38th Year.

WEDNESDAY, NOVEMBER 7, 1906.

Vol. LIII. No. 14.

Salient Pieces of the Beautiful Silver Service for the Armored Cruiser "Tennessee."

(See Text on Page 49.)

ALVIN SILVER

 OUR DEPOSIT WARE LINE is larger and more artistic this year than ever before. Jewelers who are looking for artistic effects in Deposit Ware and at prices that will ensure a ready sale, would do well to see our line.

ALVIN M'F'G CO.
Silversmiths, New York

Fahys

**Fahys "Permanent"
Gold Filled Case**

On account of the high karat and liberal amount of gold used in Fahys Permanent Cases, the finish and appearance are more like that of fine solid gold cases than any other filled case on the market.

JOSEPH FAHYS & CO.

Fahys Cases can be obtained from any of the leading Jobbers.

YOU KNOW WHERE YOU ARE

You may walk this street in absolute safety day or night.

We guarantee you against overcharging or misrepresentation here. You can be sure, if you purchase, you are getting just what you think you are buying.

Warning to the Trade!

Retailers are being called upon by a man who is selling twenty-one chains on a cloth for \$18, with swivels stamped "S. O. B. & Co.," and with a duplicate tag of ours bearing our trade-mark, attached to same. The chains are nothing more or less than brass shaded over, and will not stand acid for a single moment.

Jewelers with any experience ought to be able to discover the difference between a finished article and a rotten one.

Anyone who has been swindled by this man will please notify our house, as we want all the evidence possible, and we will do the rest.

Localities where goods have been disposed of are Pittsburg, Allegheny, McKeesport and surrounding towns.

We have two chains now in our possession that were sold by this man.

S. O. BIGNEY & CO.

We give you below an exact copy of an assay of chains manufactured by the leading chain makers of the United States.

1-10 GOLD FILLED WATCH CHAINS, MINUS BAR AND SWIVEL.

| Number | Gross Weight | | Fineness Gold 1000ths | Value | Maker | Chain Number | Cost |

The REPAIRING

END OF YOUR BUSINESS IS THE
MOST IMPORTANT PART OF IT

More people come into your store to leave work than to purchase goods.

Almost every one of your good customers became so through your repair department.

Progressive jewelers know this and concentrate their efforts on the repair department of their business. They give it the most prominent place in their stores; they emphasize it in all their advertisements; they keep themselves and their employes thoroughly informed on the costs of all kinds of work, new ideas and methods; they are courteous and accommodating to repair customers; have all work ready when promised; and do only such work at home as they can do well.

They send all the rest to us.

We devote our entire time, energy, capital, and twenty-five years' experience to this important branch of the jewelry business; employ and educate the best help that can be obtained; systematize and inspect the work, and use every modern method to produce the best work promptly at reasonable prices.

It is to your interest to do business with us, it is to our interest to have you.

Let us work together.

FILLED versus SOLID WATCH CASES

IT IS ADMITTED, of course, that a Solid Case is worth more intrinsically than a Gold Filled one. The question is, "Does the former necessarily possess greater *practical wearing qualities?*"

The Wadsworth "PERMANENT"—Worthy of Its Name

QUERY:

Is not the finest type of Filled Case as capable of resisting the ordinary surface wear as if it were solid gold all through? If so, what a saving in cost! The WADSWORTH "PERMANENT" CASE answers these questions in favor of the best type of Filled Case. Nor are consummate style, form and finish lacking. Attractive prices.

Dueber

is the name most intimately known to the Watch Trade of the United States as associated with the Watch Case industry. The name "Dueber" on any Watch Case is an absolute guarantee of good quality, artistic conception and fine workmanship.

Hampden

stands for what is peerless in American Watch Movements. For twenty-five years the name has borne an unrivaled reputation, and the Hampden high-grade movement has been a standard for imitators to work from.

Watches

are an essential part of every retail jeweler's stock, and to have the right kind of watches should be the care of every dealer. The more consideration given to this subject the more sure are Dueber-Hampden Watches to be chosen.

The W. J. JOHNSTON COMPANY

Fifth Avenue and Market Street, Pittsburgh, Pa.

Talent, Energy and Progression

are the qualities necessary to achieve success in this strenuous age

¶ The followers of the "let well enough alone" policy are living in the past and become the victims of the ambitious, hustling competitors who, looking into the future, constantly go forward.

¶ The forward pace in business is made more easy and quick by selling the right kind of goods; goods that are satisfying in quality and value and that add to the reputation of the merchant.

¶ *We offer you goods that have all the requisites necessary to please and satisfy your customers, that equal in value the cost, and will never mar your reputation from being associated with.*

Manufacturers of

High Grade Hair Brushes

and Artistic Merchandise for the TOILET TABLE.

We solicit your inspection of matched sets in color and figure, beautiful in design, as well as articles for use.

In addition to many hundred styles of Hair Brushes, we make the necessary articles to completely "fit up" the highest quality of Leather Bags and Suit Cases.

“HOWARD'S QUALITY”

Silver Deposit Ware

THE ever-increasing popularity of Silver Deposit Ware leads the Whiting Company to direct particular attention to the attractive and very complete line now shown by them at prices which will, on examination, be found to compare most favorably with those demanded for articles of a similar character but of markedly inferior quality.

¶ As the accompanying illustrations will serve to indicate, this artistic ware is notable for the markedly decorative effect which it insures at a comparatively moderate cost.

¶ At the same time it may be pointed out that while these particular examples shown are suggestive of one of its most effective applications, the Deposit process can with equal fitness be adapted to every desirable form of ceramic or glass ware, thus very materially widening the range of its utility.

¶ Among the articles in this ware offered by the Whiting Company, complete, are

Tea and Coffee Services.
Liqueur Sets.
Sherbet and Champagne Cups.
Whiskey Jugs and Bottles.
Cock-tail Glasses.
Lemonade Glasses.
Claret and Cordial Glasses.
High-Ball Glasses.

NOVEMBER

Third of the year's business, practically, will have to be crowded into the period between now and Christmas.

It is the time of all times to make your strongest bid for trade in all lines.

When you talk or display watch chains, it's certain that the strongest appeal for business can be made with SIMMONS CHAINS.

You can confidently invite comparison of the Simmons patterns, Simmons style and Simmons quality, with any other make of chains shown elsewhere. They are goods that you can push with full assurance that your efforts will be well repaid.

C. F. RUMPP & SONS, Philadelphia, Pa.

We all have a goal we are striving to reach--"SUCCESS"

For the jeweler it means essentially the confidence, good-will and esteem of his trade. To establish and maintain same, it is necessary that he have goods on which he can rely fully in every respect; and which when bought by his customer, will give permanent satisfaction. Our lines, marked with the "Rose" trade-mark, are of exactly that character. Our established reputation of over 40 years is back of same, and our large list of satisfied customers is ample proof of the reliability of our assertions.

It is high time that your stock was replete with "Sellers"; we are ready now, as always, to supply the demand. Everything in the line of **Diamonds, Watches and Gold Jewelry.**

Jewelers! School Seals are Popular.

Seals are very popular, and we show here only a few of the many made for the different schools last year.

For a State School or University no pin would be more appropriate than one with the Coat of Arms of the State in the center. If the school has no official seal, let us make a pin for you showing the characteristics of this design. If you do not care to have pin made in either of these ways, substitute the year and class initials and have the class motto in the circle.

We make seals in two sizes and three different ways, as you will see by the illustrations. Advise us regarding your wishes, stating quality and quantity desired, and we will be pleased to have prepared a colored sketch embodying your ideas, and forward with prices.

Send for our new catalog of Flag and Class pins. You can make more money handling Bastian's than any other. Special designs and estimates free of charge.

COMBS
THAT INVITE
COMPARISON

COMPETITION ceases to be dreaded where the appeal is one of distinctive quality. The fact that a dealer may have bought elsewhere does not deter him when he sees these goods — he simply buys again. The styles are convincing.

The features embodied in these Combs are the result of long experience in a specialized line, which nicely gauges discriminating demand.

New shapes and rich effects. Happy combinations with pearls and gem settings. A delight to womankind.

Another Appreciation of the Work of René Lalique.

(Translated and abstracted expressly for THE JEWELERS' CIRCULAR—WEEKLY from *Art et Decoration*.)

It is of the utmost importance that a jeweled ornament should be becoming to its wearer, and therefore it is that women of wealth are lending themselves to the habit of ordering such ornaments made to fit themselves, and no one else. Its destination known, the jeweler will remember that it is imperative a jewel should be a jewel, that it should have its habitual form, the one which is traditional to it—that is to say, a ring must be a ring, or, in other words, a hoop encircling a finger; a bracelet a bracelet, with the round form of the wrist; a necklace a necklace, with the shape of the neck; that a diadem should set well on the forehead, on the hair, and should follow the lines of the head; while, of course, a watch must have the circular form of the dial.

Decoration should not change this primary form, but should adapt itself to it. The more strictly rigorous the adaptation is the better will the end and aim of the article be achieved. No one understands

cover is arranged as a frame for a fish. This is an image of nature which is altogether surprising; in the creature shown one may almost say that there is the spark of life. The angry fish struggles in the small space in which it is confined exactly as if taken in a fisherman's net. Its terri-

ble jaws are open, its big eye frightened, its muscular body distorted, its scales up-standing, its gills distended—it is a living representation of impotent rage. It is a monster bending itself to the service of art; but, notwithstanding the great animation depicted, the artist never loses sight of the exact representation of form. This remains precise through the most thrilling motions; with his scientific knowledge of weights and lines the artist displays the fleeting expressions of the individuals of the animal world, whether insects, fish, reptiles or birds. He gives also to plants their expression, their vigor and their delicacy.

CORSAGE ORNAMENT OF ENGRAVED CRYSTAL AND ENAMELED GOLD.

NECKLACE OF CARVED CRYSTAL SET WITH DIAMONDS.

more thoroughly than René Lalique this fundamental principle of his art. At the Autumn Salon Mr. Lalique exhibited insects which are living jewelry. The fluttering of their wings, their feverish agitation, one might almost say their buzzing, are examples of a most peculiar art, entirely different, for instance, from the motionless art of Egypt which represented its scarabees and its sphinxes in a form of gravity, peacefulness, serenity, almost as if embalmed. The modern artist who may hold to the remote tradition of the Egyptian sculptors from a regard for its truth has also learned from the masters of Japan the secret of giving life to the world of waters, of earth and of the air. A small masterpiece by Lalique is a shell box whose loose

Other shell boxes done by Lalique represent beautiful insects fluttering among flowers. Fish are the principal ornaments of a waist buckle closed by an emerald. These fish, engraved and modeled in a crystal representing the peaceful lapping of the waves, seem to dart from behind sea weeds whose greenish hue give them the very aspect of wet plants dragged on by the current. This is a harmony in white and green which is quite beautiful. Again, another harmony is in yellow and gold, a neck pendant in topazes surrounded by sheaves of ripe wheat. And still another belt buckle has fish and sea weeds which a group of men are taking away.

An exquisite necklace is made of small crystal vases upon which are engraved the figures of women in the style of the nymphs and naiads of the Renaissance. From these little vases spring forth bent branches of eucalyptus set with diamonds. This is an all-white harmony, and the grace of the composition is perfect. Necklaces are necessary for women, and Mr. Lalique has again by his ingenuity succeeded in rendering

CORSAGE JEWEL OF CARVED CRYSTAL SET WITH EMERALD.

IF you are a wide-awake retail jeweler, you have been preparing some weeks back for the greatest Xmas business in the history of the jewelry trade.

The year 1906 is a year of optimists, and has no room for pessimists. Are you in the right class?

Referring to your stock of gold jewelry, have you any weak spots in it? Are your lines of rings for man, woman and child; lockets, cuff buttons, shirt studs, vest buttons, as large and complete as they should be for a big business?

If not, may we strengthen these lines through our travelers, the Larter Gold Book or Uncle Sam's Post Office?

them fascinating by the infinite care of details, the witchery of the combined whole. But how many other necklaces has he prepared for the slaves of fashion! He knows well how best to obtain effect from pale gold and greenish gold. He knows in what doses the colors should be given, how to place pearls, and disposes with prudent fancy white geraniums, leaves, violets, the tiny gray-blue field flowrets with golden heads like little stars. He knows, too, how to give the impression of a flower that is fading, its detached leaves just on the point of falling.

He is fond of reptiles as well, serpents that he fairly causes to hiss in a woman's hair. He would doubtless have been delighted to dress the head of a Gorgon; but if the use of a Medusa may still be allowed

GOLD ENAMEL PENDANT WITH TOPAZES.

in our day it should certainly be in a modified form.

René Lalique is not only a jeweler, he is a goldsmith, a designer and maker of all these articles; therefore, if he used his reptiles to frame a mirror he would compel them to assume their necessary rigid curves and lines; and then, he may leave his favorite snakes to favor again his winged creatures who may lend their fairy-like beauty to a jewel, or to a chandelier.

Let us praise Lalique for having honored in jewels all that animal world which had been about neglected by artists. Search as we may, we will find few examples of this observation of the naturalist in sculpture and in the object. There are animals in Gothic art—birds, fish, crabs, seen on cathedral doors; there are animals on the dishes of Bernard de Palissy. Sculpture has represented horses, lions, dogs. But these exceptions do not make the rule.

The true masters of Lalique are the Japanese artists, for neither have the Japanese disdained the animal. They see everything in animated nature; they have captured not only the bird's flight, but that of the winged insect, and even the creatures that crawl along the earth, and hide under the leaf of a weed—the smallest, most obscure things, the tiniest fragments visible in the immense

universe. The living poetry by which the Japanese have represented the animal world is an unparalleled novelty in art. With what surprising intelligence they have produced all sorts of birds, walking on the ground, springing from branch to branch, flying in the air; and fishes swimming between waters, or ascending the foam of a waterfall; and the butterflies and the wasps and other winged things describing by slow or rapid circles their flight around flowers, and all and each of the animals that figure in the nomenclature of natural history. Japanese art in itself, in respect to animals, is a complete natural history, and the living animalistic creatures of Japan are at once incomparable works of art and documents of absolute truth.

Let us congratulate Lalique upon having understood this instruction, which is not comprehended by many, as we must confess.

CORSAGE JEWEL OF CARVED IVORY, ENGRAVED CRYSTAL AND ENAMEL.

The eyes of westerners are not yet opened to this great truth, and we continually hear the opinion expressed that the drawings and sculptures of Japan are bizarre works, chimerical fancies, a world upside down, an art of fans and screens, etc. But Lalique has known how to read these pages of living reality. Like the Japanese, he has demanded of nature her secrets, and nature has answered him, as it answers all who know how to question her. That answer is ever the same: See and understand! All that lives is perforce constituted for living. All forms, all motions, have their logic, are in harmony with an environment, demand a style of action. Now observe that logic and obtain that harmony. The expressions are infinite in number, as each creature has its own. All resemble, but all differ. There is absolute unity, but variety always and everywhere. Do not fear to lack subjects for reflection and observation. The laboratory of life works without cessation, and not the existence of any one man can exhaust the productions of nature's labor. Art has never yet done more than skim across nature. The immensity, tumultuous in movement, quivering with light, unceasingly creating phenomenal forms, has been as yet hardly perceived by the wandering eyes of artists, and these artists are great in having seized only a little of what exists, a little of what they have felt. Imitate them!

Incontestably Lalique has rejuvenated the jeweler's art. He created a style in his first period by his objects with delicate lines, his frail flowers, and then as his observation became keener his execution became more supple. He has been imitated on every hand, as was to be expected. At every Salon where he exhibits his case always awakens curiosity and admiration. He deserves the interest aroused by his productions not only because of the talent he displays in the composition and the arrangement of his articles, but also by his faculty of varying them unceasingly. And while others are trying to imitate Lalique's first style, he is ever on the research for something different. A few years ago at the Salon of French artists there was a collection of diadems, buckles, rings, etc., in which opals, mother-of-pearl and pale gold made a beautiful symphony in white, dis-

playing the originality of the artist most incontestably.

