyons, who for upwards of 10 years has been connected with the firm, having purchased Mr. Loeb's interests. At the Newman, Wednesday evening, Mr. Loeb gave a dinner in honor of Mr. Lyons, at which were present Mr. and Mrs. Loeb, Stanley Loeb, Mr. and Mrs. Lyons, Albert Cohen, of Chicago, and Louis Schoenberg, of New York, two of the oldest salesmen in the employ of the company. A pleasant feature of the gathering was the presentation of a silver loving cup to Mr. Loeb by Mr. Lyons, while responding for all the salesmen of the firm in expressing to Mr. Loeb their appreciation of the relations which had existed between them, and the presentation of gold watches to Mr. Cohen and Mr. Schoenberg by Mr. Loeb, engraved with pictures of their respective families.

North Attleboro.

Heron I. Smith has gone to Chicago on a business trip.

Henry Hines will succeed Eugene Hawkins as foreman of Whiting & Davis, Plainville.

John Morrill has opened a jewelry store in Milford, and with that as headquarters is conducting a jobbing business.

With genuine regret and sorrow, many of the local jewelers learned, last Wednesday, of the death of their former friend and business associate, Martin M. Brown, in Meriden, Conn. Mr. Brown came to North Attleboro in 1843 and here learned the jewelry business. He was superintendent of F. G. Whitney & Co. for many years, and left to become superintendent of Bliss & Carpenter.

Announcements were made, Wednesday of last week, of the change in personnel of Casper & Mandalian, located in the Totten building. Eugene A. Hawkins, of Plainville, has purchased the interest of Reuben Casper. The concern will continue under the same name with the addition of several new lines. The new member of the firm was for 28 years in the employ of Whiting & Davis, Plainville, the last two of which he was foreman. Mr. Hawkins begins his duties with Casper & Mandalian on Jan. 1.

Washington, D. C.

In Criminal Court No. 2, before Justice Barnard, last week, the suit of the Commercial Jewelry Co. vs. Isaac Sacks resulted in a verdict for defendant.

Charles E. Brunn, who again comes to Congress from the 12th Pennsylvania district after serving four previous terms in different years from 1881 to 1899, was in his younger days a watchmaker and served a full apprenticeship in this trade. Neither his friends nor the newspapers allow him to forget this fact, but continue to tell the delight he takes in tinkering with the delicate mechanism of the watches of his friends.

Attleboro.

William Nerney, of William Nerney & Co., was last week elected to office in the Royal Arcanum.

Oscar G. Felton, of the New York office of J. M. Fisher & Co., visited the home office several days last week.

The petition for a new post office building, bearing the signature of all the jewelry manufacturers, has been filed at Congress.

Jesse Carpenter, for years traveling salesman for the Horton, Angell Co., has succeeded Walter J. Newman as superintendent of the factory.

The D. F. Briggs Co.'s new cement factory, adjoining its present wooden plant, is nearing completion and will soon be ready for occupancy.

The annual banquet of the working force of Carter, Qvarnstrom & Remington will be held at the Crown Hotel, Providence, on the evening of Dec. 15.

Miss Maude Poole, daughter of George Poole, Taunton, silverware manufacturer, becomes the bride of Dr. W. W. Wardwell, of Lynn, Mass., to-day.

Fred. Perry, Mansfield, has been appointed assistant foreman of the Bristol Mfg. Co.'s factory. He was formerly with the Watson & Newell Co.

W. H. Wilmarth & Co. last week sent \$50 to the Firemen's Relief Association in appreciation of the work done at the recent fire which damaged the concern's plant.

A loss of \$3,000, insured, was sustained by fire at the S. W. Card Mfg. Co. plant in Mansfield last week. The cause is thought to have been a railroad engine spark, and the damage was confined to a large storehouse.

The indignant protest of the united jewelry manufacturers against the present inadequate depot facilities of the N. Y., N. H. & H. R. R. Co. has been answered by President S. S. Mellen with a promise of immediate improvement.

Joseph Feinberg, of the Feinberg Mfg. Co., left early last week on a western trip, which will take him as far as the Pacific coast. Mr. Feinberg expects to be on the road for about 12 weeks, and will visit the largest towns from here to San Francisco.

The standing of the Jewelers' Bowling League is in this order: Regnell, Bigney & Co., W. E. Richards & Co., the Watson & Newell Co., Bates & Baon, Attleboro Mfg. Co., C. A. Marsh & Co., J. M. Fisher & Co., C. H. Eden Co., Fontneau & Cook Co., Carter, Qvarnstrom & Remington.

The Associated Press sent broadcast last week stories of widespread larcenies of precious metal in the Attleboro factories, of one arrest, of searches in the homes of operatives, and other strenuous incidents. The report was not borne out by the facts. No such events took place in any form.

The C. H. Eden Co. has purchased the comb plant of the A. C. Messler Co., Providence. The Atlantic Comb Co., which is the comb department of the Eden business, will be combined with the new purchase, and a large concern will be operated in the factory recently vacated by the H. M. Williams Co. The business style will be the C. H. Eden Co. Joseph Nickerson will be factory superintendent. The New York office of the C. H. Eden Co. will be enlarged.

TRADE CONDITIONS.

The holiday trade is now in full swing. Retailers throughout the city declare that they are doing better business than at any time before. New stores are being opened at points of advantage, and the wholesalers are kept busy filling 11th-hour orders. It is assumed by both wholesalers and retailers that conditions have resulted in renewed confidence in all commercial lines. The holiday trade seems to have in every manner so far confirmed the general opinion of prosperity.

C. E. Currie, watchmaker, accepted a position last week with C. R. Smith & Son.

A. R. Nelson, formerly with M. Sickles & Sons, has accepted a position with George Katz, Germantown Ave.

John D. Smedley, 725 Sansom St., watchmaker for the trade, has recovered from a severe attack of the grippe.

H. O. Sadler, Ridge Ave. and 15th St., is receiving the condolences of the trade upon the death last week of his wife.

John F. Blisard, of John F. Blisard & Co., 7 Sansom St., spent a few days in New York last week on business for the firm.

James Jones, formerly with C. S. Powell, 11th and Market Sts., has accepted a position with the Bailey, Banks & Biddle Co. as a jeweler.

The Franklin Jewelry Co. entered judgment in the local courts last week against a W. Vance on a judgment note for \$401.12.

Morris Pfalezer, a retired retail jeweler, was drawn last week as a member of the December Grand Jury of the United States district Court.

The Bailey, Banks & Biddle Co. offers a reward for the return of three gold chain watch bags, left recently in a train from a suburban point.

By smashing a bulk window of the retail store of George C. Child, S. 9th St., last week, a sneak thief made off with 26 bracelets valued at \$80.

Henry J. Andrews, of Henry J. Andrews & Co., manufacturing jewelers, 8th and Sansom Sts., was confined to his home last week with a carbuncle.

All arrangements are completed for the Hebrew Watchmakers and Jewelers' Association bazaar and ball, to be given New Year's eve at the hall, 928 S. 6th St.

Daniel Ungaro, engraver, removed last week from 717 Sansom St. to 725 Sansom St., where he has quarters in the manufacturing jewelry establishment of Jacob Kocum.

J. S. Wilson, retailer, S. Broad St., Trenton, N. J., completed alterations and improvements in his store last week. Mr. Wilson was one of the buyers in town during the week.

William Haines, James M. Orr and Gus French, prominent watchmakers of this city, recently paid a visit to the Hamilton Watch Co.'s factory at Lancaster, Pa., where they were the guests of Charles D. Wood, the president of the company.

Ben. Krischer, of M. Sickles & Sons, is confined to his home with typhoid fever. Miss Minnie Klein, of the same house, sustained a painful injury last week in an accident in the basement of the establishment. Her complete recovery is, however, assured.

Walter S. Chattin, formerly of the manufacturing jewelry firm of Garber & Chattin,

8th and Sansom Sts., which was dissolved about three years ago, has again embarked in business in this city. He last week started as a numismatist at 13 S. 17th St., and will deal in old gold and silver as well as old coins.

Among the nearby retailers purchasing of local wholesalers during the week were: J. M. Lewis, Lambertville, N. J.; A. M. Yeakel, Perkasié, Pa.; H. Goldsmith, of I. Goldsmith & Son, Reading, Pa.; M. K. Laudenslager, Souderton, Pa.; Joseph H. Shuler, Norristown, Pa.; Robert King, Atlantic City, N. J.; T. Gilpin Massey, Wilmington, Del.; David Krause, North Wales, Pa.; H. L. Phillips, Smyrna, Del.; E. Allez, Millville, N. J.; Joseph S. Wilson, Trenton, N. J., and Gustave Lanz, Norristown, Pa.

Connecticut.

H. B. Case and wife, Barkhamste I., last week, were the guests of Col. C. H. Case, Hartford.

T. W. Shirlcliffe, of R. C. Shirlcliffe & Son, Sheffield, Eng., was among the recent visitors to the trade in New Britain.

C. W. Poud, former manager of the Hotel Waterbury, Waterbury, has entered the employ of the Seth Thomas Clock Co., Thomaston.

Hon. E. B. Dunbar, who, as announced last week, was confined to a New York hospital, is reported to be gradually improving. Mr. Dunbar hopes to be back in Bristol within a few days.

Morton Ingraham, son of W. A. Ingraham, of the E. Ingraham Co., Bristol, has returned home for a short stay, from Philadelphia, where he is a student. He will accompany the family to Bermuda in a few days.

Frederick Goodrich, for several years a well-known traveling representative for Landers, Frary & Clark, New Britain, and president of the Taplin Mfg. Co., of Forestville, died Dec. 1, at his home in New Britain.

Governor-elect Rolland S. Woodruff, of Connecticut, has appointed W. H. Lyon, of Meriden, aide-de-camp on his staff, with the title of major. Mr. Lyon is secretary, treasurer and general manager of the Chas. Parker Co.

The town hall clock of Stamford was set in operation Thanksgiving Day, the striking apparatus beginning work for the first time at the noon hour. The clock was erected by the Seth Thomas Clock Co., Thomaston.

A. H. Chamberlain, for over half a century in the employ of the New Haven Clock Co., New Haven, died Thursday, at his home, 25 Leonard St., that city, aged 77 years. The deceased is survived by three sons and one daughter.

Among the well-known members of the trade in Meriden who appeared and advocated a police pension bill at that place, recently, were: E. Miller, Jr., Arthur E. Miller, Wm. Zerfass, Geo. E. Savage, Geo. H. Wilcox and C. F. Monroe.

The Peabody Mfg. Co., Worcester, Mass., recently purchased by the Westfield Plate Co., Thompsonville, is being moved to the latter place, and will be conducted in connection with the Westfield Plate Co.'s plant, under the supervision of H. L. Viets.

One of the important exhibits planned by the Connecticut Commission at the Jamestown Exposition, which will open next April, will show the development of the clock industry in this State. The commissioners have requested Samuel P. Thrasher, of Manchester, to arrange an exhibit which will show clocks of the earliest make down to those of the present time.

One of the large braces which hold in place the steel plate tank on the new factory of J. H. Sessions & Son, Forestville, broke last week, owing to excessive pressure of water, and resulted in a partial collapse of the tank at the bottom, slightly tipping it. The water was immediately turned off and work of repairing the tank with additional braces is now well nigh completed.

Morris Steinfeld, a former employe of Jennings Bros. Mfg. Co., Bridgeport, has brought suit against that concern for \$10,000 damages for alleged injuries sustained at the factory on 3d St., Oct. 1. He alleges that an elevator which he was running was in poor condition, thereby causing an accident which resulted in the bruising of several toes, one of which had to be amputated.

Harrisburg, Pa.

Walter M. McCormick, 1628 N. 6th St., has returned from a business trip to Baltimore.

E. L. Rinkenback has been appointed a member of the committee of the West End Business Men's Association to interview the Central Pennsylvania Traction officials regarding better service on N. 3d St.

Claude Garfield Bennethum, of Dives, Pomeroy & Stewart's establishment, was wedded in Minneapolis last week to Miss Zoe Cyphers. They will be at home after Jan. 15.

E. L. Rinkenback has declined the invitation to become a candidate for Common Council in the Fifth Ward next month. Joseph Rinkenback is opening an optical department in his father's store on N. 3d St.

It is the intention of the State Bureau of Industrial Statistics to enlarge the scope of their inquiries in 1907 to take in newer fields of labor that have been developing in Pennsylvania. Watch and jewelry manufacturers will be included, in all probability.

Omaha.

George Lerew, Hamburg, Ia., has opened a store at Sidney, Ia.

J. C. Huteson, optician, has just returned from a short trip to California.

The A. E. Chittick Jewelry Co. has succeeded J. N. Sturdevant, Stuart, Nebr.

R. C. Keiwin, Griswold, Ia., was in this city, during the past week, buying holiday stock.

T. J. Turner, with S. W. Lindsay, has resumed work, after having been confined to his home by illness.

W. T. Marcuson, formerly of Petersburg, Nebr., has moved to West Point, Nebr., where he has opened a store.

Edward Roehm, Detroit, Mich., successor to the recently dissolved firm of Roehm & Son, founded in 1849, is continuing business in attractively furnished quarters at 11 John St.

Koshland & Italic Co.

702 Chestnut Street, PHILADELPHIA, PA.

We anticipate an unprecedented Holiday Trade and have accordingly prepared ourselves with large and complete stocks of EVERYTHING.

Pittsburg.

Anthony Larney, of the Larney-Barr Co returned last week from a buying trip New York.

The Weisser-Low Co., which recent opened a store at Liberty St. and Oliv Ave., moving from Market St., has added a jewelry department, of which Mr. Mertl is the manager.

J. Alexander Hardy, of the Hardy Hayes Co., is a director of the Home Tru Co., which last week amalgamated with the Guarantee Title & Trust Co., of this city Mr. Hardy becoming a director of the combined institution.

R. A. Noble, Wellsville, O., has advised that he will sell out his store auction, and begins the sale in a few days. He intends to retire from business as a move away because of the illness of some of the members of his family. He has been in business in Wellsville for a number of years.

Frank Conley was arrested last week Detective Lally and locked up while tempting to sell a \$75 watch for \$1. It was a 21-jewel movement of Waltham manufacture, numbered 1,209,513. It has a Duel case, numbered 5,279,381. Conley was committed to jail for 10 days until his record is inquired into.

Among the out-of-town merchants Pittsburg last week buying holiday stock were the following: F. A. Robinson, Clarburg; J. M. Langendorf, Monongahela; Frank B. Theakston, Brownsville; F. Blair, California; W. W. Hyde, West Middlesex; P. J. Mason, Jeanette; Fred Knott, Tarentum; A. C. Shaner, Sharpsville.

The stock of Charles Sloan & Co. has been sold to J. Ostroff and David Selezne of this city, for \$790. Sloan & Co. recently went into bankruptcy, as announced in THE CIRCULAR-WEEKLY, and the affairs of concern are being straightened up as far as possible. In discussing the failure with a representative of THE CIRCULAR-WEEKLY Mr. Sloan said that he had suffered considerable bad luck during the past year or two.

F. H. Felger, of F. & F. Felger, who several weeks ago was robbed in Chicago of a sample case valued at \$500, has found no trace of it. The sample case was taken from the Wells-Fargo Express Co., and Mr. Felger will not lose anything by the transaction. It has caused him a lot of annoyance, and it is doubtful if he ever hears anything about it. Mr. Felger, who was in Pittsburg last week, said that a hat was still being made for it.

Graf & Niemann have not been able to come to satisfactory terms with their landlord, and will decide Jan. 1 whether they will retire from business or remain in their present location. There is still a hitch regarding the amount of rental to be charged for the building the firm occupies. If the rents in Pittsburg continue, it is quite likely that other jewelers will also have to move to quarters where the rents are less expensive. As an illustration as to the advance of property values in Pittsburg, a prominent jeweler told THE CIRCULAR-WEEKLY correspondent that 15 years ago he was offered a building and lot in Wood St. for \$25,000 which to-day would bring \$300,000.

A Holiday Gift Suggestion

The Holiday season—the period of good-will, of reciprocation of courtesies, of kindly thought and friendly feeling—brings vividly to mind the esteem that should exist between jeweler and employe. The giving of presents is the material recognition of mutual regard, but the gift ought to be suggestive of conditions and relations.

THEREFORE, A HINT

From the Jeweler to His Watchmaker

“Practical Course in Adjusting,” comprising

a review of the laws governing the motion of the balance and balance spring in watches and chronometers, and application of the principles deduced therefrom in the correction of variations of rate arising from want of isochronism, change of position and variation of temperature.

The latest and best work on the subject and calculated to develop a higher degree of efficiency and more certain results by the watchmaker.

Price, \$2.50, Postpaid. Special Reduced Price, \$1.50

From the Jeweler to His Repairer

Workshop Notes for Jewelers and Watchmakers

A collection of the latest practical receipts on the manufacture and repairing of watches and clocks, and on the various processes entering into the manufacture and repairing of jewelry, as coloring, polishing, enameling, annealing, oxydizing, etc., in short, a thorough compendium of the numerous mechanical departments of the jeweler's and watchmaker's shops.

Invaluable to every workman, and puts into his hands, available at the instant, the best aids to his work.

Price, \$2.50, Net, Postpaid

From the Jeweler to His Optician

Encyclopedia-Dictionary and Reference Handbook of the Ophthalmic Sciences

An exposition of all subjects pertaining to optics and ophthalmics; also the principles of refraction.

The only work of its kind extant, profusely illustrated, concise in statement and didactic in style. Wide-awake opticians will find it a ready-reference hand-book in which to find just what they require at the time they need it.

Essential as a standard work of reference and conducive to more intelligent results in the optical department.

Price, \$2.50, Postpaid

From Employe to the Jeweler

Trade-Marks of the Jewelry and Kindred Trades

A collection of illustrations of the marks used by manufacturers and dealers of jewelry, silverware, silver plated ware, watches, watch cases, precious and imitation stones, clocks, optical goods, fountain pens, tools, materials, pottery, porcelain, cut glass and cognate lines.

It will aid him to add to his reputation, increase his business, and help protect him from imposition. It will save him time, trouble and money.

4,000 Illustrations and Representations of Trade-Marks. Price, \$3.00, Net.

WHAT EVERY JEWELER NEEDS

¶ At no season of the year other than this is there a more insistent demand made upon the retail jeweler's stock for such silverware as Toilet Goods and Manicure Sets, Desk Furnishings, Handkerchief and Glove Boxes and articles of a similar nature.

¶ It is, therefore, incumbent upon the jeweler of alert perceptiveness to satisfy himself that in this respect his stock needs no replenishing, or to remedy the omission should he find that it exists.

¶ The Gorham Company have always paid particular attention to this important feature of their holiday productions and in variety as well as in attractiveness of price and appearance the Gorham line of these goods is without parallel.

No attention paid to communications unless accompanied by full name and address of the writer. His is asked not necessarily for publication, but as an evidence of good faith.

Gem Imports Continue to Break Records.

AS already intimated in these columns, the importations of gems into the Port of New York will surely break all records of previous calendar years; in fact, the value of the importations for the 11 months just past is about \$2,400,000 ahead of the entire year of 1905, and under normal conditions the 12 months of 1906 will exceed the previous year in all by about \$6,000,000. The total importations of precious stones which passed through the Public Stores at New York so far are valued at \$39,543,161, while the total importation in these lines in the corresponding months of 1905 amounted to \$33,512,957. Following the example set by the other months, the gem figures for November were again of the record-breaking variety, exceeding the value of the importations of the same month of last year by \$284,000. In all, the figures total \$2,751,117.98, and of this the importations of cut precious stones and pearls amounted to \$1,978,300.76, while the uncut stones, principally diamonds, amounted to \$773,116.32. How these figures compare with the figures of November of previous years is to be seen from an examination of the following table:

| Year | Cut | Uncut | Total |
|------|----------------|--------------|----------------|
| 1906 | \$1,978,300.76 | \$773,116.32 | \$2,751,447.08 |
| 1905 | 1,695,378.61 | 771,714.83 | 2,467,093.57 |
| 1901 | 2,165,720.00 | 659,398.04 | 2,825,118.04 |
| 1903 | 1,223,487.90 | 613,647.82 | 1,837,135.72 |
| 1902 | 1,307,306.39 | 638,192.78 | 1,945,499.17 |
| 1901 | 1,091,592.82 | 687,506.91 | 1,780,099.73 |
| 1900 | 905,691.31 | 962,041.80 | 1,867,733.14 |
| 1899 | 811,625.13 | 264,771.51 | 1,076,396.64 |
| 1898 | 427,334.09 | 415,655.04 | 872,989.13 |

How the importations of each month of this year have compared with those of the same month of 1905 will be found in the following:

| 1905 | | 1906 | |
|-----------|--------------|-----------|--------------|
| January | \$2,831,212 | January | \$2,706,997 |
| February | 2,107,089 | February | 3,067,036 |
| March | 3,673,383 | March | 3,789,825 |
| April | 2,429,338 | April | 3,614,932 |
| May | 3,233,825 | May | 4,021,405 |
| June | 3,442,043 | June | 3,887,893 |
| July | 3,992,831 | July | 4,739,996 |
| August | 2,275,873 | August | 3,382,296 |
| September | 3,250,580 | September | 2,545,757 |
| October | 3,509,390 | October | 5,035,577 |
| November | 2,467,083 | November | 2,751,447 |
| | \$33,512,957 | | \$39,543,161 |

Congress and the Jewelry Trade.

CONGRESS opened last week under conditions which excited less interest in the jewelry trade than for many years past, inasmuch as the main legislation desired by the trade (the national regulation of the marking on gold and silver), has already been accomplished, and the subject is not likely to come up in any way during the present short session. Of course, the trade through its representatives must keep sharp watch to see that no amendments to the law which they have obtained, inimicable to the trade at large, are introduced, but the statute is so full and clear, and covers the subject so thoroughly, that there is little likelihood that any consideration will be given to amendments by the powers which control legislation in both houses. Interest will, of course, be felt by jewelers as well as other merchants in the question of the parcels post should the matter be given consideration at this session.

Whether the agitation over the amount of

precious metals used in the arts will lead to an attempt to prevent the use of coin in jewelry is problematical. The fate of the Shafroth bill, which died in committee a few years ago, will probably deter other enthusiasts from meddling with the subject.

Encouraging Outlook for Holiday Trade.

THE outlook for Christmas trade is indeed encouraging, glowing reports having come from all sections of the country. In certain parts of the east and in Pennsylvania, where the general prosperity has resulted in an increase in wages by the railroad companies and other big corporations, jewelers are particularly gratified, as they are already beginning to feel the effects of the same not only in the amount of sales but in the value of the articles purchased. Pittsburg being the center of many of the industries affected, the jewelers of that section may be said to have even more than their share of prosperity. According to various authorities, conditions in every way are excellent, expectations for record-breaking demands for Christmas specialties are being fully realized, and a phenomenal Christmas trade is predicted both by *Dun's Review* and *Bradstreet's* in their issue of last Saturday. In addition to the satisfactory holiday trade, the prospects for trade at the beginning of the year were never better.

Unlike most of the other industries, the jewelry trade is not feeling such a marked irregularity in collections as is generally reported, and in addition failures are fewer and liabilities less than usual at this season of the year. According to *Dun's Review* but six jewelry and clock dealers became insolvent during November, and the total liabilities of these failures amounted to but \$24,032, an average of about \$4,005. How favorably this compares with former years will be seen from the fact that there were 10 failures in the corresponding month of last year with liabilities of \$84,104; 15 failures in November, 1904, with liabilities of \$141,367; 19 failures in November, 1903, with liabilities of \$131,581, and 15 failures in November, 1902, with liabilities of \$81,463.

Death of Henry A. Kammerer.

PHILADELPHIA, Pa., Dec. 8.—Henry A. Kammerer, for many years a watchmaker and retail jeweler at 2205 Fairmount Ave., died suddenly of heart disease Friday at his home over his place of business. Mr. Kammerer was widely known and much esteemed in the trade of this city. While he had long suffered from heart disease and rheumatism, his death was entirely unexpected and came as a shock to a host of friends.

Mr. Kammerer had all his life been active in politics, and was for a quarter of a century door keeper of Common Council. He was also a member of influential secret societies. He was 55 years old. One son is confidential clerk to J. Warner Hutchins, 728 Sansom St.

The firm of Tompkins & Steidley, Afton, Ind. T., has been succeeded by J. C. P. Tompkins, who will discontinue the jewelry end of the business.

BESIEGED *by crowds of Holiday Buyers!*

This is a condition which is now confronting many jewelers.

Many of these buyers are calling for certain grades of diamonds and diamond jewelry which you may be temporarily out of, or don't regularly carry in stock.

You make or lose sales according to whether you can or cannot supply the goods quickly.

We can send any assortment on memorandum *at once*. This is the time to put us to the test.

Pacific Coast Notes.

J. C. Wahlen, Petaluma, Cal., is about to retire from the jewelry business.

A. G. Stone, Mendocino, Cal., returned from a purchasing trip to San Francisco, last week.

J. B. C. Schmidt, Jamestown, Cal., has been appointed official watch inspector for the Sierra Railroad Co.

M. L. Rice, formerly in business at Hollywood, Cal., has opened a store in the Palmer block, at the same place.

C. W. Friend, who formerly owned and operated a jewelry store in Carson City, Nev., is going into business for himself at San Diego, Cal.

C. I. Hoople, Anaheim, Cal., has disposed of his interests there and will remove to Los Angeles. He will give up the jewelry trade and will engage in the manufacture of an invention which he recently patented.

D. C. Collier, San Diego, Cal., has commenced working an extensive deposit of jade at Happy Camp, 80 miles west of Yreka, Cal., and reports that he has already contracted for the output of the mine to New York buyers.

The Reed Jewelry Co. has arranged to occupy the south half of the ground floor of the new May building, at Lakeport, Cal. The company has bought a number of new show cases and counters and taken over the entire stock of silverware carried by Fred L. Coles.

The remodeling of the store of J. Herbert Hall, at Pasadena, Cal., has been completed at a cost of \$4,000. The change include an entire new front with double display windows, additional counters and show cases, and an extension at the rear for the optical department.

M. S. Cooney and others are apparently doing preliminary work on their diamond mine near Oroville, Cal. Several shafts are being sunk and 1,000 feet of trenches are already done. Two hundred and fifty tons of gravel have been piled up ready to be washed, and it is announced that a number of buildings will be erected soon.

Diamonds, said to be worth \$750, together with a suit case, were stolen from O. B. Leonard, a traveling man, on the train somewhere between Phoenix, Ariz. and Tucson, Ariz., recently. Mr. Leonard claims that the diamonds were safely in his suit case, when he left Phoenix, and had disappeared by the time he reached Tucson.

Montgomery Bros., Spring St., Los Angeles, Cal., have taken a lease for a long term of years of the entire ground floor of the Grant Block at the northwest corner of Broadway and 4th St. The present leases will not expire for a year, and the remodeling of the premises may have to be delayed. E. Gerson, the jeweler who occupies a portion of the property, has not yet arranged for another location.

N. Mondragon, Santa Fe, N. Mex., returned from a short business trip to Las Vegas.

G. W. Hickox, senior member of the firm of Hickox, Maynard Co., Albuquerque, N. Mex., returned recently from a recuperative trip to Santa Fe.

New York Notes.

Max Boroek, who had a retail store at 84 Ninth Ave., is no longer in business here.

A new street clock in a Venetian iron frame has been placed at 90 Warren St. by Bass & Co., English brewers.

C. August Windels, of Powers & Mayer, filed last Thursday on *La Lorraine*, and will remain abroad several months.

Thieves recently stole several articles of small value from Peter McPartland's pawnshop, 121 Greenpoint Ave., Brooklyn.

The Gorham Co. is a creditor to the amount of \$321 of Mrs. Jesse Baskerville, who last week filed a petition in bankruptcy.

Thomas Atkins, a jewelry workman, who had long been employed in Manhattan, died last week at his home, 1639 Broadway, Brooklyn, in his 66th year.

Emil Lewy, of Lewy & Cohen, 530 Broadway, sailed for Europe last Wednesday on the *Vaderland*, and while abroad will meet new lines of fans and jewelry novelties.

Emil Pimsler, of Pimsler Bros., 77 Third Ave., and also of Pimsler & Ghinger, 51 Maiden Lane, and Miss Mary Harris will be married Sunday at Arlington Hall, 19 E. Mark's Pl.

Samuel Berkowitz, 32 Lewis St., was arrested last week on the charge of defrauding Mrs. Sarah Goldberger, 1090 Madison Ave., by exchanging a pair of glass earrings for real diamonds.

Fire broke out last Friday in the home of Michael Murray, a silver worker living at 71 Clinton Ave., Bronx, and his two-year-old son was burned to death, while eight other children were rescued with difficulty.

Henry Buchlein, a well-known engraver of 12 William St., died suddenly last week in his 64th year. He had been in the engraving business for 35 years. The funeral took place from his home, 31 Sterling St., Newark, N. J.

Henry J. Bebro, of get-rich-quick fame, who, according to the daily papers, has fled to Europe, was charged some years ago with defrauding jewelers in this city under the name of Phillips, and his record has been published from time to time in this paper.

Jocose remarks are being published in the Brooklyn papers in relation to the Borough Hall clock, which has been out of order on one or two occasions recently, and which for several nights could not be seen because of decreased power in the electric illumination.

Workmen in the umbrella handle factories who had been on a strike for several weeks have gone back to their old places under an agreement which provides that the question as to whether they shall work nine or 10 hours a day shall be submitted to arbitration.

The beautiful silver service for the battle-ship *New Jersey*, which was illustrated in THE CIRCULAR-WEEKLY of Oct. 18, 1905, arrived at the State house, Trenton, N. J., Friday, and was put on general exhibition. The service, as already noted in THE CIRCULAR-WEEKLY, was made by Tiffany & Co., New York, and cost \$10,000.

C. E. Fritts, Sag Harbor, L. I., last week

caused the arrest of a young man, who was suspected of stealing two watches, which had been taken from the jeweler's shelf. The jeweler testified in court that the defendant had stepped behind the counter to look at a clock and soon afterward the watches were missed. Justice William Wallace discharged the defendant.

Dec. 19 is the date for the next auction sale of goods seized at the Port of New York for the violation of customs laws. The auction, which will be conducted at the appraiser's stores at Washington and Christopher Sts., will include small lots of clocks, watches, diamonds, coral ornaments such as crosses, necklaces, earrings, brooches and cameos, and other jewelry.

Norman Selby, the president of the Norman Selby Co., 1503 Broadway, resigned Dec. 7 and severed his connection as a director and stockholder in the company. Mr. Selby, who has been known in pugilistic circles as "Kid" McCoy, expects to go into the automobile business in Denver, Colo. The jewelry business will be continued for the present under the old name. A new president has not yet been chosen.

James H. Miles, the diamond broker at 9 Eldridge St., who was held up and robbed of \$97 in cash and a check for \$11 on a Third Ave. surface car, as related in last week's issue, was unable to identify in court William Lewis, the man arrested by the police on the charge of committing the robbery. Judge Moss held Lewis in \$1,000 bail and postponed the hearing until Dec. 18, to allow Mr. Miles time to produce witnesses.

No appeal has yet been taken from the decision recently made by the Board of the United States General Appraisers, holding that articles made of precious coral as settings for jewelry are to be classified as precious stones advanced in condition and dutiable at 10 per cent. The opinion is expressed in customs circles that the Treasury Department will make no further opposition to this classification, but the time within which the Government may file an appeal has not yet expired.

A petition in bankruptcy was filed last Wednesday against Tessie Horowitz, retailer at 376 Bowery, New York, by the following creditors: Isaac Wasserman, \$119; Max Kameron, \$106.50; L. Shapiro, \$283. It was alleged that the defendant had recently transferred a large part of her property. The liabilities, it is said, are about \$6,500; nominal assets, \$2,300. The business was begun in 1898. Beverly R. Robinson was appointed temporary receiver. Marcus Helfand is attorney for the creditors.

The death of Mrs. Rosa Riglander, mother of J. W. Riglander, of Hammel, Riglander & Co., 49 Maiden Lane, occurred last Wednesday, after a short illness, of bronchial trouble aggravated by the weakness of declining years. Deceased was 82 years of age. Surviving her, besides her son, are two daughters, Mrs. H. H. Kayton, New York, and Mrs. Ellen New, Cleveland, O. The funeral services were held Friday from her late residence, 65 E. 93d St., the Rev. Spiegel officiating. The interment was in Salem Field Cemetery.

Edwin Davis French, of Saranac Lake, N. Y., who was originally a silver engraver,

and became one of the foremost American engravers on book plates, died last Saturday in New York. He was the president of the Art Students' League of this city in 1889-1891. Mr. French used the old art of copper plate engraving, and critics spoke with enthusiasm of his work, even when compared with that of the old French engraver, who used similar means of decorative expression. A collection comprising more than 200 of his book plates is shown in the New York Public Library.

Kremenz & Co., Newark, N. J., have made an innovation by equipping their New York sales department with a handsome and speedy automobile. H. A. Bliss, manager of the New York office at 1 Maiden Lane, says that the vehicle is proving a decided convenience. The city salesmen, instead of going about in street cars and carrying their sample cases by hand, now proceed expeditiously from point to point in the automobile, in which there is plenty of room for the cases, the salesman taking orders and filling them at once. The vehicle is a Landsen electrette, and bears no commercial sign except the Kremenz monogram.

In the December *Bulletin* of the Metropolitan Museum of Art, the principal accessions of the past month are mentioned. Among them are five Roman architectural fragments presented by J. Pierpont Morgan, which show designs in relief. Four gargoyles, or decorative water spouts, illustrative of the Gothic period in French architecture, were recently bought for the Museum. A replica of the famous jubilee plaque of Queen Victoria, made by the late Anton Scharf, medalist of Vienna, comes as a gift of Franklin B. Lord. The face of the Queen at the date of her coronation and her face after a reign of 50 years are shown. Several minor additions to the collection of bronzes have also been received of late.

Present expectations are that the hearing of evidence in the bankruptcy case of Sol. Urbach, formerly a diamond jobber at 49 Maiden Lane, will be closed Friday of this week, and Referee F. K. Pendleton will probably require a couple of weeks before announcing his decision. The question sent the referee for determination was whether or not an order should be issued directing Urbach to turn over to the trustee for the benefit of creditors diamonds which he said he had lost or their equivalent in cash. It will be recalled that Mr. Urbach reported the loss of his stock, valued at \$40,000, while he was in a sleeping car, traveling between Jersey City and Baltimore. The creditors have been trying to prove that his account of such a loss is a fiction, and that he is trying to conceal his assets.

Visitors to the new quarters of the Mercantile National Bank, at 195 Broadway, Western Union building, express genuine admiration for the spacious establishment, with appointments and equipments that commend themselves for their beauty as well as their utility. The new bank is finished in rich mahogany, with antique fixtures and modern furnishings, contrasting agreeably with the walls in light cream and gold, panel designs and Grecian borders. The floor space is 74 by 189 feet, or nearly 15,000 square feet in all. The bank, which

New York Notes.

(Continued from page 65.)

for 44 years was located at the opposite corner, 191 Broadway, has sent out to its patrons a pamphlet in which the new quarters are described and handsomely illustrated, and there are speaking likenesses of Frederick B. Schenck, the president, and James M. O'Brien, vice-president.

"Frederic's" filed Monday a judgment for \$10,071 against Una Boyd.

Alfred Stevens, who had been since 1895 salesman with Enos Richardson & Co., Maiden Lane, died Sunday in Brooklyn, after an illness of several weeks. Mr. Stevens was about 40 years of age, and was native of Tecumseh, Mich. His first employment in the jewelry trade was as a salesman for the old house of H. Muhr's Sons, and he left them in order to accept with Enos Richardson & Co. the position which he held up to the time of his death.

August, when Mr. Stevens returned from one of his regular trips, he was ill, and he had since been incapacitated from work. He was widely known through the Southern States, where he had traveled for many years, and was held in high esteem by his employers and associates. He is survived by a widow. The funeral will take place to-day from his late home in Brooklyn.

M. Tecla & Co., 929 Broadway, last week joined with the Board of United States General Appraisers a protest against an assessment of a 20 per cent. duty on an importation of artificial emeralds and sapphires.

The importers are represented by A. H. Washburn, who filed several weeks ago similar protests in behalf of another house. As to the exact character of these stones, which were designated as "reconstructed" in the invoices the importers themselves are not prepared at this time to furnish evidence, and information is being obtained in their behalf from the manufacturers in Europe. The contention of the United States attorney is that the stones are properly imitations made of glass or paste, or doublets, the duty being 20 per cent., whether they be placed in one or the other class. The importers claim that the duty should be 10 per cent. under the similitude clause, arguing that the articles are similar to natural precious stones and are not glass or paste imitations. In interviews published in recent issues, recognized authorities in the trade expressed the opinion that there are no "reconstructed" emeralds or sapphires in the sense that the word "reconstructed" is applied to a class of artificial rubies.

Whether or not silver articles, used for both purposes of utility and of personal adornment, are jewelry, is a question that General Appraiser Sharretts is now considering, testimony having been closed Monday on the protest of Tiffany & Co. against an assessment of duty by the Collector at New York. The company imported a quantity of silver buckles, girdles and cloak clasps, in value ranging each from \$16 to \$200, which the Collector classified as dutiable at 60 per cent. as jewelry. The importers protested, claiming that the duty should be 45 per cent., under the clause of the Tariff Law relating

to manufactures of metal. About two weeks ago General Appraiser Sharretts handed down a decision in another case which may be precedent as to the silver buckles. The former case came in the form of a protest by Hensel, Brockman & Lohrbacher against an assessment of duty by the Collector, and the issue, as in the Tiffany protest, was whether the articles are jewelry or manufactures of metal. The General Appraiser declared that the buckles were commonly known as silver, and he affirmed the Collector's assessment of duty at 60 per cent. The issue as to the articles of the general class of those imported by Tiffany & Co. will finally be carried to the courts, it is expected.

Reports of the discovery of diamonds, blue ground and other indications of valuable mines have been published with some frequency of late in the daily press. Dr. Geo. F. Kunz, of Tiffany & Co., said yesterday that none of the reported discoveries has as yet proved of importance. As to the Canadian reports, which have been especially persistent, they have all been investigated, he said, and have been based on mistakes. As far as he knows, not a single diamond has yet been found in Canada. Moissan's process for making artificial diamonds has recently been exploited as something new, but the details were published several months ago in this paper. Dr. Kunz said that no artificial diamonds having value as gems have yet been made. The diamonds produced in the Moissan electric furnace and elsewhere are simply dust having neither the size nor the color and brilliancy to fit them for the jeweler's use.

Ball's Official Standard R. R. Watches

WHAT WOULD YOU GIVE FOR A LIFELONG CUSTOMER?

Try this plan:

Sell your next watch customer a "Ball."

Its reliable performance will convince him you are a dealer to be depended on—he'll keep coming back for other things.

The watch will win you his business and friendship for always.

Write for booklet, and watch this space.

We want to add a lot of new friends to the Ball family of railroad watch dealers.

CHICAGO, WEDNESDAY, DECEMBER 12, 1906.

No. 19.

Chicago Notes.

Frank E. Behrendt, representing Moore & son, is making a short trip this week.

C. L. Caliger, representing Sproehle & Co., has returned from a trip northwest.

F. G. Storm and C. T. E. Smith, with Reed & Barton, are in from their last trips or the season.

George Lebolt, of Lebolt & Co., is now at the New York store, where he will remain until after Christmas.

H. E. King, representing the Queen City silver Co., has returned from a trip to Kansas City and St. Louis.

F. E. Wallace, representing T. W. Adams Co., is making a trip this week to Kansas City and other western points.

G. E. Siebert, Ottumwa, Ia., was in this city recently buying a stock of goods for the new store which he is opening.

Harry H. Miller, of the Chicago office of Hutchison & Huestis, is making a trip east, making in Cincinnati and Pittsburg.

The Julius King Optical Co. has issued from the Chicago office a very neat brochure referring to prescription work.

L. A. MacKown, Chicago manager of the Oneida Community, Ltd., has returned from a visit to the factory at Oneida, N. Y.

R. M. Harding, the auctioneer, has now returned from his ranch at Siverton, Ore., having disposed of a big crop of grain.

F. A. Ferinandsen has removed his optical business from room 602, Columbus Memorial building, to Austin, a west side suburb.

John W. Neasham, Ottumwa, Ia., was in this city recently for a few days looking after some iron interests and also purchasing goods.

W. S. Willis, W. H. Burton, T. G. Jewett and R. S. Atwood, of the traveling force of the Gorham Mfg. Co., are in for the season and report the best business they have ever had.

A. M. Keasey, who has been calling on the city trade for Graffe & Stanek, is no longer with that firm. He contemplates going into business for himself by the first of the year.

In the suit of the International Silver Co. vs. Samuel Lyons, Mr. Lyons has furnished bonds in the sum of \$6,500, required by the court, and appealed the case. The suit brought by Lyons against the company,

which was near the call on Judge Landis' calendar, was deferred trial by agreement until the appeal is tried.

Clarence Chambers, Sidney, Ia., suffered the loss of his entire stock by fire recently, the loss being estimated at \$700 to \$800. Mr. Chambers had only been located at this point a few weeks.

James Connors and Frank Murphy were arrested here recently at their rooms in W. 47th St. on a charge of robbing a buggy owned by T. J. Brady, a traveling jeweler, of gold cuff buttons and other jewelry valued at \$300.

William Schuettler, 23, and William Bock, 21, who were charged by Montgomery, Ward & Co. with stealing jewelry while in their employ, were each sentenced to one year in the House of Correction by Judge Newcomer, last week. Schuettler had a mask and a revolver when arrested and the police declare he is a hold-up man.

C. L. Bosler, watchmaker in the employ of Sive & Behrman, Logansport, Ind., died of heart disease in that town last Thursday, and his body was brought here for interment. Mr. Bosler formerly kept a retail store here on S. State St., and also conducted a retail jewelry business at one time in Waukegan, Ill. He was 50 years old at the time of his death.

The demurrer of Julius Kahn to the Federal indictment, charging him with using the mails to promote a fraudulent scheme, was overruled by Judge Humphrey, and trial was set for an early date. The indictment of Kahn followed the collapse of the Cash Buyers' Union, First National Co-operative Society, of which Kahn was president and prime mover.

In a card of thanks published in the Chicago newspapers last week the Ladies Aid Society of the Passavant Memorial Hospital thanked the following firms for their contributions to the "Streets of Paris" show: C. D. Peacock, Charles E. Graves & Co., Ansonia Clock Co., Benj. Allen & Co., Charles H. Hulburd, Rowe Bros., the Gorham Co., Almer Coe, F. A. Hardy & Co., Martin Copeland & Co., E. A. Dorrance, Otto Young & Co., Western Clock Mfg. Co., R. Wallace & Sons Mfg. Co., Homan Silver Plate Mfg. Co.

The following buyers were in this city

during the past week: H. J. Crooks, Madison, Wis.; J. D. Jenkins, El Paso, Ill.; B. D. Robinson, Albion, Mich.; C. Veicht, Milwaukee, Wis.; R. Sloan, Ironwood, Mich.; F. C. Sheldon, Shelbyville, Ind.; W. Chapman, Benton Harbor, Mich.; C. E. Hurd, Sycamore, Ill.; Claude R. Stoops, Nappanee, Ind.; J. H. Ramsey, Aledo, Ill.; E. A. Shetter, DeKalb, Ill.; J. C. Oates, Darlington, Wis.; Mr. Spector, of Spector & Fishman Co., Lafayette, Ind.; Charles M. Waara, Hancock, Mich.; L. Sachs, Milwaukee, Wis.; J. C. Ranbow, Maquogua, Ill.; John R. Reeves, Mt. Pulaski, Ill.; L. Ratzesberger, Milford, Ill.; A. D. Lemmon, Guthrie Center, Ia.; S. B. Walton, Unionville, Mo.; F. S. Dahlberg, Durand, Ill.; W. M. Axe, Capron, Ill.; Al. Swift, Bloomington, Ill.; E. W. Bassett, Jacksonville, Ill.; J. J. Beale, Rockford, Ill.; F. W. Hinrichs, Kalamazoo, Mich.; Aaron Purcel, Noblesville, Ind.; Frank Smith, Pontiac, Ill.; E. H. Rummele, Sheboygan, Wis.; John W. Upsal, Watseka, Ill.

Pacific Northwest.

The store of Patchens & Dixon, Drain, Ore., was entered by thieves, a few days ago, and robbed of a number of clocks and watches.

O. Olson, Genesee, Idaho, has purchased the stock of C. W. Campbell, at Uniontown, and will take possession within a few days.

R. P. Endicott, Myrtle Point, Ore., has disposed of his other interests, and hereafter will confine his attention to his retail jewelry business.

In the suit brought by Ben C. Nichols, Spokane, Wash., against the Kossuth-Marx Jewelry Co., of New York; A. Eisenberg, San Francisco, and Sheriff Doak, Spokane, to restrain them from collecting judgments against him, a decision has been rendered in favor of the defendants, thus giving them the power to enforce their levies. The Kossuth-Marx Jewelry Co. has a judgment for \$939, and A. Eisenberg, a judgment for \$320. Mr. Nichols claims to have been declared bankrupt by the courts in Alaska, and that the defendants had levied on property belonging to him, valued at \$3,000. When the decision was rendered, the plaintiff gave notice of an appeal.

St. Louis.

The Mermod, Jaccard & King Jewelry Co. celebrated, last week, the 78th annual holiday opening.

The trade in this city has been advised of the fact that H. W. Thompson has moved his stock into a new store at Muskogee, Mo.

The Jewelry Jobbers' Association is due to meet next week, but President Edwin Massa stated that the meeting would be postponed until after the holidays.

Mrs. A. N. Ens, mother of Charles Ens, manager for William Weidlich & Bro., died suddenly at her home, 4818 Hammett Pl., and was buried on Tuesday of last week. Mrs. Ens was 60 years old.

Carl R. Gross, traveling representative of the material department of the Baumanassa Jewelry Co., has returned from his trip and reports success. He will remain in St. Louis until after the holidays.

F. J. Longden, who represents the Eisenhardt Mfg. Co. in Indiana, Ohio and Michigan, has gone to his home in Bluffton, Ind., where he will remain until Jan. 1. A. F. Senbeiss, Texas representative for the firm, has just returned from a trip over his territory.

Chester Haile, southwestern representative of William Weidlich & Bro., is in from his trip. H. F. Hines, Iowa representative of the same firm, departed last week for his home in Grand Forks, N. Dak., and while there will assist W. R. Lasham through the holiday rush.

Harriet B. Brooks has filed suit for divorce from her husband, Arlington R. Brooks, of A. R. Brooks & Co., in the St. Louis County Circuit Court, at Clayton, Mo. Mr. Brooks brought suit for divorce on May 23, and voluntarily dismissed it Sept. 1. He is 40 years old, while his wife is 19.

Among the out-of-town jewelers in this city last week were: Otto Rink, Carlyle, Ill.; Christ. Keyler, Nashville, Ill.; W. H. Ahn, Pacific, Mo.; T. H. Vinyard, Piedmont, Mo.; F. Kurz, Breese, Ill.; J. H. Harrell, Litchfield, Ill.; J. A. Allison, Rolla, Mo.; T. J. Edwards, Clarksville, Ill.; J. Winslow, Moberly, Mo.

The store occupied by the branch of the Michaels Loan & Securities Co. at 6th and Chestnut Sts., has been leased to a cigar company, and the business of the jewelry company will be transferred to the main store at 900 Franklin Ave. An auction is now being conducted at the branch. The change will be made Jan. 1.

Toledo, O.

H. B. Rogers, formerly of Toledo, but here recently of Seville, O., has opened a store at Wadsworth, O.

W. R. McFadden, 407 Summit St., enjoys the reputation of having the smallest frontage of any jeweler in Toledo, but his quarters are as cozy and beautifully decorated as they are small.

C. P. Eels, watchmaker for John Proaska, 109 Summit St., has just improved his property at the corner of Virginia St. Mr. Eels is at present operating a fancy work and painted china store on W. Banoff St.

W. L. Milner & Co. are about to move

into their new addition, which will give them the largest store building in northwestern Ohio. A large space is devoted to the jewelry department, which is to be enlarged and improved.

Kansas City.

TRADE CONDITIONS.

The retail stores in this city are already doing an excellent business. The trade has opened a great deal earlier than usual. Country retailers are also doing a big business now, judging from the orders rolling into the jobbing houses, and their complaint has always been in the past that Christmas trade was confined to one week.

Chas. S. Robertshaw, Natchitoches, La., is a new pupil at the Southwestern Optical College.

O. H. Stevens and Geo. A. Stevens, pawnbrokers of this city, have lost their suit to break the will of their uncle.

J. H. Trowbridge has just taken a position in the shipping department of the Woodstock Hoefler Watch & Jewelry Co.

Sam Bloom, traveling representative of the Meyer Jewelry Co., is making a short trip through northern Kansas before Christmas.

Frank Castle, Kansas City, Kans., and J. W. Farney, Hays, Kans., have enrolled as pupils with the Kansas City Polytechnic Institute.

T. Lackland, of the engraving department of the Meyer Jewelry Co., who has been away for a week on account of illness, is again attending to his duties.

E. C. Cleveland, traveling representative for the Woodstock-Hoefler Watch & Jewelry Co., was in this city last week long enough to refill his trunks. He left for his territory again without delay.

E. H. Ray, Texas representative of the Edwards & Sloane Jewelry Co., informs the house that he has secured quarters at 309 Main St., Dallas, Tex., and will have his samples displayed there until Christmas.

Louis Meyer, president of the Meyer Jewelry Co., says that in the course of 10 more years the number of mechanics in this country will not materially increase. Boys are refusing to learn trades, but merely want to make as much as they can for the time being, and their parents do not seem to be figuring ahead much further than the boys.

The following out-of-town jewelers called on the trade during the past week: N. B. Jeter, Butler, Mo.; H. E. Tucker, of Tucker Jewelry Co., Higginsville, Mo.; Chas. E. Wardin, Topeka, Kans.; Mr. Connor, of Connor Jewelry & Optical Co., Caldwell, Kans.; J. A. Lukens, Bucklin, Kans.; S. J. Huey, Excelsior Springs, Mo.; Mrs. H. A. Pratt, Fremont, Nebr.; G. R. Summers, Sturgeon, Mo.; W. H. H. Schrickengaust, Pattonburg, Mo.; W. A. Cooper, with R. O. Schenkner & Co., Weston, Mo.; J. S. Kelly, Marshall, Mo.; Gus. Willman, Lawrence, Kans.; Otto Burklund, Osawatimie, Kans.; Mr. Thomas, of the Santa Fe Watch Co., Topeka, Kans.; L. J. Harris, Corder, Mo.; C. A. Clement, Springfield, Mo.; J. Mutton, with Kigher Bros., Excelsior Springs, Mo.; A. Rosenfield, Leavenworth, Kans.; F. C. Roeder, Higginsville, Mo.

Extensive improvements have just been completed in the store of G. W. Loar & Co., Grafton, W. Va.

Indianapolis.

TRADE CONDITIONS.

"If trade keeps up proportionately to the way it has started, we will have the biggest holiday business of years." "Christmas shopping started earlier than my former year since 1892." "We have more business than we can take care of and I am anticipating an unprecedented holiday rush." These statements by prominent jewelers reflect the views of the trade in this city. All the merchants are optimistic. Every jewelry firm has added help to take care of the business. Reports for November show a gain of from 10 to 20 per cent. over the corresponding month of last year.

Fletcher M. Moe has been elected president of the Indianapolis Aerie of Eagles.

Ed. Craft, of the A. P. Craft Co., has recovered from a severe illness, which forced him to use crutches for six weeks.

Lawrence Kohl, Logansport, Ind., has entered the service of Carl L. Rost, as a watchmaker. Mr. Rost now keeps four watchmakers employed all the time.

Chris. Bernlochr & Bro., Pembroke Arcade, have leased the entire second floor of the McQuat building, in Washington St., between Meridian and Pennsylvania, and will move early next year.

E. F. Hirst, Richmond, Ind., a buyer in this market for more than a half century, is closing out his stock at auction prices to retire permanently. Mr. Hirst is one of the oldest and best-known jewelers in Indiana.

The pearl hunting season along the Wabash River has closed. Throughout the Spring, Summer and Fall, the banks of the river have been thronged with men hunting mussel shells. The most valuable pearl found sold for \$950.

Abram Cohen, of H. Cohen & Sons, who was injured recently by the falling of an elevator in the Landgraf building, has brought suit for \$25,000 damages against the owners and lessee of the building. Both of Cohen's ankles were broken and he was otherwise injured.

Among the out-of-town jewelers calling on the local trade, last week, were: Samuel Prager, Terre Haute; Mrs. B. Maier, Edinburg; Philip Adler, Lebanon; J. L. Hastings, Sheridan; J. A. Meissen, Cicero; A. C. Kinnear, Marion; Charles Ham, Franklin; A. A. Gardner, Lebanon; H. A. Robert, Veedersburg; E. N. Canada, Winchester; C. E. Hodgen, Kokomo, and J. B. Johnson, Goodland. Several of these came to Indianapolis to attend the annual convocation of the Mystic Shrine.

Jewelry salesmen were interested in a case that came to an end, last week, in the Marion County Circuit Court. The State Railroad Commission sought to enforce the excess baggage law of 1903 to the extent of making that law apply to samples carried by commercial travelers. The matter was brought to the attention of the commission by several bodies of commercial travelers, who declared that the railroads did not obey the 1903 law, providing that the charge for each 100 pounds of excess baggage should not be more than 12 per cent. of the first-class passenger fare. The question arose as to whether or not this law applied to samples carried by commercial travelers, so the matter was referred to Judge Mc-Masters, who decided that the law was not applicable in this case.

SWARTCHILD & CO.

ESTABLISHED 1870

138 Wabash Avenue

CHICAGO, ILL.

Watchmakers', Jewelers' and Engravers' Supplies.

Our new 432 double-size page catalogue containing 20,000 illustrations will be sent to you gratis (prepaid) on application.

FEATURES

"BLACK SHIELD" MAINSPRINGS are packed in the following manner: Each spring is wrapped separately in oiled paper, and placed in an individual envelope printed with the name and size of movement for which it is intended. Twelve envelopes, or one dozen mainsprings, are contained in a well-made strong box properly labeled. Useless handling of the springs is avoided, thereby preventing rust or mixing of stock. The name, "BLACK SHIELD" is scratched on every spring.

THE NEW MAINSPRING

"BLACK SHIELD"

MAIN-SPRINGS

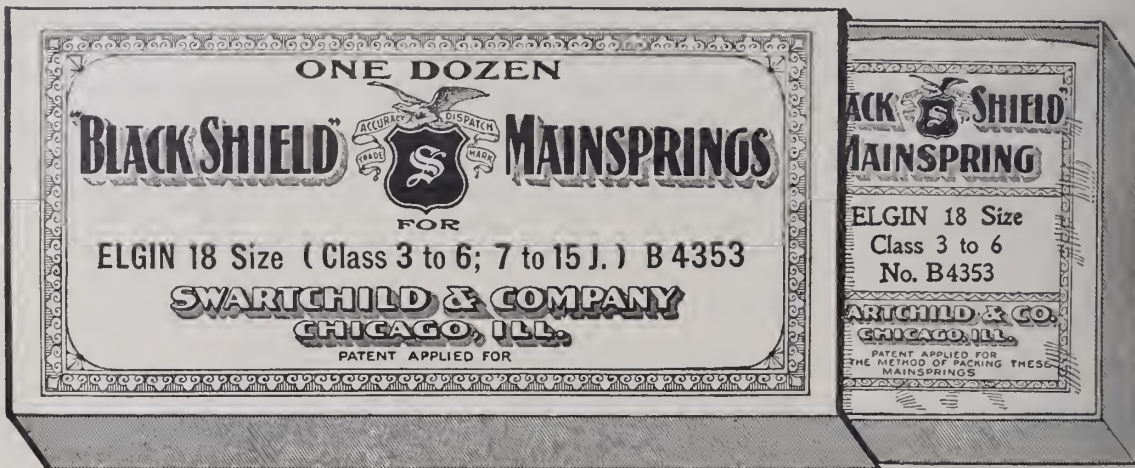

FOR ALL AMERICAN WATCHES.

The Product of the Highest Attainment in Mainspring Making

TESTS

In selecting the "BLACK SHIELD" MAINSPRINGS, we were guided not alone by our own severe tests and judgment, but we distributed samples to dozens of expert watchmakers throughout the country. The opinion of all was that the "BLACK SHIELD" MAINSPRINGS are the finest ever introduced in this country. That they are even, properly tempered, carefully finished, correctly gaged, and tips and length positively accurate. They are of wine color, well polished, and will fit the respective movements without any filing or change whatsoever.

"Black Shield" Mainsprings are manufactured for us only by the oldest and most reputable maker in Switzerland
Per Dozen, \$1.25 Per Gross, \$13.50

Fac-Simile of Box Containing One Dozen "Black Shield" Mainsprings

"Black Shield" Mainsprings are guaranteed in every respect. No better can be had at any price
Per Gross, with 4-Drawer Cabinet (capacity, 48 dozen), \$15.00

HOLSMAN & ALTER, Wholesale Jewelers, 176-178-180 East Madison Street, CHICAGO, ILL.

San Francisco.

Paul V. Garin has taken on two additional saleswomen.

H. E. Denton, with G. G. Brooks, Colusa, Cal., was among last week's visitors to this city.

H. Wachhorst came down from Sacramento the earlier part of the week to order holiday stock.

Burr W. Freer, in the Kamm building, has just added a neat show case for the display of samples.

A. A. De Neuf, Virginia City, Nev., visited the trade here the earlier part of the week and ordered a large supply of holiday goods.

Kragen's Department Store, at 1149 Market St., has opened, with its other departments, an attractive jewelry department for the holiday trade.

Henry Hackett, at 2506 Mission St., has added another large wall case to his store. Hackett is trying to find larger quarters for his increasing business.

Fred. De Ferrari & Co., who have been on New Montgomery St. since the fire, will move back to their former location at Beach St. in order to accommodate their old customers.

The People's Jewelry Co., 1485 Eddy St., is prepared for the holiday trade by substituting new show cases for the old ones. The concern has just ordered a large lot for its office equipment.

The Diamond Parlor Jewelry Co., 1429 Fillmore St., has increased its working force and declares that it would still further increase it could the proper men be obtained, as it is impossible to get them. Watchmakers are especially scarce.

Shreve & Co. have begun suit against thealedoman Fire Insurance Co. for \$9,000. The policy was written on a stock of diamonds and jewelry in the Shreve building, at the corner of Post St. and Grant Ave., which was destroyed in the April fire.

George Desenfant, 1613 Fillmore St., has increased his clerking force to five, and has made other preparations for a lively holiday trade. Mr. Desenfant is going to start his factory in the rear of the store as soon as men and material can be obtained, but owing to the scarcity of both it will probably be the first of the year before the factory is in regular running order.

The United Jewelry & Optical Co., at the old stand on Market St. before the fire, had only two clerks, but now has 10. This company has also started a factory and repairing shop in the rear of its store, where all of its diamond setting and other similar work will be done. M. Rosenberg, an eastern jeweler, has been placed in charge of the factory.

Joseph Fahys & Co., whose San Francisco branch has been doing business for some time in the Kamm building, have moved across the street into the Mutual Bank building, and will there occupy large rooms on the eighth floor. The fixtures are not all in yet, but the company is having them put in as early as possible in order to begin the new year with everything in permanent shape.

Harry Behrend, the Steiner St. jeweler, who distinguished himself a few weeks ago by the capture of Louis Dabner, the "gas pipe" murderer, is still doing police duty in

San Francisco, and promises to make things interesting for criminals in that neighborhood. With his head still swathed in bandages as a result of his encounter with Dabner and Siensen, the plucky jeweler sallied forth one morning last week to give battle to a supposed burglar. The latter proved to be only a messenger who was trying to deliver a message, and who had made a mistake in the street number. His mistake and his failure to answer when Mr. Behrend demanded his business came near costing him his life, as the jeweler fired at him when he ran.

Cincinnati.

Lindenberg & Fox have been appointed special agents for the Illinois Watch Co.

V. C. Dwyer, New York manager for the John Holland Gold Pen Co., visited this city, last week.

Jacob Frohman, of Frohman & Co., is again able to be in his office, after his recent automobile accident.

Merrill B. Gary, Dayton, O., was here, recently, buying the opening stock for his new retail store in that place.

Adolph Muchlmann has moved from his old quarters in the Lion building to the second floor in the same building.

Herman Keck, of the Herman Keck Mfg. Co., sailed from New York, Dec. 8, on a diamond purchasing trip to Brazil.

Albert Wallenstein and Walter Mayer, of Wallenstein, Mayer & Co., have returned from an extended southern trip.

William J. Burkhardt was purchasing stock here, last week, for the new branch business, which he is about to open at Dayton, O.

H. Glicksman, Washington Court House, O., stated to friends here, last week, that he intends to go out of business at that place after Jan. 1, and will locate in Nevada.

The Clemens Oskamp Co. has greatly beautified its store by putting in an entire new glass front. The change is not only a vast improvement to the store, but to that part of the street, and the store is now one of the finest in this section.

Out-of-town jewelers here buying stock the past week included: A. C. Davis, Coolville, O.; A. Krohme, Maysville, Ky.; A. Clooney, Maysville, Ky.; R. H. Dilly, Cambridge, O.; A. M. Stamm, Williamsburg, O.; G. H. Hansgen, Bethel, O.; F. L. Horning, Brookville, Ind.; H. Bertram, Augusta, Ky.; J. E. Robertson, Augusta, Ky.; W. C. Klein, Connersville, O.; F. C. Thienemann, Franklin, O.; Mr. Carson, Franklin, O.; O. C. Beer, Sunman, Ind.; Arthur Bland, Greenfield, O.; L. C. Diefenbaugh, Lewisburg, O.; J. A. Simpson, Ripley, O.; Edward Mueller, Hamilton, O.; Owen Sherwood, Falmouth, Ky., and William Shire, Paris, Ky.

H. H. Graham, Meridian, Miss., has sold his business, at that place, and gone to Hattiesburg, Miss.

A new front has just been added to the retail jewelry establishment of A. J. Reinhardt, Lincoln, Ill. The improvements give the jeweler a very attractive display window.

Denver.

E. A. Stevens has taken a position with J. C. Bloom & Co.

Samuel Dawson, with J. C. Bloom & Co., left, last week, for New York.

Samuel Swartz, formerly with A. F. Lowenthal & Co., is now with Syman Bros.

H. Lindeman has enlarged his shop by the addition of several rooms and new machinery.

W. W. Hamilton, of W. W. Hamilton & Co., has returned from a long trip through the northwest.

E. L. Deacon returned from his western trip, last week, and will remain in Denver until after the holidays.

Theodor Sorensen, formerly with the Boyd Park Jewelry Co., has opened a factory for manufacturing jewelry.

The Habert Lapidary & Jewelry Co. is having a large Howard clock placed in front of its store. When completed, the clock will have a novel electrical attachment to attract attention.

Out-of-town jewelers, who called on the trade in Denver during the past week, included: J. L. Klinefleter, Breckenridge, Colo.; S. Bitterly, Phillips Jewelry Co., Victor, Colo.; E. R. Fisher, Pueblo, Colo.; H. G. Petty, Fort Collins, Colo.; M. C. Witherspoon, Boulder, Colo.; S. E. Selbe, Trinidad, Colo.; J. D. Kramer, Salida, Colo.; W. E. Payne, Boulder, Colo.; J. W. Barker, Central City, Colo.; H. C. Morse, Rocky Ford, Colo.; S. C. Morgan, Longmont, Colo.; J. Olin, Axtell, Nebr.; J. M. Bolding, Longmont, Colo.

Minneapolis and St. Paul.

J. B. Bodfors, Minneapolis, has re-arranged the interior of his store and installed additional show cases.

Among the out-of-town jewelers in the Twin Cities, during the past week, were: W. G. Gould, Glencoe, Minn.; Webber Bros., St. Cloud, Minn.; Oscar Holmes, Cambridge, Minn.; George H. Lang, Mankato, Minn.; A. M. Harper, Renville, Minn.; Chas. Wessalie, Waconda, Minn.

The uptown tendency of the retail trade in Minneapolis is becoming more and more pronounced as the city grows, and new store buildings are built further out. It is now reported that a leading retail jeweler is preparing to move to a new building at 9th St. and Nicollet Ave., which is just under construction. It was not long ago that such a location would have been regarded as unheard of, being clearly out of the retail business district. On the other hand, there is something of an attempt to get away from the domination of Nicollet Ave., as a retail street, which has resulted in rents there becoming exorbitant. There is desultory talk of an organized movement to some other street, probably Hennepin Ave., which is the next street north, parallel to it. In the meantime, the cross streets are gradually coming into prominence as retail thoroughfares, and 4th and 6th Sts. are now both regarded as coming retail stands.

Hugh V. Griffin, formerly of Leary, Ga., has moved to Edison, in the same State.

TRADE-MARKS

OF THE

JEWELRY and KINDRED TRADES,

PRICE \$3.00.

THE JEWELERS' CIRCULAR PUB. CO.

11 John St., Cor. Broadway, New York.

If You Know the Mark

you are not confined to the limitations of your stock, but will be able to supply any goods desired. Frequently a resident of a town or city will turn from a visit to a larger city, bringing back an attractive novelty or piece of jewelry that is greatly admired by her friends, who will probably want to obtain others like it. They will first call on a local jeweler and if he is not an up-to-date jeweler he will turn them away disappointed, because he has not the articles in stock. If, however, he is a progressive dealer, he will examine the trade-mark on the article, identify the maker and send for a line on memorandum. He will then tell his prospective customers that he has not the goods in stock just at present, but will have them in a few days. He will make a sale, and even sale counts. But more than this, he will agree to surprise and please his patrons and will convince them that it is not necessary to go out-of-town to obtain the latest and best productions of a jeweler and silversmith.

"TRADE-MARKS OF THE JEWELRY AND KINDRED TRADES"

(Second Edition)

will enable the jeweler to identify the maker of any article embraced in the jewelry and kindred trades. It illustrates 4,000 marks and covers every branch of the trade. It also contains much interesting and valuable reading matter on the subject of trade-marks in general.

One jeweler, after having the book for a week, wrote: "This book has been invaluable to me upon many occasions. Like the cowboy's plow, 'tis not required every day, but when needed is wanted quite bad."

PRICE \$3.00,

Express Prepaid.

UNITED STATES PATENTS.

ISSUE OF DEC. 4, 1906.

337,506. SPOON. WILLIAM E. RANEY, Norfolk, Va., assignor of one-half to John F. Woodward, Norfolk, Va. Filed March 10, 1906. Serial No. 305,336.

A spoon of the character described, comprising a bowl, having a handle at one end provided on its outer side with a recess and a headed stud ad-

joined to said recess, a cover for the bowl of said spoon provided with a handle at one end having a notch in one edge adapted to engage said headed stud, and a projection upon the handle of said cover adapted to enter the recess in the handle of said spoon.

337,564. STEM WINDING AND SETTING WATCH. LARS HAUBROE, New Haven, Conn. Filed April 3, 1906. Serial No. 309,670.

The combination with a winding stem or arbor, of a clutch sliding thereon and rotating therewith, a locking-lever, one arm of which engages the lower end of said stem, a spring engaging with

the opposite end of said locking-lever and adapted to lower the same, a slipping-lever, one arm of which engages with said clutch, and a "clicking" connected with said locking-lever and adapted to alternate with said locking-lever to engage with the other end of said slipping-lever when said clutch is raised and lowered.

337,577. WATCH-ROLLER REMOVER. WILLIAM N. LOUD, Quincy, Mass., assignor to Kendrick & Davis, Lebanon, N. H. Filed May 21, 1906. Serial No. 317,884.

A tool of the character stated, comprising a tubular shank having a roller-seat at its outer end and a plunger-guide adjacent to said seat, a spring-

actuated plunger movable in said guide, a nut detachably engaged with the inner end of the shank, and a handle having a screw-threaded extension engaged with said nut and bearing on the bead of the plunger.

337,615. SETTING. GEORGE W. DOVER, Cranston, R. I. Filed May 16, 1906. Serial No. 317,237.

The combination with a pin comprising a pin-body with a loop therein, of a box-setting provided

with an external channel adapted to receive the loop.

337,735. HAIR-WAVER. ARNOLD SCHARER, New York. Filed Feb. 24, 1906. Serial No. 302,750.

In a hair-waver, an element provided with a series of bifurcated winding-pins and means for turning the same, and a second toothed element

arranged to receive the winding-pins between the teeth, the second element being removable from the first element.

DESIGNS.

338,330. BADGE. BENJAMIN A. RICHARDSON, JR., Norfolk, Va. Filed Aug. 6, 1906. Serial

No. 329,508. Term of patent 3 1/2 years. 338,331. WATCH-CHARM OR SIMILAR ARTICLE. KEMP E. SAVAGE, Norfolk, Va. Filed

Sept. 28, 1906. Serial No. 336,649. Term of patent 3 1/2 years.

338,332. HANDLE FOR SPOONS, FORKS OR SIMILAR ARTICLES. GILBERT L. CROWELL, JR., Arlington, N. J., assignor to Dominick

& Hafl, New York. Filed Oct. 29, 1906. Serial No. 341,187. Term of patent 7 years.

UNITED STATES TRADE-MARKS.

[The following trade-marks have been adjudged entitled to registration under the Act of Feb. 20, 1905, and are published in compliance with Section 6 of said act. Said section provides:

"Any person who believes he would be damaged by the registration of a mark may oppose the same by filing notice of opposition, stating the grounds therefor, in the Patent Office, within 30 days after the publication of the mark sought to be registered, which said notice of opposition shall be verified by the person filing the same before one of the officers mentioned in Section 2 of this act. If no notice of opposition is filed within said time the commissioner shall issue a certificate of registration therefore, as hereinafter provided for."

Marks which are stated to have been "Used 10 years" are registrable under the last proviso of Section 5 of said act, which is as follows:

"And provided further, that nothing herein shall prevent the registration of any mark used by the applicant or his predecessor, or by those from whom title to the mark is derived, in commerce with foreign nations or among the several States, or with Indian tribes, which was in actual and exclusive use as a trade-mark of the applicant or his predecessors from whom he derived title for 10 years next preceding the passage of this act."]

PROVIDENCE, R. I. PHILADELPHIA, PA.

ard with respect to printing-wheels, for operating the recording-apparatus, and for excluding dust. A clock-driven shaft 29, Fig. 1, actuates a minute wheel 37, which advances an hour-wheel 46 by means of a pin 43 and a star-wheel 47. Fig. 2. Another pin on the minute-wheel carrying a roller 56 engages the underside of a lever 57 before this printing takes place, and slowly raises this lever

plate 17 and the back fork 16. This second plate is slotted and normally hangs free of the forks. It can be raised by a key-actuated slide 28 and pin 25, thus locking the indicator arm 14 in position. The perforated plate 17 preferably carries an indicator plate, for days of the week for example, etc.

15,979. TIME-RECORDERS. J. DEY and A. DEY, Syracuse, N. Y. Aug. 4.

A device for positioning a record card horizontally and vertically with respect to printing-wheels, 1, 2, is shown in plan in Fig. 1. A pinion 11, the crank of which moves over a suitable indicator, drives a rack which actuates both portions of the device. This rack is connected to extensions of the end pieces 5, 6 of the card-holder, and shifts them horizontally. The vertically-acting devices

rest against a spring 60. The roller 56 reaches a spring part of the spring-pulled lever 57 just as printing occurs, so that the spring 60 then tends to force the minute-wheel forward and reverse the clock-work of sudden strain, etc., etc.

15,978. TIME-RECORDERS. J. DEY and A. DEY, Syracuse, N. Y. Aug. 4.

Means for positioning a record card (1) vertically, (2) horizontally, with respect to time-printing wheels are shown in the figures. The card rests on a ledge 4, Fig. 1, attached to a sleeve 9 which can slide on a vertical rod. This sleeve is

may act horizontally, and vice versa. The rack also carries an arm 28, bearing a cam block for actuating the vertical positioning means. The card rests on one of a series of arms 13 radiating spirally from a vertical roller, this roller being geared to an adjacent shaft bearing a star-wheel 19. A tooth of this star-wheel is normally held by a notch in a spring-pulled locking-lever 21, shown in Fig. 4. This lever has a pin 26 for disengaging it by hand if necessary, etc., etc.

15,980. TIME-RECORDER. J. DEY and A. DEY, Syracuse, N. Y. Aug. 4.

Comprises a special form of casing, card positioning and gripping means, and a device for printing in different colors records taken at different periods. A front portion of the casing is formed by a detachable cover, the top of which is held behind a door. This door can be fastened to a second door at the side, by a lock and also by a hook. The cover carries two card gripping jaws on a slide which can be shifted horizontally, a pin being linked to this side and adapted to engage one of a series of holds in the cover. An indicator may be placed on the casing to show the positions of the card which correspond with these holes. The card holder proper is carried by two uprights and can be slid off when the cover has been removed. One of the gripping jaws is fixed to the slide, while the other can be moved slightly and is pulled away from the first by a spring to leave room for the insertion of a card. The movable jaw is pushed by a cam on the slide against the inserted card to grip it before printing takes place, etc., etc.

Swiss Watch Trade Expanding.

IN a report just received at Washington, D. C., Consul Edward Higgins says that the Swiss watch industry in the Berne district gives employment to 25,000 persons in the factories and several thousand more who work at home. Flourishing trade schools, which thoroughly cover the making of watches, have been established in all the larger towns. The minimum age for entrance is 14, and a three years' course fits the pupil for high-grade technical work.

The total value of the watches exported in 1905 was \$25,733,000, an increase of \$2,000,000 over 1904. The chief buyers of the Swiss watches were: Germany, \$5,800,000; United Kingdom, \$3,200,000; Russia, \$2,500,000; Austria, \$2,300,000; United States, \$1,700,000, and Italy, \$1,525,000.

Reappraisal of Watches.

A reappraisal of watches was announced recently by the Board of United States General Appraisers, New York, as follows:

WATCHES.—From Ste An'ne les lagasins Reunis, Paris, exported June 21, 1906, entered at Baltimore (File No. 40845); findings of Board No. 3; Prices as published in reappraisal No. 8160, Sept. 17, 1906. Reapprised value affirmed.

T. J. Peacock, formerly of Holland, Tex., has gone to Milford, in the same State.

connected to a second one 12, the connection allowing rotation. The second sleeve carries an indicator arm 14, shown in Fig. 3 and having hooked ends 15, 16. Between these ends is a plate having a series of holes, one of which is engaged by a pin 19, Fig. 3, on one of the forks. Each therefore corresponds to a definite position of the card-ledge 4. The forks 15, 16 barely clear the perforated plate, and, when the pin 19 is in the hole, its withdrawal can be prevented by the action of another plate 23 between the first

THE HOROLOGICAL REVIEW

Watch Repairing.

By H. REINECKE.

(Continued from issue of Nov. 21.)

THE wheel-cutting engine here represented is of the ordinary Swiss construction. The square frame is made of cast iron with iron feet. The latter are for convenience of fastening the tool on the work bench, when fly cutters are used, which have to be operated by foot power. Serrated cutters are generally operated by a long bow with a catgut or by a grooved

the tool adaptable for cutting clock or watch wheels. In explaining the construction and uses of this Swiss cutting engine an effort must be made to refer to its weak and objectionable points as well as to its usefulness.

The frame has two horizontal bars joined by two uprights, and in the middle spaces of these horizontal bearings have been provided for a hollow steel spindle, resting by means of a female center on a screw with a conical point, causing the spindle to move friction tight. On the outside of the lower

center spindle having a solid head is drilled in its center to very nearly its lower extremity for the purpose of its carrying a steel center, resting on a spiral spring and projecting at its upper end and terminating in a long conical hardened point.

This conical point is intended for centering watch wheel blanks. The solid head of this arbor is prepared to accommodate hollow chucks with serrated steel tops of graduated sizes for blanks of watch wheel, which are pinched on these chucks by a steel cap and a screw-governed spring attached to a poppet seen at the foot of the cut which may be made to slide up and down on the square upright on the upper horizontal of the frame.

The cutting of watch wheels in this manner has no better results than the cutting of clock wheels, but the centers of watch wheels may at times be corrected by the callipers and a round file. Other devices for cutting wheels are often employed for various kinds of steel and other wheels, but accuracy is seldom obtained.

It will be readily understood how wheel blanks are connected with the dividing plate, which is a brass plate having a number of small cone-shaped countersinks or holes drilled in its surface. These holes are arranged in circles, each circle containing a decreasing or increasing number carefully spaced. During the cutting of wheels the dividing plate is kept steady by a pin attached to a strong spring, which is released by lifting with the finger, when changed from one to the next hole of the particular circle, which has either the correct number of holes or a multiple thereof, as, for instance, in cutting a wheel of 30 teeth the 60 or 90 numbered circle may be used. When the first space is cut the pin is shifted into the next hole or the next but one, or the next but two, as the case may be. If the dividing plate is only marked by cone-shaped countersinks and the tool stands in a horizontal position, the cutting of a large brass wheel will cover the dividing plate with chips, which cause the inconvenience of filling these countersinks with chips. Care is then required to avoid committing an error. The elevation at the rear end of the tool shows the mechanism for operating the cutters up and down. The dark shaded knob is the handle of the screw which moves the same combination to and from the center.

The cutter spindle is moved sidewise in its frame by two thumb screws with jam nuts. The bearings of the cutter spindle

A SWISS WHEEL-CUTTING ENGINE.

and wheel. One of the latter is here shown; it is similar in size, rig and form to the one used with the rounding-up tool. The Swiss wheel-cutting engines are constructed with quite a number of attachments, calculated to be of use to the manifold needs of the watch repairer. Therefore it must in its present form be considered a combination tool. It is well known that all combination tools are full of weak and objectionable points, and in this respect the present tool forms no exception. It is easily to be conjectured that one of the most potent incentives for one of the combinations has been the object of making

part of this spindle is fastened a large brass collar intended for carrying the index plate with its divisions. In the hollow parts of the spindle are fitted several brass arbors with disk-like heads, through which project steel centers, threaded and with nuts to match for fastening between these disks and loose covers blanks for clock wheels. Wheels cut on these brass arbors, when fastened in the hollow spindle by a set screw, are hardly ever true in the round and require to be placed in recessed fixtures on the mandril and have their centers bored out. A different one of these arbors described and fitting in the hollow part of the

are two hardened cone centers, which run in the female centers of the thumb-screws of the brass frame, which is not a very good arrangement, as in cutting a large clock wheel the last few teeth are often spoiled on account of the cutting spindles getting shaky in their bearings. The cutters, which will cut the teeth of wheels with their so-called epicycloidal teeth all finished are of the serrated kind, and are kept for sale by material dealers. They may be purchased singly or in sets. It cannot be denied that these cutters, which at times do excellent work, are a great convenience to watch repairers who own only a small cutting tool and are not within easy distance of better accommodation.

Further Criticism by a Criticized Critic.

BOSTON, Mass., Dec. 5, 1906.

Editor THE JEWELERS' CIRCULAR-WEEKLY: I have read Mr. Higginbotham's letter. Now that he has had his "say," I think it will be proper for me to admit an error in my criticism of his lecture. As you are aware, Mr. Editor, I called your attention to the error promptly upon publication of the criticism, but decided to let it stand, thus giving Mr. Higginbotham an opening to reply and opportunity to gracefully admit his errors—an opportunity he has failed to grasp.

To his statement that my criticism was misleading, etc., I will pay no attention. Those interested are invited to read carefully his lecture and my criticism, and judge for themselves. I will consider each paragraph of his letter in its order, noting my own error in its turn.

(1) He says: "It does not require a technical education to recognize the fact that an angle of 60 degrees will span 3½ points, said points 24 degrees apart." Let us examine this "fact." In Fig. 1 the radial lines a b are 60 degrees apart. The crosses x x x indicate points 24 degrees apart. Beginning with the point located on the line a, and counting toward b, there are three points. But, when we go farther, is it not obvious that he really means the space between the points?

Consider Fig. 2, in which a b are two graduations, indicating any given distance on the line c, say 1 cm. Would it not be absurd to declare it was 2 cm. because it requires two points or graduations? Yet such deduction would be the legitimate fruit of Mr. Higginbotham's logic. When wheel teeth are mentioned, and any fractions of teeth included, the term "tooth" necessarily means the angular extent of a tooth and space, or its equivalent a tooth and two equal spaces. Therefore, it is scientifically exact to say: Pallets having an angular opening of 60 degrees, span 2½ teeth of a 5-tooth wheel.

Science defines a point as an indefinitely small space—a location without breadth or thickness. For Mr. Higginbotham to attempt dividing such space is crawling through a very small hole; far more dignified to frankly admit his error. In the matter of proportion in fork and roller radii, Mr. Higginbotham nearly admits himself in error—not quite. In the expression "face of the roller pin," I was using his own words. I assumed his lecture to be a

non-technical exposition of "points" and criticized it on that basis. Had there been no errors greater than the difference between the impulse radius of the roller and the face of the pin, his lecture would have "passed muster" all right. Mr. Higginbotham should know that whatever the proportions of fork and roller radii, the difference between the impulse radius of the roller and the face of the pin varies with the diameter of the pin. Therefore, the

FIG. 1.

trigonometry to which he treats us is a misfit.

He alleges a mistake in reporting his lecture. About six weeks elapsed between its appearance in THE CIRCULAR-WEEKLY and the other trade publications. Time enough, one would think, for him to correct such glaring errors.

(2) He says: "As to the word cohesion used in my lecture, it clearly expresses the idea intended to be conveyed." Science defines cohesion as the force holding like particles—as of the oil itself—together. Adhesion as the force holding unlike particles

FIG. 2.

together, such, for example, as the sticking of oil to a pallet stone. It will be seen that cohesion can act only in the oil itself, while adhesion acts upon two surfaces—the pallet stone and the wheel tooth. In such cases as the one under consideration, adhesion is the term used by all authorities. It best expresses what really takes place.

(3) He says: "There was nothing whatever to justify him in saying that I seemed to favor the two-piece fork and pallets." In Mr. Higginbotham's "points" on matching the escapement, no other type of escapement was considered. I think this sufficient justification for my inference.

He further says: "But to say that the 'two-piece fork and pallets is a practically obsolete type' is very far from the fact." Please observe that this is not a very accurate quotation. Want of accuracy, both in reasoning and quotation, appears characteristic of Mr. Higginbotham. Two-piece fork and pallets are still produced, but they are mostly old models. Theory and practice point unerringly to one-piece fork and pallets, as the type of the future.

(4) Mr. Higginbotham here makes a labored effort, with elaborate drawing (incorrect), to prove a proposition no one has

denied. In his lecture he stated: "Drawing out the receiving stone increases the angle of impulse and draft." This means that both impulse and draft are increased. I denied it, and said: "If the stone were drawn out, and the pallet swung on the fork in the opposite direction, i.e., the receiving end moved away from the wheel, it would increase the angles of draft and impulse on both stones." In this I was in error. I should have said it would increase the angle of draft on both stones and impulse on the receiving stone. Carefully observe that Mr. Higginbotham fails to explain by means of his drawing, or otherwise, how drawing out the stone changes the angle of draft, and for very good reason.

All authorities are agreed that the pallet staff should be planted on a line tangent to a circle representing the primitive diameter of the escape wheel. In the drawing presented by Mr. Higginbotham the pallet staff is too far from the wheel. Is it possible he does not know this? This defect in the drawing makes the effect of pushing the stone out, or in, much more marked.

Referring to his drawing, observe that in the case of the entrance stone the farther it is pushed out the farther is the locking corner from the pallet staff center when in position for the escape wheel tooth to act. This offsets, to a considerable degree, the effect which he essays to illustrate, and which, as I have stated, nobody has denied.

In a correctly designed escapement, shifting of the pallet stones, out or in, can be but slight and retain the proper relations; and as long as the pallet is not swung on the fork, or the fork bent, the change in impulse angle is exceedingly slight, and may be ignored entirely.

(5) Has Mr. Higginbotham discovered some means of transmitting impulse in watches without material contact? He says: "The resistance offered by the slide, on the contrary, is in part compensated for by a slight impulse delivered by the escape wheel tooth while sliding up the incline of the stone." Does he not know that at the conclusion of impulse the roller pin is moving at about its greatest speed, and that the fork, by reason of its inertia, moves up to the bank while the escape wheel is traversing the arc known as "the drop"? But let us suppose the fork stopped at the instant the tooth escaped; the roller pin continues its motion, and, by the time the escape tooth has traversed the arc of drop and drawn the fork up to the bank the roller pin is well clear of the notch.

His remarks on locking, etc., I will pass for reasons that must be obvious to any intelligent watchmaker.

(6) As to the method I mentioned for adjusting the various actions of the lever escapement, nothing was said against moving the pallet on the fork when necessary. It should be remembered, however, that there is but one correct position for the pallet, which gives the right draw on the stones; that being correct, locking, "let off," etc., should be adjusted by moving the stones. We are talking about an escapement "originally correctly designed."

Mr. Higginbotham should remember there are thousands of watchmakers believing his statements, because he makes them. He should know, also, that a man to be worthy the confidence of readers must be willing,

F. R. CUNNINGHAM.

Jewelry, Clocks, Watches, Silverware and Kindred Lines Exported from New York.

WASHINGTON, D. C., Dec. 5.—The following were the exports of jewelry, silverware and optical goods, clocks, watches and kindred lines from the Port of New York for the week just ended:

- Bombay 170 cases clocks, \$2,430; 51 cases welry, \$633; 1 case jewelry, \$110.
- Bremen 2 cases plated ware, \$165; 100 cases welry, \$175.
- Bremerhaven: 1 case silverware, \$300.
- Buenos Ayres: 41 cases plated ware, \$3,278; 32 cases clocks, \$640.
- Cairo: 1 case watches, \$178.
- Calcutta 30 cases clocks, \$540; 800 packages opes and views, \$800.
- Campeche: 2 cases clocks, \$266.
- Chaux de Fonds: 2 cases watches, \$100.
- Cienfuegos: 1 package optical goods, \$135; 2 cases jewelry, \$645.
- Copenhagen: 8 cases clocks, \$232.
- Corinto: 3 cases plated ware, \$190.
- Hamburg 1 case watches, \$2,210; 1 package tical goods, \$322; 1 case jewelry, \$101; 5 packages optical goods, \$807; 1 case silverware, \$960; case watches, \$1,345.
- Hatfield: 4 cases plated ware, \$222.
- Havana: 6 cases plated ware, \$758; 6 cases cks, \$112; 1 case jewelry, \$339; 2 cases jewelry, \$657.
- Havre: 3 cases watches, \$212; 1 case jewelry, \$00.
- Hull: 1 case plated ware, \$175.
- London: 8 packages optical goods, \$908; 89 cases cks, \$1,315; 3 cases watches, \$500; 3 cases plated re, \$160; 116 cases clocks, \$2,512; 2 packages reoscopic goods, \$290; 31 cases watches, \$5,523; cases silversmiths' supplies, \$753.
- Liverpool: 1 case plated ware, \$1,143; 1 case welry, \$705; 3 cases silverware, \$1,500; 75 cases cks, \$998; 3 cases watches, \$500; 2 cases jewelry, \$1,011.
- Manchester: 11 cases clocks, \$140.
- Melbourne: 8 cases plated ware, \$399; 247 cases cks, \$2,698; 1 case jewelry, \$167; 2 cases itches, \$934.
- Rio de Janeiro: 1 case jewelry, \$197; 1 package tical goods, \$156; 2 cases jewelry, \$870.
- Sheffield: 4 cases jewelers' sweepings, \$3,000.
- Smyrna: 97 cases clocks, \$906.
- Stockholm: 2 cases clocks, \$134.
- Trinidad: 7 cases watches, \$179.
- Valparaiso: 4 cases plated ware, \$266; 34 cases cks, \$778; 4 cases watches, \$954.
- Vera Cruz: 4 cases plated ware, \$445; 46 cases cks, \$422.
- Wellington: 14 packages jewelers' machinery, \$27; 217 cases clocks, \$4,444; 4 cases stereoscopic ods, \$700; 5 cases plated ware, \$306; 10 cases itches, \$1,300.

"Mirabile Dictu!" if True.

At Station V of the Brooklyn Postoffice, 9th St. and Fifth Ave., there is a clock which is rather remarkable. Precisely at six o'clock on the morning of May 14, six months ago, it was compared very carefully with standard Washington time, and since then it has not varied by a fifth of a second. Is there any other official clock in Brooklyn that can beat this record, and is there any watchmaker who can explain the cause of its wonderful accuracy, asks a correspondent in a daily exchange.

W. E. Vick, Columbia, Miss., has been succeeded by the Vick, Berry Jewelry Co. The firm of Sutton Bros. & Doty, Ma-la, Ia., has dissolved, B. H. Doty continuing alone.

Frictioning the Center Arbor.

BOSTON, Mass., Dec. 5, 1906.

Editor THE JEWELERS' CIRCULAR-WEEKLY:

MANY watches are so constructed that the arbor turns in the center pinion when the hands are set. To secure a uniform friction of the right degree is a problem often consuming much time, and seldom well solved.

The time-honored ways of doing it are well known, and nothing can be said in their praise. A slight lack of roundness in the hole may make the friction uneven and unsatisfactory, particularly in stem-winding watches.

I have used the following method with entirely satisfactory results: With a round-edge lap grind the center arbor about half-way through, near the larger end. Then lay it on a brass stake, or a brass stump in the staking tool, and with the round-edge swaging punch resting in the hollow of the arbor, with a light tap on the punch slightly bend the arbor, with little danger of breakage. In Fig. 1, a represents the punch, b the arbor, and c the stump. When the arbor is inserted the walls of the hole force the

FIG. 1.

arbor into its original straight form, which affords a durable and even friction, a slight lack of roundness in the hole making no noticeable difference in the smoothness of the setting.

Do not, thinking to improve on this plan, grind the arbor away on both sides. It will require more bending to produce the effect, and, moreover, the walls of the hole will not as nearly straighten the arbor; the front end will describe a small circle as the center wheel revolves, or when the hands are set.

This method is, of course, not recommended in cases where the arbor is not a tolerably good fit for the hole, as, for example, where there is sufficient room to admit the insertion of a bristle along with the arbor, a plan followed by some men. In such cases the correct remedy is a new arbor, and you cannot do better than friction it by this method. You save thereby much time, and the results are permanent and satisfactory.

The friction surfaces should always be oiled, whether the arbor turns in the center pinion or the cannon pinion on the arbor.

To realize the real effectiveness of this plan, try it on one of those nice little watches, about the size of a dime, and be happy.

"WATCHMAKER."

Johannes Nord, Rice Lake, Wis., has completed a course in watchmaking and engraving in Minneapolis, Minn.

Horological Notes.

IN a Leipsic show window there is on exhibition a clock made entirely of glass, with the exception of the springs. It took a man who is now 71 years old six years to make it. The clock is quite transparent, every movement of the component parts being clearly visible.

* * *

Two large clocks are being set up in the Terminal building, Spokane, Wash., by the Inland Empire Railway Co. They will be placed on the east and west sides of the building in apertures reserved for them when the general offices of the company were built. The clocks will be about four feet in diameter, and will be visible at a considerable distance. They were made by the Seth Thomas Clock Co., and were installed by G. R. Dodson.

* * *

Abram L. Kreider, 217 Church St., Lancaster, Pa., owns a clock over 200 years old, with wooden works, which has not lost a minute during the past four months. It was made in Europe.

* * *

Two of the most elaborate watches that have ever been constructed belonged, the one to Queen Elizabeth, the other to Mary Queen of Scots. Queen Elizabeth's watch was in the form of a duck, with beautifully chased feathers. The lower part opened, showing a face of silver, with an elaborate gilt design, and the whole was kept in a case of brass, covered with black leather which was studded with knobs of silver. The Scottish queen's watch was in the shape of a skull, the dial being introduced where the palate should have been, the works being in the mimic brain cavity. A little bell struck the hours.

* * *

E. S. Williamson, of the Canadian Crown Lands Department, president of the Dickens Fellowship, has discovered another interesting relic of Dickens, the great author, and one which, curiously enough, he has been carrying around for a few years without knowing it. He has been the possessor since 1901 of the first gold watch carried by Dickens, which was brought to this country by Francis Jeffery Dickens, the third son of the author, who went to Canada shortly after his father's death and became inspector in the Northwest Mounted Police. His father gave him the watch as a keepsake. Recently Mr. Williamson sent the time-piece to a jeweler to be cleaned, and the latter discovered on the back case a secret recess. In this was a lock of dark hair, a man's evidently, tied with thread. Whose is it? That is the question Mr. Williamson would like to solve.

* * *

Klipper Bros., New York, are showing a new repeating watch which resembles in appearance an ordinary striking watch, but embodies an additional attachment which, when set, strikes the quarters, half, three-quarter hours and full hour, continuing to do so until the lever is reversed. The watch includes also a regular attachment for striking the time whenever the slide is moved.

The death is reported of Oscar Parker, Colorado Springs, Colo.

A Good Test of Watch Service

THE HOLIDAY SEASON witnesses increased activity in the watch trade as in other departments of commerce. Orders at this time are all apt to be marked "rush"; and work enough for several months often has to be crowded into one. Where time is limited, it is difficult to correct mistakes should such be made. It is at periods of this character that the perfection and efficiency of the service rendered by any organization are put to the severest test. These Offices are able to cope with Holiday conditions, without the slightest disorder or delay.

MUNSEY'S MAGAZINE—ADVE

The TEST of a Good Watch

McCLURE'S MAGAZINE

begins new because perhaps it more abundant

How Can we Know a Good Watch?

BY the time it keeps. Not while it is new, but for the years it must serve you. The common fault in watches is that they become inaccurate. There is no reason why a watch should not remain accurate. The reason so many do not remain accurate is that the "hair spring" and "balance wheel" are called upon to overcome defects in the watch itself.

The Rockford Test

Assures Permanent Accuracy

Time for a Lifetime

EVERYBODY'S MAGAZINE

The Rockford Watch Test

EVERY Rockford Watch is run without a hairspring before it gets one. Because that proves perfect parts accurately put together. And when a watch that has passed this Rockford Test is properly "adjusted" it will remain an accurate keeper.

proper purpose of "adjusting" is to correct "outside" natural conditions inaccuracies—such as the changing position and the heat contraction caused by heat improperly and "balance spring" and "balance wheel" the adjusting upon to overcome defects in the watch.

COLLIER'S

Proving Watch Perfection

TWO things cause inaccurate time-keeping in a watch, broadly speaking: Defects in the watch itself and outside natural causes, such as the effect on a watch of the constantly changing position in which it is carried and the expansion and contraction caused by heat and cold.

Rockford

Time for a Lifetime

Making the Rockford Sell

Of course, you know all about the Rockford Watch—

No use telling you what you already know—that the Rockford is a very superior watch.

But we do want you to know that we are reaching 17,000,000 readers of the best periodical publications every month with advertisements like these.

We are telling people why the Rockford is such a reliable watch.

Why? To make it easier for you to sell them.

If a man came in to-day and asked for a Rockford Watch, could you sell him one?

If not, write us at once, because you are going to have calls for Rockford Watches—from people who will prefer a Rockford over any other watch.

Don't wait and see—have a Rockford to sell when you're called on for a Rockford.

Write for illustrated book of movements and prices.

You can always sell Rockford Watches on merit. You can always get Rockford Parts for repairing. The Rockford Watch Co. is making high-grade watches, and is ready to guarantee the trade reliable watches and satisfactory treatment.

OPTICAL DEPARTMENT

Examination Questions to Be Answered for Admission to Membership in the Physiological Section of the A. A. O.

THE following is the new application form sent out by Secretary Eimer, of the Physiological Section of the A. A. of O. Applicants are permitted the use of text books in the preparation of the theses, but must not avail themselves of personal aid.

The Physiological Section is so rapidly gaining recognition as the leading optometrical body that it behooves all optometrists to become associated with it. The requirements, while affording the Board of Regents a comprehensive idea of the applicant's ability, are not of a prohibitive nature.

Applications can only be obtained from the secretary, Ernest Eimer, Muskegon, Mich.

TO THE PRESIDENT OF THE PHYSIOLOGICAL SECTION OF THE A. A. O. AND THE BOARD OF REGENTS OF THE AMERICAN ASSOCIATION OF OPTICIANS:

Honored Sirs—I hereby make formal application for membership in the Physiological Section of the American Association of Opticians, having complied with your requirements and submitted a thesis on the following subjects:

Question No. 1.—(8) Points. (1) Describe the human eye, touching upon its form, various tunics, ciliary body, principal nerves and blood vessels, lens, aqueous and vitreous humors, iris, etc.

Question No. 2.—(4) Points. (2) Describe the extrinsic ocular muscles and their actions, and note what nerves control these muscles.

Question No. 3.—(2) Points. (3) Name the bones that form the orbit.

Question No. 4.—(6) Points. (4) Describe convex and concave spherical and cylindrical lenses. Show by diagram how images are formed by convex and concave spherical lenses. Explain conjugate foci.

Question No. 5.—(8) Points. (5) Describe the various methods to be relied upon to insure accurate sight-testing.

Question No. 6.—(4) Points. (6) What is meant by refractive index? Of what refractive index is the glass used for optometrical lenses? How is the refractive index of any given glass ascertained?

Question No. 7.—(5) Points. (7) Describe how light produces vision, and name the various functions involved in the accomplishment of sight.

Question No. 8.—(4) Points. (8) Describe the two theories held regarding the act of accommodation.

Question No. 9.—(4) Points. (9) Define the near point, the far point, and the amplitude of accommodation.

Question No. 10.—(7) Points. (10) Describe the various forms of muscular imbalance and state your own method of caring for these abnormal conditions.

Question No. 11.—(5) Points. (11) Define the relation existing between convergence and accommodation.

Question No. 12.—(2) Points. (12) How do you ascertain the proper strength lens for reading?

Question No. 13.—(5) Points. (13) Would you fully or partially correct the following conditions: Girl, age 12, 0.50 D. hypermetropia. Boy, age 4, esotropic with 5.00 D. hypermetropia. Man, age 34, 11.00 D. myopia. Man, age 52, 0.25 D. myopia.

Woman, age 25, 4.50 D. hypermetropic astigmatism, never used glasses.

Question No. 14.—(5) Points. (14) Describe in detail how you conduct a skiascopic examination; where do you place the light; where do you sit; where do you direct the patient's gaze, and do you always or ever cover the eye not under examination?

Question No. 15.—(4) Points. (15) Do you think accurate refractive findings can be obtained with the direct method of ophthalmoscopy? Describe the direct and indirect methods of ophthalmoscopy.

Question No. 16.—(3) Points. (16) Define the optometrist's limitations in relation to disease and describe the methods you employ to differentiate refractive and medical conditions.

Question No. 17.—(7) Points. (17) Describe the principal features and symptoms of cataract, sty, pterygium, chalazion, trachoma, simple and purulent conjunctivitis, ptosis, tobacco amblyopia, aphakia, muscae volitantes, nyctalopia, glaucoma, arcus senilis, blepharitis and iritis.

Question No. 18.—(3) Points. (18) Reduce the following to the simplest form: O. D. + 1.25 (— .87 C. ax. 175 (— 1° P. base In. O. S. + 2.62 S. (— .275 C. ax. 5 (— 1° P. base In.

Question No. 19.—(3) Points. (19) Transpose + 2.00 C. ax. 90 (— .175 C. ax. 180 to its equivalent spherocylinder.

Question No. 20.—(3) Points. (20) Suppose an eye had 3.25 dioptries of hypermetropia in its vertical meridian and 2.62 dioptries of myopia in its horizontal meridian, give two spherocylindrical combinations either of which would correct the error.

Question No. 21.—(3) Points. (21) To obtain proper results what points in the adjustment of frames must be borne in mind?

Question No. 22.—(3) Points. (22) What is the difference between a mydiatic and a cycloplegic?

Question No. 23.—(2) Points. (23) Describe your system of recording findings and explain why you believe it contains sufficient data.

Good writing, spelling, clearness, composition and diction are expected and if lacking will cause a reduction of from one to 10 points.

Each question to be answered independent of others.

A correct answer entitles the writer to the number of credits shown on margin opposite the question.

Seventy-five credits necessary to pass.

Applicants have the privilege of using any text books in the preparation of theses.

Thesis written by hand will be accepted, but we prefer them typewritten.

I declare upon my honor, that the thesis upon the foregoing subjects submitted by me to the Board of Regents, is original and entirely of my own production, and that in its preparation I have had no assistance from any person or persons, and that I have placed no marks upon it for identification other than the number 601.

I am a member in good standing in the American Association of Opticians, and pledge myself to abide by the constitution and by laws of the Physiological Section of said association, should I be found eligible to membership in the same.

Respectfully submitted,

Points Worth Remembering While Estimating the Reading Correction.

DONDERS' rule for presbyopic correction, unless modified for nearly every case, cannot be depended upon; if it be modified for each case it works better, but is no longer a rule. Reference as above made is to the practical and not to the theoretical correction of presbyopia; that the rule holds good if all patients held reading matter at a fixed distance of 13 inches, but they do not. It is not intended here to detract from Donders, but to point out that he presented an almost, if not absolutely, perfect theoretical rule, and that optometrists are, in many instances, prone to apply this rule in a practical way, and then complain of its failure to give satisfactory results.

For instance, at the age of 50 Donders advises adding + 2.00 D. for reading. But he bases this calculation on a 13-inch reading point, therefore if your patient has been and intends to continue holding his reading matter at a greater or less distance than 13 inches, do not add the + 2.00 D. sphere and then blame Donders. If the patient holds the reading matter at a distance greater than 13 inches add as much less than 2.00 D. as will permit him to see the fine (No. 1) type at his distance; if he holds it at a point nearer than 13 inches (which is seldom the case) add more than 2.00 D., but only as much more as will permit reading at this near point. As most people hold their reading and writing at a distance greater than 13 inches, at that point or nearer, the amounts that Donders' rule bids one to add must be reduced to proportionate number of cases.

No single rule will apply equally well to both hypermetropic and myopic cases. In a myopic case particularly must be treated upon its individual merits, and it will be found that in apparently similar cases varying amounts of plus spherical power will have to be added for reading. In hypermetropic cases never more than + 3.00 D. sphere should have to be added for reading, whatever the age. If the patient be 60, 70 or even 80 years of age he should not require more than a + 3.50 D. addition to his distance correction; and should it be found necessary to add more than + 3.50 D. to bring out the fine type, the you can rest assured that his distance correction is imperfect.

A simple expedient for quickly estimating whether or not a presbyopic reading correction is too strong is to find the near point at which the patient can read No. 1 type with his correction on. Make 1

Optical Department.

rain his utmost; then, if he can read inside of eight inches, that correction will be found too strong for ordinary practical use.

It is believed that each eye becomes presbyopic to the same extent. This, I find, is not so. Therefore apply the above test to each eye separately as well as to both once.

In myopic cases expect to add much more spherical than the age rule calls for, in other words, more than you would expect to add in a hypermetropic case of the same age.

E. L. R.

A Neglected Duty.

JAMES BRANCH TAYLOR, M.D., in the *Ophthalmic Record*.

(Continued from issue of Dec. 5.)

THE physician may instruct the hopeful case that at a certain time and under certain conditions he may gradually retrace his steps by using his eyes on fewer occasions and for more limited purposes. The latter may be able to thus scientifically practice himself, and gradually and carefully come back to original freedom. For such purposes, a medical man must, of course, have the cooperation of a conscientious and intelligent patient who will not abuse his privileges. The case, however, is just the same in other fields where the patient must rest. It is clear also that this mode of procedure—the gradual relinquishment of glasses which have been worn—is applicable particularly to the class of patients who have been using relatively weak lenses. How many oculists give their patients the advantage of such care and advice? How many, by routine, simply dismiss the case with the prescription?

3) In cases of fairly strong or somewhat pronounced lenses, a staple method is turning the patient back by a graded reduction of lenses. A considerable number of patients, and who should be handled in a distinct class by themselves, may be shaded back to zero in the use of glasses by this graded plan. It is an interesting process, a reward to the doctor and a relief to the patient, to see Nature pick up her powers again under gradual lessening of the artificial helps.

The rules for judgment in these cases, the tests on which the physician will make his discriminations and the injunctions for the patient, can not be gone into for limits of space; but this is of relatively small importance since the chief point is that in these matters oculists do not sufficiently practice what they will acknowledge to be true, and in accordance with analogies and awake practices in other fields.

The summary is that we must carefully screen an eligible and important class of patients from the dictum of "Once wearing glasses always wearing glasses." In doing this we must scientifically discriminate between a temporary help and a permanent burden.

Cases 4 and 5.—Similar, so only one will be discussed. A young man, 24 years of age, a insurance solicitor; test shows weak com-

pound hyperopic astigmatism. O.D. vision almost $\frac{20}{40}$, with +.75 sph. \ominus +.37 cyl. ax. 45 vision is $\frac{20}{60}$ full; O.S. vision nearly $\frac{20}{60}$ with +.75 sph. \ominus +.37 cyl. ax. 144, vision $\frac{20}{60}$. No muscular insufficiency. Accommodation and convergence normal. The above lenses are not comfortable, nor has any combination been found that is. Tests may be made with or without atropin; all satisfactory for a while, then a change seems needed—sometimes in sphere, sometimes in the cylinder or its axis.

There may be undoubtedly an element of spasm in this case, which even the atropin did not uncover, but for my part I do not believe that the spasm can be the principal cause of the trouble, because only a slight change can be made in the lenses each time, this slight change giving satisfaction for a time, and the failure to find a permanent cure by atropin disproves the spasm idea. I hold that there is unequal refraction in various parts of the pupillary area of the lenses. Thus with a change in the size of pupil there would be a change in the refraction, and all this talk of spasm as the cause is simply rubbish.

There is no permanent remedy optically, and what an oculist could do by treating the iris is uncertain. This young man has been to many oculists, and had his full quota of atropin treatment, and the first skilled optometrist gave him as much relief as any; that is nothing strange.

These cases wherein the refractive errors cannot be permanently corrected by the skilled optometrist, without the use of atropin, will probably not be benefited in any way by the oculist.

The oculist may do many things for a patient by way of curing diseased conditions, but in refractive cases, pure and simple, I have not found even those with international reputations superior to the high-grade optometrists.

[THE END.]

Optical Notes and Briefs

J. E. Adcox, Dufur, Ore., has added a well-equipped optical department to his store.

The Chinn-Beretta Optical Co., San Francisco, Oakland and elsewhere in California, is preparing to open a branch store in Visalia, Cal., and will begin business at the new establishment within a few days.

A meeting of the Alumnae Club, of the Rochester School of Optometry, was held in the offices of the school in the Triangle building, Rochester, N. Y., Tuesday, Dec. 4. About 20 members were present. N. W. Bissell was to have delivered an address, but being indisposed was not able to be present. Dr. Watson gave an interesting lecture on "The Effect of the Teeth on the Eyes."

Dr. S. W. Lane, president of the Southwestern Optical College, is going up to Lincoln, Nebr., to attend the meeting of the Nebraska State Optical Association, which is to be held Jan. 15-17. He is booked for a couple of lectures, and states that he has been informed that John C. Eberhardt, Dayton, O., will also lecture there at the same time. This meeting is expected to be a rousing one, as the association has a membership of about 165.

Optometrist's Views on the Recent Movement of a Medical Club.

Editor THE JEWELERS' CIRCULAR—WEEKLY:

THE following, quoted from a daily exchange, comes as a surprise. Those who, at Albany, have heard the earnest pleas made by physicians for protection in their work of unbounded goodness and charity, will not readily reconcile this action with those lofty claims:

Mutual protection against "dead beats" and an effort to obtain more money for their services are said to be the objects of the Middletown Medical Club, which is composed of nearly all the physicians of Middletown, N. Y. At a meeting of the club, last night, a list of people who do not pay their doctors was made up and approved. It is said that if any one whose name is on this list is taken ill he may have to go out of town for a physician or go without medical attendance. The physicians also decided to raise their prices for calls, giving as a reason the increased cost of all commodities.

The leaders in the medical opposition to the optometry act extolled the virtues of the physicians and claimed that they opposed any measure only when it aimed at the public welfare. We knew that was false in one respect, because the optometry act aims, beyond all question, toward benefiting the public, but they also emphatically stated that the money question never bothered them. It was not that the optometrists caused money to flow in channels other than medical that caused opposition; no, the physician cares little for money. The above report, however, makes it evident that a mistake exists somewhere; either these medico-political representatives were grossly ignorant of the nature of their rank and file brethren, or else they were hypocrites practicing despicable deceit; for by this same report it is seen, and seen all too plainly, that some physicians do care for money, apparently more for money than for human life. If one, who, on account of unfortunate circumstances, perhaps beyond his control, cannot pay his doctor bill and should be taken ill, not only will he be unable to obtain that doctor's services, but will be refused attention by all other physicians in his neighborhood. Should he die, well, it is said "dead men tell no tales."

It is these men who oppose optometry acts, it is such who play the hypocrite and delude legislators into believing that they are really guarding public interest, it is such with whom we have to contend and whom we have been taught to look up to with respect, and it is such who will always play us false and whom we must make come out into the open to fight.

One thing I do believe, namely, that no reputable, honorable physician would enter into a compact of the above sort no more than do honorable physicians appear against our bill at Albany. I urge against fighting with the respectable representatives of the medical profession, but toward such as these we should show no quarter, and in crushing their selfish plans help the good men in the medical calling as well as ourselves.

The heading should have been "Doctors Form a Sub-trust," because one grand trust has long existed in the form of a medical profession.

E. LEROY RYER.

The remainder of the stock of C. F. Askins, Oshkosh, Wis., has been sold to I. S. Schoenfeld, Chicago.

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan which they are utilizing in connection with their business.

The Hiring of Proficient Jewelry Clerks

Written Expressly for The Jewelers' Circular-Weekly by FRANK FARRINGTON
(Continued from issue of Dec. 5.)

PART II.

LOOK for clerks who can adapt themselves to their customers, and size them up without seeming to do so. A clerk ought to be something of a student of human nature if he is to make a salesman. The natural salesman will handle a stranger with such tact that he will get a maximum of result every time, and that without giving a particle of offense. Tact is one of the most useful of virtues in business.

You want clerks who are not quick tempered, who are courteous and obliging. Some men are so crabbed by nature that they cannot be pleasant. Others are so churlish that they will never take the pains to accommodate. People will not trade with impolite or unaccommodating clerks.

An employer whose clerks fear him will never get the best results from them. They should feel at liberty to come to headquarters with complaints or grievances at any time. Better at any time an unjust grievance told at once than a just one nursed in secret. The former will be corrected in time, while the latter will rankle and injure both parties to it.

Show appreciation of your clerks' efforts. Accept their suggestions and give their ideas a trial even if you are sometimes doubtful of their value. By doing so you place upon them the responsibility for making their own plans successful, and they will work the harder for them.

Clerks will not continue to offer suggestions, when they find that they are habitually turned down. Offer them every encouragement to think up schemes for the advancement of trade in your store. If it is a big store, prizes for the best ideas offered are a good plan, or a prize of so much for every idea adopted. A money incentive is perhaps better than any other that an employe is likely to have, though there are cases where loyalty and energy are given voluntarily with a will that may surprise you.

Give your clerks an insight into what you are trying to accomplish with your store. Take them into your confidence a little and make them feel that they are part and parcel of the working machinery of the plant

In the case of the smaller store, your success is more than otherwise dependent upon the personality of the help. You can make a success of the business perhaps without the entire co-operation of the clerk force, but it will be like rowing against the current and will be no such success as you can accomplish with their co-operation.

Have a system in the treatment and hiring of employes and adhere to it. See that your store rules are obeyed properly by all. Exceptions always breed discontent and cause favoritism to be accused. Give fair and just hearing to all complaints, being lenient when advisable and severe only in rare cases. A disgruntled clerk can often be made into the best servant the house has by a little delicacy in handling, while careless judging of his case would turn him out to become an enemy to the store as long as he remained in town.

A great many troubles and misunderstandings can be avoided if you make plain to the clerk at first his duties and responsibilities. Leave nothing to be guessed at. Start him in without any excuse for saying afterward that he "didn't know it was loaded."

There is no help so expensive as cheap help. Get the best to be had and pay good salaries; then expect the best of service. A well-paid clerk can be called upon for first-class work, and plenty of it, when a cheap man would be more or less justified at kicking at being asked to work overtime or to serve customers in a way beyond his ability and his pay. Few clerks earn more than they get if they work in a good store. A great many get more than they earn, though, and they can be called upon to do more without injustice to them or yourself.

One thing is certain as a rudimentary principle. A clerk is not made successful by high pay. The man who is the right sort will do his best whatever his wages. If he thinks himself underpaid he will look out for a chance to better himself at the first opportunity, but he will not slight his work in his present underpaid position.

An understanding that promotion and increased salary are coming to every clerk

who proves to be worthy of them will be very much. No man is going to be satisfied to grub along at the same old job for same old pay year after year. You would think of doing it yourself. Give the good man a chance to work up, and weed out the drones as soon as you can get rid of them to advantage.

The proprietor himself sets the pace his clerks. If he is the sort to sit around with his feet up and a cigar in his mouth his clerks will not be likely to step any lively in rush time or to spend their spare moments in tidying up the stock of their own sweet will. Energy and enthusiasm are contagious. So are laziness and listlessness.

In order to impress your clerks with your capacity for work it is not necessary for you to get your coat off and rush lessly around, upsetting things, boss every one right and left and confusing help generally. Your assistants have sense enough to know that not all work is made and they realize that the grinding at desk is often the hardest kind of labor.

As long as you are willing to get an hour on time in the morning and do not waste time in sheer idleness, you will be set a pretty good example. There are lots of merchants who do not realize how much time slips by without getting used for accomplishment of anything, and if they allow themselves to waste time so, the clerk will think themselves justified. Example, too, is often unconsciously imitated and the imitator thinks himself avoiding the fall of laziness.

A little visiting is a good thing now and then, but a man can visit away two or three hours in a day without noticing it. Visiting proprietors make visiting clerks. Visiting stores are apt to be dirty and untidy stores. The man who makes a point to get busy early in the day and keep busy is the man whose clerks keep the busiest, too.

Indifferent clerks are poor clerks. They are the ones who do not really care whether a customer buys or not. They think nothing to them. Their pay goes on the same; and so it does, but if you have clerks of that kind, you'd better stop paying and let them go on as soon as you want to. They are of no use to a store often damage its trade chances. The least prevent other live clerks from getting hold of customers and selling their goods. You want no clerks of the "D.C. Care" school.

Storekeeping Department.

If you hire clerks of whose ability you have doubts at the outset, you will probably find that you will not be disappointed in them. Hire men whom you believe in at first anyway. Hire men whom you want to keep. Changing clerks is a bad thing for employer and employed. Of course, a man sometimes stays in a store too long. There comes a time when he has done all the good he can, and he gets restless and wants a change. Some good men are so. When that point is reached, better let him go and not injure your business by keeping a dissatisfied man behind your counter.