Nature is inexhaustible, and each artist can discover for himself forms unsuspected by others. Success is certain to be achieved when the artist, so to speak, can cause us to forget the matter used; when gold and enamel only show us the leaf and the flower; when the pearl and the brilliant suggest the ripe grain, the budding flower, the drop of dew; and when the glass and the crystal evoke the water of current streams or its congelation into ice. Thus precious stones as well as ordinary stones, in themselves as beautiful as rare gems, are compelled, by the skilled fingers which handle them, to hide their luxurious and costly significance in their exquisite representation of the wonderful and admired fragments of Eternal Matter.

Coral is principally cut into beads, and buttons on settings, cut *en cabochon*, and also in leaves, flowers and other shapes for making the carved ornaments seen in Naples and Genoa. It is made into charms, worn in bunches in some countries, which are supposed to dissipate the influence of the "evil eye," and occasionally appears in cameos. The cutting and working of coral occupies a considerable number of persons, the three most important factories being at Genoa and Leghorn, Italy, and Marseilles, France.

The Irish International Exhibition.

IRELAND'S forthcoming International Exhibition, which will be open from May to October, 1907, will be the biggest undertaking of its kind ever organized by Irishmen, completely dwarfing any of the expositions previously held. Work on the exhibit buildings has gone on so rapidly that they will be finished some months before the day set for opening, May 1, 1907. Machinery Hall is already completed. It is believed that 3,000,000 people will attend the exposition during the time it is open.

Foreign countries, recognizing the opportunities which the exposition will afford, are making active preparations to send exhibits. France is preparing a French section which will equal that at the exposition at Liege; Russia has appointed an agent to make necessary arrangements for a large exhibit; Italy, Canada and Australia and other countries will be well represented.

Exhibits will be classified in 19 sections, special sections being devoted to fine arts, arts and crafts, liberal arts and manufactures.

Opposite the main entrance will be the principal building, consisting of a central octagonal court, 215 feet in diameter, surrounded by a corridor capable of accommodating 7,000 people. Around this will be grouped the pavilions for the British, foreign and colonial exhibits. The machinery building will be 900 by 100 feet, giving a floor area of 92,000 square feet. The fine art gallery, one of the features of the exposition, will have 30,000 square feet, and several other buildings ranging from 10,000 to 50,000 square feet are in course of erection. Altogether, the exposition will cover 52 acres of ground.

The executive committee expects to obtain from the various railroads, steamship companies, etc., special terms for the conveyance of goods to and from the exposition. Motor power will be supplied to exhibitors at a moderate price. The charge for space will be \$1 per square foot, with a minimum of \$25. A sliding scale of rebates on space rents will be allowed in order to accommodate large exhibitors. Forms of application for space and power may be obtained from the secretary, James Shanks, Ballsbridge, Dublin, Ireland.

Tourmaline in Colorado.

LESS than two years ago Tourmaline gems were discovered at a place near the top of the famous Royal Gorge, near Canon City, Colo. Since that time mining for these beautiful gems has been carried on in that neighborhood with comparatively successful results. Many beautiful crystals have been found, the predominant colors being pink and green, the form of crystals comparing very nearly with those of California. The Denver lapidists have taken up the cutting and polishing of these gems, and the near future promises much for Colorado in the way of native gems that are really gems.

One of the mines which has been most extensively worked is owned by C. A. Beghtol & Co., Canon City, Colo. Mr. Beghtol has interested Denver jewelers in the product of his mine.

DIAMONDS

SIZES *and* PRICES *for* USUAL DEMANDS.
NOTABLE STONES, ALSO
FULL ASSORTMENT.

WHILE THIS HOUSE has long been identified with the importation of stones notable for their size, beauty and value, the fullest provision is also made to supply the more usual and ordinary demands of Jewelers for this, the most important of gems. The sale of exceptionally large and expensive diamonds is occasional; the sale of average sizes and shapes is constant. Whatever your requirements may be, it will be to your advantage to send to us.

We can and will make prices that will attract you.

170 BROADWAY

Beautiful Silver Service Presented by the State of Tennessee to the United States Cruiser Tennessee.

ON the front cover of this issue are illustrated some of the salient pieces of the silver service to be presented by the State of Tennessee to the armored cruiser of the same name. The set includes the following articles: A punch bowl, punch ladle, 12 punch cups, tray for punch bowl, centerpiece, two candelabra, meat dish, fish dish, two entrée dishes, two double vegetable dishes.

Chaste simplicity is the chief characteristic of the set, both in its modeling and ornamentation, every article being fashioned in a strict accordance with the purposes for which it is intended. The coat-of-arms of Tennessee and the seal of the navy are etched on every piece.

The following etchings, patriots and scenes appear on the service: State capital, Hermitage, Andrew Jackson, James K. Polk, John Sevier, David G. Farragut, N. B. Forrest, M. F. Maury, battle of New Orleans, "First Tennessee" in the Philippines, battle of King's Mountain, battle of Cerro Gordo, Lookout Mountain scene, Tennessee River scene.

These etchings are placed on the 12-gallon punch bowl and the centerpiece. The coat-of-arms of the State is represented in festoons on the face of the bowl, while in panels on either side of the coat-of-arms are the portraits of President Jackson and President Polk, the two chief executives given to the country by this State. In adjoining panels are shown the State capitol and the hermitage. Other etchings are on the reverse. A picture of the cruiser, to which the service is to be presented, appears on the tray.

In ornamenting the centerpiece a similar plan has been followed, the coat-of-arms being in the center, while historical scenes are shown in panels. On each piece is the inscription: "Presented by the State of Tennessee."

At the last session of the Tennessee legislature \$5,000 was appropriated for the purchase of the service. Governor John I. Cox was chairman of the committee authorized to purchase and select the service. Many designs were submitted, and the order was given to the Gray & Dudley Hardware Co., Nashville, Tenn., on a design submitted by the Whiting Mfg. Co., New York, which company has since made the set. The service, placed in a beautiful display case, was recently exhibited in the Nashville concern's store, and was greatly admired by many people, including visitors from various parts of the State who were in the city during the week of the State Fair.

The vessels of the United States Navy whose presentation services have been illustrated and described in THE CIRCULAR-WEEKLY, and the dates of the issues in which these illustrations and descriptions appeared from time to time, are as follows:

Progress in Movement to Establish the Metric Carat.

LUDWIG SCHROEDER, who delivered an address at the convention in Eisenach upon the metric carat, and whose remarks were received with approval, sent reports of the proceedings to the president of the International Bureau of Weights and Measures, Professor W. Förster, of Berlin, and to his representative, Ch. Ed. Guillaume, of Sèvres, says the *Deutsche Goldschmiede Zeitung*, and received from these gentlemen the letters which we herewith give to our readers.

Professor Förster writes:

"I am extremely glad to hear of the resolutions passed by the convention in regard to the metric carat. In my opinion, the next step to be taken in Germany is for you to appeal, on behalf of the association, to the Secretary of the Interior, Count Posadowsky, giving full details of the development of the matter so far, and asking that it shall be carried forward, both in German legislation and in its international relations. I wish very much that by Oct. 1, when it will be my duty to visit the International Bureau of Weights and Measures, at Sèvres, I might be in possession of a communication on the subject, in order to direct the necessary action on the part of the committee there. At the general conference next year, definite action can then be taken, with the co-operation of the diplomatic and scientific delegates of all countries."

Ch. Ed. Guillaume, of Sèvres, who was the first to propose the introduction of the metric carat, writes:

"I thank you very much for the good news that the convention in Eisenach has expressed itself in favor of the metric carat. This is a great step in advance, for it is the first decisive action which has been taken

on the subject by a national assembly. Several of our syndicates have officially expressed decided wishes in favor of the metric carat, but these have not, of course, the importance attaching to the voice of the convention, which takes in all the interested persons of a great country. The steps decided upon, in respect of appealing to the government, will no doubt determine the matter.

"I do not share your apprehensions that our national self-love may be wounded, in the case in point. In a conversation which I had last June with M. Falco, president of the association of diamond, pearl and precious stone merchants, he confirmed orally his previous written declaration in favor of the metric carat. It appears that the interested persons in France will eagerly accept the new carat, as soon as a law is enacted forbidding the use of the old one. But they are afraid that if it were to be introduced on one side only, without international agreement, both the home and foreign trade in gems would have, for a time, as many added inconveniences as advantages. If the countries chiefly interested—that is, France, Germany, England, Belgium, Holland and the United States—would enter upon the reform simultaneously the French would consider it a great advance. Far from their being jealous of the German convention for having taken the first step, they would embrace the reform with enthusiasm, and do everything in their power to carry it out in France. As I have so far conducted the negotiations with M. Falco and with M. Aucoc, president of the association of Parisian goldsmiths, I think it may be well for me to continue them, and keep you informed of the course of events, so that you may take the necessary steps at the right time. I shall have the French convention in mind.

"It seems to me, however, a matter of pressing necessity to appeal to the associations in Amsterdam and Antwerp, to whom I wrote at the beginning of the year. The president of the latter answered my communication, and showed much interest in the matter, but the Amsterdam people seem to be indifferent. At all events, the resolutions passed in France and Germany might be communicated to them, and the wish expressed that the reform might be introduced simultaneously by all countries."

Both of these letters are in the hands of the committee of the convention, who will pursue the matter in accord with the instructions of the convention.

The Attleboro National Bank, the stockholders of which are all connected with the jewelry trade of the Attleboros, have received notice that it must discontinue the savings department recently instituted. The notice comes from the State officials, who claim that it is a violation of the State laws. It is anticipated that the bank will disregard the notice and continue to conduct the business, taking the ground that their institution is governed by national and not State laws. A refusal to obey the mandate of the State officials will mean that Attorney General Dana Malone will proceed to take action against the bank and a test case will result.

PARIS

The World's Market for Precious Stones

UNIQUE in name and methods, "Gemfinder" offers his services as a Commission Merchant for the purchase of Precious Stones in the European markets.

An American, son of a manufacturing jeweler, born and brought up in New York, with 28 years' experience in the line, "Gemfinder" possesses unequalled advantages. His knowledge of the requirements of the American market is only equalled, if not surpassed, by his judgment of values. He saves the small commission charged the buyer many times over.

Everyone who has experienced the difficulties of buying in Europe knows that "Gemfinder" can save time as well as money.

By refusing to accept anything from the seller, he is independent; and, on account of his long residence in ^{the}Paris, knows what to avoid.

Remember, you pay "Gemfinder" his commission. He works for you, not for the seller.

"GEMFINDER"

FREDERICK A. JEANNE

5 SQUARE DE L'OPERA, PARIS, FRANCE

LONDON: Chancery Lane Safe Deposits. NEW YORK: Maiden Lane Safe Deposit Co.

"Gemfinder" is now in New York, and will remain until November 15, returning then to Paris.

Frank Kelley Arrested for Robbing Binghamton, N. Y., Jeweler, Convicted and Sentenced.

BINGHAMTON, N. Y., Nov. 1.—Frank Kelley, the suspected diamond thief, who has been in jail here since last May, has in the past week been tried, convicted and sentenced on a charge of grand larceny. Kelley's trial took place Tuesday in the Supreme Court before Justice Sewell, who to-day sentenced Kelley to not less than three years and 10 months and not more than four years and 10 months in the State prison. The prisoner's attorney, Frank S. O'Neill, asked a new trial, which was denied, and then, after the sentence, obtained a stay of execution until Saturday.

Kelley, it will be remembered, is accused of taking a diamond ring from the store of

FRANK KELLEY, CONVICTED OF LARCENY.

Judson S. Newing, 86 Court St., early last May. At the time of the theft alleged, he had called at Mr. Newing's store in company with a woman known as Mary Hennessey and Mary Mack. The two had been looking at bracelets and Mr. Newing, becoming suspicious, called them to the attention of the chief of police, who happened to come in, and the latter caused their arrest. Kelley was indicted but his companion was released. She was, however, immediately rearrested on the charge of stealing a diamond from J. A. Merrill & Co., of Portland, Me., and was indicted on that charge and released under a bail bond of \$4,000.

The trial of Kelley took two days and was bitterly fought all the way through. The case went to the jury at four o'clock Tuesday and for a long time the body could not agree, but after receiving additional instructions from the judge handed in a verdict of guilty six and one-half hours later. The case of Mary Hennessey was called, but she did not appear and the bond was forfeited despite the fact that the attorney said she was on the way to this city. She arrived here at midnight and this morning went before Justice Sewell and from there to the jail. It is probable that the forfeiture of her bond will be canceled.

Kelley, who is about 38 years old, is five feet 4½ inches high, weighs 120 pounds,

has brown hair, blue eyes and a sandy mustache, good teeth, small ears and a ruddy complexion. It is alleged that he had been previously arrested, but this he denies.

Mary Hennessey is 28 years old, five feet three inches high, weighs about 130 pounds, has brown hair and blue eyes. She formerly resided at Kankakee, Ill.

Clocks, Watches, Jewelry and Kindred Lines Exported from New York.

WASHINGTON, D. C., Oct. 31.—The following were the exports of jewelry, silverware and optical goods, clocks, watches and kindred lines from the Port of New York for the week just ended:

Basle: 1 case jewelry, \$100.
 Berlin: 14 cases clocks, \$488.
 Bombay: 1 case jewelry, \$5,550; 33 cases clocks, \$446.
 Bremen: 1 case jewelry, \$500; 7 packages plated ware, \$1,499.
 Buenos Ayres: 244 cases clocks, \$6,181.
 Calcutta: 1 package optical goods, \$266.
 Cartagena: 1 case watches, \$119.
 Chaux de Fonds: 2 cases watches, \$100.
 Corinto: 276 packages cartridges and ammunition, \$5,253; 54 packages firearms, \$18,000.
 Colon: 3 cases clocks, \$101.
 Genoa: 14 cases clocks, \$670.
 Glasgow: 80 cases clocks, \$1,738; 1 package plated ware, \$175.
 Hamburg: 14 cases clocks, \$214; 4 cases watches, \$5,076; 1 case jewelry, \$500; 1 package optical goods, \$300; 1 case watches, \$1,500.
 Havana: 1 package plated ware, \$198.
 Havre: 4 packages scopes and views, \$124; 1 case silverware, \$300; 3 cases jewelry, \$653.
 Kingston: 13 cases clocks, \$162; 3 cases watches, \$242.
 La Paz: 4 cases watches, \$108.
 Liverpool: 2 cases silverware, \$1,650; 6 cases watches, \$350; 2 cases jewelry, \$1,000; 9 cases clocks, \$315; 22 packages jewelers' ashes, \$5,500; 62 cases clocks, \$1,268; 1 package jewelers' ashes, \$500.
 London: 288 cases clocks, \$3,707; 1 case jewelers' goods, \$101; 74 cases clocks, \$1,439.
 Manchester: 1 package plated ware, \$174.
 Melbourne: 78 cases clocks, \$1,324; 1 package optical goods, \$194; 14 packages plated ware, \$1,356; 19 cases clocks, \$2,100.
 Para: 4 cases jewelry, \$522; 2 cases watches, \$182.
 Rotterdam: 6 packages plated ware, \$242.
 St. Johns: 13 cases clocks, \$327.
 Stockholm: 4 cases clocks, \$185.
 Vera Cruz: 37 cases clocks, \$509.
 Wellington: 13 cases clocks, \$197.
 Yokobama: 2 cases silverware, \$800; 45 packages clock springs, \$2,000.

Death of W. B. Cooley.

W. B. Cooley, a traveling salesman who for the last three years had been with Robt. H. Ingersoll & Bro., 51 Maiden Lane, and was well known in New Jersey, Delaware and Maryland, the territory he covered, was killed in the railroad wreck near Atlantic City, N. J., Sunday, Oct. 28. No report of his death reached the firm until it was learned that mileage slips taken by the conductor between Camden and Atlantic City corresponded with the book belonging to Mr. Cooley. Chas. H. Ingersoll left at once for the scene of the disaster and identified the salesman's body, returning with the remains Tuesday morning of last week.

Mr. Cooley was born at Milford, N. J., in 1868. For five years he was a coal dealer at Newark, N. J., and later became manager of Robt. H. Ingersoll's sporting goods store in 42d St., New York. About three years ago he became a traveling salesman for the wholesale business of Mr. Ingersoll. He was a general favorite at the New York office, and his jovial, pleasant ways won for

him friends wherever he went. Deceased is survived by a widow and one brother.

Funeral services were held from his late home in East Orange, N. J., at 8 p. m., Thursday. Interment took place at Milford, Friday, Nov. 2.

Coincidence Results in Capture of Pittsburg Jewelry Salesman Accused of Larceny.

PITTSBURG, Nov. 3.—Detective Louis Leff to-night arrived in Pittsburg from New York, bringing with him Bango S. Jaffe, who is wanted here to answer the charge of stealing diamonds, valued at \$5,000, from the Castleberg Jewelry Co., of 408 Smithfield St., by whom he was formerly employed, as previously told in THE CIRCULAR-WEEKLY.

Jaffe's arrest was brought about in a very peculiar manner. It appears that there is another Jaffe in Pittsburg of the same initials, but who is no relation or acquaintance or connection of the accused. Both men dealt with a New York silversmith, according to Superintendent of Police McQuaide, and the mail to these men went wrong, the Pittsburg Jaffe securing a letter intended for the other. This was a cue for the police, and the general delivery window at New York was watched, with the result that Jaffe was finally arrested.

It is now said that action probably will be begun in this city to recover certain goods from pawnbrokers, with whom Jaffe had dealt. Many articles have been recovered, but it is said that some of the pawnbrokers refuse to give up the alleged stolen property. Charges of larceny have been entered against Jaffe before Magistrate Brady, and it is expected that he will be given a speedy trial.

The publication of Jaffe's photograph in THE CIRCULAR-WEEKLY resulted in the police department of this city receiving a large number of letters from jewelers in different States, especially in Ohio, giving the police information about certain persons, whom they thought might be the man. Of course, the police considered all of the suggestions and were glad to hear from the persons in question. Jaffe, however, had been located in New York several days before his arrest, although at one time it was regarded doubtful if he would be captured there.

Death of G. H. Hulbert.

MIDDLETOWN, Conn., Nov. 2.—G. H. Hulbert, who for many years was president of the old Middletown Silver Plate Co., and one of the leading citizens of this city, died about midnight yesterday, of internal hemorrhages, at his boarding place on College St. Mr. Hulbert suffered financial losses about 15 years ago, and since that time his mind has been affected.

The deceased had resided here for a number of years past, being provided for by a small annual income. About a year ago he suffered a shock, from which he recovered, and for several months he was about as usual. His wife died about six months ago. He leaves two sons, George and Russell, both residents of this State.

The C. F. Dunbar Co., Wausau, Wis., has renovated the interior of its store.

Pittsburg Police Arrest Man Charged With Check Swindling.

PITTSBURG, Pa., Nov. 1.—A man whom the police say is a clever and slick swindler who gave his name as E. E. Clark was arrested yesterday in this city and locked up in Central Police Station pending a thorough investigation. Clark was taken up on the charge that he had swindled a local bank out of \$200. On his person was found a number of pawn tickets, issued principally by Chicago pawnshops, which lead to the belief that Clark may have swindled jewelers, although nothing to this effect is known by the police as yet.

Clark has been photographed and his picture sent to all important cities in the hope that something more will be learned

E. E. CLARK, ARRESTED AT PITTSBURG.

of him. Two women with him, who gave the names of Miss Daisy Robinson and Miss Nellie Howard, were also arrested, but discharged from custody to-day, as nothing could be charged against them.

Clark entered the Merchants' Savings & Trust Co. in Fifth Ave. and, exhibiting a check for \$10,000, made to his order by the Green Joyce Co., Columbus, O., payable at the New First National Bank, endeavored to open an account. After a conversation with the bank cashier Clark walked around to the teller and presented a check for \$500 drawn on the same Columbus bank, made payable to Clark and signed by the Columbus firm. The teller handed out Clark \$200 in cash, placing \$300 to his credit in an account which he opened. Then Clark went to a store and endeavored to pass a check for \$30.

In the meantime, the local bank had called up the Columbus bank on the telephone and found that Clark had no standing there and that the check was worthless. The storekeeper, in the meantime, telephoned the Pittsburg bank asking for information about Clark, and the dealer was requested to hold the man until officers could arrive. When they came upon the scene Clark drew a pistol and threatened to shoot his captors.

Jewelers in various parts of the country have recently been swindled by a man who

gave checks on local banks after starting accounts with a forged check or draft. If any of the victims recognize the picture of the Pittsburg prisoner, they are requested to communicate directly with the Pittsburg police

PITTSBURG, Pa., Nov. 2.—A letter was received to-day by Supt. of Police Thomas A. McQuaide, from the police at Columbus, O., stating that the photograph of E. E. Clark has been identified as that of Peter Fuller, whose picture is in the Rogues Gallery at that city. Fuller is said to have been arrested in Columbus 18 months ago for stealing a diamond.

Fuller is said to be on parole from the Mansfield Reformatory, having been sentenced there for forgery. The Pittsburg police are also anxiously awaiting to hear from other cities.

The Annual Meeting of the Illinois State Optical Society.

CHICAGO, Oct. 31.—The Illinois State Optical Society held its annual meeting at 181 W. Madison St., this city, Monday, the attendance being large and representative. After the usual business proceedings a motion put by Mr. Rose that the present members' time to put in an application for examination be extended until the next annual meeting was carried. W. E. Hueston, secretary of the A. A. O., gave an address on the advantages of affiliating with the national association, after which a motion made by A. E. Wuesteman that the Illinois Society affiliate with the national body was carried.

Prof. George H. Rogers was unanimously elected to succeed Mr. Wuesteman as president of the society. The other officers elected were: First vice-president, W. C. Sommer, Springfield; second vice-president, C. C. Burkham, Dixon; third vice-president, H. N. Meyers, De Kalb; treasurer, W. D. Turner, Chicago; secretary, O. J. Halbe, Chicago. The members of the executive board are: M. T. Hazlett, Dupue; J. M. Phar, Mount Carmel; J. E. Carlson, La Salle; A. E. Cooper, Chicago; W. A. Foley, Chicago Heights, and J. W. Lundstrom, Joliet. A. E. Wuesteman was elected a member of the board of regents to serve for three years. The board of regents recently passed the following applications for admission into the society: J. M. Dunn, Rockford, Ill.; C. C. Burkhart, Dixon, Ill.; Ford A. Smith, Sterling, Ill.; Wilmer G. Bradfield, Chicago; J. E. Carlson, La Salle, Ill.; Robt. M. Ingalls, Waukegan; J. M. Thrasher, Kewanee, Ill.; H. U. Meyers, De Kalb, Ill.

Among those who attended the meeting were: J. H. Ellis, South Bend, Ind.; T. G. Atkinson, M.D., Chicago; J. M. Thrasher, Kewanee, Ill.; J. M. Dunn, Rockford, Ill.; M. T. Hazlett, Sheffield, Ill.; H. U. Meyers, De Kalb, Ill.; Ford A. Smith, Sterling, Ill.; A. E. Cooper, Chicago; R. M. Ingalls, Waukegan, Ill.; J. M. Prockter, Chicago; A. E. Wuesteman, Champaign, Ill.; J. Rose, Chicago; E. Munson, Mendota, Ill.; J. E. Carlson, La Salle, Ill.; W. A. Foley, Chicago Heights; W. E. Hueston, Kansas City, Mo.; A. G. Larson, Chicago; Earl J. Brown, M.D., Chicago; C. C. Burkhart, Dixon, Ill.; M. H. Cohen, O. J. Halbe and George A. Rogers, Chicago.

Importers Express Opinions as to So-called Reconstructed Stones Other Than Rubies.

Speaking of customs cases involving duties on several kinds of artificial or imitation emeralds and sapphires, recently imported at New York, an importer who is in touch with recent developments predicted yesterday that none of these stones will prove to be "reconstructed," as the term is applied to rubies. He said:

"Some of these stones are doublets, made with an upper half of aquamarine, quartz or garnet, and with the lower half of colored glass. Some of the doublets are made of two pieces of precious stones with coloring matter between, as the line of junction can be plainly seen.

"While these methods are not new, yet they have been improved of late so that the stones in controversy are of a better grade than those formerly made by a similar process."

It is pointed out that these processes are all quite distinct from that of manufacturing rubies of the same composition and properties as the natural stone possesses, this operation having been described in detail in the issue of Oct. 24. There are differences of opinion, however, as to whether or not other reconstructed stones are made as well as the ruby. A prominent dealer, who recently arrived from Paris, declares that sapphires are made by exactly the same process as rubies, except with a change of the coloring principle, to bring out a blue instead of a red stone.

An authority on customs laws said: "When two pieces of real stones are put together with coloring matter between to make an imitation emerald or sapphire, the product is entitled to entry on payment of the 10 per cent. duty under the classification of precious stones advanced in value. The fact that coloring matter has been placed between two precious stones to give them the appearance another kind of a precious stone would not take them out of the precious stone class.

"A more intricate question is presented where one of the pieces is of glass. The tariff law provides a 20 per cent. duty for imitation precious stones made of glass or paste. When half of the stone is a natural product and the other half glass, the question comes whether the article is a precious stone or an imitation made of glass. The fact that the stone is usually the component material of chief value will have a bearing in the decision of the question, but other facts must also be considered."

Testimony is to be taken in the test cases in the near future before the Board of United States General Appraisers, New York.

H. E. Richardson, who recently bought the store of Frank Killgore, Caldwell, Kans., is putting in new fixtures. Mr. Killgore will remain in Caldwell the balance of the year, taking care of his optical business.

The merchants of Macon, Ga., have taken steps to prevent itinerant vendors of cheap jewelry from doing business in that place. A petition signed by many well-known business men has been sent to the City Council asking that in future no strangers be allowed sidewalk stands.

Chicago Manufacturers Win.

Striking Workmen in Jewelry Trade Vote to Go Back to Work at Nine Hours a Day.

CHICAGO, Ill., Nov. 2.—The prediction of the manufacturers that the striking workmen in the jewelry trade would come back to their work Nov. 1 has been verified despite the fact that the men, only a short time ago, voted to stay out until Jan. 1. The strike is broken and the manufacturers have won. The strike has lasted three and a half weeks and has caused considerable inconvenience in the trade in this city.

The victory is in no way a doubtful one inasmuch as the Union has officially declared the strike off. At a stormy meeting of the members of the Union Monday the majority voted that if the manufacturers would take them back in a body they would return to work on the basis of a nine-hour workday. The manufacturers, however, when the proposition was put before them refused to accede to it in full, saying that they would take back only such men as they needed, and on this arrangement the majority of the men returned to work. It is expected, however, that though some new hands have been employed by the manufacturers, practically all of the workmen will be back at the bench in a short time, inasmuch as they can all be utilized and they have all applied for their old positions individually.

Whether or not the fiasco will lead to the breaking up of the Union here or a change in the officers and management is not known at the present time. There is no doubt that the workmen are disgusted and discouraged at the outcome and most of them regret the action that they had taken.

Further Developments in the Bankruptcy of Trenor P. Judd, Syracuse, N. Y.

SYRACUSE, N. Y., Nov. 2.—John H. Burke, a local lawyer, has been appointed receiver of Trenor P. Judd, the local jeweler, who went into bankruptcy, last week, pending the appointment of a trustee. Burke's bond was fixed at \$4,000. Mr. Burke was appointed upon the application of creditors who filed the involuntary petition against Judd.

E. M. Byrne, representing Judd, and W. B. Cheney, representing the petitioning creditors, had a race to Norwich, where Judge Roy resides. Mr. Byrne had Judd's voluntary petition and a petition that he be made the temporary receiver, but Mr. Cheney reached Norwich 10 hours ahead of Mr. Byrne and secured the appointment of Mr. Burke as the temporary receiver. Both petitions will be sent to Referee Stone.

Referee Stone, of this city, to-day called the meeting of creditors of Mr. Judd. It will be held at 330 Onondaga County Savings Bank building, Nov. 19 at 11 o'clock. Mr. Burke, the temporary receiver, will probably be chosen as the trustee.

Klaus & Glousberg and other creditors were restrained from prosecuting merchandise claims in the State courts, and the sheriff was also restrained from acting in replevin proceedings.

National Monthly Import and Export Statistics.

WASHINGTON, D. C., Nov. 1.—The records of the Treasury Department contain the following comparative statistics of interest to the jewelry trade for September, 1905, and 1906, and for the nine months ended September, 1906:

Increase in Prices of Sterling Silver and Silver Plated Flat Ware.

Notices were sent out last week by the International Silver Co., advancing the prices of sterling silver flat ware, plated flat ware and all steel knives. The advances were effective Nov. 1. An officer of the company said that the advance is close to 5 per cent. on all lines of plated flat ware, except "1847 Roger Bros.," which was advanced 10 per cent. Certain lines of sterling silver flat ware were advanced to cover the recent increase in the cost of the bullion.

George W. Shiebler & Co., 5 Maiden Lane, also advanced their prices on sterling flat ware. Advances were recently declared by the Gorham Mfg. Co., Whiting Mfg. Co. and Dominick & Haff, as noted in the issue of Oct. 24. No advance in hollow ware has been announced.

Speaking of the advances one of the sterling manufacturers said: "As the bullion is costing five cents an ounce more than it did when the old scale of prices was determined and as the margin of profit on sterling flat ware is small, we have been obliged to add approximately this much to the prices. The advances have been as light as they could be made considering the increase in the cost of material and the increased cost of labor. The margin in sterling flat ware is, I believe, smaller than in any other line of silverware."

Death of Henry A. Church.

PROVIDENCE, R. I., Nov. 5.—Henry A. Church, at one time a well-known manufacturing jeweler here, although of late years identified with other interests, died at his late home on Prospect St. last Friday morning at 3 o'clock. Death resulted from a complication of diseases.

Mr. Church was the son of Peter and Sarah Church, and was born Aug. 1, 1831. He received his early education in the Lyons & Frieze School, and after leaving that institution entered the employ of his father, then with the Church, Metcalf Co. He later became a member of the firm, which was known as the H. A. & G. M. Church Co. In June, 1895, he retired from

the jewelry manufacturing business and associated himself with the Halkyard Mfg. Co., which makes hooks for shoe laces. He patented a hook which was manufactured by the concern and which has come to be widely known.

Deceased was a member of the Providence Board of Trade, a charter member of the corporation of the Rhode Island School of Design and was prominently associated with the Providence Art Club. He was something of a collector and had a number of antiques that are regarded as valuable.

A petition to have the case of Frank P. McKenny against the McKenny Jewelry Co., Portland, Me., continued, on the ground that he had begun proceedings in the United States Court to have the bankruptcy proceedings set aside because of alleged fraud, was refused. Mr. McKenny was formerly general manager of the concern, and brought suit to recover for four weeks' salary and 100 hours overtime at \$1 an hour.

Man Who Robbed Knoxville, Tenn., Jeweler Believed to Have Operated in Other Cities.

KNOXVILLE, Tenn., Nov. 1.—A man believed by the police to be a professional jewelry thief is locked up here on the charge of stealing a diamond ring worth about \$100 from the H. J. Cook Optical & Jewelry Co., yesterday afternoon. The man entered the jewelry store about 4 p. m., and after looking at some articles, selected a Knight Templar charm, gold vest buttons and a diamond locket; he then departed, saying that he would call for the articles about 6 p. m. The clerk who waited on him informed Mr. Cook of the sale, and the jeweler, becoming suspicious, made an investigation of the trays that the man had looked at and discovered that a diamond ring had been taken from one of them and a very cheap ring substituted in its place.