If a clerk is ambitious, he wants to be a proprietor some day. If he has that in mind he will be saving and industrious. He will be a good clerk, but you will lose him in the end. Don't let that prevent you from encouraging him in his ambitions. Help him all you can and you will get the best good out of him while he stays. You do not expect good men to be willing to work for you all their lives. If they did they would become worthless because of their age sooner or later. The youngsters are the masters of the age, and a salesman with gray hair must be the exception to be valuable. Exceptions there are, but not many.

The talk-too-much clerk is one to be avoided always. He will injure your business and post your competitor on your ears. No man can talk too much without saying a great many things better left unsaid. That rule hits proprietor and clerks alike. As a rule, according to Benjamin Franklin, "Great talkers are little doers." Be most that great talkers do is to create enemies by their gossip. Don't allow clerks to gossip behind the counters if you don't want customers to fight shy of your store.

Can you impress upon a clerk who comes to work for you that your business is to be the thing uppermost in his mind as long as he stays? He is to think store all the time at he is there and be so interested in your success that he will think business when he is away as well. Show him where it is to his interest to identify himself with his work in such a way that its success is his success. This pays a clerk. It makes a good man of him. It makes the kind of help that is in demand, so that when you have to do without him go there will be no trouble about finding him the sort of recommendation that will find him another place where he will not have to begin at the bottom once more. It is perhaps well that a clerk shall not feel too secure of his position. A sinecure is the best thing in the world to dissolve ambition. You know that yourself. When everything seems to be coming your way, you are apt to rest on your oars. Keep busy promoting the hard workers in your store fast enough so that no man will feel safe enough to let up, for fear that next promotion day some one will go by him and crowd him back.

A good many clerks act as if they were going crazy. They seem to think of nothing but what is coming to them Saturday night. Some clerks can be cured of that sort of thing by talking to them seriously once in a while about success and about what they can make of themselves if they will try.

There are other men whom no amount of advice or friendly talk can affect, but the average fellow of fairly good sort is looking forward to something some day. Help him to keep that something in his mind's eye and help him to get there. It's a pretty good plan to furnish your clerks with trade literature and encourage them to post themselves. There are a good many things nowadays in the way of what might be called "success literature," books and magazines that are full of articles which inspire a man and serve to urge him to better and greater endeavor. Get all of that sort of thing before your clerks that you can. It will pay you and it will help them materially.

If you hire a clerk for so long, don't wait till his time is up to tell him what to expect when the day comes. If he is making good and is the sort you want to keep, let him understand that you expect him to stay with you and that he will be worth more money. If a clerk is worth more money than you are paying him, don't hesitate to raise his pay without waiting to be asked. The raise will be doubly acceptable when unexpected and unasked for.

Start right in by paying every clerk his entire wages as soon as due. Borrow money if necessary to do it, but don't hold up your help's wages. They probably need the money. At any rate, they have the right to it, and the clerk with back pay coming is always talking about it to his fellows in the other stores, and it will damage you more than you have any idea if you let the payroll get behind. Teach your clerks to save their money if you can. Help them in any possible way, but pay them promptly. It is about as unwise to advance a clerk's pay as to hold back the same, though on occasion circumstances might warrant it. Cash is the only proper basis for doing business with employes.

[THE END.]

The Salesman's Creed.

POSSIBLY the Salesman's Creed has not been read by all the world. The salesman who is not on the square and on the level, whose ways are not upright, soon goes to the wall of commercial life. If a man can live up to the following he will surely succeed:

I believe in the goods I am selling, in the firm I am working for, and in my ability to get results.

I believe that honest goods can be sold to honest men by honest methods.

I believe in working, not waiting; in laughing, not weeping; in boasting, not knocking, and in the pleasure of selling goods.

I believe that a man gets what he goes after; that one order to-day is worth two orders to-morrow, and that no man is down and out until he has lost faith in himself.

I believe in to-day and the work I am doing; in to-morrow and the work I hope to do, and in the sure reward which the future holds.

I believe in courtesy, in generosity, in good cheer, in kindness, in friendship and honest competition.

I believe there is an order somewhere for every man ready to take one. I believe I'm ready—right now.—*Good Business.*

How the Jeweler Can Meet the Competition of the Mail-Order House.

(Continued from issue of Nov. 28.)

ONE way to keep the mail-order houses from getting any business in your territory is to become so thoroughly acquainted with your line of merchandise that you not only know values, but are able to explain the difference in cost of apparently identically the same thing. The only way to get such a knowledge is to thoroughly study your line. Study your trade papers, study every catalogue you can find, and everything you find that is cheaper than something else and will take its place. Look them up and find out where the difference in cost comes in. You can always find out if you try hard enough. Always have a list of questions written out to ask the next traveling man, and when he cannot answer them, have him find out for you. He will not object, for traveling men like well posted customers.

One thing which you might as well get fixed in your mind right at the start is the fact that whatever price you pay for goods, it is based on the cost of production, and if the manufacturer and jobber are the right kind you may be sure that only a fair percentage of profit is added to the cost of production, and so there must be a good reason for a marked difference in the price of goods having the same general appearance. Some goods are made to sell, and some to use, and you will learn that those made to sell generally look well, for all the expense goes into appearance. Now, the consumer is not always an expert, and as a result he either depends largely on your judgment in his buying, or goes on the advice found in some mail-order catalogue. If you are so thoroughly posted as to be recognized as an expert, you have a big advantage, for all inexperienced persons, except fools, like to have the advice of an expert, and if your advice is known to be given free, about your line of goods, you will find the patron of the mail-order houses will be seeking your free advice along with others.

Being a sensible man, as well as an expert, of course you are not expected to handle goods which you cannot recommend, but you are always expected to have a good reason for not handling other lines, and the same reason which has caused you to take up one line and let the other one go is very likely to be strong enough to make your customer feel like doing the same thing.

A plain statement which a customer will find backed up by the facts, will be your best advertisement, no matter whether you make a sale or the money goes to the mail-order house. If you have described the mail-order goods correctly, and told how they are cheapened, your customer will remember your words when he finds everything turning out as you said. That will give you a prestige with him for future business which you could never have if you knew so little about your line as to give him wrong information and have him then find out that you were wrong, for after that he would never have confidence in you. And it would be even worse for him to find you really knew nothing much about your line of goods, for no matter what your line may be, your customer likes to deal with a man who knows all about it.

[Answers are also solicited from our readers to the questions published on this page.]

QUESTION No. 1724.—To Remove Soft Solder.—Will you kindly tell us what will remove soft solder?
G. F. S.

ANSWER!—One of the most serious evils which the repairer has to contend with is the presence of soft solder on the piece under treatment, being the imperishable record of some botch; all this must be removed or destroyed before the article can be properly repaired. Workmen generally believe that annealing and boiling out will destroy it, while, in fact, it has the very opposite effect. The heat thus applied simply aids in driving it in and amalgamating the solder with the gold. We have often tried to remove the solder after the annealing process by scraping and filing, but invariably found that it had penetrated so deeply into the gold that it would be utterly impossible to eradicate it by any such means. One of the common methods of treating this class of solder in the workshop is to remove whatever can be gotten off with the scraper, which consists of a three-square file sharpened at the point, and then to place the article for some time in strong muriatic acid. Nitric acid would answer much better, but it cannot be safely applied to articles of inferior qualities of gold, as it would act upon the alloy of which they are partly composed. For colored gold, however, it can be used with advantage and safety. From a long practical experience in the matter of soft solder we have arrived at the conclusion that there is no better way of treating it than that which we are about to point out. The solvent to be employed is a mixture of muriatic acid and crocus, and prepared as follows: To eight ounces of muriatic acid add one ounce of crocus and shake it well to increase a perfect intermixing; to one ounce of this mixture add four ounces of hot water; place in a pipkin and keep up the heat by means of a gas flame. Then introduce your soft soldered article and you will soon be satisfied with the result.

QUESTION No. 1725.—Cause of "Weeping" Solder.—When I solder a shield to a cup made of gilding metal, and afterwards hold it, I find the solder weeps and verdigris forms around the edges of the shield. Can you let me have the formula for the solder which will not produce this result?
F. O. H.

ANSWER!—It is to be surmised that the soldering to which you refer is done with soft solder. In such a case the verdigris which is formed around the edges of the shield is caused by the acid in the soldering fluid used in the soldering. If such is the case, you will have to use a soldering fluid which contains no acid. Such soldering fluid is prepared by dissolving some chloride

of zinc in alcohol, adding thereto a small piece of sal ammoniac. The presence of acid in the ordinary soldering fluid may be removed by the use of fluid ammonia, applied when the object is warmed to the temperature of boiling water after having been soldered.

QUESTION No. 1726.—Working Drawings for Hall Clock.—The De Selms Watch

School referred me to you as an authority who might be able to inform me where I can obtain the working drawings for a hall clock with chimes, hour and quarter-hour strike. Can you also tell me where I can get the working drawings for a synchronizing apparatus?
J. F. S.

ANSWER!—There are only two treatises which give any information on hall and striking clocks. The most modern one is the "Watch and Clockmakers' Handbook," by F. J. Britten, which has a good deal of information on hall and striking clocks, and is really useful to a student. For general fundamental study there is a book by Thomas Reid, issued in Scotland, in the year 1849. The book is out of print and a copy cannot be purchased very easily, as it is highly prized. There is a treatise on turret clocks and bells, edited in London by Baron Grimthorpe, formerly Mr. Dennison, president of the Horological Institute of London. There is not much new in the line of hall clocks. A great many are manufactured in Germany and Great Britain. There is nothing published on synchronizing clocks, and such information as does exist is hard to obtain.

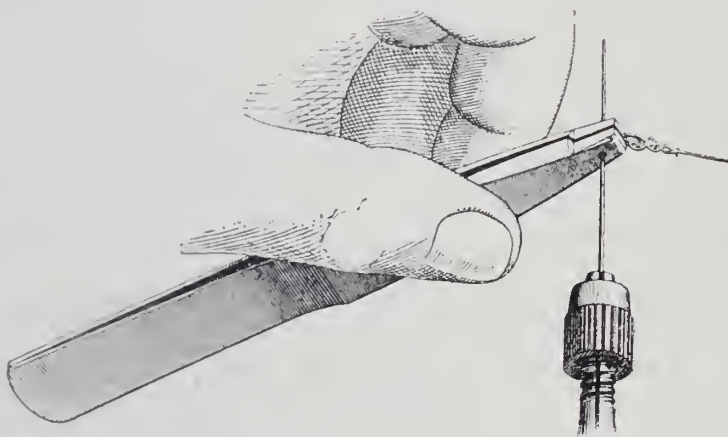

QUESTION No. 1727.—To Harden Lead.—In our manufacturing of sterling silver goods we are obliged to use some lead which, when rolled, becomes very hard and brittle, and breaks in pieces. Can you give

us an alloy for making this soft and purifying it?
L. C. D.

ANSWER!—Continuous rolling will harden lead, but its toughness may be restored by heating to less than melting point. All metals of whatever kind will become brittle when not pure, and lead when strictly pure will stand more rolling than impure lead. Antimony is the greatest enemy of pure metals because it unites with sulphur and phosphorus. We know of no process to make lead more malleable than it is when pure.

To Open a Hole in the Flat Watch's Minute Hand.

THIS small operation is very simple, and yet there is hardly a watchmaker who has not broken such a hand in using a reamer for opening the hole to fit the center part of a flat watch. Some will hold the hand while performing this operation

A SAFE METHOD OF OPENING A HOLE FOR THE CENTER PART OF A FLAT WATCH.

between the fingers, others will use the sliding tongues. Everyone, however, has a different way of doing it.

By the method illustrated herewith promptness and safety are assured. Take an old pair of tweezers which are filed down somewhat from the points till a thickness of about one centimeter has been reached. At a distance of about five millimeters from the end drive a hole through both halves of the shortened tweezers, as shown in the illustration. After that the hand is to be placed between the tweezers where the three holes coincide. Holding the tool firmly in the left hand, the use of a reamer in the right hand will enable an operator to fit the hole in the hand for the center part of the watch without the least risk of breaking it at any point in its length.

A. S. Kneale, the former employe of J. F. Hartwell, Oklahoma City, Okla., who was arrested a short time ago on a charge of appropriating to his own use valuable articles belonging to his employer, has been released.

A man giving his name as Edward R. Rafferty, and who said that he resided in Susquehanna, Pa., was recently taken into custody in Binghamton, N. Y., accused of being implicated in the recent robbery of a jewelry store. He was held under bonds of \$1,000 to await an investigation.

CROWN HALL CLOCKS

Artistic designs, fine details, correct styles, attractive values, are some of the strong points of **Crown Hall Clocks**.

In the making of **Crown Hall Clock Cases**, the standard that we adhere to is the best that we can produce, and the best that we can make is the best that can be made. Our workmanship has stood the test.

Our famous **Crown Movements** are the perfection of quality construction and finish. All our movements fitted with either fine gongs or tubular bells.

Our **Crown Symphony Tubes** (recently patented) are superior to any tubular bells of the market to-day in point of sweetness of tone and carrying power. Every set correctly tuned to concert pitch. New catalogue and price-list upon request.

Does the advantage of buying your Hall Clocks from manufacturers, who make them an **EXCLUSIVE SPECIALTY**—their only line—appeal to you?
If so, we can serve you best.

THE CONNOISSEUR

Devoted to Art Pottery, China, Marbles, Bronzes, Cut and Decorated Glass Ware, Bric-à-Brac, Lamps, Art Metal Wares, Fancy Goods and Kindred Lines.

The St. Petersburg Imperial Porcelain Factory and Its Product.

THE Imperial Russian Porcelain Factory was established in the year 1756. It occupies a position on the Schlüsselburg main road at the Nevsky barrier of St. Petersburg. Since its foundation, besides the large quantity of goods produced, an immense collection of precious specimens has been gathered, and may now be seen in the showrooms. In this factory a strong porcelain is made approaching the Chinese product in chemical composition. It is

one-eighth the number of waters obtained when fresh paste is used.

In the matter of glazes it is claimed that for variety of application of colored glazes—blue, red, nickel, gray, violet, cinnamon, green, purple, rose and ferric, the Russian factory surpasses all others in Europe. On the firing of the objects the slightest defect in the texture or the slightest running of colors involves the destruction of the defective article, which naturally makes for the reputation of the factory. All designs used in the factory are by hand; there are no stamps. The simplest design is worked on

panied its owner to his grave. It belonged to the sculptor Ivan, who lived in the time of the Emperor Nicholas I. The delicacy of his work is marvelous; it is incredible that it is done in porcelain. The petals of the flowers appear as though plucked from Nature—they are thin as paper, and the filaments are like wire. His work was carried on behind closed doors. His secret died with him. Another claim to distinction on the part of this factory is that the scars formed on the "biscuit" goods after firing can be obviated by an invention discovered in the factory in the form of a machine by means of which the scars after firing can be smoothed down so effectually that only the very closest scrutiny can detect that they have been treated.

Since the year 1890 a glass factory has been added to the porcelain factory for the production of works of art in crystal. There is a large grinding department attached to it. It is the only fine art glass works in the country. The general description concludes with the words: "On the whole it may be said that from the artistic, qualitative and technical points of view the Russian Imperial Glass & Porcelain Works occupy a position of honor among the best factories of the kind in Europe."

The Production of Rubies in Burma During the Past Year.

ACCORDING to Consul General William H. Michael, of Calcutta, during the last year in Burma 1,773,129 trucks of ruby earth were washed, at an average of \$1.50 per truck. This is 130,000 less than were washed last year.

It is reported that this decrease is due to the working out of the Choungzone mine. The output of this mine came from corners and crevices of the rock, which increased the cost of taking out the dirt. Work will soon begin at the Myntada mine, which is very close to the Choungzone, and will use the same washing machinery without necessitating the moving of it. The royalties received by the government from native miners this year amounted to \$62,975, which is about half what it was in 1904.

There was a net profit of about \$40,000 for the year 1905-6 and a dividend of 12 cents a share was declared. But for the control held by a few persons over the ruby deposits of Burma and the disposition to limit the output, rubies would be 50 per cent. cheaper than they are to-day. Burma coal oil lands and ruby deposits are held in the tight fist of monopoly, and it looks as if no power would be able to break it.

ARTISTIC POTTERY FROM THE ST. PETERSBURG IMPERIAL FACTORY.

white, small grained and fairly transparent; brilliant, quite colorless glaze covers it with an even film. Readers of the *Novoe remya* are informed that in the preparation of the paste it is allowed a long time to mature. In China it is left at rest as long as 40 or 50 years, or even 100 years. This leads the writer to observe that in the Russian Imperial Porcelain Factory there is a quantity of paste which has remained in one of the reservoirs since the year 1882, thus undergoing a chemical change, becoming darker in color and improving in quality. Well ripened paste will yield on firing only

the porcelain by the hand of a designer. The firing experience gained in the factory shows that few colors can stand up to 1,600 degrees, the exceptions being cobalt blue, chrome green, rose gold and uranium black. It was also found that under-glaze colors become diffused. This difficulty was first solved at the Royal Copenhagen Porcelain Factory. In 1892, the Russian factory, on the initiative of the Danish factory, adopted under-glaze designs, assisted at first by the Danish artists Martensen and Lisberg.

The St. Petersburg factory has had its secrets, one of which at least has accom-

An Oarsman's Handsome Medals.

AMONG the handsome medals awarded in the past season are two given by the National Association of Amateur Oarsmen to Constance S. Titus, the champion American single scull oarsman. One of the illustrations shows the two championship medals, which are alike, made into an attractive watch fob. They are 18 karat gold each is 1½ inches in diameter and ¼ of an inch in thickness. The design is in re-

MEDAL AWARDED C. S. TITUS.

ief and represents an oarsman in position, surrounding the figure is the laurel wreath signifying victory. The inscription, "National Association Amateur Oarsmen, MDCCCLXXII," forms the border of the medals. The name of the holder and the date of the contest is engraved on the back. The medals were made by George R. Laybrog & Son, New York.

This firm has also fashioned the artistic

UNIQUE BELT AND COLLARETTE FORMED OF MR. TITUS' MEDALS.

belt and collarette shown in the second picture. The medals arranged in these articles were won by Mr. Titus in various contests, extending through a number of years.

Phil. Stachler, Coldwater, O., has removed to Portland, Ind.

Diamonds in New South Wales.

AT the recent annual convention of the British Association, Prof. T. W. Edgeworth David, F. R. S., produced specimens of diamonds in matrix, discovered in New South Wales. The government geologist of New South Wales, Prof. E. F. Pittman, had co-operated with the discoverers in forwarding the specimens, the first ever really discovered in Australia, for any exhibition in England. Mr. Pittman had had an analysis made of the rock combination containing the diamond, along with two of the diamonds. One of the latter was still in the actual matrix, but the other loosened by weather. The analysis made by Prof. Pittman was placed before the Section.

Continuing, Prof. David remarked that New South Wales had up to now produced over 100,000 carats of diamonds, the value of which was about £60,000. Previous to this recent discovery the diamonds of Australia were all proved to be of alluvial origin, some occurring, as in West Australia, in very ancient gravels, now consolidated into conglomerates. Others were found in loose sands and gravels of much newer age.

At a particular mine, near Inverall, these diamonds were accidentally discovered by Messrs. Pike and O'Donnell while driving a tunnel through a hill slope of granite. In this operation three vertical dykes of a basic greenish brown rock were intersected, the thickest of them being 26 feet. It yielded four small diamonds, which were contained in two loads of about four to five tons. However, about 85 tons of the material, which were subsequently examined for diamonds, yielded only negative results.

Both diamonds shown by the lecturer possessed very sharp angles and edges, one being still half embedded in the matrix rock.

While it was quite possible, added Prof. David, that the two diamonds have grown in the rock where they now were, it was also possible that they may have been derived from still older rocks. Every effort was being made by the discoverers to find a similar dyke in the same district containing

diamonds in a number sufficient to be worked remuneratively. The discovery, in any event, was of great scientific interest, and, concluded Prof. David, might throw important light on one of the most controverted problems in modern geology.—*London Jeweler and Metalworker.*

A RICH DISPLAY OF ART GLASS.

AT 57 Park Pl., New York, the display of cut glass products from the Libbey Glass Co. includes a line of fluted vases which combine the desired strength with beauty, making useful as well as attractive articles. Engraved floral and fruit decorations of careful selection are used on this ware.

GLASS COMPANY'S NEW QUARTERS.

THE Sterling Glass Co., Cincinnati, O., has improved its quarters with a new show room and offices. The show room is particularly worthy of comment, as it is both handsome and up-to-date in every particular. The fixtures are entirely of ebony, and with the French plate mirrors show to the best advantage the many rich cuttings as well as the engraved and carved crystal, which the concern makes.

AMERICAN POTTERS WIN FREIGHT RATE FIGHT.

A DECISION has just been promulgated by the Pennsylvania Railroad that is of special importance to the potters of this country. After seven years' effort the United States Pottery Association, comprising all the principal potters of the country, has won its fight for equitable freight rates, the potters at East Liverpool, O., which is only a short distance from Pittsburg, having been so notified. Under the old conditions German manufacturers have been able to transport pottery and crockery across the ocean and freight it to Denver, Colo., for less money than it costs to ship ware from East Liverpool to Denver. The rate from Germany to Denver is 65 cents for 100 pounds, and from East Liverpool the rate is \$1.58. This was so manifestly unfair that a storm of protest resulted in a fight that has been waged and carried to a successful conclusion. Officials of the Pennsylvania Railroad have notified H. P. Knoblock, of East Liverpool, that after Jan. 1, 1907, foreign shippers will be placed on an exact par with American shippers as regards freights in this country, and it is believed that other trunk lines have come to the same understanding. Next to the tariff, the subject is the most vital that confronted the potters, and it is stated that it cannot help but have a most beneficial effect on all of the potters of this country, and especially those of Ohio in the East Liverpool district.

Look for the Pouyat Marks

Some of the reasons why dealers in Art-Porcelains should be interested in Pouyat China:

It is a notable ware historically; famous since 1783.
 It is recognized as the finest modern product of the celebrated Limoges potteries.
 Its unflinching supremacy is certified by a long series of medals and awards, including five bestowals of the Cross of the Legion of Honor upon successive heads of the Pouyat house.
 It offers the widest choice of artistic designs, the widest range of prices.
 Finally, all Pouyat ADVERTISING is designed to stimulate the business of LOCAL DEALERS.
 If your jobber does not handle Pouyat China, we will inform you where to obtain it.

**You Can Easily Operate
This Typewriter
Yourself**

Don't worry your correspondent.

Don't write him anything by hand that takes him time to make out—that may leave him in doubt—that he can't easily read.

And don't fill out legal papers or card memos—or make out accounts or hotel menus in your own handwriting.

It looks had, reflects on your standing, makes people think you can't afford a stenographer, and is sometimes ambiguous.

You can write out your letters—make out an abstract—fill in an insurance policy—enter your card memos—make out your accounts, or a hotel menu—or do any kind of writing you need, on any kind, size or thickness of paper, and space any way you want on

The **OLIVER**
Typewriter

The Standard Visible Writer

You can write any of these things yourself if you do not happen to have a stenographer.

For you can easily learn, with a little practice, to write just as rapidly, and as perfectly, as an expert operator on the OLIVER. Because the OLIVER is the simplified typewriter. And you can see every word you write. About 80% more durable than any other typewriter, because it has about 80% less wearing points than most other typewriters.

80% easier to write with than these other complicated, intricate machines that require "humoring"—technical knowledge—long practice and special skill to operate.

Than machines which cannot be adjusted to any special space—with which it is impossible to write abstracts, insurance policies, or odd-sized documents except you buy expensive special attachments requiring experts to operate.

You can adjust the OLIVER to any reasonable space—you can write on any reasonable size and thickness of paper, right out to the very edge, without the aid of any expensive attachment or special skill, and your work will be neat appearing, legible and clear.

For the OLIVER is the typewriter for the doctor, the lawyer, the insurance agent, the merchant, the hotel proprietor—or any man who does his own writing.

Write us now for our booklet on the simplified features of the OLIVER.

ALVIN SILVER

IF you want something attractive, something serviceable and something that will meet with a ready sale for the holiday trade, we recommend our Sterling Silver Toilet Sets. No. 2400, illustrated above, is a beautiful pattern in very low relief. A departure and welcome change from the old style of high relief so long in vogue. Order at once and avoid disappointment.

A Trio That Can't Be Beat

The "MONTAUK"

20 Year

A 20 year case that has seen many competitors disappear, has withstood all competition and retained its lead of all 20 year cases.

The "BRISTOL"

25 Year

Met with immediate success on account of its true merit. It is beyond question the best 25 year case on the market.

The "PERMANENT"

Permanent Guarantee

The best case for the best works. The best case for any works. There is nothing made in a filled case to compare with this case.

All made in the Senior Style Case, the neatest case a man can carry, with the added feature of being dustproof, as the movement shuts down into a shell or cup into which no dust can possibly penetrate.

The REPAIRING

END OF YOUR BUSINESS IS THE
MOST IMPORTANT PART OF IT

More people come into your store to leave work than to purchase goods.

Almost every one of your good customers became so through your repair department.

Progressive jewelers know this and concentrate their efforts on the repair department of their business. They give it the most prominent place in their stores; they emphasize it in all their advertisements; they keep themselves and their employes thoroughly informed on the costs of all kinds of work, new ideas and methods; they are courteous and accommodating to repair customers; have all work ready when promised; and do only such work at home as they can do well.

They send all the rest to us.

We devote our entire time, energy, capital, and twenty-five years' experience to this important branch of the jewelry business; employ and educate the best help that can be obtained; systematize and inspect the work, and use every modern method to produce the best work promptly at reasonable prices.

It is to your interest to do business with us, it is to our interest to have you.

Let us work together.

25-Year
"Pilot"
Watch
Case

A
 QUARTER
 OF
 A
 CENTURY

TWENTY-FIVE YEARS is the period most people have in mind in buying a Watch Case. Cases guaranteed for that time are the most popular on the market. Among the many makes offered in this class it is simply a problem of selection. Wise selection can only be made after intelligent examination and comparison, balancing values and prices.

Here is the Case that has won pre-eminence in the 25-year field. The WADSWORTH "PILOT" has forged to the front on its points of merit alone—unaided by any fictitious considerations. Right in designs, models, workmanship and price.

North Attleboro, Mass.

New York, 14 Maiden Lane

Of Interest to Jewelers

The Whiting Company have, during the past year, consistently maintained their well-known policy of introducing to the Jewelry Trade a constant succession of new and attractive patterns in solid silverware.

Attention may, in the first place, be directed to those richly hand chased Vases and other Special Pieces which have aided in establishing the Company's reputation for the production of silverware of the most individual character.

Among the additions made to the exclusive Whiting designs in Hollowware is the very effective Louis Quatorze, while the already extensive line of Toilet Sets has been further increased by the Duchess pattern, and the combination sets of Silver and fine Porcelain by the St. Germain, Bouillon, Coffee and Chocolate Cups, with Spoons to match.

The new Adam pattern has already taken an assured position in the long list of those which have conferred such generally recognized popularity on the Whiting Flatware productions.

Finally, mention must be made of the unusually comprehensive assortment of new and original examples of Deposit Ware which are always to be found in the Whiting stock.

DOMINICK & HAFF

SILVERSMITHS

FACTORY AND SALESROOM 543 5 7 W. 23RD STREET NEW YORK

The Process Explained

In Most Cases

when the Sternau Coffee Machine is shown and fully explained the prospective customer desires the Sternau Coffee Machine.

Sectional View.

In the Sternau Coffee Machine, coffee is automatically distilled by generated steam forcing hot water up through the center tube (A). The water is then sprayed, by the spreader (B), over the ground coffee on strainer (C), and the coffee extract percolates into the reservoir (D).

This process should continue from ten to twelve minutes, after the water begins to percolate over the ground coffee.

Thus the ground coffee never lies in the water, and the unwholesome properties of the coffee are not extracted.

Made of nickel-plate, copper and silver-plate. Sizes, 2 pts., 2½ pts. and 3½ pts.

Why?

Because he realizes that the proper way to make coffee is to distil it.

Distilling preserves the fine flavor and extracts only the wholesome properties, whereas boiling dissipates the aromatic oil and brings out the undesirable elements.

Furthermore, Sternau Coffee Machines are very convenient, as they make coffee on the table and are fitted with a Sterno-Inferno Burner, which is the best alcohol lamp made.

Our latest catalogue, No. 21, illustrating many useful and ornamental articles, sent on request.

"ONE IN A THOUSAND"

16 PRINTERS' INK.

GETTING MORE SPACE THAN YOU PAY FOR.

IT CAN BE DONE BY ATTENTION TO THE TONE OF YOUR AD—DIFFERENCE BETWEEN TONE DISPLAY AND MERE BLACKNESS OR BIGNESS—TONE IS AN ELEMENT THAT ONLY ONE ADVERTISER IN A THOUSAND KNOWS ABOUT—CHANCE FOR THE COPY MAN WHO STUDIES IT—GOOD FOR BOOKLETS AND CATALOGUES TOO.

From the very beginning of advertising the constant endeavor of all advertisers has been to make their announcements "stand out," as the phrase is. What brought into being all the faces of display type, all the borders, all the devices of engraving? Chiefly this search for something that would make an advertisement look black, and prominent, and bigger and more important than it really is.

A glance through the advertising pages of any magazine or newspaper, however, will show that not one copy man in a thousand (a large ratio, yet a safe one) has any idea of the fundamental principle of real display. He sometimes makes his ad black and expects it to stand out. Or just as often he attempts to get the same effect by liberal introduction of white space.

What all but one copy man in a thousand fail to comprehend is that distinction in display is not a matter of bigness, or blackness, or whiteness, but *unity of tone*. Into their black ad they will introduce enough white space and light type to destroy its effect of blackness. Into the white ad will be introduced display lines that break its clean-cut outlines. The ad that merely attempts to be big will often have elements of black, and white, and half a dozen shades of gray in between, so that, as far as unity of tone is concerned, it might as well be a collection of little display ads. The text in one tone clashes with the cut in another, and the firm name shouts in a third to call attention away from the argument.

As examples of space well

filled, consider the specimens reproduced here.

First, the Roger Bros. silverware announcement. This was printed in the women's magazine for November, 1906, and the designer probably worked with the knowledge that his ad was to occupy the outer columns on back pages, flanking either one or two columns of reading matter in between. He succeeded in capturing those inside columns without paying for them. This was done partly by his design, which gives the effect of a full page. But quite as much is due to his careful use of the *tone*

of the reading matter. That is almost white. Therefore, his design, which might at first appear to be exceedingly black, is really worked out in a dark gray tone. His type matter was made just a shade lighter, so that it would match the drawings on one side and the publisher's reading matter on the other. It is at once apparent to anyone who thinks about it that, had he made his flanking ads very black, they would have been in such contrast to the inner columns of reading matter that unity would have been lost. What the eye would then see would be simply a couple of single-column ads, not only out

PRINTERS' INK.

of harmony with the text, but who also out of harmony with one another. Had he made them too light, the effect would have been flat and insipid. The excellence of this bit of work is due to a careful study of tone values. When tone had been determined, then it was an easy thing to work out masses in the design.

The Knox hat ad, giving the effect of a full page in three-quarter space, is also kept to fair unity of tone, but its prominence is gained by the clever way in which the illustration has been worked out in gray, and made to occupy the whole width of the

—the distinctive part of dress, in all ages and nations. This is why gentlemen have always been so particular about their hats. Whether you spend the Winter in New York, Paris or Cairo you will find the

KNOX HAT

quietly asserting its supremacy in good taste and high quality—a quality as fixed as the price.

Knox agents are showing the Fall and Winter styles in Men's and Women's Hats on all the principal streets of the United States.

page. It really starts out as though it were intended for a full-page illustration, with the result that a full-page effect is gained. Placed at the bottom of the page, it would have less force. Yet even a very black ad at the bottom might not nullify its effect. Notice, too, that the quarter-page Rogers ad at the bottom is not in any way overshadowed.

The Autocar ad, prepared by the Ireland agency, is blacker than either of the others in general tone, but this darker tone is faithfully carried out through the

AS A SILVERWARE DEALER,

interested in modern methods it will be worth your time. The fact that this authority on advertising states that he thinks "1847 Rogers Bros." advertising is among the strongest put out—in fact, "one in a thousand"—probably partly explains why the sales during the past few years have so largely increased. The experienced dealer knows of more or less unimportant concerns in various lines who, by a temporary plunge, strive to create the impression that they are doing big things. Contrast with this our consistent and systematic campaign—the general plan (subject to conditions as they appear) arranged for months—almost years—in advance.

A campaign of this kind on the part of the maker insures for the dealer a steady demand throughout the year instead of a few calls during the rush season and then no further movement for the balance of the year.

The Iridescent Beauty of the Egyptian Pearl

As shown in our newest creations, is beyond comparison. These goods excel the usual in gold jewelry as holiday gifts. The present and latest fad is the button shape pearl, mounted in the French clutch ear screw for unpierced ears, as shown in the illustration. All of our mountings are of 10K. gold.

WE CAN SUPPLY YOUR XMAS WANTS WITH AN IMMEDIATE DELIVERY

Prices range from \$20.00 to \$36.00 per doz. pairs—plain screw; and from \$27.00 to \$45.00 per doz. pairs in the French clutch.

We have just received a large consignment of Coral and have mounted the choicest pieces in the same style gold mountings as shown in the illustration, offering a line of

Genuine Coral Earrings

in a variety of colors, showing the popular round button shape, that is one of the leading features of the present season. Prices on these Coral goods range from \$3.00 to \$9.00 per pair.

Send your orders to-day by mail or telegraph.

NORTH ATTLEBORO, MASS.

To make your Holiday Stock complete you will require a good assortment of

The Rosary in Fine Jewels

Five years ago the sale of the Rosary was by Catholic periodical stores only. We advised that they should form part of the staple stock of every Jeweler, and those who added this special line to their stocks have been pleased with the results.

We have a splendid variety in real and imitation stones, popular selling sizes and colors, nicely mounted in gold and rolled gold-plate.

We will, on request, send illustrated list and if you wish, we will also send a package on selection, containing a good assortment of the different grades.

Beautiful Silver Service Presented by the State of Louisiana to the United States Battleship "Louisiana."

ELABORATE and beautiful is the silver set which was presented last Saturday (Dec. 15) by the people of Louisiana to the battleship named after that State, an illustration of various pieces of which appear in this issue.

The 58 goblets each represent a parish. The seal of the State appears on one side of the goblet, while the corresponding space on the other side is used for the name of the parish. The principal feature in the treatment of the goblet is the magnolia which was chosen as symbolical of the State as a whole, consequently covering all the parishes as no other similar feature could. The blossom forms a socket for the cup and continues to the base, forming the stem of the goblet, with garlands of fruit.

The two ladles have bowls formed of open magnolia blossom designs. The handle has the seal of the State and Navy, with the eagle at the top. The complete set consists

FRUIT AND CAKE BASKETS.

of a large bowl, which, with tray (shown on the cover), makes an imposing center piece. 58 goblets, four baskets, two ladles, and a smaller serving tray. The set cost \$10,000. The silver used is .935 fine, instead of the usual .925, or sterling.

All decorative mounts, including the scenes in panels, medallions, seals, etc., are modeled, cast and applied after being carefully finished by hand chasing. In workmanship, finish, artistic treatment and in careful rendering of detail this service compares to the highest ideals of the silversmith's art.

The center piece is symbolical of three features, i.e., the State of Louisiana, the battleship *Louisiana* and the Navy. The form of the bowl is suggestive of the prosperity of the State in its agricultural wealth

shown by the clusters of fruit which forms a wreath as the crowning feature of the bowl. The State seal is introduced at the top of the bowl, encircled by the magnolia, or State flower. On the reverse side, balancing the magnolia, the cypress and long leaf pine appears.

In considering the scroll work of the design, it will be noted that throughout it is of the Louis XIV. period, and as this a remote historic feature it has been

interwoven as a background, taking its proper place from an historic point of view, and at the same time playing an important part as a decorative effect.

On the body of the bowl, in the center panel, is the Cabildo, flanked on either side by two medallions, the subjects of which are (1) La Salle taking possession of Louisiana in the name of King Louis XIV, (2) transfer of Louisiana from France to the United States. Between these panels are cotton and tobacco.

The reverse side of the body of the bowl shows the City Hall in the center panel, with scenes of navigation and railroad transportation depicted on the two side medallions. Between the medallions sugar cane and rice are worked. The reverse side, in conception and arrangement, balances the front of the bowl.

The treatment of the body of the bowl symbolizes and is emblematic of the State itself, the base of the bowl being dedicated to the Navy by the use of the seal of the Navy, together with the eagle, whose attitude is that of watchfulness over the sea, which is in turn depicted in decorative treatment of the tray forming the base of the complete piece.

On one side of the elevation of the tray is a *bas-relief* of the old ram *Louisiana* and on the reverse side appears the present battleship *Louisiana* carefully worked out in detail. The large seal of the Navy Department, at each end of the tray, completes this design.

The bowl is gold lined, and the complete center piece weighs approximately 2,000 ounces. The capacity of the bowl is 15 gallons. The diameter of the large tray is 45 inches.

The small tray, intended for use as a serving tray, has two massive scrolls at each end, forming substantial handles. On the flange appears the State seal, the Navy seal, magnolia, cypress, long leaf pine, rice and sugar cane.

The fruit baskets are two in number, and show both the seal of the State and the seal of the Navy. Magnolia, interwoven with Louis XIV. scroll work, is carried throughout the pieces. The bodies of the fruit baskets are a trellis with entwined grape vines in open pierced work.

The cake baskets, like the fruit baskets,

PUNCH LADLE.

are two in number, and of the same treatment with the exception of not being of open work.

The service, prior to the presentation, was exhibited in the show windows of Cole-

man E. Adler, 810 Canal St., New Orleans, who furnished the set. The designers and manufacturers were the Frank W. Smith Co., Gardner, Mass.

The vessels of the United States Navy whose presentation services have been illustrated and described in THE CIRCULAR-WEEKLY, and the dates of the issues in which these illustrations and descriptions appeared from time to time, are as follows:

- St. Johns: 3 cases jewelry, \$315; 30 cases clocks, \$352.
- Vera Cruz: 73 cases clocks, \$510.
- Wellington: 1 package optical goods, \$150.

Slig Oppenheim, a jeweler located at 8 Broadway, Oakland, Cal., was badly burned about the face, hands and neck recently by an explosion which occurred in his store after he had thrown a lighted match in what is supposed to have been black powder. The jeweler was at once taken to the hospital, where his injuries were attended

New Canadian Tariff on Diamonds and Its Effect on the Jewelry Trade in the Dominion.

MONTREAL, Dec. 12.—The new provision in the Canadian tariff imposing a duty of five per cent. on imported diamonds, cut and in the rough, has caused considerable dissatisfaction in Montreal jewelry circles, and a petition is in circulation for presentation to Mr. Fielding, Finance Minister, praying him to remove the duty without delay.

A CIRCULAR-WEEKLY representative who interviewed some of the leading members of the trade found them as one in their opposition. R. Hemsley, representing the retail dealers, stated that hitherto one-third of the total diamond trade had been done with Americans, because the American tariff imposed a duty of 10 per cent. on imported diamonds, and consequently it was far cheaper for an American to pay the cost of a trip to Montreal to buy his diamonds here than to buy the diamonds in New York. There was also to be reckoned the profit on this advantage of 10 per cent., which brought it up to a total of 12 per cent. "We shall now, however," said Mr. Hemsley, "have to deduct from that 12 per cent. five per cent. duty plus the profit, which means that the difference between Montreal and New York prices in future will be six per cent. With so small a difference the American will prefer to buy in its own market, as it will scarcely be worth its while to come here."

"What will be the direct result of the new duty on the diamond trade of Montreal?"

"Well, we shall lose the American trade, and local purchasers will have to pay six per cent. more than hitherto. The new duty will probably result in an addition to the revenue to the Government of \$40,000 a year, and a loss of over a quarter of a million to the Canadian diamond trade. Although the Government may gain a small sum, both the jewelers and the public will be the losers. There seems to be no justification so far as I can see for the imposition of the duty, and I have signed the petition for its abolition."

I. Michalson, Jr., member of the firm of I. L. Michalson & Sons, diamond importers, said he believed that it will cost the Government more to watch the wholesale smuggling that will be attempted between Europe and Canada than it will derive from the total receipts of the new duty. Some people will be sure to think that they can save the duty by smuggling and they will smuggle. With our tariff still only half the American rates, however, the Americans will be able to save money by coming here, and I fancy will still continue to buy here. There is no doubt, however, that the new tariff will affect the tourist trade to a very large degree. It is not true that American jewelers have been in the habit of coming over here and buying their stock in Canada, but the tourist trade has been a very large one, indeed, and just as far as the new tariff will affect it so far as it is injuring the Canadian diamond industry. I believe the Government would find it more expensive to enforce this tariff than the receipts collectable from the new duty will be worth. I cannot understand how any duty which injures any Canadian

trade can be beneficial in the long run to the Dominion."

Another diamond importer, who did not wish to be mentioned by name, had some interesting remarks to make. "The new duty," he said, "will only affect the retailers who get the tourist trade. It will not, as far as I can see, harm the wholesale trade. One thing it will do, however, and that is to encourage smuggling of diamonds into Canada from London and Amsterdam.

"You may say that for a mere five per cent. a man would not be willing to take risks, but you must remember that it is the easiest possible thing to smuggle \$50,000 of diamonds in one's vest pocket, and that this would mean a saving of \$2,500, which would be well worth while.

"The price of diamonds is going up every day, and as this has not affected the sale, which is increasing in volume, I am not inclined to think that the new duty will affect it either. In fact, I think it may benefit the wholesalers, as it will prevent London and Amsterdam diamond merchants' representatives from filling up the retail houses, and thus give the local wholesale men a chance. I do not think that the new duty is unfair; it seems to be as long as it is short. I consider that diamonds, being a luxury which only the rich man can afford, should pay duty, in view of the fact that at the present time we all have to pay duties on the necessities of life."

Advancing Rents in Pittsburg May Cause Changes in Retail Jewelry District Next Spring.

PITTSBURG, Pa., Dec. 14.—Some big changes are contemplated in the jewelry district of this city in Market St., between Fifth Ave. and Diamond Sq., after April 1 next. The John M. Roberts & Sons Co. has leased the buildings formerly occupied by the Weisser-Low Co., adjoining the store of J. R. Reed & Co., at 536 Market St., the present Roberts establishment being next door to the Reed place, on the north. The Reed firm was notified several days ago that beginning April 1 the rent would be advanced from \$6,000 per annum to \$9,000. The Roberts house has released its present place of business, but it has not been decided what will be done with the buildings (two stores) formerly occupied by the Weisser house, which recently moved to Liberty Ave., because of high rent and because of a desire also to get larger quarters. It is reported, but the report could not be confirmed, that the Roberts house will pay \$18,000 a year for the Weisser buildings. The firm is not yet ready to announce what it intends to do with the stores, but the report of the leasing of the buildings leaked out to-day and was confirmed. The Roberts firm also succeeded in securing a long lease on its present establishment, but the terms have not been announced.

The Reed firm is negotiating for a lease at the present time, and it is not known what the outcome will be. It is, however, the same story of high rentals in the downtown section of Pittsburg, attention to which has been frequently called by THE CIRCULAR-WEEKLY. The tendency to advance rents is becoming a very serious subject of discussion with some firms.

J. R. Reed, who retired from the Reed firm several years ago, after having been

long at the head of the house, is assisting during the holiday rush. To a reporter he said: "I read with a great deal of interest the article recently published in THE CIRCULAR-WEEKLY about high rents in Pittsburg, and it is a serious question.

"Last year some firms were forced off of Fifth Ave. because of high rentals. I really believe it is wrong to run property values up to present high figures, and that appears to be what is responsible for advancing rents. Naturally when a man buys a property he wants to get a proper per cent. on his investment, and the tenant must pay the price. I heard the other day on good authority, that a certain firm offered \$18,000 a year rental for a building occupied by a jewelry house and that the agreement was that the tenant would pay the taxes and make repairs. I do not think that this offer was accepted. But I am really satisfied that I retired from business several years ago."

All jewelers in Pittsburg, without exception, report good business, and under normal conditions it will not be difficult to make the advancing rent. J. C. Grogan & Co., who occupy the building at Fifth Ave. and Market St., adjoining the Roberts house, have another year's lease on the building from next April. The houses named have been in the location for many years, and is among the oldest established in the city, the best retail stores being within this block and within two or three blocks of these stores. The stores paying the highest rents are located within that radius.

Choice frontage in the retail section has been run up to \$20,000 and \$25,000 a foot front. Buildings only three and four stories high grace many of these lots.

Chicago Jewelers Pass Resolutions on the Death of Otto Young.

CHICAGO, Dec. 12.—At a recent meeting of the Chicago Jewelers' Association a committee composed of Benj. Allen, H. F. Hahn and C. H. Knights was appointed to draw up suitable resolutions embracing the sentiment of the association on the death of Otto Young, who was a charter member of the association and one of the most active members in organizing it in 1876, and later, in 1883, its fourth president.

The resolutions follow:

Whereas, In the death of Otto Young the Chicago Jewelers' Association recognizes that one of the most prominent and useful citizens of our city has been called away. That during the years while he was active in the jewelry trade, he was a loyal and enthusiastic member of the association and a warm supporter of its business affairs. Of alert mind and positive convictions he was always ready to support his judgment by hard work, and that he contributed largely to the success of this organization both in counsel and action during its early years. Therefore, be it

Resolved, That the jewelry and kindred trades of Chicago have lost in the death of Mr. Young a man who for more than a third of a century has been identified with their interests. As a man of business he possessed great foresight and early saw that Chicago was bound to become one of the leading distributing points in all America for jewelry and allied lines. By his associates in our trade he was recognized as a strong factor in the business whose wise counsel and keen judgment will be sadly missed.

Resolved, That the members of this association extend to the family their sincerest sympathy in this hour of affliction. Be it further

Resolved, That these resolutions be printed in the representative journals of the trade and spread upon the records of this association, and that a copy of them be suitably engrossed and presented to the family of the deceased.

Death of Samuel Dodd.

**President of International Silver Co.
Passes Away at Meriden, Conn.**

MERIDEN, Conn., Dec. 13.—Samuel Dodd, president of the International Silver Co., and Meriden's leading manufacturer, died suddenly at his home on Colony St. shortly after 6 o'clock yesterday evening of valvular disease of the heart, from which he had suffered for the past two years. The death of Mr. Dodd, who was undoubtedly one of the best known members of the jewelry trade in the United States, cast a gloom over this thrifty village, where he was much beloved by all his business and social acquaintances.

Mr. Dodd was in unusually good spirits on Wednesday and spent the entire day at his office, returning home about 5.45 in the afternoon. Soon after arriving at the house he summoned a servant, to whom he complained of feeling distressed for breath. Stimulants were administered to him, after which he tried to say a few words, but was unable to do so. He passed away almost instantly. The fact that Mr. Dodd had previously been so critically ill as to cause alarm to his intimate friends was not generally known, and his death consequently came as a shock to the entire community. He is survived by one son, Charles T. Dodd, his wife, who was Miss Catherine Brooks, having died about 18 years ago.

Samuel Dodd was the son of Samuel and Frances (Bull) Dodd, of Hartford, where he was born Oct. 4, 1834. He was descended from old New England stock. His paternal ancestors came from England in 1682 and settled in Hartford. Mr. Dodd's

paternal ancestry was also distinguished, the Bull family having been prominent in the history of Hartford. Thomas Bull was one of the original proprietors of Hartford. Some members of the family held honorable positions in the Continental Army during the Revolution. Mr. Dodd received his early education in the public schools of Hartford, and passed his youth and early manhood in that city. He began his business career as a clerk in the large drug establishment of Lee & Butler, with whom he remained for a number of years. He afterwards acted as teller and discount clerk in the City Bank.

Mr. Dodd came to Meriden in 1857 as cashier of the Home Bank, which position he held until 1867, when he became one of the organizers of the Parker & Casper Co., manufacturers of silverware. This concern was later merged with the Wilcox Silver Plate Co., of which, until its consolidation with the International Silver Co., Mr. Dodd was secretary and treasurer.

Upon the organization of the International Silver Co., in November, 1898, Mr. Dodd was made its president, which office he held until his death. His managerial

was a staunch Republican, and in 1879 was elected by that party as a member of the General Assembly in this place. This was the only political office which he ever held, although many were offered to him. Upon numerous occasions he was asked to run for Mayor, but would never accept the office. The deceased was really a man of retiring disposition, and in every sense of the word a lover of his home, preferring the latter's comforts and pleasures to the more strenuous social life. He was not associated with any fraternal organizations of this place, with the exception of the Home Club. He was a member of St. Andrew's Episcopal Church, of which he was a vestryman for several years.

MERIDEN, Conn., Dec. 15.—The funeral of Samuel Dodd was held this afternoon, and, like Mr. Dodd's life, was of the most unostentatious character.

The manufacturing, business and official interests of Meriden were represented in the throng that listened to the impressive service at St. Andrew's Episcopal Church. Directors of the International Silver Co. from all the cities in which branches of the great corporation are located and business friends from many places were in attendance, attesting to the high regard in which the deceased was held.

The burial was in Walnut Grove. The grave was lined with concrete, with an inner lining of steel. The committal service in the cemetery was conducted by Rev. M. Randall.

The honorary bearers, all old friends of Mr. Dodd, were: John W. Coe, A. Chamberlain, George H. Wilcox, Dr. E. T. Bradstreet, C. Berry Peets, C. L. Rockwell, W. B. Ives, W. B. Cashen, George A. Fay, E. J. Doolittle.

The active bearers, selected from the young men of the office forces in factories "E" and "N," of the International Silver Co., were Lester Stevens, Max Sternberg, W. E. Hinsdale, Howard Stevenson, H. H. Stockder, A. E. Sisson, George Duplessis and John B. Morse.

In respect to the memory of President Dodd the flags on the International Silver Co.'s factories, which were closed all day, were at half mast.

Charles J. Webb, Byron, Minn., was badly injured recently by a heavy sliding door, which fell upon him.

THE LATE SAMUEL DODD.

ability, tact and foresight were instrumental in developing and increasing the business, and during his career several new lines were added to that firm's output. The deceased's great talent for comprehending details and almost intuitive discernment of business possibilities have made the International Silver Co. known all over the world. The deceased, upon entering the manufacturing business, did not sever his connections with the Home Bank, but continued as one of its directors. He was also secretary and treasurer of the Meriden Gas & Electric Light Co.

Although not active in politics, Mr. Dodd

The News From London

Details of the Decision of the Court of Appeal that Watches Are "Plate"—Far Reaching Effect of the Decision—Watch and Clock Makers' Guild to Insure Members—Calmer Situation in the Optical Trade.

LONDON, Dec. 8.—Hearty and fraternal greetings from St. George and Merry England; the best of good wishes for a Merry Xmas and the continuance of that prosperity which the United States has so long possessed.

The Christmas trade is in full swing, and shopkeepers generally are doing remarkably well. Both in London and Birmingham, also Sheffield, the manufacturers are well employed, and in many cases working overtime. Our Board of Trade returns show steadily increasing totals in both exports and imports; another good sign that we are well on the turn of the tidal wave of prosperity.

* * *

The decision of the Court of Appeal which sat for four days to hear the arguments of the Worshipful Company of Goldsmiths against the decision of Justice Channell has been given in favor of the Goldsmiths' company, the judges, to put it shortly, saying that even if it were conceded that to one would use the word "plate" as including gold and silver watches in ordinary conversation it was not the business of the court to dispute it.

The question they had to consider was whether in the various Acts of Parliament the word "plate" covered watches in gold and silver cases, and if, as had been admitted, a watch case without the movements were plate, the court failed to see why the insertion of the movements made it any the less plate. "A watch case was plate by reason of the fact that it was made of gold or silver, for the metal remained unchanged whether the article remained a watch case or developed into a watch."

On considering the question of practice, and this had been strongly urged on behalf of the defendant the judges stated that though it had been urged that there had been a uniform practice, since Acts five and six Queen Victoria, in the opinion of the court the principle of contemporaneous exposition decidedly could not be applied to a modern statute. The utmost, if the acts amounted to usage, would be that a court should be cautious and not decide unnecessarily against it, and finally compulsory identification of foreign watches had no connection with the standard of gold and silver articles imported into this country, and consequently Justice Channell's decision must be reversed.

Sir Robert Finlay, chief counsel for the defense, requested a stay of execution, pointing out that if this were not allowed innumerable actions might be commenced against the sellers and holders of stocks of foreign made watches, and considerable injury result to an industry which had been allowed to grow up in the belief that the members thereof were engaged in a lawful business. The Goldsmiths' Company contrived and stay of execution was granted. The result of this trial, which took place before three of the most reliable judges of Great Britain, will have a very far reaching effect, because unless an appeal is made to the final tribunal, the House of Lords (and

even then if that appeal is unsuccessful), every foreign gold or silver watch case weighing more than five pennyweights will have to be sent to one or other of the British Assay Offices to be assayed, and if approved, marked with a special mark, as provided in the Merchandise Marks Act of 1871, denoting its quality and foreign origin. This would mean that every watch held by either manufacturers, factors or shopkeepers would have to be sent to "hall," and in the process it is almost unthinkable the damage which would result, the financial losses which would be sustained, let alone an enormous amount of trouble and anxiety. The Worshipful Company of Goldsmiths, who, if execution is ultimately granted, will have so much power in their hands, will, it is hoped, act in as lenient a manner as possible, but, on the other hand, it cannot be overlooked that the company is after all simply the authority which has to carry into effect the law, and it only requires an informer to compel them to make these powers operative.

* * *

The British Watch & Clockmakers' Guild holds its first general meeting Jan. 3, 1907, when its general council will be elected. It has arranged a scheme of insurance against accidents for all its members, which amounts to £500 in the case of death of an employer and £100 in the case of death of a workman or apprentice, besides certain sum per week in case of temporary disablement, etc., etc., the subscriptions being 5s. and 2s. 6d., respectively, and 1s. 3d. for apprentices.

* * *

The National Association of Goldsmiths, at its last executive meeting, gave its secretary to understand that he was not to publish any documents without consulting his colleagues, but within a few days he was at the same kind of thing again, and one may not be surprised to learn that writs for libel are being served upon him.

* * *

In optical politics matters are cooling down somewhat. The Spectacle Makers' Company has withdrawn the action for libel against the British Optical Association, and hopes are generally expressed that the latter will reciprocate and so enable the General Board of Opticians to bring about the position, desired by so many British opticians, necessary to ensure the passing through Parliament of a sight-testing optician's bill.

ST. GEORGE.

Death of Horace K. Blanchard.

PROVIDENCE, R. I., Dec. 15.—Horace K. Blanchard, senior member of the firm of Blanchard, Young & Co., notion and jewelry dealers, died suddenly last week. The death of a grandchild some little time ago is said to have preyed upon Mr. Blanchard seriously, and it is believed that grief over this death hastened his own.

Mr. Blanchard was born in Worcester in 1844 and had spent all his business life in this city. He was prominent in the Masonic organizations and had served in

the city council. The funeral, which was held on Wednesday from his late home, was largely attended.

Arthur H. Buck, Missing Jewelry Salesman, Arrested in Montana, Brought to Boston to Answer Larceny Charge.

Edward C. Abel, of Abel Bros. & Co., New York, returned, last Saturday, from Butte, Mont. On the trip back east, he had with him, in the custody of Inspectors Pierce and Shields, of the Boston Police Department, Arthur H. Buck, the salesman, who was recently captured in the western city after having pawned samples belonging to the firm. The salesman was taken on to Boston to answer the charge of larceny.

As soon as it was learned that Buck had been captured, Mr. Abel left for the west. When he reached Butte he found his former employe lodged in the city jail. A written confession was obtained from Buck.

Tickets issued by pawnbrokers in New Orleans and other large cities have been obtained and all the missing property, with the exception of goods valued at \$125, have been located, said Mr. Abel. The samples were pawned for less than \$2,000. The firm's total claims against the schemer are about \$7,000 in amount, but in the Boston case he is charged only with the theft of property valued at \$500.

The Butte, Mont., papers, in their accounts of Buck's arrest, give extended descriptions of his appearance and conduct, and judging from these reports he caused quite a sensation in the western city. In one of the reports he is represented as reaching the acme of fastidious dressing. His wearing gloves in jail was especially noted, and a reporter went there to ask him what was his reason for this. The salesman's reply, as quoted, was to the effect that as he possessed white and soft hands he did not wish them to be soiled by the dust of the cell.

The reporter added that Buck donned clean collars and cuffs every day, and the authorities of the jail allowed him, as a favor, to wash his face and hands as often as he desired. His expensive olive-colored ascot and his ultra-fashionable English cutaway were described with much care.

The papers said that great numbers of billet-doux were found among the salesman's belongings. It was said that one of the missing diamond clusters was recovered from a young woman to whom he had given it a few days before his arrest.

An interview with the salesman was published in which he is represented as saying that fast life brought on his trouble and that as he got short of funds he "soaked" his samples. He said that about \$1,250 would pay for all, and that if the firm was lenient he would get sufficient money from his friends to make restitution.

The stores conducted by Horrigan Bros. and George H. England, respectively, in Holyoke, Mass., were slightly damaged by a fire which broke out at that place a short time ago. The damage was confined chiefly to the basement.

Satisfaction Expressed at Conviction of Men Who Robbed Store of Joseph Wineburgh & Son, Utica, N. Y. Two Men Released.

UTICA, N. Y., Dec. 12.—There was considerable satisfaction in the jewelry trade of this city over the conviction and sentence, mentioned in the last issue of THE CIRCULAR WEEKLY, of John Bliss and Albert Young, two of the men arrested for stealing diamonds from the store of Jos. Wineburgh & Sons, in July last. The fact that Young was given a term of three years and nine months and Bliss, who is the ringleader of the crowd, received only a year is not considered surprising, as it had been known for some time that Bliss wanted to throw himself on the leniency of the court, and had confided in the district attorney. He

pleaded guilty and were sent to Auburn prison, made affidavits exonerating Hayes and stating that they never saw Hayes until they met in the Utica jail. Hayes, with John Reddie, were arrested by a railroad detective at a firemen's convention in Brockport, N. Y. Both Hayes and Reddie always maintained that they were innocent.

Well Known Thief Captured After Attempting "Wild West" Method of Robbery in Omaha.

OMAHA, Neb., Dec. 15. Two thieves entered the pawnshop and jewelry store of J. Sonnenberg, 1305 Douglas St., at 8:20 yesterday morning, and after binding the proprietor and a clerk with ropes, robbed the store of \$8,000 worth of jewelry. Both

Death of Wickliffe B. Durand.

NEWARK, N. J., Dec. 17.—Wickliffe Baldwin Durand, who was for 35 years one of the best known men in the manufacturing jewelry trade of the country, prior to his retirement from active business about 15 years ago, died Saturday night in his home at Milburn, N. J., after long illness from a cancerous affection. He is survived by a widow, whose maiden name was Jane Taylor, by three daughters, and by a son, Harry Durand, secretary of the jewelry manufacturing company of Durand & Co., with which his father was associated for many years.

Wickliffe B. Durand was 65 years old, and was the son of the late James M. Durand, who established the jewelry manufacturing business of Durand & Co., more than 60 years ago. Wickliffe B. Durand entered the business in 1856. His brothers, Henry, Wallace and Frank, were also associated with the concern. Of these Wallace is now the only survivor, and is the president of the company.

Wickliffe B. Durand, while possessing the artistic taste characteristic of the family, early developed rare business capacity. He showed a degree of energy and enterprise which contributed largely to the prosperity of the business.

For a short time, after his retirement from the company, Mr. Durand maintained an office as a broker in Maiden Lane.

Deceased resided for many years on Broad St., near Kinney St., in this city, and was a noted host, entertaining constantly with lavish hospitality. He was fond of horses and had several of the most elegant equipages in the city. He was an expert whip, and drove a tandem and four-in-hand, and with great skill. After his retirement from business he lived quietly in Milburn, or Old Short Hills, where he had a pleasant home. Mr. Durand had a ready wit, was fond of social life, and was of a kindly and generous disposition.

The funeral was private.

JOHN W. BLISS.

ALBERT YOUNG.

Two of the four men who robbed Joseph Wineburgh & Sons, at Utica, N. Y.

was asked for several interviews with the latter, and it is believed that he has given him considerable information.

People who have seen and talked with Bliss say that he is showing a strong desire to reform, but also believe that he will have little opportunity of carrying this desire into effect, because the chances are that he will not live to serve his term in prison, being in an advanced stage of consumption. The prisoner has had several hemorrhages while in jail here and both lungs are said to be affected.

The robbery of Mr. Wineburgh's store was one of the most sensational ever attempted in this city. As told in THE CIRCULAR WEEKLY at the time, three men occupied the attention of the clerks, at mid-day, while a fourth stood at the door, and one of the men succeeded in getting away with 5 diamonds, valued at about \$3,000. The arrest of Bliss and Young followed, and after the police arrested Thomas Hayes, who has been held here with the other two men. It is now known that Bliss and Young have both pleaded guilty the police are inclined to believe in Hayes' story that he did not have a hand in the robbery, and he may not be tried.

Bliss, before pleading guilty, secured the return of about 22 of the stolen diamonds.

UTICA, N. Y., Dec. 13.—Thomas Hayes, arrested with Bliss and Young for the Wineburgh diamond robbery, has been discharged from custody. Bliss and Young, who

were about to make their escape when Sam Gross, a fireman, from Engine House No. 2, gave chase, catching one of them. The other got away. Fortunately the captive was the one who had the booty, so the jeweler is out nothing. The prisoner is Ed. Elliott, alias Harris. The man who escaped is James Wilson, alias Mitchell. Both come from Denver, and are known to the police as desperate characters. They entered the store at a time when business for the day had scarcely begun, confronted Sonnenberg and Michael Morrissey, his clerk, with revolvers, bound them and rifled three safes.

The robbery committed in broad daylight, created the greatest excitement. Police and fire alarms were turned in, and members of both departments were soon on the scene. After a running fight, during which several shots were fired, Elliott was located in a room in the basement of a hotel, where he had crept under the bed. He was hauled out and arrested with little difficulty.

A large number of diamonds was taken from Elliott's pockets, besides many watches, rings and stick pins. Mr. Sonnenberg said late in the afternoon that everything had been recovered. The recovered diamonds and jewelry were placed on exhibition in the window and attracted a large crowd.

Mrs. Geo. H. Stinson, Camden, Ark., is closing out her business.

Imports of Rough Diamonds Indicate Great Increase in Product of American Diamond Cutting Industry.

A compilation of the monthly reports made by the Appraiser of the Port of New York during the present year shows that the diamond cutting industry has increased its product by approximately 50 per cent. on the valuation of the imports. The uncut stones, which are almost entirely diamonds, imported in 11 months of the year, amounted in value to \$14,433,099, and there will be a substantial addition to this when the December figures are computed. Prior to this year the largest valuation was that of last year when the uncut stones for 12 months were valued at \$10,146,451.

While there has been a steady growth in the diamond cutting business as indicated by the figures showing the valuation of imports for a number of years, never before has about \$5,000,000 been added in a single year, as the completed figures of 1906 will show. In 1898 the valuation was under \$1,000,000, but was almost double that of the year before.

The total imports of cut stones and pearls in 11 months are a little less than the total for all of last year, and when December is added, supposing that the imports in the present month will be about the same as in the corresponding month of last year, a gain may be expected for the current year. In this class of imports the total for last year was \$26,999,886; for 11 months of this year, \$25,110,065.

The cut stones and pearls took an unusual jump last year as compared with the year before, the gain being more than 60 per cent. This year the rough stones make up far the greater gain.

There is no difference of opinion among the importers of rough diamonds as to the scarcity of choice qualities and sizes and, in fact, it is said that even the less desirable grades are more difficult to get than a year ago, while the unfavorable assorting has added quite steadily to the cost. "You may safely publish the fact," said one large manufacturer, "that diamonds are scarce and hard to get." He showed the reporter a check for nearly \$200,000, which he had just signed and was about to send to the syndicate in London. "That money goes for diamonds that I have never seen. We have to take them as they come and be glad to get them at any terms."

Arrest of Man Accused of Shooting Leo Slonim, and Robbing Plainfield, N. J., Store.

NEWARK, N. J., Dec. 17.—Charged with the theft of several diamond rings and with shooting Leo Slonim, the Plainfield jeweler, as related in last week's issue, George Saeger, alias John Stevens, was taken to Plainfield last night by Detective-Sergeant McCarthy.

The prisoner protested that he was not the man wanted, but Mr. Slonim said he was almost positive in his identification. The man who robbed the Plainfield store did so late in the evening, grabbing the rings and making a dash for the street, shooting the jeweler tried to stop him.

Detectives Donovan and Carson called Friday at Goldblatt & Co.'s pawnshop, at Broadway and Eighth Ave., in this city.

Saeger was in the place asking to see a watch. Donovan became suspicious of him, and after questioning the man placed him under arrest. A series of false addresses was given by the prisoner, it is said, but Donovan and Carson finally learned that he had been living in a Market St. lodging house. The detectives then suspected from his similarity to the description of the Plainfield robber that he was the man.

Mr. Slonim and Detective-Sergeant McCarthy came to Newark yesterday. The jeweler looked at the prisoner and immediately went back to Plainfield to lodge a complaint against him. The Newark police think that Saeger is from the west.

Jewelers' Club of Philadelphia to Celebrate Christmas Eve by Trimming a Christmas Tree.

PHILADELPHIA, Dec. 17.—The Philadelphia Jewelers' Club has decided upon a novel entertainment for Christmas Eve, and an entertainment which will afford the members and their guests much amusement. It is intended to have a formal trimming of a Christmas tree, the ornaments for which will be contributed for the most part by the members with a view to their appropriateness to the various members of the organization. Already A. G. Lee, of the board of governors, and now with the Imperial Cut Glass Co., has furnished a lot of dolls dressed in attractive feminine costumes. William Linker has donated dolls dressed as men and in imported costumes. Other contributions are pouring in from the members. Some are directed to those to whom it is intended they should be presented.

While there will be much good-natured raillery and lots of fun, the management of the club proposes to make a tree in every way beautiful. To this end they have gone to much expense in providing small varicolored incandescent bulbs. The Kriss Kringle of the evening will be William G. Earle. He will wear the time-honored hoary whiskers and the imitation fur-lined overcoat. Mr. Earle was selected by reason of his ruddy, benevolent expression and his rotund form. The tree trimmers will be William W. Long, A. J. Le Jambre, A. J. Cadwallader, J. Warner Hutchins and Jacob Alburger.

This is the first time the club has observed a Christmas Eve, but it is an example which it is thought will be followed by other kindred organizations throughout the country, especially since to the jeweler Christmas Eve virtually closes his year's work and ends the strenuous times of the holiday shopping.

Otto S. Beggs, Camden, Ind., has admitted a partner into the business and the style is now Tesh & Beggs.

A report from Paris states that the women of that city are wearing the old snake bracelet of 30 years ago as a means of holding the long glove of custom in its place. Some of these flexible serpents are in filigree; others made with realistic scales are popular. With gray and black gloves silver and steel snakes are correct, while gold ones adorn the tans and fawns, and even the dark red suedes that are being used with the fashionable wine color in gowns.

The Diamond Markets.

ANTWERP, Dec. 9.—November generally is a very good month, but this year sales at the end of the month were very slow and business in general quiet. The prices paid for precious stones are somewhat lower than a month ago, and some merchants hope to profit by this condition, but it is doubtful if they will do much business. The financial condition of the trade as a whole was never in better shape than at present.

The number of members of the "Antwerpse Diamantbewerksbond" reached 3,800 Nov. 30, but the "Amsterdamsche Diamantbewerksbond" numbers 8,200 members.

The following buyers were here during the past fortnight: Messrs. Schenkeim, Nordlinger, Herzfelder and Herzog, New York; Mr. Schetino and Mr. Nocera, Naples; Mr. Rutstein, and Mrs. Grossbard, Warsaw; Messrs. Is. Levy, B. Rapoport, Oiffer, Arm, Levy, Bayadjian, Slyper and Mezbourian, Paris; Mr. Monossohn, St. Petersburg; Mr. Kollinsky and Mr. Frankel, Frankfurt-on-Main; Mr. Kahn, Stuttgart; Messrs. Kauffmann, Citroen and Weiss, London; Mr. Walewijck, Madrid; Mr. Winkeler and Mr. Sanick, Vienna.

AMSTERDAM, Dec. 9.—Business here has been very quiet, but the prices are firmer than ever. It is hoped that December will be better, as several American buyers are expected in this city.

The following foreign buyers were here during the last month: Mr. I. Rosenbach, representative of Zimmern, Rees & Co. and Eichberg & Co., Mr. Roo, New York; Mr. Fox, of Fox Bros. & Co., Cincinnati; Mr. Levy, Canada; A. Memuer, of the California Jewelry Co., San Francisco; Mr. Kahn, Stuttgart; Mr. Bozenhardt, Hamburg; J. B. Kaufmann and Messrs. Backes and Strauss, London; representatives of A. and E. Worms, Marchand Frères, M. Hahn & Co. and Lambert Frères, all of Paris; H. Klein, Antwerp.

T. and L. Pardo have the sympathy of the trade in the loss of their mother, Mrs. G. Pardo, Van Hessen, who died here Nov. 21, aged 83 years.

PARIS, Dec. 9.—The precious stone market in this city did not come up to the expectations of the local merchants last month. This was greatly due to the rise of the discount rate given to the trade by the banks. The quiet condition of the market is also attributed to the rumors that there would be a number of failures at the end of November, but trade generally was never in a better state, and it is hoped that December will prove still a better month for our industry.

The office of L. Demange, formerly at 10, Rue Laferriere, has been moved to 10, Rue Notre Dame de Lorette. A new firm has been established under the style of Gros-siord, David & Co., to operate a diamond cutting factory at Martinet.

A local diamond merchant and broker who recently left in a cab a bag containing precious stones valued at 100,000 francs had the good fortune to find them at the police station, whither they were brought by the honest coachman.

Trade of the United States in the Philippines During the Past Year.

WASHINGTON, D. C., Dec. 17.—The report of our trade with the Philippines for the past fiscal year shows that, as a whole, there has been an excess of the exports over the imports of \$6,117,868. The exports are not quite as heavy as for the preceding year, the returns showing a total value of \$31,917,134, whereas in 1905 the total value was \$32,352,615. The imports show that there has been a decrease from \$18,763,350 in 1905 to only \$25,799,266 in 1906. This is partly due to the fact that there was an increase in the trade of the preceding year in anticipation of the change in the tariff, and a consequent overstocking.

The United States afford the largest market for native goods, leading with \$11,794,411 in the year ending June 30 last; but this was much smaller than for the year previous, when we received \$15,668,300. The United Kingdom is the second largest importer of Philippine goods. Of our exports to the islands, it appears that there was a decrease in value from \$5,761,808 to \$4,333,893; on the other hand, Great Britain shows an increase from \$1,848,393 to \$5,224,020, thus superseding us as the leading source of supply.

ART WORKS AND STATUARY.—There has been an increase in these imports from \$1,002 in 1904 to \$3,769 in 1905, and still further to \$4,688 in 1906; for the past year our share of this trade amounted to \$2,738.

CLOCKS AND WATCHES.—In 1904 the total value of the importations of clocks and watches was \$8,414, of which we supplied \$1,174. In 1905 we supplied \$2,244 out of a total of \$9,195, leaving the bulk of trade to Germany, who had a total value of \$2,576; in 1906, out of a total value of \$14,589, we had with \$4,667. Germany came second with \$3,304, Japan third with \$2,853 and France fourth with \$2,543.

There has been a steady and satisfactory growth in the import trade in so far as it relates to watches, of which, in 1904, the total import value was \$65,129, France leading with \$28,165 and the United States second with that of \$17,901, Switzerland coming a close third with a value of \$16,032. By the end of 1905 there was a total value of \$71,451, and again France is in the lead with \$30,466; Switzerland took our place as second with a value of \$21,064 and the United States following third with a value of \$18,018. During the past fiscal year the total value was \$78,487, and this we have managed to secure first place with a total value to our credit of \$26,418; France stands second with \$24,674, and Switzerland third with \$23,021.

JEWELRY.—Not nearly so satisfactory a condition exists when we take the jewelry importations into consideration, as there has been a decrease in value from \$258,928 in 1904 to \$160,165 in 1905, and still further to \$150,939 in 1906. In each of these years France has been the main source of supply, though her share of the trade, which in 1904 was \$231,658 decreased in 1905 to \$18,104, and still further in 1906 to \$80,001. While we are nowhere near the lead in this part of the trade, yet it is some satisfaction to note that there has been a steady increase in our trade during the past few years from \$5,076 in 1904 to \$14,461

in 1905 and still further to \$20,292 in 1906.

Of all other manufactures of gold and silver the total importations in 1901 were valued at \$20,432, and at that time France led off with \$6,888, the United States coming second with \$1,412; in 1905 the total value had fallen to \$15,112, and France, while still in the lead, showed a decrease to \$5,584 and the United States to \$3,471; in 1906 there was a decided increase to \$28,282, and France took the leading part with a total value of \$13,460, but the United States showed a very satisfactory increase to \$7,597.

A feature of the trade that shows a very decided decrease is the importations of plated ware, of which, in 1901, the total value was reported at \$77,519, and our share at \$35,858; in 1905 the total value was only \$36,382, and our part of same only \$15,963. By the time 1906 had rolled off its months the total value had decreased still further to \$21,108, and our share to only \$10,209, although it is only fair to state that, in each year, we are the leading source of supply.

The exports are very inconsiderable, as must be the case in a new country; those of jewelry and precious stones were only valued at \$2,131, as against \$4,075 in 1905; all of the shipments in 1905, with the exception of \$75 worth, were sent to Spain; during 1906 all exports were shipped to Hongkong.

The shipments of mother-of-pearl shell show a decided decrease from \$80,932 in 1901 to \$92,614 in 1905, falling in 1906 to \$62,018. During the past two years none of these shells was shipped directly to the United States, although in 1904 we received \$3,000 worth. During the year just ended practically all of the shipments were made to the British East Indies.

The exports of tortoise shell show a decided increase from \$8,600 in 1904 to \$12,700 in 1905, and still further to \$13,951 in 1906; again no shipments come directly to the United States.

Of all other shell the shipments in 1904 were valued at \$14,866, in 1905 to \$11,850 and in 1906 to \$30,467. In all these items it appears that the major part of the shipments are made to the East Indies, either British or Dutch, principally to the former.

Store of J. E. Griffith, Hartford, Conn., Wrecked by Fire.

HARTFORD, Conn., Dec. 15.—A fire which broke out in the heart of the business district in this city yesterday morning destroyed four stores, including the retail jewelry establishment of J. E. Griffith, making the total loss \$28,000 and that of the jeweler \$5,000.

The fire is supposed to have started in the cellar under Mr. Griffith's jewelry store and to have spread rapidly upward to the second floor. The floor in the store collapsed, and the counters sank into the cellar, carrying their valuable contents into the debris. The store is a complete wreck, and was the center of attraction of those who looked over the scene of the conflagration to-day.

Mr. Griffith has made temporary arrangements with C. W. Pratt for a part of his store at 73 Pratt St., where the jeweler will continue to fill his holiday orders.

A Glimpse at the Conditions in the Australian Jewelry Trade.

ATTLEBORO, Mass., Dec. 12.—A glimpse at jewelry trade conditions in Australia is given by a report received by the Attleboro jewelers last week from the Massachusetts Bureau of Statistics of Labor. The jewelry workers of the island continent do not receive wages as high as those prevailing in the Bay State.

The State Bureau, receiving a copy of the Australia trade report, found that it coincided in form with the one issued periodically to show Massachusetts conditions. It was possible, therefore, to make quotations from it exactly corresponding to the customary statements the Bureau regularly gives out. Accordingly these quotations were put in tabular form and issued.

Instead of reproducing them in full, a few words will suffice. In Australia the following conditions exist:

Chain makers, gilders, jobbers, lappers, melters, mounters, polishers, refiners, ring makers, setters, silversmiths and stampers receive \$12.50 a week, with 48 hours' work.

Chasers and engravers receive \$15 for a 48-hour week.

Engravers employed on jewelers' ornamental work receive \$20 for a 48-hour week.

Engravers of monograms and inscriptions, \$17.50 for a 48-hour week.

Die sinkers, \$15 for 48 hours.

All persons over 21 not classified above, \$9 for a 48-hour week.

Females in all branches, \$7.50 for 48 hours.

Schedules in Bankruptcy of Harry W. Farwell, Hornell, New York.

HORNELL, N. Y., Dec. 12.—The schedules of Harry W. Farwell, a local retail jeweler, who filed a petition in bankruptcy last week in the office of S. W. Petrie, referee in bankruptcy, at Buffalo, show his assets to be about \$7,761, and liabilities, \$16,872. Of the assets, \$3,611 is in stock and \$2,057 in accounts due. The unsecured claims of creditors amount to \$15,120.

Farwell has been in business here for about three years, but prior to that conducted a store at Belmont, N. Y. In 1903 he bought out the stock of Mrs. M. M. Griswold, who had long been connected with the jewelry trade and had conducted the store established many years before by her deceased husband. Since then Farwell has married Mrs. Griswold. He was well regarded in the trade and in the community and the news of his failure was heard with surprise and regret by his many friends. It is hoped that he will be able to make some arrangements with his creditors and continue business.

Edward Vail, of Ed. Vail & Co., Wichita, Kans., who have the contract for the supplying of a silver service for the United States battleship *Kansas*, received word last week that the service was completed and ready for shipment. The service will be shipped to Topeka, arriving there Dec. 26, where it will be on display in the office of Governor Hoch. Feb. 16 the service will be shipped to Wichita, where it will be displayed in the window of the Vail jewelry store on E. Douglas Ave.

Death of John Deckelman.

LEAVENWORTH, Kans., Dec. 12.—The recent death of John Deckelman, a pioneer jeweler of this city, was the subject of deep regret and grief to a large number of our citizens, as at the passing of the deceased Leavenworth lost its oldest resident and probably the oldest German settler in this section. Mr. Deckelman's death, which occurred at the home of his daughter, Mrs. Belgio, 315 Ottawa St., was due to the results of old age, Mr. Deckelman having passed his 92d year. He had been failing for some time past, and his demise was not unexpected, although a great shock to his friends and family.

John Deckelman was a native of Bavaria, Germany, and was born Sept. 9, 1814. He learned the trade of watchmaker and jeweler in his native land, and carried it on until the early 50's, when, with many other of his countrymen, he forsook his fatherland to find fame and fortune in the land of freedom. After arriving in the United States he went to the west, and in 1852 settled in Weston, Mo. He remained there only a short time, leaving that town to come to Leavenworth, which was just then beginning to rise out of the category of a small frontier settlement.

Immediately on his arrival here Mr. Deckelman started in the jewelry trade, and shortly after moved his business to the first brick building erected on Delaware St., No. 208. After building up a good trade here he moved to 318 Delaware St., where for nearly half a century he remained in active charge of the store. Owing to his age he retired from business about eight years ago, and from that time he resided with his daughter and son-in-law.

Deceased was prominent in many societies of this city, particularly in the Turners, which he helped to organize here. He was long associated with the business interests of the town that he was known throughout the entire city. He is survived by three daughters and three sons—H. A. Deckelman, who continues the business in his town, and Charles and Frank Deckelman, of Kansas City. The funeral services were held from the family residence, and the pallbearers were chosen from his associates of the Turn Verein.

State of the Late Otto Young Valued at \$20,000,000—Charitable Bequests Aggregate \$460,000.

CHICAGO, Dec. 15.—The will of the late Otto Young, the jeweler and financier, has been filed for probate and shows his estate to be worth about \$20,000,000. It contains charitable bequests aggregating \$460,000, the beneficiaries being: Chicago Home for incurables, \$400,000; Chicago Orphan Asylum, \$20,000; Chicago Home for the friendless, \$20,000; Old People's Home, \$10,000; Poor Handmaids of Jesus Christ, \$10,000.

The widow, the four daughters, the grandchildren, and the possible great grandchildren of the late Otto Young are to be the principal beneficiaries of the dead man's millions. The widow is given the town house at Calumet Ave. and 21st St., the handsome Lake Geneva "Summer cottage," the stock in the wholesale jewelry firm of Otto Young & Co., of this city, and

a life annuity to the amount of \$100,000.

The four daughters, Mrs. Selma Cecile Heyworth, Mrs. Marie Julia Kaufman, Mrs. Catherine Osborn Hobart, and Mrs. Laura Elizabeth Martin, are given annuities of \$36,000 apiece during the lifetime of their mother. After the death of the widow the daughters or their heirs are to receive 22 per cent, each of the net income of the estate, and the remaining 12 per cent. is to be turned back into the estate and added to the principal. Not until the widow and the four daughters are dead and the youngest grandchild is 21 years of age, is this great trust estate to be divided. Then it will be split up between the grandchildren share and share alike.

The rest of the estate after the immediate bequests are paid is given to the First Trust & Savings Bank of Chicago as trustee, with general powers to carry on the affairs of the estate, to sell or retain stock or bonds as well as the real estate, also to invest in Chicago real estate.

Arrest of Two Men for Receiving Silverware Stolen from the Gorham Co.'s Store.

Charged with receiving silverware stolen from the Gorham Co.'s store, Fifth Ave. and 36th St., New York, two men, one a dentist and the other a bartender, were arrested last Friday. The bartender said that his name is Charles Summers, but the police say that he is Joseph White and is a crook. He said that he lives at 321 E. 126th St., but later his home was said to be on 123d St., near First Ave.

The dentist gave his name as Bert Smith, and said that he lived at 2985 Lexington Ave. The detectives say that his real name is Jacobson, and he was arrested because the silver was taken by Summers or White to his dental establishment, 171 E. 126th St. and sold to a third person.

The arrest is said by the detectives to be unusually important. Detective Larkin says that for weeks he has been working in an effort to get a gang of thieves who have been stealing jewelry and silverware from the large stores. They are well-dressed men, he says, who make a favorable impression when they enter a store, and so are not watched any more closely than are other people.

The thieves, as indicated by their work, have an unusual degree of skill in "sneak" tactics—that is, in abstracting articles from shelves, cases and counters and concealing the booty in long overcoats that probably have specially constructed pockets. Knives, forks and spoons have been chiefly taken from the silverware stores.

According to the detectives, silverware from the Gorham store was traced directly to Summers. Assistance was given to them in tracing the property by Walter Britchford, who trades in gold and silver with dentists. He had an invitation to go to Jacobson's in order to buy a quantity of silverware, and it is said that seven dozen each of knives, forks and spoons, valued at \$180, were delivered to him for \$95. He paid in marked bills which had been given to him by detectives. They waited outside until after the transaction, and then made the arrests, recovering the marked money, they said.

Death of J. Howard Danforth.

CLEVELAND, O., Dec. 13.—The news that J. Howard Danforth, secretary and treasurer of the Cowell & Hubbard Co., had died Monday night caused great grief among his many friends in the jewelry trade. Mr. Cowell's death, which occurred in the hospital and followed an operation performed by Dr. Dudley O. Allen, came after a long illness. Mr. Danforth had been getting worse for some time past, and the operation was declared necessary to save his life; this, however, proved too severe an attack on his vitality, and he never rallied.

Mr. Danforth was widely known in the

THE LATE J. H. DANFORTH.

jewelry trade, having been secretary of the Cowell & Hubbard Co. since the concern was incorporated in 1887. The associates in business are A. T. Hubbard, president, and T. S. Beckwith, vice-president.

The funeral took place this afternoon, and was held in the First Presbyterian Church in East Cleveland and was largely attended. The burial was private.

Death of James W. Gwinn.

PROVIDENCE, R. I., Dec. 17.—James W. Gwinn, who 15 years ago was prominent in local jewelry circles, died on Saturday at his home, 448 Friendship St. Although he had been in ill health for some time, bronchial pneumonia was the immediate cause of death.

Born in Newburgh, N. Y., Aug. 10, 1826. Mr. Gwinn came here when 17 years of age to learn the machinists' trade. For three years he worked at this, and then went into the jewelry business with Lewis Carr. In the late 70's this partnership was dissolved, Mr. Gwinn forming a partnership with John McCloy, the firm being known as Gwinn & McCloy.

Mr. Gwinn retired about 15 years ago from active business. He leaves a widow, one son, and a sister.

J. F. Schweiger, formerly of Delphi, Ind., is now at Flora, in the same State.

"GEMFINDER" takes a melancholy pleasure in referring the trade to his advertisement of April 25th last, in the "Jewelers' Circular." Unfortunately, his prophecy has been fulfilled. Not only have Precious Stones advanced, but the end has not yet been reached. Sapphires have gone up at least 25 per cent. in the last six months, and they will go still higher.

"Gemfinder" again warns prospective buyers not to delay. All kinds of Precious Stones are scarce and prices on some may become prohibitive.

Optical Notes and Briefs

J. E. Adcox, Dufur, Ore., is adding an optical department.

The Churn-Beretta Optical Co., San Francisco, Cal., opened its new store in Visalia, Cal., last week.

W. B. Dove, optician, moved recently from Michigan to Dublin, Ga., where he will continue in the optical business.

Max L. Shirpser, 1127 Van Ness Ave., San Francisco, Cal., has installed a large plate glass show case and made other improvements in his store.

Elaborate preparations are being made for the meeting of the North Dakota Optical Association, which will be held in Fargo, during the early part of January, 1907, the exact date not having been fixed as yet. An effort is being made to have the North Dakota Jewelers' Association meet at the same time. Many of the opticians belong to both organizations and it is claimed that it will be more convenient to hold both meetings on the same day.

James M. Dean, optician, Washington, D. C., who, as announced in THE CIRCULAR WEEKLY at the time, was recently taken to the Government Hospital for the Insane, critically ill, is dead. Mr. Dean's mind became deranged during the pendency of a suit which his wife began against him in the local divorce court. He was taken into custody after fleeing from his store, fearing his life was in danger. The court appointed a receiver for his business.

The members of the Southern Tier Optical Society met recently in the rooms of E. Robbins on Water St., Elmira, N. Y. Myron Ringer, of Bath, was elected to membership. A lecture given by C. H. Terney, of Watkins, was one of the interesting features of the evening. A discussion on optical topics was held. Those present were: W. L. Hopkins, Montour Falls, C. H. Vernoy, Watkins; D. L. Perkins, Horseheads; H. J. Hallock, Wyalusing, Pa.; J. F. Stolford, Athens, Pa.; L. L. Stone, Canton, Pa.; I. Putnam, F. M. Newell, M. A. Ruger and F. E. Robbins, Elmira.

The regular monthly meeting of the New England Association of Opticians was held at Young's Hotel, Boston, Mass., yesterday evening. The lecture of the evening was delivered by Walter W. Slade, of the Globe Optical Co. His subject was "New Lenses and Their Advantages to the Public as Well as to the Optician." C. Howard Edwards, Globe Optical Co., recommended by Bros. Cox and Green, and Max Jacobs, Hudson, Mass., recommended by Bros. Quimby and Thompson, were admitted as associate members. Ladies' night will be on Jan. 15. An interesting entertainment is provided.

Harrisburg, Pa.

TRADE CONDITIONS.

There has been quite a spurt in holiday buying within the past few days, and the present week is expected to be a record-breaker among the local jewelers. The thousands of railroad men of the city received their November pay, last week, and the stores all day Saturday and Saturday evening were well patronized. All the jewelers have secured additional temporary help to handle the trade. Local jewelry stores never held a larger better assortment of fine goods than at present.

An auctioneer is conducting a sale at the

store of A. R. Kramer, 1014 N. 3d St. The sale began Saturday, 15th, and will continue until the entire stock is sold. Mr. Kramer may return to Carlisle, his old home, and engage in the jewelry business.

The 33d annual report of the Bureau of Industrial Statistics, covering the year 1905, presents interesting figures showing the growth of certain industries in Pennsylvania, whose products find their way to the shelves and cases of the jewelry stores. A few of the more important statistics are herewith presented

| | <i>Brass, copper and bronze goods.</i> | <i>Glass (including cut glass).</i> |
|---|--|-------------------------------------|
| Establishments reporting..... | 18 | 20 |

New Stores and Enterprises.

B. G. Haigh is a new jeweler in Belgrade, Mont.

E. F. Kewshaw has opened a store in Buffalo, Kans.

Chas. E. Dickinson is a new jeweler in Great Bend, Kans.

E. E. Brown recently began business in Central City, Nebr.

Miles McIntyre has opened a store on S. 6th St., Grant's Pass, Ore.

William Guilfoyle and Frank Zentner will shortly engage in business in Kaukauna, Wis., as the Kaukauna Jewelry Co.

Harry Mohr, Sacramento, Cal., has secured a store room at Pasadena, Cal., and is preparing to start in business at that place.

R. C. Bates has begun business in Alliance, O. He will shortly add an optical department, which will be in charge of his wife, who is a competent optometrist.

The Rogers Co., Boston, Mass., is the name of a new concern recently incorporated with a capital of \$15,000. The treasurer is Albert E. Knowlton; clerk, H. P. Knowlton, both of Boston.

The Mayer & Miller Co. was incorporated in New York recently to cut and deal in precious stones, with a capital of \$1,000. The incorporators were: H. Mayer, W. Miller, P. Fried, New York; E. Schulman, Brooklyn.

A Manitoba charter of incorporation has been granted to W. H. Noble & Co., Ltd., Winnipeg, Man., as wholesale and manufacturing jewelers. The incorporators are: D. F. Clark, H. W. Read, W. H. Noble, C. H. Fraser and T. H. Colt.

The Golden State Optical Co., with headquarters in San Diego, Cal., was incorporated about a week ago to manufacture and deal in optical goods and jewelry. The capital stock is \$100,000 divided into 1,000 shares at \$100 each, par value. The board of directors are C. L. Williams, H. Scudder, P. M. Johnson, Frederick M. Gazlay and R. K. Holman.

O. E. Hamilton & Co. have discontinued business in Gurdon, Ark.

Newark.

Newark engravers are working night and day, Sundays and all, on Christmas orders. They have never before had so great a rush of work, and large and small establishments alike are putting on all the extra hands they can get.

Thomas Anderson, as a special master in chancery, has recommended a decree of absolute divorce for William A. Simpson, a Newark jewelry workman, from his wife, Vestion Simpson. The couple separated in Attleboro, Mass., in 1900.

Joseph Sands, who recently broke the show window in Frank Holt & Co.'s store, 6 Academy St., was arraigned last week in the police court. He denied that he had any intention of stealing jewelry, but said that he broke the window for the purpose of getting arrested and being sent to a public institution for the Winter. Sands, who is about 60 years old, was in his younger years a successful artist, but drink dragged him down.

The case of Harry Babchin, 586 Newark Ave., Jersey City, against Louis Schreiber, an action to recover \$130, claimed to be the balance due on a diamond ring sold for \$230, was tried last week and a judgment against the defendant for the full amount asked was given. The jeweler's attorney tried to obtain the ring on an attachment as soon as the judgment was rendered, but the defendant's lawyer obtained a stay of execution by filing a notice of an appeal.

John Ehmann, who was for many years employed in a Newark (N. J.) jewelry factory, died on Sunday in his home at 208 Hunterdon St., after a short illness from a cold. He was 90 years old. He was born in Germany, coming to America when a boy of six. He retired from active work about 20 years ago and had since made his home with his children. He was the oldest member of Schiller Lodge, F. & A. M., and was one of the organizers of the original Eintracht Singing Society.

Frank Holt & Co., 8 Academy St., have leased from the Federal Trust Co. the building at Broad and Academy Sts., for a long term of years. The lease includes the store now occupied by the firm and another adjoining, giving a frontage on Academy St. of 117 feet and on Broad St. about 25 feet. The entire place will be turned into one large store and will be fitted up with the idea of making it the handsomest and most attractive retail jewelry store in New Jersey. Possession under the new lease is to begin May 1 next.

Jewelers' Gold Bars Withdrawn and Exchanged at New York.

Week Ended Dec. 15, 1906.

The U. S. Assay Office reports:

| | |
|--|--------------|
| Gold bars exchanged for gold coin..... | \$478,817.99 |
| Gold bars paid depositors..... | 75,116.57 |
| Total..... | \$553,934.56 |

Of this the gold bars exchanged for gold coin are reported as follows:

| | |
|--------------|--------------|
| Dec. 10..... | \$83,525.19 |
| " 11..... | 72,095.81 |
| " 12..... | 133,214.52 |
| " 13..... | 118,024.44 |

TRADE CONDITIONS.

The holiday trade has so far been record-breaking in its proportions. The volume of business done by the leading retailers is reported to have exceeded the business of any previous years and be indicative of the business done by the general retailers. Out-of-town retailers have been frequent visitors to the city seeking to replenish their stocks, and from the wholesalers' viewpoint the holiday stock taking of the first of the year will be less burdensome than heretofore, since it is expected that the balancing of accounts will show not only a greater volume of business but a wider margin of profits.

Joseph Heaton, formerly of Allentown, Pa., has accepted a position with I. Press & Co. as a city salesman.

Harry Lophis, watchmaker for Jacob Ruppel, 127 S. 8th St., is receiving the sympathy of the trade owing to the critical illness of his wife.

Louis Spoerhase, a prominent Lancaster Pa. retailer, has resumed active business after being confined to his home a fortnight with an injury to his knee.

John Garrison, formerly a retailer of Cape May, N. J., is reported to have opened last week a retail store at Cape May Court House, the county seat of the south Jersey county.

Walter Davis, city salesman for M. McKel & Sons, is confined to his home ill.

Polak, of the same firm, made his last trip of the year to Baltimore and Washington last week.

H. W. Asquith, a watchmaker well known in the local trade, last week opened a retail store of his own at 5611 Chew St., Germantown, in which suburb the Asquith family is well known.

Thomas D. Pearce, of Pearce & Ferraille, took a prominent part last week in the arrangements being perfected for the participation of the Society of Colonial Wars, of which he is a member, in the forthcoming Westtown Exposition.

George Phillips, city salesman for D. V. Brown, 710 Sansom St., has bought out the store of James Hlire at 264 S. 8th St. Mr. Hlire died recently. G. W. Haas has been chosen to fill the vacancy with D. V. Brown, caused by the retirement of Mr. Phillips.

The Van Dusen & Stokes Co., retailers of Japanese and other novelties, have opened a store at 1123 Chestnut St. Already they have employed a large staff of watchmakers and jewelers. The members of the firm are John Van Dusen and Joseph Spham Stokes.

The Bailey, Banks & Biddle Co. had on display last week a magnificent piece which attracted general attention. It was valued at \$75,000, being a \$45,000 diamond pendant, weighing 24³/₄ carats, pear-shaped and attached to a \$32,000 string of perfectly matched pearls. The piece is a necklace.

William P. Kammerer, son of Henry A. Kammerer, retail jeweler and watchmaker, 65 Fairmount Ave., who died recently, announces that the old-established business of his father will be disposed of. Mr. Kammerer proposes to continue in association with J. Warner Hutchins, 728 Sansom St. until a disposition of the business on Fairmount Ave. is made it will be continued by the sons of Henry Kammerer.

"Diamond Lew" Bailey, promoter of

prize fights and other strenuous pastimes, was reported last week to have effected a settlement with Charles Dean, diamond broker, at 717 Sansom St., from whom he rented a diamond to stun the "sports" with whom he associated. This diamond Bailey says he lost. Mr. Dean at first fixed the value of the ring at \$2,500, but is later reported to have compromised on a settlement of a trifle less than \$1,000.

Among the retailers from nearby points who visited local wholesalers during the week were: John Parrish, Newark, Del.; E. K. Bean, Lansdale, Pa.; John Merz, Hopewell, N. J.; J. W. Clark, Bristol, Pa.; Josiah Heckler, Mainland, Pa.; Jos. H. Shuler, Norristown, Pa.; R. T. Chapman, Atlantic City, N. J.; M. K. Loudenslager, Souderton, Pa.; Henry Bolte, Atlantic City, N. J.; E. Allez, Millville, N. J.; C. B. Collins, of W. W. Vincent, Baltimore, Md.; Frank Klein, Spring City, Pa.; J. H. Halt, Mt. Holly, N. J., and George Oliver, Burlington, N. J.

Boston.

Charles M. Adams, Jr., of the Boston office of the E. Howard Clock Co., is at the Chicago office on business.

The engagement of Benjamin D. Shreve, assistant treasurer of the Shreve, Crump & Low Co., to Miss Sanders is announced.

Gus Weiler, of the Weiler Mfg. Co., has been receiving congratulations from his friends on account of the advent of a junior Weiler in his household.

George Hazen, City Hall Ave., has the sympathy of many friends in the trade on account of his recent bereavement by the death of Mrs. Hazen, of pneumonia.

Col. Murray Clement, former paymaster of the Waltham Watch Co. at the factory in Waltham, is back from an extended leave of absence, being connected with the Boston office.

The funeral of the late George H. Whitford, of Waltham, Mass., formerly in business as a retail jeweler in that city, and on Washington St., this city, who died Dec. 2, in California, took place on Monday at the residence in Waltham.

The automatic sprinkler installed as a protection against fire in the establishment of Smith, Patterson Co., responded last Tuesday to an overheated condition of the store during business hours, and caused a few moments of excitement. The damage was slight.

Among the incorporators of a new independent telephone company for Boston, styled the Automatic Telephone Co., is J. C. Sawyer, 10 Summer St. Mr. Sawyer has been one of the prime movers in the enterprise, and has enlisted the co-operation of a number of other business men, including S. O. Bigney, of Attleboro.

During the absence in New York this week of E. A. Bigelow, treasurer of the E. Howard Clock Co., burglars entered his house at Winchester. Being heard and in danger of discovery by members of the family, one of the men fled to the attic, and the door thereto was locked by Mrs. Bigelow, who telephoned for the police. Before assistance arrived, however, the thief made his escape from a window to a lower roof, and thence to the ground, taking with him

a number of solid silver spoons, the only booty he had time to secure, apparently.

Buyers in town during the week included: H. S. Hewitt, Brockton; S. G. Beers, Taunton; William L. Kelly, New Bedford; E. S. Clark, Sandwich; E. Beaudreau, Marlboro; W. H. Wiesman, Clinton; H. P. N. Dahl, Maynard; J. E. Whiting, Andover; Harry Foye, Athol; Mr. Johnson, for Richardson & Gillespie, Leominster; F. H. Coffin and A. F. Grimes, Peterboro, N. H.; S. Shara, Concord, N. H.; F. P. Fisk, Ep- ping, N. H.

Connecticut.

Samuel Phillips, Stamford, has just added a 3,600-pound safe to his office equipment.

The new trolley road in Thomaston is now constructed as far as the case shop of the Thomaston Clock Co.

L. S. Reddick, foreign representative of Landers, Frary & Clark, has just returned home after an 18-months' trip abroad.

Hon. Edward B. Dunbar returned to his home in Bristol, Thursday, after having been a patient in a New York hospital for three weeks.

The International Silver Co. has transferred a parcel of real estate on Myrtle St., Meriden, including land and buildings, to John Bess, of that place.

E. T. Silvernial, who recently fell from a scaffold attached to the factory of the Sessions Clock Co., Bristol, where he was painting the building, severely fracturing his arm, is reported to be rapidly improving.

The Seth Thomas Clock Co.'s factory, Thomaston, will be closed from Dec. 22 to Jan. 1 for the annual Christmas vacation. Contrary to the custom of former years, however, the plant will resume operations on New Year's Day.

The funeral of Judge L. M. Hubbard, for several years identified in corporation interests with the leading men in the silver manufacturing business in Wallingford, was held last week, and attended by many well-known members of the trade.

Landers, Frary & Clark, New Britain, have decided not to erect a new building for the press room, but will remodel the old foundry. The contract for the work has just been awarded. A die vault of brick, 37 by 37 feet, as well as a new annealing building, 29 by 50 feet, and new machinery will be installed in the office building.

N. Burton Rogers and other residents of Danbury will apply to the General Assembly at its annual session for a charter for an electric railway from Danbury through New Fairfield to Sherman, to Wabatuok, N. Y., and thence to Gaylordsville Station, in the town of New Milford, and also to Squantz Point, near New Fairfield.

Application was made last week, in Waterbury, to the Probate Court for an administrator of the estate of Mrs. A. S. Chase, at the request of the family. Henry Chase was appointed administrator, his brothers, Irwin H. and Frederick S. Chase, acting as his bondsmen. The court appointed A. M. Blaksley and J. H. Cronson as executors. Mrs. Chase left no will, as she had disposed of most of her property during her lifetime.

Special Attention paid to Jewelers' Accounts

Canada Notes.

Frank De Paris, Quebec, Ont., has as signed to Lefavre & Taschereau.

H. E. Prince, formerly of Port Perry Ont., has opened a store at Dutton, Ont.

G. F. Smith has purchased the jewel business of A. L. McNavin, Springhill, Ont.

W. J. Sheppard, Toronto Junction, Ont has moved into a new and more commodious store.

Joseph Pequegnat, Guelph, Ont., has secured a new store in a central position, to which he will remove early in the new year.

Norman Ellis, Hamilton, Ont., moved into his new establishment, 21-23 King St., East last week. The façade is finished in Mexican onyx and statuary bronze, presenting a very handsome appearance. The inside finish is of solid mahogany, the display cases being of the same material. An optic room has been fitted up with the latest appliances. At the rear is a large manufacturing room.

Out-of-town jewelers calling on the Toronto, Ont., trade last week included: Parke, Bradford, Ont.; H. Hurchmer, Beccaygeon, Ont.; Chas. P. Gill, Hespeler, Ont.; N. F. Babb, Stratford, Ont.; A. B. Watson, Georgetown, Ont.; J. Munro, Beeton, Ont.; C. E. Frosi, Peterboro, Ont.; M. Hough, Bridgeburg, Ont.; J. W. Gledhill, Huntville, Ont.; F. S. Chadwick, Simcoe, Ont. and J. F. Maynard, Campbellford, Ont.

Great dissatisfaction is being expressed by the trade in regard to some of the provisions of the new tariff. The principal features to which exception is taken are the increased tariff on watch movements, the duty on which was raised from 10 per cent., the increases on raw materials and the removal of unset diamonds from the free list and subjecting them to a 5 per cent. duty. Owing to the free importation of diamonds a large business with American visitors in diamond goods has been done of late years, which is now to some extent threatened by the duty. Petitions asking for the abrogation of the duty are being extensively circulated for signature among the retail jewelers, and will be presented after the holiday season is over. It is contended that the increased duty on watch movements is unjustifiable on principle, being unnecessary from a revenue point of view and too low to be a protective measure. The manufacture of movements in Canada is impracticable, as would require a capital of at least \$2,000, to turn out movements so as to compete with the American goods. W. K. Naught, of the American Watch Case Co., Toronto, Ont., interviewed the Minister of Finance this week on behalf of the Jewelers' Section of the Canadian Manufacturers' Association to protest against the increase of duties on jewelers' and watchmakers' raw materials. He asserted that the result would be to increase the price of watches and other goods.

Samuel S. Hall, Jr., Elgin, Ill., has moved to Montgomery Center, Vt.

T. MacWilliams, formerly of Washington, D. C., but recently a resident of Rocky Mt., and Miss Olive Grady, of the latter place, were united in marriage last Wednesday evening.

Attleboro.

Frank C. Hodges, for years prominent in the jewelry business, celebrated his 70th birthday last week.

Emmons D. Guild, of W. H. Wilmarth & Co., has been elected commander of the Attleboro Grand Army Post.

Hon. Sidney O. Bigney, of S. O. Bigney & Co., is financially interested in a new telephone proposition in Boston. Mr. Bigney was a guest of honor last week at the annual banquet of the Attleboro militia company, composed almost wholly of young men from the jewelry factories.

Charles M. Robbins, of the Chas. M. Robbins Co., is on his way home from Europe to spend Christmas with his sons. When he left for the other side he planned a longer trip, but a desire to rejoin the boys for the holiday led to a change of plan. They will meet him in New York.

H. S. Hewett, Brockton, Mass., showed sound business judgment last week. The public school teachers of his city were unable to get their pay for many weeks owing to a financial deadlock in the city government. He invited all to make their Christmas purchases on credit, an invitation that was promptly accepted.

John R. Tingley, 17, more commonly known as John R. Moss, has been in the county jail, unable to furnish \$1,000 surety for his appearance Dec. 19 for trial on the charge of setting fire to the W. H. Wilmarth & Co. factory. Tingley was employed in the Wilmarth company, and was in the building at the time of the fire Nov. 20. When extensive damage was done to the plants of his employers and the P. J. Cummings Co. Deputy State Fire Marshal. Lamore, of Fall River, made the arrest. Tingley was given immediate hearing, entering a plea of not guilty. Tingley's arrest came as the result of his conflicting stories. While the authorities were inquiring into the start of the fire, Tingley was questioned. He told three quite different stories.

Walter J. Newman, who recently retired as superintendent of the Horton, Angell & Co. factory, has received from the employees there a watch and chain which he will ever treasure as a mark of their good will. Mr. Newman had served at the factory for 27 years, the anniversary falling on Oct. 27. A large share of that time he had been superintendent, winning the personal regard of every one under his control. When he left great regret was felt, and the resignation was immediately planned. Ill health made it impossible for the working force to wait upon him personally at his home, as they desired, so the token was delivered by a delegation. His other watch came to him from Edwin Horton, whose name will be recalled by every old-time jeweler. Mr. Horton secured it only a short time before his death. Mr. Newman went to work in the Horton, Angell Co. factory as soon as he left high school. He early won the confidence and esteem of his employers. He acquired full charge of the factory, holding it through a period of years in which the business developed by leaps and bounds. Newman continued in his place, devoted days, nights and resting times to his task until he finally reached a point where a complete rest was necessary, and resigned. He has had several attractive offers of em-

ployment, but his plans are not made. He is giving some thought to a proposition to go into business on his own account.

North Attleboro.

E. Ira Richards, who spends the Winter in New York, is in town on a short visit.

Alpin Chisholm, of the Bugbee & Niles Co., is being urged by his friends to become a member of the school board.

Fred B. Brigham, western representative for Cheever, Tweedy & Co., has purchased a residence on Washington St.

Christopher Rudolph has moved his chasing and engraving shop from the Smith building on Elm St. to Boyle block, Washington St.

Walter B. Ballou has now recovered sufficiently from his automobile accident of several months ago to enjoy an occasional short walk.

William C. Tufts, an old-time jeweler, died last Thursday at the age of 80. He was an apprentice to E. Ira Richards & Co. 66 years ago. He is survived by two sons, William and Harry W., of the H. W. Tufts Tool Co.

Alexander Eklund, head toolmaker at the factory of J. F. Sturdy's Sons, received a serious injury last Thursday. An emery wheel broke while in motion and one of the parts in flying struck Mr. Eklund in the face, inflicting a severe flesh wound.

The George L. Paine Co. has been compelled to secure additional room in the top floor of the Totten building. When W. G. Clark & Co. move out to their new factory, J. J. Sommer & Co. will have the whole second floor of the Totten building and the Paine company will have the entire top floor.

Eugene A. Hawkins retired last Saturday as foreman of Whiting & Davis, and this week entered the firm of Casper & Mandalien. When leaving Mr. Hawkins was presented with a handsome solid gold watch and chain by the firm and employes. Frank A. Brown made the presentation speech, expressing the appreciation of the employes for the kindness of the retiring foreman.

Washington, D. C.

The annual auction sale of unclaimed packages at the Dead Letter Office is now on. The jewelry sale will take place Saturday.

Harris & Shafer recently entered suit in the District Supreme Court against Congressman E. F. Blackburn of North Carolina to recover \$215 with interest from Sept. 4, 1903. The amount is said to be due for a diamond and turquoise ring sold to the Congressman, on which but \$10 was paid on account.

At the dinner given to Robert E. Perry by the National Geographical Society in the New Willard Hotel Saturday night, the famous Arctic explorer was presented with a gold medal by President Roosevelt on behalf of the society. The medal on the obverse contains a representation of the Arctic circle, with a star near the North Pole marking the site of the stone cache erected by Mr. Perry at 87° 6' N. The star is represented by a beautiful Montana sapphire. On the reverse is an inscription.

Providence.

TRADE CONDITIONS.

The retailers report that Christmas buying is ahead of that of last year. The shoppers appear to be buying earlier than usual, too, this year, a condition of affairs which is appreciated.

R. Berberian, enameler, is now located at 11 Blount St., having removed from his former place of business on Chestnut St.

The jewelry store of Jacob Ernstoff, 545 Westminster St., was broken into one night last week and property valued at \$158 stolen.

The condition of Henry Tilden, who has been seriously ill for some little time, remains practically unchanged, though he has at times rallied and shown marked improvement.

An extra dividend of three per cent. has just been declared by the Nicholson File Co. This is in addition to the regular quarterly dividend of two per cent. and makes an appreciated Christmas remembrance for the stockholders.

The Gorham Mfg. Co. recently completed a handsome silver trophy to be donated by Mayor Coughlin, of Fall River, to the team which won the championship in the recently closed New England Association football race. The cup stands 10¼ inches high and holds about 6¼ pints.

The partnership heretofore existing between Frederick A. Stevens and Albert E. Lenz under the name of Stevens & Co. has been dissolved by mutual consent, formal action to this effect being taken Dec. 11. Mr. Stevens will continue the business, one of the best known in optical circles.

A meeting of the creditors of the Newell & Fisher Mfg. Co. was held last week at the office of the assignee. It was then stated that the liabilities were a trifle over \$13,000 and the assets about \$3,600. Two propositions were submitted. One was to pay 20 per cent. cash and the other was to allow the firm to continue in business, pay its November accounts, and make payments on the remainder every six months from two-thirds of the profits. This was the proposition accepted.

Among buyers in town last week were C. I. Goldsmith, Cleveland; H. Kadden, Philadelphia; I. N. Oppenheimer, Baltimore; S. Prentke, Cleveland; B. Wolf, St. Paul; J. L. Felsenthal, Chicago; O. P. Myer, Montreal; Mr. Peterson, St. Paul; T. R. Allen, Denver; J. N. Hahn, St. Louis; E. M. Stern, Philadelphia; D. Harris, Albany; C. H. Dinkelman, Baltimore; W. L. Wales, Sidney, N. Y.; J. Floersheim, Chicago; J. Mann, Albany; S. Schweizer, Philadelphia; S. S. Wyle, Albany; J. Israel, Chicago; H. Seligman, St. Louis.

News has been received in this city of the death of William D. Anderson in Milwaukee. Mr. Anderson formerly lived here, going west about a year ago in search of health. He was formerly in the employ of the Gorham Mfg. Co., and when 19 years of age went to London to study the silversmith's art. On his return he started in business for himself, but after five years of this he entered the employ of the Gorham concern. He married the daughter of a wealthy westerner and at the time of his death was a prosperous real estate dealer in Milwaukee. He was born in 1857.

GORHAM SILVER

WHAT EVERY JEWELER NEEDS

¶ At no season of the year other than this is there a more insistent demand made upon the retail jeweler's stock for such silverware as Toilet Goods and Manicure Sets, Desk Furnishings, Handkerchief and Glove Boxes and articles of a similar nature.

¶ It is, therefore, incumbent upon the jeweler of alert perceptiveness to satisfy himself that in this respect his stock needs no replenishing, or to remedy the omission should he find that it exists.

¶ The Gorham Company have always paid particular attention to this important feature of their holiday productions and in variety as well as in attractiveness of price and appearance the Gorham line of these goods is without parallel.

THE GORHAM COMPANY,

Hall-Marking of Watches in Great Britain.

The news letter from London, published in another column, contains some details on the decision of the Court of Appeals on the question of imported watches being "plate" within the meaning of the Hall-Marking Act. The gist of this decision, which reversed that of Justice Channell in the suit of the Goldsmiths' Company vs. Wyatt, declaring complete watches were not plate, was mentioned editorially in THE CIRCULAR-WEEKLY Dec. 5. From more complete reports it seems that the Court of Appeal brushed aside many of the contentions of counsel on both sides, particularly that relating to the meaning of the word "plate" in common parlance. The question before the court was not the meaning of the word in ordinary language, but whether in acts of Parliament the word included gold and silver watch cases. If a silver watch case was "plate" the court failed to see why the insertion of the words made it any less so after than before the operation as the case was plate by reason of the gold or silver metal in it and the metal was unchanged, whether it remained a watch case or developed into a watch.

Should this decision stand, and it will unless reversed by the House of Lords, the result will be far-reaching, as it will compel every foreign gold or silver watch case weighing more than five pennyweights now in Great Britain to be sent to the British Assay Office to be assayed and marked with a special mark. The manufacturers and dealers in Swiss watch cases have been behind the defendant in the fight, and it will lie with them whether or not the appeal will be taken to the House of Lords.

Coins May be Destroyed But Not Mutilated.

It is this season of the year many inquiries come both from consumers as well as jewelers as to the law forbidding the mutilation of United States coin. Owing to the fact that several newspapers, in answer to correspondents, have interpreted the law as to forbidding the use of coin in the making of jewelry, it is well for jewelers themselves to understand, and call their customers' attention to the fact, that the law applies only to the mutilation or depreciation of coin and does not apply to the use of the gold or silver where the article is entirely destroyed as a coin.

So clearly is the gold and silver worker's right to use the coin recognized by the Government that the Director of the Mint sends out to manufacturers and jewelers each year a letter requesting that they state how much gold or silver has been used in order that the Treasury Department may keep tab upon the amount of coin that has been taken from general circulation. It was a well-known fact that in the New England States a large amount of coin is used instead of bullion, and the Assay Office at New York figures on shipping a certain amount to the east every week for the purpose of manufacture.

The essential thing for the jeweler to remember and to impress upon customers who desire work made up from coin, is that when money is used it must be manipulated in such a way as to absolutely destroy its resemblance to a coin so that it will be en-

tirely put out of circulation, and it will be impossible for any one to still attempt to pass the metal as a coin again. Drilling a hole in a coin does not take it out of circulation, because this can be filled up, plated over and the coin again used; therefore, such an act may be considered mutilation under the statutes and punished. The safe way for the jeweler to act is to endeavor to obliterate all traces of the Government's marking on the gold and silver, from the milling on the edge to the design on one side or the inscription on the other.

Information as to Identification of Imitations of Precious Stones.

THE question of the identification of imitation precious stones is growing more important to the jeweler every day, particularly as many imitations of sapphires and emeralds are now being made of especially prepared glass of unusual hardness that will not respond to the ordinary tests of scratching. THE CIRCULAR-WEEKLY will therefore give even more prominence in the future than in the past to all matter pertaining to the construction or detection of imitation stones. The endeavor will be made to keep the trade informed not only as to the character of the imitations which come to the market from time to time, but also in every way possible, to indicate how these imitations may be tested. It is unfortunate but true that a large number of retail jewelers know but little about gems and less about imitations of gems, and the letters that come to this office from time to time would indicate that there are many dealers buying and selling jewelry and precious stones who have no knowledge at all as to how imitation gems are constructed.