Mr. Cook then immediately notified the police and search was made for the man. The first train to depart from Knoxville was watched and the man was arrested. He pretended to resist arrest, and during the scrimmage threw a ring some distance away; this was found and identified as the one missing from Mr. Cook's store. In the prisoner's clothes were found two large lockets, one set with diamonds and the other a plain locket with a one-eighth carat stone. It was then learned that the man had visited the stores of Hope Bros., 519 Gay St., and William T. Newton, 13 Gay St., but the lockets which he carried belonged to neither house. It is suspected by the police that the man has been operating in other cities, and that these articles were taken from jewelers in New Orleans or Montgomery.

The suspect, who gave his name as J. T. Roberts, is a young man about 5 feet 6 inches high and weighs about 150 pounds. He has dark hair, wears a clean-shaven face and looks something like a preacher. He is well dressed, and his appearance would in no way excite suspicion. It was learned later that he was accompanied to Knoxville by a woman, and that his baggage was checked from here to Asheville.

Jewelry Jobbers' Association of St. Louis Elects Permanent Officers.

ST. LOUIS, Mo., Nov. 4.—The first important movement by the Jewelry Jobbers' Association, which has just formed a permanent organization, is in the direction of securing a card of uniform size for carding jewelry. This question was discussed at length at the recent meeting, and it is the sense of the jobbers that there was a necessity for reform in this direction.

A committee of one, in the person of Alvin L. Bauman, president of the L. Bauman Jewelry Co., was appointed to take up the matter with the manufacturers and jobbers of jewelry all over the United States. The fact that so many different sizes of cards are used is a source of much trouble to jobbers, and the St. Louis association wishes to have some uniform size adopted. It is thought that the movement will receive the hearty sympathy of the manufacturers and jobbers generally.

The permanent officers elected by the association were as follows: President, Edwin Massa, of Bauman-Massa Jewelry Co.;

vice-president, Morris Eisenstadt, Eisenstadt Mfg. Co.; secretary, H. S. Aller, Aller-Newman-Wilmes Jewelry Co.; treasurer, Alvin L. Bauman, L. Bauman Jewelry Co. An executive committee will be appointed later.

Meetings of the association will be held on the third Thursday in every month.

Death of W. L. Pettit.

MINNEAPOLIS, Minn., Nov. 2.—W. L. Pettit, who conducted business here as W. L. Pettit & Co., died in this city Oct. 28. He had been associated with the jewelry business in Minneapolis for several years. The deceased served with distinction during the Civil War in Company K of the Third Ohio regiment.

Mr. Pettit first engaged in business in Monmouth, Ill., under the name of W. L. Pettit & Co., his wife being the Co. He subsequently moved to this city, and later to St. Paul, returning again to this city in 1883. In September, 1884, he became financially embarrassed and requested an extension. The business failed in 1886, but he compromised with creditors at 45 per cent., 25 per cent. in cash and the balance in six and eight months. In October, 1894, creditors were offered 33⅓ per cent. cash, which offer most of them accepted. Since that time the business continued without interruption, and at the time of Mr. Pettit's death was believed to be prosperous.

Death of Peter M. Boyer.

News was received in New York last week to the effect that P. M. Boyer, a well-known retailer of Grass Valley, Ore., had died in that town on Oct. 13. His widow, it is said, will close out the business.

Peter Boyer was well liked by many members of the trade who knew him, and his untimely death is regretted by all his friends. He was about 46 years old and had been in business at Grass Valley for about three years. As a practical watchmaker and a good business man he stood high in the esteem of his fellow townsmen.

A Word of Warning from an Old Merchant.

"PUT a word of warning in your notes," said one of the elders among the wholesale merchants in the downtown district, "on the practice of dealers pawning their stock. I do not mean to say anything against the pawnbrokers. There may be times when a dealer is justified in getting loans on parts of his stock. But there is a danger in the ease with which money may be raised in this way by men in our trade.

"Recent developments in this city illustrate this. Money obtained so readily is sometimes spent in a reckless way and trouble follows. A dealer should exercise the utmost caution in borrowing money on any part of his stock, and in handling money after he gets it. If he pledges merchandise obtained on memorandum he is liable under the criminal law, and this is something that he may not think of in time."

C. W. Livergood, Reinbeck, Ia., has moved his stock of jewelry into the quarters formerly occupied by E. J. Price & Co., who have moved to Dubuque.

Referee in Bankruptcy Decides Against Claim of Secured Creditors of Gerstman & Bandman.

In the bankruptcy proceedings of Gerstman & Bandman, who were wholesale jewelers at 75 Nassau St., New York, and who filed a voluntary petition in the last week of January findings, were announced last Friday by William Allen, the referee, against certain creditors, who put in a claim for the stock of merchandise, contending that it belonged to them in accordance with unrecorded agreements.

When Marshall S. Hagar, the trustee in bankruptcy, took possession of the assets he found jewelry valued from \$6,000 to \$10,000 which was claimed by Harry Schwab, Howard A. Frost and Verne M. Bovie as collateral security for loans made to the firm aggregating \$10,941, under certain trust agreements and bills of sale which had not been put on record.

These men brought proceedings against Mr. Hagar to recover the jewelry, and Referee Allen, after hearing testimony, decided that their applications should be dismissed. He said that the transactions, although bills of sale, were intended to operate as chattel mortgages and as there was no actual change of possession of the jewelry the transfers are void as to creditors.

The referee said that the claimants were "dummies" used by the Metropolitan Bank and its president in granting the several loans to the firm. On July 31, 1905, the bank was a creditor for \$13,205 unsecured. Thereafter all the creditors had under consideration the question of giving an extension of time to the firm. Officers of the bank said that the bank's claim was \$3,065. They concealed from the other creditors, the referee says, the fact that they had in less than two weeks reduced the unsecured debt of \$13,205 to \$3,065, and that they held jewelry worth \$12,441 as security for money advanced.

The referee's report will go to the district court for its approval.

Trans-Atlantic Voyagers.

TO EUROPE.

D. Bloomfield, of Bloomfield Bros., Montreal, Can., sailed Friday on the *Empress of India*.

Henry Fera, of Fera & Kadison, New York, with his wife and daughter, will sail to-morrow on the *Kaiserin Auguste Victoria*.

Sailing last week on *La Provence* were Hugo Oppenheim, of Oppenheim & Straus, New York; George Garreaud, of Gerreaud & Griser, New York.

FROM EUROPE.

Irving Baum, New York, sailed Saturday from Europe on the *New York*.

Jos. Simons was arrested a short time ago for robbing the display window in the store of Guest Bros., Kewanee, Ill. After the glass had been shattered by muffled tools, Simons was seen to pass a baggage check to a confederate. The check was taken to Peoria by Chief of Police Cunningham, who obtained a trunk filled with plunder which is supposed to have been stolen from stores at Gala and the above-mentioned town.

Creditors of Chas. A. Weber Decide to Redeem Jewelry Pawned by the Bankrupt.

Creditors of Charles A. Weber, diamond dealer at 320 Fifth Ave., against whom a bankruptcy petition was filed, as related in the issue of Oct. 24, held a meeting Friday of last week in the office of David C. Townsend & Co., 170 Broadway. John R. Keim, who had been appointed receiver by the bankruptcy court, called the meeting, and was present in order to confer with the creditors. He said that his purpose was to learn what their wishes were in order that he might proceed in such manner as would bring the best results for them.

A statement was presented showing that the receiver has now in his hands pawn tickets for jewelry on which \$20,000 had been advanced. The value of this jewelry was given as \$60,000, although some doubt was expressed as to whether or not this appraisal was too high. This jewelry, still in the pawnshop, is entirely apart from the memorandum transactions. The memorandum merchandise, which was pledged for approximately \$15,000, has nearly all been taken back from the pawnshops by the owners, to whom Mr. Keim delivered the pawn tickets.

There was a discussion as to what would be done with the pawn tickets for the merchandise bought on credit. One plan suggested by the receiver was for the creditors to declare an assessment corresponding to the amount of their respective claims and to turn over the cash to him so that he might redeem the jewelry.

The receiver said that if \$10,000 were turned over to him in this way he would redeem half of the jewelry in pawn, and after selling it would redeem the remainder. With the proceeds he could repay the amounts advanced and the surplus would go into the bankrupt's estate for subsequent distribution among the creditors.

Another plan was to turn over to each creditor the tickets for the jewelry sold by such creditor to Weber. The creditor could then redeem his own jewelry.

It was decided to advance sufficient money for the receiver to redeem the jewelry from the pawnshop, which he is then to sell. The approval of the bankruptcy court will be asked before the plan is put into operation.

The figures submitted at the meeting indicate that Weber's liabilities were larger than had been estimated at first, being about \$80,000, of which about one-half were on memorandum transactions.

Games Rolled by the Jewelers' Bowling League of New York.

Following are the results of the games played in the last week in the tournament of the Jewelers' Bowling League of New York:

The Diamond Markets.

ANTWERP, Oct. 25.—Business is somewhat quieter at present, owing to the scarcity of the rough stones. The manufacturers are finding great difficulty in getting good assortments of rough, but the cutters who have particularly good workmen find a certain amount of profit in the poor lines of goods.

Several employers have been obliged to again accede to the employes' demands and advance salaries, as it is very difficult to secure skilled polishers.

The following merchants were in the city during the past fortnight: Messrs. E. Mayer, Garabian, M. Shubotzky, Merlin, Mund, Schiff, Geurek, Matheossian, E. K. Nayan, De Haan, Citroen and B. Rapoport, Paris; Frankel and M. Kanneke, Frankfurt-a-Main; Baum, Schenkeim, Rees and Rosenbaum, New York; Gallop, Broekhuysen, Goldberg and Kauffman, London; Gross, Braun, Hohn and Hock, Vienna; Van Gulk, Goch; Maiselsohn, Tiflis; Sednau, Cairo; Menassian, Constantinople; Vichnan, Hanau; Abend, Berlin; Mazzala, Naples; Bellusschi, Milan; Beurubi, Salonique.

PARIS, Oct. 25.—The market here is very brisk. Brilliants, large and small, have been bought quite extensively. The demand at the present time is for blue diamonds, and enormous prices are paid for these colors. In modern jewels shown in the Rue de la Paix, Avenue de l'Opera and the Boulevard, fancy stones are used extensively: A Parisian jeweler bought the emeralds of the Russian Imperial Cabinet, and intends sending them to America.

The offices of Poli Freres, which were at Rue de Chateaudun, are now at Rue Rossini. J. Hekster has also moved his office from Rue Rochochourt, 24, to Rue de Maubeuge, 35.

David Althausen died, recently, at the age of 41 years.

AMSTERDAM, Oct. 24.—The Dutch diamond market is at present experiencing an extraordinary period of activity. The demand for fine colored stones comes from all sides. Reports received from other diamond centers state that business conditions are generally good, few failures having occurred during the last month.

Several weeks ago the "rough syndicate" changed the assorting of the shipments of Kimberley and Bultfontein, raising the standard of color and price. In color these assortments approach those of the first

color, Wesselton. Since the mine of Du-toitspan is again working, its product is being joined with that of Kimberley.

Newark.

The Wakefield & Seiler Co. was incorporated last week to manufacture jewelry with a capital stock of \$10,000. The incorporators are: R. Wakefield, Irvington; H. J. Seiler, P. Wakefield and W. J. Wakefield, Newark.

Creditors of the Ulmer & Day Co., Trenton, were notified last week that the trustee in bankruptcy had filed his final account, showing a balance on hand of \$316.51. He has since paid out \$236.50, leaving on hand \$80.01. The payment of costs and fees will leave nothing to the unpreferred creditors. The final meeting of the creditors will be held at 132 E. State St., Trenton, Nov. 12, at 10 A. M., at the office of the Referee in Bankruptcy, F. D. Oliphant.

Edward Jaeckle, retailer at Jersey City, N. J., recently bought a plot of ground on Ocean and Garfield Aves., in that city. The land was sold at auction under a restriction that no "flat or tenement" should be built on it. Mr. Jaeckle was about to construct a two-family house when the executors of the estate that formerly owned the land obtained a temporary injunction. Mr. Jaeckle, through his lawyer, contends that a two-family house is neither a flat nor a tenement, and that he is not violating the restrictions. Vice-Chancellor Garrison has the matter under consideration.

Frederick M. Bay, 21 years old, who boarded in Newark and was learning the trade of a silver finisher at Tiffany & Co.'s works, Forest Hill, was found in a dying condition, last Thursday morning, on Pompton Turnpike, near Cedar Grove, by a policeman. August Bennett, 22 years old, who had been learning the finisher's trade in the same works, was bending over Bay, calling upon him to get up. Bay died soon afterward, and it was found that he had been stabbed in the aorta. The two young men had gone together to a hallowe'en party the night before. Bennett, who had been drinking, said that on the way home they had been attacked by a stranger, who had stabbed his friend.

Miss Mary Larter, daughter of Frederick H. Larter, of Larter & Sons, 21 Maiden Lane, New York, was married last Thursday evening to William Francis Price, East Orange, N. J., in St. Luke's Methodist Church, Newark. The wedding, which was unusually pretty, was attended by a large assemblage of friends. Miss Jessie E. Larter, a sister of the bride, was maid of honor. The bridesmaids were Miss Gertrude A. Larter, a cousin of the bride, Miss Edna C. Osborne and Miss Lillian Randall. Henry D. Northrop, Jr., acted as best man. The bride was given away by her father. Those who served as ushers were Daniel Price, a brother of the bridegroom; Dayton K. Price, another brother; Howard E. Potter, Herbert S. Gay, Charles S. Conant and Philip S. Suffern. After the ceremony a reception was held at the home of the bride's parents. Many beautiful and costly presents were received.

Biddleman & Hamilton, Thornburg, Ia., have been succeeded by Hamilton & Son.

News Gleanings.

C. E. Cole & Co., Atlantic, Ia., have added another watchmaker to their force.

Edward Kreyer has purchased the business of F. P. Burkholder, Fort Scott, Kans.

Herman Dipher, for nearly 40 years in the employ of Mr. Shafer, a retail jeweler of Cobleskill, N. Y., died recently, after a brief illness, aged 64 years.

Jas. Calder, who has just finished a course in the Kansas City Polytechnic Institute, has taken a position with Geo. G. Bowen, McPherson, Kans.

The jewelry store of Andrew J. O'Brien, Oshkosh, Wis., was entered by thieves, recently, and watches, watch charms and rings, valued in all at \$400, were stolen.

C. F. Miller, Cairo, Ill., has removed his stock from the Grimstead building to his own building, at 806 Commercial Ave., which has been extensively renovated.

Drs. Noeling and Goodyear, of the Gem Optical Co., a concern which recently began business in Dunkirk, N. Y., are being anxiously sought by local customers and creditors.

J. L. Peterson has purchased an interest in the business of A. Threadgill, Marlin, Tex. Peterson was formerly engaged in the drug business for several years at the same place.

D. Danenbaum, Johnstown, Pa., has purchased a parcel of real estate on Locust St., at that place, for \$5,500. The property contains a lot 35 by 80 feet, and a double house of 14 rooms.

J. Jacobson, formerly employed in a retail jewelry store of Racine, Wis., and who disappeared April 9, 1905, leaving a wife and three children, has been located in San Francisco, Cal.

About 50 members of the Pittsburg Optical Association and others attended the dinner at the Seventh Avenue Hotel in Pittsburg, Pa., Oct. 26. The dinner was given by T. J. Little.

W. R. Marchall, until recently of St. Joseph, Mo., has returned to Topeka, Kans., where he has formed a partnership in the retail jewelry business with R. B. Robertson, at 603 Kansas Ave.

A. J. Clossen, Coffeyville, Kans., was injured in the recent natural gas explosion at that place. His little son was killed and his entire stock of goods and store demolished. He had no insurance.

The Pacific Silver Mfg. Co. is a new concern which recently commenced business at 507 San Pedro St., Los Angeles, Cal., to manufacture sterling silver goods. The proprietors are Adolf Braese, John Thiel and Edward Schill.

Joseph Martin, at one time engaged in the jewelry business in San Francisco, Cal., was recently taken into custody in Des Moines, Ia., on a charge of the alleged forgery of a check for \$15.

The International Silver Co. has sold six of the seven houses which belonged to the Wilcox Silver Plate Co., Meriden, Conn., and of which the former concern came into possession when the consolidation took place. The houses were built about 30 years ago.

Notices have been posted in all the departments of the Seth Thomas Clock Co.'s factory, Thomaston, that, commencing Oct.

31, the factories will be operated on the old 10-hour schedule instead of 12 hours, running from 6 A. M. to 7 P. M.

The residence of Frank J. Voirol, 129 E. Sutfinfield St., Fort Wayne, Ind., was recently entered by a burglar. The jeweler's wife heard the thief rummaging about and immediately pressed a button, which turned on the electric lights in the house. The thief escaped.

A man recently walked into the store of Lon. Williams, 216 E. Douglas Ave., Wichita, Kans., and after requesting the clerk to show him some Masonic charms, made off with four of them. He was pursued by a clerk, with whom he struggled for a time, and finally escaped.

Albert Lawtenslager, a jeweler of Albany, N. Y., recently completed a fishing reel measuring 1 1/2 inches in diameter and 1 1/2 inches thick for the Prime Minister of Siam. The reel is totally unlike the usual fishing rod accessory, and was made according to a wooden model sent to the jeweler. The centerpiece is of aluminum, while the rest of it is chiefly of brass. The centerpiece also contains the machinery which, unlike the common reel, works automatically upon pressing a button. About a month's time was consumed in constructing the device.

Jos. Leibson, a retail jeweler of Wilkes-Barre, Pa., has been made the defendant in a suit brought against him by Miss Viola Hoffnagle, 17 years old, and her father, George Hoffnagle, both of Luzerneborough, for \$50,000 damages for alleged malicious prosecution. The complaint avers that the young girl was employed as a domestic in the household of the defendant during the latter part of August and the early part of September. In her statement the girl alleges that a valuable stickpin belonging to the jeweler disappeared and that he accused her of stealing it. She claims that she had been arrested on a warrant accused of larceny and that after having been given a hearing before Mayor Kirkendall, Sept. 15, she established her innocence and was discharged.

Damages amounting to over \$200 were caused recently in the jewelry store of C. B. Lauterman, Colorado Springs, Colo., by the mysterious breaking of a plate glass slide and a glass panel in a wall case, which fell among many cut glass vases and smashed them into innumerable fragments. Mr. Lauterman explained later that he was in the store at the time, together with an assistant and customer, and that no one was near the glass when the crash occurred. The only explanation vouchsafed, according to the jeweler, is that the closing notes of a selection rendered by a band which was playing in a park across the street were pitched in the particular musical tone at which the glass would vibrate so violently as to shatter the material. A wag suggested that the musicians were probably playing "Waiting at the Church."

Market Price for Silver Bars.

The following are the quotations of silver bars in London and New York, as reported by Zimmerman & Forshay:

| | London. | New York. |

Louis Freund, of Henry Freund & Bro., is expected in San Francisco, Cal., within a few days.

Nat. Shiman, of Shiman Bros., is now on his way to the coast and is expected in San Francisco, Cal., this week.

Mr. Graham, W. R. Humphrey, Birmingham, Eng., and Mr. Nye, International Silver Co., were in Toronto, Ont., last week.

The following traveling representatives visited the trade in San Francisco, Cal., last week: William Rosenberger, A. Wallach Co.; Mr. Bowles, Win. Scheer; F. Wilkerson, A. Wittnauer Co.

W. J. Brown, one of the J. B. Whitney Co.'s California representatives for the Holmes & Edwards Silver Co. and of the E. Ingraham Co., returned from Los Angeles, recently, and has left for Oregon, for an extensive trip.

Lancaster, Pa., was, recently, visited by the following representatives of the trade: R. A. Hunken, J. B. Bowden & Co.; T. A. Brennan, L. Witsenhansen; W. B. Ehlers, Ehlers & Co.; Harry Lissauer, Jacobson Bros.; Albert S. Van Doren, Day, Clark & Co.; Lawrence F. May, Moskowitz Bros.; W. H. Rowland, International Silver Co.

The following traveling representatives called on the trade in Kansas City, Mo., during the past week: W. B. Howe, Bradley & Hubbard Mfg. Co.; H. W. Raymond, Worthington & Raymond; Leo Goldsmith; C. B. Bartlett, Whiting Mfg. Co.; E. A. Reed and C. T. E. Smith, Reed & Barton; Martin Dattelbaum, Dattelbaum & Friedman; Mr. Yeaton, S. Sternau & Co.; H. B. Rogers, Thiery & Rogers; Theo. L. Lyons, Lyons Gem Co.; T. S. Sturgis, Perley Bros.

Among the traveling representatives who called on the trade in St. Louis, Mo., last week, were the following: H. B. Rogers, Newark, N. J.; Elmer B. Sweetser, Sweetser Co.; M. F. Thornton, A. Lounsberry & Son; Lewis P. Cook, S. Sternau & Co.; Alberto S. J. Schweizer, Ansonia Clock Co.; F. C. Allen, Sansbury & Nellis; Max H. Kling, Kling & Baer; Vincent W. Henderson, Crane & Theurer; J. E. Simonson, Ludwig Nissen & Co.; J. P. Wrayton, Lebkuuecher & Co.; C. L. Krugler, Mandeville, Carrow & Crane.

The trade at Pittsburg, Pa., was, last week, visited by the following traveling representatives: C. V. Schuyler, Dominick & Haff; H. C. Kionka, Kionka & Wagner; Russell A. Talbot, Joseph Fahys & Co.; George W. Whittemore, Sessions Clock Co.; Mr. Crane, Mandeville, Carrow & Crane; Wm. J. McQuillin, Mount & Woodhull; Abel King, I. Emrich & Co.; Mr. Tenill, Traub Jewelry Mfg. Co.; Alberto S. J. Schweizer, Ansonia Clock Co.; W. H. Osborne, R. Wallace & Sons Mfg. Co.; T. J. Griffith, Jr., Carter, Howe & Co.; James O. Otis, Harvey & Otis.

Traveling representatives calling on the trade in Omaha, Nebr., last week, were: P. A. McCourt, Quaker City Cut Glass Co.; E. P. Ledos, Ledos Mfg. Co.; Carl Weidemann, Borrelli & Vitelli; Hubert Somborn, Hipp, Didisheim & Bro.; Mr. Hines, Wm. Weidlich & Bro.; Martin Dattelbaum, Dattelbaum & Friedman; J. Rothschild, Kaffeman, Rothschild & Co.; E. B. Frank, Fairpoint Corporation; S. W. Abbey, E. Ira Richards & Co.; J. H. Mednikow, J. H. Mednikow & Co.; Walter S. Noon, Cory Bros. Co.; Frank W. Price, National Papeterie Co.; Thos. E. Rogers, Riker Bros.; Henry Freund, Henry Freund & Bro.; J. Arthur Comm, Edmund E. Robert.

Traveling representatives who called on the Cincinnati, O., trade, during the past week, included: R. B. Carr, Link & Angell; I. Price, Louis Strasburger's Son & Co.; J. Thompson, J. B. Bowden & Co.; F. A. Perry, John Russell Cutlery Co.; Emery Sweetser, Sweetser Co.; W. Sumner Blackinton, S. O. Bigney & Co.; Mr. McClennin, Wilcox Silver Plate Co.; Benj. Eichberg, Eichberg & Co.; H. Somborn, Hipp, Didisheim & Bro.; Mr. Hickey, Henry Zimmern & Co.; W. A. Moore, F. W. Gesswein Co.; P. H. Arthur, E. Howard Watch Co.; R. A. Talbot, Joseph Fahys & Co.; H. C. Rowbotham, Schrader-Wittstein Co.

B. Ristine, gold and silver plater, 125 S. 7th St., is reported to be critically ill.

Anthony Krider, watchmaker, accepted a position last week with William H. Long, 1627 South St.

J. F. Neill, 727 Sansom St., is receiving the condolences of the trade upon the death, last week, of his mother.

Joseph Gumpert, 2218 Ridge Ave., spent a few days in Baltimore last week attending a meeting of the German turners.

John Fisher, with R. M. Cooper & Son, 726 Sansom St., spent a few days last week gunning for rabbits in Quakertown, Pa.

F. A. Colladay, Germantown Ave., near Seymour St., Germantown, is receiving the condolences of the trade on the death, last week, of his aged father.

George L. Meade, watchmaker, formerly of Binghamton, N. Y., has taken up his residence at 1802 Fairmont Ave. and proposes to engage in business here.

Edmund Diesinger, casemaker, 7th and Sansom Sts., has completed alterations and improvements in his establishment, designed to make the place more attractive.

William Thegan, 618 Chestnut St., manufacturer of badges, is reported to be so critically ill of pneumonia that his recovery is despaired of by his friends in the trade.

Charles Diesinger, Jr., formerly associated in business with his father, Charles Diesinger, a manufacturing jeweler and diamond setter, 726 Sansom St., has accepted a position with a New York house. Mr. Diesinger was in this city last week visiting his father and mother.

George Liggins, who has for many years conducted a retail store at 2d and George Sts., is disposing of his business at auction with the view of retiring permanently from the trade. Mr. Liggins is a brother of William Liggins, who for a quarter of a century conducted a store at 11th St. and Girard Ave. and who died about a year ago.

C. F. Reisner, of the H. S. Meiskey Co., Lancaster, Pa., was one of the salesmen in this city last week who contemplated making a trip to Atlantic City on the new third rail road on the day of the great accident, and who has reason to congratulate himself that he was persuaded to remain in the city and forego the pleasure trip to the shore.

Among the out-of-town visitors to this city's trade during the week were: H. L. Phillips and Mrs. M. E. Smith, Smyrna, Del.; J. W. Parrish, Newark, Del.; Edmond Oliver, Burlington, N. J.; M. E. Hunter, Beverly, N. J.; A. M. Kendall, Millville, N. J.; Frank Kline, Spring City, Pa., and William MacFarland, Downingtown, Pa.

William C. Williams, with C. H. O'Bryon, 735 Sansom St., is reported to have been successful in his campaign for election to City Councils as the member from the 18th Ward on the Republican ticket to succeed Jacob Henderson, who died some months ago, and who was frequently one of the entertainers at the Jewelers' Club festivities.

M. Sickles & Sons are making improvements in the diamond corner of their establishment at 730 Chestnut St. Abe

Sickles went to Newark last week to act as godfather at the christening of the baby son of his brother Gustavus Sickles, of the Eastwood Park Co. Walter S. Davis, city salesman, spent a few days in the country recuperating.

F. C. Hoffman and C. E. Bush, who have been engaged in the business of manufacturers of jewelry and silverware cases at 17 S. 8th St., have dissolved partnership. The business will be conducted at the old stand by F. C. Hoffman, who assumes all the obligations of the late firm. Mr. Bush will take a long rest, after which he proposes to again engage in the business. The firm was established about 15 years ago and carried on successfully at 810 Sansom St. for many years until it removed to 17 S. 8th St.

Abraham Press, of the wholesale and retail jewelry firm of I. Press & Sons, 819 S. 2d St. and 35 S. 8th St., was made the defendant in a suit instituted in the local courts last week against him by Miss Bella Blum, of Brooklyn, N. Y., who seeks to recover \$25,000 damages for alleged breach of promise to marry and also for the recovery of diamonds and jewelry, valued at \$2,000, which, she says, Press has in his custody. The publication of the love troubles between his son and Miss Blum has almost prostrated Mr. Press' father, and he is now reported to be seriously ill. The entire Press family feel that Abraham is being prosecuted unjustly. Mr. Press denies that he has any valuable jewelry belonging to Miss Blum, but, on the contrary, declares that he made her valuable presents. He declares that his acquaintanceship with her was brought about because his father and Miss Blum's father had been chums in the old country, and it was the wish of Miss Blum's father that his old friend's son marry his daughter. He denies that he broke off the engagement with Miss Blum.

The musicale of the Philadelphia Jewelers' Club given last week proved to be an entire success. About 200 members and their guests attended, and the evening was enlivened by the D'Amico Italian Troubadore Orchestra, William Disston, a soloist; Master Edward, a boy soprano; the Fidelio Lady Quartette; George Strauss, a baritone; Miss Elizabeth Murray, from Keith's circuit, who made the hit of the evening in coon and comic songs, and other male and female talent recruited from professional ranks. A luncheon for the members and their guests was spread in the billiard room of the club house and all made merry until the wee sma' hours of the morning. To J. Warner Hutchins, L. P. White, William Linker and William H. Long belongs much of the credit for the success of the musicale. It will be the last social function of the club until after the Christmas holidays, when preparations will be made for the annual banquet to be held on Washington's birthday.

Harry Gamenthaler, until recently with McCoy & Co., Minot, N. Dak., has returned to Cass Lake, Minn., where he formerly lived, and has bought the R. F. Lussier building. He will engage in the retail jewelry business. Mr. Lussier will open a store in Foley, Minn.

Lancaster, Pa.

John B. Roth, Jr., has been spending a few days in New York.

G. W. Reisner spent several days last week at Princeton University.

John J. Bowman, of Ezra F. Bowman's Sons, has returned from a visit to New York.

T. Wilson Dubbs celebrated his 40th birthday anniversary Nov. 1 with a reception at his home.

George R. Weber, of Louis Weber & Son, spent a few days in New York last week on business.

Wesley R. McKee, jeweler, Sligo, Pa., has entered the Ezra F. Bowman Technical School for a course in watchmaking.

Miss Irene Smith, late a saleswoman for Louis Weber & Son, has returned to her old position at Augustus Rhoades' store.

Charles E. P. Keim, Newport, Pa., stopped over in Lancaster a few days on his way home from Philadelphia last week.

Oscar M. Lowrie, formerly of the local firm of Keller & Lowrie, has accepted a position with George F. Blakeslee, Tonopah, Nev.

M. T. Reineman, Chambersburg, has sold out his establishment and goes to New York to take a position with a jewelry firm in that city.

George McIntyre, Baltimore, has been spending the past week with relatives in Lancaster, his old home, before removing to Cleveland, O., where he expects to engage in business.

John Dougherty, aged 79 years, Reading, Pa., was committed to the Lancaster County Prison last week by the mayor for 10 days, for vagrancy. He was at one time a well known watchmaker.

John B. Roth, Jr., has just finished hand-some pins for the Franklin and Marshall Academy and the Harbaugh Club of Franklin and Marshall College. They are enameled gold shields, suitably inscribed.

George W. Hurst, Warrenton, Va., who learned the trade of watchmaker many years ago at Manheim, Lancaster County, with Jeweler Connell, stopped in Lancaster last week to see friends, while en route to Parkersburg, Pa., to attend his brother's funeral.

A disastrous fire in Columbia, Oct. 30, when failure of the water supply threatened the safety of the business section, left H. F. Vergey's handsome jewelry store in considerable danger for several hours, a single building intervening between it and the burning business structures.

W. H. Wilhelm, a retired jeweler, for many years in business in New York, though a resident of Trenton, N. J., for some years, died Wednesday at the home of a relative, John Mason, near Columbia, where he was visiting. The deceased was the inventor of a couple of articles of value to watchmakers. He was 71 years old.