Owing to the number of inquiries that have been received as to how imitation pearls are made (a matter that has been thrashed over time and time again in this journal and in various works on precious stones) we will publish a brief article on the subject in the next issue of THE CIRCULAR-WEEKLY.

Recent Customs Decisions on Molded Lenses and Imitation Gems.

Decisions of the Board of United States General Appraisers, New York, in cases involving duties on lenses and imitation precious stones have been announced in the last week as follows:

MOLDED LENSES.—Protests of American Electric Novelty & Mfg. Co. against the assessment of duty by the Collector of Customs of New York. Protests overruled on the authority of G.A. 6086 (T. D. 26541), relating to molded lenses.

IMITATION PRECIOUS STONES.—Protest of Hüssa & Co. against the assessment of duty by the Collector of Customs of New York. The goods were held dutiable as imitation precious stones under Par. 435, Tariff Act of 1897, as claimed by the importers.

L. T. Harnden has disposed of his interests at Ettrick, Wis., and has gone to Whitehall, Wis.

E. G. Swezey, Goshen, N. Y., is making extensive improvements in the exterior of his store on W. Main St., at that place.

New York Notes.

Charles T. Paye, of Paye & Baker Mfg. Co., North Attleboro, Mass., was in New York last week.

Dr. George F. Kunz, of Tiffany & Co. was last week elected president of the American Scenic and Historic Preservation Society.

Philip Mackey, pearl dealer of Mustine, Ia., was in the city, last week, making his headquarters with I. Guntzberg, John St.

The Gorham Mfg. Co. has cast a statue of Gen. J. E. B. Stuart, the Confederate cavalry leader, which is to be unveiled in Richmond, Va., next year.

The auction sale of unclaimed goods, including a quantity of jewelry and watches in the seizure rooms at the Appraiser's Stores, 641 Washington St., is to be held to-day.

W. H. Kinna, manager of the New York office of the Elgin National Watch Co., was last Wednesday to pass the holidays in French Lick Springs, Ind. He will return about Jan. 1.

Indictments have been found against Oscar Rohr, silver chaser, and Joseph Kerner, porter, accused of grand larceny in stealing silverware from the Whiting Mfg. Co.'s factory at Lafayette and E. 4th St.

Fire on Monday morning destroyed the upper part of the Police Gazette building, including the tower clock to which an army of Brooklynites have habitually looked for the time as they crossed the bridge to and from work.

Among recent accessions at the Metropolitan Museum of Art is a universal dial with ball and socket movement, made late in the 18th century in Germany by Fischers. The dial is a gift to the museum from Mrs. Stephen D. Tucker.

In the City Court, Trial Term, Part before Judge Green, the case of Powers Mayers against the Jewelers Safety Society, which has been pending for several years, was tried last week, and resulted in a disagreement of the jury.

Eastern offices of the John Holland Gun Pen Co., 82 Duane St., are to be enlarged next month and equipped with complete stocks in all lines made by the Cincinnati company. E. C. Dwyer, who was until recently with the C. Howard Hunt Pen Co., Camden, N. J., is now in charge of the offices.

It is reported that Conrad Gutgesell, who formerly had a jewelry store in Ponkeepsie, N. Y., died recently in New York. The body was taken to his former home for interment. He was in business in Ponkeepsie upward of 20 years ago, but for some time before his death had been out of the jewelry trade.

Several of the lawyers who have been taking part in the examination of Sol Bach, formerly a diamond broker at Maiden Lane, journeyed, last week, to Baltimore, Md., where the testimony of several witnesses was taken before a commissioner. This evidence was supplemental to what was obtained in New York.

Eduard Van Dam is in Europe, and before his return will visit his factories in Amsterdam and Antwerp. A strike which occurred recently in the Amsterdam

BESIEGED *by crowds of Holiday Buyers!*

This is a condition which is now confronting many jewelers.

Many of these buyers are calling for certain grades of diamonds and diamond jewelry which you may be temporarily out of, or don't regularly carry in stock.

You make or lose sales according to whether you can or cannot supply the goods quickly.

We can send any assortment on memorandum *at once*. This is the time to put us to the test.

ARCH CROWN MFG. CO. 26 Camp St. NEWARK, N. J., U. S. A.

has been satisfactorily adjusted, it was learned yesterday at the New York office. M. A. De Vries, with E. Van Dam, returned recently on the *Finland* after a trip abroad.

The Jewelers Board of Trade received recently a second dividend of 20 per cent. for the creditors of Charles F. Askins, Oshkosh, Wis., who is now in bankruptcy, and checks were sent. This makes 40 per cent. that has been paid by the estate, and it is expected that 5 or 10 per cent. more will be paid.

Jacob Dreicer & Son, 292 Fifth Ave., bought for \$85,000 a pearl necklace sold last Saturday at the Fifth Ave. Art Galleries by Auctioneer James P. Silo. It was reported that the necklace was once owned by the Russian Czar. Several other articles of jewelry, all said to belong to the same owner, were also sold. This owner's name was not revealed.

New members of the Jewelers Board of Trade were unanimously elected at a meeting held last Thursday night by the Board of Directors: Fontneau & Cook Co., Attleboro, Mass.; Geo. Meikle, Sturgeon Bay, Wis.; Reed-Bennett Co., Minneapolis, Minn., and De Passe Mfg. Co., S. Kaplan Co., Louis Shapiro, Stone & Becker and Tiffany Electric Clock Co., all of New York. Lewis B. Peterson, a watchmaker and jeweler, living at 207 E. 116th St., Manhattan, who is the brother of John H. Peterson, an engineer killed in a railroad wreck near East Rochester, recently, was for a time anxious to recover the watch stolen from the body of his brother, and received word last week that a man had been arrested at Rochester on the charge and was now in jail. The watch has been recovered.

Invitations have been issued for the annual banquet to be given Thursday evening, Jan. 24, by the Boost Club. At a recent meeting the following officers were nominated for the coming year: Arch Booster, F. P. Seymour; Festive Booster, W. E. Smith; Glad Hand Booster, Samuel Graydon; Coin Keeper, H. R. Jackson, Jr.; Secretary, H. D. Shipman; Boost Committee, J. B. Fisher, George E. Newcomb, Robert Ansley, Arthur P. Jackson.

Jacob Dreicer, of Jacob Dreicer & Son, last week sold the five-story building at 292 Fifth Ave., in which the firm has its store. The lot is 25 by 100 feet. Mr. Dreicer bought the property 12 years ago for \$165,000, and according to the reports obtained more than double that price. The sale was said to be at the largest figure at which any 25-foot lot on the avenue, south of 34th St., was ever sold. The firm is to move next June to the 12-story building, which it is now erecting at Fifth Ave. and 16th St.

Columns of space were devoted to the daily papers in the last week to the diamond necklace, said to be worth \$10,000, the ownership of which was contested by Mrs. Helen Dwelle, a widow, and Adolph J. Davis, a miner, to whom she had been betrothed. It appeared from the testimony that Mr. Davis gave her trousseau money with which she bought the necklace of a jeweler in Memphis, Tenn., paying \$7,000 for it. The various court proceedings were finally settled and Mrs. Davis is to keep the necklace.

The Alvin Mfg. Co.'s new uptown store,

373 Fifth Ave., was fitted up and the company comfortably established in it in time for the holiday trade. George W. Harvey is manager of the store, which is one of the most handsome and best equipped in the Fifth Ave. jewelry colony. The company occupies the first floor and basement, and the frontage on both the avenue and 35th St. gives advantages in show windows and lighting. The interior woodwork is in mahogany and rosewood. In the back of the store are convenient offices.

Henry C. Bainbridge, the president of the Stationers Board of Trade, was chosen at a meeting held by the trustees, Tuesday of last week, to represent the Board at a convention called for Jan. 11, in Washington, D. C., for the purpose of considering plans for the extension of foreign commerce. In the call for this convention, it is set forth that there are serious obstacles in the development of the trade of this country in foreign lands, and that they should be removed if the United States is to attain pre-eminence.

The speakers' committee of the 24-Karat Club, which recently returned from a trip to Washington, D. C., reports that the results of its efforts were satisfactory, and it is safe to promise notable addresses at the dinner which is to be given Friday evening, Jan. 25, in Delmonico's. It is expected that both houses of Congress and the State and city governments will be represented on the toast list. The entertainment committee is arranging a programme of pleasing music, including selections. The souvenirs are to be worthy of the event and to provide a real surprise.

Samuel Reyman, Mount Vernon, N. Y., was robbed last Monday night of jewelry valued at about \$800. As he was about to close his store for the night a well-dressed man entered his place of business and asked to see some rings. The jeweler took from the safe a case containing about 50 rings and placed them before the prospective customer, when suddenly he found a revolver pointed at his head. Quickly sweeping the rings into a pocket of his raincoat, the stranger made his escape. The police of Mount Vernon, Yonkers and New York were immediately notified to look out for the man.

In a fire occurring in the six-story building at 140 Sullivan St., last Saturday morning, much damage was caused in the silverware factory of William R. Elfers, occupying the third and fourth floors. The flames started on a lower floor occupied by a dealer in artists' materials. Gas escaping from a broken service pipe added to the difficulties of the firemen in extinguishing the blaze. The factory was insured to the extent of \$16,000. Mr. Elfer will start work within three or four days in a building back of the burned structure, but it will take five or six weeks before he can have everything in running order as usual.

Imitations of rock crystal with intaglio and painted representations of cats' heads were held, last week, by the Board of United States General Appraisers to be properly dutiable at 45 per cent. ad valorem as manufactures of glass or paste. This decision affirmed a ruling by the Collector of the Port. H. Nordlinger's Sons, the importers,

protested against this ruling and tried to obtain a classification of the articles as imitation precious stones dutiable at 10 per cent. In its opinion the Board said that the articles could have been classified as imitation precious stones but for the fact that a superadded process had been applied in the form of a hand painting.

The body of Henry Van Doeselaer, until recently employed as a diamond setter by Jac. Kryn & Wouters Bros., Water and Washington Sts., Brooklyn, was found last Wednesday morning in Hook Creek, near Jamaica, L. I., by the police of the Springfield station. In a coat was found \$130 in bills, two watches and papers by which the body was identified. Steamship tickets, purchased in anticipation of a trip to Europe, which he and his wife intended to take, were also found. It is the belief of the police that Mr. Van Doeselaer started, Tuesday night for the home of friends in Canarsie, L. I., lost his way in the darkness and fell into the creek in which he was drowned. Mr. Doeselaer was born in Antwerp, Belgium, 43 years ago. He had been 25 years in the employ of Jac. Kryn & Wouters Bros. The funeral was held last Saturday from his late home, 43 Hicks St., Brooklyn.

It is supposed that the 30 pearls shipped to New York by Golay Bros. & Stahl, Geneva, Switzerland, and on which the invoice values were recently advanced by a decision of General Appraiser Sharretts, have been taken out of bond. In accordance with his practice, the collector of the port does not give out information as to whether or not the shipment has been released, but as no notice of appeal has as yet been filed, it seems likely that the general appraiser's decision was accepted. To get the pearls, under the terms of the decision, the importers were required to pay about \$1,000 in additional duties and penalties. The American Express Co. was the consignee named in the invoice, but the identity of the buyer of the pearls has not yet been revealed. The pearls were part of a necklace, the other portion of which is said to be in Paris.

Trans-Atlantic Voyagers.

TO EUROPE.

J. C. Bigalke, of the Bigalke & Eckert Co., sailed, Saturday, on the *Kronprinz*.

FROM EUROPE.

M. A. DeVries, with Eduard Van Dam, returned, recently, on the *Finland*.

Lee Reichman, of Jos. H. Fink & Co., sailed, Saturday, for home on the *Kaiser Wilhelm II*.

M. B. Rosenback, of W. I. Rosenfeld, returned, recently, on the *Kaiserin Augusta Victoria*.

Ball's Official Standard R. R. Watches

WHAT WOULD YOU GIVE FOR A LIFELONG CUSTOMER?

Try this plan :

Sell your next watch customer a "Ball."

Its reliable performance will convince him you are a dealer to be depended on—he'll keep coming back for other things.

The watch will win you his business and friendship for always.

Write for booklet, and watch this space.

We want to add a lot of new friends to the Ball family of railroad watch dealers.

VOL. LIII.

CHICAGO, WEDNESDAY, DECEMBER 19, 1906.

No. 20.

Chicago Notes.

Max Kling, New York, has been spending the month of December in Chicago.

Max M. Joseph, with the Rockford Watch Co., is in off the road until after the holidays.

J. H. Donnelly, with Sproenhle & Co., has just returned from a trip to the Pacific coast.

Frank E. Behrendt, representing Moore & Son, has just returned from his last trip before the holidays.

Joseph Di Marinano, representing Albert Orsch & Co., has returned home after a visit to the trade here.

John H. Carr, salesman in the eastern states for the Elgin National Watch Co., visited the factory a few days last week.

E. M. Lunt, manager of the Chicago office of the Towle Mfg. Co., is making a short visit to the factory at Newburyport, Mass.

A. L. Thomas, of the firm of Lord & Thomas, who died here recently, was a heavy stockholder in the firm of Jones & Meyer.

H. F. Aicher, F. J. Aicher, G. W. Inckenauer, Leland Stanford and L. Hertz, of the Alvin Mfg. Co.'s traveling force, are in Chicago for the holidays.

S. C. and M. C. Eppenstein and their wives attended the reception last Sunday at Minneapolis, given in honor of the engagement of Louis A. Eppenstein and Miss Annette Davis.

A. T. King has taken space with L. G. Cobb & Co. on the sixth floor of the Columbus Memorial building, where he will have stock of goods in his representation of the Green City Silver Co. and Wilcox & Roth. Inasmuch as most of the leading business men of Chicago are members of either the Merchants' or the Commercial clubs, whose purposes are almost identical, a proposition to consolidate the two clubs is now being considered.

J. A. Lucas, in addition to the A. H. Kiss & Co. line, will represent the James E. Wake Co., Attleboro, Mass. Mr. Lucas will, however, only call on the Chicago trade hereafter, as his health will not permit of extended trips.

On account of the death of Samuel Dodd at Meriden, Conn., the International Silver Co.'s offices were closed on last Saturday,

the day of the funeral. A. L. Sercomb, of the Chicago office, attended the funeral services at Meriden.

The N. Shure Co. has taken a lease of the five-story building at the corner of Franklin and Madison Sts., and intends to remove to that location by the middle of January if possible. This building, if the concern decides to occupy it entirely, will afford them about double the space now occupied.

Hiram A. Jacobs, who has been employed in a St. Paul house for the past five years, will enter the employ of the Knickerbocker Silver Co., of which concern his father, C. J. Jacobs, is secretary, Jan. 1. He will travel in the central western States. C. J. Jacobs proposes to spend some two weeks at the factory at Port Jervis, N. Y., after Christmas.

In relation to the account of the failure of J. F. Dailey & Co. published last week, Alvin L. Bauman, president of the L. Bauman Jewelry Co., St. Louis, Mo., has notified THE CIRCULAR-WEEKLY that any statement that any portion of the property of J. F. Dailey & Co., of Chicago, has been hypothecated to the L. Bauman Jewelry Co. is entirely erroneous.

Mr. and Mrs. Mathias Loewe, 4928 Forrestville Ave., celebrated their 60th wedding anniversary, Dec. 9, at the Unity Clubhouse, 3140 Indiana Ave. They were married in Breslau, Germany, 60 years ago. Mr. Loewe from early youth was a watch manufacturer, and still has in his possession several timepieces he made 75 years ago. Mr. and Mrs. Loewe have lived in Chicago since 1871.

Mrs. Annie B. Hoffman, wife of Ed. B. Hoffman, salesman for H. F. Hahn & Co., died Dec. 3 at their home in Big Rapids, Mich., of Bright's disease. Mr. Hoffman travels in the States of Michigan, Ohio, Indiana, Illinois, Iowa and Wisconsin, and Mrs. Hoffman frequently accompanied him and knew most of his customers. His many friends join in extending condolences to the bereaved husband.

The following are a few of the buyers who were in the city during the past week: Ed. Parker, Gilman City, Mo.; J. W. Lief, DeKalb, Ill.; N. A. Huenman, W. McHenry, Ill.; F. S. Hart, Streator, Ill.; L. J. Yoeman, Waukegan, Ill.; E. E. Wilber, Danville, Ill.; Wm. Kuehlman, Antioch, Ill.;

H. C. Watts, Forrest, Ill.; Mr. Boyson, of the Boyson Co., Cedar Rapids, Ia.; G. O. Warren and C. E. Hurd, Sycamore, Ill.; J. H. Schmith, Clinton, Ill.; J. C. Mahon, Aurora, Ill.

William Ford, sometimes referred to as "Diamond Bill," a jeweler of Waukegan, Ill., came to Chicago a week ago, and, as was his custom, had about him considerable jewelry which he intended to dispose of among his customers of railroad employes. He was staying at Spears' Hotel, and left to keep an appointment in the evening to sell some diamonds, and has been missing ever since. His friends think he has met with foul play, as he had jewelry worth \$1,000 with him. The police have not been able to find any trace of Ford so far.

The A. C. Becken Co. caused the arrest of Margaret Gurrie, 16 years old, living at 582 Sedgwick St., for the theft of five gold rings from the house. The girl was committed to the Juvenile Court on the preliminary hearing in the Municipal Court. She explained that the rings were taken home so that her sisters could select one for a Christmas purchase. The complainants, however, asserted that the rings were found in the lining of her coat, and not taken out on memorandum in the regular way. The girl was employed by Becken as an order filler. The Juvenile Court appointed a probation officer to keep in touch with the young girl from time to time. It is understood that more prosecutions of this kind will be made by different firms in the future instead of simply discharging the guilty party from employment, as has been the custom heretofore.

Edward R. Roehm, in his new quarters at 16 John R. St., Detroit, Mich., has succeeded to the fraternity jewelry, novelty and stationery business of the recently dissolved firm of Roehm & Son. A note was published to this effect last week, but it was not made clear that Mr. Roehm had taken over only the fraternity end of the business. He conducted this department with the old firm for nearly 20 years, and has all the patterns, dies, special machinery and files of orders. All the workmen, except two, formerly with Roehm & Son are now in the employ of Edward R. Roehm, who devotes his entire attention to this specialty exclusively.

Cincinnati.

TRADE CONDITIONS.

Holiday trade seems to have begun in earnest here the past week. Retail merchants were kept busy as the shoppers are beginning to buy heavily. Many new clerks have been installed for the holiday season. Several traveling salesmen of the material houses have gone to other towns to assist during the rush. The stores are beautifully decorated and are arranged in a more attractive way than in past years, and the merchants feel jubilant over the prospects for a big season. The demand for diamonds and bracelets prevails. Factories are running day and night.

Harry Neher, of E. & J. Swigart, is again at business after a several weeks' illness.

W. F. Willman, of Maisch & Willman, has returned from a business trip to New York.

The engagement of Lawrence Herschede, of the Frank Herschede Co., and Miss Edna Lumstein is announced.

Charles Beeker, manager of the Philadelphia Watch Case Co. office, is reported to be recovering from an attack of fever.

W. S. Fawcett, with Lindner & Co., is at Xenia, O., where he is assisting Mrs. Eugenia Tiffany through the holiday season.

After Jan. 1 the Keystone Watch Case Co. office will move into its new quarters on the third floor of the Mercantile Library building.

Urias Schwabacher, formerly of Bessemer, Ala., was purchasing goods here for the new store which he has just opened at Birmingham, Ala.

After considerable effort on the part of the receiver of the estate of Grosse & Kappler, bankrupt jewelers of Dayton, O., a bond of \$500 was secured. It came from E. A. Fishback. The receiver recommended that this be accepted. The recommendation was approved by the judge.

Last Wednesday morning, at an early hour, thieves secured \$75 worth of jewelry by smashing the large plate glass window in the jewelry store of Joseph Sauer at York and Sixth Sts., Newport, Ky. They broke the window with a rock wrapped in a cloth. In their hurry to escape the thieves overlooked a tray of diamonds worth \$2,000.

Out-of-town dealers here the past week making Christmas purchases included: E. F. Starks, Newport, Ind.; I. N. Polloek, Ashland, Ky.; L. Baldwin and wife, Winchester, Ky.; Mr. Bowen, Winchester, Ky.; D. E. McWaters, Somerset, Ky.; Herman A. Rohs, Cynthia, Ky.; J. A. Simpson, Ripley, O.; C. A. Gossard, Washington Court House, O.; H. C. Kline, Connorsville, Ind.; John Ashton, of Ashton & Baker, Middletown, O.; Fred G. Wittlinger, Middletown, O.; Will Schaible, Troy, O.; Mrs. Kupferschmid, Lawrenceburg, Ind.; W. W. Roberts, Nicholasville, Ky.; J. H. Daller, Lima, O.; H. L. Greenback, Piqua, O., and William L. Lehne, Decatur, Ind.

One of the finest medals ever turned out in Cincinnati is now being made by the Ickelheimer Bros. It is to be the world's championship medal, so-called "Bill Board Medal," to be presented Jan. 7 at Music Hall Skating Rink, to the champion roller skater of the world during the skating tournament. The medal is solid gold, studded with diamonds. The center is the globe encircled by the American flag in gold and enamel. On the globe in relief stands the champion on roller skates. Encircling this is

a wreath of laurels indicating victory. The medal is suspended by gold chains from a gold bar on which is engraved "Bill Board Medal," while mounted on the bar are a pair of gold wings, emblematic of speed. These wings are joined together with a large diamond.

San Francisco.

Harold A. Forbes, Los Angeles, was among last week's visitors to this city.

Frank E. Smith, San Jose, paid the jobbers of this city a short visit last week.

W. F. Wooster, Suisun, Cal., was in town again last week buying holiday stock.

Louis Koberg, Healdsburg, Cal., was in this city, last week, combining business and pleasure.

James J. Horen, Antioch, Cal., was in town visiting some of the local jobbers the first part of the week.

Ickelheimer Bros., dealers in lamps, etc., have opened a cut glass department at their store, at 1115 Sutter St.

A. F. Joseph, of the Joseph Jewelry Co., Ukiah, Cal., came in the earlier part of the week to purchase holiday goods.

Henry Bohm, of the Bohm-Bristol Co., has returned from Denver, Colo., and will remain here until after the holidays.

The Alexandra Jewelry Co., on Van Ness Ave., at Pine St., has increased its force materially, and has just added four new show cases.

Bruce Bonny, of Shreve & Co., went with the special delegation of merchants on an excursion to the gold mining camps of Nevada last week.

Karl Eber & Co., who were formerly located on Fillmore St., have moved to their new store on Van Ness Ave., near Post St., where they expect to get their share of the holiday trade.

The Alphonse Judis Co.'s quarters in the Mutual Bank building was visited, during the week, by the painters and varnishers, who renovated the woodwork of the company's salesrooms.

F. R. Deremer & Co. have just installed two new American Beauty show cases which, together with several imitation palms, give the store on Van Ness Ave. an attractive appearance.

Mayer & Weinschenk, in the Kamm building, have rented an additional room adjoining that already occupied and have torn out the partition. This will give the firm almost double the amount of space occupied.

Jobbers report that the proprietors of stores in towns not far distant from this city are falling more and more into the habit of coming to this city to select their stock themselves. They frequently take selections home with them.

The store of Adolph Hirschman, 1641 Van Ness Ave., has just added a new show case, making eight large ones in all. Mr. Hirschman has obtained the services of M. Orrsich, late of Denver, who will take charge of the watch department.

The Diamond House, at 1121 Van Ness Ave., has just installed a costly wall case 14 feet long, which greatly increases the capacity and beautifies the appearance of the store. It has also been necessary to increase the factory force, located upstairs in the same building.

H. Brunn, a manufacturers' representa-

tive, who has the Pacific Coast agency for the Philadelphia Watch Case Co., and other lines, is soon to leave for the east, on a business trip. He will be gone for several weeks. While east, Mr. Brunn expects to acquire the agency of several new lines.

The Keystone Jewelry Co. has taken rooms in the Mutual Bank building, on the fourth floor. Most of the fixtures are in and the decorating is about finished. The company's safes have not yet arrived, but, with the exception of these, the concern is well equipped. Mr. Smith is managing the company's business here.

The Bohm-Bristol Co., at the corner of Van Ness Ave. and Sacramento St., has recently remodeled the front of its store. Numerous trimmings and some fancy woodwork have been added. The color scheme is light green trimmings on a dark green background. The effect is artistic and the change makes the store stand out distinctly from the rest of the store on Van Ness Ave. To accommodate the Christmas trade two large show cases have just been put in and the clerking force has been increased.

The Elgin National Watch Co., in the Mutual Bank building, on Market St., has just added some fine office furniture. The carpenters and painters during the week have been greatly changing the appearance of the rooms. New partitions have been put in and all of the woodwork has been varnished. This company, which for a long time, was unable to get stock, has just received several large packages from the east and the employes are now working nights and Sundays to get out orders in time for the holiday trade.

Minneapolis and St. Paul.

John Paegel, Minneapolis, was a recent visitor to Hanover and St. Michael, Minn.

Mrs. Sarah J. Brown, wife of Edgar A. Brown, St. Paul, died recently at her home. The funeral was held from St. Paul's Episcopal church.

Recent out-of-town jewelers in the Twin Cities included: John Saxine, Prescott, Wis.; Julius Anderson, Mora, Minn.; H. F. Leuders, Norwood, Minn.; O. E. Oslund, Milaca, Minn.; I. M. Radabaugh, Hastings, Minn.; Gus Chellin, Dassel, Minn.

Amery Maston has sued M. L. Finkelstein, St. Paul, for the alleged false representation of the value of a watch and chain which was said to have been placed at \$2,365. The defendant claims to have paid \$1,265 and to have given notes for the remainder.

There is a determined effort being made by newspapers of various kinds to induce an earlier shopping and it seems to have had a certain effect so far. Already there has been a large volume of early buying, and in some classes of merchandise the increase is reported as particularly noticeable.

Richard Lantry and John Schneider recently confessed that they robbed the store of Wm. T. Kettering, Peoria, Ill., of 23 watch cases. They stated that they threw the greater number of the cases into the river after having failed in an effort to dispose of them.

HOLSMAN & ALTER, Wholesale Jewelers, 176-178-180 East Madison Street, CHICAGO, ILL.

Denver.

Carl Heitler is to travel for the Crown Mfg. Co. after January.

H. L. Hall, with Joseph I. Schwartz, is going to Los Angeles for his health.

Louise Frumess, daughter of H. H. Frumess, died Dec. 12 of an attack of scarlet fever.

Ernst Weintraub, with the Crown Mfg. Co. left yesterday for New York and other markets in the east.

Henry Bohm, of the Bohm-Allen Jewelry Co. left last week for San Francisco, where he will remain until January.

Lombetto Francisconi, who at one time was singing in grand opera, has taken up the former trade of designer and engraver since the loss of his voice by illness.

Joseph I. Schwartz made the gold medal presented to Leoncavallo by the Italian citizens of Denver. On the reverse side were figures in relief, symbolic of music, and on the obverse the American and Italian flags mounted by the crest of Colorado.

Out-of-town jewelers in this city during the past week included: L. Legholme, Empa, Colo.; G. D. Harrington, Cortez, Colo.; A. Vehlagen, Alamosa, Colo.; C. A. Eld, H. G. Petty, Fort Collins, Colo.; T. H. Wells, Florence, Colo.; J. H. Nelson, Colorado Springs, Colo.; M. Tucker, Del Norte, Colo.; W. E. Payne, Boulder, Colo.

Roland Turner, until recently manager of J. S. Johnson Jewelry Co., and who was charged with larceny by the proprietor of the store, was found not guilty. Turner was charged with stealing a ring from a customer. The evidence showed that he had taken the ring to Cripple Creek to reset the diamond, with the knowledge of the owner. The jury was out but three minutes when it returned its verdict.

St. Louis.

Julius Hermann, of Hermann & Co., New York, and Leo Goldsmith, New York, were among the local visitors last week.

The officers and employes of the Brooks Jewelry & Optical Co. were the guests of James J. Burke last Sunday at dinner and bowling party.

William Wine, well known in the jewelry trade here, intends shortly to go into business for himself in Chicago. He is at present in this city.

The Hess & Culbertson Jewelry Co. has recently put in new show cases and other fixtures, the work of installation being done during business hours.

A. Schoenle has just returned from a successful business trip for the Maschmeyer-Edwards Silver Co., through the south, and will remain in until after the holidays.

Joseph Auer and Leo Bauman, two of the best of traveling representatives of the L. E. Egan Jewelry Co., are now in this city, where they will remain until after the first of the new year.

Fredrick W. Drost, of the F. W. Drost Jewelry Co., has been elected a member of the Board of Directors of the new Central National Bank, which is located across the street from the jewelry store.

Charles De Rousse, Prairie De Rochelle, Ill., who retired from business some time ago, has again entered the jewelry business at that place. He was in St. Louis last week

buying an entirely new stock of goods for his store.

Among other out-of-town visitors in this city last week were the following: T. E. Gonterman, Granite City, Ill.; J. W. Strain, Carrollton, Ill.; Philip Kelly, Morrisonville, Ill.; F. Kunz, Breese, Ill.; Fred Simon, Collinsville, Ill.; J. A. Allison, Rolla, Mo.; William L. Bode, Ashley, Ind.; D. Goulding, of E. H. Goulding's Sons, Alton, Ill.

Omaha.

S. W. Lindsay added new arc lights in his store during the past week.

J. R. Stewart, Mount Ayr, Ia., has sold his business to L. M. Lowenthal.

C. W. Sawyer, Silver City, Ia., and J. H. Gear, Coatsfield, Nebr., were in this city, last week, buying stock.

W. S. Dodge, representing the Johnston Optical Co., was in this city, last week, on his way home to Detroit, Mich.

The Omaha Optical Co., incorporated a few weeks ago, has rented the second floor of the new Kennard building, at 15th and Douglas Sts.

Nelson Martin, father of Mrs. W. C. Price, with the Shook Mfg. Co., died last week, aged 75 years. He was buried at Forest Lawn.

The Mawhinney & Ryan Co. has arranged a room again this year in the basement of its store, where they are serving, free of charge, dinners and suppers to all the employes during the holiday rush.

Pacific Coast Notes.

Alex. Carlson, Greenwood, Mendocino County, Cal., lost part of his stock and store by fire last week.

L. A. Schanfele, Monterey, Cal., has purchased the building in which his store is located at a cost of \$6,000.

The S. Conradi Co., 203-205 South Spring St., Los Angeles, Cal., is retiring from business, and is now holding a closing out sale which is expected to continue until about the first of the year.

During the temporary absence of the clerk in charge of the store at the noon hour a few days ago the establishment of R. C. Wetenhall, at 2307 Westlake Ave., Los Angeles, Cal., was entered and robbed of tools and jewelry. David Knowles, a negro boy, 10 years old, and another boy were seen to enter the store. Knowles is under arrest. So far he has made no admissions.

Toledo, O.

The Clinton & Close Co. has just enlarged its jewelry department, and in the future will give this feature considerable attention.

J. G. Kapp, 415 Summit St., is being spoken of for president of the Board of Education. C. F. Watts, the present president, will resign at the first meeting of the new year and Mr. Kapp will probably be selected as his successor.

The plate glass window in the front of Tetebaum's jewelry store and pawn shop at 27 Summit St., was broken Friday night and a large number of revolvers and some jewelry stolen. William Kelley and Harold Turner, both of Cleveland, have been arrested as the guilty parties.

Kansas City.**TRADE CONDITIONS.**

Factories here are all busy day and night, and the wholesale houses are working their forces long hours. Factories report that they are having a heavier business this year than for any previous year at the same time.

W. F. Smith has succeeded to the entire instalment jewelry business of Grim & Smith.

W. H. Carter and J. T. Latkey, both of Sterling, Kans., have just enrolled as pupils at the Kansas City Horological School.

C. P. Kionka, of Kionka & Kionka, is just in from a successful trip, and reports finding the retailers very busy.

The Jones Dry Goods Co., which has a large jewelry department, has just taken out a permit to construct a \$300,000 addition to its building, on the Walnut St. side.

L. Weixelbaum, who fitted up a factory last Fall and started in business for himself, has taken a position in the manufacturing department of the Jaccard Jewelry Corporation.

C. W. Owen, who took a course of engraving at the Kansas City Polytechnic Institute, has gone to St. Joseph, Mo., where he will take a position with W. F. Kirkpatrick & Co.

Paul Preston, C. O. Dietterich and J. H. Whitney, of the traveling force of the Edwards & Sloane Jewelry Co., are all in the house, and will assist in getting the goods to their customers for the balance of the rush season.

The Supreme Court of Kansas has just handed down a decision of importance to all corporations doing business there, holding that no foreign corporation can sue in the courts unless it has first been granted a license to do business in the State by the secretary of state.

Sam Bloom, traveler for the Meyer Jewelry Co., has come in off the road and is busy at a bench in the engraving department. Leslie Burklund, of the material department of the same company, has been transferred to the engraving department until after the big rush.

The Kansas City Watch Case & Jewelry Mfg. Co. has added several to its force, and is working long hours. The firm contemplates adding another room to the size of the plant right after the first of the year and putting in some new machinery.

The following out-of-town buyers were in this city during the past week: E. M. Crelin and wife, Chillicothe, Mo.; F. J. Burgy, Brunswick, Mo.; J. J. Stott, Paola, Kans.; J. H. Whiteside, Liberty, Mo.; Otto Burkland, Osawatimie, Kans.; C. B. Libby, Weir City, Kans.; W. R. Pearce, Gardner, Kans.; J. B. Hampton, Colby, Kans.; Mr. Cooper, Weston, Mo.; E. B. Dabney, La Plata, Mo.; Mrs. F. W. Bartlett, Leavenworth, Kans.; M. B. Jeter, Butler, Mo.; W. H. Meyer, Lawson, Mo.; H. W. Starcke and wife, Junction City, Kans.; F. W. Galer, Nowata, Ind. T.; T. S. Lidstone, Dearborn, Mo.; G. H. Church, Oak Grove, Mo.; C. L. Dockhorn, Oskaloosa, Kans.; A. Rosenfield, Leavenworth, Kans.; W. F. Kirkpatrick, Winchester, Kans.; M. C. Rosenfield, St. Joseph, Mo.; Mrs. C. J. Benson, Lees Summit, Mo.

News Gleanings.

B. F. Kipp, Exeter, N. Y., has discontinued business at that place.

J. R. Kevil, Princeton, Ky., has sold his business to Wylie & Johnson.

Fred. Pell & Sons have moved from Sulphur, Ind. T., to Guthrie, Okla.

J. R. Stewart has sold his store in Diagonal, Nebr., to L. M. Lowenthal.

Elthon & Gullickson, Fertile, Ia., have been succeeded by Elthon & Rholl.

Behner & Behner, Newton, Ia., have opened a branch store in Colfax, Ia.

F. B. Logan, Royalton, Minn., is about to move his stock into the Wilson building.

F. N. Hopkins has purchased the business of Ben E. Smith & Co. in Sulphur Springs, Tex.

J. F. Brinkley has been succeeded in business in Haviland, Kans., by Brinkley & Bevan.

The stock of C. M. Franke, Newton, Ill., was recently damaged by fire. The loss amounts to \$300.

The E. J. Hyde Jewelry Co., Spokane, Wash., has moved into larger quarters at 609 Sprague Ave.

Walter C. Rix has become associated with O. B. Rudd in the latter's retail jewelry business, at Ilion, N. Y.

A. R. Sweet, Sand Point, Idaho, recently purchased five acres of land in Spokane, Wash., for \$750, as an investment.

R. F. Lussier, Foley, Minn., who recently started in business there, has moved into new quarters in the State Bank building.

Charles Feasal, Henry, S. Dak., intends to take a post-graduate course in watch-making in Minneapolis after the first of the year.

Abner C. Thomas is about to retire permanently from business in Anniston, Ala. He will devote all of his time to the practice of optometry in New York.

A. Seidensticker, Hamilton, O., has completed extensive improvements in the interior and exterior of his store, including the erection of a large electric sign.

Cyrus W. Bullington died recently at his home, 337 S. Laurel St., Manchester, Va. The deceased was the father of F. S. Bullington, manager of the S. Galeski Optical Co., Richmond, Va.

Thieves recently broke into the store of Frank E. Ennis, Clare, Ia., and made off with stock valued at about \$1,000. Entrance was effected by removing a pane of glass from a window.

The store of John Weller, Reading, Pa., was broken into about a week ago by thieves, who stole a few watches, several dozen phonograph records and a small amount of cash. There is no clue.

Albert G. Page, Jr., recently began business in the handsomely furnished store in the Sagadoek Bank Block, Bath, Me. The interior of the establishment is attractively decorated and equipped with every modern store convenience.

C. M. Bowers has purchased a half interest in the jewelry business of the late F. O. Cox, who for some years past conducted the store at 144 Main St., Concord, N. H. Mr. Bowers will carry on the business as the F. O. Cox Co.

Robert Hendershot was recently indicted on three counts in Center Hall, Pa. Hen-

dershot was arrested a short time ago on a charge of robbing the store of Frank P. Blair, Bellefonte, Pa., Oct. 7, when he took stock valued at \$337. Sentence was suspended.

The retail store of David Adelson, Brockton, Mass., was entered Sunday night and a quantity of Christmas goods taken. He reports to the police the loss of \$75 worth of rings, \$80 worth of fancy pins, \$30 worth of watches, \$75 worth of charms, cuff links and scarfpins, besides razors and other toilet articles.

Cyrus Murphy, charged with breaking into the store of F. W. Hoffman, Albany, N. Y., was convicted of larceny in Albany early last week after a trial. Part of the jewelry stolen from Mr. Hoffman's store was found on the prisoner. Frank Alexander, arrested with Murphy, asked for a separate trial, and this was granted.

Charles B. Morrow, a jeweler of Stronghurst, Ill., recently met with a fatal accident at Avon in that State. While on his way to Prairie City to visit friends, Mr. Morrow was struck by a train and both his legs were cut off. He was removed to a hospital at Galesburg, where he died Dec. 4. The deceased is survived by a widow.

The James R. Armiger Co., Baltimore, Md., entered suit in the Superior Court Dec. 15 against Mrs. Helen A. W. Cowen, widow of John K. Cowen, former president of the Baltimore & Ohio Railroad, to recover \$4,353 alleged to be due for jewelry and other articles bought by Mrs. Cowen and work done for her between Jan. 23, 1904, and Dec. 1, 1905.

A fire broke out in the store of Jerome W. Schirm, 211 W. Lexington St., Baltimore, Md., last week, but was extinguished before doing any serious damage. The blaze was caused by the ignition where there was a leak of a rubber tube which connects the jet with a gas lamp. The tube had been burned in two and part of it fell upon the floor, igniting that part of the building. The loss was small.

About 2 o'clock one morning recently the plate glass window in the store of George Greyer, 929 Meridian St., Anderson, Ind., was broken by a vandal who was frightened away before securing any of the valuable stock on display, which included watches and jewelry. A belated patron of a restaurant across the street from the store saw the man kick the glass. No arrests have thus far been made.

An unknown man, who is believed to have been insane, recently kicked in the plate glass window in Goodman Bros.' store, Columbus, O. The man for no apparent reason fell down upon the sidewalk, kicked his heels in the air and broke the window, containing a number of diamonds. Nothing was stolen, and the man was locked up. The police have been unable to learn his name or anything about him.

A rather interesting point is involved in the suit brought by the firm of Wm. Burns & Son, Claysville, Pa., against L. G. Gardner, of the same place. From the complaint it appears that Wm. Burns & Son bought out the jewelry business of Gardner about two years ago, and the latter entered into a contract not to engage in the same business in Claysville while the Burns concern continued in business. It is claimed that

Gardner broke the agreement and Burns Son are now asking that the court enjoin him from continuing business.

Louis H. Borsheim has purchased the business interests of John G. Cooper, in the firm of John G. Cooper & Co., also known as Cooper & Borsheim, who conducted business as manufacturing jewelers, engravers and watchmakers at 608 Paxton block Omaha, Nebr. Mr. Borsheim will assume the financial responsibilities of the firm and will receive all debts payable to it. Mr. Cooper intends to re-enter the engraving business at 518 Paxton block.

Amos R. Little, an aged financier Philadelphia, Pa., for many years active and influential in the constructive policies which have advanced notable business enterprises of that city, died Sunday at the Aldine Hotel, where he resided. He had been ill since Summer. His death is a tribute to old age. Mr. Little was 75 years of age. He was a director of the Keystone Watch Case Co., and had an interest in the Bailey, Banks & Biddle Co. These interests in the jewelry business, acquired, however, as a capitalist, and not because of any commercial interest in the trade. He was also a director of the Pennsylvania Railroad and many financial institutions.

Ornamental Buckles of Silver and Gold Declared to be Dutiable as Jewelry.

The Board of United States General Appraisers, New York, decided last week that buckles made of silver or gold, or part of one and partly of the other metal, ornamented by carving or chasing or set with jewels, are to be classified as jewelry dutiable at 60 per cent. The decision overruled a protest of a Philadelphia firm. The opinion had not been given out at the time going to press, but it is understood that some other similar articles made of gold and silver and similarly ornamented will be affected. The decision will be regarded as important, as quite a number of other cases will doubtless be disposed of after this according to the precedent. It is not like, however, that an appeal to the courts will be made before the question is finally settled.

The Board recently handed down a decision against Hensel, Brockman & Lohbach, holding silver buckles to be dutiable as jewelry, but in the value of the importation was slight and the case practically won by default, little effort being made to sustain the protest. The Philadelphia importers on the other hand, made a vigorous contest, much evidence being taken before the Board reached a conclusion.

The contention of the importers is that the various articles should be classified as manufactures of metal dutiable at 45 per cent. The question is similar to many others which the Board has been passing, in which it is called upon to distinguish between jewelry and millinery or dress ornaments.

Tiffany & Co. have a protest pending in relation to the duty on silver buckles, belts and girdles and on cloak clasps, articles imported a number of years ago. The Philadelphia case brought in the question of articles recently imported, and made present, and so are regarded as of more consequence to the trade.

THE JEWELERS' CIRCULAR PUB. CO.,

Publishers

11 John St., cor. Broadway, New York.

If You Know the Marks

you are not confined to the limitations of your stock, but will be able to supply any goods desired. Frequently a resident of a town or city will return from a visit to a larger city, bringing back an attractive novelty or piece of jewelry that is greatly admired by her friends, who will probably want to obtain others like it. They will first call on a local jeweler and if he is not an up-to-date jeweler he will turn them away disappointed because he has not the articles in stock. If, however, he is a progressive dealer, he will examine the trade-mark on the article, identify the maker and send for a line on memorandum. He will then tell his prospective customers that he has not the goods in stock just at present, but will have them in a few days. He will make a sale, and even sale counts. But more than this, he will agree to surprise and please his patrons and will convince them that it is not necessary to go out-of-town to obtain the latest and best productions of the jeweler and silversmith.

"TRADE-MARKS OF THE JEWELRY AND KINDRED TRADES"

(Second Edition)

will enable the jeweler to identify the maker of any article embraced in the jewelry and kindred trades. It illustrates 4,000 marks and covers every branch of the trade. It also contains much interesting and valuable reading matter on the subject of trade-marks in general.

One jeweler, after having the book for a while wrote: "This book has been invaluable to me upon many occasions. Like the cowboy's pistol 'tis not required every day, but when needed it wanted quite bad."

PRICE \$3.00,

Express Prepaid.

UNITED STATES PATENTS.

ISSUE OF DEC. 11, 1906.

38,155. METHOD OF DECORATING POTTERY. JOHN W. YOUNG, Zanesville, O. Filed March 17, 1906. Serial No. 306,696. The method of decorating pottery consisting in applying the decoration to the surface of the pot-

tery while in a green state by means of a soft yielding stamp, and afterward immersing the decorated article in a glazing, and firing the same.

38,205. CIGAR-TIP CUTTER. CHARLES NOBS, JR., Newark, N. J. Filed Feb. 5, 1906. Serial No. 299,375.

In a cigar-tip cutter, the combination of two parallel blades, two handles, one connected to each of said blades on opposite sides of the device, two parallel blades pivotally connected at an angle to the first two blades, whereby when the handles are

manipulated the blades connected thereto move bodily in an arc toward or away from each other, while the other two blades each swing one end in one direction in the arc of movement of one of the handle-blades and the other end in the opposite direction in the arc of movement of the handle-blade.

38,271. ATTACHMENT TO EYEGLASSES. ALBERT A. PETIT, Chicago. Filed Sept. 1, 1906. Serial No. 333,011.

The combination with a box side and eyeglass part, of a screw with shouldered and flat-sided

ad, shouldered under a larger head, and a locking device between said larger head and eyeglass part and box side and lesser head.

38,298. CUTTER FOR CIGARS. WILLIAM C. BRIGGS, Winston-Salem, N. C. Filed Feb. 19, 1906. Serial No. 301,903.

A cigar-tip cutter provided with a thin flat hand-

cutting finger co-operating with a cutting edge on

the tip-cutting and adapted to pass between a cigar-band and a cigar

388,401. SPOON. WILLIS W. GROCOTT, St. Louis, Mo. Filed Aug. 2, 1905. Serial No. 272,434.

As a new article of manufacture, a spoon comprising a bowl and a handle, said handle being provided with an engaging head in the form of an

ornamental element fixed upon the handle at a point suitably remote from the bowl, said head being extended wholly around the handle and adapted for engagement with the rim of a vessel irrespective of the position which the spoon may occupy when placed in the latter.

388,440. MANICURING DEVICE. JACOB L. NEFF, Omaha, Nebr. Filed June 6, 1904. Renewed March 24, 1906. Serial No. 307,923.

A manicuring device comprising a disk having a central perforation, and having portions of its

peripheral edge cut away, the circular edge portions of the device being provided with V-shaped file-grooves, the remaining edges being sharp to serve as scraping edges, and projecting grooved knives formed in prolonging the grooved edge of the device.

388,496. MANUFACTURE OF GLAZED OR ENAMELED CERAMIC WARE. ALEXANDER BIGOT, Paris, France. Filed Feb. 17, 1903. Serial No. 143,858.

The improved process of making articles of pottery consisting in superposing in a mold layers of ceramic material in a slightly-damp powdered condition and of an enameling or glazing material, applying pressure to impart to the materials the shape of the mold, and then immediately firing the molded article without preliminary drying.

388,499. EMBLEM-CHARM. NATHAN D. COLE, Norwood, R. I. Filed Jan. 27, 1906. Serial No. 298,289.

In an emblem-charm, the combination of the upper and lower members, with the longitudinally-

pinned tubular joint and the abutting shoulders which serve to prevent the swinging movement of the said members.

DESIGNS.

388,343. MEDAL OR SIMILAR ARTICLE. CHARLES OSBORNE, New York, assignor by mesne assignment to Carnegie Hero Fund

Commission, Pittsburg, Pa. Filed Oct. 10,

1906. Serial No. 338,325. Term of patent 14 years.

38,345. CLOCK-FRAME. JOSEPH E. STEINMEIER, New York, assignor to the Western Clock

Mfg. Co., La Salle, Ill. Filed Nov. 5, 1906. Serial No. 342,157. Term of patent 7 years.

UNITED STATES TRADE-MARKS.

[The following trade-marks have been adjudged entitled to registration under the Act of Feb. 20, 1905, and are published in compliance with Section 6 of said act. Said section provides:

"Any person who believes he would be damaged by the registration of a mark may oppose the same by filing notice of opposition, stating the grounds therefor, in the Patent Office, within 30 days after the publication of the mark sought to be registered, which said notice of opposition shall be verified by the person filing the same before one of the officers mentioned in Section 2 of this act. If no notice of opposition is filed within said time the commissioner shall issue a certificate of registration therefore, as hereinafter provided for."

Marks which are stated to have been "Used 10 years" are registrable under the last proviso of Section 5 of said act, which is as follows:

"And provided further, that nothing herein shall prevent the registration of any mark used by the applicant or his predecessor, or by those from whom title to the mark is derived, in commerce with foreign nations or among the several States, or with Indian tribes, which was in actual and exclusive use as a trade-mark of the applicant or his predecessors from whom he derived title for 10 years next preceding the passage of this act."]

PUBLISHED DEC. 11, 1906.

BRITISH PATENTS.

(ABRIDGMENTS OF SPECIFICATIONS, 1905, FROM THE Illustrated Official Journal.)

ISSUE OF NOV. 28, 1906.

16,125. FIELD-GLASSES. J. H. BARTON, London, S. W. Aug. 8.

Relates to two-power glasses in which the racking of the tubes for focusing effects automatically the changing of the eye lenses. The eye lenses D¹, D² are mounted in a segment of a cylinder D, pivoted transversely in the tube F on a disk A. The segment D is normally held in the position shown in Fig. II. by a spring K, Fig. V. So

long therefore as the tube F is withdrawn from the intermediate tube G, the high-power lens D² is in use, but when the low-power being desired, the tube F is pushed in, a metal strip I, coming in contact with a stud J on the segment D, pushes the latter back into the position shown in Fig. V, and thus puts the lens D¹ in action. The strip I may carry a rack engaging with a quadrant on the segment D.

16,150. FOUNTAIN-PENS. W. I. FERRIS, Stamford, Conn. Aug. 8.

Relates to fountain-pens having a compressible reservoir as a means for filling the pen. The

holder 7 is, slotted at 18, so that the ink reservoir 17 can be compressed by the action of the finger

upon a metal strip 16 secured to the reservoir. The slot 18 may be covered, at will, by a revoluble sleeve 12, slotted similarly to the holder 7, and held upon the latter by the portion 11 engaging over the head 22. The usual protecting-cap 9 is provided. The invention is similarly applied to a fountain drawing-pen. The pen is filled with ink by expelling the ink from the reservoir, dipping the nip-portion beneath ink, and then allowing the reservoir to expand.

16,152. TIME-RECORDERS. J. DEY and A. DEY, Syracuse, N. Y. Aug. 8.

In an automatic device for positioning a record card in one direction, of the type described in Specification No. 15,977, A. D. 1905, the actuating-pawl is withdrawn immediately after operation, allowing its rack to drop on to a holding-pawl. The card rests in a holder on a stop 12, Fig. 1, which is connected to a rack. This rack is elevated step by step by a cam 22 on a clock-driven shaft which depresses an arm of a rocking shaft 29. The cam, shaped as shown, is pivoted to a disk, and works between two stop pins 23, 24, thereon. This enables the cam shaft to be turned backwards without affecting the rocking shaft. This shaft 29 is rocked against a spring fastened to a second arm 31, and carries the actuating-pawl 37 of the rack mounted in a yoke at one end, as shown in Fig. 2. This pawl is pressed towards the rack by a spring 39, and coacts with a similar holding-pawl 43. The actuating-pawl raises the rack slightly beyond the point at which the hold-

ing-pawl engages, and then is withdrawn at once by a trip-lever 51, thus dropping the rack on to the holding-pawl. This is to avoid a slight alteration of the position of the record before the holding-pawl engages, due to the gradual lowering of the actuating-pawl through the rotation of the cam. The trip-lever 51 engages the bent end 40 of the actuating-pawl, and is pulled into action by a link 50 connected to a spring-pulled lever 48 shown in Fig. 1, this lever being turned slightly by a pin on the cam 22 immediately after the actuating-pawl has raised the rack one step. This trip-lever is also used to restore the rack to its lowest position, a pin 55 at the bottom of the rack lifting the trip-lever so that when pulled by its link 50 it disengages both the actuating and the holding pawl. The position of the stop may be shown by an indicator drum 56 rotated as shown from the rack above mentioned, and bearing, for example, the days of the week. A grip 62 may be provided upon the connecting-sleeve for manual adjustment.

16,241. FIELD-GLASSES. J. H. BARTON, London, S. W. Aug. 9.

Relates to means for making the interiors of prismatic field-glasses more accessible for cleaning and inspection without disturbing the optical adjustments. For this purpose, double end plates, A, B, connected together by screws as shown, are provided, the inner plates A being kept at a fixed distance apart by connecting-pieces C, C'. The metal cases D, D' carrying the prisms are secured to the outer faces of the inner plates A by screws. The open parts of the frame-work are provided with metal covers, E, which may be held in place by metal pieces F, F', shaped as shown, the piece

A Holiday Gift Suggestion

The Holiday season—the period of good-will, of reciprocation of courtesies, of kindly thought and friendly feeling—brings vividly to mind the esteem that should exist between jeweler and employe. The giving of presents is the material recognition of mutual regard, but the gift ought to be suggestive of conditions and relations.

THEREFORE, A HINT

From the Jeweler to His Watchmaker

“Practical Course in Adjusting,” comprising

a review of the laws governing the motion of the balance and balance spring in watches and chronometers, and application of the principles deduced therefrom in the correction of variations of rate arising from want of isochronism, change of position and variation of temperature.

The latest and best work on the subject and calculated to develop a higher degree of efficiency and more certain results by the watchmaker.

Price, \$2.50, Postpaid. Special Reduced Price, \$1.50

From the Jeweler to His Repairer

Workshop Notes for Jewelers and Watchmakers

A collection of the latest practical receipts on the manufacture and repairing of watches and clocks, and on the various processes entering into the manufacture and repairing of jewelry, as coloring, polishing, enameling, annealing, oxydizing, etc., in short, a thorough compendium of the numerous mechanical departments of the jeweler's and watchmaker's shops.

Invaluable to every workman, and puts into his hands, available at the instant, the best aids to his work.

Price, \$2.50, Net, Postpaid

From the Jeweler to His Optician

Encyclopedia-Dictionary and Reference Handbook of the Ophthalmic Sciences

An exposition of all subjects pertaining to optics and ophthalmics; also the principles of refraction.

The only work of its kind extant, profusely illustrated, concise in statement and didactic in style. Wide-awake opticians will find it a ready-reference hand-book in which to find just what they require at the time they need it.

Essential as a standard work of reference and conducive to more intelligent results in the optical department.

Price, \$2.50, Postpaid

From Employe to the Jeweler

Trade-Marks of the Jewelry and Kindred Trades

A collection of illustrations of the marks used by manufacturers and dealers of jewelry, silverware, silver plated ware, watches, watch cases, precious and imitation stones, clocks, optical goods, fountain pens, tools, materials, pottery, porcelain, cut glass and cognate lines.

It will aid him to add to his reputation, increase his business, and help protect him from imposition. It will save him time, trouble and money.

4,000 Illustrations and Representations of Trade-Marks. **Price, \$3.00, Net.**

Pittsburg.

Joseph Bevan, a brother of Miss Hannah Bevan, bookkeeper for Heeren Bros. & Co., was killed in an accident at the works of the Jones & Laughlin Steel Co. last week.

The Merchants and Manufacturers' Association and the Pittsburg Chamber of Commerce have passed resolutions requesting that the mercantile tax, which is a burden to some merchants, be abolished.

Miss Lula P. Harn, who has conducted a jewelry store in the McCaugue building, 3d St., Beaver, for the past year has moved to the A. C. Hurst building. Miss Harn has fitted up the store with show cases and furniture of the latest styles.

Samuel Shanberger, the Butler (Pa.) jeweler, convicted of arson three months ago, and who disappeared shortly before he was to have been called for sentence, is still missing, and so far as known nothing has been heard of his whereabouts.

A large number of the local jewelry stores have decided to keep open until 9 and 10 p. m. until after Christmas. Most of the stores have hired extra help, and some of the stores have been unable to get as many persons as desired, because of a scarcity of labor.

Among the out-of-town buyers who visited Pittsburg last week were the following: J. F. Murphy, Dawson; J. R. Thorn, Toronto; William Bersford, Piedmont; George Eckert, Jeanette; Harry Bauer, Blairsville; Fred Kropff, Tarentum; G. H. Phillips, New Brighton.

The closing of the Farmers and Drovers' National Bank at Waynesburg, Pa., last week by order of the Comptroller of the Currency is said to have caught one or two local jewelers there. The bank, however, will be reopened soon, although it is reported that some arrests will be made because of the failure.

Andrew Imgrund, aged 56, died two weeks ago at the residence of his son-in-law, E. A. C. Kulmel, 433 Bluff St., Carnegie. The funeral services were held at St. Joseph's Church, the interment taking place in St. Mary's Cemetery, this city. The deceased was a well-known watchmaker, but had retired from active duties some time ago. His will was filed for probate last Saturday, leaving an estate valued at \$16,000 to his daughter, Mrs. Kuhnel, for life. He also left several small bequests to charity.

The bankrupt stock of Davis Bros., Galion, O., was purchased recently by J. R. Brown, of the Marsh, Brown, Mather Co. for \$2,975. An involuntary petition in bankruptcy was filed against the firm several weeks ago, terminating as stated, the sale having been approved by the courts. The stock had been appraised at \$4,235.56. It is thought that the firm will not pay more than 10 per cent. on the dollar. Charles Davis, the father of the members of the firm, died three years ago, and Henry Davis, his son, was made executor of the estate. The first settlement with creditors amounted to 33 1/2 per cent., and within 18 months after

the father's death letters were sent to the creditors, so it was stated here to-day, offering to settle on the basis of 60 per cent. for the remainder owed, and this was agreeable. H. S. Davis, who had been in business at Mt. Gillead, O., removed his stock to Galion, and a partnership was opened up under the name of Davis & Sons, but some time afterwards the mother withdrew, and then the business was carried on under the firm name of Davis Bros., the brothers being Henry and Harold Davis. When the final crash came in the business of the brothers, an assignment was made to J. M. Talbot, and later involuntary petitions in bankruptcy filed, resulting in the court confirming the sale of the stock to the Marsh, Brown, Mather Co., which was a creditor, but not to a very large amount.

Lancaster, Pa.

TRADE CONDITIONS.

The holiday trade, this year, among the Lancaster, Pa., jewelers is not as good as it was for the same period last year. The main reason is the trouble between the leaf tobacco growers and the packers. With a crop worth \$4,000,000 to the growers of Lancaster County, very little has been delivered.

Cyrus Novinger, Halifax, Pa., visited friends here last week.

Fred A. Patterson, Landisburg, Pa., has gone home for a few weeks.

H. W. Detterlein, representing the Non-Retailing Co., is home from a western trip.

John J. Bowman, of Ezra F. Bowman's Sons, spent several days in New York last week.

S. Kurtz Zook has installed a novelty at his store in the form of Westminster chimes. The bells are outside the store and the electrical clock inside. It attracts much attention.

President A. H. Rosenstein, of the Lancaster Silver Plate Co., is off on a trip to Philadelphia and Baltimore. Last week Mr. Rosenstein had a family reunion at home in honor of his wife's birthday.

Philip Miscally, Charleston, S. C., a student of the Ezra F. Bowman Technical School, has gone home for a vacation. Another student, Homer Harkness, watchmaker for V. H. Wertz, Lewistown, Pa., has finished a course in engraving. O. V. Tillman, Richmond, Va., has finished a course in engraving and returned to his old place.

Young men giving the names of William Butler and Frank Davidson were arrested last week by the police on suspicion of having stolen some fine jewelry they had tried to pawn. Several pieces were worth at least \$50 apiece. The prisoners told clear and plausible stories as to their possession of the goods, and as nothing could be proved against them they were discharged. They disappeared quickly.

The mistake the Lancaster jewelers have made by neglecting to organize, as repeatedly proposed, is now apparent. The merchants generally decided to keep their stores open in the evening for only one week prior to Christmas, but the jewelers protested; having no organization, their protests were unheeded, so they decided to keep open an extra week themselves. This they did last week, and hardly paid their gas bills, as nobody went out to shop with the other business places closed.

THE HOROLOGICAL REVIEW.

Complicated Clock Mechanism for Lighting and Extinguishing Lamps

Translated for THE JEWELERS' CIRCULAR-WEEKLY from the *Revue Internationale de l'Horlogerie*

THIS igniter and extinguisher is the invention of Ernest Capt, a Swiss electrical clockmaker. It is a little more complicated than those to which we have lately referred in these columns, the complication resulting from the fact that Mr. Capt sought to solve automatically, with his

FIG. 1.

method, the greatest possible number of uses which can come up. For the sake of simplicity in the description, we exclude from the illustration a part of the attachments. Our purpose is not to give a working drawing, but simply an outline sketch of the construction of the apparatus and the principle upon which it works. The plan is electrical; the circuit-breaker is composed of a lever I, turning on the axis J. It is provided with two fingers, one of which, K, plunges continually into the bowl of mercury N, connected with one of the binding-posts of the wire, while the other one, L, allows the igniting current to pass or not, according as it does or does

not plunge into the bowl M, connected with the other end.

The system controls the immersion of L at the moment when it is desired to light the lamps, and then withdraws it to extinguish them. These functions are produced automatically by two equal wheels, A and B, gearing into each other and hence turning in opposite directions with equal speed. They make one revolution a day. When they are in the position indicated by Fig. 1, the current does not pass. In order that it may pass, it is necessary that the wheel A, in its movement, by the intermediation of the cam Q, raise the arm C, of the lever CED, which, when at rest, presses against the contact stud V. The movement conveyed to the arm C operates to free the tip F of the tooth E, by which it is held. This causes the fall of the lever I, and the contact of the finger L with the mercury in the bowl M. Thus the current passing through the circuit-breaker will not be cut off until the lever G, pivoted on H, and drawn tight by the spiral spring U, has lifted up the lever I by the action of its contact stud upon the upper part of the slot in F.

The play of the lever G is limited by the stop X. The raising of the lever I is controlled by the fall of the cylinder O into the notches of a cam P, which forms a part of the wheel B and is cut out in a way to produce the extinction of the light at the desired time.

The cam Q, which controls the lighting of the lamps, is mounted loose on the shaft of the wheel A, but it is attached to a lever pivoted at *d* upon a bridge forming part of the wheel A. At each turn of the wheel A, the cam Q causes C to rise and releases F. In like manner at each revolution of the wheel B, the cam P, which forms a part of that wheel, brings about the locking in of F, as a result of the fall of the cylinder O to the bottom of the first of its notches.

The problem now is to light and extinguish the lamps automatically at hours varying according to the seasons. It will be remembered that in the systems previously described, this function was not au-

tomatic, but was done by hand, by changing the position of pegs, introduced into such or such holes punctured in the circumference of a large wheel. Mr. Capt has placed, behind each of the wheels A and B, a cam which makes a revolution in 365 days. The cam of the wheel A is shown with its eccentric groove at S in Fig. 2. The cam of the wheel B, likewise with its groove, is shown at T. The lever pivoted at *d*, which lever guides the igniting cam Q, has at *a* a small contact stud which engages in the groove of the cam S. The eccentricity of this groove is so calculated that the ignition is made later, and later as the solstice approaches, and earlier and earlier at the approach of the winter solstice, the function of the contact stud *a* being to carry the cam Q to the right or to the left, according to the season. If the cylinder O,

FIG. 2.

of the lever G, controlled the extinction at the moment of its fall into the notch *f*, this extinction would always take place at the same hour.

In order to vary this hour according to the season, Mr. Capt has devised a movable plug, which, according to the season, withdraws the edge of the notch, more or less, being guided by the eccentric groove of the cam J, a groove of the same shape as that of S, and destined to produce the same effect, but in an opposite sense.

Up to the present time, we have only taken into account a single ignition and a single extinction; that is what the igniting extinguishers, previously spoken of, give. But the system of Mr. Capt. permits, if desired, two ignitions and two extinctions; the first ignition, controlled by the cam Q, at a variable hour in the evening, the first extinction at a fixed hour (at midnight or one o'clock in the morning, for instance), by the fall of the cylinder O into the first notch of the cam P.

The second ignition is controlled by the nose R, of a lever pivoted at *e* and termin-

Wise Dealers Set Store by the ELGIN

The wide-awake dealer knows the value of a good stock of Elgin Watches. He knows that they are a good criterion by which to have the public judge his store.

He knows that Elgin customers are satisfied customers, and that satisfied customers are the very foundation of successful business. The

ELGIN WATCH

is the World's Standard Timekeeper

See Jobbers' List for prices or write the Company.

Every dealer is invited to send for the Elgin Art Booklet, "Timemakers and Timekeepers," illustrating the history and development of the watch.

ELGIN NATIONAL WATCH COMPANY,

Factories, Elgin, Ill., U. S. A.
General Offices, 131 Wabash Ave., Chicago.

New York Office, 11 John Street.
San Francisco Office, 704 Market St.

ting by a roller *b*, held against the face of the cam *S*; the second extinction is controlled at a variable hour, by the fall of the drum *O* into the second notch of the cam *P*, a notch more or less removed by changing the position of the plug of which we have spoken, but which is not represented, its motion being produced in the same way as that of the lever which regulates the cam *Q*. It will be seen in Fig. 2 that the circumference of the cam *S* has been cut in such a way that at certain times of the year, the nose *R* does not act upon the lever *L*. It will readily be understood that during the long days of summer there is no need of a special ignition in the morning.

To sum up, the igniting extinguisher of Mr. Capt solves all the questions of lighting dials and also street lamps that can come up, and that, too, in a manner absolutely automatic. Lighting in the evening, at a variable hour, extinction at a fixed hour, midnight or one o'clock in the morning, at a fixed hour; extinction at a variable hour. Or, simply lighting at a variable hour in the evening and extinction at a variable hour in the morning, the lamps remaining lighted throughout the night. Naturally, it suffices in the second case to do away with the arm which carries the nose *R*, and also the first notch *f*, of the cam *P*. When it is a question of gaslights, and not of electric lights, the circuit-breaker is placed by a cock with an arm and connected with the mercury, with a secondary cock with an arm intended to keep a watch-light burning by allowing a very small quantity of gas to escape when the principal cock is closed. Moreover, a meter can be added to Capt's apparatus, registering the number of hours during which the lamps have been burning, and permitting the regulation of the expense when the lighting is to be paid for by the hour. It is an interesting invention and one which seems likely to render good service in doing away completely with hand labor for lighting.

A resident of Birmingham, Eng., has just made the novel suggestion that all the clocks should be synchronized, and that all public clocks should be controlled direct from Big Ben, the well-known timepiece of London. It will doubtless be interesting to Americans to learn that in the British House of Commons there is a department—the Office of Works whose particular business it is to look after the supply of clocks to the Government offices, and here we frequently to be seen some fine examples of clocks by famous old British manufacturers—as, for instance, Valliamy, Dutton, and that world famous horologist, Simpson. Just lately a very fine grandfather's clock by Gregg has been placed in the Prime Minister's official residence. At present the only other grandfather's clock to be seen in the members' cloak room. This is one of the few articles saved from the fire which razed the Houses of Parliament to the ground. Writing of clocks, we might mention that the clock in the tower of St. Cross Hospital Church, which was made by one William Skelthorp in 1577, recently struck 117 right off. It is long to be taken down now.

The Action of Magnetism on Pocket Chronometers.

By L. GUILLET, Director of Industrial Physics at the University of Besançon.

THE magnetization of steel parts, so long known, gave rise to no inconvenience from the point of view of chronometry so long as precision had not its present importance. The need which we feel of having, within a limited volume, a mechanism which gives us the time with sufficient exactness every minute during the day, renders the scientific and practical task of the watchmaker more and more difficult.

In clocks of great accuracy, for instance,

FIG. 1.

the driving weight is generally considerably heavier than it need be to keep up the movement of the pendulum, and if retardative causes intervene the energy of the weight is sufficient to keep up a movement which is not perceptibly varied, provided the length of the pendulum remain unchanged. But in a marine, or in a pocket chronometer, the case is different. The motion is kept up not by the fall of a weight, but by the employment of the principle of a coiled spring, and this force is

FIG. 2.

greater just in proportion as the coiled mass is greater. This is a fact of daily experience and so well known that it would be unnecessary to mention it, were it not that theoretical and practical mechanics tend to greater precision, and particularly to the best possible utilization of the forces at our command.

In the chronometers of to-day, which are relative to clocks, so small and made of so many parts, the driving force stored up in the spring is something in excess of what is needed to set the parts in motion. But in order that a mechanism may work in what we call a regular way, the motive

power must remain practically constant, or at least the variations must not fall within a limit at which the regularity would be impaired.

The object of this article is to put before the reader the result of experiments easy to reproduce, and which show that among the causes of variation in the running and rate of a chronometer the magnetization of the steel parts is a disturbing factor which must not be neglected. The parts which may become magnets are the pivots, springs, lever, the balance spring and the balance

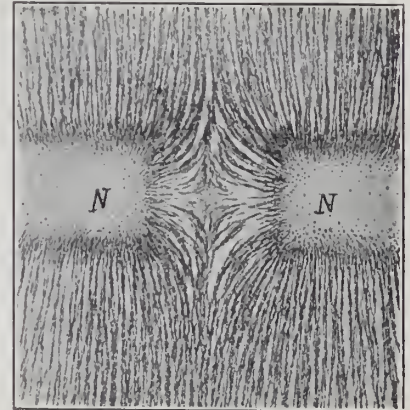

FIG. 3.

and parts of the escapement. The action of these different parts, looked at solely from the point of view of magnetization, is at intervals and of two sorts—the first permanent, tending to increase the friction of the pivots on the jewels; the others periodical, sometimes accelerative, sometimes retardative, tending to change the period of the swing (oscillation) of the balance and its range (amplitude) to the point of stopping the chronometer.

To illustrate this action at intervals let

FIG. 4.

us recall some elementary experiments in magnetism.

Take a magnetized iron bar and lay on it a sheet of cardboard. Sprinkle some iron filings thereon; now, if we shake the cardboard slightly to help the distribution of the filings, we observe a certain arrangement of the particles along well-marked lines, which we will call, according to the custom, lines of force. The magnetic field will be the space subjected to magnetic action.

This is shown in Fig. 1. The lines of force seem to go from one end to the other. It is a magnetic curve.

POLES OF A MAGNET.—Let a magnetized needle be movable on a vertical axis, the needle remaining horizontal; we observe

Some Case Pointers!

There's just as much difference in watch cases as in the people that carry them. Some are good and up-to-date—a large number are questionable.

If you want the snappiest designs and choicest case ornamentation, you need

JAS. BOSS CASES

They not only sell themselves through their superior patterns, but the satisfaction they have given for time indefinite, proves their quality. (Made since 1853).

Cincinnati
San Francisco

that it points uniformly in a particular direction, and that the same end always turns toward the north. We will indicate the north pole by N, and the end which turns toward the south pole by S.

MUTUAL ACTION OF TWO POLES.—Having marked the poles of two magnetized needles, if we put together two poles of opposite name they will be attracted together; if of the same name, they will repel each other.

Instead of taking two magnetized needles

FIG. 5.

we have taken two magnetized bars, and putting two poles of different names opposite each other we obtain a magnetic curve represented by Fig. 2. The lines of force which start from the pole N go out to meet those starting from the pole S and bend together when they meet.

If we put two poles of the same name opposite each other the magnetic curve resulting is shown in Fig. 3. The lines of

FIG. 6.

force emanating from the two similar poles seem to repel each other.

Let us now take four magnets arranged as shown in Fig. 4. The magnetic curve assumes a new form.

If we put in juxtaposition several magnets, no matter how arranged, we shall have a figure easy to imagine, and we have made the experiment by taking eight small magnets whose magnetic curve is represented by Fig. 5.

Returning to chronometers, let us consider a mainspring confined in its barrel; after having magnetized it we make its

magnetic curve as it is represented by Fig. 6. We perceive, when the coils are placed near each other, that the whole very much resembles Fig. 1 from the point of view of the arrangement of the lines of force. We have practically an iron bar which has been hollowed out in the middle, and which has two distinct poles. Let us take the spring out of the barrel and allow it to uncoil to form the magnetic curve which is represented in Fig. 7. Here we no longer have two poles, but a series of north and south poles arranged in alternation around the coils of the spring, such as we saw in studying the arrangement of the iron filings in Fig. 2.

Hence we can infer, from an examination of Fig. 7, that the separate coils of a magnetized spring, which is uncoiling itself and thereby furnishing energy to turn wheels, are subject to influences which modify to a certain degree the uncoiling of the spring. These influences may be accelerative if between two adjacent coils the lines of force repel each other; or retardative if the lines of force attract each other; that is to say, two adjacent coils tend to cling to each other. In any case the uncoiling of the

FIG. 7.

spring is not accomplished in a constant and regularly decreasing manner.

There would be a sort of alternation in this uncoiling, and the cause of the movement being essentially variable, the resulting movement might be so likewise.

In fact, it would be difficult to estimate the disturbance introduced into the uncoiling of a spring, and it is perhaps not so much in this variation of uncoiling that we ought to look for the variations in rate of a chronometer, as soon as it becomes magnetized, as in the same variation in the amplitude of the balance, which is driven by the balance spring. A balance spring takes a form analogous to that of a spring which is uncoiling, and if it be of steel and magnetized, its magnetic curve would have the same appearance as that of a mainspring, and it is conceivable that its magnetization works the same change in amplitude of the period of oscillation. It is at this point proper to recall what we said at the opening of this article, to wit: that the energy of the balance spring is little more than is necessary to keep up the full oscillation of the balance, and the disturbing action due to magnetization will make itself most felt upon the balance spring.

(To be continued.)

The Centenary of Berthoud.

A FRANCO-SWISS Committee under the patronage of distinguished French and Swiss watchmakers and scientists has been formed in Paris with the object of presenting to the Swiss Government and the Paris Observatory a bust of Ferdinand Berthoud, who was born in Switzerland in March, 1727, removed to Paris at the age of 19, and made France his home, dying there in 1807.

A warm appeal is made to horologers of all nations in order that the centenary may be suitably and permanently recorded by all engaged in the practice and science of horology. Donations toward the fund may be sent to M. Turret, 30 Rue Manin, Paris, or to W. Augustus Steward, editor of the *Watchmaker*, 150 Holborn, London, E. C.

In connection with the centenary and the high estimates which have been placed upon Berthoud's position as an horologer we would refer our readers to page 782 of Claudius Saunier's monumental work "Modern Horology," which was so brilliantly translated into English by Mr. Julien Trippin. In this M. Saunier states that "So far from having invented chronometers, as several of his biographers have asserted, he had no success whatever in the art of the chronometer maker until he adopted the recommendations of P. Le Roy."

Other criticisms are also made by Saunier, who concludes, however, by saying: "Although these criticisms are abundantly justified, Berthoud did much valuable work, and his name will, therefore, long remain one of the glories of the horological art."

The Vernier and Its Uses.

CHICAGO, Dec. 12, 1906.

Editor THE JEWELERS' CIRCULAR-WEEKLY:

Will you please give me some information regarding the vernier? A. R.

ANSWER:—A vernier is a secondary scale for obtaining very exact measurements. It was invented by one Pierre Vernier, a Frenchman. If a scale already exists in which inches or any other unit is divided into 100 equal parts, and another scale having 99/100 of an inch, divided into 100 equal parts, is applied to it, so that the two scales coincide at zero, they will also coincide at 99/100 of an inch, but nowhere else. Starting from zero, the difference between each of the first divisions would be 1/1000 of an inch. The second division of the secondary scale would be 2/1000 of an inch short of the second division on the primary scale, and so on. In use, when the zero points do not coincide, as many 1/1000 of an inch would be added to the register of the primary scale as divisions of the secondary scale were passed before one coincided with a division of the primary scale. In horology vernier gauges are used with sliding gauges. In astronomy and navigation verniers are used for measuring angles with the greatest accuracy, in degrees, minutes and seconds; and even decimals of the latter.

A show case containing optical goods, erected in front of the store of Walter A. Boas, Reading, Pa., was broken, a short time ago, by thieves who stole about \$50 worth of stock.

A Good Test of Watch Service

THE HOLIDAY SEASON witnesses increased activity in the watch trade as in other departments of commerce. Orders at this time are all apt to be marked "rush"; and work enough for several months often has to be crowded into one. Where time is limited, it is difficult to correct mistakes should such be made. It is at periods of this character that the perfection and efficiency of the service rendered by any organization are put to the severest test. These Offices are able to cope with Holiday conditions, without the slightest disorder or delay.

OF IRRESISTIBLE

New England

ADVERTISING

During the last six months of 1906 more than 26,000,000 people read the clever advertising of New England watches every month. Thousands of these people of the United States were attracted to those jewelers selling New Englands, or wrote us to find out where they could get them.

We have educated the great American people to use "the watch made expressly for them," and they are buying New Englands so fast that our factory can scarcely keep up with the orders.

Were you one of the lucky jewelers who sold out your stock of New England watches before Thanksgiving—and had to re-order for the Christmas trade? There were hundreds like that.

1907 Will Be Even a Bigger New England Year

We are now arranging to advertise even more extensively to American watch buyers during 1907. And, what is better still, we have recently made improvements in manufacture which make New Englands far and away the highest grade watches ever sold at a medium price.

Our policy during 1907 will be the same as in the past: not to stock you up with New Englands, but to *sell* New Englands for you and *through* you—to co-operate with you in every practical way. That's the object of our Retailers' Aid Department.

If you are not handling New England watches, you are doing your business and yourself an injustice. Somebody in your town is reaping or going to reap the benefit of New England advertising—why not you?

Hockford Watches Speak for Themselves.

High Hypermetropia.*

(By THEODORE B. SCHNEIDEMAN, A.D., M.D., Professor of Diseases of the Eye, Philadelphia Polyclinic, Philadelphia Pa., in the *Ophthalmic Record*.)

HIGH hypermetropia possesses, in addition to certain features common to hypermetropia in general, certain phenomena which are peculiar to itself. The diminution in the diameters giving rise to the small eyeball is an exaggeration of what is characteristic of ordinary hypermetropia. This diminution is ascribed to lack of development. But the special conditions or occasions responsible for such failure to develop normally have not been discovered, lying as yet hidden in the obscurity which prevails in the domain of heredity and development in general.

The diminished radius of curvature of the cornea which has frequently been observed in cases of high hypermetropia and which would tend to increase the refraction seems to be a part of the diminution suffered by all of the ocular structures. The smallness of the globe would seem to favor more extended excursions, but this has not been found to be the case; the field of fixation of hypermetropes of this class has been found to be restricted; their mobility is inferior to the normal.

The cause of this appears to be a weakness of the extrinsic muscles which have suffered from the same dystrophy as the other ocular structures. Even the ciliary muscle, contrary to what might be expected, has suffered similarly. The range of accommodation has generally been found to be less than in normal eyes or than those affected with moderate error. The nervous mechanism of such eyes shares in the general inferiority. The ophthalmoscope furnishes positive proof of this as regards the optic nerve. The papilla not only seems smaller, but calculation shows that it actually is so; moreover, it very generally presents an abnormality as to color, being at times paler than normal and in other cases of a deeper hue, so as to be scarcely distinguishable from the surrounding fundus; its outlines are often indistinct and irregular.

The retinal vessels present a peculiar disposition; they are tortuous and suggest in many cases the appearance of optic neuritis. Horner's hypothesis of this peculiarity that the retinal vessels make their way, so to speak, into a closed cavity already formed serves to explain these appearances.

A matter of capital importance in many

of these cases is the defective vision which is frequently so marked a phenomenon in high hypermetropia. The diminished visual acuity has been ascribed among others by Donders to the fact that "a smaller number of percipient elements of the retina are affected than in emmetropia by reason of the diminished retinal images and that this discrepancy could only be compensated if a given smaller surface of the retina possessed the same number of percipient elements as the larger surface of emmetropic eyes."

But Mauthner has shown that this can not be the cause, for axial hypermetropia as high as 12 D. could only in this way reduce the acuity from 20/20 to 17/20 when corrected by the accommodation. Moreover, the retinal images can be enlarged to be equal to or greater than in emmetropia by means of correcting glasses. Possibly the explanation is to be found in a disturbance of the development of the percipient apparatus, but anatomical proof of this has not been brought forward.

Every degree of amblyopia is encountered. Why should two individuals affected with the same amount of error possess such different visual acuities? It has seemed to the writer from his cases that the amblyopia is the more pronounced the older the subjects when they first began to wear glasses, as if the badly formed images of the uncorrected eye had failed to awaken the proper function of visual perception.

Very high hypermetropes requiring for their correction an excessive amount of accommodation hold near objects very close to the eyes, simulating myopia. In this way they see better, thanks to the increase in size of the retinal image; the objects, letters, etc., are indistinct, but in bringing these close to the eyes, the circles of diffusion increase less rapidly than the images and the subjects have learned besides to further cut off such circles by nipping their lids.

It is frequently stated that such eyes are especially affected with astigmatism, but this has not been my experience. The records of my cases show that astigmatism is, to say the least, no more frequent in high hypermetropia than in other states of the refraction; in fact, rather less. Nor is the astigmatism present apt to be particularly high. There are, of course, many cases of high hypermetropic astigmatism, but the cases I am considering are of much more numerous ones, where the axial defect predominates. It may be added that when a high degree of amblyopia is present low or even moderate astigmatism can only be recognized with certainty by objective methods, of which the shadow test is the best; the cylinder in these cases adds too little to the visual

acuity to be certainly recognized by a subjective method.

As the eye is not a single point, but anteroposterior axis nearly an inch in length, the question from what point of ametropia should be counted has been frequently discussed and is not settled yet. In the lower degrees it is a matter of indifference, but in the higher correct ideas as to the optical constants of such eyes are comparisons between different cases can only be made with exactness when the same reference point is chosen in each. Some writers think it most simple to choose the summit of the cornea as the point from which to measure the punctum remotum. They object to any of the cardinal points of the optical system, because these points do not occupy the same position in all eyes nor in all meridians of the same eye even for all parts of the same meridian.

From what point shall the punctum remotum be computed? The inverse of the distance is the measure of the ametropia. As it is a question of mathematics, it is preferable to select one of the cardinal points and not an anatomical point; for the cardinal points enter into the calculations concerning the dioptric apparatus, but the anatomical points do not.

Donders chose to measure the degree of ametropia from the anterior nodal point obviously because the images being reckoned from the second nodal point the conjugate of the first, their size was readily obtained. The objection to the nodal points are that these are not constant, but change their position during accommodation and in different stages of the refraction. He himself abandoned this point in aphakia. The principal point is now generally chosen as the point from which to measure the punctum remotum; as a matter of fact, in practice we may use this interchangeably with the anterior surface of the cornea with serious error, for the two are separated only 1.75 mm.

Convergent strabismus is exceptional in high hypermetropia. This has given rise to some surprise on the part of writers who has been regarded as in contradiction with Donders' theory of the connection between hypermetropia and convergent strabismus. Donders has himself answered this objection by urging that the hyperope, whose error is very considerable, does not even attempt correction by excessive convergence; besides to correct a hypermetropia of high degree would require such an excessive amount of convergence as can not be obtained even if the accommodation is sufficient to correct the error. The defect lies in the power of convergence and

*Read before the American Academy of Ophthalmology and Oto-Laryngology, September, 1906.

Optical Department.

that of accommodation. On the other hand, divergent strabismus is not unfrequently met with. This is probably due to the imperfect development of the extrinsic muscles which share in the general dystrophy. Moreover, amblyopic eyes frequently lapse into divergence.

From recent extensive statistics by Tscherning as to the incidence of refractive anomalies among young persons in Copenhagen, practically no difference existed as regards the higher degree of hypermetropia among the educated and illiterate. What difference there was showed a slightly greater proportion among the illiterate. The same statistics, as usual, showed an enormous preponderance of low and moderate myopia among the educated classes, while the highest degrees of the latter were again equally divided among both.

Analysis of 6,000 individuals refracted by myself, with, of course, almost twice the number of eyes, excluding those that had lost one eye, showed, of these 12,000, 222 having more than 4 D. of H. Of these, 16 had 7 D., five 8 D. and one 9 D., four 11 D. and one to be described more fully presently had 16 D. in one eye and 17 D. in the other. As compared with the incidence of high myopia, the same material showed 304 eyes affected with myopia above 10 D.: these included cases from 10 D. to one of 29 D. The majority, of course, belonged to the inferior limit. Thus the number of cases in this group of 6,000 individuals were not very unequal, 304 of myopia to 222 of hypermetropia.

Hypermetropia of 14, 20 and 24 D. have been reported uncomplicated by serious disturbances of development. Perhaps the case

of the highest degree ever recorded was one communicated to Donders by Bowman, which required a convex lens of 1 $\frac{1}{2}$ inches or its correction. Calculation gives the anteroposterior axis and the sizes of the images in the uncorrected and corrected eye as follows: anteroposterior axis, 16.908 mm.; size of image linear (10 being normal), 9.587 in the uncorrected eye and 4.499 in the corrected eye.

The correcting lens being placed 12 mm. from the anterior principal point, or 10 $\frac{1}{4}$ mm. from the summit of the cornea, so that the enlargement of the image produced by the glass, obtained by dividing the size of the image in the corrected eye by that of the uncorrected eye 1.514.

Following is a record of the case of high myopia above referred to:

J. J. F., real estate agent, aged 28, born in Ireland. Father's sight poor; is unable to give further particulars. The sight of his sister is like his own. Up to the age of 12 he held near objects very close to the eyes so that he was thought to be nearsighted. At that age he was given glasses which were of some assistance. He was advised then by his oculist that his eyes had stopped developing before they had been fully formed."

The external appearance of the eyes is highly suggestive. They are small, deep set and seem more mobile than normal. The pupils are equal and react to light and convergence. The visual acuity without

glasses is ability to see large objects. Measurements of the cornea with the ophthalmometer gave the small radius of 7.1 right and left, corresponding to 49 D. without any astigmatism. The accommodation is 7 D. right and left. The ophthalmoscope showed that the media were clear. The details of the fundus came out clearly with very high convex lenses. The nerve appeared very small, slightly paler than normal, but not enough to warrant the opinion of atrophy, nor was there any other special fundus lesion.

The shadow test showed the presence of 16 D. of hypermetropia in the right and 17 D. in the left eye in the visual zone, with moderate positive meridional astigmatism. There was a trace of astigmatism with the rule, but this did not measure as much as 0.50 D. The visual acuity was extremely poor, right and left 5/60, with the correcting glasses +16 and +17 D., respectively.

He was given this correction to wear steadily and reported from time to time that, while the vision was imperfect, the glasses were giving him greater satisfaction than he had heretofore had.

This is the highest degree of hypermetropia the writer has ever seen.

The Treatment of Myopia.

AT the International Medical Congress, held in April, 1906, at Lisbon, H. Sattler (*Klin. Mon. fuer Aug.*, xlv., 1, p. 465) drew the following conclusions from his clinical experience, says the *Medical Review of Reviews*.

(1) Full correction may check the progression of myopia if a sufficient distance for near work is maintained and a too great inclination of the plane of fixation is avoided.

(2) In young persons full correction is tolerated in myopia of 10 diopters or more.

(3) If a progression should take place even then, it would generally be slight.

(4) Also in high degrees of myopia a reading distance of at least 20 to 25 cm. must be secured by corresponding correction.

(5) A timely proper correction seems to be a protective against the dangers by which a myopic eye is threatened.

(6) Insufficiency of convergence is generally averted by full correction.

(7) Muscular asthenopic troubles require tenotomy of the external recti in exophoria of any amount or prisms besides full correction.

(8) In very high myopia (18 diopters or more) up to the end of the third decade of life the extraction of the transparent lens with the concave, lance-shaped knife is to be recommended.

(9) Primary extraction surpasses primary discission by a small number of interferences, more speedy restoration of good vision, greater safety as to loss of vitreous, avoidance of increased intraocular pressure, and apparently less danger of post-operative detachment of the retina.

Van Patton Bros., 281 Chestnut St., Meadville, Pa., have just completed extensive improvements in the interior of their store, which has been entirely renovated and equipped with up-to-date fixtures.

The Minimum Price List.

NUMEROUS attempts have been made to establish minimum price lists in various sections of the country, and results are as varied as the localities. Rochester shows perhaps the most striking example of its successful operation, while New York City can show nothing but a continuous series of failures. Now, failure alone need not necessarily be a discouraging sign, especially if the same spirit is maintained with which to renew the fight, but in New York City the spirit, which never was markedly arduous, is now completely lacking, and one naturally seeks a cause for this apparent apathy.

The root of the matter may be arrived at by settling whether or not the adoption of the proposed minimum price list would really be a benefit to those engaged in the optical business.

On its face it has many promising features, but it must be a well-known fact that competition is, in truth, the life of trade, and as the minimum price list plan tends, no matter how indirectly, to limit competition, it is striking at one of the fundamental principles of trade, and the failure of the plan here speaks well, it seems, for the broad business sense of New York City's opticians.

The better class of men engaged in this or any line of business has respect for public opinion, and, to the most casual observer, it must be evident that public opinion will not, at the present time, harbor anything that savors, in the least, of monopoly or "fixed" rates, and when a number of men combine and agree to make the public pay "their" price for an article, they are treading upon rather dangerous ground; and this is really what the minimum price list amounts to. Though small in the face of railroad combines, it is none the less a "combination," and, on the whole, is best left untouched.

The claim set forth by its adherents is that it will bring the little man, the cut-rate man, into line. Vain hope! All would sign, a few honest ones would hold to their promises, and the rest would laugh at those, say they were rid of that many competitors, and go on cutting prices as usual.

An honest man will get a fair price for his goods and services; if another cuts that price he either gives poorer goods and services, or loses money, or proves that the first man received too much; so is it not evident that among high-class, scrupulous optometrists the price of goods will adjust itself, unaided? The other class is not worth worrying about. Wherein, then, is the necessity for the general adoption of a minimum price list? "SQUARE DEAL."

Harry Janowitz has resumed business at 219 Franklin St., Johnstown, Pa. Mr. Janowitz was formerly engaged for several years in the jewelry business on Main St., in the same place. He sold out and moved to another territory on account of ill health.

J. R. Nelson, a retail jeweler of Urbana, Ill., recently identified as an article sold by him to Frank Wells, of the same place, a watch that was found by Charles Creek on a picket fence, where it is believed to have been dropped by a thief who stole it from Mr. Wells.

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan which they are utilizing in connection with their business.

The Salesman's Helper.

WE Americans, fortunately, have been blessed with inventive geniuses who devoted their lives to making the work of others a little pleasanter and easier. Such men as Morse, Bell and Edison contributed wonders through their inventions to the progress of commercial life, and they eliminated much drudgery and unprofitable effort connected therewith.

Perhaps the greatest gift to the commercial salesman was the telephone. As an order getter, time saver and space eliminator, the telephone is unsurpassed. It has doubled the salary of many salesmen, because it enabled them to cover more territory, and thus enlarge their scope of operations.

Before the introduction of the telephone, when railroads were few and far between, commercial salesmen were often three days or even a week in calling on a single rural merchant. Long distances, bad roads, and fatigue of traveling, prevented fast time with horse and buggy. Not always when the salesman reached his destination did he get the desired order. The merchant when writing the house was doubtless acting in good faith, but the time intervening between his inquiry and the arrival of the salesman gave the merchant an opportunity to change his plans or allow for unforeseen events to interfere. Such disappointments, after long and strenuous exertion, made the life of the old-time salesman rather unpleasant.

Many of these vexatious delays, waste of time and money, disappeared with the introduction of the telephone. It made possible the calling up of the rural buyer, and first ascertaining if he was at home, and if he was likely to buy. In fact, the telephone revolutionized the salesman's methods.

There is a right and a wrong way to use every labor-saving device, and it is very likely that many salesmen are not getting as much benefit from the telephone as they might. One large Chicago house devotes considerable time instructing the salesmen how they can best, quickest and economically cover their field, and the telephone plays a very important part in the instruction. This house tells its salesmen to first select a large centrally located city with extensive country districts tributary, as the base of their operations for a week or more. On arriving at the hotel the salesman engages the use of a private telephone, and with his list of active or live prospects at hand he

telephones each person on his list.

The city prospects, especially if they are rated well, are handled differently from the rural customers. The salesman calls up the city proprietor or buyer and advises him that he is in town, and endeavors to make an appointment with him at an hour when he can give the subject for discussion the attention it deserves. After the salesman calls on the most pressing prospects he stops at each of his other city customers long enough to offer assistance, and for a short friendly talk.

It is out in the surrounding country, however, where the telephone saves the salesman's time. He calls up all his rural prospects, has a pleasant chat with them, and inquires if he can be of assistance to them. If done rightly, the salesman will adroitly draw out his customer, and determine whether or not the chances of selling him are good, and plan his call accordingly.

One reason why many houses expect their salesmen to ascertain whether an inquiry is genuine or not, is because when attempting to decide at long range they have judged wrongly too many times. Every large house receives daily inquiries from curiosity seekers and from practical jokers, yet it is difficult to judge of the intentions of a writer by his letter. A Chicago house once received an inquiry for a catalogue, which was written in a scrawly hand and on the poorest grade of wrapping paper imaginable. The correspondent handling the inquiry wrote the customary letter seeking evidence that the party asking the catalogue was acting in good faith. The reply read: "Never mind, I have bought a \$3,000 outfit from your competitor." And he had; and on further investigation it was found that at different times the man had bought \$5,000 worth of goods from the firm. Had the letter first reached the credit department the customer would have been recognized.

After that incident, it was the rule of the house to send catalogues to all inquiries, and to instruct the salesman in the territory to follow up the inquiry, and in case the recipient was not entitled to the catalogue to take it away from him. The catalogue was an expensive one, valued at \$2, but in no case was the salesman to expend more than this amount in time or money in getting the catalogue back. So the salesmen handle these doubtful inquiries by the telephone, and thus winnow the chaff from the wheat. Many hours, many tedious rides

and disappointments were thus saved.

As a general thing, the operator of a country telephone exchange will be very accommodating, and will send a messenger out for the person wanted, and will call the salesman when he arrives. Tact is an essential quality in telephoning as in other affairs. Lack of it recently placed a salesman for a printers' supply house in a bad predicament. He called up the telephone operator in a small town, and inquired for Mr. A who, it seems, was a printer employed in the only newspaper office in the town, and who contemplated starting in business for himself. The telephone operator was niece of the established newspaper proprietor, and it was needless to say that she apprised her uncle at once of the possibility of competition. The ambitious employe was "fired without notice," the house lost the sale of an outfit, lost the good-will of an old customer for encouraging competition, and the salesman was out a big commission and received a just rebuke from the same manager—all because he was not tactful.

As fast as the salesman receives telephone replies, indicating that the prospects are ready to talk business, he makes up his route, grouping prospects so that they can be advantageously visited. He then telephones each the hour at which he will call.

It is essential for a salesman to know the characteristics of each customer he telephones, so that he can converse with him to the best advantage. Although not possible to remember the "hobbies," the likes and dislikes of a hundred or more customers, they can be recorded on card indexes fitted in a frame ready to attach to the telephone. No set rules for telephone conversation are applicable for all, yet it is well at the start to talk on subjects outside of business, and gradually lead up to the point of asking for the order. Nine men out of 10 resent being asked abruptly to part with their money.

Above all, the acquirement of a pleasant and courteous telephone manner is valuable. In these days of rush, a slang telephone vocabulary has been coined, which is every sense rather harsh and disagreeable to sensitive ears. Some day jot down a few words of the average telephone conversation, and see how they look in written form. I wager you will immediately tone up your own telephone conversation.

Use the telephone when it will save you time, for time is money; and the often you use it the better you will know the value of time.—*My Business Friend.*

Storekeeping Department.

How the Jeweler Can Meet the Competition of the Mail-Order House.

(Continued from issue of Dec. 12.)

SOME retailers have become so angry because the mail-order houses have cut in on their trade that they have lost their good judgment and tell their customers that all goods sold by catalogue houses have something wrong with them. That is no method with which to fight competition. It is not the truth, and the first time your neighbor sends in an order to some mail-order house he will find it out, if he does not already know, and then he will have a great deal less confidence in you than he had before.

If you are not able to be truthful in your fight for business, you are not well enough acquainted with your business. If you know your business thoroughly you can find hundreds of good reasons why your neighbors should trade with you, and every one of them will be true. Mail order houses handle many different lines of goods, some good, some bad and some medium. Your right move is to become so well acquainted with the stock that you can tell the exact difference in the quality, and you can explain the difference in cost. On good quality goods you will generally find that your price is about the same as theirs, freight considered, and if you know the quality of their cheap offerings it will not take long to convince the buyer that the best is the cheapest in the end, and at the same price you are almost sure to get the preference.

You will find that it never pays to run down a competitor, or the stock which he handles. The only way you can make an impression on your trade by calling attention to the bad quality of goods handled by a competitor is to be so well acquainted with them that you can convince those to whom you are talking that you are right. The bare statement that the goods of a competitor are not of as good quality as those you sell will not suffice. You will find that you must go into details at once, so those you are talking to will have a chance to use their own judgment. Lost Americans are rather proud of their ability to reason out things for themselves. It is up to you to make your arguments and descriptions so plain that any one can take them up where you leave off and feel like deciding in your favor.

You must learn to do this in your advertisements, as well as in your conversation. Your advertisement should just be your side of a well worded conversation, and that conversation should always be about your own goods. The man to whom you are talking in an advertisement does not get a chance to ask questions he will want to ask, and answer them right there. If they are all answered right the advertisement will put him in the mood to buy.

Remember this advice. Never make remarks about the quality of a competitor's stock unless you know exactly what you are talking about, and then go right into details, and show by your description of the goods, the methods of manufacture, etc., that you are thoroughly familiar with your subject,

and you will then be able to convince your hearers. This is very dangerous ground, and too many retailers are inclined to step in without the facts to back them, and thus injure themselves more than those whom they talk against.

F. A. P.

What Some Jewelers Say.

THE price you pay for diamonds does not represent the actual value of your purchase. The profit of the dealer is added in proportion to the expense of maintaining his establishment. Our expenses are comparatively small, our diamonds as pure and perfect as any in the city, our prices much below those asked by other dealers. If you

One of the Representative Retail Jewelry Stores of Denver, Col.

THE accompanying illustration shows one of the up-to-date retail jewelry stores of Denver, Colo. This store has just been fitted out by Syman Bros., at 828 16th St. It is in the Symes building, a fireproof modern office building recently finished.

The store is 100 feet in depth. The fixtures are of mahogany, with hammered brass supports. These, in connection with the brass light fixtures and the wall decorations in blue and white, create a rich and pleasing effect.

In the rear is the art room, enclosed in

INTERIOR VIEW OF THE STORE OF SYMAN BROS., DENVER, COLO.

are thinking of diamonds, by all means come to us. Hugh Connolly, Detroit, Mich.

Lapel button for "Eagles," just gotten out by us in three sizes, is: (1) Symbolistic, (2) unique, (3) catchy, (4) tasteful, (5) superior. Bound to be as universally worn by the F. O. E. as the famous elk head insignia is by the B. P. O. E. Made in solid gold and gold filled, with or without initials. Ruby jewel eyes. Gold filled, 75c. to \$1.50; solid gold, \$1.50 to \$3.50; with diamonds, \$6.50 to \$8.50. Spott & Jefferson, Little Rock, Ark.

Our Introductory Christmas Sale.—Today we fire the inaugural gun of our Christmas campaign. Everything in complete readiness for gift seekers. Special price concessions as advertised in Sunday's *Gazette* will prevail all week. Visit our store and view the magnificent preparations we have made. Select your gift articles now and have them laid aside. Albert Pfeifer & Bro., Little Rock, Ark.

A Quality Store.—It is true that the quality mark is on everything we sell. Our store is unique in this, that everything we sell, even the lowest priced trifle, must be the best of its kind or we won't sell it. Look over our silver and you'll see how the application of this rule results. Louis Esser Co., Milwaukee, Wis.

glass. This room is lined with mirrors. Being brilliantly lighted, the cut glass is shown to advantage on the plate glass shelves. Over the art room is the office.

At the rear of the art room is the workshop, fitted up with all the latest machinery. At the front of the store (not seen in the photograph), on one side, is the watchmaker's room, on the other a private diamond room.

The Way of the Enterprising.

A DISPLAY consisting of watches exclusively, and including over 500 timepieces, was made a short time ago by Challooner & Mitchell, Victoria, B. C., with excellent results, the idea being to emphasize the extensiveness of the concern's watch department. Almost every kind and every size of watch, from the modest \$1 variety up to the accurate \$300 machine was exhibited.

A word-building contest is being conducted by F. C. Hyde & Co., Appleton, Wis. A gold watch will be given to the person forming the greatest number of words from the letters contained in the name "Hyde & Co., jewelers."

A diamond, said to weigh 12½ carats, and at one time owned by Barney Barnato, was recently displayed in the show window of M. L. Cohen's store, Minneapolis, Minn.

[Answers are also solicited from our readers to the questions published on this page.]

QUESTION No. 1728.—To Fit French lever Escapement.—I have a clock to which I want to fit a lever escapement, of those used in French traveling clocks. As I have to modify some gears, I am undecided in the selection of beat, 10,000 or 16,200. Which do you think is preferable for a stationary clock? The gear next to the escape wheel is to be a steel gear. Having a given size for the escape wheel pinion, I am unable to determine the total diameter of the wheel. Do you know of any books, French or English, that make a special study of gears as used in horology, and without too much mathematics, that give the correct way to find the total diameter of the wheel and pinion, giving their number of teeth and leaves and the distance between the two centers? In constructing a clock, how is the relation between the train and the length of the pendulum or beats per second found? Do constructors of watches or clocks use tables readily calculated? I would like to have a good knowledge of the question, and any information which you can give me will be greatly appreciated.

E. R.

ANSWER:—Among practical men it is generally admitted that 18,000 beats is the best number of vibrations for a timepiece having an escapement and balance of moderate size. The most convenient book in the English language giving the information which you desire is the "Watch and Clock-makers' Handbook," by F. J. Britten, in the contents of which you will find the information you desire under the heading of "Pinions, Wheels, etc.," in the index. The explanations do not contain too much mathematics. Bevel gears are not used in the trains of clocks or watches, but they do contrate wheels if they cannot be avoided. Contrate wheels have upright teeth intended to transmit vertical to horizontal action. The most simple way to find the length of pendulum to the number of vibrations of a clock is to take the seconds pendulum as a basis, which is about 39.2 inches long and has 60 beats in the minute. To find the length of a pendulum according to a given number of vibration: **Rule**—Multiply the number of vibrations in a minute by the standard or seconds pendulum (60) by itself, which is squaring it, and this being multiplied by the standard length of 39.2 inches and the last product divided by the square of the number of vibrations given in a minute by the pendulum of which the length is required, the quotient will be the length of that pendulum in inches and decimal parts of an inch. **Example**—To find the length of a pendulum which shall make 120 vibrations in a minute:

| | | |
|--|--------|-----------|
| | 120 | 60 |
| | 120 | 60 |
| | 14,400 | 3,600 |
| | 39.2 | 3,600 |
| | | 3,600 |
| | | 235,200 |
| | | 1,176 |
| | 14,400 | 1,411,200 |
| | | 1,296,000 |
| | | 115,200 |
| | | 115,200 |

*The length of the pendulum which was required.

The time of the vibration of pendulums is in the direct ratio of the square roots of their lengths, and the number of vibrations made in a given time are in the inverse ratio of their lengths. Modern treatises of horology have generally a table indicating the lengths of pendulums for different numbers of vibrations per minute.

QUESTION No. 1729.—Black Diamonds of Brazil.—Kindly inform me where black diamonds are mined, and what are they used for?

S. T. L.

ANSWER:—The black diamond is an important article of commerce, not because it is destined to embellish the hand of feminine grace, but because of the fact that it has been widely applied in industry. The home of the black diamond is Brazil, the richest beds having been found in the province of Bahia and on the banks and in the bed of the San Jose River. The stone, which is perfectly opaque, is not beautiful, and if the magical word diamond had never been applied to the substance there is no doubt that to this day the black diamond would be a thing unknown. However, the favor which this mineral enjoys is of very recent date, for 20 years ago its properties were unknown and the trade in the stone was practically nothing. The constantly increasing perfection of boring instruments brought out the value of the black diamond, the use of diamond point drills now having become so general that the price of the mineral has in consequence rapidly increased. Today the diamond has become of prime necessity in working tempered metals, sawing of marbles, piercing of tunnels and galleries, and in mines. At the time of the inauguration of the Laboratory of Arts and Trades, on July 1, 1903, a circular saw, provided with diamond points, produced surprising results, cutting into thin slices the hardest of materials. On the banks of the San Jose we find the traces of the first exploitation of the mines by the natives, the Garimperos.

The black diamond, however, having no commercial value, did not attract these people, and they were apparently ignorant of the real character of the mineral. From the report of an engineer who explored the region in 1858 we learn that one day the diamond diggers discovered a black stone in San Jose. They took the stone to one of their huts and sought to discover its nature by attempting to crack it. All their efforts were fruitless, the stone resisting the most powerful hammers, and after a time it was thrown back into the river. The stone weighed about 10,000 carats, and at the present price of \$40 a carat represents a loss of \$400,000. The exploitation of the Brazilian diamond mines by the Garimperos, it is unnecessary to say, was not scientific. The crevices of the rocks are explored with the hand, the gravel being taken away in little barrels, which are carried on the head. Attempts have been made to lessen the time of the work by diving for the mineral, but the violence of the stream is such during the rainy season that this plan has been but little adopted. The only method which will produce results and the one which will shortly be put in operation is that of draining. Dams will be erected 300 feet apart and centrifugal pumps will be installed for the purpose of drawing off the water. The results of the work cannot be a question of doubt, judging from the past performances of these diamond mines. The question naturally arises, Why have the diamonds been found in the San Jose? The answer to this is not difficult, and is given when we state that the original rock—which formerly occupied the high plateau—has been gradually disintegrated, the debris of the rock being carried by rains into the San Jose. Because of their density the black and white diamonds were concealed under the sand, together with the mineral accessories which surround them and which are the indications of the precious stones. Thus, in the course of years, these beds have been formed, beds the richness of which is incalculable.

QUESTION No. 1730.—Tinning Small Brass Pins.—How can I tin over a lot of brass pins?

T. S. B.

ANSWER:—A very simple method of tinning small objects is to add ammonia to a solution of tin salt in water until there is no longer any precipitation; take the precipitate off on a linen cloth, wash several times with water, boil the residue, which consists of hydrated oxide of tin, with strong potash lye, and dilute the solution of potassium. Stannate is thus obtained with water. The pins are tinned by dipping them into this liquid on a sieve. The temperature of the liquid should be about 122 F.

Thieves who recently broke into the store of W. F. Kettering, 3019 S. Adams St., Peoria, Ill., stole about two dozen gold filled watch cases and several cheaper watches. Two boys, who were later arrested, confessed their guilt.

The show windows in the store of Bates & Co., Atlantic City, N. J., were broken one day last week by a large tree trunk which was being cut down by a sidewalk contractor. The damage amounts to about \$150. Mr. Bates, of the firm, narrowly escaped serious injury.

More Facts About the Art School of Birmingham.

Translated expressly for THE JEWELERS' CIRCULAR-WEEKLY from *Art et Décoration*.)

IN Summer the pupils of this school work as long as possible in the open air in the country near Birmingham. There they observe how living plants are grouped and how they mingle in masses, details of which they have learned at the school. They see how plants rise from the ground, cast their shadows against the atmosphere, are reflected in the water. The greatest importance is given to drawing exercises from memory. Not only are styles not taught, but students have no facility for learning new by themselves in the school. The only way in which they could do so would be through certain ancient objects, few in number which have been loaned by museums. The danger of invasion of foreign influences, not only ancient, but modern, is fought against, as it is believed that such influences may convey more evil propensities than useful teaching.

For the study of industrial application workshops have been established in the school, provided with all the necessary material in the way of tools, machines, ovens, etc., for the complete execution of the objects designed by the pupils. They are directed by professors who are not only artists, but very skilled handicraftsmen also, closely joined to the industry whose production with embellishments they are teaching, and glorying in the task of taking a hand themselves in the work.

The pupils, while pursuing their studies from nature, work in one, perhaps several, of the shops devoted to the careers they have chosen. They are made to create after their own designs, thus being obliged from the start to acquire the habit of drawing lively objects which may be easily realized, and not to consider ornamental design apart from the matter in which it is to appear. In account of the constant fear of the committee that decorative composition may take a too theoretic turn, this line is not made the subject of a special course. It is taught separately in each workshop by a competent professor, and in connection with the matter itself.

The Jewelers' School is the only one which is entirely self-supporting. Like the Central School, it has its special director and its theoretic and practical classes, covering a complete education in the arts relating to metals. It has its own expositions, its small museum, etc.

The municipal assistance given to the Art School enables it to make the rates for instruction quite low; these rates vary, ac-

ording to the number of courses taken by pupils.

That which makes the exceptional strength of the art school and its efficiency in working is its union with the Birmingham merchants. By carefully maintained relations with the industrial associations and by recruiting a part of its members in these associations themselves the museum and School of Art Committee avoids all possibility of divergence. The manufacturers allow their apprentices leisure to take the courses; in exchange the school gives the courses without charge; and finally both parties put their resources together to meet expenses.

It is not surprising that with the facilities it gives its pupils the Art School should have 4,000 annually take the courses at the Central and Branch schools, 600 of them being in the one school of the jewelers' quarter. The work resulting is brilliant. In the interscholastic competitions the Birmingham school always arrives a good first, and many now celebrated artists were pupils there.

But what, after all, is the school's incomparable merit is that of creating for Birmingham industries generations of workmen with a pronounced taste for art. Very often nowadays in the most simple objects of domestic use in workpeople's houses in the Birmingham suburbs one sees such artistic comprehension as our age has not yet become accustomed to. In these articles one recognizes the hand of the artisan, not that of the mere workman.

The Birmingham School of Art shows us what can be done without resuscitating corporations by an intelligent and practical organization in artistic instruction in a great industrial city. The lesson is one for others to ponder over deeply. The school was founded without State assistance. It developed by itself; and it had reached maturity when it gave itself over to the municipality, upon which it imposed its own conditions.

T. W. Gurley, Meyersdale, Pa., has the sympathy of his many friends in the trade owing to the death recently, of his mother, Mrs. L. Gurley, at the family home near Dickens Mill, about six miles from Cumberland. The deceased was 65 years old.

In the table issued by the United States Geological Survey, under the direction of Charles D. Walcott, showing the mineral products of the United States for the years 1896 to 1905, the value of the precious stones for the past year is given as \$326,350 as against \$324,300 in 1904, \$307,900 in 1903, \$328,450 in 1902, \$289,050 in 1901 and \$233,170 in 1900.

English and French Glass and Pottery.

IT is strange to see along what different paths artistic glass work is running on the two sides of the Channel. In England what is being done is practically all in the way of delicately colored, thin, blown glass—either after Venetian or Bohemian models or on new lines. Even the slight movement towards artistic cut glass is in the direction of simple cutting on comparatively thin glass.

In France, on the other hand, the current seems all in the opposite direction; the artists who are working in glass have turned their attention almost exclusively to thick and deeply colored vessels made in different colored glass pastes and sometimes elaborately carved. (Cut has come to have so technical a meaning that this kind of cutting seems to be better explained by the term carving.) The color effect, which to start with, is at times very happy, is often further enhanced by the addition of pastes of different colors to decorate various portions of the vases. Emile Gallé occasionally combines drops or "prints," both plain and elongated, with this kind of work with a very happy result. These drops, of course, are not in clear glass, but in colors which harmonize with the glass paste of the vessel itself.

As regards pottery, French makers seem to have been working of late on much the same lines as the English potters, except that for the moment they appear to have given less attention to luster. Some years back they were the pioneers in this direction, but the finest luster is now undoubtedly being made on the north side of the Channel.

In both countries a good deal of attention is still being given to the production of crystalline glazes, and *flambé* has been attempted with more or less success—though in this case, again, it is the English potters who have brought it to the greatest perfection. At Sèvres they are bringing out crystalline glazes distinguished by the size of the crystals produced, while the porcelain painting is largely on more or less naturalistic floral lines. Taxile Doat is producing work unlike other people—he is seeking after new chemical effects and also doing delicate figure work, sometimes glazed, sometimes unglazed, on a delicate celadon green ground.—*Journal Society of Arts*.

The stock of George E. Childs, Flint, Mich., was recently sold by the administrator of the estate to Horton & Putnam. The senior member of the new firm is W. H. Horton, formerly of Goodrich. His partner of George F. Putnam.

The Alaska-Yukon-Pacific Exposition.

AT the present time much interest is centered here in the work of creating the Alaska-Yukon-Pacific Exposition, which will be held in 1909, opening June 1 and closing Oct. 15.

Although three years remain before the fair will be opened to the public, the management is hard at work perfecting and carrying out plans to make the enterprise worthy of the purposes it will aim to accomplish.

Beginning with the idea of making the new western world's fair original in every possible way the management has succeeded admirably up to the present time. As soon as the capital stock had been subscribed, John C. Olmsted, the noted landscape artist of Brookline, Mass., who laid out the Chicago and Portland expositions, was called to Seattle, and he is now busily engaged in designing the grounds and arranging the buildings. He has pronounced the site as scenically the finest ever utilized for such a purpose.

Henry E. Reed, director of exploitation, is now making arrangements for the States to participate. He has Major T. S. Clarkson, special commissioner, in the field visiting the governors of all the commonwealths. So far Major Clarkson has met with unprecedented success.

The management is receiving letters from all over the country endorsing the object of the exposition and pledging support from different localities.

Different from other fairs, the Alaska-Yukon-Pacific Exposition will not celebrate any particular event. The awakening of the Pacific, the wonderful achievement in all lines of effort of the countries in and bordering thereon and the important rôle the commerce of the great ocean plays in that of the world are the most noteworthy things the fair will celebrate. The exposition site comprises 255 acres of the campus of the Washington University. The grounds border for more than a mile and a half on Lake Union and Lake Washington. The Olympic and Cascade mountains are in plain sight, and an unobstructed view of the perpetual snow peaks of Mt. Ranier and Mt. Baker may be obtained.

The Alaska-Yukon-Pacific Exposition includes in its plan the erection of permanent buildings. Many of the large exhibit palaces will be substantially erected, and they will remain as the property of the university after the fair closes, to be used for educational purposes.

Walter Drew, convicted of breaking into and entering the store of Roehm & Son, Detroit, Mich., on Aug. 19, has been sentenced to serve two years in the Jackson prison.

Louis Curdts, at one time engaged in the jewelry business, died recently at his home in Ghent, Va., aged 82 years. The deceased was a member of the Lafayette Lodge of Odd Fellows and of the Knights of Honor.

AN INTERESTING EXHIBIT OF FANS.

AN interesting collection of fans has been on view at the K. J. Collins gallery, 8 W. 33d St., New York. The examples show great variety of date, workmanship and material. The majority, however, come from the Louis XV. period, though there are some good specimens of earlier and later periods. The collection attests the marvelous ingenuity and delicacy that were once expended on the decoration of this half serious and wholly playful social weapon. The treatment of ivory, tortoise shell, mother-of-pearl, wood and other materials for the sticks is constantly varied, and the pictorial decoration of the fan proper has the curiosity always of a sort of sentimentalized version of the art of the period. The fragile beauty of these specimens and their romantic associations, imagined or recorded, go far toward explaining the fancy for collecting fans.