R. L. Brown, Kellerton, Ia., is closing out his stock at auction.

Brock & Feagans, Los Angeles, Cal., have taken a lease of a site on the west side of Broadway, corner of 4th and 5th Sts., and intend to have the building remodeled for their use. No expense will be spared in making the location one of the best equipped on the coast for a retail jewelry store.

EICHBERG & CO.,

Pittsburg.

The Pittsburg Jewelry Co. continues to conduct an auction at its Smithfield St. store.

W. G. Ingham, buyer for the George B. Barrett Co., spent several days of last week on the road.

The Henry Wilkens Co., of this city, has been incorporated to deal in jewelry and pictures with a capital of \$10,000.

W. E. Jones, city salesman for the W. J. Johnston Co., has been confined to his home for over a week on account of illness.

Anthony A. Larney, of the Larney-Barr Jewelry Co., and Thomas A. Curran, of the same firm, spent last week in New York, buying holiday stock.

Miss Erna Kingsbacher, a daughter of Morris Kingsbacher, of Kingsbacher Bros., will marry Ernest William Stix, St. Louis, early in January.

The *Observer*, last week, published photographs of the members of the Larney-Barr Jewelry Co., on the occasion of the dedication of the new St. Paul's Cathedral.

The A. M. Andrews Co. is making a handsome exhibit of prizes to be awarded to contestants at the horse show, which opened to-day in this city, and continues during the remainder of the week.

Henry Terheyden, 530 Smithfield St., last week made an autumn display in his window which attracted much attention. Carl Meade, formerly with George Snyder, a South Side jeweler, is now with Mr. Terheyden.

Gillespie Bros. are remodeling and repainting their store and expect to add a jobbing department by Dec. 1. This will necessitate making an addition to the store, for which arrangements are now being perfected.

Among the out-of-town jewelers who visited Pittsburg last week were the following: William Heckman, Meadville; Carl H. Leighner, Butler; L. L. Swan, New Castle; E. L. Young, Latrobe; J. M. McKinney, East Liverpool.

The Marsh, Brown & Mather Co. has leased the room adjoining its store in the Bessemer building, Sixth St. and Duquesne Way, and will make extensive alterations to the stores. The improvements will not be commenced until Jan. 1.

Some of the local wholesale houses have served notice on certain manufacturers that unless goods are shipped within a certain period of the present month, orders will be canceled, the dealers not caring to take the chance of carrying stock over to next year.

According to information received in Pittsburg last week from Altoona, Pa., Louis Lippman, at that place, sold the Schenck block to Sol. Rosenthal, New York, for \$82,000, clearing \$30,000 on the property. Mr. Lippman is well known in Pittsburg and local jewelers were glad to hear of his good speculation.

F. B. Crowthers, formerly of Wilkinsburg, is now with Graf & Niemann. The same house has added a cashier, a new departure to the store. West Vorhees, watchmaker, has connected himself with the house, and Miss Florence Sprague, who has been associated with the house for

years, has resigned her position because of her approaching marriage.

J. Alexander Hardy, who went to Harrisburg, last week, with a number of Pittsburg business men, was the spokesman of the party, making an address on behalf of the downtown property owners, who are protesting against Gov. S. W. Pennypacker granting charters to projected elevated railroad companies. Mr. Hardy's address was published in full in last week's issue of *The Shield*.

The Pennsylvania Lines west of Pittsburg have withdrawn the \$20 mileage ticket, much to the surprise of the traveling public; but, as other railroads in Central Passenger Association territory will issue them, it is believed the Pennsylvania will be forced to do so. The road has issued instead a 1,000-mileage ticket, good for the one only in whose name it is issued, instead of good for bearer, as it had announced would be the case. The rates have been reduced to 2½ cents a mile, with a charge of 15 per cent. over regular rates if fares are paid on trains. The public for a long time paid fares on trains after the Ohio line was reached, buying tickets from Pittsburg to the nearest stopping point in Ohio, paying fare on the train in order to get advantage of the two-cent Ohio rate. The railroad had been charging the three-cent rate on interstate business.

In celebrating Halloween in the downtown section Wednesday night last, some one, by accident or deliberate design, broke one of the front show windows of the Hardy & Hayes Co.; the glass fell into the sidewalk, exposing \$3,000 worth of stock. Two policemen were soon on the scene and a clerk for E. P. Roberts & Sons, who was passing at the time, called up J. Alexander Hardy and informed him of the accident. Mr. Hardy communicated with the Holmes Electric Protective system and that concern detailed a man, who stood guard all night, although the police department had also detailed two men. A member of the concern was dispatched to the store and removed the goods from the window. There happened to be two policemen opposite the store when the window was broken. The glass was insured. Mr. Hardy has written Superintendent of Police Thomas A. McQuaide, thanking him for the interest his department showed in the matter.

North Attleboro.

William and Frank Maintien are in the Maine woods hunting this week.

Charles H. Peckham returned, Friday from a western trip in the interests of J. H. Peckham & Co.

A tube blew out of the boiler of the Webster Co.'s factory, Thursday, causing a shut down for a day.

Arthur Chace, of F. S. Gilbert, and Walter Hopkins, of C. H. Eden & Co., returned from the west last week.

The estate of the late Frederick D. Hefron was finally settled, Wednesday, at a meeting held in Taunton.

John Kelley, foreman for Scofield, Melcher & Scofield, Plainville, is at the Emerson hospital with a broken leg, sustained by a fall.

K. L. Taylor, of Riley & French, re-

turned last week from the west. Richard L. Saunders, of Paye & Baker Mfg. Co., has left on an extended trip.

Local relatives received word this week that Martin Brown, a former resident of the town and superintendent of the Bliss Mfg. Co., Meriden, Conn., is seriously ill.

Attleboro.

Otis Williams, a veteran employe of Bates & Bacon, died last week.

Charles P. Keeler, of McRae & Keeler, has the sympathy of the trade in the death last week of his sister, Miss Emma A. Keeler.

William L. King, of E. D. Gilmore & Co., and J. Thomas Inman, of the J. T. Inman Co., were last week elected to office in the local Republican club.

Willard A. Engley, retired jewelry manufacturer, and David E. Makepeace, of the D. E. Makepeace Co., with their wives, returned last week from an 8,000-mile pleasure trip, embracing the whole far western circuit.

Alfred R. Crosby, of Smith & Crosby, last week installed the officers of Ezekiel Bates lodge of Masons, including Frank W. Weaver and Harry P. Kent, of F. W. Weaver & Co., and Ernest D. Gilmore, of E. D. Gilmore & Co.

Hon. Sidney O. Bigney, of S. O. Bigney & Co., though personally out of politics this year, was persuaded to deliver a spirited address at a Republican rally in a nearby town, last week, in which he spoke at length of the prosperity of the jewelry business.

Buyers who visit Attleboro within the next few months will find notable changes in the appearance at the center. The abolition of the railroad grade crossings has changed the whole town, and within a few days the handsome new railroad station will be completed.

The standing of the teams in the Jewelers' Bowling League at the close of last week follows: Regnell, Bigney & Co., Bates & Bacon, Attleboro Mfg. Co., the Watson & Newell Co., W. E. Richards & Co., J. M. Fisher & Co., C. A. Marsh & Co., Carter, Qvarnstrom & Remington, Fontneau & Cook and the C. H. Eden Co.

The keen suspicions of a deputy sheriff brought to light a series of thefts at the silver works of the James E. Blake Co., and led to the arrest and punishment of the man responsible. The sheriff heard of a small boy trying to sell a quantity of pocket knives with heavy, costly solid silver handles among his playmates at the public schools. He questioned the boy, and learned that he got them from his father, Stephen Douya, an expert toolmaker in the Blake works, and then proceeded to the office. There a member of the company informed him that thefts had been noticed, but all efforts to trace them had failed. A search warrant was obtained, Douya's house searched, and more of the company's property found. At the close of his day's work Douya was arrested. In court he confessed and was sent to the House of Correction for six months.

E. J. Born, Ashland, Wis., is at present confined in a St. Paul hospital, suffering from a slight attack of brain disease.

Connecticut.

Walter A. Ingraham and Wm. S. Ingraham have been elected directors of the Bristol Tramway Co.

W. H. Sparks, a traveling representative of the Seth Thomas Clock Co., Thomaston, is at the home office for a few days.

A. Tracy Bergen, traveling representative for the J. D. Bergen Co., Meriden, has returned home after a six weeks' business trip.

Wm. S. Ingraham, of the E. Ingraham Co., Bristol, laid the cornerstone of the new Bristol library, last week. A large crowd of spectators attended the ceremony.

At the Wallingford Republican convention, Oct. 31, Charles H. Tibbets, well known in the trade, was chosen for representative in the next General Assembly.

Martin H. Brown, well known in Meriden, and superintendent of the E. A. Bliss Co.'s factory at that place, is critically ill at his home. He is suffering from heart disease.

The plant of the Westfield Plate Co., Thompsonville, was closed all day Oct. 27, when the women employes enjoyed their annual outing to New York at the expense of the concern.

A new voter to enliven the present campaign has just arrived at the home of Samuel Komroff, manager of the Guarantee Watch Co., New Haven, in the person of a 13-pound baby boy.

Frank Ferrari, employed at R. Wallace & Sons Mfg. Co.'s factory, Wallingford, sustained bruises to the index finger and thumb of his right hand last week, which necessitated partial amputation of those members.

K. S. Hathaway, until recently in the employ of the Bradley & Hubbard Mfg. Co., Meriden, died suddenly at the home of his nephew in Westfield, Oct. 27, aged 88 years. The deceased had resided in Meriden for many years.

Albert B. Puffer, for many years in the employ of the Wilcox Silver Plate Co., Meriden, died suddenly of heart disease at his home in New Haven, Sunday morning, of last week. The deceased was a veteran of the Civil War.

Frank G. Case, formerly employed in the casket hardware department, at factory "L," International Silver Co., Meriden, severed his connections there, Saturday, to take a position as bookkeeper with the Chas. Parker Co., in the same town.

The Worcester Metal Goods Co. has been organized with a capital stock of \$30,000 to continue the business of the Grilley Co., buckle manufacturers, New Haven. The new owners are all residents of Worcester, Mass., to which place the plant will be removed.

Walter Camp, president of the New Haven Clock Co., New Haven, addressed the annual meeting of the Yale Alumni Association of Hartford, at the Hartford Club, Wednesday evening. Mr. Camp talked about the new football rules and their effect on games.

Geo. M. Wallace, for several years Chicago representative of the R. Wallace & Sons Mfg. Co., Wallingford, was the Democratic candidate for Congress in the second district. He was born in Wallingford and is the son of the late Robert Wallace, who

was at one time the head of the Wallace Mfg. Co.

President Samuel Dodd and Treasurer George M. Curtis, of the International Silver Co., were among those who attended the trial in Jersey City, N. J., Oct. 29, of E. R. Thomas and others to restrain several banks, including the two Meriden banks, from voting the International Silver Co.'s stock, which they held as collateral.

Thos. Dudley Bradstreet, Republican nominee for State Comptroller, entered the employ of the famous Seth Thomas Clock Co., in 1873, and gradually worked his way up to be vice-president and general manager of the company, having filled that position successfully since 1896. Mr. Bradstreet is also a director of the Seth Thomas Clock Co., Thomaston.

Wm. E. Sessions, of the Sessions Foundry Co. and the Sessions Clock Co., Bristol, last week confirmed the report that a trust company would be established in Bristol. Mr. Sessions said that he had entertained the idea of starting such a company in that town for some time and that its establishment will be simply the carrying out of his plans. He said that the old Muzzy store, corner of Riverside Ave. and Main St., had been purchased and the new financial institute will have its home on that site.

A daring burglary was committed last week, when the store of T. W. Suttin, 911 Grand Ave., New Haven, was broken into and robbed of between \$400 and \$500 worth of jewelry of every description. The burglars forced the doors with a jimmy, and having thus gained entrance, broke into a show case in which Mr. Suttin had left some of his jewelry. No definite trace of the burglars has yet been discovered. According to a list given by the jewelry, the robbers got one dozen pearl-handled opera glasses, three dozen gold rings, studded with imitation pearls, diamonds and rubies, 25 gold rings with chip diamonds and a large collection of other miscellaneous jewelry.

Rochester.

Judgment was taken by default in the Municipal Court last week by Don. I. Danks against Benjamin Palmer for \$51.75.

Morris Rosenbloom left on a special trip through Pennsylvania a few days ago. Mr. Levinson, with this firm, is also out on the road, but is expected back within a few days.

Thomas M. Busby has brought suit against Harlan W. Rippey, receiver for the bankrupt firm of Gooberlet Bros., dealers in leather novelties, for his share of dividends recently declared to the creditors. Busby's claim was not filed within the time limit, hence the suit.

Philip Present, a few days ago, gave to the Judéan Club of this city the sum of \$1,000, which is to be the nucleus of a fund for the erection of the club of a building to be used as a gymnasium and to be conducted on lines similar to the Y. M. C. A. Mr. Present made the gift in honor of his 50th birthday.

The trial of Grace Cullen, the young woman accused of stealing rings from the stores of two local jewelers, was held last week. Evidence showing that the woman had a bad reputation was submitted. It was

also charged that she had stolen at other business places. The Koehler girl, who was her companion on the day of the alleged theft, was put on the stand and examined. She placed all the blame on the Cullen woman.

Providence.

A. S. Vennerbeck was one of the members of the Metacomet Golf Club team which played the Agawam Hunt team Saturday, putting his man out handily.

Among the imports at the port of Providence last week were six packages of imitation precious stones from Bremen and two of the same variety from Hamburg.

The association football team, representing the Gorham Mfg. Co., was defeated in the game which it played against the Howard-Bullough team Saturday by the score of 2 to 1.

While the rush is by no means ended, some of the manufacturers have found themselves enabled to stop the night work in their factories. The difficulty in securing skilled help still continues, however, as perusal of the "help wanted" ads. indicates.

Jewelers were well represented in the election Tuesday. Among the employing jewelers who figured as candidates in the election were George W. Parks, out for Alderman in the First Ward; John Kelso, candidate for Councilman in the Second Ward; Everett I. Rogers and William A. Schofield, Republican candidates for the Second Ward Council ticket; Frank B. Reynolds, named by the Democrats for the Sixth Ward; Henry Fletcher, candidate for Alderman from the Seventh Ward, and Walter H. Durfee, who is Council candidate from the same precinct. A number of others employed in the trade also figured as candidates for various positions.

Boston.

Roswell H. Houghton, salesman for a number of years for J. C. Sawyer, is now with A. Stowell & Co.

R. E. Lynch, formerly salesman for Wilson Bros., has accepted a position with J. C. Sawyer in a similar capacity.

The Rogers Co. succeeds W. E. Van Wert, who for the past two years has conducted three stores, one being at 46 Cornhill, one at 7 Elm St., this city, and the third at Medford, a suburban city. Mr. Van Wert is an official of the new company.

Chief Watts, of the Bureau of Criminal Investigation, last week received word from the New York police that Edward Whalen had been arrested in that city. He is wanted here for the alleged larceny of a diamond valued at \$300 from the Thomas Long Co., at Summer St., on Oct. 8. Whalen is said to have worked the substitution game, walking off with a good gem. He is about 50 years old and is a man of many aliases.

J. Freshman, a jeweler of Cripple Creek, Colo., last week received a bullet in his left shoulder as the result of the accidental discharge of a revolver which fell from the hip pocket of one of his workmen and exploded.

GORHAM LEATHER GOODS

ATTRACTIVE NOVELTIES FOR THE HOLIDAY SEASON.

¶ It is realized by the Jewelry Trade in general, that Gorham Manufactures of Leather have attained as convincing a reputation in the estimation of the public as Gorham Silverware.

¶ This is due to the absolute integrity of their workmanship, the unsurpassed quality of their material, and the individuality of the style and appearance.