RICH AND ARTISTIC HALL CLOCKS.

NEW hall clock cases are constantly arriving at the salesrooms of Harris & Harrington, 12 Barclay St., New York. There is now on exhibition a case eight feet four inches in height, made of heavy Circassian walnut, tastefully furnished in golden bronze. The massive proportions of the case blend with the heavy Corinthian style of decorative work in producing a pleasing effect. The dial of the clock is under an arch with columns of bronze. Four bronze pillars of the same design ascend from the base of the case to the smaller columns. The base is furnished in elaborate bronze work, in the center of which is a plate representing a group of cupids. In the lower portion of the case is a glass door protected by a heavy lattice of bronze bars. Behind this door swings a crystal mercury pendulum. On the top of the case rests a figure representing a Grecian driver, and chariot drawn by four war horses. Among other novelties is a clock case of Flemish oak with heavy decorative work in the Corinthian style.

ATTRACTIVE DOMESTIC NOVELTIES.

IN its popular line of Wave Crest ware, the C. F. Monroe Co., 28 Barclay St., New York, is exhibiting hand-painted vases in a variety of antique shapes. Gold-plated trimmings, wrought into fanciful designs, add to the attractiveness of the vases. The pieces are many and of different sizes, and are supported by base work designs, finished in gold plate. Floral designs predominate among the many decorative patterns shown.

**You Can Easily Operate
This Typewriter
Yourself**

Don't worry your correspondent.

Don't write him anything by hand that takes him time to make out—that may leave him in doubt—that he can't easily read.

And don't fill out legal papers or card memos—or make out accounts or hotel menus in your own handwriting.

It looks bad, reflects on your standing, makes people think you can't afford a stenographer, and is sometimes ambiguous.

You can write out your letters—make out an abstract—fill in an insurance policy—enter your card memos—make out your accounts, or a hotel menu—or do any kind of writing you need, on any kind, size or thickness of paper, and space any way you want on

The **OLIVER**
Typewriter

The Standard Visible Writer

You can write any of these things yourself if you do not happen to have a stenographer.

For you can easily learn, with a little practice, to write just as rapidly, and as perfectly, as an expert operator on the OLIVER. Because the OLIVER is the simplified typewriter. And you can see every word you write. About 80% more durable than any other typewriter, because it has about 80% less wearing points than most other typewriters.

80% easier to write with than these other complicated, intricate machines that require "humoring"—technical knowledge—long practice and special skill to operate.

Than machines which cannot be adjusted to any special space—with which it is impossible to write abstracts, insurance policies, or odd-sized documents except you buy expensive special attachments requiring experts to operate.

You can adjust the OLIVER to any reasonable space—you can write on any reasonable size and thickness of paper, right out to the very edge, without the aid of any expensive attachment or special skill, and your work will be neat appearing, legible and clear.

For the OLIVER is the typewriter for the doctor, the lawyer, the insurance agent, the merchant, the hotel proprietor—or any man who does his own writing.

Write us now for our booklet on the simplified features of the OLIVER.

Fahys Cases

“A purchaser who buys a staple”
“article from a reputable house has”
“the assurance that such an article”
“has been thoroughly tried out.”

This truth applies forcibly to Fahys Cases, which are the product of half a century of successful years in the watch case business.

The highest class of workmanship and skill has made the Fahys Cases the acknowledged superior of all other makes, and earned for them the right to the most prominent place in any show case.

JOSEPH FAHYS & CO.

Best Value

THIS IS THE POINT!

It's a point that shines
very clearly, too.

It's a point to be considered
most carefully. "Best Value" is
the point we pin our faith on.

Many thousand jewelers know
we give "Best Value." We will gladly
prove it to you the next time you need
any diamonds.

Wadsworth
25-Year
“Pilot”
Watch
Case

A
QUARTER
OF
A
CENTURY

TWENTY-FIVE YEARS is the period most people have in mind in buying a Watch Case. Cases guaranteed for that time are the most popular on the market. Among the many makes offered in this class it is simply a problem of selection. Wise selection can only be made after intelligent examination and comparison, balancing values and prices.

Here is the Case that has won pre-eminence in the 25-year field. The WADSWORTH “PILOT” has forged to the front on its points of merit alone—unaided by any fictitious considerations. Right in designs, models, workmanship and price.

WE desire to extend to our friends in the trade our best wishes for a happy and prosperous New Year, and to express to them our appreciation of their generous support, which has made the past year an exceptionally satisfactory one to us.

Illinois Watch Company,
Springfield.

IS INFLUENTIAL BECAUSE IT IS RESPECTED

The Jewelers' Circular of New York City the Sort of Paper That Makes Its Existence Necessary in the Jewelry Trade and Kindred Lines

COPYRIGHTED BY NEWSPAPERDOM PUBLISHING CO., AUGUST, 1906.

A multiplicity of titles for a trade journal is usually considered as a sign of prosperity in the past, though not necessarily of present or future greatness. If this be true, then The Jewelers' Circular with which are consolidated The Horological Review, The Jewelers' Weekly and The Jewelers' Review, ought certainly to have enjoyed a long and happy career. Thirty-seven years of continuous existence is a good record for any periodical in this youthful country. So much for the past.

The consolidation of the three papers, the policy of the publishers in being independent and unbiased have given The Jewelers' Circular an influence and prestige among its readers such as few papers can boast of, and it has grown to a solid and substantial hundred-and-twenty-page paper with an artistic cover, and well printed pages. There is no larger commercial trade paper published in this country. The advertisements are particularly well printed and illustrated, as indeed they must be to show up such difficult objects as articles of fine jewelry. The jewelry trade is widespread. The shop of a jeweler is among the first to be opened in a new town, such is mankind's love for barbaric decoration of gold, silver and precious stones. In order to find out to what extent this trade was covered by The Jewelers' Circular, **NEWSPAPERDOM** wrote to some of The Circular's advertisers, who wrote as follows concerning the returns they get from their advertising.

Larter & Sons, New York.

To the Editor of Newspaperdom—"We have been constant advertisers in the Jewelers' Circular for a number of years, and consider it one of the very best publications issued. We feel sure that our investment for space in the Circular has been a wise one, because of the general healthy growth of our business, a certain proportion of which must be due to our using the space in The Jewelers' Circular. We feel sure that you cannot endorse it too highly.

LARTER & SONS."

C. Dorflinger & Sons, New York.

To the Editor of Newspaperdom—"We have been advertising in The Jewelers' Circular for a long time. It is the only trade paper in that line that we use, and we would not feel that we were properly represented in the jewelry trade without it.

C. DORFLINGER & SONS."

Elgin National Watch Co., Elgin, Ill.

To the Editor of Newspaperdom—"We have used The Jewelers' Circular for quite a number of years, and consider it one of the best advertising mediums in the jewelry trade, and it stands well with the jewelers throughout the country.

ELGIN NATIONAL WATCH CO."

Ostby & Barton Co., Providence, R. I.

To the Editor of Newspaperdom—"We have used The Jewelers' Circular for some time, and consider it an excellent advertising medium.

OSTBY & BARTON CO."

Geo. H. Cahoon & Co., Providence, R. I.

To the Editor of Newspaperdom—"We consider The Jewelers' Circular an excellent advertising medium for the jewelry business, being the principal weekly, and, therefore, having all the news up-to-date.

GEO. H. CAHOONE CO."

Waite, Thresher Co., Providence, R. I.

To the Editor of Newspaperdom—"The long and successful record of The Jewelers' Circular speaks for itself. We have always advertised in it more or less regularly, and have felt that it fulfilled its promises. We are always glad to say a good word for the paper.

WAITE, THRESHER CO."

Alvin Mfg. Co., New York.

To the Editor of Newspaperdom—"The Jewelers' Circular is an excellent advertising medium in reaching jewelers and silversmiths.

ALVIN MFG. CO."

Shiman Bros. & Co., New York.

To the Editor of Newspaperdom—"As an advertising medium we find that The Jewelers' Circular has a far-reaching effect. We know of no other means by which we could give our line more publicity.

SHIMAN BROS & CO."

Theodore W. Foster & Bro. Co., Providence, R. I.

To the Editor of Newspaperdom—"We have been using the advertising columns of The Jewelers' Circular for a number of years, and are convinced it brings very good returns, and as a proof of our high opinion we intend to continue using it for a long while to come.

E. L. FULLER, Sec."

W. J. Johnston Co., Pittsburg, Pa.

To the Editor of Newspaperdom—"As to the character, tone and influence of The Jewelers' Circular, I should unhesitatingly affirm that it is the leading spirit in trade journals devoted to the jewelry business, and has the confidence and respect of the jewelry trade of the United States, and its influence among its subscribers is paramount.

W. J. JOHNSTON, President."

Hodenpyl & Walker, New York.

To the Editor of Newspaperdom—"The Jewelers' Circular is the only paper we use, and it is our impression that it goes to most of the best trade in the country. Our advertising is running in it all the while, and at the present time we have no intention of doing otherwise. That is what we think of it as a result-getter.

HODENPYL & WALKER."

Whiting & Davis, Plainville, Mass.

To the Editor of Newspaperdom—"We have used The Jewelers' Circular as an advertising medium for five years or more. We have always had good results from it—better than from any other trade paper.

WHITING & DAVIS."

W. & S. Blackinton Co., North Attleboro, Mass.

To the Editor of Newspaperdom—"We have observed gratifying results from our advertising campaign, and we consider that the space we are using in The Jewelers' Circular is productive of a liberal share of the benefits that have accrued. We look for results, and believe we are getting them.

W. & S. BLACKINTON CO."

Arch Crown Mfg. Co., Newark, N. J.

To the Editor of Newspaperdom—"We consider The Jewelers' Circular of such value as an advertising medium that we could not afford to be unrepresented therein.

C. T. WITTSTEIN, Pres."

Kohn & Co., Newark, N. J.

To the Editor of Newspaperdom—"Our opinion of The Jewelers' Circular as an advertising medium is very high. We can trace back many new accounts that have developed nicely which we secured primarily through the columns of this paper.

KOHN & CO."

Chopard Freres, New York.

To the Editor of Newspaperdom—"Of the several mediums of advertising we have tried, The Jewelers' Circular has certainly given us the best results, and we are only too glad to pay to this valuable paper a tribute of acknowledgment of its merits as a business-getter.

CHOPARD FRERES."

Stern Bros. & Co., New York.

To the Editor of Newspaperdom—"Our advertising in The Jewelers' Circular is satisfactory. We have no doubt that it is beneficial to us.

STERN BROS. & CO."

American Silver Co., Bristol, Conn.

To the Editor of Newspaperdom—"The advertising we have done in The Jewelers' Circular has been very satisfactory, and we consider the paper a very clean sheet indeed.

AMERICAN SILVER CO."

Robt. Levy, Newark, N. J.

To the Editor of Newspaperdom—"As an advertising medium we can speak of The Jewelers' Circular only in the highest terms. I have made several of the best customers that I have on my books since I have been using this paper, and would advise any one to advertise in its columns should they desire to increase their business.

ROBT. LEVY."

The F. H. Sadler Co., Attleboro, Mass.

To the Editor of Newspaperdom—"For a number of years we have used The Jewelers' Circular as an advertising medium, and we gladly say that we find it reliable in its dealings and profitable to us at all times. The fact that we still continue to use it expresses our idea in regard to its worth as well as any words can do.

F. H. SADLER CO."

D. C. Percival & Co., Boston, Mass.

To the Editor of Newspaperdom—"We are perfectly satisfied with the results obtained from our advertising in The Jewelers' Circular.

D. C. PERCIVAL & CO."

Byron L. Strasburger & Co., New York.

To the Editor of Newspaperdom—"We consider The Jewelers' Circular a splendid advertising medium. We have advertised in it from time to time during many years, and find that our advertising produces satisfactory results.

BYRON L. STRASBURGER."

If the increase of per capita wealth does not cease, the United States will soon be the richest country in the world. Some of this wealth will be spent for luxuries—among which we may count jewelry one. Surely a most encouraging outlook for the future of the weekly with the long name, and which is sure to result in increased prosperity for the trade.

Editorially, The Circular is ably conducted. There is a great amount of interesting reading matter developed in the jewelry trade and The Circular gets a great proportion of it. It has made itself a power in the trade, and has had a career of steady growth, in circulation, advertising and influence.

*From
"Newspaperdom,"
New York,
an authority on
newspapers.*

Dueber

is the name most intimately known to the Watch Trade of the United States as associated with the Watch Case industry. The name "Dueber" on any Watch Case is an absolute guarantee of good quality, artistic conception and fine workmanship.

Hampden

stands for what is peerless in American Watch Movements. For twenty-five years the name has borne an unrivaled reputation, and the Hampden high-grade movement has been a standard for imitators to work from.

Watches

are an essential part of every retail jeweler's stock, and to have the right kind of watches should be the care of every dealer. The more consideration given to this subject the more sure are Dueber-Hampden Watches to be chosen.

The W. J. JOHNSTON COMPANY

Wholesale Agents for the Leading American Watch Companies,

Fifth Avenue and Market Street, Pittsburgh, Pa.

Talent, Energy and Progression

are the qualities necessary to achieve success in this strenuous age

¶ The followers of the "let well enough alone" policy are living in the past and become the victims of the ambitious, hustling competitors who, looking into the future, constantly go forward.

¶ The forward pace in business is made more easy and quick by selling the right kind of goods; goods that are satisfying in quality and value and that add to the reputation of the merchant.

¶ *We offer you goods that have all the requisites necessary to please and satisfy your customers, that equal in value the cost, and will never mar your reputation from being associated with.*

¶ We refer to

Of Interest to Jewelers

The Whiting Company have, during the past year, consistently maintained their well-known policy of introducing to the Jewelry Trade a constant succession of new and attractive patterns in solid silverware.

Attention may, in the first place, be directed to those richly hand chased Vases and other Special Pieces which have aided in establishing the Company's reputation for the production of silverware of the most individual character.

Among the additions made to the exclusive Whiting designs in Hollowware is the very effective Louis Quatorze, while the already extensive line of Toilet Sets has been further increased by the Duchess pattern, and the combination sets of Silver and fine Porcelain by the St. Germain, Bouillon, Coffee and Chocolate Cups, with Spoons to match.

The new Adam pattern has already taken an assured position in the long list of those which have conferred such generally recognized popularity on the Whiting Flatware productions.

Finally, mention must be made of the unusually comprehensive assortment of new and original examples of Deposit Ware which are always to be found in the Whiting stock.

*The "Why" of
Gold Buckles.*

FOR SEVERAL SEASONS the Belt has been in the ascendant. New and handsome forms and fabrics have been introduced. It is no longer a mere incident in feminine apparel; it is a special creation in itself.

Under these circumstances Gold Buckles naturally become a matter of necessity. The Buckle crowns the Belt, confirming and completing its beauty. And the Buckle in itself is a creation—a piece of jewelry of rich effect and permanent value.

The Buckles made here raise the standard and maintain it.

Altogether this or other of our advertisements appear in over 500 publications daily, weekly and monthly. The dealer who handles

"1847 ROGERS BROS."

goods sells the best known silver-plated ware on the market—the Best known to-day and for the past sixty years.

When silver-plated ware is mentioned, the average person at once thinks of the brand marked

"1847 ROGERS BROS."

There are several reasons why this should be so. One is that it has been before the public so long—"1847 ROGERS BROS." being the original silver-plated ware, dating back to 1847, when the electro-plating process was discovered by Rogers Bros.

Another is that no other silverware is so thoroughly advertised.

But the chief reason is to be found summed up in the phrase

"Silver Plate That Wears"

An investigation by a prominent publication showed that more than half of the people preferred our goods in 1905, but during 1906 they evidently bought largest of their kind in the world were run far into the night and yet could not supply the demand for

"Silver Plate that Wears"

1907—the sixtieth year since the business was established—will undoubtedly mark a greater record in sales, prestige and influence in the trade. Sold by leading dealers everywhere.

Beautiful Punch Bowl Made for the Hamburg Senate from the Design of a Famous Architect.

A GALA punch bowl has recently come into the possession of the Hamburg Senate, and will be added to the silver treasure of the Council. It is from the atelier of Alexander Schönauer, the Senate's official goldsmith, and is a splendid example of the goldsmith's art.

This masterpiece has a history. In his book on "Style in the Technic and Tectonic Arts," the famous architect, Dr. Gottfried Semper (born in Altona) took the picture of a bowl to illustrate his ideas of art applied with due subordination to the demands of the material. The cover of the bowl, according to his design, conceived in the style of the late Italian Renaissance, was crowned with a capital or knob composed of heavy acanthus-like foliage in filigree work. The body of the bowl and the ground of the cover was to be gilded, and the body was encircled by an antique frieze, representing a Bacchanalian festival, of sea nymphs and sea monsters. All the figures upon the cover and the support or base were to be executed in oxidized silver. The foliage on the base, chiefly in dull white silver, was to have gilding intermingled with it, in order that the golden body of the bowl might not seem isolated.

This is the description of the model illustrated. But Gottfried Semper died without seeing the execution of his design, and his drawing came into the possession of the Museum of Arts and Crafts in Hamburg. The Director of the Museum, Dr. Brinckmann, in lecturing before the Association for Art and Science, on the occasion of the centennial celebration for Semper, thought the drawing of sufficient value to warrant the expression of the wish that the design, giving a deep insight into the world of artistic conceptions which filled the mind of its maker, might, through the munificence of some citizen of Hamburg, be given life, as it were, in precious metal, and become a part of the silver treasure preserved in the City Hall or Council House. His wish was destined to be fulfilled sooner than its author had thought. Edmund J. A. Siemers entered into negotiations with Mr. Schönauer in regard to the execution of the design. The work presented enormous difficulties, from the fact that a one-surface drawing was the only guide. But Mr. Schönauer did not shrink from the task, and the contract was soon made.

To an eye educated in the modern tendency to simplicity in art, this noble work shown on the front cover of this issue gives an impression, in the first moment, of a confusing wealth of ornament and figures. But the delicacy and care with which each smallest detail is worked out is simultaneously perceived, and allows of a feeling of an overloading of ornament, so alien to a work of art. Most beautiful is the crown-like capital or handle of the cover, where "puttos," riding on sphinxes, appear between garlands of acanthus leaves. On the upper side of the framework of foliage, the arms of the city of Hamburg

and of the donor are seen upon a little tablet. Upon the polished surface of the cover is the inscription, "*Von Gottfried Semper erdacht, von Alexander Schönauer gemacht, von Edmund J. A. Siemers dargebracht, dem Senat von Hamburg, 1906.*"

The design left by Semper, as already mentioned, showed only one side. Mr. Schönauer, for artistic reasons, did not wish to repeat the frieze upon the other side, and had no choice but to complete the composition himself. This was done with the greatest success. The two parts of the frieze—representing a procession of Bacchantes, mermaids, fauns and Cupids, dancing and playing upon musical instruments, and accompanied by fantastic sea monsters with serpents' bodies and dragons, lions and tigers heads—harmonize as perfectly as if made at a single cast. The base supporting the bowl is entwined with vine leaves and decorated with masks. At the corners are nude, winged female figures, and above them on the polished upper surface of the base, are bearded masks, one at each corner, which bring a play of figures to the otherwise empty surface, and are welcome resting points for the eye.

The thoroughness with which the first designer of the piece entered into details, and his wealth of invention, are shown in the decoration of the foot of the base—leaves and climbing lizards and salamanders, carried out in a directly modern spirit. The handles, standing out on each side, are upborne each by two Tritons, blowing on shells, whose modeling, as well as those of the figures of the frieze, are brilliant proofs of the faithful life-studies of the goldsmith who executed them, and of his artistic capabilities.

The bowl, as a whole, weighs 13 kilos (26 pounds), is 55 centimeters high (22 inches) and 14 centimeters (14 inches) in diameter. It adorned the table of the Senate for the first time at the dinner in honor of the Emperor's birthday.

Jewelry Schedules in New Tariff of South African Customs Bureau.

WASHINGTON, D. C., Dec. 17.—By reason of a special convention held in Petermaritzburg, S. A., in March of this year, a new tariff for the South African Customs Union went into effect on June 30, 1906. By its terms the following provisions are made:

FREE.—Cups, medals and other trophies for presentation as prizes, etc., provided that on importation or delivery, free of customs duty, they shall bear engraved or otherwise indelibly marked on them the occasion or purpose for which presented.

Diamonds and other precious stones in their rough state.

Jewelry, as an unlisted article, 15 per cent. ad valorem.

J. C. Cloud, Ross Smith and F. Jaeschke, accused of robbing the store of Uber & Über, 1822 S. Main St., Los Angeles, Cal., Nov. 25, have been held by Police Justice Austin to answer before the Superior Court. The bonds were fixed at \$1,500 each.

ELSIE BEE'S FASHIONS.

NOVELTIES SEEN IN A LADY'S RAMBLES AMONG THE JEWELERS.

A CHARMING little watch, that would be a delightful possession, has the case of the softest shade of lovely pink rimmed in gold.

*

An elegant diamond bar pin simulated the open links of a heavy chain.

*

Under the cunning guise of a little gold memorandum book the vanity case still serves its useful purpose.

*

A peculiar brooch displaying a combination of blue and green has the groundwork of blue enriched by a fine green stone.

*

Some of the slurred-top gold mesh bags are now fitted with convenient coin holders, card case or tablet, and a separate inside pocket.

*

An extremely novel pendant is an odd shape in finest green enamel ornamented with inset, scattered, blue leaves, with an emerald as a central stone.

*

The extent to which silver jewelry will again become popular remains to be seen. Silver and pearls accord well with the fine silver embroidery which is considered very chic. A little brooch of this character is a new design.

*

A silver center-piece, that takes on an unusual form, is designed to be very decorative with a large flaring vase for flowers in the center, from which spring four curving supports, each of which serve to suspend a very pretty basket of pierced silver suggestive of its use.

*

Years ago there was a fashion for flexible snake bracelets, and an indication of the revival of this motif in fine jewelry was recently seen in a new necklet, with bracelet to match, of the most delicate workmanship, in yellow gold wire, an admirable example of the goldsmith's art. The eyes of the snakes were of fine rubies.

*

The holiday season brings again the inevitable holly and mistletoe in various devices. Among the prettiest trinkets shown are, perhaps, the little brooches of diamond-veined green leaf with pink pearl or coral berries in the one case, and transparent tinted enamel, with pearls, in the peculiar growth of the mistletoe in the other.

*

In a strikingly picturesque style is a chain, with pendant, of curiously wrought gold set with different colored stones in a brilliant arrangement effecting a novel and attractive color scheme. The chain is formed of elliptical shapes of ornamental gold, adorned with gems. These are linked together and richly supplemented by the elaborate pendant closely attached.

Cal. Maus' store in Creston, Ia., was recently broken into, but very little was stolen. Six other stores were entered there. The losses were nominal in all cases.

 Yokohama: 163 cases clocks, \$4,900; 1 case plated ware, \$100.

The mazer was the favorite drink vessel of monks of the wealthier Benedictine establishment. The monks of the great priory of Christ Church, Canterbury had, according to an inventory of 1278, many as 182 mazers in their frater. Later inventories name 32 mazers at Bath Abbey, 40 at Westminster, and 49 at Durham. According to the "Rites of Durham," "Every monk had his mazer personally by himself to drink in, and all the mazers were largely and finely engraved with silver double gilt."

How Imitation Pearls Are Made and Some Methods by Which They May Be Detected.

THE imitation of gems has always existed, but in recent years this work has been brought to a state of perfection rarely dreamed of by the workers of ancient times, and the manufacture of imitation gems of specially prepared glass, paste, etc., has become quite an important industry.

The means of ascertaining the genuineness of pearls, which are frequently imitated with marvelous skill, is especially important to the layman, even though the jeweler may quickly detect them. Imitations are usually lighter than real pearls, and generally are brittle (although some are made solid of fish scales, and do not break so easily), while the holes, which in the real pearl are drilled very small and have a sharp edge, are in the false larger and have a blunt edge. As a rule, the imitation pearls are like hollow spheres of glass colored internally with a coating imitating the orient of natural pearl.

The manufacture of these articles embraces two series of operations, the production of the sphere and the introduction of coating. The spheres are produced by the glass blower, who by aid of an enameler's lamp solders the extremity of a tube when the substance is of the right consistency. In this way are obtained very regular little spheres that serve for the composition of the ordinary quality of false pearls. In the more beautiful imitations the tube employed is slightly opalescent, and the glass blower, besides, gives to the little spheres while they are yet malleable certain slight perceptible inequalities of surface by gently tapping them with a small iron bar. This gives them a still greater resemblance to natural pearls, which are very seldom absolutely regular.

Imitation pearls were manufactured in Egypt at least 15 centuries before our era, by some authorities, and the manufacture seems to have remained stationary there for a long time. The manufacture of a false pearl at Rome goes back to the period when the taste for fine pearls became general, and Pliny indicates this in the most precise manner. The silence of other ancient authors on imitation pearls allows us to simply conjecture what must have been their use among the inferior classes, which in all ages have considered themselves obliged to imitate cheaply the luxuries of the higher circles, so we must abandon these remote times and come directly to Venice, where we shall find, if not the origin, at least the mention of this industry, the first productions of which are dated in the night of time.

The first authentic mention of imitation pearls dates from the year 1318, when the manufacturers, called by the name of vernoster-makers and pearl-makers, were established either at Venice or at Murano. The first glass balls were filled with various materials, generally with a base of mercury, but in the year 1680 a rosary-maker named Tacquin conceived the idea of using, in the place of this mercurial mixture, a harmless substance that produced infinitely more perfect color.

This substance, the essence of orient, is formed from the scales of the ablette, a little white fish which abounds in the Seine, the Marne and the Lorret. The fishes are rubbed rather roughly in pure water in a large basin, and the water is then strained through a linen cloth, and the residue is left for several days to settle. The sediment thus obtained forms the essence of orient. It requires from 17,000 to 18,000 fishes to obtain 500 grammes (a little over a pound) of this substance. The scaly substance is liable to decompose quickly, and numerous chemical agents are employed by different manufacturers to preserve it. These means are kept a secret, but it is known that liquid ammonia or the volatile alkali is one of the substances most commonly used.

The discovery of a method for preserving the brilliancy of fish scales has led to their export from Restov-on-Don, Russia, for the last five or six years. The fish used are so small that nets of 5,000,000 to 8,000,000 strands in the mesh are used. Seventy-two pounds of fish yield 14 ounces of scales, which are powdered with some preservative, packed in 10-lb. tins, hermetically sealed, and sent by parcel post to Berlin, Stettin and Paris. Over eight tons have already been exported. The scales are thought to be used for the making of artificial pearls and similar articles. The trade is growing, and St. Petersburg, Warsaw, Vitelsk and Astraklan have begun to export.

The process of coloring the pearl is commenced by lining the interior of the ball with a delicate layer of perfectly limpid and colorless parchment glue, and before it is quite dry the essence of orient is introduced by means of a slender blow-pipe. It is allowed to dry, the pearl is filled with wax, and, if intended for a necklace, is pierced.

Artificial pearls are also made from beads of opalescent glass filled with gum, the polish of the glass being reduced by the vapor of hydrofluoric acid. Very good imitations of the genuine pearl are made from mother-of-pearl also. This material is cut to required shape and polished beautifully, when it has an appearance very similar to that of the genuine article, though an expert can readily distinguish the imitation from the genuine gem.

Imitation pearls manufactured by known processes, and more particularly the largest variety, are too fragile when hollow and too heavy to deceive the gem dealer when sold. The manufacture of pearls of irregular form, termed "baroques," is more costly than that of pearls of regular form in consequence of which a special molding process has to be adopted. This process obtains artificial pearls having a nacreous luster, and, to a high degree, the qualities of strength and lightness and irregularity of form which imparts an exact resemblance to genuine pearl "baroques."

There are at present on the market imitations of pearls consisting of a central sphere of china, stone or mother-of-pearl, with an outside coating resembling celluloid in structure, but having a color and luster that

closely simulates that of genuine pearls. Some of these are made in spheres and pear shapes too perfect in detail by far, but others show defects in form such as are met with in natural pearls. A simple and quick way to detect these imitations is to touch them to the tongue, upon which they appear warm as does celluloid, and not cold as do natural pearls. The outer coating may also be easily scraped with a sharp knife.

The Oldest Diamond Fields.

IN a recent report of the Geological Survey of India there is an interesting account of the Panna diamond fields of central India. Historically this country is believed to be the original home of the diamond, and from them it is supposed that the famous Kohinoor was extracted some three and a half centuries ago, the earliest diamonds dating some 25 years previously.

Of late years India has quite retired from the field as a precious stone producer to any extent or value, but from the account given it should be worth the while of a small syndicate to take up these diamonds, says the *Pioneer*, and work them systematically, though it is said that neither in luster nor price do the stones found compare with the yield of the South African fields.

The methods, however, now in vogue mean merely superficial treatment, following the lines which have been in vogue for centuries, with the probable result that the strata containing the most valuable deposits of stones are not reached. From a geological point of view there are said to be diamond bearing conglomerates over several areas, which would admit of deep shaft sinking and systematic mining under competent control being carried on profitably.

Recurrence of the Report That Diamond Cutting Industry Is to be Established in South Africa.

According to the *African World* of London cable messages received in that city have revived in more definite form the report that the De Beers management is considering the establishment of a diamond-cutting industry in South Africa, which will give employment to 15,000 white laborers. A colonial correspondent points out that uncut stones to the value approximately of £7,000,000 are shipped annually from South Africa, and says that the company loses a large sum of money which could be made by cutting the diamonds on the spot.

The reports say that the several governments in South Africa are to be approached with a view of adding to their financial policy a clause imposing a duty on the exportation of uncut stones and thus assisting in building up a cutting industry.

Herman Schroeder, a farmer, living north of Akeley, Minn., lost an Elgin watch on his farm three years ago. Each Fall the land has been plowed up after harvesting, and while doing so this Fall he discovered the missing timepiece. He proceeded to scour up the tarnished case, clean the face and rusty hands and wound and set it. It is claimed that it is running and keeping accurate time. The movement number is given as 9,694,221.

We extend the compliments of the season to the entire trade.

**J. H. Sweger, Missing Lewistown, Pa.,
Jeweler Heard from—Search for
Him Still Goes On.**

LEWISTOWN, Pa., Dec. 20.—The search for J. H. Sweger, the missing manager of the Millin County Jewelry Co., is still going on, and though the man has been heard from recently, he has not yet been located and brought to this city. As noted in previous issues of THE CIRCULAR-WEEKLY, Mr. Sweger disappeared Oct. 10, and at the time of his disappearance a quantity of jewelry which had been bought by the concern of which he was the head disappeared with him. The officers of the company and stockholders, as well as some of the creditors, immediately instituted a search but without avail. At first it was believed that Mr. Sweger might have met with foul play at the hands of people who wished to rob him of the jewelry he carried, but this

J. H. SWEGER, MISSING JEWELER.

theory was shattered when it was learned that he had appeared at certain jewelry stores and tried to dispose of some articles. Last week Elder Ulsh, the secretary of the concern, received word from L. A. Boli, Hamilton, O., to the effect that on Dec. 7 Mr. Sweger had appeared at the latter's store and offered for sale a diamond locket and horseshoe pin, but as he wanted \$125 for the articles and \$75 was all that was offered, he did not sell them. Later Mr. Boli heard that Mr. Sweger was wanted in his home town, and wrote to the concern. Sweger, as before noted, is 38 years old, five feet, eight inches high, heavily built, and weighs about 200 pounds. He stutters at times in speaking. The photograph from which the above cut is made is said to be a very good likeness of the missing man.

Martin L. Hatlestad, Radcliffe, Ia., has sold his jewelry and drug business to the Reinert Drug Co.

Miss Lulu P. Harn, Beaver, Pa., has moved from the McCague building, on 3d St., into a larger and newly furnished store in the Hurst building.

**Controversy With Bank Causes F. W.
Bartlett, Sayre, Pa., to Go Into
Bankruptcy.**

SCRANTON, Pa., Dec. 19.—F. W. Bartlett, a retail jeweler at Sayre, Pa., was adjudged an involuntary bankrupt by Judge Archbald in this city, and his schedules show liabilities of \$7,800 and nominal assets of \$7,300. A temporary receiver has been appointed and the stock will be sold at retail until after the holiday season.

Bartlett has been in business in Sayre for about four years. The First National Bank of Sayre is the principal creditor. Bartlett became financially embarrassed several months ago, and an offer of settlement made by him was accepted by the merchandise creditors. The bank furnished Bartlett with sufficient funds to effect the settlement, and Bartlett gave it a bill of sale, covering his stock and fixtures, as collateral security. The bill of sale was conditional in that Bartlett had six months in which to buy the stock back again. This contract expires on March 1, 1907. Bartlett, who was to make all deposits with the bank, also gave the bank his note which had been reduced in part.

On Dec. 11 the bank levied on Bartlett's stock and a sale was then advertised. So Bartlett, to protect the other creditors, decided to go into voluntary bankruptcy, and Judge Archbald appointed Joseph W. Beaman of Athens as the receiver.

Bartlett claimed that this step was justified because the bank broke faith with the agreement which it made with him, although he was unable to stop the action which the bank officials took. The bank claimed that the contract made by Bartlett was as an individual, and not as an official of the bank, and that the cashier's actions were not binding legally upon the bank. Bartlett claims that he could have saved himself with the holiday trade if the bank had not forced him to go into bankruptcy.

**Burglars After Making Vain Effort to
Open Safe, Take Valuable Jewelry
from Show Cases.**

STAMFORD, Conn., Dec. 19.—The jewelry store of Sigismund Kronholtz, 489 Main St., was robbed, yesterday evening, of between \$1,000 and \$1,200 worth of jewelry. The police are watching for a man who used to live in Stamford and was under suspicion for a similar burglary there three or four years ago. He reappeared in the town, a short time ago, and has not been located since the robbery.

Entrance was gained to the store through a thin partition wall of wood and plaster which separates that store from an adjoining clock establishment. A small saw was used to cut a way through and desperate efforts were made to open the burglar-proof safe, in which were jewelry and diamonds valued at about \$20,000. The burglars cut the outer iron wall in the back of the safe in two places and drilled through the cement into the inner steel surface, but the attempt to drill further was futile. The greater part of the stolen jewelry was taken from trays in the long show cases.

The stolen property consists chiefly of small pieces of silver, fountain pens, cuff buttons, lockets, cuff pins, etc.

**Employe Convicted of Setting Fire to
Jewelry Factory Building at Attle-
boro, Mass.**

ATTLEBORO, Mass., Dec. 22.—John R. Tingley having confessed that he purposely set the fire which did approximately \$100,000 damage at the jewelry factory building of W. H. Wilmarth & Co., several days previous, will hear his sentence in the District Court Dec. 29. For the first time since his arrest he appeared to realize at the hearing last Wednesday the gravity of the charge and of his position. He was found guilty by Judge F. B. Byram, and the case continued for sentence.

Tingley was employed by the Wilmarth concern, his work keeping him in the basement section of the factory, near the store-room, where the fire started. His confession was to the effect that a fire on Dunham St., near the factory, aroused in him a desire to see something burn, and to experience the excitement attendant upon a brisk fire. This feeling grew upon him, he said, until it was uncontrollable. Being alone for a short time during the noon hour he said he set fire to some paper boxes, thinking they would start a small blaze, that the fire department or volunteer fire fighters would be prompt, and that the damage would be small. The blaze started, the firemen and scores of volunteers worked promptly and heroically, but the big wooden structure offered too easy prey to the flames, and damage running into six figures resulted.

The boy says that he then felt some remorse, and went to his home. His arrest came about through the efforts of Deputy Sheriff Nerney, of the local police, and Deputy Fire Marshal Collamore, of Fall River, to trace the cause of the fire. As Tingley worked near the place where it started, he was questioned. He told three wholly conflicting stories in these interviews, and was arrested as a measure of precaution.

The District Court hearing on his case occupied some time. The boy appeared deeply affected by his position, and was close to breaking down. Edward A. Sweeney, one of the officers of W. H. Wilmarth & Co., testified that the fire damage amounted to some \$100,000, and that the losers did not wish to see any extreme penalty inflicted upon the boy. He said that they merely wished to see him restrained in a way to make a repetition of the affair impossible.

Evidence was offered to show that before the trial a full confession was made in the presence of Emmons D. Guild and two police officers. Edward N. Thurber, Timothy J. Slinay, Miss Emma Couillard, William M. Curtain, Orin L. Bowman and William E. Stowe told of incidents and conditions in the factory bearing on the matter. The chief of the fire department added corroborative evidence.

W. E. Wood has sold his store in Caldwell, Idaho, to S. N. Moe.

Morgan D. Wise and L. W. Cox have formed a partnership and leased the store at 114 N. Main St., Rockford, Ill., where they will conduct a jewelry and drug business.

DIAMONDS, PEARLS AND PRECIOUS STONES

MEMORANDUM ORDERS SOLICITED.

Suit to Obtain Forfeiture of Alleged Smuggled Emeralds Tried at New York.

In the case of the United States vs. 218½ carats of cut emeralds, loose and unpierced, brought to New York by Manuel J. Suarez, of Bogota, Colombia, evidence was taken Wednesday of last week, before Judge Holt, in the United States District Court, at New York. The proceedings were instituted by the Government for the forfeiture of the emeralds.

An indictment for smuggling, found against Suarez soon after his arrival, is to be quashed, under the court's direction, at the close of the civil case. Besides the cut stones Suarez carried about 300 carats of rough emeralds, which have been delivered to him as they are free from duty. The value of the cut stones which are held by the Government has been estimated at \$5,000.

The briefs submitted by lawyers are of much importance because they discuss thoroughly the effects of decisions in prior cases involving questions of how far the suspected smuggler must go from the ship and what latitude is allowed him in correcting his declarations before the act of smuggling is completed.

Another feature of interest brought out in the briefs of Assistant United States Attorney Winfred T. Denison, who argued the case for the Government, is in grouping facts indicative of a somewhat systematic traffic in emeralds on the part of Mr. Suarez.

At the time of his arrest it was said that the Colombian casually came into possession of a considerable quantity of emeralds and took them to England, intending to sell them, but not being offered as high prices as he had expected, he kept the stones and, as on his way back to Bogota, when he landed in New York, intending to stay here for a few days and then resume his journey home. The idea that Suarez was in the business of carrying or selling precious stones was not then entertained.

The statement of facts as given by Mr. Denison comprise so much that has not been published before that it is quoted as follows:

The claimant, Suarez, came from England on the steamship *Oceanic*, arriving Oct. 6, 1906. With him he had a paper package containing 218½ carats of loose, unpierced emeralds, cut. He was found on the dock the morning of the landing and as found not to have made any declaration before going ashore. He was then taken aboard for declaration, which he made in the usual form of baggage declaration and entry.

Herein he declared three packages only and stated that everything in his possession was wearing apparel, articles of personal adornment, etc., in the usual form, which does not include the merchandise in question.

In the oral examination to which he was subjected before his signing this declaration and entry, he said that he had with him no merchandise but only three packages of baggage. Later, on the dock, he was again examined thoroughly by Hawes, who spoke in Spanish and who inquired particularly whether he had any precious stones on his person or in his pockets, to which the claimant replied that he had absolutely none except two rings which he pointed out.

In order to avoid any mistake, Hawes had the claimant repeat back the substance of the conversation, which the claimant did. In this conversation the claimant had stated that he wanted some packages sent in bond, but that there were no jewels in those packages. The packages which he was asked to have sent in bond were a trunk and a case. It was he, himself, who introduced the

subject of bonding these packages, but he never said anything about bonding the emeralds until after they had been discovered and seized.

The claimant's baggage, which was not to be bonded, was then examined and passed. Subsequently the claimant was searched. When the search was about to begin he put on a couch his overcoat, put on top of that his jacket, and on top of that his vest, and then presented himself for search. The search of the body revealed nothing, but after the vest and jacket had been searched, the package of emeralds was found in the inner pocket of the overcoat.

The fraudulent intent of the claimant was overwhelmingly established by these facts, as well as by the other details, which appear in the transcript of the testimony. The plaintiff himself did not venture to take the stand and hardly claims that he acted in good faith. Even his own statement, which was put in evidence by the Government and which was made after the discovery of the emeralds, shows fraud on its very face.

He claims that he received the emeralds from one Reyes, to be delivered at Costa Rica to one Acosta, and yet the only suggestion of any bonding was of goods to go to Colombia. Also his answer and claim in this record state that he was at that time and is the owner of the emeralds, which is inconsistent with the claim made in his statement that he was a messenger from Reyes to Acosta.

The statement also reveals an exceedingly suspicious state of facts in that it shows a delivery by Reyes to Suarez of some emeralds to be brought over by Suarez, although Reyes himself was coming over, and delivery by Suarez himself of other emeralds to persons for transmission to one Guzman, who, also, was about to come to the United States, and who was to deliver these emeralds to Reyes. Suarez, in other words, was receiving some emeralds from Reyes to be brought over and was giving to Guzman other emeralds to be delivered by Guzman to Reyes.

The statement claims that he did not declare the emeralds because he intended that the collector of customs who should take charge of one case and one trunk should also take charge of this package. It does not appear why, intending to send the case, the trunk and the emeralds in bond, he should have mentioned only the case and the trunk. The statement concedes that he did not mention the emeralds.

Lewis S. Phillips, attorney for the claimant, in the course of his brief tries to show that his client's difficulties were due to ignorance of the English language, that he spoke French only indifferently and that the inspector who talked with him in Spanish had only a colloquial acquaintance with that language. As a result, the attorney claimed, there was a misunderstanding, but his client had not intended to sell any stones in this country or to defraud the Government in any way.

Mr. Phillips argued that various regulations as to the declaration have no force in this case because there was no actual entry of the articles in controversy. He denied that statements made to a customs officer, even if false, could be used as a basis for a forfeiture when the law does not require the making of such statements unless there is an entry. It was also claimed that the emeralds were not property included in the term baggage.

The Keck decision was cited by the attorney for Suarez to sustain the claim that there could be no forfeiture because his client had not actually gone outside the custom lines and outside the jurisdiction of the custom authorities. Until a man had done this, according to the lawyer's contention, he might have an intention to smuggle or even have made an attempt to smuggle, but these acts are not sufficient to justify a forfeiture of the article.

Mr. Phillips quoted extensively from the decisions and opinions in the Keck, Stuller and Dodge cases, and argued that there is no smuggling until the goods are carried outside the fence constructed on the dock

or wharf, and guarded by the customs officers. On this point he says:

An attempt has been made by the learned district attorney to argue that an imaginary line exists in cases of this character, and that when the customs officials ask a passenger whether he has any dutiable goods on his person, and then give him an opportunity to make a disclosure, that a failure at that time to give information constitutes smuggling, but the mere statement of this proposition shows its utter impracticability as a rule of action.

There must be some definite fixed line beyond which a person may not go without accounting for or securing the payment of the duty for due entry of his goods. In the case of cargo it is the ship itself. In the case of baggage and article of merchandise carried in his baggage or on the person, the customs territory is extended, as pointed out by Judge Lacombe in the Dulles case. Judge Brown in his dissenting opinion in the Keck case says that the effect of the decision of the majority is that the obligation to pay the duties does not arise until an attempt is made to carry the goods off the wharf. This rule, fixed by the Supreme Court, is practical and capable of sensible execution.

Mr. Denison controverts the claim that it is necessary for a smuggler to go outside the fence on the dock or wharf in order to give a basis for a forfeiture of the articles. He argues that the Suarez emeralds were baggage and that the claimant's declaration and oral examination, both made after he had left the ship and walked ashore, on the wharf, made the entry complete within the scope of the statutes.

Text of Decision Declaring Certain Classes of Belts and Belt Buckles to be Dutiable as Jewelry.

Buckles made of gold and silver, belts and belt sets, similarly made, with or without precious stone settings, were recently classified as jewelry by the Board of United States General Appraisers, New York, as noted in last week's issue. Since then the opinion of General Appraiser Sharretts, giving his reasons for overruling the claims of the importers, J. G. Darlington & Co., Philadelphia, has been made public.

General Appraiser Sharretts says the articles in controversy are not in the same class with the gold and silver chain purses and chatelaine bags on which a 45 per cent. duty has been accepted since Tiffany & Co. won a victory, several years ago, in a test case involving the latter articles. It is understood that the government has no intention of reopening the old question as to the purses and bags on which the 45 per cent. duty will be accepted as in the past.

The decision as to belts and buckles is not a precedent for these articles when made of steel or other base metals or cheap material. The opinion follows:

The attorneys for the importers, basing their argument on the decision of the Circuit Court for the Southern District of New York, in the case of Tiffany vs. United States, relative to chain purses and chatelaine bags, composed of precious metals, contend that belts and belt fixtures are also articles of utility and hence are not jewelry; but we do not agree with the soundness of this doctrine. The word jewelry, in its generally accepted and modern sense, is understood to mean ornaments worn for personal adornment only. Purses and chatelaine bags are never worn on the person, while belts and belt sets for women's wear have no other use. Many articles designed for personal adornment which are typical articles of jewelry, such as gold and silver collar buttons, shirt studs, sleeve buttons, hat-pins, etc., serve useful as well as ornamental purposes, and we clearly think that gold and silver belts and belt sets fall within this class.

Charles G. Bade will close out his stock of jewelry at Wahpeton, N. Dak.

Thief Who Robbed Samuel Reyman Commits Suicide When Pursued by the Police.

The man who robbed Samuel Reyman, Jr., of 62 Mount Vernon Ave., Mount Vernon, N. Y., at the point of a revolver, as reported in last week's issue, committed suicide in New York, Tuesday afternoon of last week, by shooting himself in the head, as he was about to be placed under arrest, after a chase through the city streets. Mr. Reyman came to New York that morning to look over the photographs in the Rogues' Gallery. He was accompanied by a police officer from Mount Vernon. As they left their headquarters they came upon a man at the corner of Houston and Elizabeth streets, whom the jeweler identified as the robber he was seeking.

The policeman tried to arrest the man, but the robber struck the officer in the face with his fist. The policeman used his club, and reached for his revolver. The robber then ran through Elizabeth St. to Pecker, thence to the Bowery and on toward 2d St., brandishing a revolver as he ran. The jeweler and the Mount Vernon policeman followed and were joined by several New York patrolmen, who saw the case. On 2d St. the pursuers closed in on the fugitive. Patrolman Patrick High came up first and faced the revolver held by the thief. "Don't shoot," cried the policeman, and as he said this the man fired the revolver on his own breast and died three shots, dropping to the pavement dead.

The identity of the robber is uncertain. It was at first supposed that he was William Madison, a former member of the 71st Regiment. The dead man resembles Madison's photograph and the police were certain that he was the man. The Bertillon system showed, however, that the dead man's thumb prints differed from those of Madison. There was no clue on the body except a name of a Chicago hatter printed inside the slouch hat. The man's hand was cut. The robber who attacked Reyman in store smashed the show case with his revolver and in doing so cut his hand.

Wife and Children of E. L. McWithey, Silverware Salesman, Burned to Death.

A terrible affliction was sustained, Friday night of last week, by Edward L. McWithey, a house salesman of the International Silver Co., 9 Maiden Lane, whose wife and two children were burned to death in a fire which consumed their home at Pompton, N. J. Because of the holiday rush of business, last week, Mr. McWithey had been busy in the salesrooms until 12 o'clock at night, and so he remained in New York instead of going home as usual.

The fire broke out at night in the house in which the family lived. There is a fire department in Pompton, and when flames were seen a number of neighbors hurried with buckets, but they were unable to save the inmates, as the house was by that time a mass of flames. Mr. McWithey has been with the International Silver Co. many years. The most sincere sympathy is extended by all who know

Scarcity of Chaton Brilliants Worries Providence Manufacturers.

PROVIDENCE, R. I., Dec. 21.—Such a scurry as there has been recently among the manufacturers in this city who use chaton brilliants in their wares to secure these stones has probably never before been witnessed hereabouts. The situation is one which has aroused the keenest interest and attracted the attention of manufacturers outside the trade.

N. Levy, located at 212 Union St., is one of the largest dealers in chaton brilliants in the city. It appears that his prices were such that somebody, presumably one of his competitors, entered a protest to the United States custom authorities to the effect that the stones must be coming into the country on an undervaluation. The Government, in view of this protest, held up the next importation, pending an investigation. The usual recourse was open to Mr. Levy to furnish a suitable bond and release the goods. This amount the Government would refund if, after a hearing, the charges should be proved groundless.

Mr. Levy claims that the stones have been brought in at their proper valuation and have been sold here at precisely the same figures they bring all over Europe. He says that he has nothing to conceal in any way. The stones are sent to him by a manufacturer in Europe, and he has furnished them to the manufacturers here at prices which, apparently, some of the other dealers have not been able to meet.

In the meantime the manufacturers here who were trying to hurry out combs, bracelets, pendants, etc., in which these stones are so largely used were perspiring in their efforts to get the materials with which to finish up their goods. A rough estimate has placed the total amount of these stones used here during the year at 600,000 gross, and it has been estimated that Mr. Levy has furnished perhaps two-thirds of this quantity, an estimate made by a conservative manufacturer who uses many of these stones. It is said that Mr. Levy has done everything in his power to accommodate his customers. He has supplied those whom he could, and while others have been compelled to wait, it is asserted that in due time they will receive their share.

To add to the difficulties of the situation, the steamer *Kaiser Wilhelm der Grosse*, which had a large consignment of these stones aboard, ran into the British steamer *Orinoco* off Cherbourg, and as a result had to lay up for repairs.

No date has been set for the hearing before the Board of Appraisers in New York. The question raised as to the appraisal on the stones coming through the local Custom House is to be heard before that tribunal and possibly will not come up for three weeks.

All the jewelry recently taken from the store of Theo. G. Stuedel, Chilton, Wis., was found about a week ago by two boys while skating. The jewelry was tied up in a white handkerchief and concealed under a pile of old tiles, about 200 feet south of the depot. Two men have been arrested accused of the theft. The boys who found the jewelry were liberally rewarded by the jeweler.

Charles A. Webber, Bankrupt Diamond Broker, Arrested on Charge of Grand Larceny.

Charles A. Webber, a diamond broker at 320 Fifth Ave. until October last, when creditors filed a petition in bankruptcy against him, was arrested Sunday at Port Jervis, N. Y., by Pinkerton detectives, who for a month have been trying to locate him. He is accused of grand larceny in pawning a pearl necklace, intrusted to him on memorandum by Ludeke & Heiser, 170 Broadway. Webber pawned a number of articles which he had on memorandum, and after his failure returned the pawn tickets to the owners of the jewelry, each of whom redeemed his own property. It is possible that additional charges will be made against him because of the other transactions.

Webber's total liabilities, as shown by schedules, amounted to \$91,479, of which \$32,171 was secured by the assignment of jewelry from his stock. He had practically pawned everything, including goods given him on memorandum, as well as the jewelry which he obtained in the usual course of credit. The detectives say they obtained trace of Webber at South Bethlehem, Pa., where he called upon a former actress, and it is said that he had spent a considerable part of his creditors' money on this woman. From that city he was followed to a shooting lodge in Pennsylvania, and thence to Port Jervis. He was brought back to New York after his arrest.

The creditors met Friday last in the office of Nathaniel S. Smith, the referee in bankruptcy. Claims were proved and John R. Keim, the receiver, was elected trustee, the amount of his bond being fixed at \$5,000.

Census Bureau Issues Statistics of the Jewelry Industry in Ohio.

The Federal Census Bureau issued last week statistics of the jewelry business in Ohio. The figures are self-explanatory and follow:

| | |
|--|-----------|
| Number of establishments..... | 16 |
| Machinery and tools..... | \$127,228 |
| Cash and sundries..... | \$345,059 |
| Number of proprietors..... | 21 |
| Number of salaried officials..... | 43 |
| Their salaries..... | \$42,626 |
| Number of wage earners..... | 262 |
| Their wages..... | \$161,712 |
| Men over 16 employed..... | 213 |
| Their wages..... | \$147,613 |
| Women over 16 employed..... | 31 |
| Their wages..... | \$10,050 |
| Children under 16 employed..... | 18 |
| Their wages..... | \$4,043 |
| Rent of works..... | \$11,760 |
| Taxes..... | \$569 |
| Rent of offices..... | \$24,440 |
| Contract work..... | \$1,200 |
| Cost of principal materials..... | \$225,937 |
| Fuel and rent of power..... | \$2,790 |
| Value of products for the past year..... | \$652,809 |

Assignee to Continue Business of J. Jacques Until After the Holidays.

PORTLAND, Me., Dec. 19.—J. Jacques, optician, 510 Congress St., this city, made an assignment on Thursday to his attorney, Wm. H. Gulliver. The assignee values the stock and fixtures at about \$100 and estimates the total liabilities to be about \$10,000.

Arrangements have been made between the lawyers of the creditors and the assignee to dispose of the stock during the holiday season.

A Christmas Gift to Congressman E. B. Vreeland from Members of the Jewelry Trade.

A number of members in the jewelry trade of New York and vicinity have presented as a Christmas gift a beautiful chest of silver to the Hon. E. B. Vreeland as a testimonial of their esteem and appreciation of his work in behalf of the trade in obtaining the enactment of the National Tamping Law. It was Congressman Vreeland who introduced the measure, the movement for which was started by THE CIRCULAR-WEEKLY and approved by jewelers as a whole, and it was to his efforts that the story obtained in the enactment of this law was in most part due.

Although Mr. Vreeland was formally thanked by the members of a joint committee in charge of the trade's interests, at dinner given in his honor by this journal on Sept. 12, there has been for some time a strong sentiment in favor of expressing, in concrete form, the appreciation of the members of the jewelry industry by presenting him a testimonial. For this purpose a subscription was started and placed in the hands of the New York committee of the old Bill, of which A. K. Sloan is chairman. The contributions from about 80 firms and individuals were sent to the chairman of the sub-committee on finance, Maj. Francis Appleton.

The committee, after mature consideration, decided on sending a chest of silver, and this was purchased and forwarded Saturday last to Congressman Vreeland at his home in Salamanca, N. Y.

The set comprises 134 pieces of sterling silver, including knives, forks and spoons, in the baronial pattern, handsomely chased and finished in the best art of the silversmith. The set was placed in a dark chest with chamois lining. On the top of the chest was an engraved brass name plate with the inscription, "To Hon. Edward B. Vreeland, as a testimonial of esteem and appreciation from his friends in the jewelry trade, Christmas, 1906." The set was made by the Gorham Mfg. Co.

Death of Samuel Little.

Boston, Mass., Dec. 21.—Samuel Little, formerly for a number of years president of the E. Howard Watch & Clock Co., predecessor of the present E. Howard Clock Co. and the Howard Watch Co., died this afternoon at the Hotel Lenox. He had been suffering with acute bronchitis for a few days, and to-day was stricken with a paralytic stroke, his death ensuing a short time thereafter.

Mr. Little was one of Boston's best known business men a score of years ago, being a millionaire, with many interests, chief among them the presidency of the West End Street Railway Co., since merged into the Boston elevated system. He was born in Hingham, Mass., Aug. 15, 1827. In early life he became a bank official and later bank director and president, also a street railway director, treasurer and president. He served in the Legislature in 1864-5, and held many other offices of honor and trust. Mr. Little leaves a son, Arthur M. Little, who was associated with him in the business during his presidency of the E. Howard Co.

Resolutions Adopted on the Death of President Dodd, of the International Silver Co.

MERIDEN, Conn., Dec. 24.—At a meeting of the Board of Directors of the International Silver Co., held in its offices, here, last Wednesday, resolutions on the death of the late Samuel Dodd were adopted. Geo. H. Wilcox, first vice-president, was confirmed as acting president to serve until the annual meeting. The resolutions were as follows:

In the much lamented death of our president this company has suffered a grievous loss. His rare executive ability, sturdy integrity and untiring devotion, have been largely the cause of its high place in the industrial and financial world.

While words of ours cannot do justice to the matchless skill and patience with which he has united seemingly conflicting interests, it is our earnest desire to place upon our records such an appreciation as would have been acceptable to him.

We have been most fortunate in our intimate association with him. He has shown us that the prosperity of our company depends entirely upon harmony, sincerity and integrity, to the end that its securities shall rest upon a sure and firm foundation.

This expression is our highest tribute to the memory of Samuel Dodd, who died suddenly Dec. 13, a noble and tender-hearted man, the truest and best of friends.

Death of H. C. Wisner.

ROCHESTER, N. Y., Dec. 22.—Henry C. Wisner, of the H. C. Wisner Co., in business in this city since 1858 died at his home, No. 97 Oxford St., on Thursday, aged 74 years. He had been ill for about two years and since a year ago last January had been unable to attend to business.

Mr. Wisner was born June 29, 1834, in Mount Morris, Livingston County. He went from Mount Morris to Iowa City, Ia., when a young man, and there went into business with James Mordoff. In 1854 he returned to Rochester and the firm of Brackett, Wisner & Palmer was organized at 33 State St. to deal in decorated china, silverware and crockery. After the war James Brackett stepped out and the firm became Wisner & Palmer. In 1872 Mr. Wisner bought out his partner's interest and continued in business alone until his health failed him about two years ago, when a stock company was formed to conduct the business. This company has one of the finest stores in the city.

Mr. Wisner was president of the Poughkeepsie Glass Works, Poughkeepsie, N. Y. He leaves one son, Frank P. Wisner, and one daughter, Elizabeth L. Wisner.

Market Price for Silver Bars.

The following are the quotations of silver bars in London and New York, as reported by Zimmerman & Forshay:

| | London. | New York. |
|--------------|------------|-----------|

| " 18..... | 32 3-16d. | .69% |
| " 19..... | 31 13-16d. | .68% |
| " 20..... | 32 3-16d. | .69% |
| " 21..... | 32 3-16d. | .69% |
| " 22..... | 32 3-16d. | .69% |
| " 24..... | 32 5-16d. | .69% |

Paul H. Hohberger, Gilmore City, Ia., has bought the F. G. Renken stock, in Manson, Ia., and will continue the business.

A. F. Robertson, St. Cloud, Minn., will shortly dispose of his business and retire. He has started an auction sale of his stock.

Thief Breaks Window of Boston Jewelry Store and Escapes With Stock Worth \$600.

BOSTON, Mass., Dec. 21.—The display window of the jewelry store of Arthur H. Beal, at 43 Boylston St., this city, was broken this morning just before 7 o'clock by a thief who secured about \$600 worth of jewelry. When the watchman of the building made his rounds a short time previous there was no indication of any break, but on his return trip the robbery was discovered.

The window selected for the thief's operations was a plate glass of considerable thickness, and the missile used made a hole large enough to admit of the insertion of his arm to the full length. It was an expert job, and is thought to have been the work of a professional. The cheap plated goods within reach were ignored, and the articles taken were all of good quality. The break appears to have been carefully planned. The window abuts on a doorway receding some six feet from the sidewalk.

Diamonds and watches of value are removed at night from the display, but there remained overnight some \$3,000 worth of stock. No trace of the perpetrator has been discovered, but the police were promptly notified and a description of the articles taken was furnished to the pawnshops.

Death of Wm. Bohne.

NEW ORLEANS, La., Dec. 22.—William Bohne, aged 79 years, one of the city's pioneer jewelers and opticians, died at his home in this city a few days ago as the result of a street car accident.

Mr. Bohne was born in Hanover, now a German province, and came to New Orleans in 1855, engaging in the jewelry business with his uncle, August Bohne, a jeweler of the old regime, in New Levee St. He later conducted stores in Poydras street and Carondelet street, and published three handbooks for opticians, which were largely read and generally considered authorities. From 1881 up to the time of his retirement, two years ago, Mr. Bohne was chief optician for the firm of A. Griswold & Co., of Canal St.

Trans-Atlantic Voyagers.

TO EUROPE.

Sanford Spitzel, of Sanford Spitzel & Co., New York, will sail to-morrow on *La Provence*.

H. Michalson, of I. L. Michalson & Sons, Montreal, Que., sailed, last Thursday, on *La Touraine*.

The Lawson-Rimmer Optical Co., Santa Rosa, Cal., has moved into new quarters in the Prince building, on 4th St.

The Kauffman Optical Co., on Sutter St. near Van Ness Ave., San Francisco, Cal., has put in attractive new fixtures.

The San Francisco Optical Co., San Francisco, Cal., has adopted the use of elaborately decorated gas lamps. The lamps give a fairly good light, and by having both gas and electricity one can be used when the other fails, avoiding an occasional annoyance.

Clock Manufacturers Forced to Advance Prices of Timepieces, Materials and Ornaments.

Manufacturers of clocks, materials and ornaments are quite generally advancing their prices in new catalogues and price lists now being sent out to take effect about Jan. 1, and in one or two instances the new lists are effective immediately on their receipt. The reasons given by the manufacturers are found in the greater cost of practically all the materials that enter into cases and movements and in the higher wages paid to labor.

The extent of the advance, while varying on different lines in accordance with the relative increase in cost of materials and the degree of labor involved, approximates 10 per cent, as a rule, according to the information obtained yesterday by a reporter of this paper, who called at a number of the New York offices.

All kinds of metal used in the factories for making clocks and ornaments have gone up to a remarkable extent since the present prices were recognized as standard, some of the materials costing double what they did a few years ago. Copper, which was formerly bought by the manufacturers for 12 cents, now costs twice that figure, even when bought from the producers. In the same period of time tin has increased in price from 24 to 43 cents a pound. Brass and bronze have necessarily kept pace with the advances in their constituents. Steel, aluminum, nickel, lead are each costing more than they did. The wood that is used in cases has gone up considerably.

On ornamental clocks, with cases consisting of bronze statuary and trimmings in brass, copper or silver, the increase in cost of materials is especially heavy. One of the manufacturers explained that the mere addition of the extra cost of the metal in the weight of the clock does not represent all the augmented expense, because much larger quantities of material are employed to appear in the article when it is finished, there being waste in all processes.

In the beginning of the present year it is noted in THE CIRCULAR-WEEKLY that conditions were impelling some manufacturers of clocks and art products in bronze and other metals to mark up some lines, but no general advance then occurred. The materials that had been getting more costly prior to that time have since been going up rapidly. A year ago copper was just touching 20 cents, tin was 36 cents and other metals were correspondingly less than at present.

Lancaster, Pa.

TRADE CONDITIONS.

The jewelers are more than satisfied with this year's holiday trade, because it not only boomed up in the outlook was bad for an even fair Christmas trade, but the last week before Christmas was the best in the history of the jewelry trade in Lancaster, and the same is true of the trade in the towns of Lancaster County. Money was plentiful and the finer articles of jewelry were chased in great quantities.

Willis B. Musser, Philadelphia, formerly of the old firm of Bowman & Musser, was in Lancaster last week.

J. H. Keller received ugly wounds on the head and hand last week by breaking the

glass front of a grandfather's clock in attempting to prevent it toppling over.

Joseph Zachs and wife, of Steelton, Pa., spent Christmas with his brother-in-law, Benjamin Lichtenstein.

Clark Houghton, late with J. E. Caldwell & Co., of Philadelphia, has taken a position with Louis Weber & Son as diamond setter.

C. E. Foose, E. R. Kant, F. A. Wheeler, W. M. Shute and Howard W. Detterlein, representatives of the Non-Retailing Co., all arrived home last week for the Christmas season work at headquarters.

A young man claiming to be Charles Weidler, of Lancaster, last week successfully operated a swindle in Petersburg and other places, selling a good many tickets which were to entitle the holders to chances in the drawing of jewelry in Lancaster. He disappeared before the police could arrest him.

Among the jewelers visiting this city last week were Albert T. Heberling, Parkersburg; Jacob Fisher, Elizabethtown; J. Harry Sensenig, New Holland; Mr. Burton, Reading, Pa., formerly with the Lancaster Clock Repair Co.; C. Helm, New Providence; N. W. Pinkerton, Manheim; G. L. Hepp, Lilitz; Henry Fochl, Columbia.

Connecticut.

S. L. Alford, Winsted, has left for a business trip to St. Louis in the interest of the Empire Novelty Co.

W. J. Larkin, Waterbury, superintendent of the Waterbury Clock Co., is confined to his home with a severe cold.

President Walter A. Ingraham, of the E. Ingraham Co., Bristol, with all the members of his family, left Tuesday of last week for Bermuda.

Included in the list of those who will shut down for but a short time during the holiday season are: The Meriden Cutlery Co., E. A. Bliss Co., Edward Miller & Co.

The Bradley & Hubbard Mfg. Co., Meriden, will close its factory Christmas Day and beginning with December 28 will be closed until Jan. 2 for inventory and repairs.

The blowers in the factory of the Waterbury Clock Co., Waterbury, took all three games from the Berbecker & Rolland team at the Brooster alleys recently. Mr. Schlagg rolled the highest score for the Waterbury Clock Co.'s bowlers.

Wilbur L. Hough will leave Waterbury, to-day, for San Francisco, Cal. Mr. Hough has been connected with the office of the New England Watch Co., in Waterbury, for several years. He goes to the Pacific Coast to join the company's office force there.

The trimmers and machinists of the Holmes & Edwards Silver Co., Bridgeport, rolled a close game at the Arcade alleys, recently, which resulted in the machinists winning out by a close margin. Deitz, of the machinists, made the best score of the evening, his total account being 420.

The Chas. Parker Co. has made no definite plans for the annual shut-down. The factory will be closed for Christmas Day, but the date of inventory has not yet been set. The Parker Clock Co. will close for Christmas Day, and later in the season for two weeks for the annual inventory.

News Gleanings.

J. C. Jones, Nekoosa, Wis., has bought the stock of Charles E. Briggs, Almond, Wis.

W. L. Smith, Malvern, Ia., has added a polished oak and plate glass wall case to his store.

Burglars who recently broke into the retail jewelry store of Robert Beacham, Birmingham, Ala., stole about \$150 worth of jewelry. There is no clue.

E. G. Lloyd, Olyphant, near Scranton, Pa., recently lost a large amount of his stock by a fire which did considerable damage to the business district of that town.

A. F. Puls, formerly of Kuesel & Puls, Milwaukee, Wis., is now located on the second floor of the Public Service building in room 2, Saginaw St., between 2d and 3d Sts.

A. F. Moses, who had been appointed receiver for the Brown Jewelry Co., Winston-Salem, N. C., sold the stock at public auction, recently. The purchaser was R. C. Click.

The store of Frederick L. Williams, Atlanta, Ga., was broken into recently and several watches were stolen. Entrance was gained through a rear window. There is no clue.

Arthur Troop and Fred, Colliver were recently taken into custody accused of being implicated in the robbery of stores in Sackville, N. B., including the jewelry store of Steadman & Co.

Nathaniel S. Ayers, of T. R. J. Ayres & Sons, Keokuk, Ia., died recently of paralysis, after a brief illness. He was 64 years of age and unmarried. A sister and four brothers survive.

It is reported that the supply of fine pearls from the Mississippi river this season has been much less than in previous years. Pearl buyers report that the finds have run largely to slugs.

George D. Holland, son of J. H. Holland, Concord, N. H., has received his appointment as a cadet at West Point to fill the vacancy which will be caused by the graduation of Clark B. Chandler in June, 1907.

A. J. Wiperman, Idaho Falls, Idaho, has decided to erect a brick building in Rigby. The structure will have a frontage of 23 feet and a depth of 65 feet. It will be occupied by Mr. Wiperman as a jewelry store.

Urvan Tuttle, 14 years of age, was recently taken into custody accused of attempting to rob the store of E. E. Teape, Sand Point, Idaho. Tuttle claims to reside in Reliance, Nebr. He has been held for the district court under bonds of \$500.

Another suit has been filed against the National Clock Co., John E. Chatman, of Hamilton, O., having brought action for \$265 for labor and material. The clock concern has called the annual meeting of the stockholders of the company for Jan. 8, 1907.

The store of Fred Strauss, Bismarek, N. Dak., was entered by thieves recently, and stock worth about \$350 was stolen. Mr. Strauss is a member of the Jewelers' Security Alliance. An attempt was also made to enter the store of J. B. Cook & Co. on the same night, by breaking a rear window, but iron bars across the window thwarted the purpose of the intruders.

"GEMFINDER" takes a melancholy pleasure in referring the trade to his advertisement of April 25th last, in the "Jewelers' Circular." Unfortunately, his prophecy has been fulfilled. Not only have Precious Stones advanced, but the end has not yet been reached. Sapphires have gone up at least 25 per cent. in the last six months, and they will go still higher.

"Gemfinder" again warns prospective buyers not to delay. All kinds of Precious Stones are scarce and prices on some may become prohibitive.

TRADE CONDITIONS.

From the reports gathered from retailers, wholesalers and manufacturers there is every reason to believe that this city's trade for the year is greater in volume and more profitable than for any other year. The jeweler appears to have profited this year from the trade successes of other branches, which was to have been expected, but hardly in proportion to the business done. Out-of-town retailers purchasing of local jobbers have been enthusiastic to a degree. Salesmen from New York and New England houses have also been welcomed. They have had little difficulty in seeing the buyers of the various houses and getting orders to replenish stocks. From no source is any complaint heard. All that now remains to be done is to take stock at the end of the year and balance accounts.

D. Wolf, 909 Vine St., one of the oldest and best known watchmakers in the city, is reported to be critically ill.

Charles Schlack, 2508 Frankford Ave., has as his guest over the holidays a daughter, who is in business in Boston.

S. Ottkay, lately with C. R. Smith & Son, has opened a store of his own on Kensington Ave. Mr. Ottkay was formerly in business on South St., near 20th St.

L. Ludwig, manufacturing jeweler, 128 S. 8th St., has the sympathy of his friends in the trade on account of the critical illness of his wife, who is in a hospital for treatment for a serious affection of her eyes.

Benjamin Krischer, of Morris Sickles & Sons, who has been ill with typhoid fever, is reported to be convalescent. On Christmas Day the employes of the firm presented Mr. Krischner with a present and some flowers.

Harry Lanz, George Donaldson and T. J. Campbell, of the Koshland & Italic Co., returned from trips Christmas Eve. It was to fill 11th-hour orders that they were kept out so late. The firm reports the best business in its history.

The wholesale jewelers will again this year enter an agreement to close week-days at 5 o'clock from Jan. 1 to Sept. 15, and on Saturdays during that period at 1 o'clock. This agreement will continue the one in existence for the present year. After Sept. 15 the trade is privileged to work as hard and as late as it pleases.

The Philadelphia Jewelers' Club began its Christmas festivities Sunday, when the huge tree was placed in position in the club rooms and the members employed themselves with boyish abandon in trimming it. But the great time occurred last night when the tree was denuded and presents were given to the most prominent members of the club.

Among the visitors to the trade during the week were: E. Allez, Millville, N. J.; Mrs. J. W. Clark, Bristol, Pa.; J. H. Shuler, Norristown, Pa.; J. S. Caldwell, Wildwood, N. J.; J. W. Parrish, Newark, Del.; M. E. Hunter, Beverly, N. J.; Ed. D. Oliver, Burlington, N. J.; E. K. Bean, Lansdale, Pa.; H. S. Kratz, Souderton, Pa.; Frank Kline, Spring City, Pa., and S. W. Hart, Kennett Square, Pa.

E. M. Bracher, formerly in the jobbing business for himself at 10th and Chestnut Sts., who was recently adjudged a voluntary bankrupt, has accepted a position as traveling salesman for M. J. Averbek, 19 Maiden Lane, New York City. Mr. Bracher has formally notified his friends in the trade of his city to that effect. He will begin canvassing the Philadelphia trade about the first of the year.

F. H. Chapman, wholesale dealer in sterling and plated flat and hollow ware and cut glass, 506 Commerce St., will remove Jan. 1 to 503 Commerce St., where he has secured an entire building. This change is made necessary to accommodate the increased volume of business. In his new quarters Mr. Chapman will be able to carry a stock of goods sufficient to meet every demand. Mr. Chapman has been exceptionally successful in the comparatively few years that he has been in business, and with increased facilities and more room is expected to broaden and strengthen his business.

Pittsburg.

R. G. Davis, formerly with Heeren Bros. & Co., goes on the road Jan. 1 for Benj. Allen & Co., Chicago.

M. S. Mead & Co.'s branch in this city expect to put on an additional traveling representative after Jan. 1.

Frank Lister, a young jeweler of Carnegie, Pa., is disposing of his stock at auction. He intends to move to Butler County, this state, where he has bought a farm.

The demand for watches in this city has been so urgent that local jewelers are actually taking all the samples of certain styles that representatives bring to this city. One jobber almost cleaned out the case of a representative of a large concern who arrived here last week from Buffalo.

The failure of the Farmers' & Drivers' National Bank at Waynesburg, Pa., is much worse than was at first supposed, and it is likely to cause business stagnation throughout Greene county, all of the banks of the county being located at Waynesburg. The cashier has been charged with forgery.

Among the out-of-town merchants who visited Pittsburg last week were the following: A. B. Kurtz, Connellsville; Roy W. Kuhns, Scottdale; H. R. Brown, Donora; W. F. Eyles, South Sharon; Henry Zilliken, Wellsburg; George C. Kurtz, Dawson; C. H. Bauer, Blairsville; Mr. Brady, Washington; E. H. Kennerdell, Tarentum.

Otto Heeren, of Heeren Bros. & Co., has been confined to his home for several days on account of illness. Overwork is assigned as one of the causes. Harry Heeren, buyer for the house, was also laid up for several days because of overwork. Several establishments have been crippled during the holiday rush because of the illness of employes.

In order to keep close to their place of business and be at work early to wait on the holiday crowds, all of the employes of Gillespie Bros. were last week quartered at a hotel just a few doors from the store, the male employes using a large parlor. Wednesday morning the hotel clerk got twisted in the call put in for 6 o'clock and the occupants of another room were routed out, while the Gillespie employes overslept themselves and were consequently late arriving at the store.

M. Floss, an alleged jewelry salesman, who was arrested by Detectives Robert Dennison and Morgan McDonald last week

at a house on Water St. as a suspicious person, was fined \$100 or 90 days in the workhouse by Magistrate Brady at the Central Station. Serious charges were made against the man by the detectives. Floss denied the charges, but admitted selling jewelry to immoral women. When Floss paid his fine Captain Eagan and Inspector Robert S. Gray ordered him to get out of the city at once.

William Roseman Haslett, aged 49, formerly well known in the trade as a member of the old firm of Haslett & Co., died last Tuesday in Pulaski, Pa., where he had gone three months ago for his health. While in the jewelry trade he was associated with his brother, George W. Haslett, who died several years ago. Mr. Haslett was a son of a well-known river captain, who owned much property in the hill district of this city, most of which still belongs to the estate. The funeral took place Thursday from 2011 Center Ave., this city, Mr. Haslett always expressing a desire to be buried from the old homestead.

West, White & Christy last week had a rather peculiar experience by which through a coincidence they were enabled to put a customer on the track of a stolen watch. The chief of police of Albany wrote to the firm regarding the number of a Duober watch found on a prisoner who had been arrested. The same mail brought a letter from E. F. O'Connor, Rochester, N. Y., inquiring for the number of a lost watch. This was the same as the other, 6,917,945. The chief of police at Albany had written to the manufacturers regarding the person to whom the watch had been sold and that official was referred to the Pittsburg firm. G. W. White of the firm answered Mr. O'Connor, simply saying: "The chief of police of Albany has your watch; communicate with him." Further details of the case are not known here, other than the person arrested had the watch in his possession when searched.

New Stores and Enterprises.

Holderly Bros., St. Louis, Mo., have opened a store in Salisbury, Mo.

W. H. Clinton has engaged in the retail jewelry business in Edwall, Wash.

The Gem Jewelry Co. has opened a new store at 17 East St., San Francisco, Cal.

J. Curry recently began business as a retail jeweler in the Wolfson building, Key West, Fla.

J. H. Geddes, formerly a watchmaker of Chicago, Ill., has opened a repairing business at Goshen, Ind.

W. M. Morrill is about to begin business as a watch and jewelry repairer in Westminster, near Los Angeles, Cal.

C. S. Star has just commenced business in St. George, Fla. His is said to be the only retail jewelry store within a radius of 25 miles.

The Gundy-Clapperton Co., Ltd., has been incorporated under the laws of Ontario, Can., with a capital of \$10,000, to manufacture and deal in cut glass, silver plated ware, jewelry, etc. The provisional directors are: Nathaniel F. Gundy, Harry G. Clapperton, William H. Wise and James H. Denton.

Providence.

The condition of Henry Tilden, of the firm of Tilden Thimber Co., continues to give encouragement, as he appears to have a fair prospect during the past few days.

After Jan. 1, the Kinney Co. will be represented on the Pacific Coast by Wood & Carr, of Los Angeles, while in Chicago C. J. Zeller will look after the concern's interests.

Among the imports at the port of Providence, last week, were 25 packages of imprecious stones from Bremen, two of the same kind from Hamburg and one from Havre.

More than the usual number of thefts of small articles have been reported to the police during the present holiday season, the jewelry counters in the large departments appearing to have an almost irresistible fascination for the shoplifters, most of whom are women.

Among the notable souvenirs of the holiday season are a handsome calendar, of various designs, being sent out to the trade by Macy & Elias, and a match safe and silver receiver of attractive workmanship being thrashed to the fortunate ones by Avery & Stone, refiners.

Gov. Uter has appointed Theodore W. Foster, of Theodore W. Foster & Bro. Co.; Harold J. Field, assistant secretary of the National File Co., and W. A. Viall, secretary of the Brown & Sharpe Mfg. Co., delegates to a proposed national convention having in view the extension of our trade with foreign countries. The convention is to be held in Washington, Jan. 14.

Martin, Copeland & Co., of this city, incorporated under the laws of the State of Illinois, last week, the papers of incorporation being taken out at the office of the Secretary of State at Springfield. The capitalization of the concern in this State is \$10,000, and the amount of capitalization in the State of Illinois was placed at \$40,000. It was explained by members of the firm in this city that the step was merely a technicality, as the concern had for some time had an office in Chicago and was incorporated in Illinois merely for more convenience in case it became necessary to press legal actions.

Attleboro.

TRADE CONDITIONS.

The jewelers are looking forward to a big year in 1907. There is no indication whatever of a slackening in trade, but the rush which has marked the past eight months seems likely to continue right into the Spring. At various times in the past six months publicity has been given to the plans for the erection of five new factories, and if these are put up next year will see the jewelers with better facilities than they ever enjoyed before.

The manufacturing jewelers report they have been handicapped to some extent the past few weeks by inability to get enough artificial stones, and to get them fast enough. The great bulk of the supply comes from abroad, and the delay seems to be in the European end.

The Tamton silver shops, or at least a part of them, are looking forward to a slowdown of a few days after Christmas. There has been such a feverish rush of

business that a pause for rest and repairs and changes about the factories seems imperatively needed. At last week the closing hour was 9 o'clock at night.

Although not talking much about the subject, the Attleboro jewelers take quite a pronounced interest in the movement started in North Attleboro to ask the President to use his influence toward having the date of Thanksgiving set a little earlier. No very sanguine hopes are entertained of success in any such line, but all agree that it would be a great convenience to the trade.

The D. F. Briggs Co. entertained its employees Saturday afternoon. At noon the women of the shop, 50 in number, were given a whiskey and luncheon by the firm. At the close a social was enjoyed and speeches were made by W. C. and Charles H. Tappan, of the firm. Then each woman and girl was presented with a greenback and the men employes received gold coins. Singing followed.

Col. Sidney O. Bigney, of S. O. Bigney & Co., a member of the Governor's council, and D. A. Hurtle started, Saturday afternoon, to chop down two 12-inch trees near the location of the new Bigney plant. The jeweler wagered that he could down one tree quicker than the lumberman, and he came within an ace of winning. Col. Bigney finished his tree and it fell about two seconds later than Hurtle's tree. "You gave me the best go I ever had," said Hurtle to the colonel.

North Attleboro.

Louis D. Barrows was in New York last week.

The Payne & Baker Mfg. Co. is closed until January 1.

The plant of J. F. Sturdy's Sons is closed this week for stock taking.

Harry W. Tufts has announced his candidacy for the Board of Selectmen.

Alvin Chisholm left Thursday on a middle western trip in the interests of Bugbee & Niles Co.

Arthur F. Codding, E. E. Hale and H. Alton Hill were elected to high office in Bristol Lodge, F. and A. M., this week.

Isadore Himmelreich, who was taken ill while on a southern trip for the B. S. Freeman Co. several months ago, is now able to resume his work.

Oscar H. Hornig, who for several years has been head shipping clerk for the Codding & Heilborn Co., will hereafter be its New England representative.

Power in the Totten building stopped Friday for several weeks. This is done to enable the installation of a new Corliss engine. The George G. Paine Co., J. J. Sommer & Co., W. G. Clark & Co., F. L. Shepardson & Co. and Casper, Mandalien Co. are the concerns affected.

Fred S. Gilbert, Frank L. Shepardson and Albert Totten announced last week that they would not consent to be candidates for re-election to the Board of Selectmen, where they have given efficient service for the past six years. Mauran I. Furbish intends retiring from the School Board.

W. S. Virt, Manson, Ia., is about to add a stock of jewelry to his business.

Boston.

Fire in the Studio building on Tremont St. early on Tuesday morning, Dec. 18, damaged the premises occupied by Henry Mitchell, seal and jewelry engraver, and William Buttinger, jeweler. The fire at one time threatened the old Music Hall property, between the Studio building and Washington St., and some damage from water resulted in the Marlboro building, where a number of jewelry concerns are located, on account of the bursting of a hose carried through that structure to throw a stream on the property menaced.

The Rogers Co., incorporated a few days ago for the purpose of taking over the T. F. Tuttle Co., which recently went into the hands of a receiver, has secured the plant, and succeeds to the business of the latter concern. George V. Rogers is the president of the new company, and Warren E. Van Wert is treasurer. Mr. Rogers is the proprietor of the Holmes & Blanchard Co., machinery manufacturers, this city, and is identified with a number of other important enterprises. Mr. Van Wert is associated with him at the headquarters of the machinery concern. The plant at Malden has been reopened, and is to have an increased force of workmen. For the present the office of the Tuttle company, in the Washington building, and the workrooms there, will be retained by the Rogers Co.

Canada Notes.

TRADE CONDITIONS.

Toronto merchants are having a record holiday season and business in jewelry is particularly good—necklets, locketts and bracelets in high grade goods being specially in demand. The call for silver toilet wares is probably greater than ever before, and sales of watches over the average. A heavy mail order business is being done. Reports from other parts of the Province indicate general activity. Dealers anticipated holiday requirements by buying early and freely and returns are highly satisfactory.

H. L. Hills, Nanaimo, B. C., is retiring from the jewelry business.

R. H. Tweedell, jeweler of Wolfville, N. S., died recently. The business will be continued by his son.

Out-of-town buyers calling on the Toronto, Ont., trade, last week, included: N. McLeod, Cannington; T. C. W. Watson, Newmarket; A. B. Willson, Georgetown; George Hynds, Acton, and E. D. Wilcox, Uxbridge, all Ontario.

New Orleans, La.

Lowergardt & Armstrong have installed many improvements on their handsome store in Bourbon St.

August Royer has moved his store from the old St. Louis Hotel, or State House building, in Chartres St., to lower N. Claiborne St.

The silver service made for the *New Orleans*, was formally presented to the battleship last week with appropriate ceremonies. C. E. Adler, who obtained the order, was generally congratulated for the beauty of the work.

The auction sale at the A. M. Hill store will soon be completed and the old and well known house will shortly pass out of existence.

GORHAM SILVER

A SEASONABLE PRECEPT.

¶ The Sagacious Jeweler does not allow the inevitable reaction which follows the bustling excitement of the holiday season to prevent his taking thought for the morrow.

¶ He recognizes, for instance, that provision must be made for the early wedding season which nowadays follows so closely on the heels of the New Year.

¶ More immediate urgency, however, attaches to the necessity of looking over depleted stocks and by judicious orders bringing them into a condition of unimpaired efficiency and completeness.

Greetings to Our Readers.

IN extending to you the greetings and felicitations usual at this season of the year, we wish to offer congratulations upon the prosperous business enjoyed during the past 12 months and extend the hope that 1907 will prove even better to you and all jewelers in all sections of the country than did its predecessor. We wish also to extend to the members of the trade our sincere thanks for the greatly increased co-operation and support rendered during the past year, which have permitted us to be of greater service to the entire industry.

We wish to assure our subscribers that the increased growth of THE CIRCULAR-WEEKLY, in size and circulation, means greater service to the jewelry trade than ever before. This journal and its readers form a family within the industry that can accomplish results that would be impossible for almost any other organization. Realizing our opportunities as well as the responsibilities which rest upon us as the organ and mouthpiece of so many merchants, it will be the endeavor of the management of this journal not only to produce a better and worthier paper during the coming year, but in every way possible to serve, guide and guard the interests of the industry to an extent never before attempted by a trade paper.

But the success of our work will be almost wholly dependent upon the co-operation of our subscribers, as it is only through and with them that our power and influence for good can be realized, and we, therefore, in the coming year bespeak the same aid and support from you that we have received in the past, in order that we may have cause to look back upon our work a year from now with even greater satisfaction and reason for congratulations than at present.

Collecting Data as THE Department of Interior has again sent out to jewelers and others

throughout the United States interested in precious gems, the annual circular requesting information about the discovery of precious stones within the past year. With the circular appears a long list of the gems that have been discovered in different sections of the country at various times, and the recipient is requested to enumerate opposite each name the amount and value of such stones as may have been found in his vicinity. Inasmuch as the work of the Geological Survey in this regard is a valuable record for the jewelry trade, dealers generally should see to it that all information that they may receive about the finding of precious gems is forwarded to the department in order that this record may be as complete as possible. The trouble of doing so is slight, but the result, if all mem-

bers of the trade do their duty, will prove most valuable not only to the Survey but to the trade as well.

The circular of the department announces the withdrawal of Dr. Geo. F. Kunz, who has for many years so ably collected the statistics for the annual official report and has written that section of the report devoted to the subject of precious stones. This work will in future be carried on by the organization itself and is in charge of Douglas B. Sterrett. All information, however, should be sent directly to the Director of the Geological Survey, Washington, D. C.

Jewelers who are interested in old silver should be careful to read the account which will be published in the next issue of THE CIRCULAR-WEEKLY telling of the discovery of a number of 16th and 17th century spoons, which were recently unearthed near Salisbury, England. The spoons are illustrated and the marks on them described by our correspondent, who had the pleasure of seeing them. The spoons are especially interesting as most of them appear to be of local manufacture, and until now, though Salisbury was mentioned in the act of 1423, and is one of the towns appointed to have "touch" of its own, no plate marks have been found which could positively be ascribed to it.

Of this the gold bars exchanged for gold coin are reported as follows:

| | |
|---------|--------------|
| Dec. 17 | \$98,205.19 |
| " 18 | 66,116.50 |
| " 19 | 67,226.65 |
| " 20 | 15,313.73 |
| " 21 | 25,408.62 |
| " 22 | 60,646.95 |
| Total | \$333,117.64 |

BESIEGED *by crowds of Holiday Buyers!*

This is a condition which is now confronting many jewelers.

Many of these buyers are calling for certain grades of diamonds and diamond jewelry which you may be temporarily out of, or don't regularly carry in stock.

You make or lose sales according to whether you can or cannot supply the goods quickly.

We can send any assortment on memorandum at once. This is the time to put us to the test.

ARCH CROWN MFG. CO. 26 Camp St. NEWARK, N. J., U. S. A.

New York Notes.

Invoice values of a quantity of hand-painted china imported from Limoges, France, by Charles Ahrenfeldt & Co., were advanced last week by the Board of United States General Appraisers.

At the auction sale of unclaimed goods, conducted last week in the seizure room of the Appraisers' Stores, 163 strings of coral beads were sold for \$261; a pair of diamond earrings for \$167; a diamond and emerald ring for \$180; several repeater watches for \$46 each.

Detectives have been notified that a reward of \$500 is offered for the arrest of Gabriel Hilt and Louise Louvs, who are suspected of stealing a quantity of jewelry. According to a report the gems are worth about \$20,000, but this is probably an exaggeration. An air of mystery has been thrown about the affair, because the police authorities have not disclosed the identity of the victim of the robbery. It is supposed that the couple who are wanted have recently come to New York from Paris.

As the time allowed for the government to appeal from the decision of the Board of United States General Appraisers in the coral case has expired, it is assumed that no further opposition will be made by the Treasury Department to the classification of coral when carved for use in jewelry as precious stones, dutiable at 10 per cent. ad valorem. Until the importers made a contest, they paid 50 per cent. under the provision of Par. 115, referring to manufactures of coral and other products. In the test case won by Garreaud & Griser, New York, the Board held that coral of the expensive kind, susceptible of taking a high polish and cut by a lapidary, is a precious stone.

Talking of the repeated reports in daily papers of the finding of valuable pearls in edible oysters and clams, a recognized authority in the trade said the other day that those stories reminded him of an experience he had several years ago. He had a round black pearl which he had obtained from a man who said it had come from an edible oyster. The authority mentioned this to a pearl dealer, who said he had also a black pearl. The two pearls were placed side by side and were, so far as the eye could judge, about the same in size and color and other qualities. It was suggested that one should buy the other's pearl, in order to have a pair, and then the pearl dealer remarked that his gem was only a common shoe button of the kind then in vogue. The recognized authority admitted that the joke was on him. That pearl, found in edible oysters and clams, never have the color or luster essential to give them value as gems, is a proposition on which the dealers are apparently agreed. Why the edible oyster does not secrete the kind of nacreous liquid that imparts beauty is another question. Several dealers who were asked about this said that the only answer is found in the fact that the edible oyster is a different kind of animal from the pearl oyster.

The prize of 6,000 florins offered by the Dutch government for the discovery of a new medium in which diamonds may be set in place of the lead alloy now used in dop

has not been awarded. An officer of the Diamond Workers' Protective Union, who took an active interest in the subject, said yesterday that although a number of persons, including several Americans, sent to Amsterdam mixtures of various kinds, yet none had been accepted. He said he understood that the offer was still open and the money would be paid to the first person who proposes a successful method of cutting and polishing diamonds without the use of lead. The objection to the lead alloy is in the risk of the workmen being poisoned. The men say that every now and then one of their number is incapacitated from work by lead poisoning, and sometimes the effects are of a most serious character.

Slight loss was caused recently by a fire in the jewelry store and the home of F. K. Kappelman, 74 Essex St.

Its annual meeting will be held by the 24 Karat Club, Thursday, at 3 o'clock, in parlor "L" of the Astor House.

Byron L. Strasburger & Co., 17 Maiden Lane, will in April next move to 56 Maiden Lane, where they have leased the entire seventh floor.

Charles Adler's Sons, importers of precious stones, have moved from 9 Maiden Lane to 527 Fifth Ave., corner of 44th St., in the Night and Day Bank building.

Arthur W. Payne will, after Jan. 1, travel through the southwest for Charles L. Tour & Co., 15 Maiden Lane. Mr. Payne was for six years the western manager of the E. Howard Clock Co., with offices in Chicago.

Sanford Spitzel, of Sanford Spitzel & Co., 71 Nassau St., will sail to-morrow on the *Provence*. While abroad he will visit the diamond markets of Paris, Antwerp and Amsterdam.

Samuel Spitzel, of I. Spitzel & Co., 14 Maiden Lane, and Miss Regina Schwenker are to be married next month. The groom's father has come here from London to be present at the marriage.

Sir Caspar Purdon Clarke, director of the Metropolitan Museum of Art, was the guest of honor last Wednesday at the exhibition of jewelry, ceramics and other hand crafts given by the National Society of Craftsmen at 119 E. 19th St.

Dividends of 19 per cent. are being sent by the Stationers' Board of Trade to creditors of the Van Buskirk-Crook Co., Manila, P. I. The claims represented by the board amount to \$10,000. Another dividend is expected inside of six months.

From Greensboro, N. C., comes a report that C. W. Hyams, after collecting 43 precious and fancy stones in that State, has sent them to New York to be strung in a necklace with gold ornamentation, expecting that the completed article will be worth at least \$700.

Henry Clay Ranney, a dealer in glassware, died recently at his home, 355 Decatur St., Brooklyn. For 30 years he was New York representative of Bryce, Higbie & Co., Pittsburg, Pa., manufacturers of glass tableware. He was one of the oldest members of the Crockery, Glass & Brass Association of New York.

From 33 States assurances have been given that they will be represented at the National Convention for the Extension of

Foreign Commerce of the United States, which is to be held at the New Willard, Washington, D. C., Jan. 14 next. The organizers of the movement are urging all commercial organizations to send delegates.

Arthur H. Buck, the salesman accused of pawning samples of his former employers, Abel Bros. & Co., was held last week for trial in Boston, Mass. The case will come up probably in January. A member of the firm said yesterday that nearly all the jewelry has been traced and pawn tickets for much of it have been obtained from the salesman.

Schless, Brod & Co., now at 1 Maiden Lane, have leased larger quarters in the Prescott building, John and Nassau Sts., to which they will move Jan. 1. The firm will be represented after the close of this month in the west by Franz Eschenburg, who was for many years with the Juergens & Andersen Co. He will have offices in the Columbus Memorial building, 103 State St., Chicago, and will call on his trade as heretofore.

A petition in bankruptcy was filed last Friday against Jacobson & Schechter, composed of Leopold Jacobson and Philip Schechter, manufacturers of mountings for umbrella handles and canes at 136 Thompson St., by these creditors: A & C. Marx, \$568; F. Peiffer, \$220, and Daniel A. Shaw & Co., \$416. It was alleged that the defendants are insolvent and have made preferential payments to creditors. Judge Holt appointed William Blain receiver of the assets, which are estimated at \$2,500. The firm was formed on Jan. 29, 1901, and succeeded Becker & Jacobson.

For trustees of the Stationers' Board of Trade, to be chosen at the annual meeting Jan. 8, the following members have been nominated: James C. Aikin, of Aikin, Lambert & Co.; Eberhard Faber, Carl M. Bernegan, of Keuffel & Esser Co.; David A. Tower, of the Tower Mfg. & Novelty Co.; Frank D. Waterman, of the L. E. Waterman Co.; Samuel Ward, Thomas P. Bacon, Henry C. Bainbridge, Wm. B. Boorum, Jr., Chas. S. Cooke, Stephen Farrelly, Chas. S. Kiggins, Chas. McLoughlin, Lyman B. Sturgis, Lawrence W. Sanders, Miles Vernon, John A. Walker, Franklin Weston.

In a printed circular recently issued with reference to Montana sapphires and mining prospects, there is given an extract from an official report made to the Government by Dr. George F. Kunz, of Tiffany & Co., other matter being interpolated. The report is credited to "George Francis Kunz, of Tiffany & Co." The circular has been issued without any knowledge on the part of Dr. Kunz, who wishes it known that he gave no authority to anybody to use the report in this way. His second name is Frederick and not Francis. He also calls attention to the fact that Tiffany & Co.'s name is copyrighted.

Some comment was heard last week because several members of the jewelry trade had received subpoenas to serve on federal trial juries. Coming in the rush of the holiday season, a mandate of that kind is not welcomed. The federal authorities, who were asked about the drawing of juries by a reporter of this paper, said that if any unusual number of jewelers had been named it was purely an accident. It was explained

that the names are drawn 100 at a time, or 250 if there is to be a grand jury as well as trial juries, and the list is then sent to the Marshal, who is required to bring in all the men named. Excuses can be granted only by the court.

Announcement is made that the Boost Club, which is to give its annual banquet Jan. 24 in the Hotel Knickerbocker, will thereafter give a series of monthly dinners, at each of which is to be a lecture on a topic connected with government, finances or foreign affairs. Speakers of national reputation are to be invited. The officers say that this organization, formed originally by young men in the stationery trade, has now among the members a number of jewelers, and they hope to increase this representation. At a recent meeting it was decided to accept as members gentlemen from any walk of life who believe in the club motto "to boost one another, to teach the beauty of modesty, self-sacrifice and true friendship, and consequently enjoy that only true happiness that comes from doing good to others."

Decisions were announced last week by the Board of United States General Appraisers in a number of cases involving duties on belt buckles and various other articles in which the question has been whether to place them in the classification of millinery ornaments or of jewelry. Buckles and ornaments whose chief value is in base metal or paste were held to come within the scope either of Par. 112 or of Par. 193 of the tariff law, relating to manufactures, and consequently to be dutiable at 45 per cent. Hat pins with plain imitation pearl heads were similarly classified, as also were unfinished brass snaps for toy necklaces and bracelets, and fan and muff chains made of base metal. In the case of all these articles the protests of the importers against the action of the collector in demanding 60 per cent. duty under the jewelry clause were sustained. Hat pins which have ornamental heads, more elaborate than the imitation pearls, were classified as jewelry, and the protests were overruled.

Newark.

G. A. Hauserman, 214 Main St., Paterson, was the subject of a double column picture and laudatory notice, published, one day last week, in the *News* of that city.

Carl Jung & Co., 160 Ferry St., have sold their business, including machinery, to Kamm & Berntheizel, 46 Oliver St. The retiring firm included Carl Jung, Robert Schill and Robert Jordon, who started the business last year.

While the case of Attilio Pennacchia, Hoboken, against Alexandria Sarti, was before Judge Stuhr, in the Hoboken District Court, one day last week, word was received that the defendant had died a few minutes before at his home. Sarti became ill at a prior hearing. The action was to recover \$300, claimed to be due on a sale of jewelry.

John Knowle, optician, has disposed of his business in Athens, N. Y., and taken a position in the optical department of W. M. Whitney & Co., Albany, N. Y.

VOL. LIII.

CHICAGO, WEDNESDAY, DECEMBER 26, 1906.

No. 21.

Chicago Notes.

Frank E. McCullen, manager here of the Wm. A. Rogers Co., Ltd., is spending the holidays in New York.

W. S. Willis, T. G. Jewett, R. S. Atwood and W. H. Burton, of the Gorham Mfg. Co., are in for the holidays.

Charles Lester, retiring from the office of the New England Watch Co. here, contemplates a visit to Texas to rest up.

Harry C. Fay has taken the representation of the T. I. Smith Co. of North Attleboro. Louis Fay, Jr., formerly had this line.

John J. Decker, with the Wm. A. Rogers, Ltd., was recently elected to the office of orator of the Edison Park council, Royal Arcanum.

R. L. Clark, O. F. Samuelson, E. R. Lusk, C. F. Haber and C. R. Downs, all of the Towle Mfg. Co.'s traveling force, will spend the holidays in this city.

H. A. Allen, who represents C. H. Allen & Co., Attleboro, Mass., will add the fine line of silver goods of the W. H. Saart Co., Attleboro, the first of the year.

Theodore Sundberg and his wife, Carolina Sundberg, and Albert Youngstrom were arrested recently for robbing the store of P. J. Kohl, 227 Orleans St., of \$800 worth of jewelry and other property.

The amalgamation of the Commercial and Merchants' Clubs has been perfected. A meeting of the two clubs was held at the Union League Club and both clubs voted unanimously to consolidate.

The banquet committee of the Chicago Jewelers' Association—Lem W. Flershem, A. L. Sercomb and M. A. Mead—have decided to hold the annual banquet at the Auditorium, Saturday evening, Jan. 19.

W. D. Kee, H. B. McKinley and Burton E. Chapman, of the traveling force of the Elgin National Watch Co., are in the city for the holidays. John H. Carr, of the same company, has now returned to his territory in the east.

Franz Eschenburg, who was formerly for many years with the Juergens & Andersen Co., is now representing Schless, Brod & Co., jewelry manufacturers, in New York, and has charge of their local office in the Columbus Memorial building, 103 State St.

E. V. Roddin & Co., as well as other firms who have had to work well into the

middle of the night in order to keep up with the rush of orders, have found that a barrel of apples opened up about 10 o'clock and freely distributed is a wonderful stimulant to a renewed effort.

Fred H. Colvin, who it will be remembered was arrested in the latter part of September in connection with B. S. Dennison, a former jeweler of Salida, Colo., was again arrested here on a charge of using the mails fraudulently in order to sell stock in the Boston-Colorado Co.'s mine. He was held under bonds to answer to United States Commissioner Foote.

L. A. MacKown, J. C. Cragin and F. W. Frank, all of the Chicago office of the Oneida Community, Ltd., will attend a general meeting of that company at Oneida, N. Y., between Christmas and New Year. J. T. Pierce, Wm. Barker and W. E. Spencer, of the R. Wallace & Sons' Mfg. Co.'s traveling force, are here for the holidays.

According to the police, somewhere in Chicago there lives a woman who has a diamond ring worth \$200 which she bought last week for \$3.98. The ring was purchased of a W. Madison St. jeweler, who wants the police to get it back for him. Happily for the clerks in the store, it was the proprietor himself who made the mistake. He waited on a customer who wanted a cheap imitation stone ring, and by mistake handed her a package wrapped up for another customer who had purchased a jewel worth \$200.

The New England Watch Co. emphatically denies that there is any truth whatsoever in the rumor current last week that the concern's office in Chicago was to be closed. In a statement made to THE CIRCULAR-WEEKLY the company states that it has not now or at any time had any expectation of taking such a step. This report, undoubtedly, came into existence owing to the resignation of the company's representative, Charles Lester, made necessary through his continued ill health. At the present no permanent successor to him has been chosen.

Pursuant to an order of the United States District Court, bids are solicited for the merchandise assets (in bulk) belonging to the bankrupt estate of J. F. Dailey & Co. by the American Trust & Savings Bank, the receiver of the corporation. The property consists of a stock of jewelry com-

posed of combs, lorgnettes, chains, fobs, lockets, cuff-links, bracelets, rings, brooches, diamonds, watches, studs, ear-rings, cut glass, silver and silver-plate, and articles usually sold in retail jewelry establishments, together with the fixtures. Bids will be received at the office of the bank up to Friday, December 28, at 9.45 A. M., at which time they will be reported to Judge Landis for approval. All bidders should be present before Judge Landis in Room 603, Federal building, at that time. A certified check for 25 per cent. of the amount of the bid must accompany each and every bid. The inventory of the property may be examined upon application to the receiver, or its counsel. This practically denies the order sought, as the receiver hoped to be able to dispose of the goods to Christmas shoppers. In the meantime A. H. Aylesworth, president of the concern, has filed his plea of solvency and asked for a jury trial. Hearing on the point by jury has apparently been waived, but Aylesworth claims he is making arrangements of a settlement with creditors.

Minneapolis and St. Paul.

Laurie Carlson, formerly with Rentz Bros., Minneapolis, died recently after a short illness.

The stock of W. L. Pettit & Co. is being sold to settle up the estate, Mr. Pettit having died several weeks ago at Minneapolis.

S. Gittelson, now located at 231 Nicollet Ave., Minneapolis, announces the removal of his store, Feb. 1, to quarters at 3 S. 5th St., near the West Hotel.

Peter Johnson, who has had a store at Camden Place, a suburb of North Minneapolis, has moved his stock about a mile and a half south to Thirty-second Ave.

H. Jorgenson, Superior, Wis.; John H. Ruge, Faribault, Minn.; W. G. Gould, Glencoe, Minn., and I. M. Radabaugh, Hastings, Minn., were among the visitors here last week.

The front window in the store of E. A. Warner, 467 Broadway, St. Paul, was smashed last week, but a nearby watchman heard the noise and accosted the burglars. A patrolman came along soon after, but the thieves escaped. There was about \$300 worth of stock in the window, but nothing was stolen.

St. Louis.

F. J. Bross, of the L. Bauman Jewelry Co., has returned from a successful trip over his territory, and will remain in until after the holidays.

Charles J. Celerstrom, who travels in the northwest for the Eisenstadt Mfg. Co., ended his trip last week, and will be in St. Louis early this week.

E. S. Gregory, of the traveling force of Wm. Weidlich & Bro., has gone to his home at Gallatin, Mo., where he will remain until after the holidays are over.

The building at Broadway and Olive St., in which is located the store of N. Roitman, will be torn down in the early part of the new year to make way for a larger structure.

James J. Burke, president of the Brooks Jewelry & Optical Co., is rejoicing over the fact that the Burkes now lead the St. Louis pin league, having won three successive games.

The Mermod, Jaccard & King Jewelry Co. is showing in one of its Broadway windows several of the prizes awarded at the Horse Show held here last Fall. One includes an immense cut glass cup.

Friends in St. Louis of J. E. Mann, Albuquerque, N. Mex., are sympathizing with him owing to the recent death of his wife. The deceased was buried last week in Newport, Ark., the home of her parents.

Of the visiting jewelers in St. Louis last week all were from nearby points. Among them were the following: W. J. Sproul, Sparta, Ill.; W. H. Jahn, Pacific, Mo.; Adam A. Hafner, Jr., De Soto, Mo.; M. Zeigler, Kimmswick, Mo.; Fred Simon, Collinsville, Ill.

Two watches of the value of \$25 were stolen Tuesday evening from a show case at the entrance of the stairway leading to the jewelry store of J. F. Dailey, 604 Washington Ave. The theft was an especially bold one, as it occurred while the streets were crowded with holiday shoppers. The timely appearance of one of the employes frightened off the robber before he could get the remaining six watches in the case. The man escaped. There is no clue to his identity.

Kansas City.

Fred L. Thompson, St. Louis, Mo., and Okey J. Casto, M. D., Ripley, W. Va., have just enrolled as pupils at the Southwestern Optical College.

Sam Bloom, traveler for the Meyer Jewelry Co., left last week to spend the holidays with relatives in Cincinnati.

Jake Levin, a traveling representative for Gonka & Kionka, returned from a short trip, last week. He says the out-of-town retailers have been very busy. He will stay in the house until after the first of the year, and will assist with the inventory.

The following out-of-town buyers have been in the market the past week, most of them leaving on Sunday: S. M. Coffman, Raymer, Mo.; Arthur Kroenke, Concordia, Mo.; E. Freeman, Paola, Kans.; A. Rosenfeld, Leavenworth, Kans.; Geo. Baer, Lee's Summit, Mo.; Gus. Willmann, Lawrence, Kans.; W. H. Meyer, Lawson, Mo.; C. W. Rodsham, Frodsham Bros., Savannah.

Mo.; Mr. Fowler, Parsons, Kans.; C. H. Paxton, Paola, Kans.; H. O. Woodbury, Olathe, Kans.; C. H. Munson, Olathe, Kans.; A. Hoffman and Fred Ritter, Leavenworth, Kans.; Mr. Roeder, Higginsville, Mo.; Mr. Tucker, of the Tucker Jewelry Co., Higginsville, Mo.; Mr. Davis, of Davis & Owens, Falls City, Nebr.; J. H. Riffe, Craig, Mo., and E. Hostetler, Garden City, Mo.

Denver.

J. Hamilton, formerly of Latrobe, Pa., is now with Frumess & Co., of this city.

Thomas R. Allen, of the Allen Mercantile Co., has just returned from a business trip to Boston, Mass.

Dan S. Park, of Dan S. Park & Co., has left for Roswell, N. Mex., to inspect his retail store there.

James E. Lewis, of the Lewis Jewelers' Supply Co., returned from a trip to the northwest, last week.

F. A. Sheffel, with the Providence Mfg. Co., has left on his southern trip through New Mexico, Arizona and California.

W. W. Hamilton, of W. W. Hamilton & Co., in speaking of the trade conditions here, says there never has been such a banner year in Colorado as the one just past.

Frank Carruth, formerly at Plattsmouth, Nebr., and later of this city, died Dec. 15 of paralysis. He leaves two sons, one an optician in this city, the other in business at Fort Morgan, Colo. Interment was at Plattsmouth, Nebr.

Charles Block, who traveled through the western States carrying jewelry as a side line, has disappeared with about \$200 worth of goods belonging to the Crown Mfg. Co. The last heard of him he was in western Kentucky. He is described as a Russian Hebrew, short in stature, dark and about 35 years old.

Out-of-town jewelers visiting the trade here during the past week, included: M. S. Solomon, Platteville, Colo.; S. Eslie Wynn, Walden, Colo.; A. Roseberry, Hooper, Colo.; P. M. Jones, Sawatch, Colo.; Mrs. Inman, Goldfield, Colo.; Mrs. A. Morgan, Longmont, Colo.; M. C. Witherspoon, Boulder, Colo.; A. Craig, Bentley & Craig, Boulder, Colo.; J. H. Nelson, J. H. Nelson Jewelry & Optical Co., Colorado Springs, Colo.; A. Rapin, Central City, Colo.

Omaha.

M. R. Johnson recently opened his new store at Axtell, Nebr.

C. L. Shook, of the Shook Mfg. Co., is home from a trip through the west.

Wm. Nere, with J. C. Hutson Optical Co., is confined to his home by illness.

C. L. Shook was elected High Priest of Bellevue Chapter, R. A. M., last week.

A. M. Church, chief watch inspector for the C. N. W. Railway of Chicago, was a visitor here, last week.

John Douglas, Onawa, Ia., and C. W. Sawyer, Silver City, Ia., were in this city, buying stock, last week.

Edward Elliott, the robber who was run down and captured after he and a confederate had robbed the store of Jos. Son-

nenberg, was arraigned in police court, Saturday, Dec. 15, and bound over for trial in the District Court under bonds of \$10,000. The complaint was sworn to by Mr. Sonnenberg Saturday morning, and alleged that Elliott robbed him of diamonds and jewelry valued at \$6,546. Each article that was stolen was carefully itemized, although it was at first thought the value of the stolen goods would amount to \$8,000. When Elliott was arraigned he refused to enter a plea, and the plea of not guilty was entered.

Cincinnati.

I. Gradinsky has opened a retail store at 2151 Central Ave., Brighton.

Anthony Schemel, 1953 Central Ave., has installed a new cut glass department in his store.

Jimmy Baker, of the Henkes, Baker Jewelry Co., Vincennes, Ind., was a visitor here last week.

L. H. Becht, with A. & J. Plaut, has been elected Senior Warden of the Wyoming Masonic order.

M. Schwab, of A. G. Schwab & Bro., was made treasurer in the lately organized lodge, B'nai Brith, No. 4, of Cincinnati.

William Willman and Joseph Mesch, of Mesch & Willman, leave about Dec. 27 for the south on their first business trips for the new firm.

S. & H. Gilsey have added to their road force Will Wilson, of Memphis, Tenn., and G. C. Emerson, of New Orleans, who will travel in the south.

Frank Thomas, a well-known watchmaker with George Simper, is receiving the many felicitations on his recent marriage to Miss Lida Heisel, of Westwood.

Edgar Fox, of Lindenberg & Fox, was summoned to Columbus, O., the past week, where he underwent an examination for the captaincy of a company of the First Regiment of the Ohio National Guard.

V. A. and Edwin Gebhardt, of Gebhardt Bros., have each lately received from a friend in Italy a handsomely cut cameo in onyx, made from photographs of themselves. The work is exceptionally fine and a perfect facsimile of the subjects.

Out-of-town jewelers who were here making Christmas purchases included: James C. Wilcox, Welch, W. Va.; V. Duncanson, Lynchburg, O.; J. A. Simpson, Ripley, O.; Rudolph Bentel, Hamilton, O.; Frank Emmerling, Hillsboro, O.; Charles G. Sederberg, Milford, O., and O. E. Me-Waters, Somerset, Ky.

Tuesday evening Nov. 18, when Joseph Mehmert was putting a tray of diamond rings in the safe at his Freeman Ave. store, he discovered that a \$150 solitaire ring was missing, and in its place a cheap ring with an imitation stone had been placed. The police are now looking for a woman who had called at the store in the afternoon. She was about 35 years of age and well dressed. She asked to see some solitaires, but was not satisfied, and then asked for cluster rings. As the saleslady turned to get them the woman said she would come in later and left the store. She is thought to belong to a band of pennyweighters who are going through the large cities at this time.

IMPORTERS AND CUTTERS OF

DIAMONDS

Loose or mounted goods on memo. to responsible dealers.

103 STATE ST., CHICAGO. COLUMBUS MEMORIAL BUILDING.

San Francisco.

T. G. Patton, Placerville, Cal., was in town during the past week.

The New San Francisco Loan Office has opened a jewelry store at 24 East St.

C. Kallmann & Son have renovated the interior of their store on Fillmore St.

The Landa Jewelry Co. recently opened another store at 22d and Mission Sts.

John Hood was here last week, ordering stock for his store in Santa Rosa, Cal.

John Kocher, San Jose, Cal., spent one day of last week with the local jobbers.

Read McGraney, Sonora, Cal., was a visitor here the earlier part of the week.

C. F. Gordon, Denver representative of the Morgan & Allen Co., spent a few days in this city last week.

The J. B. Whitney Co., in the Kamm building, called in all its traveling men to aid in the Christmas rush.

The securing of help was one of the gravest questions which confronted the San Francisco jewelers in their holiday rush.

Eugene Ely, a jeweler of Post St., near Fillmore St., was seriously injured during a recent wind storm. He was struck by a piece of cornice.

J. S. Lehrberger & Co., in the Mutual Bank building, have just received a large wall case fitted with sample drawers and other conveniences.

F. W. Lippman, Redwood City, Cal., was in this city last week. Mr. Lippman was in business in San Francisco prior to April 18, but since that time has been conducting a jewelry store in Redwood City.

Arthur Nordman, son of Mr. Nordman, of Nordman Bros., has decided to follow the jewelry business and will act as city salesman for the material department of Nordman Bros. in the immediate future.

The Morgan & Allen Co., in the Kamm building, on Market St., has just received two large display cases. This company has already let the contract for its new fixtures to be installed when it moves into the Jewelers' building.

Another new development in the jewelry trade this season was the number of department stores which opened jewelry departments in connection with their other ones. In some of these, as in the Emporium, the jewelry departments alone are as large as many of the regular jewelry stores in the city.

Pacific Coast Notes.

The store of J. Nye, Hollister, Cal., has been renovated.

J. F. Reed, Santa Monica, Cal., has removed from his old location to 239 3d St., in the same town.

James Pardee, Arcata, Cal., is selling out his entire stock and will hereafter devote himself exclusively to the repairing line.

Brigden & Pedersen, of Los Angeles, Cal., have moved to their new store at 507 S. Spring St., in the Hotel Alexandra building.

R. W. Huff, Orange, Cal., is selling out his stock and will shortly leave that place. His brother will succeed him in the repairing business.

Max Noack, Santa Rosa, Cal., has moved to new quarters in the Prince building, in that city. The new store is fitted up with entirely new fixtures.

Charles Sinbad, Oroville, Cal., has sold out to A. E. Casteldine and will remove with his family to San Francisco, where he will go into business.

Thomas Canty, of Canty & Goodenough, Watsonville, Cal., whose home is in San Francisco, Cal., is making a prolonged stay at Watsonville and may decide to remove permanently to that place.

H. A. Jago, St. Albans, England, who has been touring in California, has disappeared from his lodgings in Oakland, Cal., and H. A. Uridge, a friend, has notified the police. At the time of his disappearance, Nov. 9, Mr. Jago had considerable gold in his possession, and foul play is suspected.

Indianapolis.

TRADE CONDITIONS.

Though their books have not yet been thoroughly examined, local jewelers are confident that the week just closed was a record-breaker. The holiday business was unusually heavy and well distributed. It began early and continued late. There was a gratifying demand for staple articles, and while novelties and medium-priced gifts were much sought, the majority of the buyers made purchases of large value. Watches and diamonds had a splendid call. All the local merchants are well satisfied with the Christmas trade.

Gray, Gribben & Gray have erected a new electric sign in front of their store on N. Illinois St.

While in the city, last week, J. F. Schweiger, formerly of Delphi, announced that he had moved to Flora, Ind. He is a buyer in this market.

All the local jewelry shops had elaborate Christmas displays in their windows. Among the notable displays were those of J. H. Reed, Charles Mayer & Co., Carl L. Rost, F. M. Herron and the Hoosier Jewelry Co.

Jewelry salesmen have joined with other commercial travelers in petitioning Gov. Hanly and the General Assembly for a law making two cents a mile the maximum rate for passenger traffic in Indiana. It is predicted with confidence that such a law will be enacted early next year.

Because of the large crowds and the unusually big stocks carried by local jewelers this year, city patrolmen were stationed in the larger jewelry stores during the holiday rush. It was thought that the presence at the door of a stalwart and uniformed policeman would have a salutary effect upon shoplifters. Only one or two cases of thieving were reported.

Out-of-town jewelers who visited the local jobbers and manufacturers, last week, included: Samuel Prager, Terre Haute; Mrs. B. Maier, Edinburg; Philip Adler, Lebanon; J. L. Hastings, Sheridan; J. A. Meissen, Cicero; H. E. Kinnear, Marion; Charles Ham, Frankfort; A. A. Garner, Lebanon; H. A. Robert, Veedersburg; A. N. Canada, Winchester; C. E. Hodgen, Kokomo, and J. B. Johnson, Goodland.

Carl L. Rost, N. Illinois St., and S. L. Kiser & Co., Postal Telegraph building, will have to find new locations. The Claypool building, in which Mr. Rost is located, has been leased for 99 years to a syndicate of St. Louis men, who will raze the building and erect an 18-story skyscraper on the site. A ground lease for 99 years has also been taken on the site of the Postal Telegraph building and adjoining properties,

and a 17-story office building will be erected by Indianapolis men.

The Marion County Grand Jury has concluded its investigation of the origin of the fire that threatened the block in which Horace A. Comstock's store is located. It is expected that indictments will be returned against one and perhaps two persons. The fire started in the basement beneath the Comstock store, and there is no doubt that it was the work of incendiaries. Empty boxes, excelsior, coal oil and candles had been used in starting the fire. Quick and effective work on the part of the firemen prevented a conflagration. Part of Mr. Comstock's store is occupied by Mrs. Phelan, a hair dresser.

The police have been unable to get any clew to the diamond lifter who succeeded in stealing a \$350 stone from Gray, Gribben & Gray. The thief is described as being of dapper appearance, with a well-fitting suit of black, a black overcoat, and a black hat. The man was noticed particularly because of his aristocratic appearance and bearing. He had a swarthy appearance not unlike that of a Spaniard, and wore a closely-cropped beard in addition to a moustache. He was about 40 years old. A. W. Gray, who waited on him, asked what size of diamond he desired, and the man said he wished to see a stone weighing from one to one and one-half carat. A paper containing nine diamonds was spread out on the show case for his inspection. Mr. Gray watched the man carefully, and did not let him pick up any of the stones. It is thought, however, that the stranger had glue on his fingers and in that way got away with the stone. As the man started away, Mr. Gray counted the stones and found one missing. He started after the man, but he had disappeared in the crowd in the street.

Rochester.

TRADE CONDITIONS.

Rochester retail jewelers are more than satisfied with the results of the Christmas business. All last week the stores were crowded to the utmost and although the jewelers kept their stores open until 10 o'clock each evening, it seemed almost as if it were not long enough. Good sales were reported in silverware and watches, while diamonds made an excellent showing. Buyers were liberal and paid good prices. The weather as a rule was fair and brought out the shoppers and they purchased extensively. Several of the prominent dealers asserted that the holiday business of this year will exceed that of 1905.

The annual banquet of the Rochester Credit Men's Association will be held at the Eureka Club on Jan. 24. There will be three prominent speakers. A reception will be held from 6:30 o'clock, followed by the banquet at 7 o'clock.

The nominating committee of the Rochester Chamber of Commerce named the following as candidates for office in the Chamber for 1907: President, Michael Doyle; vice-pres., Charles F. Garfield; second vice-pres., Lansing G. Wetmore; third vice-pres., W. H. H. Rogers.

Arritt & Co., Newport News, Va., have just finished installing fixtures of mahogany and plate glass in their store. At the formal opening of the establishment souvenirs were distributed to every lady in attendance.

Special Attention Given to Order Work.

364 Washington Street, Boston, Mass.

If You Know the Marks

you are not confined to the limitations of your stock, but will be able to supply any goods desired. Frequently a resident of a town or city will return from a visit to a larger city, bringing back an attractive novelty or piece of jewelry that is greatly admired by her friends, who will probably want to obtain others like it. They will first call on a local jeweler and if he is not an up-to-date jeweler he will turn them away disappointed because he has not the articles in stock. If, however, he is a progressive dealer, he will examine the trade-mark on the article, identify the maker and send for a line on memorandum. He will tell his prospective customers that he has not the goods in stock just at present, but will have them in a few days. He will make a sale, and every sale counts. But more than this, he will agreeably surprise and please his patrons and will convince them that it is not necessary to go out-of-town to obtain the latest and best productions of the jeweler and silversmith.

“TRADE-MARKS OF THE JEWELRY AND KINDRED TRADES”

(Second Edition)

will enable the jeweler to identify the maker of any article embraced in the jewelry and kindred trades. It illustrates 4,000 marks and covers every branch of the trade. It also contains much interesting and valuable reading matter on the subject of trade-marks in general.

One jeweler, after having the book for a while wrote: “This book has been invaluable to us upon many occasions. Like the cowboy's pistol 'tis not required every day, but when needed it is wanted quite bad.”

PRICE \$3.00,
Express Prepaid.

WHICH IS CONTAINED A LIST OF THE LATEST PATENTS GRANTED BY THE UNITED STATES AND GREAT BRITAIN, THE UNITED STATES PATENTS THAT HAVE PIRES AND THE REGISTERED TRADE-MARKS.]

UNITED STATES PATENTS.

ISSUE OF DEC. 18, 1906.

8,619. CANDELABRUM. ANTHONY C. GUNTZER, New York. Filed March 3, 1906. Serial No. 304,071.

A candelabrum, a cruciform body comprising transverse member and upper and lower longitudinal members, detachable from each other, and a

gle fastening device for securing said members together, said members having socket-tubes extending through them, the bores of which tubes are conical, being of least diameter at their bottom ends.

8,750. ENVELOPE-OPENER. JOSEPH RINDSBERG, Richmond, Va. Filed Nov. 8, 1905. Serial No. 286,409.

An envelope-opener or paper-cutter in which are combined a cap adapted to fit a thumb or finger of user, a knife, adapted to be opened and closed, which when open stands with its sharpened edge

ect to and substantially parallel to the side of cap, and a lock-hinge for securing the knife to the exterior of the cap, whereby said knife

may be held in either an operative or inoperative position.

838,918. ELECTRIC ALARM-CLOCK. LOUIS TREDE, Durant Ia. Filed June 15, 1906. Serial No. 321,861.

The combination with a timepiece, of a contact-ring mounted on the dial thereof, an alarm-hand rotatably mounted on the dial and carrying a con-

tact-spring to engage the contact-ring, a point carried by one of the clock hands to depress said spring, and an electric circuit including an alarm, and having as its terminals, the contact-ring and contact-spring.

838,953. ADJUSTABLE MIRROR-HOLDER. STACY E. CRANE, New Orleans, La. Filed Nov. 11, 1905. Serial No. 286,869.

In a device of the character described, the combination of a bracket provided with a rack portion, a mirror-supporting arm comprising strands

of wire, one strand being bent to provide a rack-engaging hook and to connect the other strand thereto against relative movement and having its extremity disposed with relation to the extremity of the other strand to provide a rack-engaging guide, and a mirror secured to said supporting-arm.

839,045. JEWEL REMOVER AND SEATER. HENRY STRAW, Anacortes, Wash. Filed Nov. 15, 1905. Serial No. 287,440.

A jewel remover and seater, consisting of lever-handles pivoted together and provided with pins in rear of their pivot, jaws pivoted to the forward ends of the lever-handles and having their rear ends slotted to receive the pins of the handles, a spring having its ends engaging the rear ends of

the jaws, a cup carried by one jaw, a revoluble head mounted on the other jaw and carrying a plurality of punches in its inner face, and a sliding and spring-pressed locking-pin mounted in a recess of the jaw carrying the said head and having its end entering a recess of the head, said locking-pin being provided with a handle.

839,047. FASTENER. IRVING M. SYLVESTER, Providence, R. I., assignor to Parks Bros. & Rogers, Providence, R. I. Filed April 19, 1906. Serial No. 312,569.

The combination with the hollow wings of a bracelet, of a block in the end of one wing and curved to conform to the curvature of the wing

and formed with a slitted end and compressible members with rounded shoulders, the slit extending

eccentrically of the block, and a member in the end of the other wing having a shoulder within the wing and a beveled outer end.

DESIGNS.

38,360. BADGE. HENRY J. HAGERLING, Belleville, Ill.

Filed Nov. 12, 1906. Serial No. 343,161. Term of patent 14 years.

38,361. LAPEL BUTTON. ARTHUR JOHNSON, New York.

Filed Nov. 12, 1906. Serial No. 343,305. Term of patent 17 years.

38,362. EMBLEM. CORNELIUS FLORA, Schenectady, N. Y.

Filed Oct. 15, 1906. Serial No. 339,118. Term of patent 3 1/2 years.

38,364. HANDLE FOR SPOONS, FORKS, OR SIMILAR ARTICLES. MURRAY B. LEETE, Wallingford, Conn., assignor to R. Wallace & Sons Mfg. Co., Wallingford, Conn.

Filed Nov. 12, 1906. Serial No. 343,160. Term of patent 14 years.

38,365. PLATE OR SIMILAR ARTICLE. GEORGE A. ALEXANDER, Philadelphia, Pa., assignor to William Linker, Philadelphia, Pa.

Filed Sept. 22, 1906. Serial No. 335,818. Term of patent 7 years.

38,377. CLOCK-CASE. ABRAHAM A. NEWMAN, Chicago.

Filed Sept. 19, 1906. Serial No. 335,831. Term of patent 14 years.

(Patents continued on page 74.)

BRITISH PATENTS.

(ABRIDGMENTS OF SPECIFICATIONS, 1905, FROM *The Illustrated Official Journal.*)

ISSUE OF DEC. 5, 1906

16,610. MATCH-BOXES, ETC. J. YARDLEY, Birmingham. Aug. 16.

Match-boxes and the like are made so that the contents can be delivered singly. Inclined plates E, E', Figs. 1 and 2, guide the contents on to the flange c⁴ of a tray C, which is pivoted at c² and

work through a slot in the side of the box, the flange closing the slot when the box is not in use. Projections F, F¹ prevent more than one match from being delivered, and a vertical partition may be fitted to prevent interference with the pivot of the tray.

16,611. CARD, ETC., CASES. J. YARDLEY, Birmingham. Aug. 16.

Relates to card cases and the like from which the cards are delivered singly by levers. Projections c² on a lever C, pivoted at c¹ and operated

by a thumb-piece c², force the card back partially through a slot in the top of the case. A spring or springs on the lid a² press the cards against the back of the case, and a bridge F prevents them from interfering with the movement of the lever.

16,636. CIGAR, ETC., CASES. M. P. KIPPING, Berlin. Aug. 16.

Matches are held in the covers of cigar or cigarette cases by means of bands d which are

either stamped out of the material of the cases or fastened by any means. A striking-surface e is provided.

(Reference has been directed under Patents Act, 1902, to Specifications No. 24,410, A.D. 1894; No. 18,011, A.D. 1898, and No. 9832, A.D. 1902.)

16,685. WATCH STANDS. M. KOLLER, Winterthur, Switzerland. Aug. 17.

A watch stand is combined with an ordinary pocket electric lamp which can be removed and used for other purposes as usual. The stand comprises a plate a, a hook b for the watch, a tray c for the chain, etc., and a bracket d carrying a

deflector f. The lower part e of the bracket carries a spring k, and a pocket electric lamp g is supported partly on this and partly on its contact-

button i. On the lamp being pushed downwards, the watch is illuminated. The stand may be modified for placing it on a table.

16,695. TOILET-POWDER RECEPTACLES. G. HANNING, Hamburg, and F. FELDTMANN, Altona-Ottensen, Germany. Aug. 17.

A box a from which toilet or other powder may be either sprinkled or applied by a powder-puff h is made conical at the top and ends in a short

neck b, the top being perforated and provided with a cover d. Inside the box is a partition e having a central hole. When it is desired to employ the powder-puff, the box is inverted and the top inserted in the stand g, which is shaped to receive it.

16,768. VEIL FASTENINGS. E. MANN, Brondesbury, Middlesex. Aug. 18.

A clip for securing a lady's veil beneath the chin is formed of a loop 1 to which is hinged a tongue 5. Knobs 7, 7a, over which the bow 6 of

the tongue can spring, serve to secure the tongue when turned to either side. The loop 1 may be attached to the veil by means of a pin.

16,856. WATCHES. C. GLAUSER PERRIN, Le Locle, Switzerland. Aug. 19.

Keyless Mechanism.—The winder-knob rod i, solid with the knob k, can move longitudinally in the pendant l, which is soldered to the case, a

screw n on the pendant working in the guide o. The rod i bears against the nose g of a lever c, which is pivoted to any fixed part of the movement and bears on a rocking lever e, which, under

the action of a spring p, normally presses the sliding pinion f into engagement with the winding-pinion q, so that the watch may be wound by turning the knob k. On depression of this knob, the lever c is turned, rocking the lever e and

lowering the pinion f into engagement with the minute-wheel s, when the hands may be set. In the arrangement shown in Fig. 3, the knob is depressed to wind the watch, and drawn up to set the hands. The rocking rod and sliding pinion may be replaced by other mechanism, similarly operated by the winder-knob rod and nose-lever.

16,914. CLOCKS AND WATCHES. F. McINTYRE, South McAlester, Choctaw, Indian Territory. Aug. 21.

Winding Indicators.—In a winding-indicator, particularly applicable to ordinary watches, the extent to which the mainspring is wound is indicated on a scale in a depression in the dial by the hand 32 of the indicator wheel 26, which is mounted on a hollow arbor concentric with the seconds' hand arbor. A swinging arm 7 is frictionally mounted by means of a split collar on the

undercut hub of the winding-ratchet 4, and carry a compound wheel 8, having two sets of teeth 10, the former set of which are in constant engagement with the ratchet. When the watch is wound, the arm 7 is swung to the right, thereby putting the gear 10 into engagement with the teeth 18, which communicate the motion to the winding-indicator through gearing 17, 20, 23, 26. To ensure the return of the indicator to its starting point, the wheel 26 has a toothless portion 40, and the wheel 20 is frictionally mounted on the arbor 21 by means of a tension plate 25, and the teeth 10 are in excess of those required for exact action. The winding being completed, the arm 7 is automatically swung back by the working of the pinion 39 in a slot in the spring-pressed pawl 37 disengaging the gearing 10, 18. As the mainspring unwinds, the indicator is operated from the barrel-gearing by a slip pinion 15 frictionally mounted on the arbor 12, the gearing 17, 20, 23, and 26, the rotating in the reverse direction. Fine pointed teeth are used for the gear 10, 18. Figures, visible through an aperture in the dial, may be carried by the indicator wheel, the hand 32 being the dispensed with.

Complete specifications accepted Nov. 28, 1906, 1905.

24,514. CLOCK STRIKING MECHANISM. LAKE. 1906.

17,916. TIMEPIECE. TAVIRA.

Applications filed Nov. 19 to Nov. 24, 1906

26,121. PIN GUARD. ARTHUR WILLIAMS, Torrington, Conn.

- pandy, South Wales.
- 6,164. HAT-FASTENER. ERNA HABBEMA-HORAK, London. Complete specification.
- 6,172. MATCH BOX. R. H. WORLEY, London.

- 6,562. COMBINED POCKET KNIFE AND INK ERASER. CROSSLAND BROS., Sheffield.
- 6,741. CUFF-HOLDER. A. E. DREW, London.

UNITED STATES TRADE-MARKS.

The following trade-marks have been adjudged entitled to registration under the Act of Feb. 20, 1905 and are published in compliance with Section 6 of said act. Said section provides:

Any person who believes he would be damaged the registration of a mark may oppose the same filing notice of opposition, stating the grounds therefor, in the Patent Office, within 30 days after publication of the mark sought to be registered. Such notice of opposition shall be verified by the person filing the same before one of the officers mentioned in Section 2 of this act. If no notice of opposition is filed within said time the commissioner shall issue a certificate of registration therefor, as hereinafter provided for.

Trade-marks which are stated to have been "Used 10 years" are registrable under the last proviso of Section 5 of said act, which is as follows:

And provided further, that nothing herein shall prevent the registration of any mark used by the applicant or his predecessors, or by those from whom the title to the mark is derived, in commerce with foreign nations or among the several States, with Indian tribes, which was in actual and lawful use as a trade-mark of the applicant or his predecessors from whom he derived title for years next preceding the passage of this act."

D. E. Dungan, Massena, Ia., has given a bill of sale for \$1,500.

A pair of diamond earrings valued at \$145 were stolen from the store of Frank G. Meyer, Dayton, O., a short time ago, by a pennyweight thief, who is described as being 45 years of age, with gray hair. He wore a dark brown cloth overcoat and derby hat.

Thieves recently made an unsuccessful attempt to enter the store of G. L. Moss, Victoria St., Amherst, N. S. The entrance to the store has a large and small lock, and the thieves succeeded in turning the large lock with a master key, but failed to open the smaller one.

Congressional Notes.

WASHINGTON, D. C., Dec. 19.—Senator Bulkeley has introduced a bill to provide for the granting of suitable medals to the survivors and heirs of volunteers of the Port Hudson forlorn hope storming party, a sufficient sum to be set aside for the purpose by the Secretary of the Treasury.

Senator Lodge has introduced a bill for the prohibition of the employment of children in the manufacture or production of articles intended for interstate and foreign commerce. This would forbid the introduction in interstate commerce of any article in the manufacture or production of which a minor under 14 years of age has been employed, also between the ages of 14 and 16 unless such children shall have been granted a certificate by the school authorities of the city or town in which they reside testifying to the fact that they are able to read and write the English language.

Senator Flint has introduced a bill to provide for the holding of an exposition near Los Angeles, Cal., to commemorate the opening of the Panama Canal. This would include exhibits of arts, industries, manufactures and the products of the soil, mine and sea, to be held in 1915, as this is the year in which it is anticipated that the Panama Canal will be opened. The exposition would be known as the Universal Peace and Commerce Exposition.

Representative Russell has introduced a bill to provide for the amendment of the bankruptcy laws so as to provide for the payment of adequate fees in certain named instances, among others that the referees in bankruptcy shall receive as their compensation after the work is done, to be paid out of the estate administered by him, \$15 to be deposited with the clerk of the court for each individual or person filing, or against whom a petition in bankruptcy is filed, except when a fee is not required from a voluntary bankrupt or bankrupts, 25 cents for the filing of each proof of claim, pleading, motion or other paper, 50 cents for each order. Two per cent. commission on all moneys disbursed by the receiver or trustee including settlements or transfer of property of the estate in satisfaction of lien or mortgage claims, where no actual moneys have been received or disbursed.

Another bill bearing upon the abolishment of child labor in the United States has been introduced by Senator Beveridge forbidding the carriage, by any person engaged in the carriage of interstate commerce, of the production of any factories or mines in which children under 14 years of age are either employed or permitted to work. Further, that no carrier of interstate commerce shall be allowed to transport or accept for transportation the products of any factory or mine offered by the owners of same or their agents, until the president, secretary or other person having the proper authority and in control of the factory or corporation shall file with the carrier an affidavit to the effect that no children under 14 years of age are in his employ; the form of this certificate to be prescribed by the Secretary of Commerce and Labor.

H. S. Wernicke recently installed mahogany fixtures in his store at Greencastle, Ind.

*The Great Driving Wheel of a

THE HOROLOGICAL REVIEW

The Action of Magnetism on Pocket Chronometers.

By L. GULLIN, Director of Industrial Physics at the University of Besançon.

(Continued from issue of Dec. 19.)

Now let us take a magnetized cylinder with movement. Its magnetic curve is represented by Fig. 8.

We here see four magnetic centers where lines of force originate whose arrangement could only be determined by experiment. The barrel with its spring is at B; the balance spring with its index at S; the nose of the click-spring at A; a screw with a large head at V. The other steel parts, such as screws and pivots, apparently do not furnish magnetic centers.

Let us further consider two lever move-

tion of rate resulting from its change of position relative to the points of the compass, which amounts to causing the forces due to magnetization to vary. As we saw in examining the preceding figures, the mutual action of magnetized parts is interval action, and for moving parts (balance spring, barrel, mainspring) the forces are alternatively accelerative and retardative; it follows, therefore, that the variations of

(2) It would be well, before starting a chronometer, to determine the magnetic moment of the balance, whether furnished with its balance spring or not, and probably all balances would show magnetization.

(3) It would be expedient to study the systematic variations of rate according to the compass bearing of the figures XII, III, VI, IX directed toward the magnetic north, and to deduce from them a formula for correction.

(4) To regulate at 440 degrees the total extent (amplitude) of the oscillations of the balance, according to the rule discovered by Phillips, to eliminate the action of the terrestrial magnetic course. But this amplitude is hard to reach, and, particularly, to maintain. It would be well to put watches in a thick iron box to remove

FIG. 9.

P, steel pendant; Rc, crown ratchet; Rb, barrel ratchet; E, click-spring; B, balance and its spring.

rate will correspond to the variation of those forces.

Let us, then, turn the figures XII, III, VI, IX on the dial of a watch laid horizontally successively toward magnetic north. After each change of position of the watch Mr. Cornu has observed a perceptible variation of rate. As there was no other disturbing cause than that of the terrestrial magnetic field, the variation of rate could only be attributed to the influence of that field. Mr. Cornu sums up his observations as follows:

(1) Chronometers are influenced in their rate by the variations of the magnetic field in which they are placed, and according to the degree of magnetization of the balance and balance spring. The influence is more to be feared on ships whose hulls are of iron, and according to the route followed by those ships the variation of the magnetic field should make itself felt appreciably.

FIG. 10.

P, steel pendant and winding stem; Rc, crown ratchet; Rb, barrel ratchet; E, click-spring; B, balance and balance spring; A, regulator or index.

them from the magnetic influence of the earth and from the armor of the ship.

To these experiments of Mr. Cornu we might add one other, which probably shows one cause, doubtless a feebler one, of the variation of rate of a chronometer.

Let us recall that in 1824 Gambey discovered that a magnetized needle which oscillates in a terrestrial magnetic field comes to rest easier when it is placed above a metallic mass, such as copper. Arago inferred from this that there is a force between the needle and the metal, and which

FIG. 8.

ments, each provided with its pendant; we obtain Figs. 9 and 10.

On these two figures we note a series of magnetic poles which indicate the existence of parasitic forces due to magnetization and whose influence upon the regulation of the movement is far from being a negligible quantity.

Let us recall an experiment made by Mr. Cornu, member of the Institute, who has devoted much attention to questions of chronometry. In a note which appeared in the *Comptes Rendus de l'Académie des Sciences* (Nov. 26, 1900), Mr. Cornu reports the results of observations made on a magnetized watch, in regard to its varia-

SAN FRANCISCO OFFICE, 704 Market St.

is opposed to their relative movement, and might appropriately be likened to the force of friction.

In a wooden box A B C D is a copper disk Cu (Fig. 11), which can be turned horizontally by a gear and a crank. The box is closed by a cover A B made of hide, stretched upon which rests the support of the magnetized needle N S. When the disk turns by a uniform and slow movement, a constant deviation of the magnetized needle is seen. If the speed of rotation be increased, the deviation increases and the needle can be drawn along with the disk.

Herschel and Babbage in 1825 made the contrary experiment. The movable copper disk was placed above a magnet which was caused to turn; the disk was drawn along by the magnet. The explanation of this phenomenon was given by Faraday as soon as he had discovered induction. According to the experiments called inductive, the magnet shows the existence of electric cur-

FIG. 11.

rents brought into the disk, and which tend to destroy by reaction the movement which produced them, which is equivalent to friction.

In a magnetized chronometer the balance and the balance spring take the rôle of a magnetized needle and cause currents in the plate which act as a brake and tend to diminish the range (amplitude) of oscillation, whence a variation of rate should result. Moreover, the existence of these induced currents is put to use in the construction of galvanometers, of electromagnetic brakes capable of exerting up to 10 h. p.

We must infer from what precedes that the magnetization of watches and the variation of this magnetization add one difficulty more to those of mechanical adjustment.

[THE END.]

H. S. Hewett & Co., Brockton, Mass., have completed extensive improvements in their store at the corner of Main and High Sts.

A fire, which originated by an electric light bulb coming in contact with some celluloid combs on display in a show case, wrought considerable damage to the stock in the store of W. H. Miller, Uniontown, Pa., about a week ago. The loss is said to be \$800, which is fully covered by insurance.

About Jan. 1 C. R. French & Co., Phoenix, Ariz., will move from the Goodrich block, on Center St., to the Porter block,

Watch Repairing.

By II. REINECKE.

(Continued from issue of Dec. 12.)

THE imperfections in the correct centering of wheels cut or to be cut on the Swiss wheel cutting engine, mentioned in the communication of Dec. 12 on page 87, readily suggests the substitution of the hollow-center spindle of the headstock of the famous American watchmaker's lathe in place of the hollow brass spindle in the Swiss wheel-cutting tool. Originality for the suggestion of such a change can hardly be claimed, as altered Swiss wheel-cutting engines are in existence where such a change has demonstrated its success. But while such a change may be a proper one for the owners of old fashioned tools of this description, it is questionable whether the manufacture of such would be a financial success, as amateurs and model makers would probably be the only purchasers.

For the study of depths the cutting of wheels and pinions experimentally may be useful in furnishing practical instruction to the amateur or the student; but in a general business way the cutting of wheels and pinions may be done by professionals at a price, or may be had from the material dealers for the ordinary run of watch work. For those interested a description of a change made in a Swiss tool may be acceptable. The horizontal brass bars of the Swiss tool are bushed with steel bearings for accommodating the spindle of the headstock of a No. 2 watchmaker's lathe. The throat of this spindle has a hardened blank chuck with a throat for accommodating the chucks of a lathe No. 1 or No. 1½, which arrangement needs a second drawing-in spindle.

A number of solid soft chucks suitable for clock and watch wheels and for pinions are necessary. The cutter carrier is also a hollow spindle like a small American lathe, with a drawing-in spindle. It has fitted to it three solid chucks, one for circular cutters, one for fly cutters and one for finely serrated cutters for slotting pallet blanks or for other purposes. The cutter spindle is operated by a hand lever and the up-and-down motion of an upright slide, which motion is limited by a stop screw. Attached to this slide is another slide crosswise, very much like an ordinary slide rest. This second slide can be moved sidewise by a micrometric screw in increments of thousandths of an inch or hundredths of a millimeter for adjustment for cutting wheels and pinions, escape wheels, racks, and for slotting pallet blanks for jewels.

Clock and watch wheels of every description are cut by fly cutters, which rotate at a speed of several thousand revolutions per minute. These fly cutters are made of square steel rods, about 3-16 of an inch wide, of which one corner has been removed, leaving a flat side, with the remaining three corners intact. The chuck for carrying these cutters has a square hole punched through its axis in such a manner that the flat face of the cutter is parallel to the length of the chuck. A jam screw holds the cutter in position. Cycloid teeth for racks can be cut with great precision by means of the micrometric leading screw. Steel blanks for jeweled pallets are slotted

with the assistance of the index plate, marking 360 divisions to the circle, and a couple of loose gauges for regulating the depths.

Pinions can be cut in factory style by a chuck carrying a slitting saw and two forming cutters, the three being adjusted by three corresponding stop screws, each having 100 threads to the inch. These three screws are carried in a revolving disk which, by rotation, present each at the proper place during the shifting of the cutters.

(To be continued.)

A Novel Clock.

A N ingeniously constructed timepiece, made to run and to keep time with a single wheel, has been invented by C. H. Bridgen, Los Angeles, Cal. The wheel is not a gear wheel, being merely a perforated disk, so that the clock might be called a gearless clock.

A quarter-inch ball rolling on two in-

GEARLESS CLOCK, MADE BY C. H. BRIDGEN.

clined plates takes the place of pendulum and gearing. This steel ball rolls over the two inclined plates in just a minute of time and rolls off the lower plate into the lower hole of the disk, at the same time releasing the disk, which is always under tension imparted to it by two ball weights suspended in towers.

The disk carries 30 balls on one side, and, when released by the rolling of the ball from the lower plates against a locking device, the disk turns the space of one hole, or one minute, and brings the uppermost ball into position to roll on the top plate and begin its zigzag course down the two inclined plates as did the preceding ball. Each ball rolls over the plates once every 30 minutes.

Does a watch run better lying flat on its back or on edge? I put this question to half a score of dealers and none answered it, says a facetious scribe in the *N. Y. Press*. Apparently none had thought of it. Perhaps a majority of men place their watches under the pillow at night, where they lie flat down for about eight hours. During the remaining 16 hours they are on edge in the pocket. A watch in the pocket is warmed by the heat of the body. A watch on the bureau is cold. How is it affected? In a show window is a watch frozen solid in a 200 pound cake of ice, keeping excellent time. In another window is a chronometer at the bottom of a tank of water ticking away merrily and accurately. I have looked in vain for a time-piece smiling in a furnace.

Some Case Pointers!

There's just as much difference in watch cases as in the people that carry them. Some are good and up-to-date—a large number are questionable.

If you want the snappiest designs and choicest case ornamentation, you need

An Interesting Universal Clock.

Compiled from the *Oesterreichisch-Ungarische Uhrmacher-Zeitung* for THE JEWELERS' CIRCULAR-WEEKLY.

IN the Maria Josefa Park, in Vienna, recently thrown open to the public, the firm of Heinrich Kapeller, of Vienna, has erected a meteorological booth to the order of the municipal council which must be regarded as an object of remarkable interest, both on account of its handsome decoration and the high quality of its instruments.

General curiosity has been excited by a universal clock constructed with great care by the Vienna clockmaker, Anton Rapf, from a plan drawn up by Theodor Lauda, director of the high school in Leitmeritz. This is a strongly made eight-day clock with seconds pendulum (having a Riefler

exact mean local time in hours, minutes and seconds, together with the day of the week, can be read off from it by means of the hands, which are formed in the ordinary way. These same particulars are, moreover,

which will at the same time gratify the eye of the public without any detriment to its main purpose.

Fig. 1 shows the booth, which is constructed entirely of iron on a pedestal of

UNIVERSAL CLOCK ERECTED IN VIENNA.

DIAL OF VIENNA'S NEW UNIVERSAL CLOCK.

shown for every place on the earth marked on a ring revolving in the same direction as the hands. The interest excited by this clock is materially increased by the circumstance that, being apparently as exact a model as possible of the only perfect time-keeper in nature, viz., the earth, it possesses an eminently educational value, since it teaches people more clearly to understand and appreciate the ingenious time-measuring instrument, so indispensable to all.

With regard to the performance of the clock, it may be mentioned that in spite of the encumbrance of the dial rings, the operation of the striking-work, etc., no greater difference in rate than a second in the day can be detected.

We may also draw attention to the tasteful ornamentation of the dial, and particularly to the accurate division of this complicated system. The clock is fixed in the booth in such a position that it can

be easily inspected even by short persons, a decided boon to the public. Many persons in the trade will characterize the clock as a toy—we have already heard this opinion expressed—but it should be remembered that we have at this day reached such a degree of technical proficiency as to be able to produce something practically useful and

The Watch Industry to be Represented at the Jamestown Exposition.

SHOWING every phase of watch manufacture, the Waltham Watch Co., Waltham, Mass., has perfected arrangements for a most novel and comprehensive exhibit of the watch industry at the coming Jamestown Exposition. The company has engaged 2,000 square feet in the Massachusetts section of the Manufacture State's Exhibit building, where this working exhibit will be installed in charge of expert workmen.

A significant fact connected with this exhibit is that it is the first exhibit that company has made since the Chicago World's Fair, the Buffalo, St. Louis and Portland expositions having been passed by. This exhibit will show how the watch is made, beginning with the rough metal, until the finished product is reached. The way it will be arranged and the manner it will be carried out will make it one of the most interesting exhibits from the Bay State.

nickel-steel compensation). It has an hour and quarter-hour striking work, arranged separately and causing the bells, which are visible under the cupola and which can be heard at a considerable distance, to sound the quarter hours.

The dial, of which we show a separate cut, is 50 centimeters in diameter, and the

Watches Independent of Fashion's Caprice

WHILE THE WATCH undergoes slight modifications from time to time as to size and thickness of models, etc., these changes are never so radical as to greatly depreciate the value of the preceding forms. It is different with many other products which the jeweler handles, especially during the holiday season. A sudden change of popular taste, a caprice of fashion, may suddenly rob certain lines of their demand. In strong contrast with such conditions is the permanency of the demand for watches, which these offices continuously and satisfactorily supply.

The TEST of a Good Watch

EVERYBODY'S MAGAZINE

The Rockford Watch Test

EVERY Rockford Watch is run without a hairspring before it gets one. Because that proves perfect parts accurately put together. And when a watch that has passed this Rockford Test is properly adjusted, it will remain an accurate keeper.

proper purpose of "adjusting" is the outside natural conditions inaccuracies—such as the wrong position and the expansion caused by heat and "balancing" and "balancing" the adjusting upon to overcome defects in the watch.

COLLIER'S

Proving Watch Perfection

TWO things cause inaccurate time-keeping in a watch, broadly speaking: Defects in the watch itself and outside natural causes, such as the effect on a watch of the constantly changing position in which it is carried and the expansion and contraction caused by heat and cold.

McCLURE'S MAGAZINE

How Can we Know a Good Watch?

By the time it keeps. Not while it is new, but for the years it must serve you. The common fault in watches is that they become inaccurate. There is no reason why a watch should not remain accurate. The reason so many do not remain accurate is that the "hair spring" and "balance wheel" are called upon to overcome defects in the watch itself.

The Rockford Test

Time for a Lifetime

influences can be avoided, which is sufficient weight in the

OPTICAL DEPARTMENT

The Optometrist's Catechism.

A SERIES OF QUESTIONS AND ANSWERS ON ELEMENTARY OPTICS, IN CATECHETICAL FORM.

By E. Lo Roy Ryer.

Copyright, 1903, by THE JEWELERS' CIRCULAR PUBLISHING CO.

(Continued from issue of Dec. 12.)

Q.—(682) What are the chief features of the periscopic and the coquille lens?

A.—Inasmuch as the toric lens is the next to receive consideration, and as one of its principal features is so closely allied with those of periscopic and coquille lenses, it has been deemed proper to first enumerate the properties of the latter with a view toward affording a better understanding of those of the former.

Periscopic lenses were mentioned by Kepler in the year 1611, and were definitely described by Hertel in 1716. Wollaston, about 1808, strongly recommended their use, and in some manner his name has undeservedly become associated with their invention.

The term periscopic comes from the Greek periskopeo—peri meaning around and skopeo signifying look, and the entire word meaning, therefore, look around, or viewing on all sides. Herein lies the chief feature of the periscopic lens, that it gives a far wider field of vision than will the plano or double form of the same size. It is further claimed for it that it will not cause as much distortion when looked through obliquely as will the other forms. A less important feature is that the periscopic presents a much neater appearance when used in a spectacle or eyeglass than do the other forms, and this is particularly noticeable when the periscopic concave is used instead of the double concave, the former looking much better whether viewed from the front or from the side.

With few exceptions, everyone dislikes wearing glasses; it is the optometrist's duty to see that where glasses must be worn they are made to look as neat as possible, and toward this end the following rule should be kept in mind, namely, always place a convex surface forward if possible; if no convex surface exists place a plano surface forward in preference to a concave.

Manufacturers have agreed to use one -1.25 D. spherical curve on all their convex periscopic lenses and a $+1.25$ D. spherical curve on all their concave periscopic lenses. This is of particular usefulness when bifocals are called for, because one side of all segments used for these lenses has one surface that will exactly coincide with the standard curve of the upper lenses; thus,

instead of having to grind the segments special in each case, stock segments may be carried that will fit stock lenses. One side of these lenses being of a standard curvature, the other side is altered to give the desired effect. For instance, all convex periscopic lenses having a -1.25 D. curve on one side, if we desired a $+3.00$ D. lens

FIG. 104.

we must grind a $+4.25$ D. curve on the other side, in which case the standard -1.25 D. power counteracts the power of the $+4.25$ D. curve to that extent, leaving a $+3.00$ D. effect. If we desired a -2.00 D. periscopic lens, we would grind a -3.25 D. curve on one side and the standard $+1.25$ D. curve on the other would counteract that to the extent of 1.25 D., leaving in all a -2.00 D. effect.

The periscopic lens led naturally to the coquille, which is really nothing more than an accentuated periscopic lens—that is, instead of having a 1.25 D. curve it has a considerably greater one as its standard. The difference should here be noted between the coquille as we have known it and the coquille as we, no doubt, will soon know it. The old coquille was usually a moulded or pressed lens, either white, blue or smoke, and supposed to have no power, being employed, as a rule, for protection against wind, dust or strong light; seldom, however, were these lenses perfect, for not

only were their surfaces wavy or otherwise asymmetrical, but the refractive index varied in different areas of the same lens, and nearly every coquille had an irregular concave effect; this concave power was actually harmful in many instances. The new coquille came in with the toric lens. Many carelessly assume that spherical effects are obtained with toric lenses; this is not so, because the very nature of a toric lens is such as to embody a cylindrical effect; therefore, if you desired a $+1.00$ D. spherical lens you could not get it, in any practical manner, in the form of a toric lens. It is thought that were a -6.00 D. curve ground on one side and a $+7.00$ D. curve on the other a $+1.00$ D. spherical toric would be the result. The $+1.00$ D. sphere is obtained, but it is not a toric lens, because a toric lens has two different curvatures on the same surface and this necessarily produces a cylindrical effect. Therefore a spherical lens with one deep concave surface is not a toric but meniscus. This latter term has not found favor, it seems so it is safe to prophesy that such lenses will be called coquilles. Such lenses are now ground accurately, affording a far wider field than even the periscopic, causing less distortion when looked through obliquely, and presenting a decidedly more artistic appearance than any other form. Their cost is not so much greater than the periscopic as to be prohibitive, and that will be reduced when they come into more general use, and as the machinery used in their manufacture is improved.

The term coquille is derived from the French coquilles, signifying a shell. It is pronounced co-kil, as though it contained no u. Standard Dictionary defines the term as "the broad part of the guard of a sword-hilt," but this seems a specific application, as it is when we use it optically. One point should not be overlooked, namely that it was called coquille because it resembled a shell, but the coquille lens was formerly almost exclusively a colored lens and whether the term was given such a lens because it was shaped like a shell or tinted as are most shells cannot be definitely stated, and care should have been exercised in selecting this term to designate the new form of deep periscopic or meniscus lens and care must be taken now to avoid confusing the new, accurately ground, optically perfect coquille lens with the old, imperfectly moulded coquille.

The relative values of the coquille and plano lenses' fields of vision can be estimated by referring to Fig. 104. Both of these lenses are the same size, and both are shown set as close to the eye as possible.

Optical Department.

without touching the lashes. C represents coquille lens, giving a field of vision included between A and A', while P represents a plano lens giving a much smaller field of vision included between B and B'.

Types of Congenital Symbol Amblyopia.

Lecture delivered by J. HERBERT CLAIBORNE, M.D., New York, in the Section on Diseases of Children of the American Medical Association, at the 57th Annual Session, June, 1906.

N. PRINGLE MORGAN, of Scaford, Sussex, England, was the first to point out that, in addition to the word-blindness which is the result of acquired cerebral lesion, there is a word-blindness congenital in nature which he has suggested is due to defective development of the word memory centers of the cerebral cortex.

This communication was followed by the case of Hinshelwood and Nettleship, of Buenos Ayres, and others; the experience of all who have observed and studied these cases simply justifies the final and simple conclusions of Morgan. The first American observer who has rendered any observations on this subject is Schapinger, of New York, who read a paper on the subject before the Section of Ophthalmology of the New York Academy of Medicine, Feb. 19, 1906. His paper on that occasion was followed by one by myself in which I referred to two cases. That paper is the basis of this one.

It was my purpose to present an extended study of two boys whom I have repeatedly seen and who have shown themselves so backward in learning to read that the first blush it excited in my mind was a suspicion of congenital word-blindness, owing to the shyness of both of them. I have not been able to study their cases as carefully as I wish, and am compelled to present my views after a more or less imperfect investigation. I do not doubt, however, that in these two boys there is a congenital deficiency, or at least a tardy development of the word-memory centers; and the class of cases to which they belong should be clearly and definitely differentiated from those cases of word-blindness which occur in cerebral degeneration, intracranial tumors or lesions and injuries. Congenital word-blindness appears to me to be a department of pediatrics and neurology which has not received the attention it deserves.

CASE 1.—A boy, aged 10, was sent by his father to my clinic at the New Amsterdam Eye and Ear Hospital on account of an injury to his left eye. In my opinion the injury has no bearings on the symptoms which I have observed, and it is sufficient to say that he received a blow from a small shot that was thrown or fired at him by a comrade. He said the shot landed under his upper lid and fell out on examination of it by his sister.

Examination.—He has a vitreous opacity, a ruptured iris, and greatly diminished vision in his injured eye. It was, however, fully free from irritation.

While examining him I was struck by

his slowness and peculiarity, and asked his mother what his status at school was. She said he had never yet been able to learn how to read, but could write a few simple words. I tested him on his alphabet. At times he named some letters correctly, and later on failed to name the same ones correctly. I then asked him to make several letters of the alphabet, when he made repeated errors. When asked to write capital K he wrote capital T; for capital T he wrote little t, and he could not write u at all.

Although he had written a K for a T, when asked to write K he could not make it, but when asked to write his name he did so with readiness. His name is James Kennedy and he did not halt at the K. I believe his name was written automatically. The letter E seemed to have great difficulty for him. He called it S at times, at other times correctly, and finally returned to calling it S. He wrote his name James correctly, but he could not call the letter E after he had written it. He kept calling it S, although it was pointed out to him and he himself pointed it out clearly.

His refraction was about emmetropic, but I could get no accurate test of vision since he was never certain about his letters. His field of vision was normal, and he was right-handed. In other respects he was fairly bright, seemed to understand words and commands, knew the meaning of ordinary words, recognized objects and their uses, and according to his mother was talkative, communicative, even garrulous at times, and played with other boys in the street in a normal manner.

I had a letter from his teacher, and she sent me a few tests which she made of his writing at dictation and at copying. He writes very well, particularly his name, and I repeat that this act appeared to me when I examined him to be done automatically. As stated, he was right-handed and evidently copied correctly.

I myself made some tests of his spontaneous writing, which I have unfortunately lost, and which exhibited the earmarks of classical motor aphasia, although it must be remembered that motor aphasics, as a rule, write no better from dictation than they do spontaneously. His inability to learn his letters accurately, his consequent inability to remember and recognize words, smacks of just ordinary ignorance, and there is a strong temptation to dismiss the case by calling the boy a fool; but his obvious general intelligence about objects, his normal perceptions in recognizing the meaning of spoken words, and his obedience to commands that involve other things than writing save him from this criticism. He is normal in respect of reading written or printed words or letters. His word-blindness is not for other written symbols, for he can easily recognize and correctly call figures.

This case is then distinctly anomalous and is not a pure case of word-blindness, for it bears some of the marks of motor aphasia, *e. g.*, the meaningless scroll which he wrote for me spontaneously. He is obviously word-blind for written and printed letters, but not so for figures. I have described his condition as word-blindness, but this expression is incorrect. I would

describe it rather a word-amblyopia for written and printed alphabetical signs or symbols.

It appears just to me to coin this expression, "word-amblyopia," to describe these cases in which the word-blindness is incomplete. The lesion is doubtless a congenital one, and it probably consists in imperfect development and tardy reaction of the word and letter memory-cells. I believe the lesion to lie high in the cerebral cortex, probably in the region of the angular gyrus on the left side, seeing that the boy is right-handed.

CASE 2.—A boy, aged nine, in higher walks of life than the first, was brought to me by his father to see if there was anything the matter with his eyes, since he has never been able to read.

Examination.—He is a bright, smart, alert boy, comprehends words and sentences perfectly when spoken and knows common objects and their uses, but the moment he is set to look at written or printed words or to write at dictation he becomes confused and shows all the signs of shyness and a lack of self-confidence. He recognized his letters without error, but when the letters were put together to form words the difficulty began.

He called the word "how," "you"; "are," he called "ray"; "made," "ham" and "man"; "get," he called "gee" and "give," and on a third trial "eat"; "ham," he called "eat" (here we recognize a faint association of ideas); "monkey," he called "kind"; "sky," "kind"; "floor," "four"; "chair," "cy." When asked to write "wood" he wrote "dans"; "dog," "dad"; and "by," "bi." "Rat" and "cat" and "all" he spelled correctly; "horse," he spelled "hoise"; "there," "thit"; "mama," "mie"; "papa," "pipa," and "eye" he could not spell at all. He wrote his name accurately and quickly, but apparently automatically, and called it correctly afterward, but "James," which he had written with a y, he called "this." My name "Herbert," he wrote from dictation letter by letter, "Herbdred," and called it "purram"; "Anna," he called "Ed."

When asked to make figures his whole demeanor changed and he approached the desk cheerfully and with apparent confidence. He made figures accurately, knew them all, and did several small sums in addition and subtraction as quickly as any child of his age could.

I do not believe there is any sign of motor aphasia in this case, because, although he wrote at dictation imperfectly, yet the letters of his writing were all correctly made, while they were improperly put together. They never degenerated into a meaningless and unrecognizable scrawl, as is common with motor aphasics when they write spontaneously or at dictation. His vision was normal; his fields, also; and he was right-handed. The significant and peculiar fact of this case is that the boy can recognize letters, the component parts of a word, and can pronounce each letter in each word; but when he has finished he cannot, except with several well-known words, such as cat, rat and dog, make the sound which the combination of letters really warrants; nor can he in many instances remember the pronunciation which has been fixed by authority.

(To be continued.)

RETAIL JEWELERS ADVERTISING

on account of the fact that the latter is at that time in a buying mood, and this strong impression can be sustained and made lasting only by continuous advertising. This does not signify that the reader may always be kept in a buying mood, but that the advertiser's name will ever be identified with the selling of jewelry. Discontinue the advertising and the reader will forget the advertiser, when he is about to make a New Year gift, which he may have neglected. Then, again, New Year advertising, aside from its commercial motive, should make a personal appeal to customers. Thank them for their patronage, give them a few happy thoughts to dwell upon, and, without harping too much on the perfunctory Happy New Year phrase, wish them well and let them know that you take a real human interest in the general spirit of optimism which pre-

New Year Advertising Now in Order for Belated Gift Givers. Christmas Advertising Early and Vigorous this Season.

"THE day after Christmas," not a great while ago, when merchants were compelled to be as enterprising and commercially conceivably as now, found many adver-

to rust, their implements of business combat—their direct and indirect advertising. Our advertising methods have evolved with the times and we have been forced to

The collage features several prominent advertisements:

- LAY-AWAY TIME IS HERE** (R. HARRIS & CO.): A large central ad for a deposit plan on jewelry, listing various items like necklaces, earrings, and watches with prices ranging from \$25 to \$100.
- Ice Water Pitcher** (J. J. Sweeney Jewelry Co.): An advertisement for a silver pitcher, priced at \$3.25, with a note that it is 'Ordinarily' priced at \$100.
- Weddings Every Day** (J. J. Sweeney Jewelry Co.): An ad featuring a woman in a wedding dress and listing various wedding-related jewelry items.
- Jaccards** (Mermud, Inccard & King): An advertisement for an 'Exquisite Collection of Electrolytic' jewelry, highlighting 'New Importations' and listing items like diamond brooches and bracelets.
- Opening** (Henry Berlovitz): An advertisement for a new store opening, listing 'Watches, Diamonds, Jewelry and Solid Silverware'.
- The Christmas Watch** (S. J. Tuck): An advertisement for a 'diamond watch' with a 'solid gold case'.
- Gifts for the Bride** (Mermud, Inccard & King): An advertisement for various jewelry items suitable as wedding gifts.
- Our Diamonds** (Mulford Jeweler): An advertisement for diamonds, mentioning 'OUR CASH PRICES Mean Quite a SAVING to You'.
- Moore—Watches** (Lawrence L. Moore Co.): An advertisement for watches, listing various models and prices.
- Cut Glass** (S. Jacobs & Co.): An advertisement for cut glass items, including a 'Watch'.

A COLLECTION OF ADVERTISEMENTS USED SEVERAL WEEKS BEFORE CHRISTMAS.

tisers in a passive mood. Then, unlike the present, publicity was not known as the real life of trade, and consequently advertising was not the all-important factor in the scientific marketing of a product. Members of the old school, at that time, felt that the rush and hustle were over and laid aside, perhaps

"keep going" with renewed energy, even after the aftermath, if we wish our business to continue to prosper. It is a great mistake to cease advertising just after Christmas—first, because the previous advertising has operated to make a particularly strong impression upon the prospective purchaser,

vails. In this manner your patrons will be made to feel that they know you and your wares, and when they are in that mood they will not only continue to patronize your establishment but will cause their friends to do so.

A Study of Advertising.

LOUIS S. WARNER, in the *General Merchants' Review*.

ADVERTISING is a subject which, although universally discussed, is always open for an attack. I will say attack in this instance, for advertising is, more or less, subject to abuse without notice. Not only does the reading public, but advertisers themselves, firm believers in advertising, will at times ignore the fundamental rules which they themselves contribute toward good advertising, and allow the results of their work to be reproduced in such a manner that all is in vain. In bringing this subject before you I have classes of advertisers and all methods of advertising under consideration, and am referring to any particular class or method, but am trying to make clear some of the many good things advertising brings about by its existence. As a relative to business, advertising is very often turned on.

It is the smaller dealer who generally objects to advertising, and it is usually his last resort as a means of upbuilding or creating a sensational interest in the direction of his wares. He is continually advocating to all large houses, especially those which do mail order business, are a nuisance and detriment to his business. Has he paused for one moment? In which time he readily ignores the results of advertising, for this is the only method used in which they can do him any harm, as he will ever see their wares continually before the public. Here is where we will say let advertising be the foundation of every business.

In this great day and age the 20th century looks upon advertising as still in its infancy, although it has existed for centuries and was supposed to have originated in the Far East. In Rome its most primitive form was the public crier for announcing things lost, found or stolen, runaway slaves, articles for sales or all things pertaining to business nature. Then local shop signs and wall inscriptions came into vogue and set forth their information and announcements until the invention of printing brought forth new methods in the shape of signs, hand-bills and newspapers.

The first newspaper advertisement in America appeared in the *Boston News-Letter* established in 1704, a two-page paper printed on a sheet eight inches by 12, with two columns to the page. Compare the papers of to-day with the *Boston News-Letter* and think of how millions of people peruse the columns of papers, magazines and periodicals of all descriptions, looking for news or items of interest, and how they give up in good spirits thinking of how much some of the advertising is going

to benefit them, and others give up in despair, making an assertion that "such a paper or magazine is not as interesting as it used to be," although its pages have increased in number; its columns are too much taken by ads in their estimation.

Alas, here is where our sympathy should be meted out to such humble souls. To consider advertising a nuisance, by such a few, would mean a public blessing in their light on such work. What a radical change would be brought about all over the whole universe if such a thing were to happen—that is, the discontinuance. Ask yourself the question, will advertising ever cease?

But before trying to answer, picture to yourself a few things or conditions which would confront us if such were the case. Take one of our daily papers of to-day. Remove the advertising and what would be left? About one-fourth of the original copy. The results are that such news would not be of much interest on a condensed sheet, as people always consider articles of news printed in a smaller edition less interesting, for they are brought to notice without an effort in behalf of the reader to locate the same. There would not be so many papers read, for the majority of the people would not know of there being such papers in existence. Why? Because there would be no advertisements telling them of such publications. Magazines would not exist.

Think of the thousands of magazines, of different natures, which are monthly brought before the public, and to have to go through a few years of life without knowing the blessings of such work and arts would alone convince any person that advertising is great. As I said, magazines would not be known, for it is through the medium "advertising" that all periodicals exist. The sale of the same is generally based upon the results obtained from advertising through the columns of their strongest competitors.

Books and stories would be published, but the selling of them would be very limited, for their introduction would be of such a nature that it would be ages before the public would know of such happenings. In the writer's estimation advertising furnishes ample food for thought, such as could not be gained through any other resources. You may think that schools or colleges or even traveling would supply the necessary functions of an education, but first of all comes advertising. If it were not for advertising the schools and colleges would not contain the large numbers of enrollments.

The advertising schools alone (teaching only advertising) exist on the strength of their efforts to interest the people through the columns of advertising matter issued for their benefit. Some may say that traveling gives an education by itself; even so, does the desire for travel originate, to a certain extent, from the results of advertising? Now, you will wonder how a merchant or helper derives any results that are otherwise beneficial than an increase in demand for such articles as he may advertise.

First let us consider competition as the spice of business, then let us say that advertising is the spice of competition, for is

it not through the advertisements that the merchant really becomes acquainted with his competitor's doings, the classes of merchandise he handles and the methods used in disposing of the same? For is it not such advertising that attracts Mr. Merchant's attention? It is then he resolves that he is not to be outclassed or put down in his efforts to sell goods, so advertising has started another campaign.

What Some Jewelers Say.

"SILVER Plate That Wears."—When a woman wants clothespins she asks for clothespins—just clothespins. But when she buys silverware she wants a quality that she can hand down to her children as heirlooms. The reader of Scott's "Ivanhoe" is familiar with the name and character of the noble old Saxon Thane who boasted that he had "never bended the knee to Norman blood." In our 16 years of store keeping we have "never bended the knee to inferior quality of silverware," be it sterling or quadruple plate, no matter how alluring the prices were, for we knew it would not stand the test of time. Both our sterling and silver-plated cases are full of the new productions of the eastern factories, bold in design and execution, and with wearing qualities that wear. We would be more than pleased to have your opinion as to our selections. We make a specialty of a high-class silver-plated "Baby" cup, gold lined, at \$1.—Spott & Jefferson, jewelers, Little Rock, Ark.

Diamonds.—We carry loose and set stones of all kinds, rings, earrings, stud mountings, etc. Buy your diamonds loose and see just what you're paying for. Diamonds and special order work are our specialties. Let us talk to you on these and any other subjects in our line. We guarantee satisfaction.—J. F. Boes, Salt Lake City, Utah.

Buy Diamonds Now.—A wiser investment cannot be made because diamond values are rapidly advancing, yet by reason of our large imports and purchases when diamonds were lowest in price a year ago, we have a large stock of both the unmounted and mounted gems. We have not raised the prices. Every other dealer in diamonds is selling at the advanced values. For instance: Here is a diamond ring—a splendid solitaire, with a magnificent gem of full 1/2 carat weight. Pure as the sunlight in color—sparkling, radiant, scintillating, glorious in beauty—sold everywhere else at \$90; our price, \$75. Make a comparison for yourself and remember we fully guarantee every diamond. You run no chance of loss or disappointment here.—F. Rolshoven & Co., Detroit, Mich.

Own a Diamond.—Aside from their unparalleled beauty as ornaments, diamonds are absolutely safe investments. The stability of their value is proven by the fact that you can get your money out of them at a moment's notice. We call particular attention to an exceptionally large and finely selected stock of loose as well as set stones ranging from the smallest possible cut to beauties weighing upwards of five carats. Our unusually large purchases for cash allow us special discounts. These we gladly share with customers.—Geo. A. Disque, Erie, Pa.

"A Snowstorm Window Display,"

exhibiting bracelets in an effective manner, will appear in this department next week.

Four Dignified Window Displays

Comprising Separate Exhibits of Solid Silver, Silver Plated Ware, Cut Glass and China

THE window displays of the Mermod, Jaccard & King Jewelry Co., at Broadway and Pine St., St. Louis, Mo., constitute one of the most attractive features of that

with. The windows were dressed by W. H. Allen.

Display No. 1.—Solid silver. Showing a variety of wares suitable for wedding pres-

except the background, which is of black velvet.

Display No. 3.—Silver plated ware. Background, pedestals, shelves, etc., covered with black velvet.

Display No. 4.—China ware. In the center is a fine dinner set, surrounded by other pieces of bric-a-brac, etc. Throughout the entire series American Beauty roses are placed in clusters to lend a touch of color. The concern changes its displays frequently and thus never allows a display to

ATTRACTIVE WINDOW DISPLAYS OF THE
MERMOD, JACCARD & KING JEWELRY CO., KANSAS CITY, MO.

enterprising concern. Particular attention is always paid to display, and the windows have attracted much favorable comment.

A series of four of the windows were photographed recently especially for THE CIRCULAR-WEEKLY, and are shown here-

cuts. The background is brown velvet. The stock is arranged on pedestals and shelves, the shelves being covered with black velvet.

Display No. 2.—Cut glass. The same lines are carried out as in window No. 1,

one's vision. The "trims" are always unified in tone, being designed to appeal to the aesthetic sense of passers-by. At this end in view the trimmer succeeds in giving to the display a marked distinctness which impresses high-class buyers.

Monsieur Rodent and His Predilection for Jewelry Stores

A METHOD OF FORCING HIS PERMANENT EVACUATION

RODENTS comprise a serious pest around almost every store, and more in one jeweler is puzzling his head with the matter at this very moment. The fellow who has sailed boldly in and attempted to solve the problem with the use of poison or so-called exterminators has done so to sorrow, for as a rule the rats curl up and die on the premises in remote places under the floor, with a result which need be related upon.

Traps are not effective, although there are many different kinds and shapes. The wise one, and after a trap has been set by means of catching half a dozen of the rats, it is a marked article, and the other rats will walk all around it, but not into it. It has been advanced that there is something about the odor which warns the rats to keep away. The same is true to a great extent of the trap which kills them. It has been successfully employed over and over twice, there is something about the device which warns the marauders to keep away.

It is said that the most successful way of handling this nuisance is by the use of ferrets. The first cost of these animals is considerable, and it seems like a risky piece of business for a man to pay \$20 for a pair and then set them at liberty without any guarantee that they will stay on the premises.

Those who are familiar with their ways say that there is little danger of their roaming away, especially while there are any rats around the place. If they are not cared for when the rats have been exterminated, it is possible that they will find their way to other fields of operation, but it is a simple matter to avoid this.

The \$20 represents the purchase price of a pair of trained ferrets, and where there is plenty of work to be done, as, for instance, around a large store, it is economy to purchase them, for there is no more effective manner of getting rid of rats.

The method of introducing them into the surroundings is to keep the animals confined in a box for a few days after releasing them to their future home. Then it is advisable to release the male and allow him the run of the establishment for a couple of nights. This will give him an opportunity for exploration, and he will familiarize himself with the place so that there is no danger of his getting lost. He will always manage to find his way back to the female and will soon regard that particular part of the establishment as home. Then it is safe to release the female, and soon thereafter that the rat will be a scarce article.

There is something about the very odor of the ferret which is detestable to the rat. After one of the ferrets has traversed the premises, the rat will not follow it unless it is to do so. Because of this it is said that a pair of untrained ferrets, which can be bought for a very much smaller sum, will serve the purpose.

The ferrets should only be fed at such times as they are confined to the cage. If it is desired that they should hunt

their natural enemy they should be urged on by appetite for flesh and thirst for blood. Bread and milk form their diet when it is necessary to feed them.

The odor of these animals is not objectionable, but from the standpoint of the rat, his repugnance to it is no doubt prompted by the knowledge that the smell is one which indicates the presence of his enemy.

The Way of the Enterprising.

A RECENT innovation by F. Rolshoven & Co., Detroit, Mich., is a room especially set apart for the display of fine paintings, rare products in glass ware, silverware, and similar works of art. This

INTERIOR VIEW OF THE STORE OF T. H. WYNNE, GRIFFIN, GA.

department is located in a gallery reached by an easy flight of marble stairs. The novelty of the idea is attracting much attention. Everyone, whether a prospective purchaser or not, has free access to the "fine arts department."

* * *

An enterprising and unique feature of the recent holiday opening of J. D. Leys, Butte City, Mont., was the presentation to each purchaser of a dainty after-dinner coffee cup and saucer, artistically painted by hand, and also a sterling silver spoon.

* * *

H. C. Reid, Bridgeport, Conn., recently celebrated the fifth anniversary of his business career in that city, where he has a store at 952 Main St., by giving a special discount of 10 per cent. on all cash purchases.

Watch this department for articles of real practical value to the Retail Jeweler.

A Representative Retail Jewelry Establishment of Griffin, Ga.

THE illustration below represents the newly furnished store of T. H. Wynne, Griffin, Ga., located on Hill St., the principal thoroughfare of that city. The dimensions of the store are 20 feet by 50 feet, with a cut-off of 20 feet in the rear for the repair department. The fittings are of mahogany. There are three 10-foot wall cases on either side, connected by four-foot mirror sections.

The wall case doors are one piece of plate glass, displaying the attractive stock to advantage. The 10-foot show cases are all of plate glass, resting on a base of mahogany. The center wall case is attractively arranged with a mirror back and plate glass shelves for cut glass, the brilliancy of which is enhanced by an ingenious arrangement of incandescent lights.

The lighting facilities consist of several

groups of incandescent lights with ground glass globes. The walls are dark green with cream drop ceiling.

Mrs. Louise Gale was qualified in the Court of Law and Chancery, Norfolk, Va., administratrix of the estate of the late Frank H. Gale, who was a member of the Paul-Gale-Greenwood Co., of that place, and who died without leaving a will. Mrs. Gale furnished bonds amounting to \$17,000 as administratrix, and bonds of \$9,000 for the guardianship of Blanche Gale.

George Shively and Mathew Shernosky were recently taken into custody and lodged in the local jail after having made an unsuccessful attempt to burglarize the retail jewelry store of Moyer & Boyer, Mount Carmel, Pa. The men were seen trying to break a show window in the store by a night operator for a local telephone company. The operator telephoned an alarm to police headquarters.

[Answers are also solicited from our readers to the questions published on this page.]

QUESTION No. 1731.—**To Harden Plaster of Paris.**—How can I harden plaster of Paris, suitable to use as a pattern for liver castings?
T. H. P.

ANSWER:—There are several ways of hardening plaster of Paris so that it will be suitable for patterns. After the plaster has set, coat with a strong soapsuds until well saturated. Then apply a hot solution of chloride of barium. Another way is to mix the plaster with a small quantity of fine ground rice, while still another method is to soak the plaster article for 24 hours in pure linseed oil and then dry.

QUESTION No. 1732.—**Royal Copper Finish.**—How can I produce a royal copper finish?
R. C.

ANSWER:—If the article to be treated is copper, then polish the pieces in the usual way. Clean and immerse in a solution composed of sulphite of copper and sal-ammoniac in one gallon of boiling water. After it has been immersed a few minutes wash, dry and lightly buff with powdered rouge, saturated with alcohol.

QUESTION No. 1733.—**To Clean Italian Marbles.**—We are desirous of learning a method of cleaning Italian or Parian marble statuettes, and trust it will not be imposing upon your generosity too much to ask you to furnish us with same, if possible.
F. E. V. & Co.

ANSWER:—Mix quicklime with strong lye so as to form a mixture having the consistency of cream, and apply it immediately with a brush. If this composition is allowed to remain for a day or two, and is then washed off with soap and water, the marble will appear as though it were new.

QUESTION No. 1734.—**Trial Number at Observatories.**—How is the trial number observed in competitive trials of watches and chronometers made out?
R. L.

ANSWER:—A symbol used at Greenwich and at other observatories to express the relative excellence of such timepieces is obtained by adding to the greatest and least difference in seconds twice the difference between one week and the next.

QUESTION No. 1735.—**Platinum Plating.**—Can you give me any information about platinum plating—how to make and prepare the solution and keep in working condition?
P. & P.

ANSWER:—The following interesting article appeared in the *Brass Worker*, and will answer the above question: "The deposition of platinum has always been one of the triumphs of electroplating. Some of the early treatises on plating give methods for its execution and say that it can be successfully accomplished. Others say that it cannot be commercially done. Various formulas have been given, but of late years

little seems to have been done upon the subject. The fact that the platinum anode that is used for platinum plating will not dissolve seems to frighten many platers. They believe that this fact precludes the use of platinum plating. It must not be forgotten that some of the most successful gold platers use platinum anodes at even a greater cost than gold. The insolubility of the platinum anode does not affect the deposition of platinum in the least, and may, perhaps, actually be in its favor as the quantity of platinum that is deposited may be regulated better. In other words, as the solution keeps getting weaker and weaker, the platinum deposits more slowly. If the anode were not insoluble it would be liable to overload the bath, and more platinum would be deposited than intended. This is the argument put forth for the use of a platinum anode in a gold solution. The gold deposit is sure never to exceed the primary amount of gold determined upon for a given time of deposit. If the solution becomes stronger, as it might do with a gold anode, the deposit for a given length of time might be heavier than intended. These arguments are neither here nor there, however, and are open for further discussion. The statements in regard to platinum plating were so contradictory that we thought it advisable to make some experiments upon the matter. We are pleased to say that the difficulties of depositing platinum are not so great and are as easily accomplished as gold plating. Some platinum was dissolved in aqua-regia and evaporated to a syrup. This was used for making the experiments. Some of the platinum baths recommended in old treatises on electroplating were tried. The bath made by dissolving chloride of platinum made from one ounce of metallic platinum in one gallon of water and then adding 40 ounces of carbonate of soda crystals, was not found very satisfactory. The bath was used nearly boiling, as all platinum baths require heating in order to obtain a bright deposit. Although an excellent deposit was obtained on brass, copper and German silver, the bath rapidly decomposed upon standing and metallic platinum separated out. In a few hours the bath became dark brown, although previously clear. In about 24 hours the bath was nearly black from separated platinum. The separation of the platinum militated against its use as, in order to employ it successfully, the bath would have to be freshly made every time it was used. Another formula which contained caustic soda instead of carbonate of soda was found to be open to the same objection. The platinum separated out of the bath spontaneously upon standing. This fact precluded its use. A good, bright deposit was obtained from it,

however. Many of the other solutions were found open to the same objection. The most successful and satisfactory solution for depositing platinum is the double phosphate bath. This bath is recommended by Roseleur. He was undoubtedly its discoverer. We can recommend it highly, and have been able to obtain some excellent examples of platinum plating by its use. As far as we have been able to investigate, this bath is the most satisfactory. We herewith give the method of making the bath. We have modified Roseleur's process a little. He recommends the use of phosphate of ammonia. This material is unstable and is difficult for many platers to obtain. We have arrived at the same results by adding phosphoric acid to the solution and then ammonia. The ultimate effect is the same as though phosphate of ammonia had been added. To make the solution take the following: Dissolve one ounce (or 30 grammes) of platinum in a mixture of 15 ounces of strong muriatic acid (or 450 cubic centimeters) and 10 ounces (or 300 cubic centimeters) of strong nitric acid. When the platinum is dissolved, evaporate at a gentle heat until the mass is syrupy in the bottom of the dish. A porcelain dish should be used for this purpose. When cool this chloride of platinum is dissolved in three quarts of water (or three liters). To the solution is now added 15 ounces (or 450 cubic centimeters) of 50 per cent. phosphoric acid, and ammonia is added until the solution smells strongly of it. This will produce a yellow precipitate of phosphate of ammonia and platinum. It should not be filtered out, but allowed to remain in the solution. The solution should turn red litmus paper blue. The next step is to dissolve 50 ounces of phosphate of soda (1,500 grammes) in three quarts of hot water (or three liters). The solution is now heated nearly to boiling and the yellow precipitate will gradually dissolve. The heating must be continued until all the ammonia as the solution is slightly acid and has no grease-dissolving powers.

The deposit forms immediately and with a slight gray film on the surface. In a minute a sufficiently heavy deposit for most purposes is produced. For flash deposits a few seconds are all that are required.

The deposit is hard and does not burnish well. Neither do brass scratch brushes work well upon it. They leave a yellow color on the surface. Fine steel scratch brushes must be used. They are, however, usually unnecessary, as the work only requires a very light buffing to bring out the color.

The color of the platinum is white, although not as white as silver. It is a little whiter than nickel. For ornamental deposit it probably will not be of value, as its color is too near that of nickel.

Roseleur mentions that he patented this solution in 1847 and plated many articles with it. He presented to King Louis Philippe of France a platinum-plated basin, the first piece of platinum-plated apparatus ever made. He also states that a copper dish which he plated resisted the action of strong sulphuric acid for 20 evaporations without being sensibly attacked. But the last time the deposit began to show indications of having been attacked.

Matt Glaze: What It Is and How It Is Used.

In relation to the matt glaze, the development of which is apparent in the work of the potteries in recent years, the following extract from a paper read at one of the meetings of the American Ceramic Society by Charles F. Binns will be of interest:

"What, then, is a matt glaze? How is it to be used? What is to be gained by high temperature?"

"(1) A matt glaze, in the best definition of the word, is a glaze, either white or colored, which covers the ware in thick, mucous masses, which is not brilliant, but which presents to the touch a quality and texture at once sympathetic and firm. It is not a smear or half-glaze, nor is it a bright glaze deadened by a second coating of acid or sand blast.

"(2) A matt glaze is proper to certain types of pottery. Not to porcelain, for a matt is not necessarily either transparent or translucent. Not to plates and dishes, because the texture surface is not the surface of utility. The proper ware for a matt surface is either faience or gres, and its function is ornamental. Vases for decoration, tile and terra cotta are eminently suitable for matt treatment, and while for the first a low fire will suffice, for the last two high temperature is essential.

"(3) This raises the third point or the question as to the gain to be secured by the high fire. There are several. (1) Density: the perfect pottery the glaze is an ornamentation and not a necessary completion of the ware. A pottery which needs a glaze in order to preserve it from damage or integration is imperfect. The function of glaze, therefore, is to give additional texture, either in use or appearance. The real pottery is complete, as far as density, strength and vitrification are concerned, without any glaze. Hence, in a high fire, the ware is more perfect than in a low. A dense body is strong and wears well; it is, moreover, proof against frost, and a glaze does not tend to craze because the body is constant and not subject to continual change. (2) Texture: Glazes differ greatly in the quality, not only as their composition varies, but as the heat changes. The differences are not easy to explain, but every trained ceramist knows that the hard-fire wares have an air of distinction which is indescribable. One can see at a glance, for example, the difference between Chinese hard and soft paste, or between faience and porcelain. (3) Color: it may seem to some that the advantage here is all the other way, but it is not so. It is true that there are more metallic pigments available at the low heat, but the

character of the hues obtained at the high fire is incomparably more refined and sympathetic. Besides, in compounding high-fire glazes we have the possibility of reducing action, in itself a manifest advantage."

Cloisonné Glass.

CLOISONNÉ glass is one of the most interesting of the modern glass processes. It is not a wall decoration, but a kind of substitute for stained glass, very different in effect and in quality from any of the paper imitations of that substance. A sheet of plain glass is put over the drawing to be executed, and on this the outlines of the design are braced in wire (black, silver or gilt, as the case may be). These wire outlines are semi-circular in section and are firmly fixed to the background sheet, and into the cells formed by the cloisons are shoveled countless little glass beads or pieces of crushed glass, according to the effect desired. The whole surface is covered with these little beads, which are firmly cemented on to the ground, and the entire panel is then covered with a second sheet of glass.

The great point of the invention lies in the fact that along with a pleasant variety of surface (the beads may be of various sizes, and, of course, in any case do not give a perfectly plain surface), it is possible and easy to get an almost limitless variety of color, as well as the most delicate and gradual shading, in which one color melts almost imperceptibly into another.

The uses of cloisonné glass are many, but it is perhaps seen quite at its best in the panels of lanterns and hall lamps, where the strong light immediately behind the broken surface offers quite a striking effect to color. On table tops and trays it is seen to less advantage. All kinds of patterns are attempted, from the simplest designs, after the manner of plain glazing, to landscapes, flower pieces and figure subjects. There seems no valid reason why elaborate work should not be attempted in such process as this, and some work of this kind is certainly successful. The one point which does not satisfy the sense of fitness is the cementing of the beads on to the glass. It would be interesting to see the result of an effort to fuse them on without the aid of any other fixative than glass flux.

The store of Cal. Maus, Crescent, Ariz., was one of seven establishments which were entered recently by thieves, supposed to have been three men who had escaped from the local jail where they had been serving time for looting a clothing store.

Glazes and Varnishes on Attic Vases.

ONE speaks often of the black luster of Attic vases, and one admires in the same, rightly, the brilliancy of the sheen and at the same time the velvety appearance, writes M. Pottier in *L'Art Pour Tous*. When a white or red retouching has been superimposed on the black, and, whether by usage or by accident it disappears, the color that reappears beneath is dull. In the Louvre a very pretty vase in the form of a double head of a woman bearing the name Epilykos can be seen. The little splash drops projecting, that represent the buckles for the hair, have come off in several places, and one sees they were posed on a lusterless black.

It must be admitted, after the vase had been painted and baked, a last operation that gives brilliancy and life to the entire work has been performed, as in varnishing an oil painting these days. This luster is applied to the red earth as well as the colors. It is easy, in examining under the foot of a vase, in the mouth, or on the cracks, to prove that the earth is much less red in such places.

It is conceived by some minds that polishing the earth might change the color and brighten the tone. But this does not suffice. There is likewise a luster. We don't know more of the nature of that varnish than we do of the ancient black pigment. One can only prove that it contains mineral substances, because from it is formed a red precipitate which is a decomposition of the luster, and which attaches itself to the more porous parts of the argile. Several times these traces of red have been taken for attempts to make the figures stand out and for shading, but it is wrong. One finds it in different parts of the figure—the clothes, hair, etc.

This reddish deposit affects all the more porous parts of the argile. It attaches itself to the rough surfaces, the little scratches and depressions produced in manufacturing; it invades sometimes the white of retouches or the incisions. It generally deposits itself on the foot in larger quantities than elsewhere. This causes one to think the varnishing must be done by immersing the vase in a bath; it is not allowed to penetrate the interior of the vases such as amphora, craters, oenochoes. Again, opinions have obtained as to application by brushes.

Some of the beautiful works in Ornamental Glass produced at the Imperial Factory in St. Petersburg, Russia, will be illustrated and described in this department next week.

Look for the Pouyat Marks

Some of the reasons why dealers in Art-Porcelains should be interested in Pouyat China:

It is a notable ware historically; famous since 1783.
 It is recognized as the finest modern product of the celebrated Limoges potteries.
 Its unflinching supremacy is certified by a long series of medals and awards, including five bestowals of the Cross of the Legion of Honor upon successive heads of the Pouyat house.
 It offers the widest choice of artistic designs, the widest range of prices.
 Finally, all Pouyat ADVERTISING is designed to stimulate the business of LOCAL DEALERS.
 If your jobber does not handle Pouyat China, we will inform you where to obtain it.

Rapid Progress Made on Exhibit Palaces for Jamestown Exposition.

ALL of the large exhibit palaces of the Jamestown Exposition are rapidly nearing completion, and a large number of buildings and pavilions will be in readiness for the installation of exhibits by March 1, nearly two months before the date appointed for the formal opening of the Exposition.

The Manufactures and Liberal Arts Building, one of the largest of the group, is under roof. This structure is brick veneer with white staff (marble effect) trimmings, and is one of the most stately and imposing buildings on the grounds. Its sister building, Machinery and Transportation, is about ready to be roofed, and its style and finish will be similar to the Manufactures Auditorium and Administration building.

The framework of Mines and Metallurgy, Marine, Appliances, Food Products and several other smaller buildings is well under way, and under ordinary conditions will be completed within 60 days. Of the late buildings, those of Rhode Island, Virginia, Maryland, New Jersey, Pennsylvania and Ohio will be completed by January. The Inside Inn, with accommodations for more than 2,500 persons, will also be completed by that time.

The buildings all ready for exhibits include the Arts and Crafts, Mothers' and Children's and Hospital.

Work of construction on the Government buildings and pleasure piers has begun and will be vigorously pushed to early completion. A large corps of workmen are engaged in macadamizing the numerous beautiful streets and boulevards, and expert landscape decorators are laying out innumerable designs for the floral decoration.

The exhibits will embrace every phase of industrial development during 300 years, arranged and classified so that visitors can obtain at once a correct history and the development of any specific branch of industry without visiting several buildings. This has been the case in former exhibitions. While the Jamestown Exposition is to commemorate the greatest historical event in history—the founding of the first English-speaking settlement in America, at Jamestown, Va., in 1607—yet the industrial and commercial displays will form no small part of the celebration.

It is planned by the Connecticut Commission to have a most important exhibition that will show the development of the clock industry of that State from the early Colonial days when the timepieces were made by hand up to the present time, when millions of clocks are sent from Connecticut to all sections of the world. S. B. Thrasher, of Manchester, has been requested to arrange an exhibit.

Recent Reappraisements of China.

THE following were among the reappraisements of china, etc., recently added down by the United States General Appraisers:

DECORATED CHINA.—From C. V. Pustan & Co., Canton, exported Aug. 2, 1906, entered at New Orleans (file No. 41895, invoice No. 8429); find-

ings of Somerville, G. A.: Umbrella stands, 24 inches, Nanking curio crockery, 324, entered at 13 Mex per pair; do., blue and white hawth, 325, entered at 8.70 Mex per pair; vase, 18 inches, Nanking curio crockery, 600, entered at 5.70 Mex per pair. And similar goods. Discount, 2 per cent. Less export duty. Boxes, mats, rattan, etc., included. No advance.

DECORATED EARTHEN WARE.—From Kato & Co., Nagoya, exported Aug. 8, 1906, entered at Chicago (file No. 41623, entry No. 12486); findings of Waite, G. A.: Cups and saucers, 6380, 6381, 6382A, entered at .90, advanced to 1 yen per dozen.

DECORATED EARTHEN WARE, ETC.—From Uyeyanagi, Kobe, exported June 11, 1906, entered at Port Townsend (file No. 42167, invoice No. 3341); findings of Waite, G. A.: Advanced by addition of packing charges on 90 cases from 86.80 to 138.88 yen.

DECORATED EARTHEN WARE.—From S. Kato & Co., Kobe, exported July 6, 1906, entered at Chicago (file No. 41622, entry No. 11787); findings of Waite, G. A.: Cups and saucers, 6381, 6382, 6380A, entered at .90, advanced to 1 yen per dozen. Add packing, etc.

\$5,250 Paid for a Dresden Statuette at a Sale in London.

A RECENT dispatch from London states that a Dresden china figure, 11 inches high, representing a lady wearing a huge ermine and carrying a pug dog, with another pug dog at her feet, brought 1,000 guineas (\$5,250) at Christie's auction rooms there. This group was made during a famous period in the history of the Dresden factory, from 1735 to 1756, when Count Bruehl was at its head. The figure represents Countess De Kosel, one of the beauties of the Court of Augustus II., then Elector of Saxony.

The group was brought to Christie's by a man who offered to sell it for a small sum, but instead of buying it Christie's auctioned it for his benefit. In addition to this interesting detail there is a story current that this same group was recently sold at auction here for \$50, but it is now known that the group that figured in this sale was a clever imitation of the original.

New Diamond Mines in Africa.

THE *British and South African Export Gazette*, published in London, asserts that remarkable discoveries of diamonds near Kimberley have recently taken place. This publication says: "We are happily in possession of certain facts which go to show that the discoveries in question are probably more momentous to South Africa's future prosperity than anything which that marvelous country has produced since the fabulously rich Witwatersrand gold field was first opened up." Some authorities even go so far as to assert that these discoveries transcend in area and richness the existing mines of the De Beers company or that of the Premier Diamond Co., but without indorsing this statement it is unquestionably the fact that the Cape Colony has in them a potential source of wealth the importance of which it would be difficult to overestimate.

"These diggings are alluvial and promise a market for mining implements, 'dolly-ing' apparatus, etc."

R. T. Garman, Tyrone, Pa., recently moved his stock into his new building just completed at the corner of 10th St. and Penn Ave.

DOMESTIC POTTERY ON EXHIBITION.

AT the annual exhibition opened early this month by the National Society of Craftsmen in its rooms in the National Arts Club studios, 119 E. 19th St., New York, was a collection of pottery of the distinct Newcombe College styles, from the school at New Orleans. Eighteen pieces were included, each with the deeply indented lines characteristic of the school's products. Nature forms, charmingly outlined, comprise the decorative designs. Lilies and leaves, long grasses and other delicate flower effects are shown. Prominent in the exhibit is a large jug decorated with long lily leaves gracefully entwined. Smaller pieces include plates, jugs, teapots and other household articles, all of which are attractive. Another exhibit of much interest was a fine collection of plates and cups from the studio of Mrs. Anna B. Leonard. The decorative designs are nature forms conventionalized with much delicacy and with intelligent regard for the character of the object patterned. The plates and cups have a firm, brilliant glaze, and show the result of skilful workmanship.

RICH CUT GLASS IN NEW FORMS.

AMONG other new articles, a complete lamp of rich cut glass is now on exhibition at the salesrooms of C. Dorflinger & Sons, 36 Murray St., New York. It is about the size of an ordinary parlor table lamp, and is equipped with a two-wick burner, and has a fount made in nickel-plated brass, which fits into the base of the glass support. The fount holds about a quart of oil. The globe is rounded in shape, and is a clever product of the glass cutter's art. The base of the lamp may be removed and used as a flower holder. The lamp rests on a silver tray, which has a border decoration in flower effects. A line of vases of various sizes and shapes with ruby and green flash tops, fluted and scalloped, is greatly admired. Punch bowls, fancy bonbon dishes, fruit receivers, trays, etc., are shown in greater variety than ever before. A heavy cut glass cigar holder with sterling silver mountings is also among the novelties. The holder is nearly square, and about the length of an ordinary cigar. A highly polished English oak frame, with patent lock, holds the cigar jar, the lock, bars, handle and trimmings being of brass in nickel finish. THE RAMBLER.

The retail jewelry store of L. E. Gibson, Richford, Vt., was destroyed by fire recently. The store was one of the old landmarks of the town, having been conducted for the past 30 years.

MADE ONLY BY

LEONARD KROWER, Manufacturing Jeweler
536-538 Canal Street New Orleans, La.

You Can Easily Operate This Typewriter Yourself

Don't worry your correspondent. Don't write him anything by hand that takes him time to make out—that may leave him in doubt—that he can't easily read.

And don't fill out legal papers or card memos—or make out accounts or hotel menus in your own handwriting.

It looks bad, reflects on your standing, makes people think you can't afford a stenographer, and is sometimes ambiguous.

You can write out your letters—make out an abstract—fill in an insurance policy—enter your card memos—make out your accounts, or a hotel menu—or do any kind of writing you need, on any kind, size or thickness of paper, and space any way you want on

The OLIVER Typewriter

The Standard Visible Writer

You can write any of these things yourself if you do not happen to have a stenographer.

For you can easily learn, with a little practice, to write just as rapidly, and as perfectly, as an expert operator on the OLIVER. Because the OLIVER is the simplified typewriter. And you can see every word you write. About 80% more durable than any other typewriter, because it has about 80% less wearing points than most other typewriters.

80% easier to write with than these other complicated, intricate machines that require "humoring"—technical knowledge—long practice and special skill to operate.

Than machines which cannot be adjusted to any special space—with which it is impossible to write abstracts, insurance policies, or odd-sized documents except you buy expensive special attachments requiring experts to operate.

You can adjust the OLIVER to any reasonable space—you can write on any reasonable size and thickness of paper, right out to the very edge, without the aid of any expensive attachment or special skill, and your work will be neat appearing, legible and clear.

For the OLIVER is the typewriter for the doctor, the lawyer, the insurance agent, the merchant, the hotel proprietor—or any man who does his own writing.

Write us now for our booklet on the simplified features of the OLIVER.

NEW YORK

A Happy New Year

It is our custom to address you—the retail Jewelers—at this season of the year and to extend to you

Our Greetings

for a happy and prosperous New Year, and also to extend to you our heartiest thanks and appreciation for your co-operation and support in the past.

This year we feel deeply grateful; it has not only been a most successful year, an acknowledgment of the superiority of Fahys Cases, but a proof that the methods we have adopted of independence, free from entangling alliances and trust methods, have met with favor and reciprocity.

We wish you, one and all, a prosperous New Year.

JOSEPH FAHYS & CO.

The Top Note *of* Perfection

Our diamonds are perfection in shape, perfection in cutting and perfection in brilliancy—reached by the most painstaking care in cutting.

These diamonds are sold for the actual cost of production, plus our modest profit.

The
Wadsworth
25-Year
"Pilot"
Watch
Case

A
 QUARTER
 OF
 A
 CENTURY

TWENTY-FIVE YEARS is the period most people have in mind in buying a Watch Case. Cases guaranteed for that time are the most popular on the market. Among the many makes offered in this class it is simply a problem of selection. Wise selection can only be made after intelligent examination and comparison, balancing values and prices.

Here is the Case that has won pre-eminence in the 25-year field. The WADSWORTH "PILOT" has forged to the front on its points of merit alone—unaided by any fictitious considerations. Right in designs, models, workmanship and price.

WE desire to extend to our friends in the trade our best wishes for a happy and prosperous New Year, and to express to them our appreciation of their generous support, which has made the past year an exceptionally satisfactory one to us.

Illinois Watch Company,
Springfield.

THE adoption of advertising as a part of business policy serves two objects—holding what you have and getting more.

¶ The year just closed has marked a new record for sales in every line of industry. North, East, South and West have experienced the greatest prosperity in the history of the country and this prosperity has been reflected in an unprecedented demand for jewelry, silverware, watches, clocks, art goods, and kindred lines. Every one who had goods worth selling, sold them; the advertiser as usual had the advantage, but he felt the benefit of his advertising more particularly in the spring and between seasons; he had a more even year; but every manufacturer and dealer did well. The demand exceeded the supply.

¶ All indications point to a continuation of the present prosperity. The great railway systems, the large industrial enterprises have arranged to expend, in the improvement of their properties, millions of dollars in excess of the expenditures of 1906. The spirit of progress is everywhere evident and the wealth of the nation at the end of 1907 will as far exceed that of 1906 as last year's exceeded that of 1905; but conditions in the trade will be different. The stimulus of success will encourage the progressive merchant to greater efforts: he will prepare for a large increase of trade—he will not be caught short of goods; competition will be stronger and selling not so easy. The supply will keep pace with the demand.

¶ This spirit of enterprise is manifest in orders for advertising recently received by THE JEWELERS' CIRCULAR—WEEKLY. One concern has contracted for over \$27,000 worth of space, another for over \$16,000. No conservative business house would gamble to such an amount; they must know that the investment is a safe and sound one. Advertising is not an experiment, it has long since passed that stage; it is now considered by progressive, shrewd business men as much a requisite in the conduct of their business as any agent which they employ to market their product.

¶ Some men have been eminently successful without advertising; they have been so despite the fact that they did not advertise in the same way that some men have achieved great success despite careless and unsystematic business methods. Those men have possessed other elements of success that have overcome these handicaps. Many merchants rose to greatness and success before the telephone and the typewriter were in use; these instruments are not essential to business, but they are recognized as great economisers of energy. Advertising is not always essential to success, but it can accomplish positive results at a great saving of energy, time and money. It is an economic force that will vitalize any business.

Drop us a card and we will tell you how The Jewelers' Circular-Weekly can help to increase YOUR business, and we will send advertising rates or have a representative call.

Dueber

is the name most intimately known to the Watch Trade of the United States as associated with the Watch Case industry. The name "Dueber" on any Watch Case is an absolute guarantee of good quality, artistic conception and fine workmanship.

Hampden

stands for what is peerless in American Watch Movements. For twenty-five years the name has borne an unrivaled reputation, and the Hampden high-grade movement has been a standard for imitators to work from.

Watches

are an essential part of every retail jeweler's stock, and to have the right kind of watches should be the care of every dealer. The more consideration given to this subject the more sure are Dueber-Hampden Watches to be chosen.

The W. J. JOHNSTON COMPANY

Wholesale Agents for the Leading American Watch Companies,

Fifth Avenue and Market Street, Pittsburgh, Pa.

Talent, Energy and Progression

are the qualities necessary to achieve success in this strenuous age

¶ The followers of the "let well enough alone" policy are living in the past and become the victims of the ambitious, hustling competitors who, looking into the future, constantly go forward.

¶ The forward pace in business is made more easy and quick by selling the right kind of goods; goods that are satisfying in quality and value and that add to the reputation of the merchant.

¶ *We offer you goods that have all the requisites necessary to please and satisfy your customers, that equal in value the cost, and will never mar your reputation from being associated with.*

Of Interest to Jewelers

The Whiting Company have, during the past year, consistently maintained their well-known policy of introducing to the Jewelry Trade a constant succession of new and attractive patterns in solid silverware.

Attention may, in the first place, be directed to those richly hand chased Vases and other Special Pieces which have aided in establishing the Company's reputation for the production of silverware of the most individual character.

Among the additions made to the exclusive Whiting designs in Hollowware is the very effective Louis Quatorze, while the already extensive line of Toilet Sets has been further increased by the Duchess pattern, and the combination sets of Silver and fine Porcelain by the St. Germain, Bouillon, Coffee and Chocolate Cups, with Spoons to match.

The new Adam pattern has already taken an assured position in the long list of those which have conferred such generally recognized popularity on the Whiting Flatware productions.

Finally, mention must be made of the unusually comprehensive assortment of new and original examples of Deposit Ware which are always to be found in the Whiting stock.

WHITING MFG. COMPANY
SILVERSMITHS

Broadway and Nineteenth Street - NEW YORK

THE WOODSIDE STERLING CO.
 wishes to the entire trade a happy and prosperous New Year, and extends its thanks for the liberal patronage enjoyed during the year just ended.

E beg to announce that we have established a Chicago Office in the Heyworth Building, in charge of Mr. GEORGE H. THOMAS. MR. THOMAS will travel over the territory previously covered by Mr. EDWARD BALL, who now represents us in New York City and vicinity.

Altogether this or other of our advertisements appear in over 500 publications daily, weekly and monthly. The dealer who handles

"1847 ROGERS BROS."

goods sells the best known silver-plated ware on the market—the Best known to-day and for the past sixty years.

When silver-plated ware is mentioned, the average person at once thinks of the brand marked

"1847 ROGERS BROS."

There are several reasons why this should be so. One is that it has been before the public so long—"1847 ROGERS BROS." being the original silver-plated ware, dating back to 1847, when the electro-plating process was discovered by Rogers Bros.

Another is that no other silverware is so thoroughly advertised.

But the chief reason is to be found summed up in the phrase

"Silver Plate That Wears"

An investigation by a prominent publication showed that more than half of the people preferred our goods in 1905, but during 1906 they evidently bought largest of their kind in the world) were run far into the night and yet could not supply the demand for

"Silver Plate that Wears"

1907—the sixtieth year since the business was established—will undoubtedly mark a greater record in sales, prestige and influence in the trade. Sold by leading dealers everywhere.

Send for our Catalogue "to assist in making selections."

Jewelers! School Seals are Popular.

Seals are very popular, and we show here only a few of the many made for the different schools last year.

For a State School or University no pin would be more appropriate than one with the Coat of Arms of the State in the center. If the school has no official seal, let us make a pin for you showing the characteristics of this design. If you do not care to have pin made in either of these ways, substitute the year and class initials and have the class motto in the circle.

We make seals in two sizes and three different ways, as you will see by the illustrations. Advise us regarding your wishes, stating quality and quantity desired, and we will be pleased to have prepared a colored sketch embodying your ideas, and forward with prices.

Send for our new catalog of Flag and Class pins. You can make more money handling Bastian's than any other. Special designs and estimates free of charge.

*The Garnet's
Sudden
Popularity*

*Its Effect
Upon The
Supply*

THE REIGNING GEM this season is pre-eminently the Garnet, the warmest and most genial of gems. Grande dames of old wore this gem when they had their portraits painted by the great masters. It is now embodied in a splendid revival of fine old jewelry which has become the reigning fad.

So suddenly has this vogue sprung into existence, that the miners and producers were not prepared for so extraordinary a demand. The result is that the few houses fortunate enough to have a supply absolutely control the situation. The supply will be comparatively scarce for some time. We can supply you.

GREETING

WE extend our heartiest wishes to the trade for a happy and prosperous New Year.

WILCOX-ROTH CO.

Makers of Sterling Silver Wares
21-23 Camfield Street - NEWARK, N. J.

THE dominant note of the Season is a sense of satisfaction with the conditions that prevailed during 1906—and the hope that they may be equalled and excelled in 1907. Our customers advise us the holiday business has been unsurpassed; we tender our congratulations to all of them on the results obtained, and also extend our best wishes for the New Year.

We trust it may serve to cement more closely the bonds of friendly feeling existing between us. We shall endeavor to merit a continuance of the confidence reposed in us by the trade in the past, and trust we may enjoy their good will in the future.

Our time and efforts will be devoted, as always, to the interest of our customers, and we hope to anticipate and satisfactorily supply their wants during 1907.

BRACELETS

Are one of the leading money makers of the present prosperous season.

Our experience in the making reaches back for years—and our present line, comprising over 600 different styles, bears ample proof that we have profited by this long prestige, and that it is not a hit-or-miss proposition we present to you, but definite and clear-cut ideas, artistically and intelligently carried out.

Any leading jobber will be glad to show you these goods—and an inspection of the goods will prove conclusively their worth to you.

*The "Why" of
Gold Buckles.*

**Day, Clark
& Company**

14 KARAT
ONLY

23

Maiden Lane
New York

FOR SEVERAL SEASONS the Belt has been in the ascendant. New and handsome forms and fabrics have been introduced. It is no longer a mere incident in feminine apparel; it is a special creation in itself.

Under these circumstances Gold Buckles naturally become a matter of necessity. The Buckle crowns the Belt, confirming and completing its beauty. And the Buckle in itself is a creation—a piece of jewelry of rich effect and permanent value.

The Buckles made here raise the standard and maintain it.

THE IRIDESCENT BEAUTY OF THE EGYPTIAN PEARL

As shown in our newest creations, is beyond comparison. These goods excel the usual in gold jewelry. The present and latest fad is the button shape pearl, mounted in the French clutch earscrew for unpierced ears, as shown in the illustration. All of our mountings are of 10K. gold

WE CAN SUPPLY YOUR WANTS WITH AN IMMEDIATE DELIVERY

Prices range from \$20.00 to \$36.00 per doz. pairs—plain screw; and from \$27.00 to \$45.00 per doz. pairs in the French clutch.

We have just received a large consignment of Coral and have mounted the choicest pieces in the same style gold mountings as shown in the illustration, offering a line of

Genuine Coral Earrings

in a variety of colors, showing the popular round button shape, that is one of the leading features of the present season. Prices on these Coral goods range from \$3.00 to \$9.00 per pair.

Send your orders direct. They will receive prompt attention

No. 22.

Silver Service Made for the United States Battleship "Vermont" a Magnificent Example of Silversmithing.

MASSIVE in weight, the silver service presented to the battleship *Vermont* is distinguished for artistic conception in design, dignity in modeling, skilful chasing and superb workmanship throughout.

The service comprises 14 pieces: punch bowl, punch ladle, plateau or waiter upon which the bowl stands, two candelabra, water pitcher, syrup pitcher, two salad bowls, meat dish, entree dish or serving tray, two compotes and butter dish.

The punch bowl is suggestive of the 18th century in its general characteristics. Its

characteristic sugar-maker tapping a tree, while around him are shown several trees already provided with buckets hanging to them. The bowl is illustrated on the front cover of this issue.

The punch ladle has a generous and shapely bowl, the shank showing a grape vine decoration, while at the head between crossed dolphins appears the State seal.

The plateau, upon which the bowl stands, is a splendid piece, being 31 inches in diameter, including the handles. The border and handles are bold in character to match the bowl. In the center is etched a correct representation of the State House, surrounding which is the inscription: "Presented to the U. S. Battleship *Vermont* by the State of Vermont." The bouge of the plateau is ornamented with a wave decoration, with a spray of clover, the seal of Vermont, a spray of maple and the seal of the navy shown on the flange.

The candelabra are large and important pieces and are designed to be lighted by electricity. The spray of clover, with the State seal and the spray of maple, with the navy seal, which form the decoration typical of the entire service, is placed on the foot, while from the top of the pillar, each leading out from a dolphin with tail curled, are the four sweeping arms which end in decorative capitals. The candelabra are each 19 inches high and have a spread of about 20 inches each.

The water pitcher is of generous size, wide at the mouth and mounted with the borders typical of the set, the sprays and

seals being as before described. The feature of this piece is the fine etching of a Morgan horse, thus accurately portraying a product of which Vermont is proud.

The syrup pitcher is the unique piece of the service, representing a section of a maple tree and being reproduced exactly from a piece of maple bark. The cover is chased with a maple design and decorated with the seal of the State, and a natural-looking maple leaf forms the tip for lifting the cover. The handle represents a knotted and crooked stick, thoroughly in keeping with the character of the piece.

The feature of the salad bowl is its wide decorative flange with the dolphin border matching the other pieces of the service. At the bottom four small dolphins with their heads resting on a rope border seem

LARGE WATER PITCHER..

reatest diameter, including the handles, is 5 inches wide. The height to the top of the handles is 14¼ inches. The decoration is emblematic of the sea and of the State of Vermont, the handles being formed by dolphins, while the picture of the battleship *Vermont* is artistically etched in one of the large panels on the side, the panel resting in a strong wave decoration which leads down to the foot of the bowl.

On one side of the foot of the bowl in bold relief is shown a spray of maple leaves surrounding the seal of the United States navy, while on the opposite side of the bowl a spray of clover decoration encloses the seal of the State of Vermont. In the large panel opposite the battleship is a sugar maple scene which is a distinctive feature, showing Gov. Bell's sugar house in the background, and a pair of horses drawing a sled, on which is a tub for gathering sap. In the foreground appears a

BUTTER DISH.

to be supporting the bowl with their tails. The piece is 16 inches in extreme diameter and is gold-lined.

The 20-inch meat dish is decorated with the sprays and seals common to the service with a strong dolphin border and a conventional wave effect in the bouge. The 14-inch entree dish or serving tray, while similar in character, has a shell decoration

COMPOTES, SYRUP JUG, MEAT TRAY, CANDELABRUM, SALAD BOWL AND OTHER PIECES.

Larler & Sons

21-23 Maiden Lane
New York City

at either end of the flange and a rope border in place of the wave effect.

Each of the compotes, which are identical in design, stand on a high ornamental dolphin foot. The border ornamentation, though in keeping with the rest of the service, is treated in a more liberal manner as would be expected in a decorative piece of this kind. Four conventional shells leading down on the flange are introduced into the border, while the sweep of the bowl part is broken by a conventional wave decoration, the sprays and seals in relief forming the flange ornamentation.

The butter dish is treated in a manner similar to the flat dishes, except the cover, which, with a carefully modeled Guernsey cow for a handle and with a correctly etched pasture scene and a standing cow in the foreground, gives the piece a distinctive character and identifies Vermont as a dairy State.

At the 1904 session of the Legislature \$5,000 was appropriated for the purchase of a silver service to be presented to the Vermont Gov. Charles J. Bell was authorized to select and purchase the service. Designs were submitted by three competitors and the order was given to B. Bros., White River Junction, Vt., designs furnished by the Gorham Mfg. Co., which company has since made the service.

The vessels of the United States Navy whose presentation services have been illustrated and described in THE JEWELERS' CIRCULAR—WEEKLY, and the dates of the issues in which these illustrations and descriptions appeared from time to time, are as follows:

Interesting Spoons of Sixteenth and Seventeenth Centuries Recently Unearthed at Salisbury, England.

WHILE digging in a poultry run at Taunton's Farm, Netherhampton, Salisbury, Eng., two laborers came across seven silver spoons, about the size of an ordinary tablespoon, with curious shaped handles, such as are seldom to be met with nowadays except in a museum or the collection of a connoisseur. Despite the fact that they had been buried for a considerable time, except for the surface being considerably tarnished, they were in a splendid state of preservation. The men, after cleaning the spoons slightly, took them to J. Sney Rambridge, of the Canal, Salisbury, who discovered they were silver spoons of considerable value, being extremely fine specimens of the work of the 16th and early 17th centuries. He communicated with the agent of the Earl of Pembroke, the Lord of the Manor, and ultimately the police were

1596, 1 oz. 8 dwts., with initials F. H. T. S., and No. 7, 1596, 1 oz. 8 dwts., with initials E. H.

With regard to the coroner's "quest," Sir John Jervis, in discussing the office and duties of coroners, states: "Treasure trove is where any gold or silver coin, plate or bullion is found concealed in a house, or in the earth, or other private place, the owner thereof being unknown, in which case the treasure belongs to the Crown or its grantee having the franchise of treasure trove; but if he that laid it down be known or afterward discovered, the owner, and not the Crown, is entitled to it; this prerogative right only applying in the absence of an owner to claim the property. If the owner, instead of hiding the treasure, has casually lost it, or parted with it in such a manner that it is evident he intended to

smiths. Mr. Jackson writes: 'Although Salisbury (capital of Wilts) was mentioned in the Act of 1423 as one of the towns appointed to have a "touch" of its own, no plate marks have been found which can with any certainty be ascribed to it.'

Old Church Plate in Wales

IN the church of Llandudwen, seven miles to the northwest of Pwllhell, Wales, is found a pre-reformation silver chalice, hitherto unchronicled. It bears no marks, but the date is obviously, by comparison with dated examples, about 1500. This brings up the known instances of old massing chalices that escaped destruction at the time of the reformation to about 40. The bowl is plain hemispherical, and it is supported by a hexagonal stem divided by a large ornate knob. The foot is curved hexagonal, and one of the compartments has an engraved crucifixion on a foliated gilt background. It is almost identical with one at Llanellian, Denbighshire. These

SOME 16TH AND 17TH CENTURY SPOONS RECENTLY UNEARTHED NEAR SALISBURY, ENGLAND.

acquainted with the discovery, taking possession of the property, and, as a result, a coroner's "quest" will be held.

How the spoons came to be buried in a graveyard, or how long they have been hidden in such wise is a mystery. There is every possibility that they were stolen at some time and buried by the thief in the hope that later he might disinter them.

The seven spoons have baluster stems and seal heads, and are of the type which were particularly common between 1585 and about 1620, varying slightly in size and weight. On the seal end of each are engraved initials and dates ranging from 1596 to 1632. No. 1 is dated 1629 and bears the initials I. S. E. E. and weighs 1 oz. 3½ dwts.; No. 2 is dated 1629 and bears the initials I. I. E. E. and weighs 1 oz. 8½ dwts.; No. 3, 1621, 1 oz. 14 dwts., with initials B. E. I. E.; No. 4, 1632, 1 oz. 10 dwts., with initials M. A. W. E.; No. 5, 1621, 1 oz. 16 dwts., with initials T. H. I. E.; No. 6,

and a paten at Llanmaes, Glamorganshire, dated 1535, are the only three pieces of pre-reformation church plate known to be extant in Wales. Nevertheless, there is another older piece of plate, that has been in use as an alms dish in the well-known Carnarvonshire church of Clynog far beyond the memory of man. In this case, however, its origin was in a certain sense secular. It is a mazer bowl of dark polished maplewood, mounted in an ornamental silver gilt band, which bears the black letter inscription: "Ihs nazarenus rex iudeorum fill dei misereere mei." In the center of this small bowl, which is 5¼ inches in diameter and 23-16 inches deep, is a boss of silver gilt engraved with flowers, which were originally enameled.

In speaking of the account of the discovery of the spoons found near Salisbury, J. H. Buck, curator of metal work at the Metropolitan Museum of Art, New York, said: "These spoons are very interesting from the fact that they all appear to be of local manufacture. With the exception of No. 6, which is by a Coventry maker (1560-1600), the marks are to be found in 'English Goldsmiths and Their Marks,' C. J. Jackson, as 'unasccribed,' and probably made by Dorsetshire and Wiltshire gold-

and a paten at Llanmaes, Glamorganshire, dated 1535, are the only three pieces of pre-reformation church plate known to be extant in Wales.

Nevertheless, there is another older piece of plate, that has been in use as an alms dish in the well-known Carnarvonshire church of Clynog far beyond the memory of man. In this case, however, its origin was in a certain sense secular. It is a mazer bowl of dark polished maplewood, mounted in an ornamental silver gilt band, which bears the black letter inscription: "Ihs nazarenus rex iudeorum fill dei misereere mei." In the center of this small bowl, which is 5¼ inches in diameter and 23-16 inches deep, is a boss of silver gilt engraved with flowers, which were originally enameled.

The date is somewhere about 1480-1490, and it is supposed by Mr. Jones to have belonged to the adjacent monastic house of Clynog.—London Athenaeum.

We extend the compliments of the season to the entire trade.

Death of Thomas Kirkpatrick.

Thomas Kirkpatrick, president of the Kirkpatrick Co., 331 Fifth Ave., New York, who was one of the oldest and best-known retail jewelers in the metropolis, died Thursday of last week at his home, 67 W. 47th St., Manhattan, in his 73d year, after an illness of several weeks. Mr. Kirkpatrick, although his health began to fail as far back as last Summer, continued in active charge of the business until a month or so ago, when increasing weakness obliged him to remain at home. He retained his mental faculties until within a few minutes of his death.

Thomas Kirkpatrick was born in Scotland, Feb. 11, 1834, and came to New York at the age of 10 with his father and his mother. He attended the public schools of New York, and after receiving his education in 1854, obtained employment with Hall, Black & Co., who had a retail jewelry store at Broadway and Murray St. He and another youth who is now at the head of a Fifth Ave. jewelry company, obtained their first lessons in retail storekeeping, and that their duties were comprehensive may be seen from the fact that after his day's work was done they put up the nutters and slept at night under the counters in order to act as watchmen. In a year Mr. Kirkpatrick left this firm to go as a salesman in the store of Robert Rait at Broadway and Warren St. There he remained until 1860, acquiring a thorough knowledge of the business. In the latter year he opened a store of his own on Broadway near Duane St. At that time he was 26 years of age, and he continued his business by himself until his death.

From the first Mr. Kirkpatrick was successful. As the city extended northerly he moved in that direction. The first removal was to Broadway and 19th St., on the site of the building now occupied by the Whiting Mfg. Co. It was about 1881 that he opened his store at this corner, across from the old Goelet homestead, and in later years he recalled that cows pastured on the lawns in front of this house. Subsequently he moved to Broadway, corner of 22d St., in a location which formed part of the site of the present Flatiron building. At the opening of the Waldorf-Astoria Hotel Mr. Kirkpatrick was about the first jeweler to realize the possibilities of trade that would follow, and he moved across from the hotel to the store which has been occupied by his business since. He claimed, therefore, to be the father of the Fifth Ave. jewelry colony, which has since grown to so large proportions.

For 40 years Mr. Kirkpatrick had made his home at the house in which he died. When he bought it he could look from his back windows to Central Park, there being buildings between. He is survived by a widow, one son, John Kirkpatrick, who has been associated in the business and will continue it, and one daughter, Mrs. David C. Townsend.

Although Mr. Kirkpatrick was never an active politician, yet he enjoyed the intimate acquaintance of numerous men of prominence in public life, who often sought his advice, so that his influence in civic affairs was such as is exercised by few men

occupied as he was with the claims of a busy commercial life. Among other men of whom he used to relate anecdotes to his friends was the late Wm. M. Tweed, who, in the days of his power, used frequently to call at the jewelry store. Others who have been noted in politics and men of high station, officials of city and State, judges and others were known familiarly to Mr. Kirkpatrick. Among Scotchmen and those of Scotch descent, from Andrew Carnegie, through a list of many scores, he was personally known and esteemed.

In his habits Mr. Kirkpatrick was essentially a man of business, giving his time from early morning until the close of day to his store and having no fads to distract him from his chosen occupation. He personally supervised all the details of his business until his son became old enough to take a share of the burden, but up to his last illness the father gave every day to his store as usual. A year ago the business was incorporated.

Among the organizations of which the deceased was a member were the Chamber of Commerce of the State of New York, the New York Club, St. Andrew's Society and the Robert Burns Society. He was formerly for a long time a member of the Manhattan and Lotus clubs.

The funeral took place Saturday at the West Presbyterian Church, 42d St., and was large attended. The services, exceedingly impressive, were conducted by the Rev. Dr. Evans. Practically all of the prominent jewelry houses were represented in the attendance. Numerous and beautiful floral offerings testified to the esteem in which the deceased was held by his friends and associates. The pallbearers were close personal friends. Interment was in Greenwood Cemetery.

Death of Warren Richmond.

MT. MORRIS, N. Y., Dec. 26.—Warren Richmond, who died last week at his home in Genesee St., was one of the most prominent and highly respected business men in this section, and had been engaged in the jewelry trade about 45 years. Death was due to heart disease brought on by weakness incident to old age, and came after an illness of about a year.

Mr. Richmond, who was 74 years old, came to this village very early in life, and in the '60s started in the jewelry business here, following his vocation steadily until his death. He continued alone until the latter part of 1894, when owing to his advancing age he admitted his step-son, Edward Conklin, forming the firm of Richmond & Conklin, and in recent years the business has been conducted in charge of the latter.

Mr. Richmond was a Republican in politics and has been honored by his party at various times by election to town and village offices, which he always filled with fidelity and satisfaction to his constituents. He was one of the oldest as well as one of the most prominent members of the Methodist Episcopal Church, and was for a number of years one of its trustees. For the past 15 years he was secretary of the Mt. Morris Cemetery Association.

He is survived by a widow.

Jewelry, Silverware, Clocks, Watches, and Kindred Lines Exported from New York.

WASHINGTON, D. C., Dec. 26.—The following were the exports of jewelry, silverware, optical goods, clocks, watches and kindred lines from the Port of New York for the week just ended:

Bahia Blanca: 3 cases watches, \$281.
 Berlin: 5 cases silverware, \$106.
 Bombay: 1 case watches, \$1,280.
 Calcutta: 60 cases clocks, \$820.
 Cape Town: 8 cases clocks, \$1,060; 1 case watches, \$248.
 Cienfuegos: 6 cases plated ware, \$384; 8 cases clocks, \$208.
 Colon: 1 case plated ware, \$120; 2 cases watches, \$250.
 Glasgow: 133 cases clocks, \$1,683.
 Guayaquil: 1 case jewelry, \$660; 21 cases clocks, \$345.
 Hamburg: 15 cases plated ware, \$1,527; 3 packages optical goods, \$1,098; 4 cases jewelry, \$954; 1 case jewelry, \$500; 1 package optical goods, \$150.
 Havana: 1 case plated ware, \$134; 5 cases clocks, \$109; 2 cases jewelry, \$497; 1 case silverware, \$263; 2 cases plated ware, \$246.
 Havre: 6 cases jewelry, \$678.
 La Libertad: 1 case silverware, \$114.
 Lisbon: 44 cases clocks, \$472.
 Liverpool: 5 cases plated ware, \$680; 87 cases clocks, \$1,507; 2 cases watches, \$1,435; 3 cases jewelry, \$600.
 London: 43 cases clocks, \$1,200; 1 package optical goods, \$1,800; 98 cases clocks, \$4,000.
 New Castle: 10 cases plated ware, \$120.
 Oporto: 29 cases clocks, \$390.
 Para: 2 cases plated ware, \$179; 13 cases clocks, \$309.
 Rangoon: 21 cases clocks, \$296.
 Sao Miguel: 2 cases plated ware, \$192; 1 case jewelry, \$190; 17 cases clocks, \$158.
 Santiago: 2 cases watches, \$668.
 Soerabaya: 1 case watches, \$345.
 Sydney: 18 cases clocks, \$1,312; 2 cases plated ware, \$120.
 Valparaiso: 1 case jewelry, \$168; 14 cases plated ware, \$1,809; 1 case jewelry, \$176.
 Vera Cruz: 817 cases plated ware, \$3,175; 11 cases clocks, \$320.

Death of L. P. Hebard.

SHEFFIELD, Ala., Dec. 26.—Not only did the death of L. P. Hebard, a prominent jeweler of this place, cause profound regret in the community, but the sensational reports growing out of the investigation caused by the rumor that he had met with foul play, deeply grieved his friends and relatives. Mr. Hebard was found dead in his store shortly after he had opened it on Dec. 20, and it was at first thought that he had died of heart disease, but the coroner's inquest disclosed poison in his stomach.

The deceased was about 40 years old and started in the jewelry business in Sheffield in 1901, succeeding F. B. Gibson. He had previously been in the grocery trade as a member of the firm of Bryant & Hebard. He did well, was highly regarded in the community, and no motive for suicide could be ascribed by his friends. This and the fact that he had considerable money in his pockets some time before and only \$6 when the body was found, started the report of foul play.

The deceased is survived by a widow and several children.

May Eastman, accused of stealing jewelry from the store of Geo. H. Dodson, Spokane, Wash., was recently taken into custody in Seattle, and brought back to the former city to stand trial. The accused is 18 years of age.

Death of Samuel Myers.

BOSTON, Mass., Dec. 29.—The death of Samuel Myers, the oldest traveling salesman in the jewelry line in New England, which took place in Salt Lake City, Utah, Dec. 21, removes a conspicuous figure from the Boston trade.

Mr. Myers was on one of his regular transcontinental trips for the Boston house of M. Myers. He had kept constantly on the road in spite of his years, for he enjoyed the life of travel, and was an unusually successful salesman. While busy with his correspondence at the hotel where he was stopping in Salt Lake, a sudden attack of heart failure brought to an abrupt close his noteworthy career.

News of his death came as a great shock to his relatives and friends in Boston. Arrangements were at once made to have the remains forwarded to this city, and they were expected to arrive to-day.

Mr. Myers was born in London in 1829. He came to America when 27 years of age, and located in Boston, beginning business on Hanover St. Later his brother was associated with him, the firm being known as S. & J. Myers. They removed to Washington St. subsequently, and several years ago M. Myers succeeded them in the business. The latter is a son of S. Myers, and the senior since then has spent most of his time traveling in western territory for the house.

Few who knew Mr. Myers in later life, unless informed on the subject, realized that he was past the three-score and ten period. He looked scarcely more than 60, and was more alert than the average man of that age, being of the type that retains buoyancy and youthfulness of spirit throughout a busy career. Among his numerous friends and business associates he was held in the highest esteem.