¶ Special attention may be directed to such attractive holiday goods as the Men's and Women's Traveling Bags and Suit Cases, without fittings and completely fitted with Toilet and Traveling conveniences in gold, silver, turtle, ebony, ivory and tortoise shell; to the compact Manicure Cases and the Safety Razor combinations; to the Shopping Bags, Pocket Books, Card and Cigarette Cases in all the staple Leathers as well as in many exclusively controlled novelties.

OWING to the greatly increased size of THE JEWELERS' CIRCULAR-WEEKLY, it is absolutely necessary that all changes in advertisements be received one week in advance of date of publication if proof is desired. Positively no change can be made after Friday noon for the next Wednesday's issue.

Gem Importations Break All Records. THE importations of precious stones and pearls at the Port of New York continue to break all records as to size and value, and have increased continually until the amount brought in up to Oct. 31 reached the enormous sum of \$36,791,714, breaking the record of the previous year up to the same time by over \$5,700,000. In fact, the importations thus far are, in value, within a half million of the total importations of the year 1905 and \$10,700,000 more than the entire calendar year of 1904.

The importation of gems for the month of October amounted to \$5,035,577.77, which is not only the largest amount for any October on record, but is the largest amount for any month in this or in previous years, surpassing the banner month of July of the current year by nearly \$300,000. In the total the cut precious stones and pearls amounted to \$3,748,174.54, an increase of over \$1,300,000 on the importations of the corresponding month of last year, while the uncut stones, principally diamonds, amounted to \$1,287,403.23.

Truly the record established by the precious stone importations this year is one which will long be remembered, as nearly every month of the year beat the corresponding month of the previous years, despite the phenomenal increase noted in 1905. How the importations for the 10 months of 1906 compare with the same months of 1905 is shown in the following table:

| | | | |
|---------------------|---------------------|---------------------|---------------------|
| | 1905. | | 1906. |
| January | \$2,831,212 | January | \$2,706,997 |
| February | 2,407,089 | February | 3,067,036 |
| March | 3,673,383 | March | 3,789,825 |
| April | 2,429,338 | April | 3,614,932 |
| May | 3,233,825 | May | 4,021,405 |
| June | 3,442,043 | June | 3,887,893 |
| July | 3,992,831 | July | 4,739,996 |
| August | 2,275,873 | August | 3,382,296 |
| September | 3,250,880 | September | 2,545,757 |
| October | 3,509,390 | October | 5,035,577 |
| | <u>\$31,045,864</u> | | <u>\$36,791,714</u> |

How the figures for the past month compare with those of October during the previous three years will be seen from the following table, taken from the records of Gen. Geo. W. Mindil, the jewelry examiner at New York:

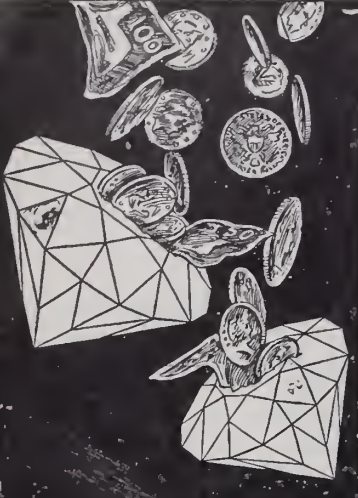

| | | | | |
|----------------|----------------|----------------|----------------|--------|
| | Oct. | Cut. | Uncut. | Total. |
| 1906 | \$3,748,174.54 | \$1,287,403.23 | \$5,035,577.77 | |
| 1905 | 2,409,144.61 | 1,100,245.92 | 3,509,390.53 | |
| 1904 | 2,009,798.20 | 1,035,557.37 | 3,045,355.57 | |
| 1903 | 1,021,709.87 | 493,602.85 | 1,515,312.72 | |

A New Trick of the Mail Order Houses. IN the fight now being raised between the legitimate merchants in every line of business and the so-called catalogue houses, each side is sparing no effort to get the better of its adversary. One of the organizations that has taken a prominent part in the fight for the merchants is the National Association of Retail Grocers, whose secretary, William Gray, recently called attention to the newest offer sent out by a Chicago mail order house. This is sent to merchants and general stores, and asks their co-operation in a plan that sounds attractive, but in reality is a demand that the merchant in the small towns betray the interests of every other dealer not in his line. The circular, in brief, asks the recipient, no matter what his line may be, to take orders for all classes of merchandise in addition to his own business, and in so doing use the catalogue of the mail order house as the bait to his customers. In other words, a dry goods man should not let an order for a plow, mill, gasolene engine, or anything else go by him, but should take the order on behalf of the Chicago concern; the goods should be shipped to the dealer and "profit-sharing certificates" issued in his name. The offer is called the "Country Merchant's Opportunity," but should be more properly called the "Merchant's Opportunity to Cut the Throat of His Fellow Townsman."

It is possible that the catalogue houses think by trying to stir up competition between merchants in various lines they can stop concerted action against their own methods. It is to be hoped that among merchants in general and jewelers in particular there is none so mean as to be tempted by this offer into violating the ethics of good business conduct, and none so foolish that he cannot see that the offer is simply a trick to tie the hands of himself and his fellows in their fight against legitimate competition.

Geo. J. Bieth, a watch repairer and jeweler of Waterloo, Can., was tried before Judge Kemper, Mount Sterling, Ky., Oct. 30, on a charge of grand larceny, and held for the Circuit Court in \$100 bonds, which he failed to give. He was remanded to jail. It is alleged that Bieth stole two gold watch cases from the store of J. W. Jones, in Mount Sterling, where he was employed.

BUYERS OF DIAMONDS

Put your money

and get your customers to put their money in **DIAMONDS**—no better investment to-day.

Prices in the Diamond market are advancing, but **OUR PRICES HAVE NOT BEEN ADVANCED** in some time. We still have a large collection of superb Diamonds which we bought a considerable time ago at lower prices than prevail to-day.

We shall not advance prices on these stones. We are merchants and not speculators and our fair percentage of profit is all we ask. So, as long as these Diamonds last, it will be possible to buy them here under the regular market for fine stones.

V. WARING, N.Y.

CROSS & BEGUELIN

Importers and Cutters of Diamonds and Precious Stones

43 Rue de Meslay, PARIS Telephone, 2188 Cortlandt 17 Maiden Lane, NEW YORK

Last Week's New York Arrivals.

THE CIRCULAR-WEEKLY each day posts in its office a bulletin of the latest buyers visiting New York, which every member of the trade is cordially invited to copy.

For the sum of \$10 (payable in advance), a daily list will be mailed or delivered, during the Fall season (Aug. 1—Dec. 15), to the offices of those desiring this service.

AKRON, O., F. B. Goodman (M. O'Neil & Co.), Cadillac.

New Orleans, La.

Bernard Barnett, 815 Poydras St., has completed improvements to his store, which is now very attractive.

L. Claudel, formerly of E. & L. Claudel, has accepted the position of manager of the optical department of L. Fishel's establishment in Carondelet St., near Canal St.

Maurice Fitzgerald, an optician connected with a Canal St. house, is receiving condolence from his friends in the trade on the death of his father, John R. Fitzgerald, which occurred recently.

Paul Granzin & Son, who have for years kept a jewelry store at 628 Camp St., in a building which is soon to be torn down to permit of the opening of a new street which is to skirt the new Postoffice building on the south side, have abandoned the plan of disputing possession with the Government, and moved to a building in Baronne St., near Girod St.

At a special meeting of the Jewelers' Fraternity, at Schutzen's Hall, in Iberville St., last week, the retiring president, Otto Granzin, was presented with a handsome gold locket. The presentation speech was made by Thomas Hall, the vice-president. Mr. Hall referred to the prosperity which the Jewelers' Fraternity had enjoyed under the three years' administration of Mr. Granzin. Mr. Granzin has been associated with A. B. Griswold & Co. for many years as a diamond seller and enjoys the respect of the entire fraternity.

The Japan *Weekly Mail* announces that the committee recently appointed upon the question of a national exhibition in Japan have decided that it shall be held in Tokyo in 1912, and that it shall be a dual affair, part foreign and part domestic. The estimated cost is \$5,000,000, one-half of which will be contributed by the government. There will be 15 principal halls and sundry smaller buildings, covering about 30 acres of the 250 acres allotted as a site.

New York Notes.

Samuel Schmukler, 129 Canal St., has gone out of business.

W. D. Burd, Vincennes, Ind., was in the city last week, and registered at the Astor House.

A. M. Stephens, a salesman for Enos Richardson & Co., 21 Maiden Lane, is seriously ill at a Brooklyn sanitarium.

Middleton & Courmettes, who were at 142 E. 8th St., recently sold out to D. E. Nightingale, and are now out of business.

The case against Harry Sikowsky, 34 Second Ave., who was accused of buying stolen jewelry, was recently dismissed by the Grand Jury.

Henry Ginnel & Co. moved last week from 31 Maiden Lane to spacious offices on the sixth floor of the Fahys building, 54 Maiden Lane.

Irving Baum, 71 Nassau St., who has been visiting the diamond markets of Amsterdam and Antwerp, sailed Saturday for home on the *New York*.

On paying \$744 in duty and penalties, Hugo L. Lederer got back the jewel case which was taken from him by a customs inspector on his recent return from Europe, as noted in last week's issue.

London reports indicate that upon the rumor of the finding of a big diamond in the Jagersfontein mine, the stock of the company rose from £8 to £9 in the stock market. The face value is £1.

The Jewelers Board of Trade was notified Saturday that A. N. Maumenee, Mobile, Ala., is in bankruptcy. He is a man 46 years of age, who had been in business there since 1896, enjoying a moderate credit.

In the ornamentation of the new Hall of Records, opened this week, are many beautiful specimens of carved and sculptured marble and bronze. The mantels in the court room are especially elaborate.

An indictment was last week returned by the Grand Jury against John F. Collins, Hoboken, N. J., who had been employed as a clerk by Tiffany & Co., and was arrested on the charge of stealing cutlery valued at \$200 from the store.

The New York Boost Club took an active part in the exercises last Wednesday night, which was "stationers' night" at the National Business Show in Madison Square Garden. W. E. Smith, of the L. E. Waterman Co., gave an illustrated lecture.

Henry Fera, of Fera & Kadison, with his wife and daughter, will sail to-morrow on the *Kaiserin Auguste Victoria* for a trip of several months to Europe, during which Mr. Fera will combine business with pleasure. Mr. Fera's headquarters will be at Hamburg.

A number of jewelers were present at the recent celebration of the 140th anniversary of the John St. Methodist Episcopal Church, at which, because of the location being in the wholesale jewelry district, several generations of people in the trade have worshipped.

A quantity of jewelry and other merchandise, said to have been stolen from stores on Fulton St., Brooklyn, was found in the pockets of Jenny Miller, alias Marie Willner, who was brought to the Adams St. police court, Tuesday of last week, and held for examination.

From Providence came a report last week that D. R. Jacobs, New York, had pledged diamonds valued at \$4,000 in pawnshops for \$800, and that the police became suspicious. It was added that the officers, on investigating, learned that Mr. Jacobs is a dealer, and that he owned the stones and had an absolute right to pawn them.

Yvel & Co.'s show window, 11 Park Row, was broken Sunday night by thieves, who took six trays of jewelry and several watches. A brass padlock, which fastened iron network outside the window, was pried loose. Although the store is on a street much traveled at all hours, the windows have been smashed several times by thieves within six months.

Norman Selby, 1503 Broadway, had a narrow escape one day last week when the gasoline tank in his automobile exploded while he was riding. Later in the week he had another experience, being brought before Justice Keady in Special Sessions, Brooklyn, for speeding his vehicle. He gave for an excuse that he was racing with the stork and the magistrate let him go.

Paul Fleischer, dealer in precious stones, 65 Nassau St., was held up early Sunday morning, Oct. 28, by three thieves and robbed of a gold watch and diamond scarf pin valued at \$125. Mr. Fleischer was walking through Dey St., intending to take the ferry to his home in Greenville, N. J. As he approached West St. two men seized him by the arms while a third seized the watch and pin. The loss was reported to the police.

Abel Bros. & Co., 24 John St., Oct. 2, caused the arrest at Baltimore, Md., of John H. Mattison, accusing him of getting, on memorandum, jewelry to the value of \$600 and converting it to his own use. The warrant was obtained by Royal Linthicum, the Baltimore representative of the company. Later Mattison was discharged, the justice deciding that the matter was one for the civil courts, as Mattison had given notes for the jewelry.

While exhibiting to a representative of Tiffany & Co. a crucifix said to have been carved by Michael Angelo, Mrs. Mollie Pastorfield Fusan was arrested last Friday on the charge of passing a worthless check on a Broadway broker. It was said that she had offered the carving to a number of prominent people in New York for \$100,000, and had also offered one-half of the amount as a commission to any person who could obtain a sale at that price.

L. Tannenbaum, of L. Tannenbaum & Co., 52 Nassau St., has been notified that an extensive fire occurred last week in the Tannenbaum chrysoptase mine on Deer Creek, near Marysville, Cal. Work at the mine has been stopped. The fire did much damage, burning the quarters of the workmen and other buildings. A large amount of chrysoptase, boxed for shipment, was destroyed. Mr. Tannenbaum left for California as soon as he was notified of the occurrence.

On complaint of Morris Sullivan, manager of the Castelberg Jewelry Co., Pittsburg, Pa., the police last Saturday arrested at the Hotel Navarre, Mrs. Millie Nelson, 23 years old, charged with being a fugitive from justice. It was said that she had stolen a diamond ring valued at \$250 from

Mr. Sullivan, and had pawned it for \$85. She said that she had pawned it with his consent in order to bet at the Jamaica race track. She was held in the Tombs Police Court in \$100 bail.

Thieves broke the show window in Louis Bloom's store, 651 Broadway, Brooklyn, Tuesday night of last week, and stole a small quantity of jewelry. The police the next day arrested Harry Brower, 22 years old, of 315 Broadway, Brooklyn, and Walter Richards, 20 years old, who lives at 1312 Roebing St., in the same borough. The two young men and an associate are also accused of breaking into a residence in that part of the city. The three were held in \$2,000 bail each for examination.

A surprising story of the reported discovery of another huge diamond in the Premier mine in Pretoria is told by a New York dealer who recently returned from London. He says that the stone, according to the account given to him in that city, weighs 3,200 carats, thus exceeding the Cullinan diamond which came from the same mine and weighed 3,032 carats. No reasons for the latest discovery not having been made public through the usual channels by the Premier concern are given. Several diamond importers who were asked their opinion as to the report said that there must be some mistake, as it would be impossible to keep such a discovery secret for a day, and the finding of so great a stone would be cabled at once all over the world.

Arrangements for its sixth annual banquet, to be given in Delmonico's Friday evening, Jan. 25, 1907, are being made by the 24-Karat Club. The members held a largely attended meeting Oct. 26, at which the president, Leo Wormsær, presided, and F. C. Beckwith acted as secretary. The time and place of the dinner were settled, and the following committees were appointed: Banquet Committee, C. F. Brinck, chairman, W. T. Gough, David Kaiser, H. C. Larter, W. H. Kinna. Speakers' Committee, Col. John L. Shepherd, E. R. Crippen, C. F. Brinck. The preparations will be completed on the elaborate scale which has marked the dinners given by this organization in past years, so the members and their friends will look forward to the event with the most pleasant of anticipations. As the membership of the club is limited to 100, and the full number was reached some time ago, there has been established a waiting list.

Jewelers' Gold Bars Withdrawn and Exchanged at New York.

Week Ended Nov. 3, 1906.

Canada Notes.

A. K. McDonald & Co., Toronto, Ont., have sold out to F. S. Hick.

A writ has been issued against F. G. England, Regina, by H. O. Knowles & Co.

C. R. McLachlan, Winnipeg, Man., has returned to that city, after an extended trip to the Pacific Coast.

Norman Ellis, Hamilton, Ont., is removing from 17 King St. E., to his new store, 21 and 23, on the same street.