Mr. Myers is survived by his brother, the partner of his younger business days; a sister and seven children. One of his sons is Alfred E. Myers, of Myers & Franks, jewelers, on Hanover St., and another is M. Myers, referred to above. Henry Cowan and E. A. Cowan, also well known members of the Boston Jewelry trade, are sons-in-law of Mr. Myers.

Death of Herman Myers.

ALBANY, N. Y., Dec. 26.—The funeral of Herman Myers, an old and at one time a well-known jeweler of this city and Gloversville, took place this afternoon from Temple Beth Emeth, the service being in charge of the Rev. Dr. Mack Schlesinger. The interment was in the Rural Cemetery.

Mr. Myers was born in Cassel, Germany, 82 years ago, and came to this country a very young man. He first settled in Albany, and a short time later went to Gloversville, where he established a jewelry business with great success. He then established a similar concern in Albany, opening a store at 386 Broadway. He conducted both for some time, and later embarked in the manufacture of shoes. Since 1872 he has devoted most of his time to the management of his real estate.

Deceased was prominent in religious work of the Temple Beth Emeth and in Masonic work, and was the oldest living member of Washington Lodge No. 85, F.

and A. M. He is survived by a widow and one son.

Death of Philip De F. Goewey.

ALBANY, N. Y., Dec. 26.—The jewelry trade of Albany and vicinity heard with deep regret and sorrow the news that Philip DeForest Goewey, Albany, one of the city's oldest and most prominent jewelers, had passed away Friday last. Death was due to Bright's disease, from which he had suffered for a number of years.

Mr. Goewey, who was widely known as the head of the firm of Goewey & Jennings, was a native New Yorker, having been born at Hartwick, Otsego County, Oct. 28, 1888. He attended the public school of his native place until he was 12 years old, and then was bound as an apprentice to P. G. Tanner, a jeweler of Cooperstown. In 1851 he left Mr. Tanner and came to Benjamin Marsh, predecessor of Marsh & Hoffman, whose store at that time was at the corner of State St. and Broadway.

After working at his trade for a few years Mr. Goewey started in business for himself in 1862, forming the partnership with his brother, J. Augustus Goewey, the firm taking a store at 12 State St. The brothers continued in business together for four years, and after J. A. Goewey withdrew the deceased conducted the business alone in several different locations until 1900. In this year he formed a partnership with Frederick D. P. Jennings under the style of Goewey & Jennings, and the firm opened the present store at 13 South Pearl St.

Mr. Goewey was married in 1862 to Miss Caroline H. Peck, and later to Mrs. L. E. Gordon. His widow, but no children, survives him. The deceased was a member of Temple Lodge No. 14, F. and A. M.; Temple Chapter No. 5, De Witt Clinton Council No. 22, Temple Commandery No. 2, K. T.; Cyprus Temple, the Scottish Rite bodies and Masonic Veteran Association.

Plucky Proprietress of Philadelphia Jewelry Store Captures Robber Who Assaults Her With a Blackjack.

PHILADELPHIA, Pa., Dec. 31, 1906.—Mrs. Elizabeth Holland, proprietress of a retail store at 1335 S. 2d St., made a heroine of herself last week in assisting in the capture of a man who attempted to rob her store. As usual, the thief pretended to wish to buy a ring. Then he distracted the attention of the proprietress of the store, and while her back was turned he hit her with a blackjack. But Mrs. Holland neither screamed nor fainted. On the contrary, she attacked her assailant and finally handed him over to a policeman.

The prisoner was identified as John Swetledge, a young man who has been only released recently from the reformatory at Glen Mills. He is held for a hearing in court.

E. E. Williams has been appointed receiver for the National Clock Co., Oxford, O., which had been incorporated with a capital of \$100,000. A plant was built at Oxford but never operated. The receiver was appointed upon the application of Kramer & Johnson, contractors of Hamilton, O., and other creditors.

Career of the Late Herman Keck.

CINCINNATI, O., Dec. 26.—The announcement of the sudden death Dec. 20 of Herman Keck, of the Herman Keck Mfg. Co., was a surprise and a shock to the jewelry community of this city. On Monday, Dec. 17, while at his office, he was stricken with a severe attack of pneumonia and sent in a carriage to his home in Maplewood Flats, Clifton. He grew rapidly worse, and died Thursday.

Mr. Keck was born in Cincinnati 42 years ago, and received his education in Cincinnati. After finishing his course at the public schools he entered and graduated from the Woodward High School in 1882. School friends in speaking of him say he was unsurpassed as a student, unusually quick at perception and always at the head of his

THE LATE HERMAN KECK.

class. He was naturally a scientist, and made a specialty of this study for two years at the Cincinnati University, which he entered upon completing the high school.

While still a student Mr. Keck engaged in business with his father, a pioneer manufacturing jeweler of this city, and continued thus for 25 years, building up his father's business after the latter's death in 1892. He became an expert judge of diamonds, and when the Wilson Tariff Bill, putting a duty of 25 per cent. on cut diamonds became a law he perceived that by the duty thereby imposed it was possible to build up a cutting industry in America. He became one of the best-known jewelry men in this country, owing to his activity in the diamond cutting industry and in the manufacturing lines of this city. He was president of the Herman Keck Mfg. Co., the business established by his father in 1837, and also president of the Duhme Jewelry Co., the concern incorporated by him and his brother, Oscar Keck, in 1897. The deceased is survived by a widow and one son eight years old. The funeral services took place at the Cincinnati Crematory on Dixmyth Ave., Sunday, Dec. 23, at 1:30 p. m.

Members of Newark Manufacturing Jewelers' Association Hold Luncheon and Hear Interesting Addresses.

Members of the Manufacturing Jewelers' Association, Newark, N. J., to the number of more than 50, assembled Thursday of last week for the annual lunch and an informal meeting at De Jianne's restaurant. It is the custom of the members to meet about this time of the year for the purpose of arranging for the annual elections which will take place within a few weeks, and usually lunch is enjoyed at the same time.

This year the affair took a somewhat new turn, as it served to call attention prominently to the merits of the Newark Technical School in offering opportunities and advantages to young men desiring to learn the jewelry trade. Several large manufacturers were present at the recent dinner given in the Technical School by the Newark Board of Trade. Their interest was greatly aroused, and they were added to the list of friends which the institution has in the jewelry ranks. Largely as a result of the impression then created, it was decided to invite as the speakers last Thursday Charles Colton, the principal of the Technical School, and John Cotton Dana, the librarian of the Newark Public Library.

Besides the addresses there were remarks

George R. Howe, of Carter, Howe & Co., the president of the association; Alvin Osmon, of the Osmon-Parker Mfg. Co., the chairman of the Good and Welfare Committee; Samuel Clark, of Day, Clark & Co.; George Strobell, of Strobell & Crane. The toastmaster was Theodore Woodland, of the Jones & Woodland Co.

Mr. Colton in his address said that in the average life of boys there is a period of two years or so, after they graduate from grammar school and before reaching the age of 16, when, as a general rule, they drift aimlessly. He regretted that boys could not be put at business or employment at that age, and said it would be better if the time were used in pursuing a technical course.

Mr. Dana spoke of the advantages offered by the library, of the large number of books, which are of especial value to people in the jewelry trade and of the metal display.

The members of the association who spoke expressed agreement with the representatives of the school and library. It was said that only a beginning had been made in the training of jewelers in the school, and that much remains to be done, in order that the industry may enjoy the full benefits that may be reaped.

A number of new members are to be received into the association following this meeting, and it is believed that before long 75 per cent. of the manufacturing jewelers in Newark will be enrolled.

The Good and Welfare Committee which had charge of the affair comprised, besides Mr. Osmon, Andrew J. Hedges, of the firm A. J. Hedges & Co.; Mr. Angell, of the Clark & Angell Co.; Theodore Woodland, of the Jones & Woodland Co.; Mr. Adams, of T. W. Adams & Co.

Miss M. L. Addis has moved from 807 Kansas Ave. to 817 Kansas Ave., Topeka, Kan.

Paterson Police Arrest Man Who Is Believed to Have Swindled Many Jewelers With Worthless Checks.

The vigilance of William Rubin, manager of the store of P. Rubin, 17 Main St., Paterson, N. J., last week led to the arrest of a young man who the police believe has been endeavoring to get watches and jewelry from many retail jewelers of this city and vicinity. The man called on Mr. Rubin about 3 P. M., and, saying that he was recommended by a doctor, asked to see some gentlemen's chains. After making a selection the man then picked out also a lady's chain. The latter he wished to take with him, offering a check in payment, at the same time telling the jeweler to deliver the man's chain at his home in Elizabeth, N. J.

The young man, who is about 23 years old, well dressed and of gentlemanly appearance, talked so well that Mr. Rubin, while not willing to allow him to take away the chain, was still in doubt as to whether or not he was a swindler. The jeweler finally agreed to show an assortment of ladies' and men's chains at the young man's house on the following day. Mr. Rubin thought no more about the matter until a little later, when his sister-in-law, the wife of H. Botwick, a jeweler at 157 River St., came to his store to get a watch chain, saying that there was a young man at her husband's place of business who had bought a watch for \$25 and wanted a chain to go with it. Mr. Rubin gave her the chain, but told her to be careful, and described the customer who had previously called at his store and ordered chains. Not wishing to take any risk, Mr. Rubin then went up to Mr. Botwick's store, and, looking through the window, recognized his customer.

His suspicions being confirmed, Mr. Rubin went across the street and telephoned police headquarters. The detectives were soon on the scene, and took the young man into custody. In the pockets of the prisoner, who had previously said he lived at 912 Elizabeth Ave., Elizabeth, the police found a number of checks signed with different names, and an investigation disclosed the fact that the young man on Christmas Eve had obtained a watch for \$25 from Sigmund Mestel, a jeweler at 40 Montgomery St., Jersey City, to whom he gave a check in payment.

The young man was taken to headquarters and photographed, and is being held to await an investigation of his record. The prisoner is about 23 or 25 years old, 5 feet 4 inches high, has light hair and clean shaven face. He talks like a southerner and walks with a limp.

To the police the prisoner said that his name is Eugene E. Lang, and that he is the son of a wholesale liquor dealer, his home being at Manchester, Va. According to the police the young man confessed that he had passed worthless checks on several jewelers in New York and vicinity.

Some of the checks were signed E. E. Schmitz, and made payable to Morris Barr.

W. M. McNeal, 6 Central Ave., Atlanta, Ga., who was recently found wounded in his jewelry establishment and who was at first thought to have been assaulted by burglars, says that he accidentally shot himself while loading a revolver in his store.

Pittsburg Jewelers Confident That 1907 Will be a Banner Year in Business.

PITTSBURG, Pa., Dec. 27.—Pittsburg merchants almost without exception all agree that the year 1907 will be one of the most profitable in the history of this city. There is every indication on the surface to make such a forecast. The United States Steel Corporation, the Pennsylvania Railroad and other corporations have advanced wages 10 per cent, and the wage-earner patronizes the Pittsburg jeweler to a greater extent than is found in any other city. A few predictions by leading merchants follow:

Otto Heeren, of Heeren Bros. & Co.: "There will be continued prosperity in 1907, and there is no doubt that business will be just as good as it was in 1906, and probably better. There is every indication of it. Wages are advancing, the farmer is receiving the highest prices for his products and everybody will have money to spend. The steel industry is enjoying great prosperity and it is a good barometer to go by. There is also a scarcity of labor, showing that there is employment for all who want to work. The country is growing and expansion is causing prosperity. I doubt if the country was ever in a more prosperous state than the present."

E. W. Hill, of Goddard, Hill & Co.: "Better business will be enjoyed in 1907 than in 1906, and it is my opinion that it will be better still in 1908. There has been an unusually large demand for small goods. Large pieces have moved slowly. I attribute this to the automobile craze. When the bicycle craze was on, few watches were sold. Everybody who could buy a wheel did so in preference to buying a watch. People who have money are putting their spare savings in automobiles. One encouraging feature is the small number of failures. Business cannot help but be good in 1907."

W. J. Johnston, of the W. J. Johnston Co.: "Barring financial disturbances and crop failures, the year 1907 ought to be one of the most prosperous years in the history of the country. The year 1906 has been a splendid one for us. In fact we did a year's business in December. Our increase for this year alone amounted to as much as we had hoped our entire sales would total when we first engaged in business. One thing, however, must be reckoned with at the present time—that is the speculative craze. But if crops are good nothing can stop continued prosperity. We are enlarging our business and expending \$15,000 on new quarters, which will give to us one of the finest establishments in the United States. We are making additions because our business has increased and we must do it. It is hard to forecast conditions, but if nothing unforeseen now happens, 1907 will be a hummer. Things look good on the surface. Business will certainly be all that one could desire."

H. B. Hayes and J. Alexander Hardy, of the Hardy & Hayes Co.: "We have talked with a number of prominent steel men of Pittsburg and have every assurance that trade will be splendid in 1907. Wages are being advanced and every firm has more orders than it possibly can fill. It ought to be a better year than ever. The year 1906 was certainly the best year that we ever had."

S. F. Roberts, of E. P. Roberts & Sons: "Our cash sales and credit sales were in excess of last year and I believe that even better times are coming. There is every indication of it. The fact that wages are being advanced is the best indication that business will be good for many months to come. The country is in a prosperous state and Pittsburg is certainly getting her share of it."

H. G. Laubach is closing out his stock in Franklin, Nebr.

Two thieves about 10 o'clock one evening last week hurled a flat iron through the plate glass window in the store of McIntosh Bros., 64 Grand River Ave., Detroit, Mich., and in the presence of the proprietor extracted a tray of diamonds valued at \$350 and escaped by means of a horse and carriage which was awaiting them. The fugitives were pursued by the jeweler, who failed, however, to overtake them.

Y.; Frank Ricard, Lawrence, Mass.; A. B. Spencer, Rutland, Ia.; Thos. Terry, Buffalo, N. Y.; Geo. Bernard, S. Seff and Weizenegger Bros., Newark, N. J.; Howard Thomas, Wenatchee, Wash.; C. H. West, Amsterdam, N. Y.; Millikan & Hickle, Athens, O.; Frank Thorwarth, Elizabeth, N. J.; Adams & Rockett, Springfield, Mass.; M. J. Bernstein, Joseph J. Carr and Nelson A. Soggs, Niagara Falls, N. Y.; Ernest Allez, Millville, N. J.; Chas. H. Ghee, Tottenville, N. Y.; Geneva Optical Co., Geneva, N. Y.; Goldwater Bros., Oakland, Cal.; Jas. A. Thorpe, Potsdam, N. Y.; Frank F. Stapf, Dunkirk, N. Y.; L. E. Winchester, Fredonia, N. Y.; Nath. Wolff, Portland, Ore.; F. M. Barney, in Creek, Nebr.

The committee authorized the payment the reward of \$100 to the following persons:

No. 17. To Ed. C. Dollard and Officer Michael Wallace, for the arrest and conviction of Frank Maneri and Frank Lovello, who smashed the window of M. Weintraub, Hoboken, N. J., Nov. 1, 1906, and snatched

diamond jewelry amounting in value between \$600 and \$700, and were sentenced to three years each in State prison.

No. 18. To Officer Thos. Cuddihee, for the arrest and conviction of David Henderson, alias Harry Smith, negro, who broke into the store of the W. F. Mueller Jewelry Co., St. Louis, Mo., May 26, and was captured after a long chase, being shot twice by the officer during the pursuit. Goods valued at \$200 were stolen, all of which were recovered together with other jewelry believed to have been the plunder of another burglary, and a burglar's vest pocket pistol, which, however, he did not have opportunity to use. He entered a plea of guilty and was sentenced to five years in the penitentiary.

No. 19. To Officer W. Woodhill, for the arrest and conviction of Thos. Roulet, who broke into the store of Warren Scarborough, Long Island City, Aug. 23, stealing jewelry amounting in value to about \$500, part of which was recovered. This burglar had a record and would have gotten a five years' sentence, but while in jail awaiting his sentence he prevented the escape of a large number of prisoners at considerable risk and therefore was let off with 30 days in the Queens County Jail.

No. 20. To D. C. Clark, for the arrest and conviction of two burglars who broke into the store of R. J. F. Roehm & Co., Detroit, Mich., Aug. 19, and stole about \$700 worth of stock, a part of which were recovered. The detectives had no clue and would never have discovered the thieves but for information given by Clark, who was boarding in the same house with the culprits, and having seen an advertisement of the reward notified the police of suspicious actions which he had observed. One was sentenced to one year and the other to two years in the State prison at Jackson.

No. 21. To officer Austin H. Gilbert, for the arrest and conviction of Sylvester Duncanson, who smashed the window of Geo. E. Childs' store, Flint, Mich., Aug. 9. Failing to get any goods on account of the vigilance of the officer, he was sentenced to 90 days in the workhouse, it being impossible to secure a longer sentence because nothing of value was taken.

No. 22. To Geo. Parker, for the arrest and conviction of Chas. T. Brooks, negro, who broke the show window of C. D. Quisenberry's store, Orange, Va., Oct. 10, and was sentenced to the penitentiary. This is a small place with no police force, but an advertisement of the reward offered resulted in a number of persons taking up the pursuit. This negro was captured and confessed to breaking the window and to breaking into a number of other stores the same night.

No. 23. To the Police Pension Fund of Albany, N. Y., for the arrest and conviction of Cyrus Murphy and Frank Alexander, who smashed the window of F. W. Hoffman, Albany, N. Y., Oct. 21, and stole rings valued at \$160, all of which were recovered. Murphy was sentenced to not more than four years or less than three years in Dannemora Prison, and sentence was suspended in Alexander's case.

No. 24. To Officer Jas. H. Lyons, for the arrest and conviction of Frank Edwards, who broke into the store of the R. G. Winter Jewelry Co., Minneapolis, Minn., Sept. 17, stealing about \$700 worth, and

was sentenced to four years and six months in the State prison at Stillwater.

No. 25. To Detective Jas. Gaffney, for the arrest and conviction of two boys who smashed the show window of A. E. Motch, Covington, Ky., on Nov. 22, stealing two watches, which were afterwards recovered. The boys being under age, one was sentenced to the State Reform School and the other was placed on probation under suspended sentence.

Lad Who Set Fire to Attleboro Jewelry Factory Sentenced to State Reformatory.

ATTLEBORO, Mass., Dec. 29.—John R. Tingley, alias Moss, who recently confessed to starting the \$100,000 fire at the jewelry factory of W. H. Wilmarth & Co., was in court this morning for sentence.

State Agent G. F. Davis, of Fall River, made a strong plea for the boy. He urged that Tingley be placed on probation and through the State Board of Charity be placed on some farm, where his habits could be watched.

Fire Marshal H. H. Collamore, who brought about the arrest of the boy, did not favor such a plan. He recommended that Tingley be sent to the State reformatory, where he could learn a trade and be safe. He argued that through the confession of the youth he was liable at any time to have a mania for starting more fires.

Judge Byram sentenced Tingley to the State Reformatory.

Agent Davis entered an appeal for the boy and the case will be settled by the Grand Jury. In the meantime Tingley will be held in Taunton jail.

Death of Robert Barton.

PROVIDENCE, R. I., Dec. 29.—Robert Barton, at one time one of the well-known jewelry manufacturers of this city, died at his home in Barrington last Wednesday. He was nearly fourscore years old, and had been retired from active business' for about four years.

Mr. Barton was born in Warren nearly 80 years ago, and when his course at the local schools was completed he started in as a salesman, being 21 years old when he secured a place as such with Smith, Deey & Eddy, then well-known manufacturers. He was later given charge of the New York office of the concern, and on leaving the latter took a position with Wheeler & Knight as traveling salesman. Later, determining that the time had become ripe for him to get into business for himself, he became partner in the firm known as Peck, Proctor & Barton, which later became Peck & Barton. Mr. Peck's death occurred a number of years ago, and after that time Mr. Barton continued the business under the same firm name.

Mr. Barton leaves a widow, but no children.

Grand & Maki, Ashland, Wis., will soon discontinue business.

Joseph Yourkoesky, who, a short time ago, was found by Officer George Reynolds in Wallace H. Miller's store, Uniontown, Pa., has been sentenced to three years' imprisonment in the penitentiary.

Interesting Specimens of Jade Exhibited by Dr. Geo. F. Kunz to Scientists Visiting New York.

At the convention held in the last week by the American Association for the Advancement of Science and by the Geological Society of America, the New York Academy of Science gave an exhibit, of which a feature was the minerals shown by Dr. George F. Kunz, of Tiffany & Co. Dr. Kunz exhibited the great mass of true jade (nephrite), weighing 4,715 pounds, which he discovered and obtained at Jordansmuhl, Silesia, in 1899, and which now belongs to the Heber R. Bishop collection, loaned to the American Museum of Natural History through the courtesy of the Metropolitan Museum of Art. With this specimen is a series of photographs of the quarry and of features connected with it, made by George H. Kunz, a son of Dr. Kunz. There were also shown a specimen that was obtained at the same time, and has since been polished, showing the beauty of the material, also a hand fragment unpolished.

This jade from Silesia is of special interest, as it was believed by many that the jade implements found in the lake dwellings of Switzerland, Italy and Austria had all been obtained from material of Asiatic origin and brought westward in the pre-Christian migrations. In this one mass there is enough jade to make five times the number of implements that exist in the combined European museums, and there is no necessity of attributing an Asiatic origin, although some of the implements may have had such an origin.

Dr. Kunz exhibited in connection with his paper before the Geological Society of America American diamonds from six distinct localities; three in Wisconsin, one in California, one in Alabama and one in Indiana. He also showed a series of Jasper rock, iron ore, horn-blend, corundum and other typical minerals and rocks, which were found associated with gold in the gold washings of Brown and Morgan counties of Indiana.

These are of especial interest, because a number of the rocks have been identified and also verified by Canadian geologists as being of Canadian origin and as having been transported during the Ice Period from the northern shores of Lake Superior and Ontario, and probably some from as far as Ungava District in British Columbia.

Naturally, the fact that a series of minerals, varying in specific gravity from quartz to native gold six times the weight of quartz, would lead to the plausible theory that these have been transported by ice and not by river action, or they would not have been transported, but would rather have been separated according to their varying densities. The subject is one of unusual interest, as diamonds have also been found in other parts of Wisconsin, Ohio and Indiana, and it is believed they all have a common origin, having been transported either in the first or second Ice Period.

With this collection was also shown a collection of concentrates from the gold washings of Brown and Morgan counties of Indiana, containing zircon, garnet, kyanite, feldspar, smoky quartz, gold and a variety of other minerals.

In the Archaeological Exhibition there was also shown with the Heber R. Bishop collection of jade the two great volumes of the monumental catalogue, and for the extensive scientific investigation connected with it. Descriptions of the book were also shown, written by Dr. Kunz, who had the scientific investigation of the Bishop collection of jade in charge.

Nebraska Jewelers and Opticians to Meet in Lincoln.

OMAHA, Nebr., Dec. 26.—The first annual meeting of the Nebraska Retail Jewelers' Association will be held in Lincoln Jan. 15. An interesting programme has been prepared and distributed to retail jewelers throughout the state. The programme is as follows:

PROGRAMME.

9 A. M.

Address of Welcome. Hon. Richard O'Neill, Lincoln
Response. Max Egge, Grand Island
Address, by the President.

E. J. Neiwöhner, Columbus
Report of Secretary-Treasurer. D. L. Davies, Nelson
Benefits of Organization. J. A. Reuling, Wymore
Protection for the Jeweler. Hamilton Watch Co.
Adjournment.

1:30 P. M.

History of Diamonds. H. P. Sutton, McCook
Successful Storekeeping from the Standpoint of a
City Retailer. T. L. Combs, Omaha
Advertising that Brings Results.

E. J. Neiwöhner, Columbus
Successful Storekeeping from the Standpoint of a
Retailer in Smaller Cities and Villages.

H. S. Knapp, Bertrand
Mail Order Competition and How to Meet It.
Fritz Hoefler, Aurora

General Discussion.
Adjournment.

7:30 P. M.

Nomination and Election of Officers for Ensuing
Year.

Appointment of Committees.

Illustrated Lecture.

H. E. Duncan, of Hamilton Watch Co.
Adjournment.

The officers of the association are: President, E. J. Neiwöhner, Columbus; vice-president, J. A. Reuling, Wymore; secretary and treasurer, D. L. Davies, Nelson; National Committee, Frederick Gardner, Lincoln; F. A. Hannis, York. The Reception Committee includes 25 members.

The first annual meeting of the Nebraska State Optical Association will be held on the following day, and ample arrangements are being completed in Lincoln for the accommodation of all. Many persons who will attend belong to both organizations, consequently it was deemed advisable to hold both meetings at the same place. The opticians will have morning, afternoon and evening sessions on both Wednesday and Thursday. Among the speakers will be C. C. McLeese, president of the association; Rev. H. H. Harmon, Dr. S. W. Lane, Kansas City, Mo.; A. O. Leiber, Utica, Nebr., "Advantage of Spectacles Over Nose Glasses;" F. A. Hannis, York, Nebr., "Optical Truths;" F. C. Calhoun, Pawnee City, Nebr., "Confidence to and of Your Patients;" Thomas Gowenlock, Clay Center, Kans., "Optical Legislation;" W. G. McLaughlin, Beatrice, Nebr., "Muscular Defects. Theories and Treatment;" H. P. Holmes, Des Moines, Ia., "Little Things in Every Day Optical Life;" C. E. Masters, Crawford, Nebr., "Duties to Patients;" George Hoffman, Leigh, Nebr., "The Nervous Patient and How to Handle Him;" William E. Huston, Kansas City, Mo., "Titles—Organizations—Education;" J. C.

Mackey, Carleton, Nebr., "Relation of Optometry to the Medical Profession;" A. B. Tarbox, Omaha, "Corrections and Errors of Refraction and Accommodation by Means of Lenses;" Dr. A. M. Phelps, reading of the Optical Bill; George E. Perkins, Ford, Nebr., "What Course to Take Against an Unscrupulous Advertiser;" John C. Eberhardt, Dayton, O. (author of "Dynamics of the Ocular Muscles," which was published in previous issues of THE CIRCULAR-WEEKLY), "Congenital Amblyopia and Its Treatment;" M. L. Jones, Fairfield, Nebr., "Fitting and Adjusting of Frames;" C. A. Hewitt, Neligh, Nebr., "Fitting and Adjusting of Frames;" G. H. Burton, Norfolk, Nebr., "Duties to Patients;" Miss J. H. Pratt, Fremont, Nebr., "Glasses as Medicine;" R. C. Simmons, Norfolk, Nebr., "Relation of Optometry to the Medical Profession."

On Wednesday evening at 8:30 the members will visit the Lyric Theatre in a body, after which a luncheon will be served at the New Windsor Hotel. The officers of the Optical Society are: President C. C. McLeese, Davenport, Nebr.; first vice-president, M. J. Egge, Grand Island; treasurer, B. B. Coombs, Omaha; secretary, J. H. Hukill, Lincoln; second vice-president, F. Hoefler, Aurora. The executive committee consists of F. A. Hallett, chairman, Lincoln; G. A. Parkins, Ord; H. P. Sutton, McCook; N. A. Heath, Hebron. The reception committee consists of Mrs. Charles Fleming, chairman; J. H. Hukill, J. J. Davis, Mrs. A. M. Phelps, Mrs. F. A. Hallett and Charles Fleming.

Interesting Reports as to Output of New Premier and Voorspoed Mines.

South African papers are now giving considerable attention to the Voorspoed mine, which in surface extent is declared to be the second largest in the world, the largest being the Premier in the Transvaal. It is reported that Wernher, Beit & Co. have bought an interest in the Voorspoed mine, indicating that the De Beers interests considered it worthy of adding to their properties.

It is admitted that as yet the Voorspoed mine has not yielded any large quantity of diamonds, but the digging has established, it is said, the existence of a large pipe. This ground is now yielding 25 to 30 carats a load, and new machinery is being installed so that larger quantities of ground may be treated.

The Premier mine's output has been increasing for several months, the gains being due in part to the treatment of overburden and residues, and adding the stones thus obtained to the others resulting from ordinary operations. In 11 months of the year 931,775 carats of diamonds have been yielded, the monthly yield being as follows:

January, 39,981; February, 45,277½; March, 71,084; April, 89,600; May, 91,163; June, 77,305½; July, 74,700; August, 104,809; September, 106,212; October, 112,478; November, 119,165. Total for 11 months, 931,775.

The number of carats recovered from each 100 loads of earth treated at the Premier mine during these months has varied from 25 to 35.

ADDISON W. WOODHULL, President.
FRANK K. HUFF, Vice-President.

GILBERT T. WOODHULL, Treasurer.

The Diamond Markets.

ANTWERP, Dec. 22.—Sales in Antwerp are rather dull, and it is expected that they will remain so until the middle of January. Very white and larger roses are still in demand, but are very scarce.

A new firm was recently established under the firm style of J. Weindling & Co., for a period of 10 years, to carry on business as diamond brokers.

A banquet was tendered to L. Coetermans, Consul General of Persia and diamond merchant, on the occasion of his nomination as an officer of the Legion of Honor of France. The banquet was held in the large hall of the Zoological Garden. There was in all 150 in attendance, many of whom were diamond merchants. Mr. Coetermans was presented with a gold medal by A. Hertogs, burgomaster of Antwerp. J. Pauwels, president of the Diamond Club, of Antwerp, in his address highly complimented Mr. Coetermans. At the close of the banquet Mr. Coetermans gave in his mother's name and in his own the sum of 5,000 francs for distribution among the poor for Christmas feasts.

The following foreign buyers were in Antwerp during the past fortnight: Messrs. Slyper, Mezbourian, Mannikendam, Mitterpolo, Ormand Levy, Arons, D. Van Praag, S. Horowitz, Wins and Matheossian, all of Paris; Messrs. Stavenhagen, Goldberg, Brackhuizen, Mednikoff, O. Herz, London; Mr. Herzog and Mrs. Herfelder, New York; Mr. Winkeleer, Vienna; Mr. Monosohn, St. Petersburg; Mr. Walewijck, Madrid; Mr. Schettino, Naples; Mr. Belusch, Milan; Mr. Michailoff, Woroneck, Mr. Mendelsohn, Manchester; Mr. Abend and Mr. Maschkowitch, Berlin; Mr. Pevsner, Bacon.

AMSTERDAM, Dec. 20.—The market has been very quiet for some days past, and it is said that this situation will not change before another two or three weeks. Notwithstanding the difficulty of selling diamonds at present, the demand for rough goods keeps up, and London shipments are immediately sold after being shown. Many of the cutters cut small goods now, in order to keep their working force busy, forecasting a good trade at the beginning of 1907.

The committee of the Algemeene Nederlandsche Diamontbewerkerbond has resolved that from Jan. 1 the workday of the diamond sawing trade will not be longer than that of the other men, namely 54 hours per week. This request has been submitted.

Rumors were again heard of the supposed establishment of diamond factories in the south of Africa, but one of the managers of the De Beers concern said it was a ridiculous story. He said that it is absolutely impossible that the diamond industry will ever be established in South Africa, and certainly not at Johannesburg. This industry can only be displaced from Amsterdam and Antwerp by renewed strikes, but he added that he hoped that such a necessity will not present itself.

PARIS, Dec. 20.—The local diamond market is rather quiet, owing to the approach of the new year. Sales of brilliants are few and far between, and the same can be said

of colored stones and pearls. A few sales in Amsterdam roses have been made during the early part of the month, but there is practically no business to speak of.

The office of Gaston Menasse, which was at 12, Rue Laconartine, is now located at 37, Rue Laffite. S. M. Cohen has opened an office at 16, Rue Charons. It is rumored that the firm of Chaumer, Rue de Richelieu, will establish quarters shortly at Place Vendôme.

Minneapolis and St. Paul.

J. C. Gerde, Paynesville, Minn., was a visitor in the Twin Cities last week.

There have not been as many complaints of shoplifting during the holidays as in previous years, although there were some thefts committed.

David Marks, clerk in a jewelry store at 145 E. 3d St., St. Paul, appeared in the Police Court recently on the complaint of L. Friel, who alleged that Marks had sold him a bogus watch, pretending that it was really the precious article it appeared to be. The case was continued, and Marks was released on \$100 bail.

There are a number of reports regarding changes and new stores about to open up on Nicollet Ave. in the downtown district of Minneapolis, but it is difficult to get authentic information on the subject. There have been several projects in view, and some at least have been dropped or deferred until more promising openings present themselves.

Washington, D. C.

The Williams Watchman's Co. has been incorporated under the laws of Virginia by residents of this city. The capital stock is \$500,000, and the officers are F. Williams, G. F. McCabe, B. F. Adams and M. C. Darnelle.

Frederick Dilger, said to be the brother of Theodore Dilger, a jeweler of Bluefield, Va., attempted suicide Thursday afternoon, jumping from the deck of a ferry boat at the foot of 7th St., this city. He was rescued by some of the boat crew and removed to the emergency hospital. The man is said to be in a serious condition. It is reported that he was going blind, and that this had prompted him to commit the rash act.

A resolution has been introduced to provide for the appointment of a commission for the purpose of inquiring into the relation of the tariff to trusts and monopolies, and the industrial and labor interests of the United States, and to recommend such changes in the schedules of the existing tariff as it may deem necessary in order to promote the common welfare. The commission is to consist of nine members, five to be appointed by the Speaker of the House, three Senators, and one to be appointed by the President. This commission would be expected to investigate the matter, especially with reference to the reputed sale of American goods abroad cheaper than they can be secured in the home markets; also into the effects of the tariff upon the various questions relating to agricultural, commercial, mercantile, manufacturing, mining, industrial and labor interests of the United States.

Canada Notes.

C. Maheux & Co., Montreal, have dissolved.

Arthur A. Marshall, London, Ont., has sold out to M. Hughson.

E. L. McDonald & Co., Wawanesa, Man., have dissolved, E. L. McDonald continuing.

The stock of F. De Paris, jeweler, of Quebec, who recently assigned, was ordered to be sold Dec. 27.

Mrs. G. B. Knowles, Battleford, Sask., has disposed of the jewelry department of her business to H. Logan & Co.

The store of Charmandy Bros., dealers in peddlers' supplies, North Bay, Ont., was destroyed by fire on Sunday of last week. The loss was partly covered by insurance.

H. Michalson, of the firm of I. L. Michalson & Sons, Ltd., Montreal, sailed on *La Touraine*, Dec. 20, for Amsterdam and Antwerp on his semi-annual trip for the purchase of diamonds.

Frank Cooke, Fort William, Ont., aged 45, was found dead on Monday morning of last week in the rear of his store, the police being attracted by the barking of his dogs, which were found guarding the body.

It will be of interest to business men outside the province of Quebec to learn that the commercial travelers' tax will be repealed at the next session of the Legislature. The tax was \$300, and it has been so much resented by commercial men that Premier Gerrin has given his promise to repeal it.

A daring burglary occurred last week at David Ward's pawnshop, 104 Adelaide St. E., Toronto, Ont., where several thousand dollars worth of diamond and other valuable jewelry were displayed for the holiday trade. The locality is one not much frequented after dark. At about nine in the evening two men drove up in a cutter and fastened the doors outside with ropes and hooks. Then while one of the robbers got into the cutter the other threw a heavy brick through the window, and made a grab through the aperture for two trays of diamonds valued at \$5,000. His arm, however, was seized from within by David Ward, who had been waiting on customers, and after a struggle the thief escaped without obtaining any booty except an amethyst brooch and two chains. He joined his companion in the cutter and drove rapidly off. They were chased by a mounted policeman, but gave him the slip for the time. Finally one of the men, John Milligan, was captured in the suburbs. He was identified as the principal culprit, his hand being cut and bleeding from the broken glass of the window. On being taken to the police station he made a full confession, implicating Joseph Warren, John Warren and Fred. Marsh as accomplices. They were arrested Monday, of last week. The two Warrens and Marsh pleaded "not guilty" when arraigned, and all four were remanded until Monday next. The burglary is the most audacious that has occurred here in many years.

Mackey & Elias, of 235 Eddy St., Providence, R. I., until recently the Mackey Jewelry Co., are mailing to the trade a handsome and expensive calendar for the coming year. Mr. Mackey has been searching for some time for an attractive design.

Connecticut.

The New Haven Clock Co., New Haven, has closed for two weeks, during which time the inventory will be taken.

The brick work on the new five-story addition to the buildings of the Wm. L. Gilbert Clock Co., Winsted, is now completed.

N. L. Bradley, of the Bradley & Hubbard Mfg. Co., Meriden, has been ill with the grippe and congestion of the lungs, but is now recovering.

The factory of the E. Ingraham Co., Bristol, has again commenced running on the regular 10-hour schedule. The plant has been operated overtime for some time past.

Mayor Landers and Charles F. Smith, New Britain, recently sent out a large number of Christmas greeting cards to their friends in accordance with their annual custom.

All the departments of the Seth Thomas Clock Co., Thomaston, closed Monday evening of last week for the Christmas vacation. Work was resumed New Year's day.

Mrs. Harriet N. Hart, mother of Gilbert L. Hart, secretary of the Morgan Silver Plate Co., Winsted, died recently at the home of Mr. Hart. The deceased was 80 years of age.

Isaac Brush, Bridgeport, who is about to retire from business in that city and locate in New York, was given a formal dinner by a number of his friends and associates at the Calumet Club last week.

A decision handed down recently by Judges Thayer and George W. Wheeler, of the Superior Court, gave Dora Briggan a decree of divorce against her husband, Abraham H. Briggan, New Haven.

P. T. Ives, Meriden, arranged during the holiday rush, a dining room in the basement of his store and served meals to his clerks. This is a 20th century idea of looking after the welfare of employes. It helps not only the clerks, but the business as well.

The Waterbury watch shop's bowling team took all three games from the Berbecker & Rowland team last week at the Wooster alleys. The game was contested by Captain Burns of the Berbecker & Rowland team on a question regarding fouls.

The resignation of Arthur O. Jennings, general manager and treasurer of the New England Watch Co., Waterbury, which was tendered last week, has been accepted by the directors of the company, and went into effect Jan. 1, 1907. Mr. Jennings has been resident of Waterbury for about 12 years.

Officer Daniel Hickey, Stamford, recently found in Gray Rock Pl. remnants of boxes taken from the S. Kronholtz jewelry store. The police believe that there were at least three men implicated in the robbery, and that they boarded a freight train to get away. Printed descriptions of the missing articles taken from the jewelry store have been sent broadcast.

August Peterson, a driver in the employ of the Wm. L. Gilbert Clock Co., Winsted, had a narrow escape recently from drowning. He was driving one of the company's large trucks in the direction of the storehouse, and when about to turn the corner near the factory dam the wagon slipped on the ice and the horses were pulled into the

water. Peterson and his little daughter, who was seated beside him, managed to cling to the sides of the wagon until rescued. One of the horses was killed and the wagon badly smashed.

A. M. Hanks, retiring foreman of the celluloid room in the case shop of the Seth Thomas Clock Co., Thomaston, was recently presented with a box of cigars and an umbrella by the workmen under him. Mr. Hanks as yet has made no definite plans for the future. He has received an offer from the Sessions Clock Co., in Forestville, where he may decide to locate.

A blaze was recently started in the basement of the jewelry store of Glouskin & Fox, on Chapel St., New Haven, by a lighted candle which accidentally came in contact with a pile of excelsior. A young man in the employ of the concern caused the trouble by inadvertently causing the flame of the candle to ignite the excelsior. The fire spread rapidly, and an alarm was turned in from box 24. The fire department responded and extinguished the flames in a few minutes. The jewelry displayed in leather and plush cases was hastily placed in the safe. The fire resulted in small loss, as most of the other stock was in glass show cases and was uninjured by the smoke.

Attorney-General William A. King, of Hartford, for the State, and Attorney George E. Beers, for the executor of the estate of the late Frank A. Stevens, European representative of the New Haven Clock Co., and who died in New York a year ago, appeared before Judge Cleveland in the Probate Court recently and argued the question as to whether or not about \$75,000 worth of Mr. Stevens' estate was subject to the succession tax in this State. Mr. Stevens at his death left an estate of \$100,000, and this went through the probate channels in New York State, and including the \$75,000 which is alleged by the State to be subject to taxation was taxed under the succession law in New York, and therefore the executor, Arthur O. Jennings, of Waterbury, protests against its being taxed here.

Lancaster, Pa.

TRADE CONDITIONS.

In spite of bad weather crowding their Christmas trade into a few days, Lancaster jewelers say the holiday season just closed was the best they ever had.

Guy Herr, Harrisburg, visited Lancaster recently.

William Pirosh, of Pirosh & Simmons, is visiting New York this week.

Two teams of jewelers are being formed to participate in a bowling match.

The Hamilton Watch Co. was so pushed with orders it did not close as usual on New Year's Day.

T. A. Willson, the Reading, Pa., spectacle manufacturer, was in Lancaster last week.

Edward Gardner and Howard Phillips, Philadelphia engravers, spent Christmas in Lancaster with their parents.

C. G. Rhoads, manager of the Mifflin County Jewelry Co.'s store at Lewistown, visited friends here last week.

Donald McBride, watchmaker, who was burned out in the San Francisco fire, is

visiting relatives in this city, accompanied by his wife.

The Travelers' Protective Association, to which most of the jewelry "boys" of Lancaster belong, will hold a reception and ball next Friday evening at the Hotel Rossmere.

Edward Rosenstein, of the Lancaster Silver Plate Co., last week conducted the exercises attending the annual celebration of the Minnehaha Club, of which he was elected president.

F. A. Peters, of the H. S. Meiskey Co., is home from a trip to New York, and F. A. Huber, C. F. Reisner and T. C. Mullenberg, traveling representatives, are all home from extended trips. They will not go out for another week at least.

New Stores and Enterprises.

G. Reber is a new jeweler in Angel's Camp, Cal.

W. R. Johnston has begun business in Axtell, Nebr.

A. B. Ensminger will shortly begin business on Jefferson St., Pickensville, Ala.

F. E. and H. M. Farley have started in the retail jewelry business at 1005 W. 7th St., Little Rock, Ark.

The Big Gem Co. was recently incorporated in Ann Arbor, Mich., to exploit and market California gems. N. H. Berger will be the California manager.

The Electric Gravity Clock Co., of New York, was incorporated last week with a capital stock of \$25,000. The directors are J. Butcher, C. M. Ellis, New York, and S. N. Putnam, Brooklyn.

The Victoria Jewelry & Fur Co. was recently incorporated in St. Louis, Mo., with a capital stock of \$10,000, of which one-half is paid in. The incorporators are August and Edgar Schreiders and Harry Lockie.

Max Ginsberg & Co. is the name of a new corporation formed last week for the purpose of dealing in metallic novelties, clocks and jewelry. The authorized capital stock is \$10,500. The incorporators are M. Ginsberg, Brooklyn; H. L. Fellman and J. J. Pantwell, New York.

The Williams Watchman's Clock Co. was recently incorporated in Alexandria, Va., to manufacture and sell clocks, with a capital stock of \$500,000. The officers are: President, H. H. Darneille; vice-president, C. W. Darr; secretary and treasurer, F. S. Norton. These, together with F. Williams, G. F. McCabe, B. F. Adams and M. C. Darneille, all of Washington, were the incorporators.

Trans-Atlantic Voyagers.

TO EUROPE.

Alvin L. Strasburger, of Louis Strasburger's Son & Co., New York, sailed last Thursday on *La Provence*.

Harry S. Morris, of the S. Cottle Co., New York, will sail next Tuesday on the *Kaiser Wilhelm II*. On the same boat will sail B. H. Davis, of B. H. Davis & Co., New York, and Mrs. Davis.

M. Berman, Altoona, Pa., was pleasantly surprised on the night before Christmas when his clerks presented him with a neat token of their esteem.

TEN MILLION women all over the United States are now being taught the usefulness of Silver Cream about the household—through our advertisements in the leading ladies' magazines.

For thirty-four years Silver Cream has proved its unqualified merits as a silver and cut-glass polish.

A FULL SIZE JAR SENT FREE also our 1907 Special Offer, upon request.

Sold by all jobbers or direct. Made only by J. A. WRIGHT & CO. Keene, N. H.

"GEMFINDER" takes a melancholy pleasure in referring the trade to his advertisement of April 25th last, in the "Jewelers' Circular." Unfortunately, his prophecy has been fulfilled. Not only have Precious Stones advanced, but the end has not yet been reached. Sapphires have gone up at least 25 per cent. in the last six months, and they will go still higher.

"Gemfinder" again warns prospective buyers not to delay. All kinds of Precious Stones are scarce and prices on some may become prohibitive.

Express their appreciation for favors received during the year that has passed and extend to their friends and patrons a Greeting for the New Year.

SILBERMANN KOHN & WALLENSTEIN
87 Maiden Lane, New York.

Providence.

A number of concerns were closed the greater part of last week for the annual stock taking.

Robt. L. Griffith expects to take soon one of his annual trips to Florida in pursuit of his favorite pastime, fishing.

Among visitors in town last week was H. Brum, formerly the San Francisco agent of the Philadelphia Watch Case Co.

A final dividend was declared in the case of Frank I. Pearce, bankrupt, by the referee in bankruptcy, last week, the entire distribution being less than 10 per cent.

Among the buyers who were registered in town last week were: J. Levy, of Philadelphia, Pa.; J. Brooks, Jr., of Arlington, Mass.; O. Kind and L. Block, of Philadelphia.

The second Wednesday in January has been set as the date for the annual meeting of the Manufacturing Jewelers' Board of Trade. The meeting will be held in the board's offices in the Wilcox building, on Weybosset St.

Two young men who were trying to dispose of jewelry at cut rates in Central Falls last week were gathered in by the police, but later released. They had a number of cheap rings which they were trying to sell to pawnbrokers.

Harry M. Mays, Arthur C. Stone and George Briggs, Jr., last week purchased the interest of George W. Dover in the George W. Dover Co. The price given has not been made public. The concern will continue under its present name. Immediately after the transfer a meeting of the new directors was held and the following officers elected: President, Arthur C. Stone; secretary, George Briggs, Jr.; treasurer, Harry M. Mays. Mr. Dover retires entirely from the business after being its active head since the organization of the firm in 1890, when he started in partnership with George W. Pritchard. The firm was incorporated in June, 1902, and has gained a wide reputation. It is at present capitalized for \$225,000, although \$50,000 of this is preferred treasury stock.

North Attleboro.

TRADE CONDITIONS.

The year just closing has been the most prosperous in the history of the local jewelers. This prosperity, unlike that of some other years, has not been confined to any single line, but has extended over the whole jewelry industry. The great building boom that North Attleboro has enjoyed, a town dependent entirely upon the jewelry business, indicates plainly the amount of business done. It has been necessary to erect three large factories to keep up with the boom, and in other instances additions have been made to factories to enable concerns to increase their lines. But while 1906 has been such a grand year, the jewelers are positive that when 1907 is over still another record will be registered. The early reports from the shops of salesmen scouring the west are favorable to a big business.

W. G. Clark & Co. moved into their new factory on Chestnut St. last week.

George Whiting is in New York for several weeks in the interests of Sturtevant & Whiting.

Theron I. Smith returned last week from a short business trip to Chicago and other western cities.

Arthur Chace returned on Thursday from

a long western trip, and left immediately upon another long tour.

The Bugbee & Niles Co. remembered its help on Christmas by giving each employe a \$5 gold piece, a custom that the concern has followed for some years. R. Blackinton & Co. presented the members of its packing room with solid gold rings as Christmas tokens.

Christmas week was rather a dull one in the jewelry business and was well broken up. Nearly all the shops were closed on Monday, and a large number remained closed for the balance of the week. Riley & French, W. & S. Blackinton Co., G. C. Hudson & Co., C. Ray Randall & Co., F. L. Shepardson & Co., Casper & Mandalian, J. J. Sommer & Co., W. G. Clark & Co. and the G. I. Paine Co. were closed all week.

A general exodus of salesmen for the west, New York and other sections of the country took place on Christmas week. Among those leaving were: Charles E. Stanley and Walter C. Sherman, for estate of O. M. Draper; Charles H. Peckham and William Peckham, for J. H. Peckham & Co.; Louis Blackinton, Fred Carpenter and George S. Semple, for the W. & S. Blackinton Co.; K. L. Taylor, and D. M. McGavin, for Riley & French; Frank Kennedy and Frank W. Reed, for the Paye & Baker Mfg. Co.; Harry Fisher, for Furbish, Swift & Fisher; G. Cheever Hudson and C. H. Lowe, for G. C. Hudson & Co.; Frank Ruggles and W. H. Bell, for W. H. Bell Co.

Boston.

TRADE CONDITIONS.

All the Boston jewelers, wholesalers and retailers, had a splendid holiday trade, this season. For some of them it surpassed all previous records, and for most of them the results were eminently satisfactory.

Buyers in town last week included: C. L. Barnard, Milford; F. R. Johnson, Campbell; W. D. Flagg, Ashburnham.

William Smith, formerly with Wilson Bros. as salesman, has taken charge of a new watch department established by the R. H. White Co.

Nelson H. Brown will install a watchman's clock system in the new Harney shoe factory at Lynn, as a result of the explosion which wrecked the old plant a few weeks ago.

William Kerins, foreman of the Eco-Magneto Clock Co.'s factory, is receiving congratulations of more than ordinary significance at this holiday season because of the advent of a son in his household.

F. I. Richards, until recently located in Rochester, N. H., where he closed out his stock during the fortnight just preceding Christmas, has come to Boston this week with the intention of locating here, or in one of the nearby suburbs.

Alvin D. Puffer, who died in Medford last week, was well known to the silver-smiths of the older generation in Boston, having been a pioneer in the manufacture of soda fountains, with silver and silver-plated mountings. He was born in Stow, Mass., 87 years ago.

The death on Dec. 30 at his home in Brookline, Mass., of S. G. Smith came as the sequel to an accident that happened about two years ago, when Mr. Smith was run over by a team. Paralysis ensued from

his injuries. He was in business as a watchmaker and jeweler for upward of 40 years in Exchange St., this city, and had a fine reputation as an expert in his line of work. He was 67 years of age.

Attleboro.

TRADE CONDITIONS.

With every promise brilliant for a busy season throughout the opening months of 1907, the manufacturing jewelers do not mean to wait for the business. Almost all the concerns will have their salesmen on the road within the next fortnight scouring for another flood of orders.

Foreman Charles O. Selby, of the P. J. Cummings Co. factory, received from the employe a watch chain.

The employes of the Finberg Mfg. Co. presented Superintendent Henry J. Carroll with a desk and chair for his office.

Foreman George E. Middleton received from the employes of Mason, Howard & Co. a quartered oak rocker and oil painting.

J. M. Fisher & Co. gave every employe a Christmas gift of an umbrella, and the office force of young women received boxes of candy.

S. O. Bigney & Co. allowed the office and packing room employes to select as Christmas gifts their choice of the products of the factory.

Charles E. Bliss, for years in Bliss Bros., and for many years active as a member of the school board, has announced his coming retirement from the latter work.

Hjalmar N. Orup, an inventor, has taken a position with the R. F. Simmons Co. He has recently returned from a trip to Cuba, following several months of ill health.

At the urgent request of the Attleboro business men certain Boston to New York express trains will hereafter stop at Attleboro, which formerly went straight through.

The C. H. Eden Co., which recently purchased the Messler comb business in Providence, and moved it to Attleboro, expects to start operations in the new department this week.

The D. F. Briggs Co. served a salad dinner to the 40 employes of the office and packing room, and the department heads. Each diner found as a souvenir a crisp greenback or gold piece at his place.

The Frank Mossberg Co. presented a Christmas gift to each office employe and department head. The gifts were books on the new savings department of the First National Bank of Attleboro, showing a deposit of \$10 in every case.

Charles M. Robbins, of the Chas. M. Robbins Co., has returned from Europe, and is back in his office with his sleeves rolled up. His concern has just landed a \$10,000 contract, to which he means to give his personal attention. It is a contract for the official souvenir badges for the coming triennial conclave of the Knights Templar at Saratoga. The workmanship and material of these badges has to be of high quality, and Mr. Robbins, being himself a Knight Templar, takes keen pride in the work. He plans later on to make a trip south, but not until he feels he can be spared from the factory. He distributed over \$700 to the employes, with specially liberal gifts to the four salesmen, the bookkeeper and foreman.

Pittsburg.

Gillespie Bros. have added a diamond room to their establishment, having set it apart in a corner of their store.

Otto Heeren, of Heeren Bros. & Co., who had been confined to his home for several days on account of illness, is again at his desk.

E. A. Bloser, New Kensington; M. Markowitz, South Sharon, and J. V. Rosen-dahl, Irwin, were among the out-of-town jewelers who visited Pittsburg last week to buy stock.

Engravers are very scarce in Pittsburg. One local engraving firm told THE CIRCULAR-WEEKLY correspondent that he could have employed 18 more men during the last month if he could have obtained them.

The American Pottery Association, which held its convention in this city a few days ago, decided to advance prices 20 per cent. As a result there will be an advance in decorated china and other decorated wares.

The Pittsburg Board of Trade at its annual election held last week elected O. H. Alerton, Jr., president, and Chauncey Lobingier secretary. Arrangements are being made to give its annual banquet in January.

Fire broke out in the Masonic Temple on Fifth Ave. last Wednesday night during a session of Lodge No. 45, F. & A. M., and there was a skirmish on the part of the members to save the famous clock, which passed through the fire of 1884 when the old temple was destroyed. The clock was saved.

W. E. Harrison, of the Marsh, Brown & Wither Co., is trying to interest some of the wholesale dealers of Pittsburg in a movement to have a banquet some time in January. If a sufficient number of dealers can be interested in the movement, the banquet will be held in some downtown hotel. It has been many years since the jewelers of this city have sat down together at a feast. Many think that it is about time that something in this line should be done.

A big robbery was committed early Wednesday morning when some culprit threw a stone or brick through a plate glass window in the store of S. S. Harris, 302 Seventh Ave., and looted it of its contents. The value of the goods stolen as given out by the police was \$2,500, but this is exaggerated, the loss being less than half that amount. Mr. Harris was making a large display because of the holiday season, and a large amount of goods was stolen. The county and city forces are at work on the case, with small chance of securing the thieves. Among the stolen articles are about 50 gold plated watches, including several women's watches studded with diamonds. A tray of rings was also taken, as were several brooches, pins and many pieces of bric-à-rac. All of the pawnshops of the city are being watched.

An indication of the great wholesale business which has been done in this city in the past year is to be found in the announcement of the W. J. Johnston Co., manufacturers and jobbers, Fifth Ave. and Market St., to the effect that the concern's books show a gain of business in 1906 over the previous year of more than \$150,000. This house is making preparations for an-

other record-breaking year, and has greatly augmented its force. Among the recent accessions to its already large traveling staff are E. J. Garsia and J. T. Kirtland, who for 14 years represented Leonard Krower, New Orleans. Beginning this year, these gentlemen will cover the same territory in the southern States for the W. J. Johnston Co. that they formerly covered for Mr. Krower.

Graf & Niemann have finally decided to go out of business, because of the firm's inability to make satisfactory terms with the owner of the present quarters at 210 6th St. Mr. Graf said that it might be necessary to rent temporary quarters after April 1 in order to enable them to dispose of their stock. "We have about decided to wait in order to secure a suitable location at reasonable figures," said Mr. Graf. "We have our eye on a location in Liberty Ave., but as we have been unable to make satisfactory terms with our present landlord we can afford to wait. It is difficult to secure a lease for a longer period than three years, and at the present rate of rents it does not pay to make improvements unless a long lease can be secured. We have been very fortunate in reducing our stock at fair prices and if we close out everything it will be at reasonable prices. We will not conduct an auction."

Philadelphia.

George Cross, of the Cross Optical Co., was married the day after Christmas at Ridley Park.

C. M. Bush, formerly of Hoffman & Bush, has accepted a position with J. Koenig & Co., 721 Sansom St.

John Eichman, watchmaker, with I. Herzberg & Bro., 8th and Arch Sts., has recovered from a serious illness.

Herbert Cain has resigned his position with the Rexford Co. He is a son of Robert Cain, a leading Ridge Ave. retailer.

Theodore Lassen, retailer, Main St. and Chelton Ave., Germantown, proposes to depart soon for Arizona to look after his business interests there.

Charles H. Dean, 717 Sansom St., was one of the manufacturing jewelers who were guests at the banquet given Thursday night in honor of Governor-elect Stuart.

John Smedley, watchmaker for the trade, 725 Sansom St., who has been ill with the grippe, is reported to have completely recovered and to have resumed his business.

John Flanagan, formerly with M. Rothschilds & Co., has leased a store of his own at 1227 Chestnut St., which he proposes to fit up elaborately and open about the first of this year.

John Zillic, a prominent Hazelton, Pa., retailer, purposes to give up his store in the near future and devote himself entirely to the real estate business, in which he has also been engaged for some time.

J. Warner Hutchins, 728 Sansom St., was appointed last week as Grand Marshal, by the Grand Master of the Grand Lodge of Pennsylvania for the ensuing Masonic year ending St. John's Day, Dec. 27, 1907.

Ed. Sickles, of M. Sickles & Sons, was in New York, Providence and the east last week buying goods of the manufacturers. Sol. Sickles, J. J. Zimmern and Max Polak

returned from their trips in time to spend their Christmas holidays at home.

Charles H. Dean, manufacturing jeweler, 717 Sansom St., was one of the guests, last week, at the banquet given in honor of Governor-elect Stuart. The banquet was given by South Philadelphia business men. Mr. Dean is a neighbor of Governor Stuart.

The Jewelers' Club, which celebrated Christmas in a real, old-fashioned manner, kept open house New Year's Day at the club rooms, 13th and Chestnut Sts. Besides the customary Quaker-like and Knickerbocker-like welcomes and greeting there was served a turkey luncheon.

William H. Long, 1627 South St., has prepared to make an extended pleasure trip after the first of the year to Florida. Mr. Long will be accompanied by his wife. During his absence, which will be indefinite, his son, George Long, will conduct the business.

The death last week of Albert Dickinson Bell, an engraver, was generally regretted in the trade. He was widely known and much esteemed. He was last employed by the American Bank Note Co. He was 49 years old and is survived by a widow and a mother, who lives in England.

Alexander Thompson Kay, a watchmaker, who has been widely known to the local trade, having been employed by J. E. Caldwell & Co., C. R. Smith & Son and other leading retail houses, was married Dec. 26, and formal notices were sent to his friends in the trade.

It is formally announced that the annual meeting of the stockholders of the Keystone Watch Case Co. will be held Jan. 25, at which time will be submitted for the approval of the stockholders the recommendation of the directors to sell a portion of the real estate now owned by the company on 19th St. above Wylie St.

The G. S. Lovell Clock Co. gave formal notice to the trade of this city last week that the concern has withdrawn all quotations on all lines of clocks, bronzes, etc., and that as soon as possible a revised list of prices and discounts will be issued. It is explained in the formal notice that such action "is imperative in view of the increased cost of all kinds of metals and materials as well as of labor."

The out-of-town retailers who were here last week, largely to make emergency purchases, were: M. K. Laudenslager, Souderton, Pa.; J. W. Clark, Bristol, Pa.; D. H. Krause, North Wales, Pa.; H. S. Kratz, Souderton, Pa.; Frank Kline, Spring City, Pa.; A. E. Baylies, Bristol, Pa.; John Harry Halt, Mt. Holly, N. J.; C. F. Kuhn, Cape May, N. J.; John Parrish, Newark, Del.; L. S. Caldwell, Wildwood, N. J.; C. Allez, Millville, N. J.

The golden wedding anniversary of John Tansley, who for 35 years kept a jewelry store on Germantown Ave., near Coulter St., was celebrated last week. Mr. Tansley is now living in retirement at 114 Queen St., Germantown. The anniversary was not only observed by his acquaintances in the trade, but also by Grand Army veterans and other organizations with which he has been connected. Of the 13 children which Mr. Tansley had only one son and three daughters are now living. Mr. Tansley is now only three years less than 80, but enjoys good health.

GORHAM SILVER

A NEW YEAR'S GREETING

¶ To the Jewelry Trade in general, to its friends and customers in particular, the Gorham Company takes pleasure in extending a cordial and hearty New Year's Greeting.

¶ Advantage is, however, taken of the opportunity to emphasize the fact that in regard to each department of its varied silversmithing activities assurance may be given of an output during the coming twelve months which shall exceed that of all former years in originality and attractiveness.

¶ Consistent progress, in a word, will in future as in past years remain the basic principle of the Gorham Company's success.

Good Things in WITH the first Store for Our Readers. issue of the new year THE CIRCULAR—WEEKLY appears in an improved dress, which we hope will add to the attractiveness of the paper in the eyes of its many subscribers.

While it is customary at this season of the year to outline the many features of the publication which will appear in the ensuing 12 months, it would hardly be possible to do so at present in justice to ourselves, inasmuch as the improvements contemplated cover so wide a field as to technical matter, news and articles of general instruction, that it would be possible to enumerate but a very few. Suffice it to say that the improvements of the past year are but an indication of what will be done in the year to come, and no expense will be spared to make this journal an auxiliary to the merchant jeweler that he cannot afford to be without.

A topic to which much prominence has been given in the past, and to which much more space will be devoted in the future, is that of imitation precious stones, particularly the so-called "scientific" and "reconstructed" gems, and in this connection it is interesting to announce an article by Clement W. Coumbe, which will be begun in the next issue of THE JEWELERS' CIRCULAR—WEEKLY. The author, who is a chemist and has given much time to the subject, takes the general position that no matter how close man may be able to imitate the products of nature in the way of artificially producing gems, the imitation or reproduction will always be an imitation and never absolutely identical with the earth-born stone. This he holds for the reason that there are features at work in the laboratory of nature (in which not the least is time) which man will never be able to possess and consequently the lack of one or more of the elements in the production of the gems will always cause a lack of something in the products of man that will be sufficient to distinguish the man-made stone from the nature-made product.

Even if some of the men making experiments in this line are inclined to disagree with the author on one or two points, there is no doubt that this article will prove most interesting as well as timely, as it may call back to common sense and reason many enthusiasts who are inclined to give too much consideration to the newspaper accounts of the experiments of chemists in gem manufacture.

Enormous Imports of Gems During 1906.

WHILE the official figures of the imports of precious stones at the Port of New York in the calendar year just closed were not at hand at the hour of going to press, it is understood that the total will be somewhat more than \$43,000,000, which will be the greatest of any year in the history of this country. The total for the calendar year 1905 was \$37,146,337, and for 1904 the

total was \$26,092,275. The closest approach to the figures of the calendar year 1906 was made in the fiscal year ended June 30 last, when the total stood \$40,217,542.

Recent reports have agreed in indicating that the imports of precious stones nearly all came through New York, the total for the entire country in the last fiscal year as given out at Washington being only \$173,220 more than that of this city alone.

The predominance of diamonds in the imports has also been emphasized in the reports of recent years. The other precious stones and pearls imported into the country in the last fiscal year reached a valuation of only \$5,384,459, or less than 15 per cent. of all.

Thieves Smash Window of Springfield, Ill., Jeweler and Escape With Three Trays of Jewelry.

SPRINGFIELD, Ill., Dec. 26.—Pinkerton detectives are working hard to discover the perpetrators of a bold robbery which occurred at the jewelry establishment of Lochman Bros. in this city a few days ago. Early in the morning a thief or thieves cut the glass of the window with a diamond, and after breaking the glass with a blunt instrument, reached through the opening and carried away three trays of jewelry which were on display, the value of which is placed roughly at \$350. An investigation made after the robbery resulted in the finding of a large iron bolt with a heavy weight at the end, which, it is believed, was used by the men in their work.

The only clue that the police and Pinkerton detectives have to work on is offered by the fact that two men registered at the hotel at N. 6th St. on the night before the robbery and left the following morning, and the proprietor noticed that the beds had not been slept in.

Death of R. B. Camp.

SAYRE, Pa., Dec. 27.—R. B. Camp, well-known as a watchmaker and jeweler, whose store was in Desmond St., died suddenly Monday morning of heart failure, which resulted from an attack of asthma of long standing. The deceased was apparently in good health until a week ago, and worked steadily at his store, so the news of his death was a great shock to his friends.

Mr. Camp is survived by four daughters, Mrs. V. Frame, Philadelphia; Mrs. R. C. Annear, Van-Eden; Mrs. Utley Teed and Mrs. Anthony Hawk, of this place. The funeral services were held this morning from his late home in Olive St., and were conducted by the Rev. J. F. Warrens. The interment was in Tioga Point Cemetery.

Report That Trenton Watch Co. Is to be Reorganized.

TRENTON, N. J., Dec. 24.—Vice Chancellor Bergen, in the Chancery Court sitting here, has granted a rule to show cause, returnable here on Jan. 2, why a receiver should not be named for the Trenton Watch Co. Mrs. John Moses, of this city, the heaviest stock and bond holder, is the applicant.

The purpose of the proceedings, it is said, is to reorganize the company on a more substantial basis.

New York Notes.

I. Guntzburger, 11 John St., yesterday admitted as a partner his son, Joseph Guntzburger.

Mr. Harry Goldstone, formerly with the I. Ollendorf Co., now represents R. L. & M. Friedlander, 30 Maiden Lane.

E. E. Waeldin, buyer for Geo. F. Bassett & Co., 49 Barclay St., returned from Europe recently on the *America*.

Wallace L. Miller will this year represent Hodenpyl & Walker, 170 Broadway, in the Western and Southern States.

The firm name of A. L. Tuska, dealer in Japanese pottery and art ware, 55 Murray St., was changed yesterday to the A. L. Tuska, Son & Co.

The Charles E. Hancock Co. has moved its New York office from 2 to 9 Maiden Lane, Room 907, where much larger quarters have been leased.

The Julius King Optical Co. is on the list of exhibitors of the Seventh National Automobile Show, to be given Jan. 12 to 19, in Madison Square Garden.

Charles L. Power & Co., 170 Broadway yesterday changed the firm style to Power & Allan. The firm is composed of Charles L. Power and Robert B. Allan.

George Fahys, of Joseph Fahys & Co., left Monday with Squadron A, in which he is an officer, for Albany, N. Y., to attend the inauguration of Gov. Hughes.

Meyer & Elting, 617 Sixth Ave., have dissolved. Mr. Etting continues under the old style. Mr. Meyer opens a new store under his own name at 636 Sixth Ave.

Sidney Lisner, who for six years has been associated with D. Lisner & Co., at 140 Fifth Ave., was yesterday admitted to partnership, no change being made in the firm name.

As the date of the regular meeting of the New York Watchmakers' Society for the New Year's Day, it was postponed until next Tuesday, Jan. 8, in the usual place 192 Third Ave.

Harry S. Morris, secretary and treasurer of the S. Cottle Co., will sail next Tuesday for Europe on the *Kaiser Wilhelm II*. Mr. Morris expects to return some time in February.

Jung, Staiger & Klitz will, after this, be known as Jung & Klitz, the firm having changed yesterday. The firm is composed of Charles Jung and Robert Klitz. Last year Mr. Staiger withdrew.

A. E. Silberman, who was with Leo Hirsch, is to travel after this for Adolph Schwab, covering his old territory, which includes the middle western states. He will start on his first trip within a week or so.

Eberhard Faber is to move his sales rooms from Pearl St., where he has been so long located, to the Barelay Building, a Broadway and Duane St. Additional facilities are obtained as a result of the change.

B. H. Davis, of B. H. Davis & Co., accompanied by his wife, will leave for Europe Jan. 8 on the *Kaiser Wilhelm II*. He will visit Amsterdam, Paris and London and afterward visit the Riviera, including Monte Carlo and Nice.

Melhado & Schotterfels have opened an office at 14 Maiden Lane. Mr. Melhado was formerly with N. Wolff & Co., 73 Nassau St.

son St., and Mr. Schotterfels was with Silbermann, Kohn & Wallenstein, 87 Maiden Lane. The new firm is to manufacture jewelry.

Morris Prager & Co., diamond importers at 11 Maiden Lane, are to close out their business May 1 next. A. J. Prager, owner, says that it is his intention to retire from commercial life. The business was established about 30 years ago, and Mr. Prager's uncle, Morris Prager, conducted it until his death about four years ago.

Alfred H. Smith, of Alfred H. Smith & Co., 170 Broadway, is confined to his home for a few days by an injury. As he stepped off a 12d St. car at Broadway on his way home last Friday he was struck by the pole of a two-horse truck. He was knocked down, but dragged himself out of the way of the wheels. A gash was cut in his chin and cheek, and this is now healing.

Two young women, said to be daughters of well-known residents of Yonkers, N. Y., are being sought by the police on a charge of shoplifting. They were accused on one of the stores of taking purses which were found in their clothing on a search. At that time several rings dropped to the floor, and these were afterward identified by Charles P. Ward, retailer jeweler, at 25 Main St.

The firm of F. A. Hardy & Co. was incorporated in New York State last week to carry on the New York branch of the Chicago house. The capital stock of the New York corporation is \$100,000. The directors mentioned in the corporation papers are: J. K. Bass, A. F. Schulte and Hollin Tracy. No changes will be made in the New York salesrooms and offices at 289 Fourth Ave.

The Ben. Spier Co. was incorporated recently to succeed Spier & Forsheim, jobbers at 37 Maiden Lane. Ben. Spier is to be the president of the new company and Mr. Forsheim has retired from the jewelry business. The capital stock of the new corporation is \$5,000. Besides Mr. Spier the incorporators include Joseph Libowitz, Brooklyn; Joseph Konigsberg and Charles A. Bretzfelder, both of New York.

Heary Goldberg, 875 E. 138th St., who said that he is a traveler for a jewelry house, caused the arrest Saturday of David Leisher, 27 years old, of 158 S. 2d St., Brooklyn. The complainant charges that his pocket was picked and diamonds, valued \$2,400 were stolen from him at the City Hall station of the Third Ave. elevated road by the prisoner. The case is to be heard to-day before Magistrate Walsh in the Essex Market Police Court.

Solomon Burland, 2855 Third Ave., was sought before Justice Davis, of the Supreme Court, Thursday of last week on an order of arrest obtained by his wife, who is suing for a limited divorce. In her affidavit asking for the order, Mrs. Burland said that her husband would leave the jurisdiction of the court if a decision, which is to be made to-morrow on a question of alimony, should be against him. He was released in \$1,000 bail.

Morris A. Forgotston, dealer in jewelry and pawn tickets, 178 Bowery, last week received his discharge in bankruptcy. An involuntary petition was filed against him early in February of last year, in which it was claimed he had transferred his busi-

ness and stock and had announced his inability to meet his personal obligations. The schedules filed early in January showed total liabilities of \$27,648. Only a small amount of the indebtedness was for merchandise.

A diamond ring, having a stone weighing 2 7/8 carats, was stolen last Friday from the store of Hyman Sosnowitz, 1751 Pitkin Ave. The thief asked the price of the ring, and on being told that it was \$300 said that he would take it. Then he threw a roll of bills on the counter, and, saying that it was the exact amount, he hurried away with the ring. The jeweler's brother, Ralph Sosnowitz, who was alone in the store, counted the money and found only \$50. The man who took the ring has not been caught.

A warning has been issued by the police in relation to a middle-aged man and two women, who have been calling at jewelry and other stores and who are suspected of being shop-lifters. The man is about five feet, five or six inches high and about 45 years of age, dark complexioned, with dark mustache. He wears a light Fedora hat, a long overcoat and gold-rimmed eyeglasses. One of the women is about 25 years of age and dresses in brown; the other about 35 years of age and dresses in green.

At a meeting of representatives of the Dey Time Recorder Co., Syracuse, N. Y., and the International Time Recorder Co., Binghamton, N. Y., held last Wednesday in the office of Drury W. Cooper, New York, the two concerns were merged under the latter style. The Syracuse plant will ultimately be moved to Binghamton. The deal was consummated by Geo. W. Fairchild and Harlow Bundy, representing the International Time Recorder Co., and Judge C. H. Duell and S. J. Moore, representing the Syracuse concern.

Although Dr. George F. Kunz, of Tiffany & Co., is not to prepare the Government annual reports on precious stones after this, it is not true, as has been stated, that he retires as a gem expert associated with the Geological Survey. Among the corps of 30 outside experts, who have in the past served the Government in various departments, four or five, including Dr. Kunz, have been retained. The Geological Survey will depend upon Dr. Kunz, as in the past, to give advice from time to time as questions arise in relation to mineral developments.

Frederick B. Bieling, long an examiner of china at the Appraiser's Stores, has resigned from the service. In one of the daily papers it was hinted that he quit the service after a quarrel with his superiors, brought about by his persistency in advancing values in the invoices of certain importing houses, including Geo. Borgfeldt & Co. and L. Straus & Sons. Customs officials say that there was no truth in the story of a quarrel, and that Mr. Bieling left to engage in business for himself. For some time domestic pottery manufacturers have been endeavoring to get a higher valuation of certain lines of imports.

Sydney S. Sittenfield, who was employed by A. Roseman, 13 Maiden Lane, as a bookkeeper at the branch office in Elmira, N. Y., has accepted an offer from his uncle in Japan, E. H. Tuska, a buyer for the A. L. Tuska Son & Co., who have New York

salesrooms at 55 Murray St. The uncle, who has been in business in Japan about 25 years, is desirous of retiring, and Mr. Sittenfield has a prospect of succeeding him. Mr. Sittenfield will come to this city in a few days and enter the salesrooms here, intending to familiarize himself with the business methods and stock. He expects to sail for Japan about April 1.

Additional facilities are to be provided soon for the factories of Joseph Fahys & Co. at Sag Harbor, L. I., by adding to the present buildings. So many times have new buildings and wings been erected to keep up with the growth of the business that the construction of additions has come to be considered quite a matter of course. The plans for the enlargement now under contemplation have not been perfected as yet, and one or two descriptive articles that have appeared in the press in relation to the improvement were somewhat exaggerated, according to information obtained at the company's New York offices. The company has for some time owned the large tract of land bounded by Washington, Division, Sage and Church Sts., in Sag Harbor, so that it has ample room for the expansion of its works.

Jewelry in Trunks of Traveling Salesman Badly Damaged by Fire at Bay City, Mich.

Norman Solomon, of Wm. C. Solomon & Co., 65 Nassau St., New York, whose three trunks of diamond jewelry were almost totally destroyed in a fire at Bay City, Mich., early last week, returned home with what remained of his samples Monday, and the work of estimating the loss is now under way.

Mr. Solomon, on going to Bay City, stopped at the Fraser House, and at the time of the fire in this hotel his trunks were standing near the elevator. As the traveler had been feeling ill he had gone to the home of a friend, a local jeweler, to arrange for treatment, and was not in the hotel at the time. Though every effort was made to rescue the trunks, this was not accomplished until after the flames had destroyed the gold and silver mountings to a considerable extent, and even some of the gems were smoked and cracked.

The firm holds an insurance on the stock of \$5,000, but Mr. Solomon stated Monday that this will not nearly cover the loss.

Last Week's New York Arrivals.

THE CIRCULAR-WEEKLY each day posts in its office a bulletin of the latest buyers visiting New York, which every member of the trade is cordially invited to copy.

Chicago Notes.

Chas. A. Bacon has been succeeded by Campbell & Co.

H. H. Miller, of Hutchison & Huestis, is making a trip to Cincinnati.

Jacob A. Goldberg, New York, has been visiting the trade here recently.

O. A. Lessing, of the S. & B. Lederer Co., is making a short western trip.

E. M. Lunt, of the Towle Mfg. Co., has returned from a visit to the factory.

The Seth Thomas Clock Co. presented all the employes with a turkey for Christmas.

R. H. King, of the New York office of the Julius King Optical Co., is visiting the Chicago office.

J. S. Braude, western representative for the Keller Jewelry Co., is making a visit to New York.

Charles E. Childs and F. A. Chase, of the Chicago office of the Charles M. Robbins Co., are visiting the factory at Attleboro.

C. T. E. Smith, of the Reed & Barton force, is spending the holidays with relatives in Grand Rapids and Battle Creek, Mich.

B. A. Tooker, manager of the Des Moines branch of the Geneva Optical Co., has been making a visit to the home office here for a few days.

Fred Mayer, representing the Bruhl Bros. & Henius Co., and H. Strauss, of Jacob Strauss & Sons, New York, have been visiting the trade here the past week.

C. T. Higginbotham, superintendent for the South Bend Watch Co., South Bend, Ind., is recovering from a sprained arm, which he sustained about seven weeks ago.

Rudolph Bruening, who has been with Hyman Berg & Co., for the past 10 years, covers the western territory for the Schrader-Wittstein Co. from the first of the new year.

Fred Nyman, formerly with T. R. J. Ayres & Sons, Keokuk, Ia., will travel for C. H. Knights & Co., beginning the first of his month. He will cover Texas, Oklahoma and the southwest.

Arthur G. French, formerly with Henry Schroeder, optician, 465 Milwaukee Ave., has located at 704 Columbus Memorial Building, succeeding R. W. Doig, who will remove to San Francisco.

Reuben W. Cohen, representing Geo. H. Cabonne & Co., will be located hereafter on the 15th floor of the Heyworth building, as his present space in the Columbus

Memorial building has become inadequate for his needs.

Earl Accola, who has been running a mail-order business at 337 Dearborn St., was closed by attachment proceedings some time ago. The prospects for a favorable settlement with creditors is not good.

A. Max Holzheimer, manager of the Chicago office of the Omega Watch Co., sailed from New York last week to visit the factory at Biemme, Switzerland. During his absence of a month and a half E. C. Bell will call on the city trade here.

Tom Bristol, of the firm of E. J. Born & Co., Ashland, Wis., died last week at Bainbridge, Ga., where he had gone for his health. Mr. Bristol was 56 years of age at the time of his death, and was a traveler for the firm of C. H. Knights & Co. for 20 years.

Albert Cohn has returned from Providence, R. I., and brings back with him a handsome gold watch presented to him by William Loeb. Mr. Loeb, it will be recalled, has now retired from business, selling out to the Lyons Mfg. Co. Mr. Cohn will represent the new firm in Chicago and west.

Julius Breidt, an old-time jeweler of Chicago, was buried last week, under the auspices of Whittaker Lodge, Knights of Pythias. He came to Chicago 44 years ago and established a jewelry business at Randolph and Canal Sts., where he suffered with many others in the fire of 1871. He re-established himself there and continued in business till 1885, when he became the official watch inspector for the Illinois Central Railroad.

A fire that broke out at 68-70 Washington St., Dec. 24, did considerable damage to the stock of J. F. Dailey & Co., now in bankruptcy. Jewelry and cut glass valued at \$400, all that was outside the safe, was trampled under foot and scattered by the fire fighters. The State Pawnors' Society Bank on the second floor was slightly damaged by smoke. To protect the bank and jewelry properties a detachment of 15 detectives from the Pinkerton headquarters and a corps of plain clothes men from Central Station were on the scene soon after the alarm. The stock in the jewelry concern's safe was not injured.

Harry P. True, senior member of the firm of True Bros., Springfield, Mass., and Miss Alice B. Corbett have announced their engagement. They will be married in the near future.

Kansas City.

TRADE CONDITIONS.

The Christmas trade is over and retailers and jobbers in this city seem to be well satisfied with results. The one thing for which there was an exceptional demand was bracelets. Outside of bracelets the demand was quite general, but better qualities were generally sold, so each sale ran into dollars and cents. Signet goods were also sold extensively.

The Eagle Jewelry Co., 215 E. 12th St., recently suffered a small burglary loss.

W. J. Rankin has just enrolled as a pupil at the Kansas City Polytechnic Institute.

P. N. Nelson, who travels in Colorado for the C. B. Norton Jewelry Co., has been spending the holidays in Texas.

T. G. King, watchmaker and engraver for the Kansas City Watch Case & Jewelry Mfg. Co., has resigned and gone to Houston, Tex.

E. C. Cleveland, with the Woodstock-Hoefler Watch & Jewelry Co., is taking a holiday vacation, and is visiting his father and mother in Burlington, Kans.

The death occurred on Christmas Day of David J. Webb, of the Webb-Freyschlag Mercantile Co., jobbers in notions, jewelry, etc. The deceased was 72 years of age.

The Merry Optical Co. is one of the subscribers to the capital stock of a boat line which is to be put on the Missouri River between here and St. Louis in the Spring.

C. C. Hoefler, of the Woodstock-Hoefler Watch & Jewelry Co., is enjoying a visit from his daughter Eunice, of Wellesley College, who is spending her vacation at home.

The following out-of-town jewelers called on the local jobbers last week: G. W. Ellis, Butler, Mo.; F. C. Roeder, Higginville, Mo.; Isador Eller, Richmond, Mo., and W. H. Meyer, Lawson, Mo.

A. H. Frodsham, Savannah, Mo., was in this city last week buying stock right after Christmas. His father established the business there 50 years ago. The grandfather of Mr. Frodsham was a watch manufacturer in England, and when his father was married Mr. Frodsham was an apprentice to his grandfather.

A jewelry establishment to be known as the Diamond Palace will be opened in Norfolk, Va., by D. Buchanan & Son, Richmond, Va. Mr. Hardy, manager of the latter firm, will act as manager. The store will be opened as soon as the new Lowenberg building, on Granby St., is completed.

THE JEWELERS' CIRCULAR PUB C

St. Louis.

Gustav Moritz, optician, has removed from 7th and Locust Sts. to his new store in the old Grand Leader building at Broadway and Washington Ave.

E. S. Gregory has resigned his position as traveling representative of William Weidlich & Bro., and taken another place with Otto Young & Co., Chicago, Ill.

W. Summer Blackinton, traveling representative of S. O. Bigney & Co., has been ill for a week at the Planters' Hotel. His condition is reported as being greatly improved.

L. Hoffman & Son is the name of a new firm that has purchased and succeeded to the business of Ben J. Yoch, 3305 Meramec St. Mr. Yoch will engage in another line of business.

A bracelet was recently stolen from the jewelry store of Charles D. Pfaff, 3206 Olive St., by a woman who was accompanied by a child. The article was concealed in a muff.

Among out-of-town jewelers in this city last week were the following: H. P. Hall, Carthage, Mo.; M. Harris, Desloge, Mo.; S. O. Harvell, of J. Harvell & Son, Litchfield, Ill.; T. E. Gouterman, Granite City, Ill.

F. A. Durgin, manager and buyer of the jewelry department of Mermod, Jaccard & King Jewelry Co., is confined to his home on account of illness, as is W. L. Ely, manager of the repairing department of the same firm.

The largest diamond in the case was taken by two pretending diamond purchasers from the show case in the store of J. Hockstraeter, 1009 Cass Ave., recently, when the clerk showed them the tray. The stolen stone, valued at several hundred dollars, has not been recovered.

Mrs. Alvina Frech, wife of Albert Frech, 529 Halliday Ave., vice-president of the Eisenstadt Mfg. Co., was severely injured recently when she was knocked down by a street car. She was attempting to cross the street when the car backed down upon her. She is now convalescent.

Two window smashers who broke the show window in the jewelry store of Boos & Albrecht, 1221 So. Broadway, recently, seized a tray of diamonds within plain view of the proprietors, Julius Boos and Robert Albrecht. The partners chased the men, but were unable to overtake them. The tray contained 12 diamond rings, a pair of diamond earrings, and several gold rings.

Miss Anna Holtz, who was to have been married to David I. Schane, a jeweler of 601 Franklin Ave., within a month, died in the latter's store. The verdict of the coroner's jury was that Miss Holtz died of poisoning from cyanide of potassium, though whether taken by accident or with intent to commit suicide is not known. Miss Holtz and Mr. Schane lived in Atlanta, Ga. Three months ago she came to St. Louis with her family, and a month later Schane allowed, opening a jewelry store at the Franklin Ave. address. Mr. Schane was outside the store, when a woman came out and told him that something was wrong. He heard the screams, and, rushing in, found his fiancée prostrate on the floor. The father and brother of the young woman, as well as Mr. Schane, testified that she was of a cheerful disposition.

Omaha.

H. H. Fruer, with A. F. Smith Co., spent the holidays in Chicago.

F. G. Renken, Manson, Ia., has sold out to Paul Hohberger, Gilmore City, La.

T. J. Brunner, with A. F. Smith Co., arrived home in time to spend the holidays in Omaha.

B. F. Wynn, with the H. F. Penfold Co., accompanied by his wife, has gone to Chicago on a business and pleasure trip.

John Crabill, Pattsmouth, Nebr.; Henry Kuzel, Hooper, Nebr.; M. Barnes, Avoca, Ia., and H. Festroit, Persia, Ia., were in this city during the past week, purchasing stock.

A chest of silver containing 84 pieces and supplied by Brown & Borsheim, was presented Christmas morning to Mayor James C. Dahlmann by 39 officials and clerks of the city government. The presentation speech was made by Commissioner Flynn.

Mr. Gross, the fireman who succeeded in capturing the thief who entered Jos. Sonnenberg's store on the morning of Dec. 11, was presented with a beautiful gold watch and ring by Mr. Sonnenberg. Fireman Gross was one of the witnesses for the State.

A number of watch manufacturers of this country, without the knowledge of the retail jewelers, agreed among themselves to present a fine watch to the retail dealer who would sell the largest number of watches, regardless of make, in the State of Nebraska during the past year. Fred Brodegaard, of Fred Brodegaard & Co., was awarded the prize, consisting of a watch valued at \$150.

Edward Elliott, who, as reported in THE CIRCULAR-WEEKLY, got away from Jos. Sonnenberg's store with \$7,000 worth of diamonds and jewelry, was found guilty of robbery by a criminal court jury Friday, Dec. 21. Mr. Sonnenberg, Mike Morrissey, his clerk; Sam Gross, the fireman who captured Elliott, and Detective Heitfeld were the principal witnesses. They all told substantially the same sensational story of the daring robbery. No defence whatever was offered. While Mr. Sonnenberg was on the witness stand an attempt was made to elicit from him an acknowledgment that there were articles of stolen property among the jewels taken from him. He indignantly denied that such was the case, and affirmed that he knew the history of every article well enough to know that it came honestly into the hands of those persons from whom he received it. Elliott in his affidavit alleges that some of his own jewelry was in Sonnenberg's collection, and that Sonnenberg had never rendered him an accounting for it.

J. R. Bookwalter, Oklahoma, Okla., is in bankruptcy.

The Empress Cut Glass Co., which has a factory at Madison Ave. and Clinton St., Elmira, N. Y., has changed its name to the Majestic Cut Glass Co., to avoid confusion with the name of another company.

A petition in involuntary bankruptcy was filed recently by Van Allen Morse, El Reno, Okla. A meeting of the creditors was held last week to elect a trustee for the bankrupt estate.

Cincinnati.

Frank Herschede, of the Frank Herschede Co., is reported to be very ill with typhoid pneumonia.

Fred Smith, bookkeeper for the Herman Keck Mfg. Co., is reported as very ill with pneumonia.

Samuel Cahn, president of the Eclipse Jewelry Co., has gone to Birmingham, Ala., where he will visit friends for several weeks.

John D. Smith, for over 40 years a jeweler at Union City, Ind., and one of the best-known jewelers in that State, died at his home Dec. 21. George Lockhorn, of the Clemens Oskamp Co., attended the funeral.

The police so far have failed to locate the thieves who broke the large plate glass window in Joe Ferlau's jewelry store on Madison Ave., Covington, Ky. Four valuable clocks were stolen from the window. The robbery occurred at an early hour one morning recently, and nothing was known of the affair until Mr. Ferlau arrived at his store. It is thought the robbers became alarmed and hastened away before they completed their work.

It is believed that George Dolle, a notorious burglar, who is wanted in this city on the charge that he robbed William Fink, Main St., of a tray of diamond rings valued at about \$2,500, some time ago, has been located in a western city, word to that effect having been received by the police. Two years ago Dolle was under a \$2,000 bond, which he forfeited by skipping, out before his trial in the Common Pleas Court. Efforts on the part of some of his friends led to the belief that they were trying to create the impression that he was dead.

During religious services at the Hamilton County Jail in Cincinnati Sunday, Dec. 23, nine prisoners who had previously decided not to participate in the services gained their freedom while the guards were not in a position to watch them. Two of the number were John Sutton, alias John Southgate, arrested Nov. 24, 1905, under the name of J. W. Bradley, on a charge of maliciously breaking a window in Harry Goldblatt's pawnshop on 6th St., and Edward Ness, arrested Nov. 7, 1906, charged with stealing eight watches from a watchmaker at 1402 John St. Ness has since given himself up to the police.

During the past week two well-dressed women of about 35 years of age called at the Frankenstein jewelry store in the Arcade. They wished to see some jewelry, and finally one selected a ring valued at \$8. She wished some changes made in the article, and said she would call later for it. She deposited \$1, also gave a name and address at Reading, O. The women then asked to see some diamond rings and were shown a tray. While one was trying to make a selection the other slipped her hand under her companion's arm, which rested on the tray, and "lifted" a ring valued at \$25. She was detected at once and accused. Both denied the charges so strongly they were allowed to go. However, a detective was sent to the address given, and secured the stolen ring after a confession by the woman, who said it was her first offence. No arrest was made.

News Gleanings.

J. M. Sarbach and J. H. Leroy, of the Sarbach Jewelry Co., Lincoln, Nebr., have gone to New York, on a purchasing trip.

A fire caused by the dropping of a lighted taper in the jewelry store of L. W. Betts, Atlantic City, N. J., last week, wrought damage amounting to about \$1,000.

Emil Estberg and M. Wolfe have bought the jewelry business of F. C. Cook, at Janesville, Wis. Mr. Estberg, until two years ago, was with the firm of Estberg & Sons.

Benjamin Barnett & Co., St. Louis, Mo., moved recently from 607 Pine St., where they have been located for several years past, into newly furnished quarters at 203 N. 6th St.

The store of J. J. Faber, 309 Main St., Peoria, Ill., was entered a short time ago by burglars, who gained entrance by prying open a transom over a rear door. The thieves made a hurried exit and secured only a few small articles of the cheaper grade.

Lieut. A. C. Peterson has filed an affidavit against Foster J. Lewis, for the past six years in the employ of Hart & Parker, Hrevoport, La., charging Lewis with larceny. Lewis' home was searched and several small jewelry trinkets were recovered. The accused did not deny the charge made against him.

The store of E. E. Flowers, 1416 Assembly St., Columbia, S. C., was recently broken into by a thief who threw a rock through the glass in the front door. Several watches which had been left to be repaired and other articles valued in all at about \$350 were stolen. An unsuccessful effort had been made to open the safe.

Burglars early one morning last week broke a large plate glass window in the store of J. H. Tattersall, Exeter, N. H., and stole stock valued at \$100. Among the loot are nine fountain pens, two pairs of military brushes with silver backs and a gilt clock. A fountain pen tray containing part of its previous contents was found on the sidewalk near the window.

George Williams and J. H. Wilson were recently taken into custody and later identified as two men who attempted to take jewelry from the stores of G. T. Brodnax and J. N. Mulford, Memphis, Tenn. Williams was finally released upon promising to leave town, and Wilson was held on charges of loitering and vagrancy.

The next regular meeting of the Buffalo Optometrical Society, of which J. P. Dimcox is president, will be held Friday evening, Jan. 4, 1907, at 8 p. m., at the Lafayette Hotel, Lafayette Park, Buffalo, N. Y. Dr. Bowen will continue his series of lectures in "The Use of the Ophthalmoscope and Reinscope." James F. Taylor has been elected an active member at the last meeting.

Samuel Kaufman, 352 S. Salina St., Syracuse, N. Y., on Tuesday of last week, reported to the local police department that two sneak thieves had entered his store and while one engaged him in conversation in the rear of the establishment the other stole \$100 from a work bench. Kaufman was engaged in counting the money, which he was about to deposit in the bank, when the men entered.

R. B. Clark, of Clark & Raber, Anderson, Ind., is the president of the Indiana Retail Merchants' Association, and is issuing a call for a meeting of the association, which will take place on Jan. 15, 16 and 17, 1907, at Evansville, Ind. Mr. Clark will be the most prominent speaker at this meeting, and as he has a number of ideas regarding mail order competition, his speech will be looked forward to with interest.

Branch No. 7, Brotherhood of Silver Workers of America, Port Jervis, N. Y., recently elected officers as follows: President, Lewis Clay, vice-president, Harry Linger, recording secretary, Harry Kramer; financial secretary, William Crawford; treasurer, John J. Barry; sergeant-at-arms, James Malone; statistician, Edward C. Dunn; trustees, Edward Moore, John T. Hall; executive board, George Rothweiller, George Zeller, Lewis Clay, Joseph Willis, Andrew Vollmer.

Newark.

Charged with stealing 13 gold rings from the factory of Moore & Son, 22 Green St., where he was employed, Louis Schmidt, 15 years old, of 168 Washington St., was arraigned in the Juvenile Court last week. Judge Ten Eyck sentenced him to an indefinite time in the Rahway Reformatory.

In the final account of the estate of Joseph B. Ludwig, Paterson, who was adjudged a bankrupt Nov. 5, the trustee says that there is no property for distribution. The creditors are called for a final meeting to be held Jan. 10 at 2 p. m. in the office of Atwood L. De Coster, Newark. A hearing will take place Jan. 14 in the United States District Court at Trenton on the bankrupt's application for a discharge.

Recent Reappraisements of Necklaces and Other Jewelry Made of Coral.

And similar goods. All advanced 40 per cent.

ELSIE BEE'S FASHIONS.

NOVELTIES SEEN IN A LADY'S RAMBLES AMONG THE JEWELERS.

ARIDING crop makes a desirable gift. Animal head handles in gold, silver or ivory are considered very smart.

Very large and elaborate hatpins are in demand.

Lozenge-shaped and triangular stones are favored in rings, necklaces and bracelets.

Little glass dishes for bonbons, etc., are set in a heavy rim of silver that is finished with two small handles.

Some teaspoons and after-dinner coffee spoons in solid gold are of perfectly plain finish, or embellished with a dainty shell-like pattern at the tip of the handle.

Sterling silver handles to umbrellas have the ornamental effect enhanced by the artistic introduction of smoked ivory and mother-of-pearl in novel designs, in which, by means of contrast, extremely good results are wrought.

Beautiful oblong clasps, panels and running designs come in fine diamond work with both wide and narrow bands of black or white velvet, in lengths to form collars, displaying these costly embellishments to the most striking advantage.

The smaller colored stones now employed as centers of brooches and the like, framed in diamonds, impart the note of always welcome variety. A comparatively small ruby, emerald or tourmaline is thus accentuated by the wide and elaborate pattern in diamond work which surrounds it.

A Parisian idea is a jeweled skirt holder to prevent the longer walking skirt from dragging. A lizard who's curving body blazes with jewels is cited as a pleasing design. This particular holder is described as being six inches long. Under the head are four little claws that fasten themselves in the folds of the fabric; under the feet are prongs extending in an opposite direction, while at the extreme end of the body is a little spring that contains the claws after they are inserted.

Perfected to the highest degree is the diamond work in tiaras that are a veritable delight to the eye. Whether upright leaf sprays are employed, with cultured manipulation, or more formal lines in designs are artistically evolved, one is forcibly impressed, and alike enamored, by the exquisite creations. There is a distinct fascination in a design where the yellow topaz is employed, in lozenge-shape, to form a row across the top, which is further worked out into diamond points, each one of which is finished by a fine, large diamond.

ELSIE BEE.

The business of J. E. Harding & Son, 12 and 11 Union St., Norfolk, Va., will, on and after to-day, be conducted by and under the name of E. H. Harding, who assumes all debts and liabilities and collects all debts due the old firm of J. E. Harding & Son.

JAMES L. HAND

America's Leading Jewelry Auctioneer

14 Maiden Lane, New York

Telephone, 1624 Cortlandt

I challenge any auctioneer or pair of auctioneers to show better records of sales and better results for the jeweler.

Hundreds of recommendations from jewelers for whom I have conducted sales prove that my sales have been successful and without injury to their reputations. Beware of the SELF-ADVERTISED auctioneer who promises impossibilities and injures your future trade.

Leading Maiden Lane wholesalers recommend "HAND" because their customers' interests are safe when I sell for them.

Write me before you employ the fellow with no ability. Let me mail you my references and tell you about my new method of conducting an auction that will help you.

LEARN JEWELERS ENGRAVING

"The Engraving School that Graduates Experts." A fascinating, high-salaried and easily learned trade, taught thoroughly and practically by correspondence. Your instructor is the foremost authority and master workman in the world. We will teach the beginner better engraving by correspondence than he can gain in years of rigid apprenticeship. We will improve the skill of any engraver one hundred per cent, and make him master of the trade. The demand for competent engravers far exceeds the supply. Send for handsome, illustrated prospectus. **PAGE-DAVIS COMPANY.** Suite 10, 90 Wabash Avenue, CHICAGO.

Trade-Mark Information

"In a Nutshell"

U. S. Registration affords PERMANENT public record of ownership and avoids possibility of expensive opposition litigation to overcome the presumption in favor of an innocent surreptitious registrant of a similar imitation mark.

Diamonds and Precious Stones

SPECIAL ATTENTION GIVEN TO RECUTTING and REPAIRING IN OUR OWN FACTORY

DIAMOND CUTTERS

BROTHER JEWELER:

Did you make money last year? I mean several thousand dollars. If not, do not fool your life away in your present store, there are plenty of places you can make money—honest dollars. I never advise anyone to try to make money only in an honest, upright way. Get my advice on how to make money, where to locate, etc., it is free to you and strictly confidential. Read this letter. I have hundreds of such letters from banks, trust companies and jewelers:

COVILLE & BRITCHER,
Attorneys and Counsellors at Law, Syracuse, N. Y.
714 Onondaga County Savings Bank Building.

HENRY D. COVILLE,
EDWARD C. BRITCHER

Mr. Dan I. Murray, Syracuse, N. Y.:

Nov. 24, 1906.

Dear Sir—We beg to thank you most sincerely for your success in selling out the stock and fixtures of the Syracuse Cutlery Co. Before we engaged your services, our client had offered the stock and fixtures in bulk at a much lower figure than the net amount realized from the auction, and to say that the sale was satisfactory is putting it mildly.

Your advice and assistance were of much value to us, and you may rest assured, should any other embarrassed clients require an auction of assets in bulk or by piece, our advice will be to get Mr. Murray without delay. It is a source of wonder to us that you are able to work daily so long and hard, under such varying conditions without warping your excellent temperament and your good health. Certain it is that your flag and presence bring together a throng of satisfactory buyers, not excelled and seldom equalled by others.

Again thanking you, and with best wishes for future success, we are,

Yours very truly,
COVILLE & BRITCHER

I am now completing my seventh sale in Syracuse, N. Y., inside of two years. I have no objection whatever with any other auctioneers, and I defy any auctioneer or pair of auctioneers to show an equal record of large sales of rich diamond jewelry. No cheap jewelry or brass watches sold by me. You can consult me personally for next 10 days at Hotel St. Cloud, Syracuse, N. Y., or at dress either office.

3 Maiden Lane, New York 151 Wabash Ave., Chicago, Ill. 512 Race St., Cincinnati, O.

IN WHICH IS CONTAINED A LIST OF THE LATEST PATENTS GRANTED BY THE UNITED STATES AND GREAT BRITAIN, THE UNITED STATES PATENTS THAT HAVE EXPIRED AND THE REGISTERED TRADE-MARKS.

UNITED STATES PATENTS.

ISSUE OF DEC. 25, 1906.

839,123. DISH. WILLIAM F. DONOVAN, Toledo, O. assignor to the Libbey Glass Co., Toledo, O. Filed June 30, 1906. Serial No. 324,276.

A pressed-glass dish comprising a bowl-shaped body, an integral diametrically-extending partition-wall therein, and handles joined to the body at the extremities of the dividing-wall.

839,149. SCARF OR NECKTIE PIN HOLDER. FRANK JACKSON, Denver, Colo., assignor of one-third to Moses Solomon and one-third to Max Hayutin, Denver, Colo. Filed March 23, 1906. Serial No. 307,655.

A holder for scarf-pins, comprising a curved spring member, having a concave head at its upper end, provided with a central aperture, the

axis of which is vertical when said holder is in position on the scarf-pin, an enlargement in said spring below said head, and at an angle thereto, having an aperture in line with the aperture of the head, the axis of which is at an angle to the axis of the aforesaid aperture, whereby said spring must be expanded to pass a pin through both apertures, and a finger portion, forming a continuation of the enlarged portion.

839,344. EYEGLASS. NATHAN A. VURGASON, Bartow, Fla. Filed May 4, 1906. Serial No. 315,195.

An attachment for spectacles comprising a plate, means for clamping the same upon the frame of spectacles, a screw-threaded stem projecting

from the plate, rotatable means adjustably mounted upon the stem, a glass carried thereby, and means on the stem for limiting the movement of the rotatable means and supporting the glass.

839,356. PROCESS FOR DIVIDING DIAMONDS. ST. JOHN WOOD, New York. Filed May 3, 1906. Serial No. 315,109.

The process of dividing a larger diamond to form a plurality of smaller diamonds, which process consists in sawing partially into the body of such larger diamond from opposite sides, said

saw cuts meeting at an angle, to form blocks from

which smaller diamonds can be formed.

839,357. PROCESS OF DIVIDING DIAMONDS. ST. JOHN WOOD, New York. Original application filed May 3, 1906. Serial No. 315,109. Divided and this application filed Aug 13, 1906. Serial No. 330,434.

The process of dividing an elongated slice or "wax" of a large diamond to form smaller diamonds, which consists in removing a block from

the point of the slice by divisions starting on opposite sides of such point and meeting at an angle to each other, separating the remainder of the slice by a central longitudinal division, and dividing the two portions thus formed by transverse divisions.

839,345. LENS GRINDING MACHINE. ANTON WAGNER, Philadelphia, Pa. Filed Feb. 2, 1906. Serial No. 299,170.

In a lens-grinding machine, a lever, means to

oscillate the same, and yielding means acting transversely to the plane of the oscillation for applying pressure to said lever.

839,537. HOLDER FOR FOUNTAIN-PENS, ETC. DAVID W. BEAUMEL, Brooklyn, N. Y. Filed June 21, 1906. Serial No. 322,674.

A holder for a fountain-pen or the like having a portion of its exterior circumference slightly cut

away or reduced substantially between the ends of the body, a suitable filling surrounding said reduced part, and longitudinally-extending strips of material secured to and covering said filling.

839,538. BRACELET. GEORGE BECKER, Providence, R. I. Filed June 28, 1906. Serial No. 323,839.

A bracelet comprising a pair of tubular members, adapted for abutting engagement at their adjacent ends, a pair of retaining members carried by each of the tubular members, said retaining members being received within the ends of said tubular

members, one of each of the pairs projecting beyond the end of its tubular member, and the retaining member of the opposite section having its outer end disposed a slight distance within the end of its tubular member, each of said retaining members having an outer closed end and an inner open end, a connecting-link passed through the closed ends of each of said retaining members, chains, one connected to each other end of each link, a button on the inner end of each chain, and spiral springs engaging each of the buttons at one end and the closed ends of the retaining members at their opposite ends.

839,562. TIME-RECORDER. SEWARD A. DEAN, Hastings, Minn., assignor of one-half to

Eugene A. Cooper, Britton, S. D. Filed Feb. 26, 1906. Serial No. 303,055.

In a time-recorder, the combination, with a support and means for attaching a flat record-sheet thereto, of means for moving said support and its

attached record-sheet in a single plane, movable recording mechanism carried by said time-recorder and arranged to make upon said sheet, at the will of the operator, either a single or a dual impression, and means for operating said recording mechanism.

839,653. BUTTON. FREDERICK D. SCHWORM, South Newstead, N. Y. Filed July 25, 1905. Serial No. 271,175.

In a button, the combination with a head having an opening formed therethrough and flared toward the outer face of the head, of an inwardly-

extending sleeve carried by the head in registration with the opening and having a flange at its inner end, a second head disposed in spaced relation to the flange for the reception of the fabric between it and the flange, spaced prongs carried by the second head and extending through the sleeve and into the flared portion of the opening of the first-named head, said prongs being bowed away from each other within the flared opening and then brought together to meet at their extremities, and a fastening member including spaced legs and a connecting-bight engaged with its legs between the prongs and the sleeve and with its bight in the flared opening and inclosing the bowed portions of the prongs.

839,578. CLOCK. PETER G. GÉROUD, New York. Filed Sept. 16, 1905. Serial No. 278,710.

In a clock, means for imparting a step-by-step movement to a disk, comprising a spring-actuated vibrating lever, means for operating the lever, a fixed guide and sliding bar pivoted to the lever and extending through the guide, the said bar

being provided with an abutment for engaging the part to be operated, with an incline for holding the bar to its work and with shoulders for limiting the movement of the bar.

839,509. FRAME FOR MAGNIFYING GLASSES. WILLIAM J. KEMLER, Pittsburg, Pa. Filed Feb. 4, 1905. Serial No. 244,163.

A frame for magnifying-glasses, comprising two flat plates arranged edgewise and spaced apart, said plates being provided with opposing knuckles

on their inner sides adjacent to the ends thereof, a flat spring of approximately the same length as the plates and provided with lugs projecting from its side edges at the center of length thereof, said lugs being secured to the inner sides of the said

posed at equal distances apart in said back plate and jaws slidable on the front of said back plate and also slotted radially, set-screws engaged in said back plate and jaws and each extending through slots in the other, thereby guiding said jaws radially.

839,789. THIMBLE ATTACHMENT. MARY J. SMITH, Lenora, Kans. Filed March 15, 1906. Serial No. 306,273.

In combination with a thimble, a thread-cutting attachment applied thereto comprising a band having its ends notched and interlocking with one

another by engagement of the notched portions, the extremities of the band projecting therefrom so as to form thread-cutting members.

DESIGNS.

ISSUE OF DEC. 25, 1906

38,381. BRACELET. AUGUST V. LAMBERT, New York, assignor to Lambert Bros., New York.

Filed Nov. 19, 1906. Serial No. 344,161. Term of patent 3 1/2 years.

38,382. FOB-PLATE. JAMES V. RIDGWAY, Sum-

mit, N. J. Filed Nov. 22, 1906. Serial No. 344,657. Term of patent 7 years.

38,383. SUGAR-TONGS. HENRY A. WEHMAN, Philadelphia, Pa., assignor to John F. Simons and Thomas Maddock, Philadelphia, Pa.; Frederick M. Simons, Swarthmore, Pa., and

Edwin S. Simons, Orange, N. J., trading as Simons, Bro. & Co., Philadelphia, Pa. Filed Nov. 7, 1906. Serial No. 342,426. Term of patent 7 years.

38,384. FORK OR SPOON OR SIMILAR ARTICLE. GEORGE P. ITTIG, Bridgeport, Conn., assignor to the E. H. H. Smith Sil-

ver Co., Stratford, Conn. Filed Nov. 22, 1906. Serial No. 344,658. Term of patent 14 years.

UNITED STATES TRADE-MARKS.

[The following trade-marks have been adjudged entitled to registration under the Act of Feb. 20, 1905, and are published in compliance with Section 6 of said act. Said section provides:

"Any person who believes he would be damaged by the registration of a mark may oppose the same by filing notice of opposition, stating the grounds therefor, in the Patent Office, within 30 days after the publication of the mark sought to be registered,

which said notice of opposition shall be verified by the person filing the same before one of the officers mentioned in Section 2 of this act. If no notice of opposition is filed within said time the commissioner shall issue a certificate of registration therefor, as hereinafter provided for."

Marks which are stated to have been "Used 10 years" are registrable under the last proviso of Section 5 of said act, which is as follows:

"And provided further, that nothing herein shall prevent the registration of any mark used by the applicant or his predecessors, or by those from whom title to the mark is derived, in commerce with foreign nations or among the several States, or with Indian tribes, which was in actual and exclusive use as a trade-mark of the applicant or his predecessors from whom he derived title for 10 years next preceding the passage of this act.")

BRITISH PATENTS.

(ABRIDGMENTS OF SPECIFICATIONS, 1905, FROM *The Illustrated Official Journal.*)

ISSUE OF DEC. 11, 1905.

- 17,077. WORKMEN'S TIME RECORDERS. P. MACMASTER, London.—(International Time Recording Co., Binghamton, N. Y.) Aug. 23. In apparatus of the kind described in Specification No. 9487, A.D. 1899, or in general having

automatically-moving time printing-wheels with the minute-wheel continuously rotated, means are shown in connection with the printing-hammer

and the operating-handle whereby the minute-wheel is aligned immediately after the hammer is tripped for the blow, so that it may be impossible to stop the clock by holding down the lever. The aligning-wheel *d* is fast to the minute printing-wheel, and is adjusted by upward motion of a slide rod *e*, produced by a sliding link *o*. Shafts

g, p, carry the hammer and handle respectively, and are normally held by springs in the position shown, but when the handle *q* is depressed both shafts are rotated by means of a hook and arm connection *r, s*, until the tail *r'* of the hook is forced upwards by contact with a stop, and the tripped hammer makes the impression. During the first movement, arms *n, r*, depending from the shafts carry the links, *o, o'*, to the right, but when the hammer is tripped the link *o* is suddenly returned and its extremity in rising up the cam-surface of the lower link forces the aligning-rod upwards. The slot allows a further motion of the link to release the rod immediately. The return of the aligning-rod may be suitably retarded by the arrangement shown in Fig. 5, whereby the rod drives an air-vane *7* through ratchet gearing, *3, 4*, on its downward stroke.

- 17,271. DRESS STUDS. J. WILLIAMS, Handsworth, Staffordshire. Aug. 26.

To the base of a stud is hinged a clip *8* of wire or sheet metal, Figs. 1 and 2, capable of being turned over so as to grip the stud in position on the shirt. A recess *14* may be formed in the shank *13* of the stud, with which the parts of the clip *8* may engage. In the case of a stud with a small back as shown in Fig. 3, the shank may be set eccentrically in the base-plate, to afford a better

action for the clip. The arms of the clip may be bent in various ways. A modified method of hinging it is shown in Fig. 3.

- 17,350. COLLAR STUDS. O. BAUMGARTNER, Vienna. Aug. 28.

Studs and solitaires constructed with one or two hinged flaps are provided with means for preventing the accidental upturning of the flaps when the stud is in use. In the case of a stud with a single flap *H*, Fig. 1, the latter is formed with a projection *V*, which, when the flap is turned down, fits into an aperture *X* in the spring *F*. When the spring *F* is withdrawn to the position shown in dotted lines, the flap *H* is caused to take up a vertical position by the action of the bent spring *G*. When the stud head consists of two flaps *H, K*, Fig. 5, the flap *K* is further furnished with projections *Z*, Fig. 9, at such a distance apart that the projection *V* can pass between them. When

the flap *K* is vertical, these projections separate the spring *F* from the shank, and, on the flap

being lowered, the spring *F* falls in, receiving the part *V* when the flap *H* is turned down.

Complete specifications accepted Dec. 5, 1906, 1905.

Production of Platinum in 1905.

THE production of platinum from domestic ores in 1905 was 318 ounces, valued at \$5,320, according to the United States Geographical Survey, as compared with 200 ounces, valued at \$4,160 in 1904; with 110 ounces, valued at \$2,080 in 1903; with 94 ounces, valued at \$1,814 in 1902; with 1,408 ounces, valued at \$27,526 in 1901, and with 400 ounces, valued at \$2,500 in 1900.

In December, 1904, the price of ingot platinum at New York advanced from \$18.50 to \$19.50 an ounce; in April, 1905, it was \$20.50; in February, 1906, it advanced to \$25, and in September, 1906, it was \$31 an ounce.

A delivery wagon belonging to the Paul-Gale-Greenwood Co., Norfolk, Va., was stolen the morning before Christmas, but later recovered by a police officer and returned to the owners.

*The Great Driving Wheel of a
LOCOMOTIVE* traveling a mile a minute,
makes 403,361 revolutions in twenty-four hours:

*The Tiny Balance Wheel of a
WALTHAM WATCH* makes 432,000
vibrations in the same time:

The immense power and high speed
of the locomotive are rendered prac-
ticable only by the wonderful precision
of the watch.

WALTHAM WATCHES are made
to fully meet the most exacting requirements.

Fitting Old Watches With Modern Movements Without Changing Their External Appearance

MANY old watches are treasured far beyond their intrinsic value, because of memories associated with them. Usually the movement of such a watch is worn out, and it becomes desirable to fit a modern movement, retaining the old dial, and, as far as possible, the original appearance of the watch. How best to accomplish this object is the purpose of this article.

Watchmaking is not only a science, but an art, beautiful and wonderful; in solving its problems this idea should be kept in mind. It is a regrettable fact, however, that in

longer men possessing the true artistic sense? This question is worth considering, but the reader may find his own answer.

Fig. 1 shows a watch, originally a key-

FIG. 1.

most cases the artistic element is forgotten. How often we see these old watches with case centers richly chased, on which the original pendant has been replaced by a modern one, which, although "it does the business," produces a discord decidedly painful to the artistic sense.

How often, doing service on a modern movement, we see a richly decorated gold dial, with the hole for seconds pivot cut away to one side, not only inartistic but mechanically a botched piece of work.

Most watchmakers know that a hand eccentric to its dial can correctly indicate the time only at two points.

Such work is mere smithery. Is this commercial age responsible, or are there no

winder, in which a modern stem-winding movement has been fitted, the only noticeable change in its external appearance being the crown nestling in the top of the origi-

FIG. 2.

FIG. 3.

nal chased pendant. The photograph also shows the seconds pivot, peeping through the precise center of the hole in the seconds bit, notwithstanding the fact that in the

new movement the seconds pivot is nearer the center than in the old by 1.1 mm. This seemingly magical shifting of the seconds bit is really very simple, although as far as we are aware, the method has not been practised, except by ourselves, and we have seen many jobs done in the greatest watch-making centers of Europe.

HOW WE DO IT.

The dial is first cemented upon a chuck in the lathe, centering by the hole, if the hole is central; if not, by the row of graduations, dots or the engine-turned circles, which ever may best serve. Then, with a slim-pointed graver we cut the seconds bit

FIG. 4.

clear of the dial. If the workman is not certain of his hand, he had best use a similarly shaped cutter in the slide-rest.

The dial is then fitted concentrically upon the new movement plate. When centered by the fourth pivot hole, we turn out the dial until the cutter just touches the bottom of the circle, where we cut out the seconds bit. Fig. 2, a, shows the shape of the section of metal removed in the second operation and helps to make clear the process. We now, from sheet brass of suitable thickness, turn an annular frame, shown in plan and section in Fig. 3, into which the seconds

FIG. 5.

bit snaps like a watch glass, the outer shoulder being a like fit for the hole in the dial.

It is obvious that we may make the dial "sunk-seconds," and it is usually desirable to do so. The visible portion, b, of the annular frame, is finished by means of a small knurl, which produces a surface peculiar in character, and harmonizing well with the general finish of such dials. The brass

An Argument for the ELGIN Dealer

The records of the Weather Bureau show a difference of 181 degrees between the extremes of heat and cold in the United States. A watch to be adapted to the use of the traveler must be able to maintain its accuracy under widely varying conditions of temperature. One reason why the

ELGIN Watch

is pre-eminently the traveler's watch is found in the fact that all Elgin Watches are tested by oven heat and by refrigeration before leaving the factory.

Their wonderful timekeeping qualities are undisturbed by extremes of temperature, damp or drought, jar or jolt, or by varying positions.

LOWEST
UNITED STATES
TEMPERATURE
63° BELOW

HIGHEST
UNITED STATES
TEMPERATURE
118° ABOVE

The above is one of the many good arguments for the Elgin Watch, all of which help the dealer to sell Elgins.

See Jobbers' list for prices or write the Company.

Every dealer is invited to send for the Elgin Art Booklet, "Timemakers and Timekeepers," illustrating the history and development of the watch.

ELGIN NATIONAL WATCH COMPANY

Factories, ELGIN, Illinois, U. S. A.
General Offices, 131 Wabash Ave., Chicago.

NEW YORK OFFICE, 11 John Street.
SAN FRANCISCO OFFICE, 704 Market St.

frame is finally gilt in color to match the dial as nearly as possible. When the parts are snapped together, and the dial applied, the fourth pivot will occupy the exact center of the hole. The operation results in a real improvement in the appearance of the dial. It has not failed to delight the most fastidious persons.

The small knurl mentioned is shown in Fig. 4. The knurl is a disk of steel about 5 mm. in diameter by 1.5 mm. in thickness. The edge is turned slightly convex and, while in the soft state, is rolled between two fine, sharp files, thus producing the small teeth necessary. It is then hardened

FIG. 6. FIG. 7.

and tempered light straw. The handle, b, is a piece of steel wire 4 mm. in diameter and about 8 cm. long, with a pivot turned to receive the knurl, which should be free to turn. A smaller pivot should be turned to receive a thin steel washer, c, to retain the knurl upon its bearing. The end of b, holding a, should be hardened and tempered to a blue. In using, we traverse the knurl to and fro in a radial direction. A very little practice will enable one to produce pleasing results.

These knurls are used to produce the matted finish sometimes seen on the solid center and main wheels of many English watches.

In order to turn out the pendant, to fit the crown, we may attach a piece of brass by means of lathic wax to the case center opposite the pendant, then mount it in the lathe, between centers, as shown in Fig. 5. A slide-rest cutter, shaped as shown in Fig. 6, is used to turn the recess. We should have a tail-stock center flattened off on one side, as shown in Fig. 7, to admit the cutter approaching the center near enough, on small cases.

Sometimes it is desirable slightly to flatten the bottom of the crown, instead of having the outside come to a sharp point, as usual. On crowns of good quality this may safely be done, without risk of exposing base metal, or having the outer shell peel off.

Fig. 5 scarcely needs explanation; it is plain view. The case is carried by the pin in the familiar face-plate chuck. On cases with chased center it is generally not necessary to cement the piece of brass; a slight center may be made on the case itself; among the chasing it is not noticeable.

Diamonds worth \$50 were recently stolen from A. V. Graves & Co., Nevada, Ia., by burglars.

S. A. Munro and George McGlory were arrested at Bismarck, N. Dak., recently, and turned over to the district court on a charge of robbing the Strauss jewelry store of about \$400 worth of jewelry. Both were held in jail. Munro was caught at Mann with a lot of plunder and McGlory was found on a farm a few miles distant, with some of the stock in his possession.

An Original Horological Puzzle Suitable for the Watchmaker's Window.

(Translated expressly for THE JEWELERS' CIRCULAR WEEKLY FROM *La France Horlogère*.)

FROM a watchmaker at Grenoble, Antony Jacques by name, we have received the description of a very curious display piece. Mr. Jacques was inspired to construct this piece by the description of elliptical gearings as well as by the theory of square wheels, which *La France Horlogère* published some time ago over the signature of its collaborator, Lanenarde, and which we deem it advisable to reproduce later on.

"In your number of Dec. 15, 1902," Mr. Jacques wrote to us, "one of your articles entitled, 'A Visit to the Conservatory of Arts and Trades,' deeply interested me, es-

a unique display piece, which by its originality causes many people to stop before my show window, especially those who are interested in mechanics. The apparatus has been built and set up in my show window just a year; I have waited this length of time before asking you to give a description of it. During that year it has run constantly and there has been no wear on the teeth. Strange to say, those whimsical gearings turn as easily as the common round ones.

"It is unfortunate that it was so hard to make, for it took me no less than three years to turn out that display piece; three years of wasted time, it is true. I can assure you that if the problem which you proposed to your subscribers and readers were to be done over, I should not undertake it.

"One peculiarity which adds to the originality of this movement is that the driving wheel which carries the gearings (behind the screen), is in the center of the group, from which it results that half the wheels turn to the right and the other half to the left. I thought it would please you to re-

FASCINATING DISPLAY OF ODD GEARINGS.

pecially the description and accompanying illustrations of the theory of square wheels, and I at once set about working it out. When all my wheels were made and cut well in proportion, I adjusted them and coupled them upon a plate of copper, as the photographs which I send you show. They are actuated by a horological movement, turn-spit style, which I wind up every morning. I have embellished the whole by a support in the form of a plate of glass, called a watch stand, which is surmounted by a bronze statue holding an electric lamp.

"The driving mechanism makes the watch stand plate turn at the same time with the wheels. At night the lamp is lighted and gives the effect of a fantastical mechanism,

FIG. 1.

ceive this description, for I believe it to be the first time that the theory of square, elliptical and other wheels has been put in practice in this way.

ELLIPTICAL GEARINGS.

"Two equal ellipses, which touch at points symmetrically placed, can turn one upon the other without slipping, for the tangent to the ellipse always makes two equal angles with the radii vectores¹ drawn from its two foci to the point of contact, which is precisely the condition it is necessary to satisfy when, as in this case, the radius vector of the second ellipse is equal to that drawn to the point of contact of the second focus of the first one, and symmetrically placed. Theoretically, therefore two ellipses may drive the one, the other by contact, without causing friction from the motion, and will

¹Radius vector is an imaginary straight line, from the center of one body to the center of another one, around which the first revolves. In the case of an ellipse, as here, radius vector means a straight line which connects a focus of the ellipse with the ellipse itself.

Some Case Pointers!

There's just as much difference in watch cases as in the people that carry them. Some are good and up-to-date—a large number are questionable

If you want the snappiest designs and choicest case ornamentation, you need

JAS. BOSS CASES

They not only sell themselves through their superior patterns, but the satisfaction they have given for time indefinite, proves their quality. (Made since 1853).

the polar trajectories of two toothed wheels, if their circumferences are furnished with teeth.

"If we compare the rotation of these curves those of two ellipses which have furnished the radii vectores, it will be seen that these same radii arrive at the same mo-

"Take the distance 2, 3, lay it off from 2' towards 3' upon the arc 3", etc.

"The point 5' ought to terminate an arc of 45°, if not the centers should be brought nearer or moved farther away.

"(2) If 5' makes an arc larger than 45°, a parallel to the line of 45° should be drawn,

FIG. 2.

ent, upon the line of centers as if it were the case of two ellipses, only describing angles half of those which would be described in this case, and that the tangent inclinations will be, at each instant, double those of the ellipses and, as a result, will remain equal for all the corresponding points of the two curves. Therefore there will be no slipping, but a rolling motion. This construction can be applied to a curve of any number whatever of projections.

These considerations bring us to the object aimed at (if we call each projection

which parallel would determine a new center O", from which the outline of the curve should be begun again. (It is groping about a little.)

"This is what is commonly called the theory of square wheels."

A Useful Barrel Stretching Device.

It frequently happens with cheap watches that the depth of the barrel is too shallow. The removal of this defect by eccentric bushing of the barrel holes in remontoire watches involves the danger of the depth of the two large winding wheels getting out of order. Stretching the barrel teeth, on the other hand, by which the original defect can be rapidly and easily rectified, cannot be accomplished without a tool.

With the barrel-stretching tool shown herewith in its actual size the operation can be quickly and neatly performed; scarcely any injury is done even to the gilding of the barrel, as the stretching of the barrel teeth is, of course, performed on the lower side. The contrivance, which, according to the *Deutsche Uhrmacher Zeitung*, is protected by a German patent (No. 262062), consists of a frame, G, in the form of a stake made of nicked steel and provided at its lower end with a shoulder for fixing the stake in the vise, while the upper portion serves as a bearing for the stretching punch P.

A hole is bored straight through G between the surface of the stake and the jaws of the clamp in which the slide S can be pushed and held fast by the binding screw s, the latter acting on a clamp spring. At the end of this slide is the bearing L for the guide ff', the object of the latter being to hold the barrel in the right position so that the stretching punch P may lie on the barrel teeth as directed. The upper surface of the bearing L is exactly on a level with that of the stake (a), so that the bottom of the barrel with the teeth will lie perfectly flat on a, when the barrel is placed upside down on the upper surface of L.

The guide ff' has an arbor f', thin enough to penetrate freely through the upper pivot

hole of the smallest barrel. The upper end f of this arbor widens to a conical head with a ribbed circumference by means of which the barrel F is centered and at the same time held fast by tightening the screw r.

When required for use the barrel is placed as shown in the illustration. It is then centered by means of the conical guide head f, and the arbor f' of the guide is then screwed tight by the screw r, so that the barrel may be turned with full friction. Then the slide

TOOL FOR BARREL-STRETCHING.

S is pushed inwards till the extremity (slightly hollowed out at the side) of the stretching punch P lies on the edge of the barrel drum, in order that the teeth may be stretched out to their full length.

The stretching proper is carried out in the same manner as with all wheel-stretching tools; the bar is slowly turned with the forefinger of the left hand, while blows with a hammer are administered uniformly and in rapid succession to the top of the punch P with the right hand.

According to the British Consul at Chefoo, China, cheap reliable steel watches are in good demand in that district in China, and large quantities of German and American watches are sold there; whereas the trade in clocks of all kinds for the native market is slowly but steadily being taken up by the Japanese makers.

Mrs. J. Wilkins Cooch, of Cooch's Bridge, near Wilmington, Del., is having made a tiny grandfather's clock which has a story of twofold interest. It is made from a piece of oak dug out of the tail race of the old mill which belonged to Mr. Cooch's ancestors, the mill being burned by the British after engaging with the Americans at Cooch's Bridge, Sept. 3, 1777. The dial of the little clock will be an open-faced gold watch which was given to Mrs. Cooch when three years of age. At that time she and her parents, the Rev. and Mrs. Edward Webb, resided in India. The clock is from the hands of James L. Lovett, New London.

FIG. 3.

(obe) to construct a series of wheels composed of one or of several lobes. (Fig. 1.)

ETCH OF CURVED GEARINGS FOR A VARIED MOVEMENT.

The wheel A is given; the wheel B must be drawn. (See Figs. 2 and 3.)

(1) 10' will be made equal to 05, or put that, for the distance of the centers are working upon an eighth, the wheel being in this case symmetrical).

Lay off 1, 2, 3, 4, 5 in equal parts; from points 2, 3, 4, 5 and from the center O draw arcs of a circle touching the line between the centers at the points 2', 3', 4', 5'; from these points and from the center O lay off indefinite centers.

Take the distance 1, 2, lay it off from 1' towards 2' upon the arc 2'.

Watches Independent of Fashion's Caprice

WHILE THE WATCH undergoes slight modifications from time to time as to size and thickness of models, etc., these changes are never so radical as to greatly depreciate the value of the preceding forms. It is different with many other products which the jeweler handles. A sudden change of popular taste, a caprice of fashion, may suddenly rob certain lines of their demand. In strong contrast with such conditions is the permanency of the demand for watches, which these offices continuously and satisfactorily supply.

The Library of the Physiological Section of the A. A. O.

ONE of the chief advantages of membership in the Physiological Section is the privilege of using its library. From rare old volumes up to the latest publications is contained herein, and any one who is a member of the section may read any of these books at the cost of only a few cents postage, no charge of any kind being made for the use of the books. A great many seem not able to appreciate the value of a good library, yet one instance proves it of great value; a man needs many books near at hand, in his own private library, but there exist many others that after being once read would no longer demand space on one's own shelf; can you afford to pay \$3 for a book which you will read once and then lay aside, when for a few cents you may have that same book to read and then return to the library? If one reads much he will appreciate the value of this one point.

Again, suppose you have an old edition of say, for instance, "Maddox on the Ocular Muscles." Do you care to spend \$3 for a new edition with a few revisions? No; the wiser way would be to send to the library, borrow the new edition, make note of the revisions in your own old edition, which is now made up to date and return the new volume to the library; one method costs \$3, the other equally good may cost about 16 cents.

A list of the books contained in the Physiological Section library may be had from the librarian, C. M. Jenkins, Richmond, Ind., and members who have not already availed themselves of these privileges should do so. Any optometrist who is not following some course of systematic reading is not progressive, and in this period of vast and rapid strides forward is bound to fall sooner or later to the rear. The science of optometry is broadening every day, and to keep abreast of the times, to fill your position and to do your duty honorably to your patients you must study, study, study. To buy the books necessary to obtain this end requires a large outlay, but the Physiological Section has put within every one's reach this vast array of reading matter, and it is the duty of every optometrist to use this means of education to the fullest extent possible.

Dr. J. A. Hau-nstein has opened optical parlors in Red Wing, Minn.

C. N. Vanzant, optician, 159 Yonge St., Toronto, Ont., has disposed of his stock and given up business.

Dependence of Accommodation and Motility on the Refraction.

By HERMAN KNAPP, M.D., New York.

THE emmetropes see at distance clearly, without an effort, and the muscles are without strain; they have orthophoria. The hyperope has to make an effort, even by perfect sight. The same effort has to be made by the internal recti. Suppose hyperope of 2 D. sees a distant object, say Snellen XX. He will see that with a strain by seeing through a plus 2 D. glass. Now determine his muscular balance. You will find that he has 2 degrees of esophoria, which, by looking through a plus 2 D., will be converted into orthophoria.

The myopes have mostly exophoria, and their conditions are the same in character, but with negative spectacles. They do not give so uniform results as the hyperopes. My method of examining is as follows:

The vision at distance, first without, then with glasses, which gives the refraction; then I determine the muscular balance with the phorometer. If this differs much from the glass results, I conclude that there is latent H. or M. With gradually giving stronger glasses, I mostly find out at least a part of the latent H. or M. If this is not sufficient I either use a mydriatic or prescribe the strongest glasses they accept, give them gradually stronger ones, and thus arrive to the degree of H. or M. This is also the treatment in these cases.

Observations on Hue Perception.

By F. W. EDRI-GREEN, M.D., F.R.C.S., in the *Ophthalmic Record*.

THESE observations were made with an instrument by means of which the exact size of a portion of the spectrum which appeared monochromatic was ascertained when it was isolated from the adjacent portions. Hue perception was found to be most accurate in the blue and the yellow regions, though in most it was more accurate in the yellow region. Then there was a gradual diminution toward the center and ends of the spectrum. Green came next, then violet, and lastly red.

The facts were in accordance with Edridge-Green's theory of color perception and predicted by it—namely, that color perception of different individuals varies with the development of a color-perceiving center in the brain, that those with a greater development of this center see more colors (points of difference) than those with a less development, and that colors appear in a regular order at the successive points of difference in a straight series.

An Optical Query Answered.

HIGHTSTOWN, N. J., Dec. 26, 1906.

Editor THE JEWELERS' CIRCULAR-WEEKLY:

In expressing the visual acuteness for near vision as $\frac{8}{8}:\frac{6}{6}$, how do you come to this determination (I understand measuring and expressing the distance visual acuteness)? In filling a blank for a railroad man the question is asked—"What is the condition of the eye for distant and near vision, using 20 as denominator for both?" I do not understand how to use 20 for a denominator for near vision. F.

ANSWER:—Jaeger's type is usually used for reading and Snellen's for distance tests. However, there are reading cards made containing type based on the Snellen principle and to be able to express your findings in the manner required by the railroad blank you should obtain such a card. If, however, the patient read No. 1 Jaeger at 12 inches he could be considered normal and you could state that he was normal or that his near vision was $\frac{6}{6}$. If vision were normal you would need the card graduated upon the Snellen basis.

Senile Cataract.

OLIVER'S study shows that the average age of operation for senile cataract is about 63 years. The occupation of the man played an important part in regard to the maturity and even the causation of the cataractous condition.

The unskilled laborer gave the highest operative age average, 66 years. The skilled workman gave the lowest age for the operative procedure, 68 years. The high-grade artisan showed no lenticular condition for removal at an average age of 63 years. The brain worker gave a very high operative age average, 65 years.

A. D. Gaston, Washington, D. C., has invented a novel device which he claims will overcome the tendency to loosen on the part of the stud screw. This device is simple both in itself and the manner of attaching. It consists of a small piece of steel plate about the width of an ordinary spring and about 5 mm. long; at one end is the hole for the stud screw to pass through, while the other end is bent in the shape of an L, this bends over and presses against the spring so that when the screw is tightened there is pressure inward on the guard and spring and outward against the head of the screw, it being the pressure that keeps the screw from loosening. The lock can be made to fit any style of frame, and is quite inconspicuous.

Optical Department.

Types of Congenital Symbol Amblyopia.

(Lecture delivered by J. HERBERT CLAIBORNE, M.D., New York, in the Section on Diseases of Children of the American Medical Association at the 57th Annual Session, June, 1906.)

(Continued from issue of Dec. 26.)

ARBITRARY PRONUNCIATIONS.

TO depart for a moment from the immediate consideration of the case in hand, I would like to know who says that c-a-t spells cat, except by admission and authority of custom and wont? C-a-t spells cate, but custom and authority have made t cat, and cat it remains by statute. But b-o-g spells dog, and cannot be made to spell anything else. Those who learn to read English always have this difficulty before them, and it would be interesting to know what difference there is in the relative facility with which children learn English, which is filled with such arbitrary pronunciation, and some other language in which each vowel and consonant has a definite value and the same value always under the same circumstances, such as Italian, Spanish and German. Compare the English words "tough," "though" and "slough," for example. No such difficulties, I believe, exist in the three other languages mentioned. I believe, and it is reasonable to assume, that word-amblyopia exists more frequently in English-speaking children than in those speaking other languages that have not the difficulties of the English.

METHOD OF PUBLIC SCHOOL INSTRUCTION UPHOLD.

To turn to our subject: This boy can recognize the constituent parts of a word, but not the entirety, except in the case of a few words which have been firmly impressed on the torpid cerebral cells by repetition. To my mind, this fact is the source of a good prognosis for this boy and for similar cases. It seems probable that if individual letters can be remembered, words which are composed of letters should be remembered under repetition, and this prognosis is all the more supported by the present method of instruction in vogue in the public schools at least.

I refer to the method by which children are taught to read by looking at words and recognizing them as a whole. Such a boy who can differentiate a "t" from a "z" could certainly learn to differentiate the word "take" from the word "dog," and call them correctly, since they have no resemblance whatever to each other.

In short, the matter appears to reduce itself to a repetition of impressions on the cerebral cells. But there are 26 letters in the alphabet, and many thousands of words in the English language, and there's the rub. When we once eliminate the old method of analyzing and spelling a word and get its pronunciation, we assist these cases of word-amblyopia by eliminating the measure the necessity of a perfect auditory memory. For example, in pronouncing and spelling the word "mutton," two facts at least of the auditory memory are necessary: First, that m-u-t spells mut, and, second, that t-o-n spells ton; then comes into play the constructive faculty to

put the two together and pronounce the combination as "mutton."

But when a child is taught that the word "mutton," with its visual marks and characteristics, stands for the sound "mutton," the fact is accomplished easier and is not so complex. A simple and single act of word memory alone is sufficient. Thus the constructive act is avoided. I conceive that the modern method of teaching reading is infinitely superior to the old in that it is simpler, easier, and less complex.

In the case before us I believe that the *audif* is imperfectly developed; witness the pronunciation of my name, Herbert, spelt slowly, letter by letter, as "purran." This is not unreasonable, since the visual speech-center and the auditory are in juxtaposition. I believe this case is one of word-amblyopia, associated with slight word-deafness; and I think it is reasonable to coin the expression "word-amblykosis" to parallel the expression "word-amblyopia." Since the boy is right-handed, the lesion probably lies on the left side and in the angular gyrus.

DIFFICULTY WITH MATHEMATICS.

In this connection I would like to call attention to the fact that throughout their lives many people are unable to learn mathematics, or at least are more backward in learning and comprehending it than would be reasonable to expect from their general intelligence. Some years ago I was discussing this point with Prof. William R. Echols, professor of mathematics at the University of Virginia, who is not only a profound mathematician, but also a philosopher.

I cited my own case as that of one who could never learn mathematics, and asked him if he had any philosophic explanation of the fact. He replied that I had no memory for symbols. I believe he was correct. Mathematics has always been a bugbear to me from childhood. Every other department of learning which I have essayed has been fairly easy to me, but in the presence of figures I become as shy and shamefaced as the last boy whom I have described was in the presence of written words.

The formulas of trigonometry and conic sections, along with the rest of the higher mathematics, are to me as unintelligible as the cuneiform inscriptions on the walls of ancient Babylon, or the hieroglyphics on the pyramids of Egypt; yet I believe I can think in a fairly straight line, form a syllogism, and draw a conclusion consistent with the necessary forms of thought. Mathematics that is not transcendental deals with cubic space, or the elements of it, and with the relationship of things to each other, and many a man has been able to achieve good results by the practical handling of things without being able to reduce his acts to the analysis of symbolic thinking.

This is the illustration of the so-called practical man who, when he gets uniformly good results, must understand what he is doing, yet the symbolic figuring representing his acts would be totally unintelligible to him.

I believe figure-amblyopia is the explanation of the inability of some people who, although intelligent and logical in other re-

spects, are incapable of understanding symbolic mathematics. Now letters and words are symbols of one kind and represent thought, even as figures are symbols of another kind and represent thought, and in the last case cited we have seen that word-amblyopia may exist with good figure sight and memory; even so, I believe that good letter and word sight and memory may co-exist with figure-amblyopia. I believe this form of amblyopia should be classed as a distinct thing and placed in the same category with letter and word amblyopia.

IMPERFECT APPRECIATION OF MUSIC.

In this connection, it is pertinent to refer to the fact that many people apparently have an imperfect appreciation of or memory for musical sounds. There are some whose musical appreciation is so defective that they cannot recognize a tune unless it has become very familiar, perhaps not even then. There are others who can carry in their memories the sequence of musical notes and who can tell when there is so much as a demi-semi-quaver of flattening in rendition, but who cannot sing or reproduce in any natural way the simplest tune with accuracy. The first class have highly defective musical memory; the second have a good memory, but cannot regulate the sounds of their own voice or of an instrument in order to reproduce perfectly their auditory memory pictures. Those who have good memories and can reproduce by voice or instrument their auditory musical pictures are said to have talent for music. Savages seem to have no native faculty for making music. Their music is really noise. It is distinctly not "a concord of sweet sounds," yet they have some precedents in the singing of birds, the sighing of wind in the tree tops, the rhythmic fall of water. Music and civilization go hand in hand. Many without the so-called "good ear" play well and accurately by note. Such have poor auditory memory for sound symbols, and their art consists in good memory for written symbols and the constructive faculty of reproducing that which they know by another symbol.

The custom of singing in concert, common in some schools, particularly schools for very young children, should be cherished and extended. It would also be easy to teach the value of the written symbol by singing in concert from the text, so to cultivate the brain center for music symbols. As a boy or young man at school or college I knew none who could play an instrument unless it was some boy who learned the piano at the expense of the respect of his fellows. It is a cheerful and healthy sign nowadays to see many boys who can play one or more instruments, and no modern college is complete without a mandolin or glee club.

(To be continued.)

A. Krugman, the jewelry auctioneer of Seattle, Wash., who has been arrested a number of times on the charge of misrepresenting stock which he sold, has agreed to discontinue his auctions at Second Ave., near Spring St., at that place, on condition that the cases now held against him shall be allowed to go on suspended sentences. Krugman had previously intended to carry the cases to a higher court.

Business Literature Issued for the Holiday Season.

Odd Conceits in Booklets, Folders, Advertising Novelties, Etc.

ILLUSTRATED on the opposite page are some original folders, booklets, calendars and advertising novelties recently issued to supplement newspaper advertising during the holiday season. Other booklets worthy of note were received, but we regret that they arrived too late for reproduction. J. F. Dailey, St. Louis, Mo., distributed the odd folder seen in the upper left-hand corner of the group. The front cover page, representing a hand taking a watch from a vest pocket, is printed in black, straw color and gold. The opposite side of the card shows the buckle and band seen at the back of a vest. To open the folder you simply remove the watch from the pocket and you are confronted with the flattering announcement: "You look good to Dailey." Then follows the advertiser's story: "Your credit is O. K. That is why you receive this card. Do not pay cash for your Christmas jewelry. Select a fine diamond, a reliable high-grade watch, or anything in the way of jewelry, and pay as you can. Prices the same as those at cash stores."

The stamped envelope is a dainty little novelty with celluloid cover pages, issued by the same concern. It is essentially a stamp case and calendar, but also contains useful suggestions for gifts and several memorandum pages. It measures $1\frac{1}{2}$ by $2\frac{1}{2}$ inches. The canceled stamp is printed in red with the familiar black lines extending across its face. The post-mark, too, is well executed. The stamp bears the timely holiday inscription: "With best wishes—good luck."

"The House of Hewett" (Herman S. Hewett & Co., Brockton, Mass.) makes a good title for a very attractive booklet, $4\frac{1}{2}$ by $5\frac{7}{8}$ inches. On the two pages shown with the cover page are illustrated half-tone views of the old and the new establishment. The printing is done in photographic brown, the cuts being embellished with conventional designs in robin's-egg blue. Separate pages are devoted to the text and half-tones, respectively. No prices are mentioned, the booklet being chiefly a history of the business, from its foundation by Herman Hewett, in Taunton, nearly half a century ago, to the gradual evolution and development of the present firm. Herman Hewett died in 1885 and was succeeded by his brother, S. Myron Hewett, until 1887, when he, too, passed away. The firm of Herman S. Hewett & Co. dates from 1890, when the son of the founder formed a partnership with his uncle, Edward A. Hewett, and opened the store which is so familiar to

Brocktonians of to-day. Edward A. Hewett retired from the business in 1900, and the store was remodeled and enlarged in 1901. During the past year an entire floor has been added, in which are located the new cut glass and china show room and the greatly enlarged optical department.

E. P. Roberts & Sons, Pittsburg, Pa., submitted to THE CIRCULAR-WEEKLY several cards, each bearing a different illustration (either an article in stock or a view of the store) and printed in subdued rich colors. The firm sent out six cards, neatly tied with ribbons, to a selected mailing list. The original of each card measures $6\frac{1}{4}$ by $3\frac{1}{2}$ inches. They might also be used as mounts for blotters, and in that way would probably be retained longer. The half-tone work on these cards is excellent. The retoucher of the "copy" has not neglected the minutest details in his attempt to bring out the beauty of the subject illustrated. The detail work evinced in the portraiture of the articles on display in the show window is especially good.

"Gifts for Everyone" is the title of the 16-page booklet of W. F. Fischer & Bro. Co., Chattanooga, Tenn. The title itself is printed in red, while the wreath encircling it depicts Christmas holly in red and green. On the back cover page is printed simply the firm's trade phrase, "The firm that gives good values." The cover pages are of a good reticulated paper and measure $3\frac{1}{2}$ by $1\frac{1}{4}$ inches, the inside pages being gloss paper and somewhat smaller. The text, which is unillustrated, is printed in green. There are ruled memorandum pages in the back of the booklet for the jotting down of the name of a friend and his gift. The mechanical make-up of the whole is good.

A booklet of exceptional beauty is that of A. Frankfield & Co., New York. It comprises several pages, of which all except one are adorned by half-tone illustrations of diamond jewelry, watches, richly ornamented combs, bracelets, etc., etc. These half-tones are vignettted and printed on heavy gloss paper of a soft manila hue. The retouching on some of the jewelry designs is slightly overdone. The booklet measures $5\frac{1}{4}$ by $8\frac{1}{4}$ inches. The firm name and the border on the cover pages are embossed and printed in gold.

Henry Birks & Sons, Montreal, use newspaper space and extra business literature of all kinds very generously, the folder entitled "Ideal Gift Suggestions," having been gotten out recently to advertise a general line of holiday stock. The folder has been reproduced folded. When unfolded and

extended it measures 26 by $5\frac{1}{2}$ inches. The text on every page is accompanied by attractive half-tone illustrations.

The calendar bearing the imprint of T. B. Hagstoz, Philadelphia, Pa., also has the advertiser's name printed on the top of every memorandum page. It measures $2\frac{3}{8}$ by $4\frac{3}{8}$ inches. The cover pages are of tanned monkey skin and the edges of the book are gilt, making rather an expensive article for gratuitous distribution.

C. W. Little & Co., 74-76 Cortlandt St., New York, give us further evidence of their enterprise and originality in the two booklets illustrated herewith. The first is really a four-page folder and contains the apt quotation from Shakespeare: "I thank your grace, the gift hath made me happy." The contents of the two inside pages appeal to the sentiment of the prospective buyer and are deemed worthy of reprinting.

There's never a time in the lives of any of us from childhood to old age, when the receipt of a gift does not afford us a very real pleasure, being with it, as it unfailingly does, proof of a kindly remembrance on the part of the donor. When in addition to the affection that prompted the gift, it is evident that in its selection, pains have been taken to secure what would be most acceptable to the recipient, this recognition of our individual tastes and preferences adds vastly to the kindly feeling awakened by the remembrance of the giver.

The pleasure afforded by a gift is not to be estimated by its actual money value by any means, but by its appropriateness to the tastes of the one to whom it is presented. In our stock you will ever find an almost endless variety of pretty and useful gifts (many of very moderate cost) from which, with the aid of one of our experienced salesmen, you will certainly secure an offering that will be both beautiful and appropriate.

On the last page is a list of appropriate gifts for all. This folder measures $2\frac{3}{4}$ by $3\frac{1}{4}$ inches.

Mr. Little uses his name to good advantage as a caption for the introduction to the second booklet, which is cleverly written.

The writer says in part:

"Ours is a department store in which jewelry, silverware and kindred lines are sold in the various departments. We have not attempted to 'corner' the choicest that jewelers, silversmiths, glass-cutters, clock makers and watchmakers can produce. Our importers procure. This little book gives a classified list of some of the things that you can find at Little's corner—Cortlandt and Washington Sts."

The several pages in the first part of the booklet contain lists of gifts under the headings "Ladies," "Gentlemen," "Babies," "Girls," "Boys." Under each list is printed a well-chosen quotation from some famous author.

The last few pages give the birth stories for the months, wedding calendars and gifts for special occasions, etc., etc.

An attractively designed annual calendar of 61 pages, including the cover page, is being distributed by Ed. T. Jensen, Decorah, Ill. The front cover page is printed in three colors and the inside pages are profusely illustrated with large, clear half-tones illustrating miscellaneous jewelry, watches, silverware of every description, hand-painted china ware, etc.

The Voedisch Jewelry Co., Aberdeen, S. Dak., is sending out pleasing calendars on heavy cardboard in a dark color with a series of views illustrating the city buildings of the city framed in the corners.

STOR. KEEPING DEPARTMENT

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan which they are utilizing in connection with their business.

An Effective Bracelet Display

Showing Bracelets Depicted in a Snow Scene and Suspended by White Ribbon.

THE accompanying photographic reproduction of a recent window display at the B. H. Stief Jewelry Co.'s store, 404 Union St., Nashville, Tenn., quite graphi-

diamond dust, created a real wintry effect.

In the center was a mirror, representing a lake, on which loose diamonds as well as diamond jewelry were scattered. In the

The light in the window itself was blue in order to intensify the effect of cold. The method of operating this clever Winter scene will no doubt prove valuable to many retail readers of THE CIRCULAR-WEEKLY in their search for novel show window display schemes.

Window Displays Without Merchandise.

By G. J. JONES.

IT is a matter of discussion, among the advocates of window displays, as to the value of a show of some kind in which there is no merchandise figuring. The broad-minded merchant takes the stand that any thing which arrests the attention of the passerby will have some permanent value as an advertisement, serving to impress upon his mind the location of the store and the name of the firm. These shows without merchandise fill the bill, although it is not deemed advisable to resort to them too frequently as they are always expensive to prepare, and the passerby must be made familiar with the contents of the store as well as its location. For the purpose of presenting a variety, the decorated window minus the merchandise affords a pleasant relief and gives the storekeeper the opportunity to exercise his originality.

A notable display of this kind was seen recently by a traveling man in Marietta, O. where an elaborately planned effort was shown in connection with the Thanksgiving season. It was a tableau occupying one entire window with two life-size figures. It was entitled the "Olde Tyme Thanksgiving." At one side was a cleverly devised fireplace of generous proportions. In front of it sat a woman at a spinning wheel, who was apparently humming under the impetus imparted by the woman's toe, but as a matter of fact it was kept in motion by an electric motor, hidden behind the figure. The figure of a cat dozed not far away. A realistic fire effect in the fire place was secured by the use of a mass of red tissue paper, backed by an electric light. The other figure stood at a paneled window, on the side of which was a constant movement of what appeared to be snow. The flakes were being thrown around in flurries so realistically that the spectator was involuntarily compelled to shiver without regard to the real temperature conditions.

This clever display was obtained by the use of an electric fan and a small quantity of down. This was contained in a large box completely enclosing the window, and the fan maintained the downy particles in constant motion.

ORIGINAL DISPLAY OF BRACELETS BY THE B. H. STIEF JEWELRY CO.

cally depicts the clever scene that attracted at the time considerable popular attention. The window, as all will quickly recognize, represents a snow scene. About 60 bracelets were suspended from the ceiling attached to white ribbons. Small snowflakes attached to the ribbons, and the flooring covered with white cotton, sprinkled with

background was a little cottage, lit up with a red light, that enhanced the effect of the chilly scene. Scattered over the flooring of the window were opera glasses, jewelry, etc. Two electric fans, hidden from view, kept the pendant ribbons in motion to give the snow a more realistic snowstorm appearance.

AN UP-TO-DATE MEANS OF STORE CLEANING

Advantages Claimed for the Perfected Air Method

THE perfection of the air method of cleaning is one which will be of interest to storekeepers particularly. The advantage of a thoroughly clean store, free from dust, is appreciated by nearly every one. It is especially desirable that a jewelry store should be in spick and span order always. Yet it is not convenient to have scrub women and sweepers at work all the time. The sweepers make a dust which is bound to settle somewhere, and the dust particles readily find their way into cases and similar places, no matter what precautions are taken to bar them out. In fact, it is stated that dust will find its way where water will not. This was once demonstrated by means of a watch, when it was found that dust particles had penetrated, whereas the same case placed in water for a considerable time was found to be perfectly dry inside.

The air method of cleaning a store offers an ideal process, especially desirable where high class goods are kept and where absolute cleanliness is desired. By this system there is no dust raised. It is sucked up and carried outside, where it is deposited in a suitable receptacle.

Up to the present time the application of the system has been available only where the undertaking was of such proportions as to warrant the bringing of a portable power plant to the scene of operation, which, of course, precluded it from use by the ordinary storekeeper, who has more or less need for it all the time.

The system has been modified now to such an extent that an air sweeping plant will be as accessible as the common broom. There are two devices recently placed on the market by the use of which the storekeeper or householder will be enabled to do his own sweeping in this manner without the aid of any professional assistance or any elaborate plant. The first one is an offensive device of English origin, which consists mainly of an air pump and motor and a dust receptacle contained in a small box-like case. This is connected by means of a wire to any ordinary electric light socket, and in this manner the necessary power is supplied to the mechanism. The "sweeping" is done by means of a fan-shaped nozzle, which is passed over the surface to be cleaned. This draws out the dust and carries it through a hose to the box, where it is caught by passing through a quantity of water.

A somewhat different means of accomplishing the same work is through an American invention. While the former is designed for a variety of purposes, such as cleaning the interior of show cases, drawers, boxes and show windows, the American scheme is designed more for cleaning floors and similar surfaces. This apparatus comprises a machine much like a parlor sweeper and is manipulated in the same manner. The interior of the box is supplied with a series of beaters and brushes by means of which the dust is driven from the carpet and gathered up in a suitable receptacle in the same manner as the the carpet sweeper. The

mechanism is driven by an electric motor, the current being supplied through a flexible cord connection with a lamp socket. The cord is of generous length to permit of the machine being moved around freely.

Another piece of apparatus anent the subject of store cleaning was shown in New York recently by its inventor. When its use becomes general, Bridget will be dispensed with entirely around the store. This is a mechanical scrubber and cleaner operated by compressed air and electricity. It supplies soap and water to the floor, scrubs it and

LARGE JEWELRY EMPORIUM OF J. C. MELLICHAMP, ATLANTA, GA.

then sucks up the water and carries it through a hose to some convenient point in the rear of the store, where it is discharged.

The Way of the Enterprising.

AT the recent annual reception and display of holiday stock at the store of Cohen Bros., Reading, Pa., an orchestra dispensed popular music from the gallery above the cut glass pagoda. The store was effectively decorated with plants and electrical effects. Every purchaser received a silver souvenir.

A. R. Kimpton, Oberlin, O., has put in new fixtures and otherwise improved the appearance of his store.

Visitors to the retail jewelry establishment of J. Jessop & Sons, San Diego, Cal., on Christmas Eve were treated to a concert.

J. F. Krohme, Jr., Clarksburg, W. Va., held a formal annual Fall opening of his store on 3d St. The establishment was attractively decorated for the occasion and souvenirs were distributed.

A Palatial Retail Jewelry Establishment of Atlanta, Ga.

THERE is probably no store "in Dixie land" more attractive than that of J. C. Mellichamp, at Atlanta, Ga. The store has a width of 17 feet and a depth of 110 feet, of which 77 feet is used as a sales room and the rear of the store as a manufacturing department. The show windows are five and a half feet wide, four and a half feet deep and eight feet high, and are finished in mahogany paneling. The store furniture, also of mahogany finish, is massive and plain, presenting, however, a rich appearance.

The show cases, 12 feet long by eight feet high, are supplied with alcove mirrors. The glass room, situated in the center in the

rear of the store, is 12 feet square and is lined with black felt, which brings out in great radiance the glass ware on exhibition. The ceiling is 12 feet, two inches high, has covered sides tinted in robin's egg blue, and mahogany moulding. Between the moulding and the top of the wall cases is a darker shade of blue burlap. The floor covering is of dark green cork linoleum.

The store is lighted by means of 196 incandescent 16-candle power electric lights, with old brass fixtures and trimmings for chandeliers and sidelights.

A box about four feet square, containing a large amount of silverware and belonging to B. F. Spink, 325 W. Lexington St., Baltimore, Md., was taken to the police station for safe keeping a short time ago, in Cumberland, after having been found on the sidewalk, where it had been left by an expressman. A few minutes after the box had been deposited upon the pavement fakirs appropriated it as a stand on which to exhibit and sell toys.

I sell only for Jewelers who have a reputation and wish to keep it.

WORKSHOP NOTES AND QUERIES

Answers are also solicited from our readers to the questions published on this page.

QUESTION No. 1736.—Platinum Solution for Oxidizing.—Please inform me how I can produce a solution for oxidizing I prefer a platinum solution, which I understand is preferable to any other. P. S. O

ANSWER:—Chloride of platinum, which will produce the best agent of oxidizing, can be produced by dissolving platinum in aqua regia, and carefully evaporating the resulting solution to dryness, which may be done more quickly by placing in the warm water bath. The mass may then be dissolved in alcohol, water or ether, according to the shade and color desired. The platinum solution can be applied with a camel's hair brush, and may be painted over several times until the desired effect is obtained. When the solution is applied hot the finish will be more durable than when applied cold. The platinum solution can be kept in vials or bottles and can be used for a long time.

QUESTION No. 1737.—Britannia Casting Metal.—Please give me a good alloy for casting Britannia spouts and handles. B. C.

ANSWER:—For spouts a good alloy is tin, 40 pounds; antimony, six pounds; copper, three pounds. For handles: Tin, 140 pounds; antimony, five pounds, and copper, two pounds.

QUESTION No. 1738.—Preparing Cyanide of Silver.—How can I prepare cyanide of silver? I want it so I can make silver solution in small quantities quickly and by simply dissolving the cyanide of silver. P. C.

ANSWER:—A formula for making the cyanide of silver was recently published in the *Metal Industry*, and is as follows: To prepare cyanide of silver, take pure crystallized nitrate of silver and dissolve it in solution till no more precipitate forms. Avoid an excess of cyanide for a silver precipitate. The precipitated cyanide of silver is then filtered, washed and redissolved with potassium cyanide. This solution is far superior to the old chloride of silver, since it produces a heavier and better deposit in less time. It is more costly, however, and requires more time in making. The results will pay in the long run. The above is recommended in making silver solution in place of the cyanide and silver chloride. The proportion is about one part of silver cyanide and two parts of potassium cyanide.

QUESTION No. 1739.—Correction for Time Signals.—In noting a signal of time, at some distance, at what velocity does the sound travel? Y. D.

ANSWER:—In the giving of signal-marking time by the firing of a gun at a distance, a correction should be made for the velocity

of sound, which, at a temperature of 50° F. is 1,110 feet per second. The direction of the wind, though it may deaden the sound, would not affect its velocity.

German Process of Stripping Gold.

IN considering mechanical operations in relation to technical science, it is recognized that at the present time a competent mechanic, in the pursuit of his profession, needs quite a liberal education to enable him to take advantage of certain axioms which from time to time are brought forward by scientists for application to technical processes. These technical processes keep step with the constant advance of artistic effort, and intelligent workers, incited

FIG. 1.

by competition, are discovering methods of lessening labor in metal working, and trying at the same time to reduce the waste of metal to the smallest possible quantity. One result of this is the process of stripping, already employed in many establishments for working gold. It is often asked among jewelers and professional gilders how articles electroplated with this most precious metal can be stripped of it. An article by Friedrich Joseph in the *Journal der Goldschmiedekunst* describes the process as follows:

Stripping is a preparatory process to polishing, insofar as it removes the first green spots (sud) in the simplest way

possible, and evenly. The stripping apparatus, shown in Fig. 1, is 80 or 90 cm. high, and is covered by a glass casing, with a draft opening from the top, this arrangement being prescribed by law to prevent the escape of poisonous fumes from the hot fluid, which are conducted through the draft, A, into the chimney or the open air. Fitted into the frame of the apparatus is a porcelain or enameled basin, which contains the stripping fluid. At the side of the basin is a shelf, J, with a vessel of water in which the articles are rinsed after treatment. The index-register, K, regulates the electrical current which is used in reverse from that employed in an electro-gilding battery. A copper anode, E, is attached to the negative pole D, and the articles to be stripped are moved backward and forward on the positive pole C by means of the implement illustrated in Fig. 2.

The operator usually sits in front of the glass door at the end of the basin. The articles are suspended from the copper hooks, generally by means of chains passed twice around, and when the fluid has

FIG. 2.

reached the proper temperature, 60°-70° C. (140°-158° F.), and the electrical current has been turned on, they are moved back and forth on the pole (copper rod) C, removed from time to time, rinsed and returned as necessary until the green spots have disappeared, and they are the color of gold. They are then rinsed again, dried, and are ready for further polishing. The stripping fluid is strongly alkaline, and has an odor of prussic acid. There are numerous formulas for it, mostly special compounds, secrets of the different establishments. But they all have about the same basis, as follows:

- 1 litre (1,000 parts by weight) of water.
- 53.4 grammes (parts) of potassium cyanide.
- 192.0 grammes (parts) of sodium phosphate.
- 3 grammes (parts) of sodium sulphite.
- 20 grammes (parts) of caustic soda.

- Or,
- 1 litre (1,000 parts by weight) of water.
 - 85 grammes (parts) of potassium cyanide.
 - 195 grammes (parts) of sodium phosphate.

Thus in accordance with chemical principles a total alkalinity of 172 is reached, and 5.04 per cent. of potassium cyanide, 3.74 per cent. of phosphoric acid and 0.16 per cent. of sulphuric acid are contained in them. The mixtures may be made stronger in the case of solid gold, or weaker where the gold is thin, and the quantity of the ingredients may vary according as the action of the fluid is to be slow or rapid.

The gold separated is either deposited on the copper anode or remains in the fluid of the bath, from which it can be removed by evaporation or precipitation.

A Christmas tree on which dozens of candles were burning fell over in the show window in the Capital City Jewelry Store, E. 6th and Locust Sts., Des Moines, Ia., recently, and set fire to the front part of the establishment. The prompt action of the fire department prevented the flames from spreading. The loss will amount to about \$300, all of which is covered by insurance.

Devoted to Art Pottery, China, Marbles, Bronzes, Cut and Decorated Glass Ware, Bric-à-Brac, Lamps, Art Metal Wares, Fancy Goods and Kindred Lines.

Some Beautiful Specimens of Engraved and Cut Glass from the Russian Imperial Factory.

OUTSIDE of the excellent new productions in porcelain at the Imperial Factory at St. Petersburg, there is much worthy of note in the objects in engraved glass, turned out by this factory, because the artisans here employed have reached

degrees of luxury, with a view only to commercial success.

This delicate and refined industry in glass vases and cups involves the laying on of colors one upon another, uniformly distributed, melting and blending the lay-

short, of the thousand surprises of the transparency of the layers.

Particularly striking in its beauty is a

HANDSOME CRYSTAL VASE PRESENTED TO PRESIDENT LOUBET.

degree of perfection in skill which undeservedly compels admiration for their marvelous handiwork. Glass, that common, cheap substance, has in the hands of these artists been made as precious as diamonds and rubies. Their vases, of really inestimable value, might have reached fabulous prices, says a recent writer in *Art Decoratif*, if a thought had been given to offering them for sale. What merit then on the part of the Imperial Factory to turn out these charming products to the sole end of artistic perfection, a purpose to which the private manufacturer cannot devote himself by reason of the impossibility of making such charming ob-

jects together by as many separate firings as there are colors, in order that the engraving and cutting of the objects (whether done in a lathe or by hand) may show the same relief as cameos of onyx and carnelian. It requires at least six months to engrave a single cup, and these glass vases are far handsomer than those made from hard stones, because the colors are so much more varied. Instead of the white and black agate or the reddish "carniole," we see vases of emerald, of chrysoprase, of topaz iced with opal, garnet or rubies. Moreover there are effects procured by a pale tone on a brilliant ground, of the polished crystalline of certain contours—in

THISTLE VASE IN GOLDEN BROWN AND ROSE.

green cup, stocky and unusual in shape, of a feeble transparency; a flower in high relief varied the upper part in a thousand tones of iris, dying out and reviving as if

There are a dozen of those marvelous reproductions of which photography can give no idea.

One of the most beautiful products is the tallest vase (39 centimeters), which has three layers—green, white and yellow—which melt into a single shade of chrysolite. It is strewn with dragon-flies and crossed by a stem of a water plant. For his work on this piece the engraver received 1,000 roubles.

There is also an astonishingly fine piece of work in shades of garnet and topaz, further relieved by inlaid uncut stones to form the calyces of fantastic flowers. This piece shown in the illustration on page 99, measures 37 centimeters. The vase called "The Thistles," also illustrated on that page, is in golden brown and rose tints, of a sharply cut design, and very effective.

A decidedly artistic piece in the shape of a white crystal vase, is the testimonial offered to the French President, Loubet, an illustration of which is shown on the preceding page.

Medals and Plaques in the Metropolitan Museum of Art.

"MEDALS and Plaques" is the subject of an article published in the December issue of the *Bulletin* of the Metropolitan Museum of Art, the purpose of the writer, Victor D. Brenner, being to call attention to the excellence of the collection shown at this institution. Incidentally he treats in his remarks the dignity and merit of the medalist's art.

"How many of the visitors to the Museum," asks the writer, "are aware of the significance of the valuable collection of medals and plaques exhibited in one of the upper galleries? The general lack of appreciation of the value of medals as a means of artistic expression is due, perhaps, to the miniature size of these objects of art, perhaps to the popular belief that a medal has for its mission only the commemoration of some historic event or the honoring of some individual. A closer acquaintance with the art of the medalist, as represented by the examples in the Museum, will show that artists of highest merits have adopted this particular branch as a means of expression capable of conveying their sentiments.

"The medal differs from any other form of sculpture in low-relief in that it must be independent of its surroundings, it must be complete in itself. Standing between sculpture and painting, it may possess all the qualities of a work of art in any of these other media; in miniature conveying a story, suggesting form, color, distance and space, thus permitting us to enjoy, compressed in its two or three square inches, a result which, expressed in a work of sculpture or a painter's canvas, requires very much more room.

"The Greeks, ever sensitive to the beautiful in all its forms, took pains to exhibit in their coinage the best expression of their art. The Romans, too, were heedful of the artistic in their coins, and they found a new use for the metal disk apart from its use as currency, striking or casting the figures of their heroes in medal form for use as passes to the theatres or games.

"The Italians, closely followed by the

Germans and the French, early in the 15th century, struck souvenir medals to commemorate events of common interest, and to be given out at festivals. Princes and rich men of the Renaissance, as well as rulers of the state, had their portraits placed on the obverse of medals, with their coat of arms on the reverse, thus commemorating their names to future generations. Most of these Italian medals were of large size, and cast by the ordinary process of bronze casting. Later, through the invention of a screw press which facilitated the striking of large medals, the art gained in popularity, especially in the 18th century, when Napoleon alone had more than 1,000 medals struck to commemorate the events of his life. Many of these examples are now in the Museum.

"In 1768 Maria Theresa of Austria opened a school for the education of medalists, and in 1803 a school was instituted by the government in Paris. The Paris mint now strikes medals from almost all the dies in her cabinets, and even buys from artists new models, independent of the subject, and strikes medals or plaques from them to sell at cost as a means of educating the general public.

"Of the many ancient medalists who have left to us the results of their beautiful thoughts in these imperishable materials some, unfortunately, were too modest to imprint their names upon them, and are therefore unknown to us by name. It would, however, take much space to enumerate those we do know. L. Forrer, of London, has been happily inspired to write a biographical dictionary of medalists and die-cutters of all periods and lands, which is now in process of publication, running into several volumes. Those who attained the highest expression of art in the Italian Renaissance medal were Vittore Pisano, called Pisanillo, Antonio del Pollajuolo, Pasti Marescotto, etc.

"The so-called modern Renaissance of the medallic art had birth in France about 50 years ago. Those most active therein have been David Chaplain, Oscar Roty, Alexandre Charpentier of Paris, and Anton Sharff of Vienna. They, with the help of the administration of their respective mints, have attained so high a standard in the medallic art that we now are able to enjoy perspective in the medal more than in any preceding period. With them the medal assumed a wider scope even than it had known before in that it is not only made to commemorate an event, or memorialize a person, but is made also the means of the artistic expression of the thought and fancy of the artist."

The sum of \$1,600 in paper money which D. A. Butcher, a jeweler of Dayton, O., had placed in a pillow slip at his home, could not be found when the jeweler arose one morning recently. An investigation disclosed the fact that a burglar had gotten into the house and ransacked the bedclothes.

Some one with the evident intent to commit a theft, cut a square in the window in George A. Poetz's store, Mobile, Ala., recently, the impression being deep and requiring only a little pressure to force out the glass. The miscreant was apparently frightened off before he had time to complete his plans.

FADS AND FANCIES IN FANS.

A WIDE variety of imported fans is being shown in the salesrooms of Lewy & Cohen, 530 Broadway, New York. White lace and spangled fans, with dark sticks in antique effects, also large flower designs, with imitation ivory and bone sticks, are included in the display. Fine fans in delicate Oriental colored lace, with artistic hand painting, and with pearl sticks, are also seen. In speaking of the demand for fans, a representative of the firm said, recently, that in the past season the jewelers have been buying quite largely and an exceptional Spring trade is expected. Emil Lewy, of this firm, is now in Europe on a purchasing trip.

NOVELTIES IN CHINA AND GLASS.

BUYERS visiting the salesrooms of Chas. Ahrenfeldt & Son, 50 Murray St., New York, are pleased by the display of hand-painted china now offered by the firm. Strawberry and cherry designs, reproduced in the natural colors, are shown in a carefully selected line of bowls, compots, bon-bon dishes, and side trays. Gold work designs in flower effects are combined with the natural fruit patterns. In colored glass ware a line of green and gold, also of ruby and gold effects, is on exhibition, including vases, fruit dishes, small trays, bon-bon dishes and other patterns. A punch bowl is included in the line. The bowl has a closely fitting cover, a cut glass ladle and a substantial tray, in similar colors and workmanship.

PORCELAIN CATALOGUE TO BE REPRINTED.

IT is announced by the Metropolitan Museum of Art, New York, that a popular edition of the catalogue of the Morgan porcelain collection is to be issued early this year. The catalogue was prepared under the direction of Wm. M. Laffan and was privately printed in 1904. The object of issuing the reprint is to enable students and lovers of Chinese porcelain to enjoy the advantages afforded by this publication.

ODD VASES IN TEPLITZ WARE.

TEPLITZ ware is now displayed in a new form of vases, reproductions of ancient Egyptian and antique models. These vases are covered with a coating which gives them the appearance of old metal. Nodules of colored glazed work are used in the decorative scheme. The vases are produced in a variety of shapes and sizes.

The REPAIRING

END OF YOUR BUSINESS IS THE
MOST IMPORTANT PART OF IT

More people come into your store to leave work than to purchase goods.

Almost every one of your good customers became so through your repair department.

Progressive jewelers know this and concentrate their efforts on the repair department of their business. They give it the most prominent place in their stores; they emphasize it in all their advertisements; they keep themselves and their employes thoroughly informed on the costs of all kinds of work, new ideas and methods; they are courteous and accommodating to repair customers; have all work ready when promised; and do only such work at home as they can do well.

They send all the rest to us.

We devote our entire time, energy, capital, and twenty-five years' experience to this important branch of the jewelry business; employ and educate the best help that can be obtained; systematize and inspect the work, and use every modern method to produce the best work promptly at reasonable prices.

It is to your interest to do business with us, it is to our interest to have you.

Let us work together.

OF
A
CENTURY

TWENTY-FIVE YEARS is the period most people have in mind in buying a Watch Case. Cases guaranteed for that time are the most popular on the market. Among the many makes offered in this class it is simply a problem of selection. Wise selection can only be made after intelligent examination and comparison, balancing values and prices.

Here is the Case that has won pre-eminence in the 25-year field. The WADSWORTH "PILOT" has forged to the front on its points of merit alone—unaided by any fictitious considerations. Right in designs, models, workmanship and price.

The Wadsworth Watch Case Co.

WE desire to extend to our friends in the trade our best wishes for a happy and prosperous New Year, and to express to them our appreciation of their generous support, which has made the past year an exceptionally satisfactory one to us.

Illinois Watch Company,
Springfield.

AN ECONOMIC FORCE

WHEN C. J. Glidden, the noted automobilist, was touring through northern Norway, he met a peasant woman trudging along at the rate of a mile an hour. Upon asking her where she was bound he learned that she was on her way to her daughter's house, twenty miles distant, and when asked when she expected to arrive there, the woman replied "To-morrow morning." Mr. Glidden placed her in his car and within forty-five minutes she was at her destination. Her to-morrow was made to-day.

¶ Advertising can make your to-morrow, to-day. It can bring in one year the prominence and success that could otherwise be attained in two or more years. With your travelers you can reach the jewelers in the larger towns and cities several times a year, and if you have travelers enough, and think the effort worth the while, you can visit every hamlet in the country. By advertising in *THE JEWELERS' CIRCULAR-WEEKLY* you can tell your story to practically every rated jeweler every week, fifty-two times a year. Advertising is a great economizer of time and labor.

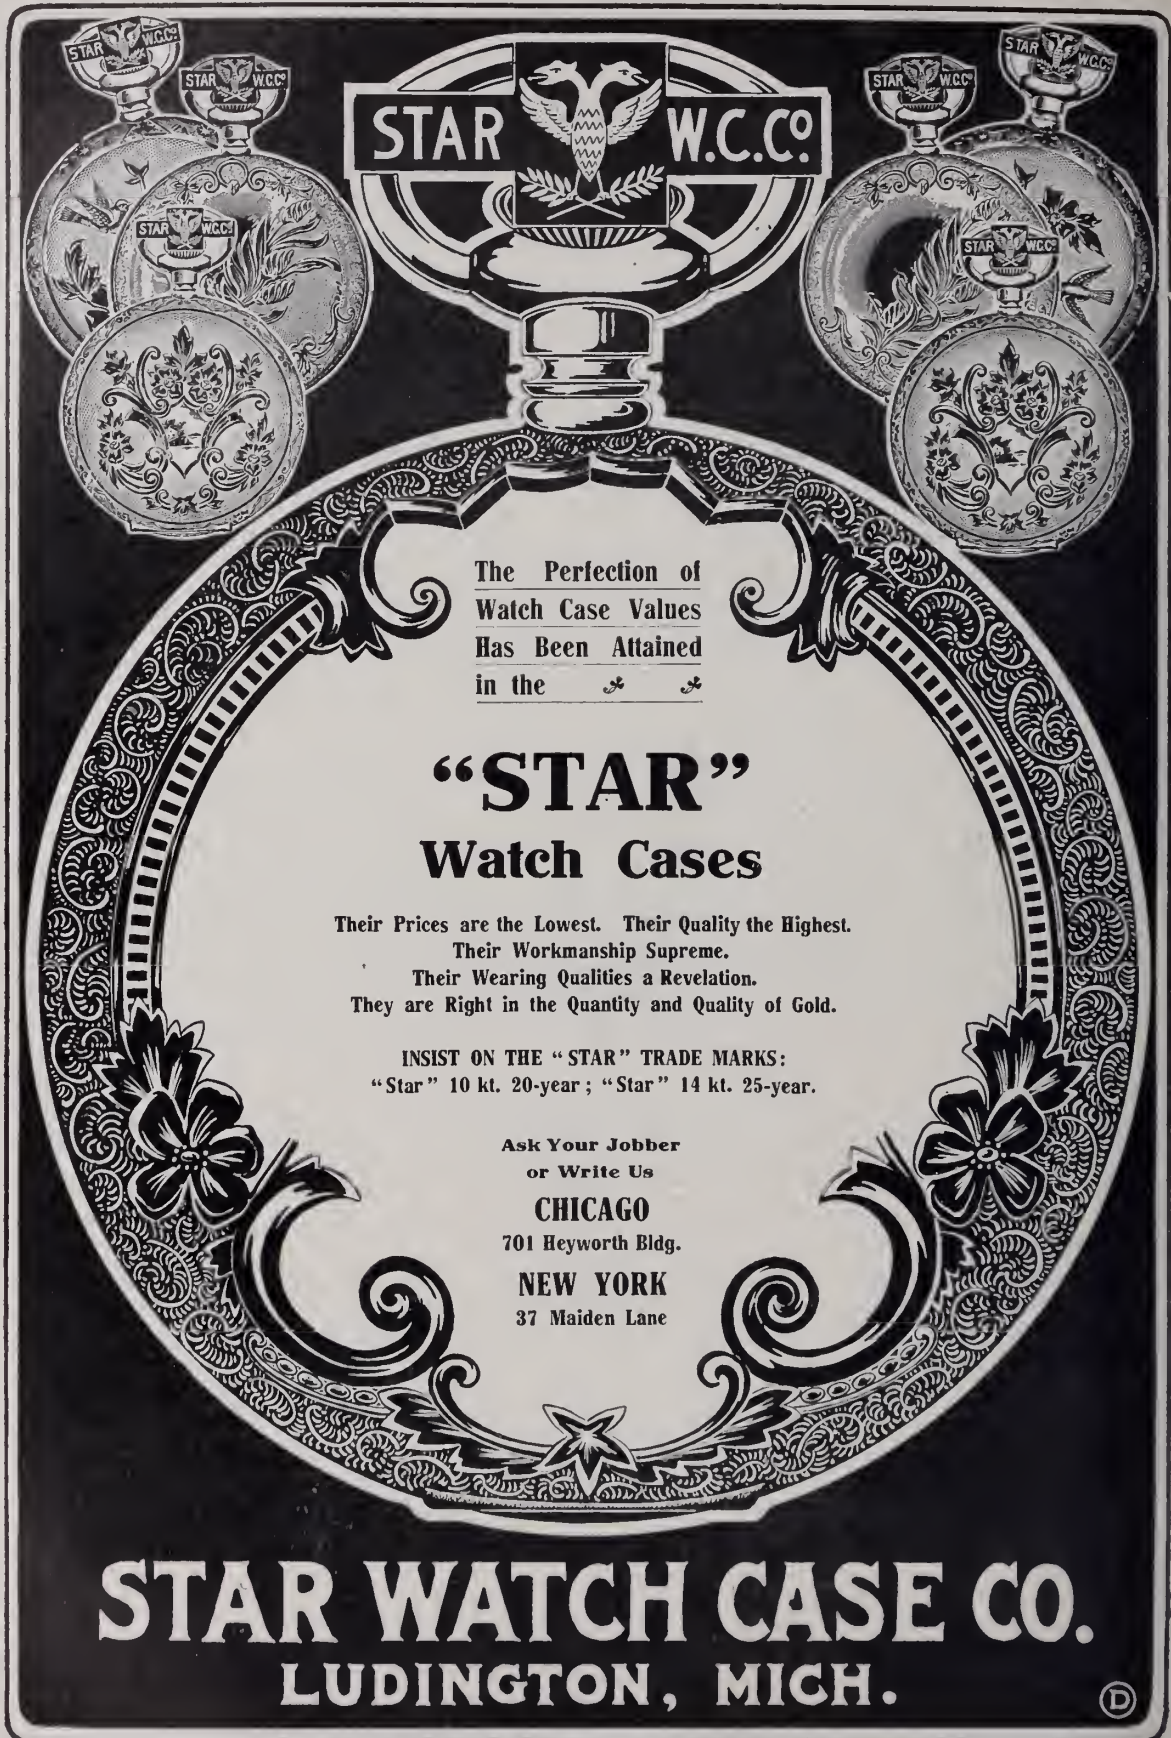

¶ If you could get all the jewelers together and tell them why they should buy your goods, you could probably convince enough of them to increase your business several fold. You cannot do this in person, but you can do it by proxy; you can bring your argument before the jewelers through the columns of their favorite paper. Advertising brings the most distant parts to your door—it enables you to appeal to the jewelers of California and Texas as quickly as to the jewelers in your own state. It enlarges your territory, your scope for action, and gives you the whole country upon which to draw. Advertising annihilates distances.

¶ Advertising is not intended to take the place of salesmen, the true mission of advertising is rather as an aid to the salesmen. Your travelers must necessarily consume much time in the introduction of your house, in telling of the merits of your goods and creating a confidence that is essential before business transactions can be opened up. Your salesmen's time is valuable. All this preliminary work advertising can accomplish equally well at considerably less expense. Every traveler knows (though some, for personal reasons, may not admit it) that he can sell advertised goods more easily and in less time than he can those not advertised. Advertising saves time, money and energy.

Drop us a card and we will tell you how The Jewelers' Circular-Weekly can help to increase YOUR business, and we will send advertising rates or have a representative call.

Of Interest to Jewelers

The Whiting Company have, during the past year, consistently maintained their well-known policy of introducing to the Jewelry Trade a constant succession of new and attractive patterns in solid silverware.

Attention may, in the first place, be directed to those richly hand chased Vases and other Special Pieces which have aided in establishing the Company's reputation for the production of silverware of the most individual character.

Among the additions made to the exclusive Whiting designs in Hollowware is the very effective Louis Quatorze, while the already extensive line of Toilet Sets has been further increased by the Duchess pattern, and the combination sets of Silver and fine Porcelain by the St. Germain, Bouillon, Coffee and Chocolate Cups, with Spoons to match.

The new Adam pattern has already taken an assured position in the long list of those which have conferred such generally recognized popularity on the Whiting Flatware productions.

Finally, mention must be made of the unusually comprehensive assortment of new and original examples of Deposit Ware which are always to be found in the Whiting stock.

North Attleboro, Mass.

New York, 14 Maiden Lane

JEWELRY STORE SPECIALTIES

SECTIONAL VIEW.

THE PROCESS EXPLAINED

In the Sтернаu Coffee Machine, coffee is automatically distilled by generated steam forcing hot water up through the center tube (A). The water is then sprayed, by the spreader (B), over the ground coffee on strainer (C), and the coffee extract percolates into the reservoir (D).

This process should continue from ten to twelve minutes, after the water begins to percolate over the ground coffee.

Thus the ground coffee never lies in the water, and the unwholesome properties of the coffee are not extracted.

IT is a well-known fact that the jeweler who carries a line of Specialties receives a larger trade than the jeweler who sells simply jewelry.

There never has been a time when the progressive jeweler was carrying more Specialties than he is at the present time.

WHY?

Because, the greater the variety of his stock, the better his chances for interesting his customers and enhancing the sale of his goods.

STERNAU COFFEE MACHINES bring new customers, as they are useful, appealing to the eye, convenient and make coffee superior to the coffee made by any other process.

It's to your interest to send for our latest Catalogue, No. 21

D. Lisner & Co.

Creating Importers of

Jewelry Novelties

One-Forty Fifth Avenue, cor. 19th St., NEW YORK

*Some
Notable
Lines*

THE DISTINCTIVE QUALITIES in Lisner imported effects merit the especial attention of the trade. The stone combinations and color tones are always impressive and the designs are historically as well as intrinsically interesting. The artificial stones are always selected with discrimination and are always the best of their kind. These characteristic qualities are admirably exemplified in the Oriental Necklaces and Bracelets.

Certain stones, not artificial, are specialized by this house with excellent results. The showings in Garnet and Japanese Coral receive unqualified praise. In Jet the artificial is preferred to the natural product, owing to the former's superior brilliancy which is not impaired by wear. Every jeweler has a constituency for Lisner products which do credit to his establishment.

Simplicity versus Mechanism in Studs

ANYTHING likely to get out of order is a sure source of dissatisfaction which reacts on the merchant who sells it. Our flat back studs are strong and simple in construction, correct in principle, easy to adjust, perfect in form and finish. Nearly a hundred styles for all occasions—all up to the Durand standard.

The Virtues of Specialization

LIMITATION is an incident of good work. The man who tries to do everything seldom does anything well. This house does not attempt to make everything in jewelry—not even everything in gold jewelry. There is specialization also as to grade: 14 Karat only.

Generally speaking, we make such jewelry as is demanded by The Niceties of Dress, including combs, necklaces, buckles, scarf-pins, cuff links, etc. Our customers will confirm the high standards that prevail.

NEW YORK, 3 Maiden Lane

CHICAGO, Columbus Building
(HARRY H. MILLER)

GREETING.

WE take this opportunity to thank the trade for one of the biggest years in our history, and trust that our customers have met with a like success. For the new year we hope for even a closer relationship, and that at the end of 1907 you, with us, will pass all previous marks. OUR GOODS will help you toward this end. EVERY ONE is a SELLER. GET NEXT. Our men are now among you. Do not fail to avail yourself of the opportunity to look over our many new and attractive patterns. Almost SIXTY years of active business has proved our stability. Every Jobber has our goods. Ask him to show you our new patterns in Scarf Pins, Rings, Brooches, Crosses, Hart Charms, Link Buttons, Studs, Neck Chains, Waist Sets, Baby and Handy Pins, Etc.

If you wish success, use successful goods.

No. 23.

The Frankfurt Municipal Silver Treasure.

THE silver treasure owned by the city of Frankfort-on-the-Main has within the last few years been considerably enriched by gifts from citizens. First among these gifts is a large silver center piece, or epergne, just finished, representing a portion of old Frankfort, around the old Main bridge. The model was made by the recently deceased sculptor, Wilhelm Schwind, and gives a faithful picture of the scene. It is a work which will not fail to heighten the fame and that of the silversmiths who executed the piece.

From a plate borne by four round feet wreathed in Gothic tracery, bearing the Frankfort eagle, repeated four times in beautiful chasing, and framed in Gothic page, as surface decoration, rise four alacms. These are joined to each other by openwork arches, which come together in a finial, giving the effect of an airy hall-like structure, which serves as support for an elaborate basin. Under the baldachins are allegorical figures, representing the four cardinal virtues (Wisdom, Justice, Strength and Charity) personified, upon which civic prosperity depends. Rising from the center of the basin is an exact reproduction of the tower of the old Sachsenhausen bridge, with its accompanying buildings, one of the most characteristic architectural structures of old Frankfort. The transition from the airy reliefs and niches of the lower part to the picturesque but more massive style above, is well made by an intermediate structure, recalling the former defenses of the city, which stretched along beside the tower. Gothic foliage and flowers harmonize it with the similar ornamentation of the basin. The whole epergne, with the exception of the figures and the tower, is heavily gilded in the color of natural gold, following the style of the Gothic period, and the neatness and delicacy of the technical work is well brought out by this means.

Another new piece in the collection is a splendid drinking cup, made after a design by the late Prof. Linnemann, a prominent painter on glass. This is about one meter in height, with rich Gothic ornament, and gilded in antique style. At the base is the coat-of-arms of the donor, in enamel, and an inscription. Encircling the base are coins with the images of German emperors, beginning with Charlemagne, each one surrounded by the coat-of-arms of the sovereign, in enamel. Gothic foliage, with figures of angels, completes the decoration of the base. Around the body of the cup are more large German Imperial coins, so placed that they can be turned around, showing the reverse side. The real cup is removable from this ornamental exterior. The cover is crowned by a tower, on which is a figure of St. George and the dragon, in beautiful enamel.

Another epergne is so large that it must stand upon a specially constructed table. It is about two meters in length, and the central figure is three-quarters of a meter high. The model for this was made by Prof. C. Hausmann, a prominent sculptor and instructor in the Frankfort School of Industrial Art. The tall central figure represents "Frankfortia," a lovely female figure, at whose feet are grouped cherubs. The epergne, on either side of the group, is shaped into a shell, and beyond these shells again are large allegorical figures. The whole piece is executed in oxidized silver. The inscription is on the smooth border of the base.

One of the especially beautiful and valuable works of art in the collection is a large figure of silver, about one meter in height, holding a solid gold cup. The pedestal represents five of the towers which belonged to the old fortifications of the city, and which are preserved to the present time—the Eschenheim, Gellies, Bockenheim, Sachsenhausen and Friedberg towers, accurately reproduced in silver. Between them are the coats-of-arms of the suburban towns now incorporated with Frankfort—Bockenheim, Bornheim, Oberrad, Niederrad, etc. Above the battlements and turrets floats an ideal figure, again Frankfortia, bearing in its hands the golden cup, richly chased and enameled. On the cover is the German Imperial crown, set with diamonds and colored stones, a superb piece of goldsmith's work. On the occasion of the visit of Kaiser William II. to Frankfort in 1903, during the German musical festival, he was given the "Willkommtrunk," or pledge of welcome, from this cup, by the city officials. Professor Ferdinand Luthmer, director of the School of Industrial Art, made the design for this piece, and the model was made by Professor Hausmann.

Still to be mentioned among the treasures of Frankfort is a beautifully chased inkstand, also the work of the two artists just mentioned. This was used for the first time by the Emperor, in 1903, to inscribe his name in the Golden Book of Frankfort in the city hall.

Other gifts are in process of execution. The one illustrated on the front cover of this issue, representing a part of old Frankfort, is from the atelier of Lazarus Posen's Widow, in Frankfort.

The Johannesburg *Leader* announces that practical steps have been taken toward the establishment of the diamond cutting industry in South Africa. Such an industry, it is estimated by that journal would give employment to 20,000 hands. This is amusing, in view of the statements from Antwerp and Amsterdam and the fact that the total employed in the diamond cutting industry of the world to-day is only 15,000, including cutters, polishers and helpers.

The Upward Price of Platinum.

PLATINUM has been selling in the last week or two at \$37 to \$38 an ounce, and according to the statements made by refiners and dealers there is no reason for expecting any fall in prices, at least not in the immediate future. The rapid rise in the price of the metal, which is so extensively used in diamond mountings, was noted in the issue of Aug. 22. At that time the metal was selling at \$28 an ounce, to which price it had risen in a year from \$18.50. Manufacturers can remember when they could buy all that they desired for \$8 or \$10 an ounce, but that was about 15 years ago.

David Belais, of Belais & Cohn, New York, said last week that the supplies of the metal are adequate to all present requirements at the prices, and that jewelry manufacturers are supplied promptly in whatever quantity they desire at the current rates. It was feared some weeks ago that there would be delays in filling orders, and reports from Russia indicated that it might become practically impossible to get the metal in the quantities demanded by the manufacturers in various lines. Besides the jeweler, manufacturers of electric, photographic and dental supplies use the metal in large quantities.

Up to this time, while the prices have gone up steadily, there has been no time when manufacturers could not get as much of the metal as they required, providing they were willing to pay the prices asked by the refiners.

Mr. Belais said that the refiners continue to depend upon Russia for the bulk of the supply of ores. Some ore comes from the western States and small quantities come also from South America.

The refiners agree that the increased consumption of the metal is the immediate cause of the rapid advance in prices. Contributing causes are found in conditions in Russia. It is said that the mine owners are restricting the output in order to keep up the prices.

Whether or not the metal will go still higher is a question, but the dealers point out that it has been steadily advancing now for a long time, and there is no particular reason for supposing that the top of the market has been reached.

Herbert J. Welch, Wabash, Ind., has been appointed time inspector for the "Big Four" Railroad at that place.

The Star Watch Case Co., Ludington, Mich., is putting on the market a guaranteed 25-year case made of 11-karat double stock in hunting and open-face styles that is meeting with universal satisfaction. The factory has been working on the model of this case for some time, and although it has just been placed on the market it has already been accorded a warm welcome.

**We wish good luck to all
the jewelry trade for the
entire year of 1907**

Speaking of good luck, we would like to call the attention of every wide-awake retail jeweler to our new line of Good Luck Jewelry, made in 14k. gold from original designs at moderate prices.

Can Science Produce Gems Identical With Nature's Product?

By CLEMENT W. COUMBE.

WITH the publication of each report of improved methods of the scientists or advance in the qualifications of their productions, the artificial gem ghost causes spasmodic chills to creep up the backs of some traders in precious stones. Prof. Moissan produces some diamonds by a new process: the ubiquitous newspaper reporter gives the public an account of the act, with some day-dream accessories thrown in for luck, and the diamond merchant gets a spell of cold shudders. A few days later the facts, sifted down to bedrock, arrive on the surface, and everybody is happy (except the worthy professor) to learn that once again the outcome of the experiment has been "dust and ashes"—diamond dust and carbon ash, it is true, but all the same the paras of the millionaires retain their value and the glittering De Beers output maintains its steady demand at the same or better figures.

The report is flashed to every land that Paris has established a ruby factory; that alumina and chromic oxide in their fused condition are to create pigeon blood gems to order any length or width desired at so many cents per carat cost, and at so and so many dollars retail. In due time the synthetic gems obtain expert examination and are discovered to vary in several respects from the "Oriental" so considerably that the fused article would only confuse a glazier or the cost is so high from the care needed in manipulation that the made-to-order variety would prove unprofitable. And again, for a period, gem owners and their precious property values are allowed to rest undisturbed, the envy still of their gemless neighbors.

Now, the pathetic part of this ghostly visitation is its persistence. It is a wraith that simply won't stay buried. And, as the advertisement says, "There's a reason." Diamonds are carbon, all right, and it's not to be disputed. And rubies are made of alumina and chromic oxide—a fact not to be gainsaid. Again, if you take pure carbon and liquefy it and then let it return to normal temperature, if your pressure on the molten mass is sufficient while cooling, adamantite crystals (true diamonds) are produced in just a wee small proportion of the mass and of microscopic size. The only feature remaining in doubt is, what are you going to do with that diamond just gained at such heavy cost, with bort in such adequate supply and carborundum and emery doing their cheap labor so effectively.

Also, if you dissolve a piece of alum and a piece of carbonate of ammonia, pour off the water and heat the precipitate till it dries and throws off the water of crystallization, you have then but to add the desired proportion of chromic oxide as a beautifier in order to have true pigeon ruby matrix. And all you need in crystals of this substance, and there you are—a ready-made, stock-in-hand ruby merchant, maybe. That is to say, providing your crystals and Dame Nature's crystals are sufficiently identical to deceive, not the dear public

(they will often accept glass beads for gems) but the experts. But the artificially produced and colored alum-glass is *not* just the same as the resplendent Oriental ruby, and the expert simply won't allow himself to be deceived, for the internal organization of the two products differ and he will keep himself posted as to those differences, always paying the top price for the natural and the very lowest prices for the chemist's bauble, and never vice-versa.

These obstinate conditions prevailing at present, the theme that next tasks even the sleeping hours of the dealer in gems is, *how long?* Are we at last to discover (and that within the period that will find this generation above the sod and holding as tokens of our wealth and our income's source these pieces of glittering stone) that these persistent researches and experiments of the chemist will be rewarded, and diamond, ruby and emerald factories displace the time-honored labor of rooting out from Nature's womb those deep-buried treasures? Will the scientist, after all, knead up his charcoal into eight-carat diamonds, and oxidized clay metal to outriveal Burmah's pigeon blood? If there is anything that will interest the jeweler or make the gem producers (from mining shareholders to wholesale dealers) in the precious stones sit up and listen it should be this evolutionary, revolutionary topic.

Suppose we take a glimpse into the laboratory of these 20th century wizards. Let us take a short inventory of the alchemistic materials that they work in, and also glance at the tools available in these Proteus workshops. We can't draw sound conjectures concerning the possible merits of the future product of a new factory unless we get some kind of a view of the plant—the equipment. Sharp tools make good carpenters; and those chemist sharps—what of their kit?

First, concerning the diamond, we have already acknowledged the chemist's rights to his claim that it is pure carbon. Well, pure carbon exists as charcoal and graphite as well as diamonds, and their difference of aspect is as widely apart as the valuation we humans place on these divergent forms of one and the same thing—*allotropes*, the chemist calls them. But the latter tells us the black variety (powder) is called "amorphous" and the sparkling carbon "crystalline"; that the latter receives its symmetrical shape through having cooled slowly from a fused, liquid condition, whereas the black stuff—well, he has not given enough attention to it to find out much about its formation; there's no money in that side of the game.

And then about "the stuff that (ruby) dreams are made of," as well as the corundum variety: The chemist informs us it is chromic oxide and alumina, a sesquioxide of the metal aluminum; for formula purposes he writes it in the following symbols, A_2O_3 , meaning three atoms of oxygen, or 18.3 parts by weight of the former to 16 parts of the latter.

But as charcoal is one of the cheapest of commercial products and aluminum metal is avoidable wherever clay—or, better, alum—is present and chemically pure chromic oxide is worth less than a dollar a pound, and the air we breathe contains 23 per cent. oxygen, the production of a few tons more or less of diamonds and rubies should be a matter of much ease (though great moment to the world) if the chemist has the right tools to stick the ingredients together and in their right proportions.

So let us look into the laboratory equipment availed to compete with Nature's productions. The scientists have positively determined that the diamond is produced by crystallization from carbon in a liquid state. Well, it takes a lot more than a wood fire to melt pure carbon; in fact, it is only within recent years that science has been able to do this thing. But with the valuable aid of the electric furnace the chemist can obtain an intensity of over 3,000 degrees centigrade. This is ample to liquefy carbon.

But scientists have recently arrived at the conclusion that natural diamonds obtain their crystalline form under immense pressure. Well, again, the physicist comes to the rescue. He can furnish for practical purposes, say, over 400 "atmospheres" pressure. The pressure of the atmosphere, as you know by the barometer, averages the weight of 760 millimeters of mercury in a glass column at 0 degree centigrade at sea level, which is 14.7 pounds to the square inch. Therefore, your arithmetic will prove that the scientist has, say, nearly 6,000 pounds pressure to the square inch at his disposal in creating carbon crystals. Now, pressure can be obtained by an internal stress created by contraction of matter through refrigeration of the medium. And the significant fact is presented that through Prof. Dewar every gas has been liquefied and even solidified (including hydrogen and argon) by this contraction method. "Absolute zero" (that point in a thermometer where the bottom of the column is reached and the registering substance has shrunk to *nothing*) is minus 273 degrees centigrade (460° Fahr.). Dewar has reached below 234 degrees centigrade! And, by *expansion* from the sun's rays engineers recently moved the vast steel structure of Williamsburg Bridge over a foot.

So you see Brother Chemico-physicist has some gigantically powerful tools of a very wide range of action wherewith to turn those cheap elements before mentioned into diamonds and rubies. And to many it may well appear that Dame Nature must watch out for her laurels (or, rather, gems) if she does not wish to be out-rivalled by giant Science. And, taking it for all and all, what we have seen emanating from the artificial gem hatchers, crediting the scientists with the unflinching energy and perseverance they are displaying, taking likewise into consideration the gigantic range of physical powers they are able to throw into their work, there might appear to be potent reason for the diamond and ruby mining fraternity and the gem holding merchants to feel dubious as to the future of their industry.

But there are very few subjects fit for discussion that have not at least two sides to them. And we have only looked so far

Altogether this or other of our advertisements appear in over 500 publications daily, weekly and monthly. The dealer who handles

"1847 ROGERS BROS."

goods sells the best known silver-plated ware on the market—the Best known to-day and for the past sixty years.

When silver-plated ware is mentioned, the average person at once thinks of the brand marked

"1847 ROGERS BROS."

There are several reasons why this should be so. One is that it has been before the public so long—"1847 ROGERS BROS." being the original silver-plated ware, dating back to 1847, when the electro-plating process was discovered by Rogers Bros.

Another is that no other silverware is so thoroughly advertised.

But the chief reason is to be found summed up in the phrase

"Silver Plate That Wears"

An investigation by a prominent publication showed that more than half of the people preferred our goods in 1905, but during 1906 they evidently bought largest of their kind in the world) were run far into the night and yet could not supply the demand for "Silver Plate that Wears" 1907—the sixtieth year since the business was established—will undoubtedly mark a greater record in sales, prestige and influence in the trade. Sold by leading dealers everywhere.

Send for our Catalogue "making selections."

MERIDEN BRITANNIA CO., Meriden, Conn.

" to assist in

into one side of this momentous question of artificial gem production. Now, let us consider with equal deliberation that other side.

First of all, it has to be acknowledged that science has not yet produced a diamond which is worth a "continental" for commercial (trade and barter) purposes. Neither have the learned synthesists produced the ruby that can fool "all the experts all the time." Every supreme effort that produces a carbon crystal ends in "dust." Every carbuncular, corundum endeavor brings forth a similarity to the Simon pure article just insufficiently close to avoid detection. The symmetrical formation gives way to vitreous homogeneity having conchoidal fracture instead of crystalline "cleavage." Or the "males" take on a different shape or disposition of their relative location. Ever, not only a difference, but one that can be estimated and demonstrated to give the lie to the counterfeit.

And there is left time yet for the lapidaries and jewelers to catch their breath before they turn their labors on to the synthetic stones.

But those interested will still remain anxiously wondering whether the elusive mystery will not soon be unrolled and declare these "temporary" obstacles are but our consolations if eventually their trade in natural stones gives place to marketing the artificial product.

Apparently nothing remains to complete the chemist's victory but to get his material into crystalline structure and more into conformity as to size and internal organization. Then, presto, the deed is done!

And to do this, what? Well, to become an adept at crystal culture it is very necessary to learn all about crystals. And man, conqueror of the elements, does he not "know it all"? His science of crystallography, all in black and white, is set forth on shelves upon shelves of tomes. Their method of formation, the relationship under the *regular, hexagonal, quadratic, rhombic, monoclinic, triclinic* system—are they not all laid down in laws fixed and irrevocable as the laws of the Medes and the Persians?

And of what does the primary function of crystalline formation consist, according to the determination arrived at after so many years of arduous research? It is expressed best, perhaps, in these words: "*The more slowly the process of solidification takes place, the larger and more symmetrical are the crystals that are formed.*" In different methods of expression you will find this crystal axiom set forth in each and every test book that handles the subject.

So, you see, none of Nature's wiles escape the chemist and physicist sleuths who are so ardently on her track. But the ultimate analysis of the subject of artificially producing diamonds and rubies of a commercial value is not a question any longer of synthetic reproduction of the elementary composition but of structural organization—an extension of the planes of symmetry. It is really a question of *growth in structure*, not of composition. And *time* is the essence of this contract or science belies herself.

But have the scientists complied with this wisest of nature in compounding their synthetic gems? If the "slowness of the process of solidification" measures the degree of

size of the planes of a crystal, and artificial gems lack size or the crystalline symmetry, perhaps it is the outcome of the human product not having had the *time* to mature that causes the synthesists' disappointments!

So, to make a success of the diamond and ruby factory, all that is apparently needed is to take *time* into consideration. To imitate exactly Nature's gems, *take your time—take her time*

But what is Nature's time? How long does she take to produce an eight-carat Cape sparkler? Aye, "there's the rub." To imitate the patience of Nature in her works is far—oh, so far—from human!

Whether the lustrous octahedrons that come from the De Beers mines took a thousand years or five hundred times that period we cannot guess with assurance. But most scientific minds would lean more heavily on the latter *tempus* than the former, I believe. And, if I am not mistaken, those South African crystals had not quite finished their baking period. For when they see daylight they appear to suffer from heart rupture at the event, very often, we are told, if they are not enveloped in a potato or some substance to maintain still longer the period of pressure somewhat, to lose their latent heat more slowly.

Supposing the scientific gem constructors submitted their synthetic counterfeits to a test of, say, a *single* thousand years of cooling as a starter in the time limit investigation, which appears to hold so important a place in the crystal growth!

If I might be permitted to draw an analogy I would like to say that scientific arboriculture may hasten the growth of an oak by fertilization, etc. But an oak tree with 50 rings conspicuous in the cross section of its trunk will take just 50 years to grow in spite of Mr. Scientist, fertilizers, etc., notwithstanding. And the sight of those 50 rings is conclusive evidence still in these days that that king of the forest took 50 long, steady-going and growing years to reach that stage of maturity. And may not the size of the crystal gem prove also a visual test of its length of formation?

Some college students in a certain physics class left a field chain lying on an open cask of pitch. In the course of a week those youngsters were surprised to find all but one link of that chain had buried itself in the apparently firm contents of the cask. They pulled, then they hacked, then they pried. But the pesky chain did not budge. Their professor of physics was called into consultation. He came and looked at the projecting link. Next he gave the young fellows an interesting lecture on viscosity. Then he told them the only convenient way of getting that chain out was by following the law of nature that imbedded it. He fastened the free link to a rope, which he swung over the limb of a nearby tree. Next he fastened a weight to the opposite end and told the youngsters to wait a week and see what happened. At the expiration of that time the chain had released itself from the viscous mass. Perhaps the professors of synthetic gemology have got to "get back to nature" in order to realize the crystals they are after.

Supposing my theory to be correct, owners and miners of natural gems can certainly "take heart," again, for their ex-

tingtion is likely to be prolonged into another century. And the natural ruby and diamond "jig" is not yet "up," and five and six carat gems even will not be reproduced synthetically next week nor next year, as some dealers fear.

Am I right in saying diamonds and rubies are not found in the frigid zones; that their *habitat* is Africa, Burmah, India, etc.—always a location where the mildness of Winter forbids sudden cooling of the earth's strata?

Far off, indeed, is the realization of the chemist if time, not power alone, is a necessity in gem growth. But even his still limited application of physical forces may be insufficient for the task undertaken. Man in his might cannot yet rival forces with Nature. His electric furnace incandescence will not compare with the volcanic intensities that probably assist in the formation of nature's big diamond and ruby crystals. And for pressures, who can place his few thousand "atmospheres" alongside the terrible superimposed weights of the Himalayas or even the most diminutive mountain ranges and their added stress under seismic disturbance?

And the prize of price will always go to the beautiful *true* stone. No *near* gems will satisfy the human thirst for jewelry adornment. Yet the value of the lessons learned so far in the synthetic productions has been that science cannot—absolutely *cannot*—make diamonds, rubies, etc., that will stand the tests of brother scientists. And the proofs so far are ever increasing evidence that to nature, not man, we must look for our precious stones.

Pearl Fishing Profits in Ceylon from Leased Government Banks.

THE pearl fishery at Ceylon, the leasing of which by the government provoked much comment recently, has been made the subject of a report from which Consul-General William H. Michael, of Calcutta, derives the following figures:

The total revenue derived from the fishery and camp amounted to \$875,392, and expenditure \$73,510; and the net profit was \$801,882—over \$111,000 in excess of that of 1904, which was the previous highest on record. The inspector of pearl banks anticipated an excellent fishery in 1906, but that after a probably small fishery in 1907, and perhaps 1908, another break in the fishery cycle was likely. A lease of the fishery was given to the Ceylon Company of Pearl Fishers (Limited), for a period of 20 years from Jan. 1, 1906, for a sum of \$103,333 per annum, it being stipulated that a sum should be annually expended by the company upon the improvement of the fishery of not less than \$16,666, to be increased at the discretion of the government to any sum not greater than \$50,000, and that all the expenses of the supervision and protection of the fishery camp by government should be borne by the company.

It is stated that the Pearl Fishers of Ceylon (Limited) shows a profit of \$256,960. Dividends of 36 cents on the ordinary shares and 18 cents on the deferred shares are to be paid; \$49,628 is set aside for depreciation and reserve, and \$77,382 is to be carried forward.

Memphis Dealers Offer Reward of \$1,000 for Recovery of Jewelry Stolen from Their Safe.

MEMPHIS, Tenn., Jan. 2.—M. O'Hara & Co., whose store at 65 Madison St. was recently entered by burglars, the safe blown open and over \$3,000 worth of jewelry stolen, are offering a reward of \$1,000 for the return of the stolen property or a portion of the reward for any portion of the jewelry which may be recovered.

The robbery was a daring one, as it was committed almost under the nose of patrolmen and night watchmen. The thieves early in the morning entered Mr. O'Hara's place of business, which is in a basement, blew open the safe in which he kept his jewelry, took all the articles of precious stones and gold which they could lay their hands on and escaped without leaving any trace. Valuable papers and negotiable notes in the safe were left untouched, though it was apparent that the robbers had gone over them carefully. Three men whose descriptions are in the hands of the city detectives are supposed to have committed the theft, but no arrests as yet have been made.

The list of jewelry for which O'Hara & Co. offer \$1,000 reward is as follows:

Three pink button shape pearls, \$275; three bright button shape pearls, \$175; eight pearls, \$400; three pear shape pearls, \$215; one lot of small pearls, \$35; one oval shape pearl, \$100; three small button shape pearls, \$50; one lot of baroques (600 grains), \$450; three baroques (300 grains), \$300; one lot of baroques, \$25; one lot of slugs, \$10; one lady's gold watch, 14 karat, \$15; one gentleman's watch, filled case, \$15; one lot of gold coins, gold and silver, \$35; one lot of opals, \$15; two gold nuggets, \$6; one diamond ring, weighing about one karat, \$110; one diamond ring, weighing about 1/4 karat, \$30; one lot of old gold, \$1,000; total, \$3,261. Also one Smith & Wesson revolver with safeguard.

Aged Watchmaker Suddenly Stricken While on His Way to Work.

ALLENTOWN, Pa., Jan. 2.—Lemuel Fisher, an old and well known watchmaker, who for many years had been employed in the store of E. Keller & Sons, 711 Hamilton St., was stricken suddenly on his way to work Monday. He fell down in the street, and when pedestrians rushed to his aid it was seen that Mr. Fisher had passed away, evidently of heart failure.

Deceased, who was 67 years old, was a native of Flemington, N. J., where for a number of years he had been engaged in the jewelry business and also worked as an engraver; in the latter line he had considerable skill, and was noted for his clever work. Seventeen years ago he moved to Allentown and secured a position with the Kellers, faithfully performing his duty and remaining with them until his death. He was highly regarded by his employers, and his passing is mourned universally by his friends and associates. Mr. Fisher is survived by a widow and one daughter, Mrs. H. L. Stoudt, of Flemington, N. J., to which place the remains were taken for burial.

Paul Hohberger has discontinued his jewelry business in Gilmore City, Ia.

National Monthly Imports and Export Statistics.

WASHINGTON, D. C., Jan. 2.—The records of the Treasury Department contain the following comparative statistics of interest to the jewelry trade for November, 1906, and for the 11 months ended November, 1906:

Nominal Assets Exceed Liabilities in Bankruptcy of Geo. H. Catlin, St. Joseph, Mo.

ST. JOSEPH, Mo., Jan. 2.—It was with great surprise that the news was received here to the effect that George H. Catlin, who conducted a jewelry store at 412 Felix St., was named in a petition in bankruptcy filed Dec. 26 with United States Commissioner Colt. No intimation of the failure was given, though Mr. Catlin has been conducting an auction sale for several weeks. R. U. Hendrick, a former jeweler of this city, has been appointed receiver on the application of the bankrupt's attorney. Mr. Catlin purchased the remainder of Mr. Hendrick's stock some years ago, and he is a creditor for \$1,132.

According to the schedules filed with the petition Mr. Catlin has assets nominally worth \$21,142.13 and liabilities of \$18,462.98. Of the assets the value of the stock is placed at about \$20,000; fixtures, \$1,000, and cash on hand \$142. The bankrupt claims about \$400 as exempt. With the exception of Mr. Hendrick's claim, mentioned above, the liabilities are nearly all for merchandise, among the principal creditors being: Charles L. Trout & Co., \$2,719; A. L. Guy-smith, \$1,116; L. Gutmann & Sons, \$1,398; Arnstine Bros. Co., \$1,025; E. E. Richards, \$161; Edwards & Sloane Jewelry Co., \$264. The bankrupt owes newspapers in this city and county advertising accounts amounting to \$176.

The petition has been referred to B. J. Woodson, referee in bankruptcy, and the first meeting of the creditors to elect a trustee will be held Jan. 7.

Creditors of Roy R. Spencer and Elizabeth Spencer, as partners in the firm of Roy R. Spencer Co., Newark, N. J., who recently went into bankruptcy, will meet Jan. 16, at 11 A. M., at the office of S. K. and B. C. Williams, Newark, to consider the proposed sales of the assets of the concern, and to pass upon the final report given to the trustee in bankruptcy, as well as to declare and order a final dividend on all claims.

Exports of Jewelry, Clocks, Watches, Silverware and Kindred Lines from New York.

WASHINGTON, D. C., Jan. 2.—The following were the exports of jewelry, silverware and optical goods, clocks, watches and kindred lines from the Port of New York for the week just ended:

- Basle: 1 case jewelry, \$300.
- Bombay: 45 cases clocks, \$776; 1 case watches, \$110; 1 case jewelry, \$300; 4 cases plated ware, \$525.
- Bremen: 1 case jewelry, \$500; 6 cases plated ware, 663.
- Calcutta: 24 cases clocks, \$335.
- Cayenne: 3 cases silverware, \$148.
- Christiania: 6 cases clocks, \$260.
- Gothenburg: 5 cases clocks, \$125.
- Hamburg: 5 cases watches, \$6,553; 1 case plated ware, \$225; 1 package optical goods, \$117; 14 barrels jewelers' sweepings, \$7,000; 1 case silverware, \$960.
- Halifax: 6 cases clocks, \$123.
- Havana: 6 cases plated ware, \$510; 3 cases clocks, \$142; 2 cases jewelry, \$649; 3 cases plated ware, \$350; 2 packages optical goods, \$192; 2 cases clocks, \$109; 2 cases jewelry, \$590.
- Havre: 1 package optical goods, \$147; 1 case plated ware, \$100; 4 cases jewelry, \$1,550.
- Hong Kong: 40 cases clocks, \$902.
- Lisbon: 44 cases clocks, \$577.
- Liverpool: 3 cases plated ware, \$300; 1 case watches, \$250; 4 cases jewelry, \$1,020; 11 packages scopes and views, \$6,480; 2 cases plated ware, \$200; 71 cases clocks, \$1,203; 2 cases jewelry, \$1,200.
- London: 10 cases plated ware, \$272; 12 packages optical goods, \$2,796; 24 cases watches, \$4,077; 2 packages scopes and views, \$180; 55 cases clocks, \$2,569; 1 case watches, \$500.
- St. John: 29 cases clocks, \$232.
- Singapore: 27 packages stereoscopic goods, \$4,000.
- Savanilla: 11 cases clocks, \$317.
- Sheffield: 5 barrels jewelers' sweepings, \$2,300.
- Smyrna: 10 cases clocks, \$110.
- Shanghai: 117 cases clocks, \$1,879.
- Sydney: 5 cases plated ware, \$342; 2 packages optical goods, \$323.
- Valparaiso: 30 cases clocks, \$2,242.
- Vera Cruz: 2 cases plated ware, \$322.

In the bankruptcy of H. W. Farwell, Hornell, N. Y., the first meeting of creditors was held, Dec. 28. C. H. Arnsted was elected trustee. The examination of the bankrupt consumed several hours, after which an adjournment was taken to Jan. 24, when the proceedings will be continued before the referee.

Bankruptcy Petition Filed Against John H. Patten After He Had Made an Assignment.

John H. Patten, in business under the name of Gleason & Patten, retail jeweler and optician at 111 W. 125th St., one of the oldest concerns in that part of New York, was named in a bankruptcy petition filed Saturday by creditors, after he had made a general assignment. It is believed that he owes about \$70,000. The stock is said to be worth from \$30,000 to \$35,000, and there are accounts receivable to the amount of \$3,800. Mr. Patten, it is claimed by creditors, has been pawning jewelry, and it is said that his equity in articles that have been pledged will amount to \$10,000.

Mr. Patten's wife, who had put considerable money into the business, recently consulted Henry I. Kowalsky, attorney at 19 W. 41 St., in relation to her husband's affairs. It is said that Mr. Patten had not been giving to the business the close attention which he formerly did, and that his physical condition was one of the causes of the trouble, as he was threatened with nervous prostration. As a result of the conference with the attorney, notices were sent out to creditors, inviting them to meet Friday of last week in his office. The day before the creditors met Mr. Patten executed the general assignment to Marcus Waldheimer.

At the creditors' meeting the following firms were represented: Chas. L. Power & Co., C. T. Goldsmith & Co., Louis Strasburger's Son & Co., Julius Wodiska, R. A. Briedenbach, Hodenpyl & Walker, B. H. Davis & Co., Rosenzweig Bros., N. H. White & Co., Cross & Beguelin. According to statements made at the meeting by the attorney about \$51,820.88 was due on notes given to merchandise creditors and about \$21,000 was due on open accounts. It was said that Mrs. Patten had put \$8,000 in cash at one time in the business, and subsequently had mortgaged her property for \$10,000, putting this amount also in the business. She had been a somewhat larger indorser on notes for her husband, but the amount of her liabilities in this way had been reduced to \$600 or thereabouts.

After hearing the attorney's statement, the creditors appointed the following committee to inquire into Mr. Patten's affairs: Julius Wodiska, C. P. Goldsmith, Louis Strasburger and Chas. L. Power. It was the first intention to await reports from the committee before taking further action, but matters were hurried along when the petition in involuntary bankruptcy was filed on the following day by creditors having claims as follows: B. S. Sugarman, \$2,500; B. H. Davis & Co., \$1,874; Alois Kohn & Co., \$232. The petition was filed by Weil & Purvin, as solicitors for these creditors. It was alleged in the petition that Mr. Patten, intending to hinder and delay his creditors, had transferred on alleged antecedent indebtedness assets to the amount of \$10,000. The general assignment made to Mr. Waldheimer was also given as another reason for declaring Mr. Patten a bankrupt.

The starting of bankruptcy proceedings at once took control of the business off of the assignee's hands. The court appointed Charles P. Howland receiver under a bond of \$3,000.

The business was established by F. C.

Gleason, who for 30 years was located at Third Ave. and 137th St., and who moved in 1893 to 113 W. 125th St., one door from the present store. In 1897 he admitted Mr. Patten as partner, the latter having been for some time before bookkeeper for a prominent jewelry house. Then the style became F. C. Gleason & Co., and so continued until early in 1903, when the firm dissolved. Patten has continued alone under the present style.

It is said that Mr. Patten's business suffered some during the construction of the Subway, but after its completion his trade improved. He has a lease of his store which runs for three years more, and this is regarded as an asset, as the rate of rental is said to be quite moderate. He employed at times as many as four watch repairers. He is about 45 years of age.

Building Occupied by Well-Known Jewelers Wiped Out by Fire in Montreal, Can.

MONTREAL, Can., Jan. 3.—The most determined fire since the Montreal Board of Trade building was destroyed broke out here in the early hours of the morning and gutted the whole Stephens business block, which was bordered by St. Antoine St., St. David's Lane, St. James St. and Little Craig St. The ground floor of the building was occupied by the Gorham Co. and the Smith-Patterson Co., and among others occupying the building were Woodburn Sons & Co., Ltd., novelty manufacturers, and the Canadian branch of the Gillette Safety Razor Co. Fifteen firms altogether were burned out and six firemen were injured by a falling wall, one man having been instantly killed. The total loss will exceed half a million dollars.

Geo. Chillas, president of the Gorham Co., said, when seen by a correspondent of THE CIRCULAR-WEEKLY, that the total loss of his company will be about \$70,000, which is secured in several European companies. All the workmen's valuable hand-made tools are gone, and it will take some time to renew these. Fortunately three fireproof vaults, built under Mr. Chillas' personal supervision, are almost intact, and these contain between \$60,000 and \$70,000 worth of stock. Three travelers are out on the road selling these goods, and if they should prove untouched, as expected, early delivery of them can be made. Mr. Chillas has been fortunate enough to secure office and show rooms in the Inglis building, St. Catherine St., and a temporary workshop will be taken so as to keep the men together until the new Gorham building, on Phillips Sq., is ready, which will be about May.

The outside of the gutted building now looks very picturesque with icicles hanging down in festoons and the gilded names of the Smith-Patterson Co. and the Gorham Co. on their respective sign boards shining through their arctic envelopment.

The Smith-Patterson Co.'s beautiful new machinery all lies in the cellar of the building, and is only fit for the scrap heap. The salvage of the stock will amount to very little beyond the metal value. Mr. Paterson himself and Fred. A. Mansfield, managing director of the company, have been scouring the town for suitable temporary premises since the fire, but so far have not been successful. The company is insured in the

Lloyds office, of London, Eng., and while Mr. Paterson was reticent as to the amount of the insurance, he said that he did not expect it would be enough to cover losses. "I hope we shall not lose much money," he concluded, "but if it were a total loss it would not affect the company's solvency, as the Boston store, with which it is affiliated, would look after that."

Mr. Mansfield said he could give no estimate of the loss until the travelers' sales had been gone over and the ruins cleared out. He said he was certain, however, that the insurance would not cover the loss to stock and plant, not considering the losses caused by interruption to business and inability temporarily to fill orders already booked. The firm for the present has office room with Wm. Hall & Co., Notre Dame St.

BOSTON, Mass., Jan. 5.—Henry W. Patterson, of the Smith, Patterson Co., went to Montreal on Thursday, on receipt of the news from that city of the destruction by fire last Thursday morning of the Montreal establishment of the concern.

Advices received here indicated that the manufacturing plant was entirely gutted, and the wholesale establishment wiped out also, being in the same building. Treasurer Mansfield, of the Canadian corporation, was here during the first half of the week, and was on his way back to Montreal when the fire took place.

Death of George W. Hewitt.

GREENVILLE, Pa., Jan. 2.—George Wesley Hewitt, who died at his home Dec. 30, after a long illness, was for more than a third of a century connected with the jewelry trade of this section, and the news of his death, therefore, was heard with regret by a large number of his associates in business who knew him well and held him in high regard.

Mr. Hewitt was born in Trumbull County, Ohio, in 1850, and in 1865 moved to Greenville. When he was about 18 years old he bought out a jewelry business here, which he continued for more than 30 years. Outside of business the deceased was prominent in fraternal circles, being a member of many orders and societies, among others the Masons, Elks, Knights of Pythias and Knights of Honor.

He was married in 1866 to Miss Amanda Donner, and his widow and two children, Clem. G. Hewitt and Mrs. E. B. Packard, survive him.

Receiver of T. F. Tuttle Silver Co. Turns Business Over to New Owners After Paying All Creditors.

BOSTON, Mass., Jan. 5.—After having the receiver-ship of the T. F. Tuttle Silver Co. for eight weeks Marshall P. Thompson turns the concern over to the new owners, the Rogers Co., with every creditor paid, \$2,500 new orders booked, and no impairment of the plant or equipment.

The receiver reports that it was a prosperous concern, the request for a receiver arising from internal dissensions solely. Mr. Thompson pays a high tribute to the character of the jewelry trade as a whole, saying that he has never come in contact with a finer class of business men in his experience as an attorney in cases of business settlements heretofore.

Death of James Mix.

ALBANY, N. Y., Jan. 4.—Albany's veteran jeweler and the trade's most prominent retail merchant in this section of the Empire State, James Mix, has passed away, and the event has caused deep sorrow and grief not only among Mr. Mix's relatives and associates in the trade, but throughout the business community of this city, as the deceased had long been one of our leading and public-spirited citizens. Mr. Mix's death occurred yesterday afternoon at his home, 688 Madison Ave., and came after an illness of several months, although his condition had not been serious enough to confine him to his bed for more than a fortnight. Although not a well man, he had

THE LATE JAMES MIX.

been connected with the business which bore his name up until his retirement which, as told in a recent issue of THE JEWELERS' CIRCULAR—WEEKLY, occurred in the latter part of November.

Mr. Mix, who was over 83 years old, had been connected with the jewelry business almost from his boyhood and came of a family which had been identified with the jewelry trade for several generations. In fact, the business which Mr. Mix conducted and recently turned over to his son, was established by the deceased's father in 1847. James Mix was born in this city Aug. 9, 1823, and received his education in the local school, finishing at the Albany Boys' Academy. Having decided as a youth to follow his father's career as a jeweler, on completing the academy, he started in to learn the trade, serving an apprenticeship at the store of Mr. Hascy. Later he joined his father, and, on becoming proficient in the business, was admitted as a partner.

The business which was then at 24 Beaver St., was moved to Beaver and Green Sts., and subsequently to its present location, Beaver and Pearl Sts. Mr. Mix succeeded his father in the early '60's and continued in active charge of the business

until his failing health forced him to give up his work. On his retirement he turned it over to his wife, Emma C. Mix, her daughter, Emma L. Hoagland, and Fred L. Mix, who have continued it without change under the old name.

Throughout his career Mr. Mix was identified with many movements of importance to this city, and there was no work which favorably affected the business interests to which he did not give his active support and co-operation. Early in life he was connected with the Independent Hook and Ladder Co. and was a member of Firemen's Lodge, I. O. O. F. Among other enterprises with which he was connected was the Albany County Savings Bank, of which he was vice-president, and the Albany County Bank, of which he was a director.

The deceased was married in 1851, and a widow, three sons, William B., Frederick L. and Edward D. Mix, and one daughter, Mrs. E. L. Hoagland, survive him.

The funeral will take place Monday afternoon and the services will be conducted by Rev. E. A. Collier, of the Reformed Church at Kinderhook, and the Rev. J. Addison Jones, of the Madison Ave. Reformed Church. The remains will be interred in the Albany Rural cemetery.

Death of Morris L. Mantell.

SYRACUSE, N. Y., Jan. 2.—The death of Morris L. Mantell, who died Christmas night at St. Joseph's Hospital, was deeply regretted by his many friends in the business world of this city, as Mr. Mantell had been prominent in the jewelry trade of Syracuse for a number of years, and his store, at 124 S. Salina St., was well known to Syracuseans. Mr. Mantell was taken to the hospital about a fortnight ago, and there underwent an operation Christmas morning. This did not prove successful, and he passed away shortly after 11 o'clock the same evening.

Mr. Mantell, who lived at 1427½ S. 7th St., was but 38 years old, but had had a long career in business. He first started in the cigar and tobacco line, but was unsuccessful. In 1888 he started a concern to sell jewelry, pianos and other articles, and later devoted himself entirely to the jewelry line. In September, 1903, Mr. Mantell was robbed of \$5,000 worth of diamonds, and this embarrassed him financially and caused him to offer to compromise with his creditors. Later he made a settlement and after this he began to make great headway in business, and was on the high road to success when his health broke down.

Deceased is survived by a widow and two children.

Creditors of Wm. Vogel, New Britain, Conn., Meet at New York and Reject Offer of Settlement.

Creditors of Wm. Vogel, 326 Main St., New Britain, Conn., met Monday of last week in the Broadway Central Hotel, New York, at his request. He submitted an offer of 25 cents in settlement of claims, of which amount he proposed to pay 15 cents in cash and 10 cents in notes. The creditors after talking over the offer, declined to accept it. What further action will be taken remains to be seen.

Mr. Vogel in December, 1902, went into bankruptcy at Hartford, Conn., where he had been in business since 1898. He again started in his own name, this time at New Britain in February of last year. His liabilities are said to be \$8,000 or more. Walsh & Roche, New Britain, are his attorneys.

The Career of the Late Phillip Zoellner.

PORTSMOUTH, O., Jan. 2.—Phillip Zoellner, a pioneer jeweler of Portsmouth, who passed away Friday evening after a long illness, was one of the most highly esteemed and respected citizens of this town. His death, though not unexpected, as he had suffered from cancer in the stomach for a long time, was a severe shock to his many friends, by whom his many sterling qualities were sincerely appreciated.

Mr. Zoellner was born November 22, 1832, at Kusel, Bavaria, and after receiving his education at the common schools and gymnasium of his native town he was apprenticed to a watchmaker. He served his time between the ages of 16 and 20, and after working for about one year at his trade in his native land he came to America on a sailing vessel, landing in New York Feb. 7, 1852. After remaining in the metropolis for a year he moved to Cincinnati, in which city his brother, Christian Zoellner, had previously located. With the latter he spent a couple of years, and then Phillip Zoellner came to Portsmouth and obtained employment with John Clungston on Market St.

The deceased started in business for himself April 1, 1857, on 2d St., near Market St., and built up a good trade; he removed his business in 1890 to a store just east of Court St. on 2d St., and from there it was moved to its present location. When Mr. Zoellner retired a few years ago he was succeeded by his two sons, the firm becoming Otto Zoellner & Bro.

Mr. Zoellner was married July 9, 1857, to Miss Mary Scott, and she and eight children survive him; of these, five are daughters—Mrs. A. Tritcheller, Mrs. George Appel, Mrs. John Bauer, Mrs. L. Schleifer, Mrs. A. Stephan—and three sons, Albert C., who is in the jewelry business at 81 W. 2d St., and Otto and Charles, who continue the father's business at 415 Chillicothe St.

Mr. Zoellner was a veteran of the Civil War, having served in Company C, 106 O. V. I. He was a member of the G. A. R., charter member of the German Benevolent Society, treasurer of the First German Building Association and a member of several associations. In addition to his jewelry business he was agent for a number of steamship lines, until 1900 was a member of the Scioto County Tax Commission, and also served two terms in the city council. At one time he was land appraiser for the First and Second wards.

He was prominent in religious works, being a charter member of the German Evangelical Church, and a trustee of that organization. The funeral services were held from this church Monday afternoon.

The following pupils enrolled at the Southwestern Optical College during the past week: David A. Espy, Kansas City, Kans.; G. C. Haven, Colorado Springs, Colo., and Fred. L. Thompson, St. Louis, Mo.

Record Breaking Figures in Precious Stones Imported at New York During the Calendar Year.

Imports of precious stones and pearls at the port of New York in the last calendar year exceeded in valuation those of any prior year, the total being \$43,573,488.59, as shown in the report of Col. Edward S. Fowler, the appraiser of the port. A constant increase in the value of these imports has been the story told by the figures for a number of years past, the most notable gains having been in the last two years.

The nearest approach to the aggregate for the last calendar year was in the fiscal year, ended on June 30 last, when there was a total of \$40,217,542.78. The proper comparison of the figures for the calendar year of 1906, however, is to be made with those of the calendar year 1905, and show a gain of \$6,427,147.24. The gain in 1905, as compared with 1904, was a little more than \$11,000,000.

Of the imports in 1906 the cut stones and pearls amounted to \$32,221,977.69. This was much more than the total imports, including cut and uncut stones, in any year prior to 1905. The importation of uncut stones, of which probably 98 per cent. is diamonds, amounted last year to \$11,351,510.90, showing a gain of \$1,205,059.86, as compared with 1905.

In the valuation of the cut stones and pearls it is likely that the diamonds contributed the same percentage of the whole as to former years, the proportion in the last fiscal year having been nearly seven-eighths. The authorities do not show in their statistics the separate value of the pearls or of other stones, aside from diamonds. No weights of stones or pearls are given.

The precious stone industry furnishes a considerable percentage of the total imports of merchandise at the Port of New York, the proportion last year having been a little more than five per cent. The increase in merchandise generally, as compared with 1905, was 12 per cent., but in precious stones the gain was somewhat higher than this average.

The following table shows the total imports of cut and uncut stones, the former including pearls, for a number of years past, and shows at a glance how rapid has been the growth:

| Year. | Cut. | Uncut. | Total. |
|----------|----------------|----------------|----------------|
| 1897.... | \$4,368,913.44 | \$2,677,413.95 | \$7,046,327.39 |
| 1898.... | 8,034,616.51 | 4,900,198.94 | 12,934,815.45 |
| 1899.... | 13,414,217.79 | 5,907,534.76 | 19,321,752.55 |
| 1900.... | 9,768,094.87 | 3,597,520.39 | 13,365,615.26 |
| 1901.... | 18,160,511.02 | 6,702,050.05 | 24,862,567.07 |
| 1902.... | 18,019,522.89 | 7,393,252.55 | 25,412,775.74 |
| 1903.... | 17,264,541.11 | 7,412,414.99 | 24,676,966.10 |
| 1904.... | 16,416,533.48 | 9,675,741.78 | 26,092,275.26 |
| 1905.... | 26,999,890.31 | 10,146,451.04 | 37,146,341.35 |
| 1906.... | 32,221,977.69 | 11,351,510.90 | 43,573,488.59 |

The December imports of precious stones surpassed in value those of this month in any other year. In the last calendar year every month except January and September show greater imports than in the corresponding month of the year before, which were themselves of unusual volume. The October imports, valued above \$5,000,000, furnished the highest record of any month

since statistics have been kept. July went almost up to \$5,000,000, and two other months passed the \$4,000,000 mark. The following table shows the December imports for a number of years past:

| December | Cut. | Uncut. | Total. |
|----------|--------------|--------------|--------------|
| 1897.... | \$556,940.40 | \$18,463.80 | \$575,404.20 |
| 1898.... | 669,156.51 | 207,688.42 | 936,844.93 |
| 1899.... | 435,886.46 | 245,917.34 | 681,803.80 |
| 1900.... | 883,906.20 | 84,781.20 | 968,687.88 |
| 1901.... | 1,734,652.54 | 450,833.32 | 2,185,485.86 |
| 1902.... | 1,149,927.76 | 846,608.77 | 2,295,636.53 |
| 1903.... | 954,189.65 | 339,790.49 | 1,293,980.14 |
| 1904.... | 1,905,310.00 | 1,036,640.00 | 2,941,950.00 |
| 1905.... | 2,846,373.52 | 787,005.70 | 3,633,379.27 |
| 1906.... | 3,162,353.78 | 867,971.06 | 4,030,324.84 |

Receivers Appointed for Trenton Watch Co. in Proceedings to Reorganize the Concern.

TRENTON, N. J., Jan. 3.—On the petition of counsel for Mrs. Olivia G. Moses, Vice-Chancellor Bergen, in the Court of Chancery yesterday, appointed John M. Cutter and Lewis A. Thompson as receivers for the Trenton Watch Co. This is a development in the plan for the reorganization of the company, and Mr. Cutter, one of the receivers, who was formerly general manager of the Elgin National Watch Co., was also for some time associated with the Trenton company.

Mrs. Moses, who is the principal stockholder and creditor, is represented in the proceedings by Frank S. Katzenbach, Jr., the former Mayor. Arthur Moses said that the company has been under a heavy burden of old indebtedness, bonded and otherwise, much of it calling for high interest charges. Conditions finally became such, he said, that some of the larger creditors saw that it would be for the best interest of all to have a receiver appointed.

An effort will be made to have the business continued for some time under the management of the receivers. Friends of the management say that the company could be placed on a profitable basis if a means were found the relieve it from some of the old indebtedness.

In the bill asking for a receiver, the following statement of the situation is made:

In the early history of the company large sums of money were lost in the manufacture of watches before the quality of watch which it manufactured became known, and before its business became established; that during this formative period a large part of the obligations mentioned were incurred, and these obligations have seriously embarrassed the successful conduct of its business in the past two years by reason of the inability of the company to secure materials, due to the poor credit of the company, and from other causes the business has been conducted at a loss; that for the past two weeks the company has been unable to pay the wages due to its operatives, which amount approximately is \$14,000.

That on Dec. 17 commercial paper of the company to the amount of \$5,308.48 was protested, and on the same day a check given by the company for \$1,221.08 was protested for non-payment. That the company is wholly unable to meet checks outstanding, given in expectation of being able to market its product in time to meet the checks. That the credit of the company is so impaired by reasons of its inability to meet its obligations as they become due, the company has been unable to purchase necessary materials with which to complete its products.

The bill says the capital stock was increased to \$700,000, of which Mrs. Moses holds 571 shares of the common stock of the par value of \$57,100, and 350 shares of the preferred stock of the par value of \$35,000.

After reciting the several bond issues the bill says:

That upwards of five years last past, the Trenton Watch Co. has been unable to pay the coupons upon its mortgage bonds as they became due; and the complainant is the owner of unpaid coupons to approximately the amount of \$34,517.50; and that in addition to the money so advanced she has become liable as endorser upon notes and bills of exchange of the company to the amount of \$161,200.

In addition to the above liability, the company has outstanding business paper in the hands of persons from whom they have purchased materials to the amount of \$28,518.20. That there is due and owing by the company on accounts about \$14,301.17 for which no notes have been given.

The assets of the company consist of the real estate and personal property, which is covered by the mortgage given by the company to secure the bonds issued, and which are outstanding to the amount of \$200,000, and also watches in process of manufacture.

There are about 100 stockholders, and the company employs about 400 hands, about half of them girls, and for many years has paid out \$150,000 annually in wages.

Chamberlain & Son, Salem, Mass., Make a General Assignment Under State Laws.

SALEM, Mass., Jan. 2.—Chamberlain & Son, 266½ Essex St., have made a general assignment under the State laws to John M. Reymond, of Salem. No schedules have been filed and no statement of the assets and liabilities has been made public, though it is said the principal assets consist of stock worth about \$3,500. Under the law the assignment is not effective unless consented to by creditors, and as it is an act of bankruptcy the creditors will have the option of either consenting to the assignment or having the concern adjudicated a bankrupt under the United States Federal laws.

The partnership conducting the firm of Chamberlain & Son consists of Mrs. Benjamin M. Chamberlain, the widow of the founder of the concern, and her son, Benjamin H. Chamberlain. The business was established by the late Mr. Chamberlain many years ago, and the son was admitted as a partner in 1872; since the elder Chamberlain died in January, 1892, his widow and son continued it under the old style. Their principal merchandise creditors are in New York and Boston.

Death of P. Ewell.

WILSON, N. C., Jan. 2.—The remains of P. Ewell, an old and well known jeweler of this section, who died Thursday morning, after an illness of two days, were taken to Williamstown, the same afternoon, where the funeral services were held later.

Mr. Ewell was a prominent and active citizen in the community. He was 60 years of age, and started in the jewelry business about a quarter of a century ago. For many years he conducted a business at Elizabeth City, and later was at Williamstown and Warrington. Late in the 90's he moved to Louisburg, and a few years ago moved to this town. He was a practical man noted as a skillful repairer and was well regarded in the trade.

H. V. Barrow, formerly of Wadley, Ga., has opened a store at Hagan, Ga.

"GEMFINDER" takes a melancholy pleasure in referring the trade to his advertisement of April 25th last, in the "Jewelers' Circular." Unfortunately, his prophecy has been fulfilled. Not only have Precious Stones advanced, but the end has not yet been reached. Sapphires have gone up at least 25 per cent. in the last six months, and they will go still higher.

"Gemfinder" again warns prospective buyers not to delay. All kinds of Precious Stones are scarce and prices on some may become prohibitive.

Member of 24-Karat Club Hold Annual Meeting and Elect Officers.

Members of the 24-Karat Club met Thursday, Dec. 27, in annual session at the Astor House, New York, President Leo Wormser presiding. There was a large attendance. After the transaction of routine business, the following officers were elected to serve during the year 1906:

President, John B. Wood, of Chas. F. Wood & Co.; vice-president, Harry C. Larter, of Larter & Son; secretary, Frank C. Beckwith, of Jos. Fahys & Co.; treasurer, Willard H. Wheeler, of Hayden W. Wheeler & Co.; board of directors, Charles F. Brinck, chairman; David C. Townsend, Leo Wormser, David Kaiser and Col. John L. Shepherd.

Reports of officers who served during the year now ended were read and showed that the club's affairs are in a satisfactory and

JOHN B. WOOD, PRESIDENT-ELECT.

prosperous condition, Willard H. Wheeler, the treasurer, reported a satisfactory balance on hand.

The question of changing the club's name came up for informal discussion. It was said that while the present name has answered quite well up to this time and conveys to people in the trade quite an accurate idea of what the organization is, yet because of the growth of the organization a broader term has become advisable. It was the unanimous sense of the members present that the name should be changed to the Jewelers' 24-Karat Club of New York City. The expectation is that definite action will be taken at a meeting to be held probably in February.

The committee on the annual dinner, which is to be given in Delmonico's Friday evening, Jan. 24, reported progress. All the seats have been taken, as the space is limited. The committee expressed the opinion that the coming dinner will be the most handsome and successful event that has ever been given by the organization. The list of speakers, not yet announced, is to include men of prominence in State and National affairs.

The following members have been selected to act as a reception committee:

Louis P. White, Percy H. Savory, S. C. Bigney, Adolph Schwob, S. H. Levy, A. K.

Sloan, David C. Townsend, Chas. R. Jury, Stephen Avery, Jas. R. Gleason, Jno. W. Sherwood, Benj. F. Griscom, Alfred Krower, F. C. Beckwith, Willard H. Wheeler, Win. J. Rosenfeld, Albert L. Stearns and Chas. B. Churchill.

A fire broke out early one morning last week in the store of G. Kern, Gay St., Knoxville, Tenn., but was extinguished before doing any serious damage.

Pittsburg Jeweler Goes Away and Sheriff Takes Possession of His Store.

PITTSBURG, Pa., Jan. 3.—J. M. Gottfursch, whose place of business is at 3545 Butler St., is missing, and so is a large part of his jewelry stock. It is alleged that he left behind his wife and child. The Sheriff has taken possession of what remains in the store on an execution issued at the instigation of the Pittsburg Jewelry Co., one of the creditors. Where Gottfursch has gone is not known, but his creditors are exceedingly anxious to locate him.

The creditors held a meeting Monday in the office of Abraham Seder, an attorney, in the Farmers' Bank building, to decide on some plan of action. Mr. Seder was assigned to secure a personal interview with Mrs. Gottfursch, and when seen by THE CIRCULAR-WEEKLY correspondent, he said:

"It appears that Gottfursch and his wife had some domestic trouble. In any event she alleges that he had been abusing her and Gottfursch left. Where he is, of course, neither she nor we know. The Pittsburg Jewelry Co. had an execution issued last Monday, and the Sheriff is in charge of the place. I do not know when the sale will take place."

It is very difficult to secure any detailed information concerning Gottfursch's affairs, because those who know anything about the case do not care to tell all the facts, hoping that Gottfursch will turn up and settle with his creditors. Just what his stock was valued at is not known, but it is stated that most of his creditors are Pittsburg houses. Gottfursch kept a very modest store and a fair stock of goods. He is well known to all of the local trade with whom he has had dealings for some time.

Gottfursch was at one time employed by A. E. Seidle, Penn Ave., East End, Pittsburg, and has been highly regarded in this city. If he can be located an effort will be made to secure the missing stock. Some of the creditors are said to be inclined to wait for a few days to see if Gottfursch will turn up before beginning any proceedings.

Death of Ernest F. Keller.

Ernest F. Keller, of Keller, Becker & Co., 53 Maiden Lane, importers of nickel manufactures and novelties, died Dec. 30 at his home, 461 St. John's Pl., Brooklyn.

Mr. Keller was born in Oberstein, Germany, 45 years ago, and finished his early education in the high school of his native town. About 18 years ago he came to the United States, and had since then been active in the jewelry trade. For 15 years of this time he was connected with Albert Lorsch & Co., holding a position of trust and confidence in the office. Within this time he became a silent partner in the firm of Becker & Co., and in order to give his active attention to this business he resigned in July of last year his position with Albert Lorsch & Co. The name of his firm was then changed to Keller, Becker & Co., under which it has continued.

The funeral took place Wednesday last in St. Theresa's Church, where solemn high mass was celebrated. The large attendance of friends, including many people in the trade, showed the high regard in which Mr. Keller was held. Interment was in Holy Cross Cemetery.

Thief Fastens Door of Tonopah, Nev., Jewelry Store, Breaks Window and Escapes With Valuable Jewelry.

TONOPAH, Nev., Jan. 2.—One of the most daring robberies that has occurred in the jewelry trade of this State took place Monday night at the store of George E. Blakeslee, the robber getting away with jewelry valued at many thousands of dollars.

While the store was still open for business the thief, who is believed to be an expert crook, suddenly put a broomstick through the outside handle of the door so that it could not be opened from the inside and then with a hammer wrapped in paper smashed the show window in which a fine selection of diamonds was displayed. He quickly put his arm through the hole in the window, pulled out the tray, jumped a fence and disappeared before the occupants of the store could interfere. Owing to the fact that the door was locked pursuit was impossible until too late.

Mr. Blakeslee, the victim of the robber, also conducts a store in Goldfield, in which town he is a partner in the firm of Blakeslee & Lord.

The list of the stolen jewelry as given out by Mr. Blakeslee includes 12 rings described as follows: Three stone men's ring fancy carved Roman, total weight of stones $3\frac{1}{2} + 1/16$ carat, stone in center slightly larger than end ones; single stone men's English pattern, weight of stone $1\frac{1}{2}$ carat; three stone ladies' circlet, fancy canary diamond center, weighing $1\frac{1}{2} + 1/64$ carat, white stone on each side, weight of two, $1\frac{7}{8}$; single stone men's fancy hand carved mounting, nude female figures entwined with snakes; single stone, Tiffany mounting, blue white stone $2\frac{3}{4} + 1/16$ carat, single stone, wire mounting, white and perfect stone, $2\frac{3}{4} + 1/16$ carat; two stone, Tiffany mounting, set diagonal, weight of the two stones, 2 carat; single stone, Tiffany mounting, weight $1\frac{1}{4}$ carat; single stone, Tiffany mounting, 18 carat, weight $\frac{5}{8}$ carat; single stone, wire mounting, weight $1\frac{3}{8} + 1/16$ carat; single stone men's, four-prong tooth mounting, weight $1\frac{3}{8}$ carat; single stone, wire mounting, small stone, $\frac{3}{8}$ carat.

Cracksmen Enter Mobile Jewelry Store and Get Away with Stock Worth \$10,000.

MOBILE, Ala., Jan. 2.—The police of this city are working hard endeavoring to discover the perpetrators of the largest and most important robbery that has occurred in this city for many years. The victims were the proprietors of the T. F. Sandoz Jewelry Co., the window of whose store on one of the leading business streets of this city was smashed Dec. 30, the establishment entered and about \$10,000 worth of jewelry carried away.

The robbers broke into the safe and looted the window and show cases. The methods employed cause the police to believe that the cracksmen were experts who had come to the city for this purpose.

One of the clues which the detectives are working on at the present time was given by a young woman who works in a restaurant opposite the store, and who says that she saw men in the Sandoz establish-

ment about 2 o'clock Sunday afternoon. A watchman claims that the safe doors were shut and apparently all right early Sunday morning, and these facts convince the police that the robbers worked during the day.

The T. F. Sandoz Jewelry Co. carried an insurance of \$5,000 against burglary, but was not a member of the Jewelers Security Alliance.

Customs Cases Involving Jewelry Duty Nearly All Decided.

Of the 10,000 customs cases in which the Board of United States General Appraisers was called upon to pass upon millinery, dress and hair ornaments, distinguishing jewelry dutiable at 60 per cent. from manufactures of glass, paste or metal, all except 1,000, have been decided. General Appraiser Sharretts said yesterday that the Board is pushing through the remainder of the cases as expeditiously as possible. The principles, he said, are now well defined, but in each case it is necessary to hear testimony and examine samples before deciding on the classification. On new importations the collector of the port classifies in accordance with the Board's decisions, which have been sustained by the courts, so that no considerable number of new protests concerning these articles is to be expected.

In deciding whether or not a particular article comes under the head of jewelry, Mr. Sharretts said the Board takes into consideration both the materials used in its construction and the degree of ornamentation. Generally speaking, if the article is made of precious metal, or if it is of an ornate character, it is declared to be jewelry. Two articles that are identical as to shape and intended use, but one of which is made of gold and the other of a cheap metal, will be differently classified, the former as jewelry and the latter as a manufacture. Should the base metal have elaborate and costly ornamentation it may be placed in the jewelry class.

Death of Fayette Gould.

Fayette Gould, who for many years was a jewelry and watchmaker at Huntington, L. I., having the only establishment of the kind in that part of Long Island, died Dec. 31 at the home of his son Edward E. Gould, 238 State St., Flushing, N. Y. Death followed an attack of pneumonia. Since Mr. Gould retired several years ago he had made his home with his son.

Besides being a jeweler Mr. Gould had ability as a musician, and his mechanical skill was shown in the building of several pipe organs. He was a talented photographer, and had one of the first photographic galleries opened in his section. In the early '50's he assisted in organizing the old Huntington fire department. In 1865 he was the postmaster of the town. He was a charter member of the Jephtha lodge, F. & A. M.

His widow and one son, Edward E., are the only immediate relatives surviving. The funeral took place Wednesday of last week from the Central Presbyterian Church, Huntington, and the interment was with Masonic honors in the Rural Cemetery of that town.

Death of James H. Gerry.

James Henry Gerry, widely known as a clockmaker and inventor, who was connected at various times with a number of the most important clock and watch companies of the country, died on the last Sunday of the closing year at his home, 36 Hale Ave., Brooklyn, of oedema of the lungs. He was perhaps best known as the superintendent of the Self Winding Clock Co., Brooklyn, a position which he filled for 15 years prior to his retirement about three years ago. He invented the self-winding clock made by this company, also a device for gravity escapements, an astronomical clock, a programme clock used in high schools, and other time-pieces.

Mr. Gerry was born Feb. 3, 1829, at Lowell, Mass., coming of an old New Eng-

THE LATE JAMES H. GERRY.

land family. He was successively connected with the factories of several watch companies, occupying responsible positions. A natural aptitude for mechanics early asserted itself, and his ability was recognized. His inventive mind led him to suggest changes in the method of manufacture, some of which have been adopted and used up to this time. In the early '80's he established a factory at Elgin, Ill., and began to make clocks on his own account. A disastrous fire occurred, and he lost all that he had put into the business. After that he came east, about 20 years ago, and had lived in Brooklyn since.

He was a Freemason and an Odd Fellow, and was for many years a member of the Engineers' Club, of Manhattan. Since residing in Brooklyn he had attended the Tompkins Avenue Presbyterian Church. He is survived by his widow, Betsey Ann Murray, a brother, Edward P. Gerry, of Elgin, Ill., and three sons, Albert E., Brooklyn; James C., Boston, Mass., and Edward M., Cincinnati, O.; also by one granddaughter and four grandsons.

The funeral took place Jan. 1 at his late residence, and the services, conducted by the Rev. Dr. Marsland, were largely attended. The interment was in Nashua, N. H.

Fire on Christmas Eve in the workshop in the store of the Chinn-Beretta Optical Co., Oakland Cal., did some damage, and for a time threatened the entire establishment. It was, however, extinguished by the employes before the arrival of the firemen.

SPECIAL ATTENTION GIVEN TO RECUTTING and REPAIRING IN OUR OWN FACTORY

Developments in the Bankruptcy Proceedings Against W. K. Austin, Port Huron, Mich.

Creditors of W. K. Austin, Port Huron, Mich., were notified last week in a letter sent out by the Jewelers Board of Trade, New York, of recent developments. John H. Raven, the auctioneer to whom the bankrupt shipped his goods, at Holland, Mich., has been present at two hearings held in bankruptcy. The auctioneer's inventory of the stock showed a total valuation of \$2,381, this being exclusive of photographic supplies and some other stock probably costing \$150. The auctioneer said that the stock was in poor shape, and that much of it needs plating and polishing before it will have a new appearance. An order was issued permitting the trustees in bankruptcy to accept from the auctioneer \$1,311 in composition of the claim of the estate against him, this being the amount which Mr. Raven offered in payment for the stock. It was stipulated that this compromise related only to the goods mentioned in the inventory.

A discrepancy is noted in the statements made by Mr. Austin and Mr. Raven. The jeweler testified in his examination that he gave a paper of diamonds to the auctioneer and Mr. Raven testified that he never saw a paper of diamonds or of any other unmounted stones belonging to Austin. The auctioneer said he sold for cash goods amounting in value to \$1,600 or \$1,800, while Austin claims that the amount was only \$1,000. The book in which the record of these sales was placed was lost by Austin. It is further said that everything which could throw light on the quantity of goods in the store was lost.

There was a fire about 18 months ago, and at that time the adjusters made an inventory, which has also been lost.

Assets and Liabilities of Tessie Horowitz as Shown by Bankruptcy Schedules.

Schedules in bankruptcy of Tessie Horowitz, who formerly conducted a jewelry shop at 370 Bowery, New York, were filed Wednesday last, and show liabilities of \$7,088.02 and nominal assets of \$2,640. The assets include stock in trade, \$2,000; machinery, tools, etc., \$600; cash in the German Exchange Bank, \$40.

Among the creditors are: Louis Berenson, \$476; Simon Spiro, \$498; M. Halpern & Co., \$142; A. Roseman, \$681.56; Nathan A. Sachs, \$305; Isaac Wasserman, \$100; F. Keller, \$120; M. Trames, \$106; Wolfson, \$461; A. Berger, \$408; Joseph Stern & Co., \$116; C. G. Rochat, \$224; Edw. K. Tryon & Co., \$123; Schoverling, Daly & Co., \$576; Spiro & Hirsch, \$671; J. H. Law & Co., \$183; Chas. J. Godfrey Co., \$207; L. Shapiro, \$628; Barnet Peisrm, \$100; the H. & C. Folsom Co., \$105.

Beverly R. Robinson was appointed receiver of the assets. Marcus Helland is attorney for the receiver.

James E. Swarthout, of James E. Swarthout & Co., Elmira, N. Y., last week denied a rumor to the effect that the firm would vacate the present store in the Rathbone Hotel building to allow the quarters to be added to the hotel lobby. Mr. Swarthout said that his lease on the store will not expire until a year from next July.

Man Arrested for Attempting to Swindle Paterson, N. J., Jeweler, Held by the Police.

Eugene Lang, who was arrested at Paterson, N. J., on the charge of passing worthless checks, has been detained in that city pending an investigation. His photograph was taken by the detective bureau, and is presented herewith.

The young man gave his age as 20 years, is five feet eight inches high, weighs 153 pounds, has dark hair and hazel eyes. There is a small scar on his right eyebrow. He gave his occupation as a student.

The circumstances under which Lang was placed under arrest were detailed in last week's issue. The arrest was made at H. Botwick's store, 157 River St., where the

Shepardson, \$11; Oppenheimer Bros. & Veith, \$1,595; Stern Bros. & Co., \$5,849; Eisenstadt Mfg. Co., \$2,549; L. Bauman Jewelry Co., \$1,699; J. Bassett Co., \$331; Louis Strasburger's Son & Co., \$5,588; A. H. Bliss & Co., \$21; Eckhardt & Co., \$25; Geneva Optical Co., \$31.

Trenton Police Believe They Have Captured a Pennyweight Thief Who Has Robbed Many Jewelers.

TRENTON, N. J., Jan. 2.—Trenton police believe that they have under arrest a man who makes a practice of stealing valuable jewelry by substituting imitations. The man is George F. Fresfeiden, or Fessenden, and his name is also given as Edward Whalen. He is about 40 years of age, and says that he came from Kansas City, Mo. A

James H. Conner, Lynn, Mass., Makes an Assignment.

LYNN, Mass., Jan. 2.—James H. Conner, a jeweler, who conducted a store at 81 Pearl St., made an assignment under State laws for the benefit of his creditors to E. Augustus Mackintire, of Salem. According to the statement made by the assignee the liabilities are estimated at about \$15,000. Mr. Conner says that the changes in the jewelry trade conditions recently largely contributed to the causes of the assignment. A meeting of his creditors has been called for Monday next to consider what disposition should be made of the business.

The business conducted by Mr. Conner was established in 1848, and was run for many years by George Howe, who admitted Mr. Conner into partnership in 1874. Mr. Howe died in 1884, and the following year Mr. Conner bought out the interest of his estate and conducted the establishment alone. He has been held in high regard by the business community, and it is generally hoped here that an arrangement may soon be consummated by which he will be able to continue.

Death of Edward D. Spangle.

ROCHESTER, N. Y., Jan. 5.—Edward D. Spangle, for over 25 years in the jewelry business at Canandaigua, died suddenly at his home in that village on Jan. 1 of apoplexy. He left a widow, a daughter, Miss Helen Spangle, two brothers and two sisters.

Mr. Spangle had been in feeble physical condition for some years, but of late seemed in apparent good health. Up to the very last he conducted his jewelry store and aided in handling a large holiday trade. His death was very sudden. As he arose and was dressing himself the family heard him fall, and, going to his room, found him beyond human aid.

Deceased was born Feb. 5, 1857, at Seneca Castle, and was the son of Z. Spangle, a well-known jeweler, who established the business many years ago. E. D. Spangle learned the trade with his father, and was finally admitted as a partner under the style of Z. Spangle & Son. Since the death of the elder Mr. Spangle in November, 1900, deceased has carried on the business alone.

Death of Robert Tetley.

FARMINGTON, Mo., Jan. 6.—Robert Tetley, one of the pioneer jewelers of Missouri, died at his home here, Sunday afternoon. Mr. Tetley, who was also well known in St. Louis, came from England when quite young, and first settled in Massachusetts, but later removed to this place. Since 1868 he has been continuously engaged in business here, having succeeded a Mr. Smith, formerly of Granby, Mo. Mr. Tetley, who conducted a prosperous business, was for many years prominent in the development of the mineral wealth of this county.

The deceased is survived by a widow and six children, all of whom reside in this county, a brother who lives in England, another brother who lives at Bonne Terre, Mo., and two sisters who live in Massachusetts. He was a member of the I. O. O. F. and Masons. The funeral will take place at the Presbyterian Church, Tuesday afternoon.

EUGENE LANG, UNDER ARREST AT PATERSON, N. J.

prisoner was getting a watch and chain. He had a short time before tried to get a chain at the store of Mr. Botwick's brother-in-law, Wm. Rubin, at 17 Main St. Mr. Rubin was not willing, however, to accept a check offered in payment.

According to the police the prisoner confessed that he obtained on Christmas Eve a watch valued at \$25 from Sigmund Mestel, 40 Montgomery St., Jersey City, giving in return one of the worthless checks. The prisoner claims that his father is a wholesale liquor dealer and that his home is in Manchester, Va.

Developments in the Bankruptcy of J. F. Daily & Co., Chicago.

CHICAGO, Jan. 2.—The sale by order of court of the J. F. Daily & Co. bankrupt stock, held Dec. 28, realized \$4,500 in cash for stock inventoried at \$6,500. The purchaser was the Bauman Loan Co. There still remains the equity in \$13,000 of stock hypothecated to the Bauman Loan Co. for \$8,000. It has not been decided whether to redeem the stock or to sell the equity.

The following are the principal creditors among the jewelry trade: Gus Guam, \$60; Victor Jones, \$29; Quaker City Glass Co., \$91; Hamilton & Hamilton, Jr., \$63; Strobell & Crone, \$169; Silbermann, Kohn & Walenstein, \$79; C. Ray Randall & Co., \$122; Link & Angell, \$255; D. Wilcox & Co., \$133; Larter & Sons, \$291; F. & F. Felger, \$86; C. P. Goldsmith & Co., \$23; F. L.

specific charge against him is stealing a diamond pin valued at \$130 from the store of Thomas Trapp, 9 E. State St., Dec. 24.

The jeweler says that Fresfeiden asked to see diamond brooches. After looking over a number the visitor went away, saying that he would call again to make a purchase. A short time afterward Mr. Trapp missed a brooch and saw that a paste article had been substituted. Later in the day, it is said, Fresfeiden called at the jewelry store of A. F. Williams, 23 E. State St., and asked George E. Meyer, a clerk, to show him some diamonds. Another employe in the store whispered to the clerk that Fresfeiden much resembled a man who stole a pin from the store three years before.

About the same time Mr. Trapp entered and demanded that Fresfeiden give up the brooch. The man denied having any stolen jewelry, it is said, but he was searched. The brooch was found in his pocket, but he said that he did not know it was there. Mr. Trapp then handed him over to the police. At the police station the man was searched, and a number of pieces of jewelry were found in his possession.

Fresfeiden was about to be released on bail when a new charge against him came from Boston, Mass., and an application for his extradition was made. He was wanted at Boston, it is said, for stealing a diamond pin valued at \$85, and after giving bail left that city before his trial. It is likely that he will be taken back there.

Morris B. Davidson, Pittsburg, Pa., Goes Into Bankruptcy.

PITTSBURG, Pa., Jan. 5.—Morris B. Davidson, doing business at 2809 Penn Ave., has filed a voluntary petition in the United States District Court in this city. Up until this morning no record of the case had been made so far as could be ascertained. The court has named Emanuel Grafner, of Grainger Bros., receiver.

The schedules of Mr. Davidson, filed with his petition in bankruptcy, give his liabilities as \$4,221.48 and assets \$1,818.80.

The following are among the large creditors: I. Alberts, \$332; Biggard & Co., \$258; C. Bruno & Son, \$96; Oliver Ditson & Co., \$135; S. Davis & Co., \$131; Empire Jewelry Co., Pittsburg, \$71; Empire Jewelry Co., New York, \$83; L. Edelstein, \$105; Frielman Bros., \$147; H. M. Friedman, \$78; Grafner Bros., \$111; Robert C. Kretschmar, \$110; Korones Bros., \$108; Laubheim Bros., \$809, of which amount \$602 is secured by promissory notes; Fred. C. Meyer & Co., \$98; Pittsburg Jewelry Co., \$357; S. Rubin, \$61; I. Robbins & Son, \$118; Union Umbrella Mfg. Co., \$84; S. & B. C. Weinhaus & Co., \$181.

Davidson's store is situated at 2809 and 2811 Penn Ave. He gives as assets furniture, etc., worth \$100, and book accounts amounting to \$234.55. He has \$14.25 to his credit in the Pennsylvania National Bank of Pittsburg. He asserts in his petition that \$300 can be realized from the sale of his household effects in Webster Ave. He values his stock in trade at \$1,500.

Accompanying his petition in voluntary bankruptcy was a petition signed by S. Davis & Co., Empire Jewelry Co., Grafner Bros., Pittsburg Jewelry Co., Biggard & Co., Landaw Bros and others asking for the appointment of a receiver, declaring that it was for the best interests of all concerned that this action be taken. Emanuel Grafner, of Grafner Bros., was then appointed.

Thief Holds Up Jeweler at Muskegon, Mich., and Escapes With a Tray of Diamond Jewelry.

MUSKEGON, Mich., Jan. 5.—The police in this city are looking for a bold robber, who last night walked into the store of James V. Wallace, 11 S. Terrace St., and after looking at some diamond jewelry suddenly stuck a revolver in the face of the jeweler, telling him to hold up his hands. Grabbing a tray of jewelry the thief ran out the door and escaped.

The police were quickly notified, but have not yet arrested the culprit. The stolen property is estimated in reports given out to the public to be valued at \$3,000.

Ohio Jeweler Commits Suicide by Drinking Wood Alcohol.

DELAWARE, O., Jan. 7.—Word has just been received here that Benjamin F. Likes, a jeweler at Galena, Delaware County, committed suicide this morning by swallowing the contents of a bottle of wood alcohol. He notified his wife of what he had done and medical aid was immediately summoned, but he died before an antidote could be administered.

It is reported that Mr. Likes had been drinking heavily lately and had become despondent and that this was, in part at least,

the cause of his act. Likes has been in business here many years, and had previously conducted a small repair shop at Louisville. He was about 58 years old.

Death of J. Ford Smith.

SALEM, Jan. 5.—J. Ford Smith, the oldest watchmaker in eastern Massachusetts, died at his home, 168 Lafayette St., after a long illness, to-night.

Mr. Smith was 90 years of age. For more than 50 years he was in the jewelry business in this city. He was the first scholar in the Bethel Sunday school, which was organized in 1823. For nearly 60 years he was a regular attendant of the Bethel services, and served as a teacher and superintendent of the Sunday school for many years.

A son, granddaughter and grandchildren survive him.

Death of Frank Cooke.

FORT WILLIAM, Ont., Jan. 2.—Frank Cooke, a well-known jeweler of this place, was recently found dead in the rear of his store. Constables had been attracted to the scene by the barking of the deceased's dogs, which jealously guarded his body.

Mr. Cooke was about 38 years of age, and for several years had been associated in business with his uncle, A. M. Cooke, who conducted a store at that place, and also one at Port Arthur, the deceased having succeeded to his uncle's business.

Brotherhood of Traveling Jewelers Hold Annual Convention and Elect Officers.

Nearly all of the 200 members of the Brotherhood of Traveling Jewelers were present at the annual meeting held Saturday of last week in the Astor House, New York. As is usual at meetings of this fraternity the utmost enthusiasm and harmony was shown.

The proceedings of the last annual meeting were read, after which President S. B. Kent delivered his annual address. He spoke of the association's work having been conducted satisfactorily in the last year by the various officers and committees. The year having been one of general prosperity, there were no calls upon the treasury for financial assistance, but in cases of illness of members committees representing the organization called to express sympathy and

E. H. ECKFELDT, PRESIDENT-ELECT.

flowers and fruit were sent, indicative of the good will of the membership. There were three deaths during the year, George Varrallman, John C. McClymont and Albert Stevens. The organization was represented at each of the funerals.

There was only one assessment during the year in addition to dues. The membership continues up to the limit, which has been set at 200.

Harry C. Larter, as chairman of the executive committee, submitted a report showing that his committee had responded with fidelity in all calls.

The election of officers for the following year resulted in the choice of the following: E. H. Eckfeldt, president; A. J. Sherrard, vice-president; Harry Higham, secretary and treasurer; W. C. Barry and N. B. Eltinge, executive committee; Victor Bergesser, C. P. Young, Herman Schwartz and H. A. Bliss, nominating committee.

Besides the new members of the executive committee two others hold over, Frank T. Sloan and Robert B. Steele. The president is a member ex-officio. The committee elects its own chairman.

The new president is a member of the firm of Eckfeldt & Ackley, manufacturers at 45 Lawrence St., Newark, N. J. Mr. Higham, the new secretary and treasurer, is with Alling & Co., 180 Broadway, New York.

GORHAM SILVER

AN OPPORTUNE SUGGESTION

¶ Immediately following the advent of the New Year The Gorham Company's staff of Traveling Salesmen started upon their periodical round of visits to the Jewelry Trade of the United States.

¶ This fact suggests the advisability of every jeweler hastening to pass in review his present stock, so that he may discover its shortcomings and deficiencies.

¶ It is essential that all broken lines be filled in and the stock in general so replenished as to adequately prepare for the early weddings and Spring business.

DURING 1906, THE JEWELERS' CIRCULAR-WEEKLY published 6,206 pages, an average of 119.2 pages each week. This is an increase of 948 pages over 1905. In 1906, 2,206 pages consisted of news, editorial discussions, technical information, answers on business topics, and art notes and illustrations, which keep the jeweler thoroughly and promptly informed regarding his trade.

Simple Test for Imitation Gems. It is with distinct pleasure that THE CIRCULAR - WEEKLY announces the publication next week of one of the most valuable contributions to the series of articles that we have been publishing on the subject of imitations of precious stones. This will be an article dealing with the experiments made by M. D. Rothschild, a widely known precious stone expert, who has succeeded in discovering a simple and accurate way by which a jeweler may clearly detect all glass imitations which are offered to him, whether under the name of imitation, genuine, reconstructed or scientific gems.

While it has always been a simple matter to determine the character of imitations by means of the dichroscope, specific gravity tests, etc., not all jewelers are in a position to apply such tests, and, therefore, the announcement of a simple method which is at the hands of every member of the trade will no doubt be heralded as a boon and almost a blessing. This will be especially valuable to the trade in detecting a vast amount of imitation emeralds and sapphires offered under the name of "reconstructed," but which are made of extraordinary hard glass that does not respond to the usual tests.

For the work done and the information he has given to the trade in this regard, Mr. Rothschild is entitled to the thanks of not only his brother jewelers, but also the public as well, and there is little doubt but that the simple test which he offers will prevent the perpetration of an immense amount of fraud.

Cuban Court Upholds Foreign Patents. MERCHANTS in this country will be interested in the fact that the Supreme Court of Cuba has to some extent righted a wrong from which they have suffered for some years past. This is in regard to the theft of American inventions, properly patented in the United States, which are cribbed or stolen and patented in Cuba by the thief, thus barring the legitimate owner from introducing his goods into the island. The decisions of the lower courts heretofore have always been in favor of the Cuban who applied for the patent, but a recent appeal of a case to the Supreme Court resulted in favor of the legitimate owner of the patent

who had lost in the courts below. The decision confirms the right of the owner of the foreign patent to market his product in Cuba as he would in any other civilized country.

It is not known yet whether this decision of the Supreme Court will have any effect on a similar cause for complaint from which American manufacturers have generally suffered, namely, the registration of American trade-marks by natives of Cuba in a way that prevents the real owners of the marks from using them in the island. This has resulted in a considerable amount of blackmail to which American manufacturers have been forced to submit if they wished to do business in the Pearl of the Antilles. Owing to the fact that the principle involved in the trade-mark situation is similar to that in the patent case, it is believed that the Supreme Court would be likely to decide a test case in favor of the original and legitimate owner of a trade-mark.

Facts on the Diamond Cutting Industry. It is not a pleasant task to criticise official reports, particularly those of the present Department of Commerce and Labor, many of which prove so valuable to this and other industries, but the article on the importations of diamonds published in one of the issues of the *Daily Consular Reports*, recently, contains some conclusions so incorrect that it would be unjust and unfair to the trade, as well as misleading to future statisticians, to let them go by without comment.

After giving the statistics of the importations of diamonds for the fiscal year ending June 30, showing the total amount of cut and uncut gems brought in, as well as the countries from which they were exported, the compiler of the reports states that the duty of 10 per cent. placed on cut stones was undoubtedly done to build up the diamond cutting industry. On the contrary, it is a matter of common knowledge that the present duty of 10 per cent., which has proved margin enough to retain the industry here, is a reduction of 15 per cent. from the previous tariff law, which was cut purely and simply to stop the wholesale smuggling that was going on under the 25 per cent. duty and at the same time give revenue to the United States that it would never have received under the higher tariff.

Quoting some old statistics of 1884 of the

Amsterdam diamond cutting industry, and saying nothing later was at hand, the statistician who compiled this new report figures as there were 4,700 workers in the diamond industry of Amsterdam at that time that there were 9,400 of these highly paid artisans altogether. It would not have been difficult to have given more up-to-date figures for both at home and abroad, and it would have been worth some trouble, as the last 13 years has shown a large increase in the industry, the total to-day being about 15,000, of which 450 cleavers, cutters, polishers and assistants are employed in the United States.

After giving the statistics of the importations of rough and uncut diamonds from 1897 to 1906, and showing that the uncut diamonds had increased from \$17,865 in the former year to \$10,579,700 in the last year, the author of the report claims that this shows that the diamond working industry of the United States had its real beginning in 1898 and that it has steadily increased since that year. Had he taken the trouble to look at the statistics prior to 1897 he would have found at a glance enough to completely refute this conclusion, for he would have seen that the importations of rough had gone up as far as \$450,000 in 1882 and decreasing to \$250,000 in 1889 had jumped to more than \$513,000 in 1890, more than \$804,000 in 1891 and finally exceeded the million mark in 1892; the very small showing of 1897 was evidently due to the increase in the amount of smuggled goods and also to the fact that the rough diamonds were about to be put on the free list under the Dingley Act, and the importers were holding off purchases to take advantage of the new rate. It was the increase of the rate of duty to 25 per cent. on cut stones and 10 per cent. on the rough under the Tariff Act of 1894 that not only caused many American firms to get into the cutting business, but also resulted in the establishment of branches in this country by a large number of the most prominent cutting concerns of Antwerp and Amsterdam. After the industry had been established, though the duty was reduced to the old rate of 10 per cent., which had existed for many years prior to 1894, many cutters found it to their advantage to continue the shops in this country, and new ones have been started from time to time.

The concluding statement in the report *i. e.*, "The question of fostering American diamond working industries becomes, therefore, a matter of prime importance," is one to which all public spirited men will agree and is one which would follow just as clearly from a correct statement of the facts as from the author's incorrect inferences. The trouble with the department's report seems to be that the conclusions are drawn from incomplete figures and no attempt had been made to find out any facts about the actual condition of the industry from other sources than the statistics directly at hand.

M. Harris, Wilmington, Del., has purchased a parcel of real estate at 509 Market St., that city, for \$32,000. Mr. Harris contemplates moving in the near future to 71 Market St., which site he purchased a few years ago from Joseph Kern, a retail jeweler.

New York Notes.

W. H. Kimma, New York manager of the Elgin National Watch Co., has returned from a western trip.

Le Weber, formerly with W. Green & Co., is now associated with Henry Fein & Co., 49 Maiden Lane.

F. L. Cahn has been engaged by Dattelbaum & Friedman, 45 John St., to represent them through the west.

Joseph Rofkin, western salesman for L. Heller & Son, and Miss Anna Rubin were married, Dec. 23, in this city.

Alfred H. Smith, of Alfred H. Smith & Co., 170 Broadway, who was struck by a truck at 12d St. and Broadway, recently, is again about, attending to business.

Frank Zahn, who said that he was a silversmith, 58 years old, and lived at 391 17th St., Brooklyn, was fined \$5 Saturday of last week for insulting a woman on the street.

The Moore collection of Oriental objects left to the Metropolitan Museum of Art by a late member of Tiffany & Co. is being rearranged in Room 26, which will be reopened to the public in a few days.

Coral is now regularly classified for customs purposes as a precious stone, the decision to that effect, recently announced by the Board of the United States General Appraisers, having been accepted by the Treasury Department.

The Atlas Clock Adjuster Co. was incorporated last week to manufacture automatic clock adjusters for railway brakes and railroad supplies, with a capital of \$10,000. The incorporators are: J. H. Festig, W. H. Sauvage and R. F. Hamilton, New York.

G. F. Jordan, who was employed as a traveling salesman by H. A. Groen & Bro., 51 Maiden Lane for the past 10 years, has left that firm to start in business for himself. Mr. Jordan has not decided on a definite location, but expects to remain in this city.

The Himalaya Mining Co., dealing in precious and semi-precious stones, with mines in California, has moved its New York office and lapidary shops from 52 Nassau St. to 537 Fifth Ave., and will occupy the entire top floor of the building at that address.

Final arguments were heard, Monday of last week, in the case of E. R. Thomas, against the International Silver Co., before Vice-Chancellor Bergen, of Chancery Chambers, Jersey City. Mr. Thomas seeks to restrain certain banks from voting at corporation meetings on the stock which they hold.

Greetings from Wm. Bardell and family at the American Consulate, Bamberg, Germany, were received on New Year's Day by a number of people in the trade, who pleasantly remembered the former vice-president of the Jewelers' League. Mr. Bardell was in the business in New York for many years before he entered the consular service.

Thomas B. Booth, who for 20 years has been a city salesman for Hayden W. Wheeler & Co., and is widely known in the trade, severed his connection with the house last week in order to go to Fort Pierce, Fla., where he has purchased a

pineapple orchard and orange grove. It is his intention to make a specialty of growing pineapples.

"Black Hand" letters have recently been received by Abraham Edson, 131 Bowery, who turned the documents over to the police. The writers demanded that he place \$1,000 at the corner of the Bowery and Rivington St., threatening that if he did not do so they would steal one of his children. Italian detectives are working on the case, but no arrests have yet been made.

The Depasse Mfg. Co., which has offices and show room at 11 Maiden Lane, has moved the factory from 206 E. 19th St. to 318 E. 23d St., where much larger quarters have been leased. The new manufacturing plant has a large show room with adequate facilities for the display of the various products in deposit ware. The downtown offices and show room will remain at the present location.

C. H. Jacot, senior member of the Jacot Music Box Co., 39 Union Sq., is slowly improving from an attack of paralysis with which he was stricken while at his office, Dec. 27. Mr. Jacot, who is 68 years of age, noticed an impediment to his speech before he left his home at Stapleton, S. I., that morning. After arriving at his office his condition became more serious and he was taken home. He was confined to his room for some time, but is now able to be about the house.

Among a number of men arrested one day last week by the police in a raid at a game of "stuss," at 263 Stanton St., was one giving his name as Moses Jaeger, a jewelry salesman of 54 E. 3d St. In the same raid Jacob Fleischner was arrested, and he is also accused of stealing a diamond brooch, four diamond rings and other jewelry from Henry Goldberg, a salesman of 875 E. 138th st. Mr. Goldberg and his wife both identified Fleischner. The robbery took place in the crowd at City Hall platform of the Third Avenue elevated railroad. Fleischner was held in the Essex Market Court in \$3,000 bail.

The S. Cottle Co., 31 E. 17th St., entertained its members and friends, one night recently, at a testimonial banquet and ball, given in the German Masonic Temple, 220 E. 15th St. About 125 persons attended, and all greatly enjoyed the affair. A tempting repast was served, at the close of which there were a number of brief addresses in which employes spoke of the happy relations existing between them and the members of the company. Mr. Levinson, president of the company, and Mr. Morris, the secretary and treasurer, spoke gracefully for the company. A pleasant dramatic program was then presented and was followed by dancing.

Two young men recently entered Gustav Brown's store, 215 Atlantic Ave., Brooklyn, and offered to sell some old coins. While one of the Brown brothers was looking at the coins, the latter were dropped on the floor, as though by accident, and several rolled inside the counter. When Mr. Brown stooped to pick them up, one of the visitors, it is said, took a small clock and a piece of silverware from a case and slipped it into his pocket. Mr. Brown's brother, who was concealed in the back part of the store, saw the act and,

rushing up with his revolver, demanded the return of the articles. They were surrendered and one of the men escaped. The other, when placed under arrest, said that he was Joseph Kelley, West Philadelphia. He was held in \$500 bail for the Court of Special Sessions.

Charles A. Weber, the former diamond broker, who had his office at 320 Fifth Ave., waived examination last Wednesday in the Tombs Police Court on the charge of the larceny of a \$6,500 pearl necklace from Ludeke & Heiser, and was held for the Grand Jury. He was unable to furnish \$6,000 bail, and was sent back to the jail, where he has been confined since his arrest, about two weeks ago. Mr. Ludeke says that the necklace was given to Weber on memorandum for him to sell. Weber pawned it for \$2,000, and it was recovered by the complainant, who obtained the pawn ticket from the receiver in bankruptcy after Weber failed. It is said that Geo. W. Lyons has withdrawn a charge of the larceny of a \$600 diamond ring against Weber, after the latter made restitution.

Charged with stealing silverware in two stores in which she had been employed as a saleswoman, Nellie Flynn, 567 W. 187th St., was arrested, recently. It is said that she had another woman, who lives in Hoboken, N. J., as a confederate. The other woman, according to the charges, entered the store and bought some trifling article. As the saleswoman was about to wrap up this article, Miss Flynn hurried across, it is claimed, and asked her to include also a piece of silver which the customer was supposed to have bought, but which was really stolen. The second saleswoman had no suspicion that anything was wrong. This operation was repeated, it is said, in the two stores in which Miss Flynn was employed. In one she worked in September and October, and in the other in November and December. It is said that silverware to the value of \$500 was stolen from the two companies during that time.

Writing on real estate developments in Fifth Ave., where the "jewelry colony" is prominent, a contributor to one of the daily papers recalled the other day a prophecy made a year ago that business on the avenue would find its terminal at 47th St. He showed how closely this limit is being pressed by business, extending up to Simon Frankel's new building on the corner in which Howard & Co. and other jewelers are to have their home. The writer said that the northern movement will surpass the limit set in the former prophecy, and that from 42d to 59th Sts. Fifth Ave will be one of the best places for trade in the city. Values are said to have increased greatly in the last year. From 34th to 42d St. the large plots have been pre-empted by prominent concerns, so that it is almost impossible for new houses to obtain an entrance here. From 42d St. north owners of corners are said to be generally holding out for higher prices than even those now prevailing.

The Merchants' Association of New York announces that merchants' rates to this city will be in effect from Trunk Line Association territory, Feb. 23 to 26, inclusive, and March 16 to 19, inclusive, with

JAMES L. HAND

America's Leading Jewelry Auctioneer

14 Maiden Lane, New York

Telephone, 1624 Cortlandt

I challenge any auctioneer or pair of auctioneers to show better records of sales and better results for the jeweler.

Hundreds of recommendations from jewelers for whom I have conducted sales prove that my sales have been successful and without injury to their reputations. Beware of the SELF-ADVERTISED auctioneer who promises impossibilities and injures your future trade.

Leading Maiden Lane wholesalers recommend "HAND" because their customers' interests are safe when I sell for them.

Write me before you employ the fellow with no ability. Let me mail you my references and tell you about my new method of conducting an auction that will help you.

New York Notes.

(Continued from page 61.)

he customary 15-day return limit. The special rate will be, as usual, a fare and one-third for the round trip. A similar announcement is made as to the Central Passenger Association, the reduced rates being effective Feb. 9 to 13, inclusive, also March 2 to 5, inclusive, with a 30-day return limit.

The 30th annual meeting of the Jewelers' League is called for Tuesday evening, Jan. 2, at 8 o'clock, in Assembly Hall, 109 E. 41st St.

Moses Kahn, of L. & M. Kahn & Co., who has been abroad since April last, is convalescent after a serious illness. He is at Munich, Bavaria.

A number of factories in New York and Newark, which shut down for a few days after New Year's for necessary repairs, started up again Monday.

F. Goldsmith, of Ingomar Goldsmith & Co., sailed Saturday on the *St. Paul* for a six months' trip in Europe, during which he will visit the diamond markets.

Joseph Fuchs, living at 62 7th St., Manhattan, filed a voluntary petition in bankruptcy in the United States Court yesterday, with liabilities of \$2,203 and no assets.

Ira Barrows, of the H. F. Barrows Co., has been confined for two weeks to his home, 26 E. 51th St., by an attack of typhoid fever. The course of the disease has been mild.

H. C. Ostrander, who was with Morris Rager & Co., has taken office room with Jos. W. Adams & Co., 11 John St. as dealer in diamonds, precious stones and pearls.

The Boost Club members last week published the first issue of the *New York Booster*, a convenient four-page monthly, in which are printed notices of interest to the members.

The Gorham Mfg. Co. has given a lease for 21 years of the eight-story structure at 4 Fifth Ave., adjoining the building which occupies on the corner of 36th St., to a firm of furriers.

Japanese porcelains, jade and crystals are to be sold at an auction of art products belonging to Jirokichi Yoshii, to be conducted in the last three days of this week at the Fifth Ave. auction rooms.

Geo. W. Korper, formerly representing A. Grinberg & Sons, who has been in business for himself for some time past at Maiden Lane, has moved into more commodious quarters at 87 Nassau St.

A supposed process for making diamonds is one of the schemes, it is said, to which R. C. Flower, the mining promoter, had been giving his attention prior to his arrest the day last week in Philadelphia, Pa.

Schedules in bankruptcy of the Restimer Smith Co., manufacturer of canes and umbrella handles, at 35 Bleecker St., show liabilities of \$23,883, and actual assets \$5,250, proceeds of sales of the assets to the receiver.

In relation to the prospects of the present year, A. K. Sloan, of Sloan & Co., said yesterday that the factories are beginning the year under circumstances of the most favorable character, and he believed that the

next 12 months will be as prosperous as was the last year.

Ninety-five shares of stock of the New York Clock Co., 5 James Slip, are included among the assets of E. M. Moer's Sons, wholesale dealers in old metals, also at 5 James Slip, who filed a petition in bankruptcy Saturday of last week, with liabilities of \$122,187 and nominal assets of \$38,558.

I. Emrich & Co., 42 E. 14th St., have changed their name by mutual consent to Emrich, King & Schorsch. No change is made in the personnel of the firm, which includes I. Emrich, Abel King, Isaac and Jacob Schorsch. Mr. King sailed yesterday on the *Kaiser Wilhelm II.* for a four months' buying trip in Europe.

Louis Kaufner, who was formerly a watchmaker and jeweler, died Wednesday of last week at his home, 151 Hamberg Ave., Brooklyn. Mr. Kaufner came to this country from Germany in 1873, and he retired from business several years ago. He is survived by a widow and two sons, Theodore and Gustave. The funeral took place Saturday, the services being conducted by the Rev. Dr. J. T. Frey, of St. Mark's Lutheran Church. Interment was in the Lutheran Cemetery.

In the case of Sol. Urbach, who was a diamond broker at 49 Maiden Lane until bankruptcy proceedings were begun against him, a decision from the referee, W. K. Pendleton, is expected within a week or two. The question sent to the referee for decision is whether or not an order shall be issued directing Mr. Urbach to turn over to the trustee in bankruptcy diamonds valued at \$40,000 or the equivalent in cash, representing his stock, which the bankrupt claims to have lost on a sleeping car.

After repeated adjournments the case of Conrad Schickerling, who was president of Schickerling & Co., manufacturers at 28 W. 22d St., and who is accused of grand larceny by Gustave Edelhoff, the former president of Edelhoff Bros. & Co., has been set down for a hearing in the West Side Police Court, Jan. 9, at 3 p. m. It was said that at the time that the two corporations went into bankruptcy there would be considerable litigation as to alleged preferences and other matters, but the expected civil suits have not yet been begun.

A check which bore the name of Samuel Lenkowsky, 80 Stanton St., and has since been declared a forgery, was presented Wednesday of last week at the State Bank, Grand St., where the jeweler carries an account. The man who presented the check said that he was Joseph Dubosar, 23 years old, of 123 Second Ave. Word was sent to the jeweler, who went to the bank and declared that the signature was not his. Dubosar was held in \$1,500 bail the next day by Magistrate Moss in the Essex Market Court, the charge being forgery.

Awakened by noise of breaking glass early last Wednesday morning, Leon Mirel, who lives over his store at 185 Washington St., Brooklyn, looked out into the street and saw that a thief had smashed the show window and was trying to get articles that were inside. The thief ran when the jeweler shouted, and Patrolman Murphy gave chase. A trolley car bound for Manhattan was boarded by the fugitive. The patrolman stopped the car and arrested a youth who gave his name as George Black and said

that he lived in Manhattan. In the Adams Street Court the prisoner was held for examination.

A recent report from Shanghai says that Robert C. Castelberg, formerly of Castelberg National Jewelry Co., at Washington, D. C., who disappeared in August, 1905, is now in that city. It is said that he had been manager for Hope Bros. & Co., jewelers on the Nanking Road, but recently, according to the account, took a contract for supplying Chinese labor for the Panama Canal. Mr. Castelberg was last seen in this country at Saratoga, N. Y., where he had been selling jewelry at the races. It was said at that time that he owed in New York about \$20,000, but it is understood that this indebtedness has been fully canceled since then by his relatives.

At the Gorham Co.'s office in New York it was said that the entire plant in Montreal, Can., where the fire occurred last week, was valued at \$200,000. Of this about one-half was in stock which, according to the reports received here, was saved in the vaults. The vaults were constructed with a special view to safety against fire and proved their efficacy. The machinery and fixtures, it is understood, were quite generally ruined and the company's loss will probably exceed \$50,000, covered by insurance. The company had plans under way before the fire for moving a part of the business to another building, and this will facilitate the work of establishing a new plant without delay.

Speaking of the advance in the price of clocks, recently noted in these columns, one of the prominent manufacturers said yesterday that with the cost of materials still tending upward it is not impossible that the timepieces may be advanced again before long. While all the materials used in the construction of the works and cases cost much more than they did a year ago, he said, the reports indicate a continuing rise, especially in metals. "Even the varnish used on the cases and the benzine we use," said the manufacturer, "costs us more than it did. When machinery is renewed we have to pay much higher prices than formerly. Taking everything into consideration, the advance in clocks averaging about 10 per cent. is most moderate and does not equal the additional expenses which have been put upon us by the increasing cost of material and our labor."

Death of Levi B. Darling.

PROVIDENCE, R. I., Jan. 7.—Levi B. Darling, one of the oldest refiners of this city, died at his home Monday of last week from a complication of diseases, aided by the weakness of declining years.

Deceased was born just 80 years ago in Cumberland, R. I., and shortly after came to this city with his parents. In 1849 he formed the firm of Bliss & Darling, who began the manufacture of jewelry. Mr. Darling gained some knowledge of refining while thus employed, which led him to believe better results were obtainable than were in vogue at that time, and gave his time to a series of experiments.

In 1853 he invented a process for refining and obtained a patent therefor. From that time he gave untiring attention to refining, and in later years built up the business which was conducted under the name of the Darling Smelting & Refining Co.

Connecticut.

G. P. Ittig, Bridgeport, has assigned to the E. H. H. Smith Silver Co., Bridgeport, a new design for forks and spoons.

The stock and fixtures of the Ernst Schall Co., 941 Main St., Hartford, were disposed of at auction, last Wednesday.

The factory of the American Silver Co., Bristol, which was closed for inventory and repairs for a short time, resumed operations Jan. 2.

Joseph Lussier, with the Wilcox Silver Plate Co., Meriden, and Miss Eva Le Fleureaux, of South Meriden, were recently married.

C. B. Rogers, Meriden, celebrated his 70th birthday on Monday, of last week, with a reunion of the Rogers family in the State of Connecticut.

Clocks in the employ of Samuel W. Tasch, Danbury, enjoyed a New Year's banquet, given to them by their employer, at the Hotel Groveland.

Col. Watson J. Miller, manager of the Derby Silver Co., Derby, has the sympathy of his many friends in the trade, owing to the recent death of his wife.

On Saturday evening, Dec. 29, at Judd Hall, Wallingford, the R. Wallace & Sons Mfg. Co.'s fire department gave a banquet in honor of the concern.

W. N. Kenyon, superintendent of the International Silver Co.'s factory, at Thompsonville, has been sadly bereaved in the death of his wife, who died Jan. 3, in Norwich.

George Y. Cheney, traveling representative for the American Silver Co., Bristol, and Miss Elouise Hocumbe, also of Bristol, were recently united in marriage at the home of the bride.

William Vogel, New Britain, has been made the defendant in a suit brought against him by Michael Goodhardt, Hartford, for \$1,000 damages. The stock in Mr. Vogel's store has been attached.

Wm. L. Hough, who, until recently, had been employed in the offices of the New England Watch Co., Waterbury, left, last week, for San Francisco, Cal., where he will represent the same firm as a traveling salesman.

Thus far no clue has been obtained to the thieves who recently broke into the store of Gustave Fischer & Bro., 236 Asylum St., Hartford, and escaped with \$1,000 worth of stock, including several dozen fountain pens.

The wife of Walter Camp, Yale's athletic adviser and president of the New Haven Clock Co., New Haven, has purchased of Yale University a plot of land adjoining property recently deeded to the city for park purposes.

The H. C. Thompson Clock Co., Bristol, has completed plans for the immediate erection of a new shop to take the place of the one destroyed by fire, last November. The contract for the new structure has already been awarded.

Horace A. Roff, formerly traveling representative for the Brainard & Wilson Co., in Danbury, has resigned and taken a position with Jennings Bros. Mfg. Co., Bridgeport. His territory with the new firm will include the west, as formerly.

At a reception to be given in honor of

Governor-elect Woodruff, in Meriden, Jan. 11, by the Colonial Club, the reception committee will be Col. Wm. H. Lyon, chairman; C. B. Rogers and George M. Curtis, Meriden, and N. Burton Rogers, representative-elect of Danbury.

Among those in Meriden who appeared publicly for the building of a trolley line from Meriden to Middletown, recently, were: Chas. P. Bradley, director of the Bradley & Hubbard Mfg. Co., and Charles F. Rockwell, treasurer and general manager of the Miller Bros. Co., of the same place.

George E. Dickinson, who for many years had been employed at factory "L," International Silver Co., Wallingford, died suddenly at his home in Wallingford, last week, of apoplexy. The deceased had at one time been in the employ of Simpson, Hall, Miller & Co., for more than 30 years. He was a veteran of the Civil War.

The International Silver Co. has sold to E. H. Warner, of Hartford, the property owned by the concern in Meriden, located at 62 Market St. and 67-69 Temple St., and extending from Market St., by an elbow, to Temple St. The property is that of the Barbour Silver Co., which concern sold the site to the International Silver Co., about five years ago.

Before Vice-Chancellor Bergen, in the Chancery Chambers, Jersey City, N. J., Dec. 31, a final argument was heard in the suit of E. R. Thomas against the International Silver Co., the question at issue being whether certain banks holding stocks of the International Silver Co. as collateral or loans, had a right to vote the stock at corporate meetings. Decision was reserved.

New Orleans, La.

Philip Cleckley, watchmaker and diamond setter, has severed his connection with Otto Winterhalder, Lake Charles, and returned to New Orleans to resume employment at the store of J. Julius Weinfurter.

Friends of J. T. Kirtland and E. J. Garsia, who for many years have represented Leonard Krower, of this city, have received formal announcement that these salesmen are covering their old territory in the southern states for W. J. Johnston Co., Pittsburg, Pa.

Pursuant to the statute, the act amending the charter of the Globe Optical Co. has been published in the daily newspaper. In this amendment the concern's name is changed to the Robbert Optical Co., Henry M. Robbert being the president and F. W. Robbert the treasurer.

The stock of A. M. Hill is so very large that the auction sale, started some time ago, will go on until May 1, or later. Mr. Hill, who acts as auctioneer himself, stated to a CIRCULAR-WEEKLY correspondent, last week, that the important part of the stock had not even been reached as yet. When the sale is finally concluded a stock company, to carry on the business, will be formed, in which L. B. Sorensen and others will be interested, and Mr. Hill will doubtless be one of the large stockholders in the new concern. At the conclusion of the sale, Mr.

Hill will quit business for about six months and take a much-needed rest.

Pittsburg.

T. M. Smith, of Morgantown, and George Eckert, of Jeannette, Pa., visited Pittsburg, last week, on buying trips.

The Merchants and Manufacturers' Association gave another of its informal dinners at the Hotel Schenley, Monday night. Prominent persons made addresses.

Henry A. Barrett's condition has not improved and he is said to be a very sick man. He has been ill for more than a year and his friends are very much worried about him.

The Pittsburg police last week arrested J. E. Turner, a negro, on whom were found a lady's gold watch, a man's watch, three gold chains and three rings. He was sent to the workhouse for 60 days and in the meantime his record will be investigated.

Sol. Cerf, of Sol. Cerf & Co., left Saturday night for New York to buy Spring stock. His son, Howard A. Cerf, last week entered the Freehold Military School, at Freehold, N. J. Mr. Cerf will join Mrs. Cerf at Atlantic City this week, and after a short stay there will return to Pittsburg.

J. Alexander Hardy, of the Hardy & Hayes Co., was extensively quoted in the Pittsburg papers, last week, regarding the proposed construction of elevated railroads. Mr. Hardy was the spokesman for the Pittsburg business men and property owners, who recently appeared before Gov. Pennypacker to protest against the granting of charters for the construction of elevated roads in this city.

S. Davis & Co. have decided to incorporate their business, with a capital of \$50,000 and will apply next week to the Secretary of the Commonwealth for letters of incorporation. The firm recently added a factory and engaged in the manufacture of diamond mountings and other lines of first class jewelry. C. D. Stuart, who was traveling for a New York house, will go on the road Jan. 15 for this house.

C. S. Wiley, secretary of the Pennsylvania Retail Jewelers' Association, expects to be able to send out notices within two weeks, stating where the meeting, called for Feb. 12, will be held. A meeting of the executive committee will be held within two weeks, to name the place. The officers of the association have been extremely busy on account of heavy holiday trade but active work is to be begun at once to strengthen the membership, which is expected to show a great increase this year.

The annual meeting of the glass manufacturers of the United States was held last week at the Monongahela House, in this city, almost every important glass manufacturer in the country being represented at the meeting. Cut glass, blown goods, table pressed and decorated ware of all kinds are on exhibition. The exhibit was so large that it required 53 rooms to hold it, and in some instances one firm had as many as three rooms. The display was one of the finest ever made in this city. Buyers from all over the United States, Mexico and Canada were present during the last week. The exhibit will continue for a period of several weeks.

Attleboro.

W. H. Saart Co. reports that its salesmen have started on their several trips throughout the country.

S. D. Grossman, of S. D. Grossman & Co., Brockton, received a New Year gift of a traveling bag from his employes.

Reed & Barton, Taunton, owing to rush of orders, have decided to postpone the annual New Year stock taking till warm weather.

The Cohammet Silver Co., Taunton, sent 50 representatives to New York last week to secure a lot of new machinery for an increase in the plant.

W. E. Rounsville, of C. A. Marsh & Co., receiving congratulations on his silver wedding anniversary, which was happily celebrated a few days ago.

S. M. Holman, representative in the Legislature from this town, won attention last week by a State House declaration that the girls in the Attleboro jewelry factories are the handsomest in the State.

Despairing of getting all the help needed on the already drained local labor market, some of the manufacturers have called upon the State Free Employment Bureau at Boston, and the fact has been heralded abroad in the bureau.

William A. Sturdy, of W. A. Sturdy & Co., is spending the Winter in Crescent City, Fla. He writes that four transplanted Attleboro families, the Paysons, Torreys, Watermans and Crotty's, several of their members formerly in the jewelry trade, are now the leading residents of the place.

Charles Gifford, of the Gifford Mfg. Co., suffered a hard fall at the railroad station last week. He arrived with two heavy trunk cases just as his Boston train was starting. He tried to board the train at the rear platform, but was handicapped by his shoes, and was thrown down the high railroad embankment, luckily escaping injury.

Charles M. Robbins, of the Chas. M. Robbins Co., who has just returned from Europe, was given a complimentary dinner at the Crown Hotel, Providence, last week. A number of guests were fellow members in the Ancient and Honorable Artillery Company, of Boston. Among the jewelers present were Major Everett S. Horton, of the Horton, Angell Co.; William H. Smith, of Smith & Crosby; Charles P. Keeler, of McRae & Keeler, and W. E. Rounsville, of C. A. Marsh & Co. Mr. Robbins displayed a number of unique souvenirs he had brought home from his trip. The Chas. M. Robbins Co. factory has resumed operations after being shut down for stock taking.

Perhaps the most effective souvenir that has ever been distributed by Almy, Stone & Co., Providence, R. I., is a match holder that is being sent to friends and customers. It is substantially made of metal finished in a bronze style. A gray eagle with spread wings surmounts a shield, on one side of which is cast an elfin figure grotesquely working at a flaming furnace, and pouring melted metal from a crucible. On the reverse side of the shield appears the card, announcing the firm as gold and silver jewellers. At each end of the oval-shaped base is located a cup in which is contained a number of parlor matches, the sticks of which have been dyed a bright green.

North Attleboro.

The G. K. Webster Co. resumed work on Monday after being closed two weeks.

Louis W. Wise, of the T. I. Smith Co., has purchased a new home on Church St.

J. F. Sturdy's Sons and Scofield, Melcher & Scofield are working 13 hours daily.

Edward A. Cummings and Alpin Christholm returned last week from western trips.

Wallace G. Franklin returned on Saturday from a brief trip in the interests of E. I. Franklin & Co.

James P. Black, who conducts a retail jewelry store on Washington St., has added a watch-repairing department, with Herbert Wilson in charge.

Frank A. Brown was presented with a handsome gold watch last Thursday when he retired from the position of president of the local acerie of Eagles.

Sparks from a barn fire on Thursday morning ignited in two places the roof of the Company Shops. The sparks were discovered in time to prevent any damage being done.

William F. Swift, who for several years was head of the engraving department of the Paye & Baker Mfg. Co., has gone into business for himself. He has obtained quarters in the Hunt building, Church St.

Louis D. Barrows has been in New York the last two weeks looking out for the interests of the H. F. Barrows Co. Ira Barrows, who is the New York head of the Barrows concern, is ill with typhoid fever.

Frank B. Gurney, head tool maker for Frank M. Whiting & Co., expired in a local store last Wednesday while waiting for a car to convey him to his home in Attleboro Falls. Heart failure was supposed to be the cause of his sudden death.

John Morrill, of this town, who started a retail jewelry store on Main street, Milford, within a comparatively short time, was burned out last week. A quantity of the stock was saved, but he lost several hundred dollars' worth of goods. There was no insurance.

G. Herbert French, treasurer of the W. & S. Blackinton Co., has given legal notice that at a public auction to be held at the factory, Jan. 12, 285 shares of capital stock in company issued to Louis A. Blackinton will be sold to satisfy the indebtedness of Mr. Blackinton to the concern.

A fire in the refining shop of Thompson & Remington Co., of Plainville, threatened the cluster of Plainville jewelry shops last Wednesday afternoon. An overheated furnace set fire to the refining shop during the noon hour. When discovered at 1 p. m. by an employe the flames were coming through the roof. The Plainville department was summoned and a special call for help was sent to North Attleboro to insure the safety of the two big factories. The firemen kept the blaze well in hand, and the loss was about \$1,000. Of this amount \$700 was on the building and the balance because of the destruction of jewelers' findings.

D. V. Morrison has purchased the jewelry department of the Changnon Drug Co., Idaho Falls, Idaho.

J. C. Slaughter, Forrest City, Ark., recently sustained a loss of \$1,500 by fire. The insurance amounts to \$500.

Boston.

The funeral of the late Samuel Myers took place on Sunday, December 30, and was attended by many friends.

William Wilkins, identified for a number of years with the Globe Optical Co., has taken a managerial position with the Boston Optical Co.

W. J. Crowley, formerly salesman for Henry Cowan, has taken a position with Charles May & Son, whom he will represent as traveling salesman in New England territory.

The Boston Jewelers' Association, an organization of retail dealers, held a meeting and banquet last Thursday evening at the American House, followed by a vaudeville entertainment.

The annual banquet of the Boston Jewelers' Club, scheduled to take place in February, will be held this year as last at the Hotel Somerset, plans now under way assuring a most enjoyable evening.

Charles Parker, for 14 years an inside salesman with Henry Cowan, has severed his connection with the house. George Turnbull and Frank Sherry, formerly with Joseph Cowan, have entered the employ of Henry Cowan.

Frank H. Eaton, 64 years old, who died recently at Waltham, was one of the city's most respected citizens, and for many years was foreman of the machine department at the Waltham Watch Co.'s factory, a position he held up to his death.

Buyers visiting Boston during the week included: J. O. Bailey, Marlboro; Mr. Sullivan, Buckley & Sullivan, Lawrence; H. L. Dole, Haverhill; Harry Foye, Athol; J. E. Whiting, Andover; R. C. Eldridge, Milford, Mass.; Mrs. O. H. Sleeper, Exeter; Mr. Safford, Jr., J. F. Safford & Son, Rochester, N. H.

About 20 former Boston members of the oldtime New England Jewelry Travelers' Association, which went out of existence a few years ago, with a number of invited friends, had a social gathering after the holidays at the Revere House. The spread was thoroughly enjoyed, and a vaudeville entertainment followed the banquet.

William A. Wilson, who had an office at 40 State St., this city, was arrested on New Year's Day, charged with the larceny, specifically, of a jeweler's lathe from the store of Chandler & Farquhar, dealers in machine tools, on Dec. 24. He gave his occupation as watchmaker and jeweler. When the police searched the premises occupied by him they found a most miscellaneous collection, the value of which ran into hundreds of dollars. The police say that he admitted the theft of the lathe, when identified by one of Chandler & Farquhar's clerks, but claimed that most of the property in his quarters was his own. Among the goods removed by the police were electrical and surgical instruments, as well as jewelers' tools of various descriptions, lenses, glass ware, suit cases and a host of articles which all suggested loot. It is believed that much of the stuff represented thefts covering a long period.

N. W. Myer, Crawfordsville, Ind., recently moved his stock to 116 S. Grand St.

Store of Hyman Sjoberg, Brooklyn,
Closed Under Attachment and Jew-
eler Is Not to be Found.

On an attachment for \$900 the retail store of Hyman Sjoberg, 5617 Third Ave., Brooklyn, was placed in the hands of the Sheriff last Saturday. The attachment was obtained by R. L. & M. Friedlander. Two or three days after Christmas this firm was notified by a boy who had been running errands for the Brooklyn jeweler that Mr. Sjoberg was sick. Reports of illness coming at this time of year are quite often received with misgivings on the part of creditors, and the firm caused inquiries to be made. The information elicited was such that its claim was put in the hands of F. L. Kalish, an attorney, and the attachment was promptly obtained.

Inquiries that have been made as to where Mr. Sjoberg and his wife now are have proved fruitless. The store was left in charge of a cousin, and the jeweler, it was said, had gone to Europe.

The total liabilities are said to be \$15,000 or more. He had been in business at the location mentioned for seven or eight years. Of late the business has been conducted under the name of his wife, Mrs. Hecla Sjoberg.

A receiver was appointed Monday in bankruptcy proceedings begun by creditors in the United States Court.

Canada Notes.

W. R. Noble & Co., Winnipeg, Man., have sustained a fire loss of about \$5,000, which is covered by insurance.

Walter J. Barr, manager of the Goldsmiths' Stock Co., left for New York on a purchasing trip last week. He will stop at the Manhattan.

Out-of-town jewelers who called on the Toronto, Ont., trade last week included J. E. Nettleton, Penetanguishene; A. H. Tobey, Sudbury; Henry Wendt, Chifurd and R. B. Keeler, Durham.

The trade here has been notified by the Waltham Watch Co. of an advance of 7 per cent. in the price of watch movements corresponding to the increase in the import duty under the new tariff.

George Harris, alias McCready, was sent to jail for five months on Monday of last week for stealing a watch from the jewelry store of Miss Kent, 257 Yonge St. He took the watch Christmas Day while examining goods under pretext of buying, and the theft was not discovered until he had left the store.

N. Fred Gundy, who for 25 years was a successful traveler for the Meriden Britannia Co., Hamilton, Ont., has resigned his position and is going into business for himself in the manufacturing of fine cut glass, associating himself with H. G. Clapperton under the firm name of Gundy, Clapperton & Co. The authorized capital is \$40,000. The first meeting was held on Saturday last. The following officers have been elected: N. F. Gundy, president; H. G. Clapperton, vice president; H. S. Wise, secretary. The office and the factory are in Hayter St. Toronto. On the last day of his connection with the Meriden Britannia Co., Mr. Gundy was presented with an address in a cabinet of sterling silver from J. Parker and the traveling representatives.

R. F. Allen, of Morgan & Allen Co., San Francisco, Cal., left for Chicago, Saturday morning.

H. T. Willis, with Barr W. Freer, San Francisco, Cal., visited the trade in Los Angeles, Cal., recently.

Frank Sussfeld, Sussfeld, Lorseh & Co., and John Case, H. E. Carpenter, were in Toronto, Ont., last week.

C. Edward Innes and L. Plamandon, with Henry M. Abrams, San Francisco, Cal., will leave shortly for their respective territories.

Joseph T. Brennan, with Burr W. Freer, is just back from an extended trip through the northwest. He spent the holidays in Seattle and Portland.

Henry H. Samuels, who has been traveling for the Bramard & Wilson Co., art metal manufacturers, Danbury, Conn., has renewed his contract with this house and will continue to represent it on the road.

Lancaster, Pa., was, recently, visited by the following salesmen: G. J. E. Wyngaert, Scofield & DeWyngaert; H. B. Bliss, Gorham Mfg. Co.; William Lehman, Ludwig Lehman; W. M. Kopf, L. H. Keller & Co.

Traveling representatives in San Francisco, Cal., recently, included: Henry H. Jacobson and Sam Jacobson, Jacobson Bros.; Mr. Gordian, Woodstock Hoefler Watch & Jewelry Co.; Mr. Brown, Carter, Howe & Co.; Jas. Gregory, Strobell & Co.

The following traveling representatives called on the trade in Kansas City, Mo., during the past week: Mr. Wilkins, Ostby & Barton Co.; Ira W. Smith, Horton, Angell Co.; Theo. L. Lyons, Lyons Gem Co.; B. A. Noble, Sturtevant & Whiting; Fred H. Carpenter, W. & S. Blackinton Co.; H. G. Pfordresher, Geo. L. Brown & Co.; P. A. Wilkinson, J. J. Sommer & Co.; Frank Barton, Fonteneau & Cook Co.; George Southwick, Payton & Kelley Co. and W. E. Richards & Co.; F. R. Sheridan, Arnold & Steere; George Goldberg, Untermeyer & Robbins Co.; F. A. Fairbrother, Armstrong Braiding Co.; Mr. Rodenberg, Dunn & Rodenberg; Robt. Kehl, F. H. Noble & Co.; R. T. Kleckner, Theodore W. Foster & Bro. Co.; I. S. Richter, C. O. Sweet & Son Co. and Doran, Bagnall & Co.

Among the traveling representatives who called on the trade in St. Louis, Mo., last week, were: J. D. Freeman, Freeman-Daughaday Co.; P. A. Wilkinson, J. J. Sommer & Co.; C. W. Battey, Schofield, Battey & Co.; J. Rosenberg, S. K. Grover Co.; R. C. Schutz, Manchester-Smith Co.; W. A. Burt, Cory & Reynolds Co.; L. C. Valentine, Taunton Pearl Works; H. A. Allen, C. F. Allen; H. G. Pfordresher, G. L. Brown & Co.; J. B. Macdonald, Woleott Mfg. Co.; Mr. Wilkins, Ostby & Barton Co.; G. Southwick, Payton & Kelley Co.; Mr. Sherman, estate of O. M. Draper; Mr. Cummings, J. P. Cummings Co.; F. J. Ruggles, W. H. Bell & Co.; R. J. Shank, International Watch Co.; W. W. Middlebrook, B. A. Ballou & Co.; J. A. Cunningham, Regnell, Bigney & Co.; O. P. Bliss, American Ring Co.; Mr. Williams, Warren & Williams; O. F. Samuelson, Towle Mfg. Co.

Traveling representatives who called on the Cincinnati, O., trade, during the past week, included: Mr. Lamb, George H. Fuller & Son Co.; J. Strandburg, Sikes & Strandburg; Mr. Allen, C. H. Allen; Mr. Cobb, Daggett & Clap Co.; Harry Kennion, Parks Bros. & Rogers; Harry Scofield, Scofield, Melcher & Scofield; J. Parker Ford, Ford & Carpenter; Mr. Sweet, R. F. Simon, Co.; W. Sumner Blackinton, S. O. Bigney & Co.; Mr. Stanley, estate of O. M. Draper; Frank W. Bloomer, E. J. Franklin & Co.; George L. Paine, George L. Paine Co.; W. T. Sherman, S. K. Merrill & Co.; Fred H. England, Frolichstein, England & Klein, Inc.; Frank W. Collom, Sulzberger Bros.; W. F. McGown, Barden & Hull; Charles H. Clark, W. G. Clark & Co.;

George Southwick, Payton & Kelley Co.; B. A. Noble, Sturtevant & Whiting; J. B. Macdonald, Woleott Mfg. Co.; Mr. Green, George L. Brown & Co.; Mr. Vaslett, Fletcher, Burrows Co.; F. J. Rider, Walter E. Hayward; William W. Middlebrook, B. A. Ballou & Co.; W. L. Bushee, A. Bushee & Co.; Frank J. Ruggles, W. H. Bell & Co.; Mr. Fisher, Furbish, Swift & Fisher; Mr. Williams, Warren & Williams; Samuel J. Loeb, Henry E. Oppenheimer Co.

Among the traveling representatives who called on the trade, recently, at Pittsburg, Pa., were the following: Arthur Bradshaw, Meriden Britannia Co.; E. M. Bliss, Bliss Bros. Co.; Mr. McPherson, C. Ray, Randall & Co.; A. H. Oakley, Thornton Bros. Co.; J. E. DeWyngaert, Scofield & DeWyngaert; Charles S. Down, F. H. Cutler & Co.; Alberto S. J. Schweizer, Ansonia Clock Co.; F. R. Truell, W. H. Saart Co.; I. Ira Foster, Milton L. Ernst; Mr. Kean, Ostby & Barton Co.; Fred H. England, Frolichstein, England & Klein; J. Rosenberg, S. K. Grover Co.; George Southwick, Payton & Kelley Co.; Frank J. Ruggles, W. H. Bell & Co.; Wm. A. Malbit, J. J. White & Co.; Charles S. Peckham, J. H. Peckham & Co.; Mr. Green, George L. Brown & Co.; Mr. Allen, Allen, McNeerney & Co.; Charles L. Drown, Ostby & Barton Co.; Louis A. Blackinton, W. & S. Blackinton Co.; Frank W. Collom, Sulzberger Bros.; George E. Heywood, Horton, Angell Co.; F. J. Rider, Walter E. Hayward; Wm. W. Middlebrook, B. A. Ballou & Co.; M. V. Decker, Plainville Stock Co.; Charles Tucker, C. R. Harris; Mr. Rogers, C. H. Cooke Co.; Mr. Johnson, C. O. Sweet & Son Co.; Mr. Fisher, Furbish, Swift & Fisher; E. P. Bennett, Waite, Mathewson & Co.; W. H. Osborne, R. Wallace & Sons Mfg. Co.; E. M. Bliss, Bliss Bros. Co.; A. H. Oakley, Thornton Bros. Co.; Charles S. Down, F. H. Cutler & Co.; G. A. Schaefer, Regnell, Bigney & Co.; R. I. Shank, International Watch Co.; J. F. Dean, Reed & Barton; H. C. Kionka, Kionka & Wagner.

News Gleanings.

F. C. Bennett, Gloversville, N. Y., recently sustained a severe loss by fire.

H. E. Whitman has sold his business in Blaine, Wash., to Barber & Barr, and will open a new store in Palouse, Wash.

George Rieger, Louisville, Ky., was recently appointed a member of the tuberculosis board of that city by Mayor Barth.

A fire recently damaged the stock in the store of A. J. Romach, Nacogdoches, Tex., to the extent of \$2,000. The loss is fully covered by insurance.

Among the half-tone illustrations published in the *Detroit Free Press* recently of the prominent citizens of Detroit, Mich., were two half-tones of R. J. F. Roehm, showing Mr. Roehm as he was 20 years ago and as he is to-day.

Leonard McLashan, founder of the silver and nickel-plate industry at Niagara Falls, and said to have been the first man to have used power from the Falls for manufacturing purposes, died Jan. 4 in Los Angeles, Cal., of typhoid fever.

It is reported from Texas that jewelers of that State had an unprecedented holiday trade, and that business is still keeping up. With the exception of a small strip of territory in the northern part, business has been phenomenally good throughout the entire State.

The firm of Daniels & Brannen, jewelers and opticians, Americus, Ga., has been dissolved by mutual consent, A. C. Brannen retiring. S. A. Daniels will continue the business, assuming all the obligations of the partnership, and to him all accounts due the old firm should be paid.

Thirty-two watches which had been left to be repaired were stolen by thieves recently from the store of R. Scardapane,

Connellsville, Pa. Access to the store was gained through a transom in the rear, the intruder having used a step-ladder with which to reach the top of the door.

From Laurel, Miss., comes a report to the effect that the store of V. P. Vallentine, at Service, in the same State, was entered by burglars and the jeweler's safe destroyed by dynamite. Fortunately there was nothing of great value in the same at the time the principal loss being due to the destruction of the safe.

Isaac Brush, who recently retired from business in Bridgeport, Conn., to take up his residence in New York, was the guest a short time ago of the Calumet Club, which gave a dinner in his honor. It was a pleasant gathering, and was a farewell to Mr. Brush, who has many business and club friends who will regret his departure.

A. Holzman, 94 Whitchall St., Atlanta, Ga., is wondering how some "smooth" individual got away with one of his most valuable diamond rings. Late Monday afternoon of last week a number of prospective purchasers, both men and women, inspected the tray containing the diamond rings. After the departure of one man and two women, who seemed a bit more interested in the trinkets than the other shoppers, Mr. Holzman discovered a "phony" stone nestling in the niche where earlier in the day a \$200 solitaire had reposed. The detectives were at once notified, but have discovered no clew upon which to pitch their efforts.

The jewelry store of Cass M. Krammer, 25 Central Ave., Albany, N. Y., was robbed of 20 watches Wednesday about 1.15 p. m., and the thieves escaped with their plunder. Mr. Krammer had locked up his store and had gone to dinner shortly before this time, and during his absence two men unlocked the rear door of the establishment, and after taking the watches concealed them about their person and boldly walked out through the front of the establishment. The closing of the front door was heard by the jeweler, who rushed upstairs in time to see the robbers disappear. The men are said to be about 25 years old. The robbers were described by two boys who saw them pass out, and this description was sent to adjacent towns by the police.

Rochester.

Charles Bryan, 49 years old, was arrested recently by Central Office detectives on a charge of attempted false pretenses. Bryan has been one of the most conspicuous figures among the peddlers of cheap jewelry and trinkets in this city for many years. He made his headquarters in the vicinity of 6th St. and the Avenue. After being taken to police headquarters he was released on \$100 bond.

E. Kirstein's Sons Co. has made a number of changes in its working force for 1907. Charles W. Krug, of the office force, will travel in the Southern states. Ben Hillsburg, who formerly made this territory, will take New England instead. William J. Hickey, formerly of Baltimore, has been engaged to travel in the Western states in the territory formerly covered by Al. Fairbairn, who is now with the Columbian Optical Co., Denver, Col.

Ball's Official Standard R. R. Watches

WHAT WOULD YOU GIVE FOR A LIFELONG CUSTOMER?

Try this plan :

Sell your next watch customer a "Ball."

Its reliable performance will convince him you are a dealer to be depended on—he'll keep coming back for other things.

The watch will win you his business and friendship for always.

Write for booklet, and watch this space.

We want to add a lot of new friends to the Ball family of railroad watch dealers.

Chicago Notes.

George Cureton, manager of H. Lefort cre, is making a trip east.

I. S. Schoenfeld has resigned his position with the Capital Jewelry Co.

J. H. Hillinger is making a trip this week to St. Paul and western points.

F. E. Behrendt, representing Moore & son, has left for a trip southwest.

The United Clock Co. has increased its capital stock from \$50,000 to \$100,000.

Jack Bradley, with J. W. Forsinger, visited in New York during the holidays.

D. A. Wilkins, of the Ostby & Barton Co., leaves for a California trip this week.

Henry Gishlin has resigned his position in the jewelry department of Mandel Bros.

C. R. Allen & Co., 315 Dearborn St., are endeavoring to make a settlement with their creditors.

R. A. Kettle, manager here for the Waltham Watch Co., is making a trip to Boston and Waltham.

Theo. A. Jacobs, of the Knickerbocker Silver Co., is making a visit to the factory at Port Jervis, N. Y.

Albert Cohn, representing the Lyons Mfg. Co., leaves for an extended trip to the Pacific Coast this week.

F. L. Maps is starting in business at Kalamazoo, Mich., and was in this city recently selecting some stock.

Mr. Allen, of the firm of Morgan & Allen, San Francisco, has been spending some time among the trade here the last week.

Arthur Ellbogen has resigned his position with Sproehle & Co., to go with the Bowler & Burdick Co., Cleveland, O.

Joe Witty, of Hopkins & Witty, Duquoy, Ia., was recently called to this city in account of the death of his brother.

H. E. Jones, manager here for the Wadsworth Watch Case Co., has just returned from a trip to the factory at Dayton, Ky.

Morgan D. Wise, who has had a repair shop at Rockford, was here recently to select a stock of jewelry to add to his business.

The Seth Thomas Clock Co. has an order for a tower clock for a church at Gustisford, Wis. The clock is to have four feet of five-foot diameter.

Chas. G. Breitenbach & Co., recently incorporated; capital, \$100,000. The incorporators were Charles G. Breitenbach, Albert M. Johnson and George E. Koplin.

W. R. Stevens, of the Bay State Optical

Co., is making a trip to Buffalo and intermediate points: C. F. Barrows, of the same company, is making an eastern trip.

F. Fernandt, who has conducted a repair business for 30 years in the McVickers Theatre building, has accepted a position with Graffe & Stanek as foreman of their shop.

W. V. Ghislin, accompanied by four of the salesmen of the Chicago office, visited the Gorham Mfg. Co.'s factory at Providence last week, as well as other eastern points.

Michael J. Baruch, a jeweler at 332 N. Carpenter St., was recently held up in his store by three men. Baruch fired at the men, shooting one in the chest and succeeding in capturing another.

The first dividend of the Cash Buyers' Union of five per cent. was recently paid the creditors of that defunct concern. Another dividend of probably 20 per cent will be paid during the coming Summer.

Percy Savory, New York representative of the Wadsworth Watch Case Co., stopped over here a few days on his way to the factory at Dayton, Ky., and visited relatives and renewed acquaintances among the trade.

The fine corner stone of the Palmer House block, at State and Monroe Sts., will be vacated by the present tenants by Feb. 15, at which time Lebolt & Co., who now occupy the store just south, will move into it.

Alfred Elsner, formerly covering Wisconsin for L. H. Schafer & Co., has joined the traveling force of A. Hirsch & Co. S. Newman and L. Eisenbach, of the same firm, will leave for their usual territory Feb. 1.

Lazarus E. Lebolt, father of Joseph Y., Meyer H. and Nathan N. Lebolt, who compose the firm of Lebolt & Co., Chicago and New York, died on Jan. 4 at his residence, 3350 Prairie Ave. The store of Lebolt & Co. was closed here on that day.

Theo. A. Thelander & Bro., 1739 N. Clark St., were damaged by fire recently, and have taken temporary quarters a few doors above them on the same street. The damage to stock was slight, and they hope to be back in their old quarters very soon.

C. G. Breitenbach & Co., Silversmiths building, recently incorporated with a capital stock of \$100,000. The officers of the new company are C. G. Breitenbach, president; A. M. Johnson, secretary and treasurer. The officers and George W. Koplin, of the Great

Western Cereal Co., compose the board of directors. The company has secured considerable space in addition to that which the concern now has, and proposes to make several changes in the arrangements of the office in order to afford more room.

C. P. Dungan, of the International Silver Co., leaves this week for a two weeks' visit to the factory at Meriden, Conn., and other eastern points. James K. Caldwell, of the same company, has just returned from a visit to Charleston, S. C., where he spent Christmas.

Denver.

Dan S. Park, of Dan S. Park & Co., has returned from a visit to Roswell, N. Mex.

Frank Wigger, with Joseph I. Schwartz, contemplates opening a store in Goldfield, Nev.

D. S. Maiman, with the Crown Mfg. Co., left last week for New York. He also will stop at Louisville, Ky.

Ole C. Oleson, with the Lewis Jewelers' Supply Co., returned from a trip to San Francisco, Cal., last week, and left at once for Rocky Ford, Colo.

William Hirt, son of George Hirt, president of the Denver Watch Case Co., was married on New Year's Eve at the home of his parents, William Hirt. He is at present with Cohn Bros., Cripple Creek, Colo.

James Keil, with the Bessemer Jewelry Co., Pueblo, Col., is in Denver for a limited period. He was elected to the State Legislature in November and has come to attend its sessions. Mr. Wilson, who has been with W. L. Morris & Co., Florence, Colo., until their recent sale to Louis Honeyman, will manage the store during Mr. Keil's absence.

Out-of-town jewelers who visited this city during the past week included: E. C. Loper, Fort Morgan, Colo.; Solomon Levinson, Deadwood, S. Dak.; Col. James S. Inman, Goldfield, Colo.; D. J. Kramer, Salida, Colo.; W. J. Crosby and wife, Loveland, Colo.; C. O. Hunter, Fort Collins, Colo.; S. Salmson, Platteville, Colo.; Mrs. Brannen, Brannen Bros., Loveland, Colo.

Joseph Davis, the colored boy charged with the larceny of a gold watch from the store of L. Sapovitz, Chester, Pa., was given a hearing about a week ago in the City Hall Court and committed to jail to await trial at the March term of the Criminal Court.

TAVANNES WATCH CO.

131 Wabash Ave., CHICAGO

2 Maiden Lane, NEW YORK

Cincinnati.**TRADE CONDITIONS.**

All Cincinnati jewelers speak of the past year as being the most prosperous they have experienced and predict a similar good business for 1937. The holiday season, just passed, was very much in advance of 1935. Sales were larger and money was more plentiful. During the past 12 months there have been several removals of firms whose business demanded larger quarters, several new firms have opened up, and one of the finest plants in the country has been built here. During the past year also the number of out-of-town buyers visiting this city has been greater than ever before.

William Willman, of Meseh & Willman, left on his southern business trip last week.

Joseph Hornbaek, lately with Albert Bros., has joined the road force of D. Jacobs & Co.

J. B. Osthoff, of Joseph Noterman & Co., and his family are spending a few weeks in Zellwood, Fla.

Mrs. Strueve, wife of H. R. Strueve, a retired Cincinnati jeweler, died at her home Dec. 27, in her 70th year.

Samuel Bloom, Jr., a wholesale jeweler of Kansas City, spent New Year's Day here with his father, Magistrate Bloom.

The show window in Charles Sederberg's store, Milford, O., was completely demolished by the decorations catching fire during Christmas week.

Charles Hummel, with Louis Hummel, Arcade, and family are rapidly recovering from injuries received in the Price Hill treet car accident, Dec. 30.

Anthony Herschede, Main St., has been elected vice-president of the Board of Public Service of Cincinnati, of which he has been director for the past year.

Ed. C. Pfaffel, formerly with L. Gutmann & Sons, and who temporarily retired from business on account of ill health, is well again and ready to resume his duties.

Charles Davidson, of the American Silver Co., and son of W. E. Davidson, Arcade, was married Jan. 2 to Miss Jessie Johnston, of Bellevue, Ky. Mr. and Mrs. Davidson are now in the east on a wedding tour.

Sam Taggart, well known to the trade, as joined with the Miller Jewelry Co. as traveling salesman in the south and northwest. This company is adding quite extensively to its factory force and plant.

The engagement of Walter Herschede, of the Herschede Hall Clock Co., and Miss Ruth Foy, of Avondale, is announced. Mr. Herschede has gone to Grand Rapids, Mich., where he has charge of the company's exhibit of clocks at the furniture exhibition.

A. A. Spiegel, former manager for the Gustave Fox Co., has formed a partnership with M. M. Plaut, succeeding Plaut & Co., Neave building. The new firm is styled A. A. Spiegel & Co., and began business Jan. 1. It will carry a full line of filled and gold jewelry, also novelties, and will occupy quarters formerly occupied by Plaut & Co. Leonard J. Fox, formerly traveling salesman for the Gustave Fox Co., succeeds Mr. Spiegel as manager of the latter concern.

Edward Slater, 25 years old, who was recently arrested in Cincinnati on a charge of obtaining a diamond ring worth \$200 in Jonesboro, Tenn., under false pretense, says he will return to that place without requisition papers. It appears Slater on his reputation bought a ring from a jeweler there, but had paid nothing on it when he left

town and came to Cincinnati. He had been here only a short time when detectives, having been notified, arrested him on a warrant sworn out by the jeweler.

Oscar Keck, formerly vice-president of the Herman Keck Mfg. Co., has succeeded the late Herman Keck as president and treasurer of that company, and also of the Duhme Jewelry Co. Both boards of directors remain the same. The business of these two concerns, will be continued as heretofore without any interruption. The estate of the late Herman Keck, which is valued at over \$100,000, will be divided by his widow, who has been made administratrix.

Lindenberg & Fox are now in their new quarters on the ninth floor of the Harrison building, where they have floor space of 2,600 feet, divided into different departments. The private office is very attractive, with handsome rugs, mahogany furniture and oil paintings. The main office, of large dimensions, is fitted up in mahogany of the latest style. The shipping room comprises about 1,200 sq. ft., and is a marvel of completeness in its every appointment. The house is adding an extensive line of both cut glass and silver hollow ware to its stock.

Out-of-town jewelers who visited this city last week buying stock included: R. Baldwin, of Baldwin Bros., Winchester, Ky.; Frank B. Carey, Lebanon, O.; J. C. Meyer, Harrison, O.; J. H. Sherrwood, Brooksville, Ky.; William Leive, Aurora, Ind.; Ira Wylie, Springfield, O.; R. F. McComb, Hamilton, O.; A. H. Beer, Versailles, Ind.; Mr. Conn, Conn Jewelry Co., Bowling Green, Ky.; Fred G. Wittlinger, Middletown, O.; A. E. Axman, Middletown, O.; Charles F. Gray, Dayton, O.; Mr. Leonard, of Edwards & Le Bron, Chattanooga, Tenn.

Toledo, O.**TRADE CONDITIONS.**

Never did a new year present a better outlook for the jewelry business than the one just ushered in. Collections are good and checks in full payment are now being received for goods bought last Fall. The holiday business was excellent, better than ever before experienced, and every indication points to a banner Spring business.

The Lang Cut Glass Co. has opened a store and showroom on Adams St.

C. K. Merrill, of the Merrill, Broer Co., will attend the annual meeting and banquet of jewelers at Chicago, Jan. 19.

The Lion Store, since opening its St. Clair St. department, has considerably increased its jewelry department.

The three local wholesale jewelry firms in this city are arranging to send their traveling salesmen out after the holiday lull, and beginning this week all these firms, the Merrill & Broer, Robert Nelson & Co., and the Swigart Watch & Optical Co., would be glad to put on at least one more salesman if they could get the right man.

The new store building of J. J. Freeman & Co., on Summit St., is rapidly nearing completion, and it is now the matter of a short time until the firm will be settled in one of the finest jewelry stores in Ohio. The new location is situated only two or three doors from the present location, and therefore the firm will lose none of the prestige gained through being located at one place for over a third of a century.

Indianapolis.**TRADE CONDITIONS.**

Local merchants have now balanced their books for 1936 and completed their inventories. Their conclusion is that the year just closed was a very satisfactory one. It was not a record-breaker, but it compared well with those that were. It was better than 1935. There were fewer duller periods and trade during June and December was better. The year was characteristically normal, that is, business was fair from month to month. The holiday trade was gratifying. It started earlier than usual and continued until Christmas Day. Staple jewelry articles were most in demand. Watches and diamonds had a steady call, but novelties were not much sought. Jewelers say that customers who formerly looked for small articles that sell from \$1 to \$2.50, this year sought \$4 and \$5 articles. Estimates made by jewelers indicate that the business of the year just closed was from 10 to 25 per cent. better than that of 1935.

A recent customer at M. F. Smith's store bought a diamond and then lost it before he had walked a block.

The General Assembly, which recently convened for its biennial session, has been asked to pass a bill creating a State board of optometry.

The employees of Charles Mayer & Co. have been made happy by the announcement that the store will close hereafter at 5:30 p. m. instead of at 6 p. m.

Chris. Bernloehr & Bros. are now settled in their new quarters on the second floor of the McQuat block, in Washington St., between Meridian and Pennsylvania Aves.

J. C. Sipe is making his annual distribution of leather-backed memorandum books. Mr. Sipe has made use of this little vest-pocket book as an advertising medium for several years.

Regret has been expressed here over the death of John D. Smith, Union City, who had been a buyer in this market for 40 years. He was one of the best known jewelers in the State. His death occurred Dec. 24.

The pulpit furniture of the new Meridian Street Methodist Church was given to the church in the memory of the late Silas Baldwin, head of the Baldwin-Miller Co., who died several months ago. The name Silas Baldwin appears beneath the pulpit diwan.

During the holiday season Charles Mayer & Co. carried what is said to have been the largest advertisement ever printed in an Indiana newspaper. The ad., which was 16 columns wide and the full depth of the page, appeared in the Indianapolis *News*.

The Indiana Retail Merchants' Association, comprising in its membership many jewelers of this and other Indiana cities, will hold its annual convention at Evansville, Ind., Jan. 15, 16 and 17. R. B. Clark, of Clark & Raber, Anderson, is president of the association. His annual address will take up the question of the best way to cope with mail-order competition.

Out-of-town jewelers, who visited the local jobbers and manufacturers last week, report that holiday business was exceptionally good. Among the number were H. A. Robert, Veedersburg; J. L. Hastings, Sheridan; J. A. Meissen, Cicero; Samuel Prager, Terre Haute; Mrs. B. Maier, Edinburg; Philip Adler, Lebanon; H. E. Kinnear, Marion; Charles Ham, Frankfort; A. A. Garner, Lebanon; A. N. Canada, Winchester; C. E. Hodgen, Kokomo, and J. B. Johnson, Goodland.

San Francisco.

Gardner & Weber are enlarging their store.

The Sterling Jewelry Co. has renovated its store.

Mr. Tuttle, Portland, Ore., visited the trade in this city recently.

Walter Green, of Carran & Green, will soon go to Europe on a purchasing trip.

George Hunter, formerly superintendent of the Elgin National Watch Co., left for Australia recently.

Werner Bros. expect to move within a few weeks. The new location has not yet been decided upon.

Mr. Hammersmith, of Hammersmith & Field, has received the San Francisco agency for the E. Howard Clock Co.

H. Knopfmacher, son of A. Knopfmacher, leaves in a few days for Amsterdam and other European diamond centers, to be gone about two months.

Karl Eber recently formed a partnership with Neil O'Neill. The new firm of O'Neill & Eber has just completed renovating its store on Fillmore St.

On Dec. 31 Alphonse Judis, of the Alphonse Judis Co., who has just recovered from a severe illness, started south for a few weeks' pleasure trip.

K. C. Levy has secured the services of Mr. Churchill, a first-class watchmaker, and has put in a fine new bench with full equipment for any kind of watch work.

The Cafe Severn's beautiful new silver service, the most complete on the Pacific Coast, made by the International Silver Co., has for several days past been on exhibition at the store of Hammersmith & Field.

The Keystone Jewelry Co., Van Ness Ave., has secured the services of I. Silverstein, who has been with the Enterprise Jewelry Co., of Denver, Colo., for the past eight years.

Henry M. Abrams, the well known jobber, was married, on Dec. 24, to Miss Mae Loeb. Mr. and Mrs. Abrams left on Christmas Day for an extended trip through the east and south.

O. M. Howard, formerly of South San Francisco, has opened a jewelry store at 3246 Mission St., this city. He is carrying a line of jewelry, watches, cut glass and flat ware and has a well-equipped repairing department.

Pacific Northwest.

E. R. Pelz is now in Portland, Ore. He is still gathering elk's teeth, and now reports a collection of 27,250.

S. Marcus, proprietor of the Emporium Outfitting Co., Williams Ave., Albina, Ore., dealing in jewelry, etc., has disappeared. The creditors are chiefly employes and jewelers.

The R. G. Colvin Co. has been incorporated to engage in the jewelry business at Everett, Wash., by R. G. Colvin and Maud G. Colvin. The capital stock of the company is \$5,000.

Chief of Police Waller, of Spokane, Wash., has returned from Seattle with May Eastman, who was arrested in the latter city on the charge of stealing jewelry from the G. R. Dodson jewelry store, Spokane, by

which she was formerly employed. The girl, who is only 18 years old, admits having taken a ring, a purse and an umbrella, but denies having taken the other things.

The auction rooms of M. Braunstein, Yates St., Victoria, B. C., were robbed last week of 47 gold and gold-filled Geneva watches valued at \$600 and a number of other articles. So far the thief or thieves have not been apprehended.

The safe in the jewelry store of Troyer & Engle, Tekoa, Wash., was dynamited by burglars a short time ago. The thieves got away with about \$2,500 worth of jewelry and watches. A reward of \$500 has been offered by the citizens of the town for the arrest and conviction of the burglars.

Pacific Coast Notes.

R. W. Huff is closing out his stock at Orange, Cal.

The San Jacinto Jewelry Store, San Jacinto, Cal., has secured the services of R. L. Loucks.

A. C. Bay, of Manson & Bay, Redlands, Cal., reports that the finishing touches have now been put on the firm's new store. A special department for cut glass and hand painted china has been added.

Mr. Cooney and others, who are working on what they hope will be a diamond mine, near Oroville, Cal., report having struck "Blue Ground" last week, at a depth of 35 feet. Twelve men are now employed on the work.

A. E. Springborg's store, at Redlands, Cal., is being improved in a number of ways. A new crystal room has been put in for the special display of cut glass and a lens grinding machine and other features have been added to the optical department. A handsome street clock is to be erected in front of the establishment.

A. L. Large and J. A. Bixler, formerly of Springfield, Ill., are at Long Beach, Cal., where they are preparing to open a watch factory. They have purchased a site comprising two acres on Pasadena Ave., and state that a factory will be put up as soon as machinery can be put on the ground. They assert that 50 hands will be employed at the start.

The authorities of Los Angeles, Cal., are following the example of Seattle and are out against the bogus jewelry concerns of that city. Last week, upon the complaint of a laborer that he had been swindled out of \$10 paid for a worthless watch, which he had bought, he claimed, at an auction sale, the chief of police visited an auction sale conducted by the Brazilian Gem Co. and warned those present that they would be defrauded if they purchased at the sale. This was followed by the introduction of an ordinance in the city council which is designed to check the work of bogus jewelry stores and auctioneers.

The store of P. H. Shuey, Red Bluff, Cal., was robbed of stock valued at about \$800, recently. As Mr. Shuey and his wife, who live in the same building as that in which the store is located, were returning home about 11 p. m., they came upon the thief at work. The burglar ran and Mr. Shuey gave chase, but was unable to overtake the fugitive. The officers were notified and the next day a man giving the name of Jacob

Smith was arrested in the neighboring town of Red Bank, on suspicion of being the man wanted. He answers the description given by Mr. Shuey and his own story of his doings on the day and night of the robbery is known to be untrue. So far the stolen goods have not been recovered by the police.

St. Louis.

W. H. Wheeler, Palmyra, Ill., was one of the visitors in this city last week.

Briggs & Dodd, the Chicago jewelry auctioneers, are now selling the stock of W. A. Gill, 612 Olive St., St. Louis, Mo.

David Lowinsky, a jewelry salesman, 50 years old, died suddenly of heart failure last week. He succumbed on the street.

Frank Hassmer, of the Mermod, Jaccard & King Jewelry Co., and Miss Minnie Watts, St. Louis, were married recently in Belleville, Ill.

G. W. Killiam, accompanied by his wife and daughter, Pittsburg, Kans., were in St. Louis last week enjoying a vacation after a strenuous holiday business.

Theodore Ebeling, formerly with the Bauman-Massa Jewelry Co., and Leo Boedeker have formed the co-partnership of Ebeling & Boedeker and purchased the store of W. F. Withus 2019 E. Grand Ave. Mr. Withus will retire from the jewelry business.

W. E. Susong has been added to the traveling force of the Bauman-Massa Jewelry Co., with northern Missouri, Iowa and Western Nebraska as his territory. He was formerly with the M. A. Lombard Co., Des Moines, Ia. He will make his first trip Jan. 15.

News has been received here of the engagement in Philadelphia of Sylvain E. Friede, one of the traveling representatives of the Howard Watch Co., to Miss Corrinne Virginia Stern. Mr. Friede is a son of Joseph Friede, vice-president of the Eisenstadt Mfg. Co.

David I. Schane, in whose store at 1005 Franklin Ave. his bride-to-be died, has returned to Atlanta, Ga. Funds to the amount of \$1,270 deposited in the Franklin National Bank were garnisheed by James J. Burke, president of the Brooks Jewelry & Optical Co., to satisfy a claim of \$780.

Harvey White, 29 years old, who says he resides in Brooklyn, was taken into custody Jan. 6 on a charge of stealing jewelry from the Providence Jewelry Co., in the Granite building, this city. The accused confessed that he had stolen 500 rings, 30 watches and many pins, which he distributed among his numerous women acquaintances. A great part of the jewelry has been recovered.

William Weidlich & Bro., now at 61 Locust St., will move about March 1 into larger quarters which they have leased on the fifth floor of the Model building, at 70 St. and Washington Ave. The firm is agent for the New Haven Clock Co., New England Watch Co., and Watson & Newell Co.

J. E. Durick, Grand Forks, N. Dak., has been engaged by William Weidlich & Bro. as a member of that firm's traveling staff. He has not been assigned any particular territory as yet. Chester Hale, who has been with the firm for some time, will travel in the territory formerly covered by F. S. Gregory—the northwest.

Omaha.

T. L. Combs, of T. L. Combs & Co., has gone to Denver, Colo., on a pleasure trip.

Frank Kubik, Rising City, Nebr., has sold out his jewelry interests and moved to Weston, Nebr.

J. M. Walsh, representing Geo. Borgfeldt & Co., was in this city last week in the interest of his firm.

Oscar Homan, with Brown & Borsheim, has returned from Des Moines, Ia., where he spent the holidays.

Bert McCollough, formerly with Shook Mfg. Co., but now located in Norfolk, Nebr., was in this city last week.

Curtis Lindsay, son of S. W. Lindsay, has returned to Armour School in Chicago, having spent his vacation with his parents in this city.

C. L. Shook, of the Shook Mfg. Co., was in Rising City, Nebr., on business last week.

Sol. Bergman, of the Sol. Bergman Jewelry Co., expects to leave for New York about Jan. 16.

Albert Edholm showed his appreciation of his employes during the holidays by setting aside a substantial percentage of his year's profits, which he divided equally among a number of them.

John T. Cooper, formerly of the firm of Cooper & Borsheim, and who recently sold his interest to Mr. Borsheim, has gone into business for himself in the Paxton block. He is making a specialty of fine engraving.

W. B. Graves, Elkhorn, Nebr.; W. E. Burrell, of Fairbury, Nebr.; M. Barnes, Avoca, Ia.; M. Funnald, Carroll, Ia., and W. H. Myers, Clearfield, Ia., were in this city during the past week, replenishing their stocks.

Ed. Elliott, who was recently found guilty in the District Court of robbing Jos. Sonnenberg's store, was sentenced Dec. 31 to 12 years and six months imprisonment in the penitentiary by Judge Sutton. Elliott's attorney made an effort to get a new trial, but the court promptly overruled this motion.

Minneapolis and St. Paul.

The strike of jewelry workers in the Twin Cities for an eight-hour day has been declared off, the men having returned to work on the old basis.

There is considerable rumor about a number of jewelers moving further up Nicollet Ave., particularly between 8th and 9th Sts., Minneapolis, but the details are missing.

E. J. Bronson, who has been located at 2 W. Lake St., Minneapolis, for five years past, is about to move into a considerably larger store at 16 W. Lake St., in the same block. Mr. Bronson has been in business in that neighborhood for 20 years.

The Dayton Dry Goods Co. will occupy the remainder of the Dayton building, Minneapolis, this Spring. This will require Eustis Bros., who are located in that building, to find other quarters. It is supposed they will move into the next block on Nicollet Ave., between 8th and 9th Sts.

Mrs. Carrie B. King, well known in the jewelry trade and for some time in the employ of Weld & Sons, Minneapolis, left that city last week to become the wife of Warren Stillwell, New York. The wedding will take place Feb. 5. After a short

sojourn in New York the couple will make their home in Milwaukee, Wis.

David Marks, St. Paul, was recently arrested on a charge of swindling Julius Gerber, who alleged that he was given a brass watch in exchange for his own watch and \$5. Marks gave bail, demanding a jury trial, and when the case came up was not on hand, it being reported that he had gone to Chicago. His bail was declared forfeited and a bench warrant was issued for his arrest.

Philadelphia.

TRADE CONDITIONS.

With the ending of stock taking both retailer and wholesaler are looking forward to a new year as bright, if not even better, than the year just ended. The buyers of the wholesale houses have been dispatched to the east to make orders already for the Spring trade, and such is their optimism and buoyancy that orders are being made more generously at this season than ever before. The fact that there has for the year just ended been only two local failures reported and these of retailers who have not been regarded as leading members of the retail trade, is generally taken as the best possible evidence of a prosperous year all around.

Aug. F. J. Dorn, 908 Market St., Camden, N. J., is reported to have been ill since Christmas.

G. H. Homer, Wildwood, N. J., has opened a branch store on Germantown Ave., above Lehigh Ave.

William Latham, watchmaker, with William Gibbons, 49th and Market Sts., is reported to be engaged to be married.

Charles Diesinger, manufacturing jeweler, 718 Sanson St., is receiving the felicitations of the trade upon the fact that he became a grandfather last week.

Homer Vernon, Ambler, Pa., is being congratulated by his friends in the trade upon his marriage New Year's eve. Mr. Vernon left for a short honeymoon trip.

Sol. Rosenblatt, Germantown Ave., above Lehigh Ave., has given up his house and taken apartments for the Winter at the Majestic Hotel, Broad St. and Girard Ave.

Charles H. Dean, diamond broker, 717 Sanson St., is receiving the condolences of the trade owing to the death last week of his mother. Mrs. Dean was 73 years old and was buried Thursday from her home, 1524 S. 2d St.

Elmer Horn, of the material department of M. Sickles & Sons, spent the holidays with his family at a reunion at the old homestead in Easton, Pa. Ben. Krischer, of the same house, returned last week after an illness of several weeks with typhoid fever.

Harry Everline, with Edmund Desinger, casemaker, 7th and Sanson Sts., was presented last week with a gold watch and chain by the members of a tennis association with which he has long been connected, and whose success he has largely promoted. The presentation was made with formality and as a Christmas token of esteem.

Among the visitors to the trade last week were George Bowen, of Thos. H. Bowen & Co., Bridgeton, N. J.; Mrs. M. E. Smith, Smyrna, Del.; H. H. Greiner, Bethlehem, Pa.; Calvin Solliday, Lambertville, N. J.; H. L. Phillips, Smyrna, Del.; David H. Krause, North Wales, Pa.; J. Harry Halt, Mt. Holly, N. J.; C. F. Kuhn, Cape May,

N. J.; C. A. Feil, Wilmington, Del.; Lynn Thomas, of L. Thomas & Co., Wilmington, Del.; Leslie Cartwell, Wildwood, N. J.

Simon Cohen, 161 N. 8th St., has called a meeting of his creditors for this week. Mr. Cohen has for the past three years conducted a small retail store at Arch and 8th Sts., where he formerly for about 10 years previously conducted a tobacco store. Mr. Cohen explained to THE CIRCULAR-WEEKLY correspondent that his embarrassment was due largely to the fact that his wife has been seriously ill, that he has been compelled to send her away to a more congenial climate and to conduct two separate establishments. He also attributes his financial losses in a measure to the fact that he was robbed last September of valuable jewelry by thieves who entered his store. He made no report of the robbery at that time, he says, because he feared that his creditors would question him so closely that they might force him "to the wall" before the beginning of the Fall business and without an opportunity to make good his losses by holiday trade, which he confidently expected. Mr. Cohen has retained G. Brian, an attorney, to look after his interests.

The Philadelphia Jewelers' Club, at its first monthly meeting of the present year, last night, received nominations for officers to be elected at the annual meeting the first Tuesday in February. From the list of nominations made it is to be expected that there will be a material change in the management of the club. This is accounted for from the fact that the entire complexion of the club, so far as the personnel of its members is concerned, has been changed greatly in the last few years, and not because of any factional division of members. It is believed that at the February meeting almost an entire new set of officers and board of directors will be chosen. Who will be nominated no one in the trade seems to know, and there is manifested much interest in last night's meeting. The officers of the club at present are: Archie Rutherford, president; A. G. Lee, vice-president; William H. Long, treasurer, and A. J. Le Jambre, secretary. The board of governors are L. P. White, Joseph Cadwallader, John Lehman, J. Warner Hutchins, and Frederick Ruchedel. At the annual meeting to be held in February, when a vote will be taken on the nominees, arrangements will be made for the annual banquet, which will probably be held as usual on Washington's birthday anniversary.

Utica.

Henry B. Moore, a jewelry manufacturer at Genesee and Liberty Sts., has sold out to E. C. Milgate. Mr. Moore will assume charge of a brick making company conducted by his father-in-law, the late John Doyle.

Samuel Orbach, the local jeweler who disappeared because of irregularities in connection with his failure, was indicted for perjury in swearing falsely to a bail bond. His son-in-law, Morris Zucker, of New York, put up \$1,500 in cash bail for Orbach's appearance for trial. The case was called in county court this week, but Orbach failed to show up, and the cash bail was ordered paid to the county treasurer.

Improved Ides Pattern Mainspring Winder

of superior quality, aluminum heads to reduce weight. 3 Arbors (interchangeable) to take all sizes of mainspring.

Price, each, \$1.50

No. 114.

No. 114 Set of 10 Punches in metal box—chiefly for reducing canons of hour hands.

Price, 60c.

No. 115 Set of 12 Punches in metal case suitable for staking escape wheels (6 flat face, 6 round face.)

Price, 60c.

No. 116 Set of 12, same as above, but all flat face. Chiefly for driving cylinders.

Price, 60c.

Nos. 115 and 116.

“National” Watchmaker’s Eye Glass

Slanting design of frame is most desirable, as it is very comfortable and easy to hold; further it shuts out the light from the side. Perforations near the lens will prevent lens from sweating.

Prices: Focus 1", 50c.
1½", 45c.
2", 40c.
2½ to 5", 35c.