George Hynds, Acton, Ont., and Wm. M. Keitchum, Brighton, Ont., were among the buyers who called on the Toronto, Ont., trade last week.

A. C. Stanners, Queen St. W., and Walter Baker and Sidney L. Kent, with B. & H. B. Kent, Toronto, Ont., have gone deer hunting in the Parry Sound district.

D. Bloomfield, Bloomfield Bros., Montreal, sailed on the *Empress of India* Nov. 2 on a buying trip. He will visit the watch and jewelry centers in Switzerland, France, England and Germany, where he will remain during the next three months.

One of the firm of Fowlie Bros., Collingwood, Ont., and D. A. Fowlie, Midland, Ont., went to Toronto, Wednesday, in attendance on their brother, Rev. A. J. Fowlie, of Coldwater, who accidentally received a gunshot wound in the right leg when duck hunting, and was taken to the General Hospital, Toronto, for treatment.

The proclamation that the Canadian Parliament is to meet Nov. 22 is of interest to United States manufacturers and merchants, since it is said that the Minister of Finance will introduce the new tariff almost immediately after the address in reply to the speech from the throne. It is expected that this tariff will impose maximum duties against the United States, and it is anticipated that one result will be that many American firms will establish branches in this country.

Henry Birks & Sons, Montreal, have announced that an erroneous impression may have reached the trade that the man named Cremer, who has been presenting worthless checks in Montreal, had succeeded in obtaining a certain amount of stock from that concern. J. Birks, of the firm, announced that although the man purchased \$10,000 worth of goods, they were not delivered, and consequently the firm lost nothing by the transaction.

What was called a romantic story of how a young German came into a fortune went the rounds of the Canadian newspapers, clubs and gossip in general for about a week, when it was discovered that the story was a fake, and the young German is now in jail a confessed impostor. He called himself First Lieutenant Karl Cremer, late of the German army, and pretended that he had come into a fortune of \$460,000. As usual in such cases he got plenty of people to believe him, including many merchants. He purchased a fine house and exquisite furniture, all on the strength of the fortune which did not exist. Among those he attempted to impose upon were Henry Birks & Sons, from whom he ordered jewelry worth \$10,000. He is now in jail and has confessed to Chief Detective Carpenter that his fortune was a dream.

Omaha.

Albert Edholm has returned from a brief hunting trip at Clarks, Nebr.

Mrs. C. C. Suddith, Fontanelle, Ia., is putting up a new store building.

W. B. Lodge, of the Mawhinney & Ryan Co., spent a few days at Walnut, Ia., last week.

C. L. Shook, of the Shook Mfg. Co., is home from a trip through Missouri and Iowa.

W. H. Valhove, with the Shook Mfg. Co., accompanied by his wife, has returned from a business trip to Ashland, Nebr.

H. S. Steiner, Neuman's Grove, stopped off in this city for a few days last week while on his way to South Dakota.

Chas. Locke, watchmaker for A. Pohlman, Pierce, Neb., was a visitor here last week, combining business and pleasure.

Ed Culler, Pierson, Ia., was in this city last week, purchasing stock for a new store which he expects to open at Rawlins, Wyo., shortly.

A large plate glass window in Jos. P. Frenzer's store was broken one day last week by thieves, who hurled a piece of concrete through it. They stole some card jewelry and made their escape before the loss was discovered.

The following out-of-town jewelers were in this city last week: B. F. Smith, Valley; C. F. Collins, Dunbar; W. H. Wilker, Spaulding; Louis Slama, Humboldt; A. B. Cameron, North Bend; John Crabill, Plattsmouth; Eggers Bros., Atlantic, Ia.; Fred Furnald, Carrol; Carl Anderson, Sioux City, and C. W. Sawyer, Silver City.

Pacific Northwest.

Carl Adler, Baker City, Ore., has turned over his stock at that place to the Western Salvage Co., Portland, Ore., to be closed out as soon as possible.

O. M. Heacock, formerly of Moro, Ore., is fitting up quarters in the Heidenreich building, on Adams Ave., La Grande, Ore., and will put in a stock of jewelry and optical goods.

The store of J. F. McMillan, Vancouver, B. C., has been fitted up with a complete system of combined merchandise and cash carriers. These are said to be the first of the sort introduced in any store in Canada.

O. Simonson was recently arrested after making a pretense of holding up young Joseph St. Jeans in his father's jewelry store, 2390 Pacific Ave., Tacoma, Wash., and fined \$50 in the police court for carrying concealed weapons. The boy appeared in court and identified Simonson, but said that the accused was intoxicated and made no attempt to steal any of the jewelry from the store.

James A. Moore, Seattle, Wash., has offered a reward of \$1,000 for the arrest and conviction of the thief and the recovery of jewelry valued at \$2,600 which was stolen from him a short time ago. Among the stolen articles are a large crescent brooch four inches long, mounted with 24 diamonds, and valued at \$1,200; a gold bracelet mounted with a large opal in the center surrounded by diamonds and valued at \$400, and a double string pearl necklace valued at \$1,000.

New Stores and Enterprises.

W. B. Scott is a new jeweler in Dewitt, Mo.

Sim Belknap has commenced business in Niles, Mich.

Mr. Jesperson is about to open a store in Thornton, Ia.

Fred Hallock has commenced business in Greeley, Nebr.

W. E. Wiseman has opened a store on Freeman Ave., Cincinnati, O.

G. W. Sherman, Victor, Colo., has opened a store at Gardena, Cal.

Elmer Hartman has erected a building in Bowbells, N. Dak., and will soon open a jewelry store there.

Dan Kugler, formerly with L. J. Henry, Rocky Ford, Colo., has just begun business on his own account at that place.

Mr. Slivit has leased a store at 13 S. 7th St., Minneapolis, Minn., where he will engage in the retail jewelry business.

S. W. Stensall, formerly with Moses Cochenhaler, Montreal, Can., on Oct. 30, formed a partnership with C. V. Keeting, to engage in business at the same place.

F. W. C. Carl, formerly with T. J. McConnell, Hancock, N. Y., has opened a jewelry and optical store, with a repairing department, at 214 Main St., Great Bend, Pa.

A new retail jewelry and optical establishment was opened in Dubuque, Ia., recently, at the corner of Main and 10th Sts., by E. J. Price & Co. Mr. Price formerly resided in Reinbeck, Ia.

The Berg-Arduser Co., Dubuque, Ia., has been incorporated to do a wholesale, retail and manufacturing business. The capital stock is \$25,000, and the incorporators are C. H. Berg, Harry H. Berg and Paul Arduser.

Pacific Coast Notes.

F. E. Wolfarth, Covina, Cal., is seriously ill at his home.

T. Y. Maynard, Albuquerque, N. Mex., has put in a cut glass department.

C. M. Henkel, a retired jeweler of Bisbee, Ariz., is at present visiting in Los Angeles, accompanied by his wife.

H. H. Hooper, Whittier, Cal., has sold his store to John Parker, formerly of Manchester, Eng., who has now located in Whittier. Mr. Hooper will retire from the jewelry business for the present.

J. E. Pauley, Estancia, N. Mex., has leased a lot in that town and will put up a new building for his jewelry business. He has secured the services of J. J. Laue, Denver, Colo., who will hereafter be at the head of the repairing department.

The H. J. Whitley Co., Los Angeles, Cal., had a striking window attraction last week, in the shape of some slabs of gold ore that were claimed to run \$100,000 to the ton and which were loaned by parties interested in the mine from which the ore was taken.

Sr. Jose Attolini, proprietor of a store in Chihuahua, Mex., has been in the neighboring city of Torreon arranging for the opening of another establishment at that place. He has leased rooms on the lower floor of the Hotel Iberia, which he will at once remodel to suit his needs. The new store will be under the management of Sr. Alfredo Attolini.

Ball's Official Standard R. R. Watches

WHAT WOULD YOU GIVE FOR A LIFELONG CUSTOMER?

Try this plan:

Sell your next watch customer a "Ball."

Its reliable performance will convince him you are a dealer to be depended on—he'll keep coming back for other things.

The watch will win you his business and friendship for always.

Write for booklet, and watch this space.

We want to add a lot of new friends to the Ball family of railroad watch dealers.

VOL. LIII.

CHICAGO, WEDNESDAY, NOVEMBER 7, 1906.

No. 14.

Chicago Notes.

Charles A. Garlick is back from a two months' trip to California.

Sid Lebolt, buyer for Rothschilds, has returned from an eastern trip.

Morris Eisenstadt, of the Eisenstadt Mfg. Co., visited the trade here during the past week.

C. E. Roy, with the W. J. Johnson Co., is making a short trip covering nearby towns.

A. F. Horner, watch buyer for Norris, Allister & Co., is back from a short pleasure trip.

Charles Offerman, with William Smith & Co., New York, was a recent visitor in Chicago.

H. E. King, with the Queen City Silver Co., has returned from a trip through the west and south.

Stanley Simpson, representing the E. Howard Clock Co., is on an extended trip to the coast.

George H. Birkebak, formerly with M. H. Bell, Kalamazoo, Mich., is now with A. M. Church, this city.

C. D. McElvain, Red Oak, Ia., accompanied by his wife, spent last week here, making Fall purchases.

Lewy Bros. have made considerable improvements in their store, which permit of additional show case space.

A. R. Oughton, with the Jennings Bros. Mfg. Co., is making a short trip this week through Indiana and Michigan.

E. A. Dayton, of E. A. Dayton & Co., has returned to Chicago after a two months' trip to the Pacific Coast.

W. A. Johnson, formerly with Loftis Bros. & Co., has accepted a position in the watch department of Rothschilds.

L. A. Eppenstein has returned from his western trip; S. Groak, of the same firm, has just started on a southern trip.

Col. T. P. Moody, the jewelry auctioneer, is making a sale in Mobile, Ala., and goes from that place to Greenville, Miss.

Albert M. Dueber, of the Dueber Watch Case Mfg. Co., Canton, O., was in Chicago for a few days during the past week.

G. W. Finckenaue, with the Chicago office of Alvin Mfg. Co., left for a short trip through Kansas and Nebraska last week.

N. Lebolt, of Lebolt & Co., is in New

York, looking over stocks in that city and also arranging with their shop there to get out all their special work.

Charles L. Crawford, of C. L. Crawford & Co., retail jewelers, Peoria, Ill., was recently united in marriage to Miss Minnie Margaret Smith, of this city.

James H. Rogers, Gibson City, Ill., was a visitor here last week. To Mr. Rogers fell the sad duty of bringing here his mother, who is undergoing an operation at a local hospital.

The Ohio Cut Glass Co., of Bowling Green, O., has completed a new addition to the factory. The capacity is now doubled and prompt shipments are assured to all customers.

Catalogues from the five big jobbing houses, viz., Benjamin Allen & Co., Otto Young & Co., Lapp & Flershem and A. C. Becken, are all out and being mailed to their customers.

Sim Belknapp has completed his course at the Bradley Polytechnic Institute and has embarked in the jewelry business at Niles, Mich., where his father is a well known physician.

The trophy donated by Lebolt & Co. for the Horse Show, a silver chafing dish, ivory mounted and valued at \$200, was awarded J. Hobart Moore for the best pair of horses hitched to a brougham.

E. J. Price, of E. J. Price & Son, Reinbeck, Ia., when in Chicago buying last week, stated that he would locate at Dubuque, Ia., by the first of this month, removing his stock from Reinbeck.

At the Horse Show at the Coliseum, last week, Miss Florine Kaiser received the second prize of \$50 while riding "Peggy" in Class 62 for cobs under saddle. Miss Kaiser is the daughter of Sol. Kaiser, of Louis Strasburger's Son & Co.

A. W. Payne, Chicago manager of the E. Howard Clock Co., reports orders for tower clock outfits for the Riley County Court House, Manhattan, Kan.; Ogden State Bank, Ogden, Ia., and for St. Mary's Church, Riverside, Ia.; also a street clock to be erected in front of the store of G. W. Winter Jewelry Co., Minneapolis, Minn.

Fred R. Sheridan, western representative of Arnold & Steere, and a stockholder in that corporation, will sever his connection with that concern April 1, 1907. Mr. Sheri-

dan has sold his stock to Horace W. Steere and will embark in the department store business at San Francisco, Cal. It has not yet been decided under what name the new San Francisco dry goods store will be conducted. Mr. Sheridan will put between \$25,000 and \$30,000 in the new venture and will have as a partner Miss Catherine Mills, a jewelry buyer for the Hale Bros. & Co.'s Pacific Coast stores. In addition to running this new department store, Mr. Sheridan will handle a number of jewelry and kindred lines on commission, visiting his old trade on the Pacific Coast.

The following were among the buyers in the city during the past week: Ezra Nuckolls, Eldora, Ia.; J. G. Ferry, Eau Claire, Wis.; A. E. Rush, Macomb, Ill.; Orr L. Keith, of Keith & McChesney, Iowa City, Ia.; E. Munson, Mendota, Ill.; W. T. Boggs, Ft. Dodge, Ia.; W. J. Crawford, Marseilles, Ill.; Edson Smith, Elmwood, Ill.; G. M. LaPierre, Niles, Mich.; W. B. Murray, East Tawas, Mich.; O. H. Fischer, Beardstown, Ill.; M. T. Haslett, Sheffield, Ill.; George A. Young, Moberly, Mo.; D. T. Kiess, Edon, O.; Ernest J. W. Starkey, Waterford, Wis.; C. S. Sands, Kirksville, Mo.; Mrs. Harry W. Yaseen, Dalhart, Tex.; G. R. Evans, Kendall, Wis.; G. A. Foland, of Russell & Foland, Mt. Pleasant, Mich.; A. H. Frandsen, Monmouth, Ill.; G. E. Carlson, Ashland, Wis.; G. A. Stevenson, Holland, Mich.; H. O. Thomas, Hampton, Ia.; L. W. Swen, W. Liberty, Ia.; J. R. Pogue, Sullivan, Ia.; S. E. Dickinson, Hartford, Wis.; B. H. Doty, Manilla, Ia.; Albert E. Wuesteman, Champaign, Ill.; J. J. Heath, Lansing, Mich.; R. W. Chamberlain, Marshalltown, Ia.

Frank W. Barnes has decided to close his store in Whitinsville, R. I., in order to devote his entire attention to his business in Uxbridge, Mass.

A man giving the name of M. C. Smith and claiming residence in Dubuque, Ia., was run over by a train in Tecumseh, Nebr., recently, his right leg having been cut off above the ankle. Smith and two companions had been trying to sell cheap jewelry in the streets during the day, and had been drinking. He was attempting to take a train out of town when he fell under the cars.

Cincinnati.

Albert Wallenstein, of Wallenstein, Mayer & Co., will visit the trade in the southeast this week.

Loring Andrews, of the Loring Andrews Co., has returned from his Summer tour of Europe.

William Pflueger, of Joseph Noterman & Co., will leave this week on his regular business trip south.

Joseph Voss, late watchmaker for the Frank Herschede Co., is now with Fred Pieper, Covington, Ky.

W. E. Wiseman, formerly a jewelry auctioneer, has opened up a new retail jewelry store on Freeman Ave.

Friends in this city have received announcements of the marriage of Charles L. Crawford and Miss Smith, both of Peoria, Ill.

Michael Reitman, an engraver at 1402 John St., was robbed a few nights ago of eight gold watches by a thief who had entered his room.

George G. Mead, formerly of the Moultrie Jewelry Co., Moultrie, Ga., recently purchased an opening outfit here for his handsome new optical parlors at that place.

Fisher Boiarsky, who was recently indicted on a charge of having obtained by false pretense from Richter & Phillips goods to the value of \$1,277.37, will be placed on trial Nov. 20.

A contract has been awarded the Frank Herschede Co. to furnish 22 diamond studded charms valued at \$75 each, to be presented to the world's champion ball team, "White Sox," Chicago.

Joseph Becker, who recently retired from business after some years with the Philadelphia Watch Case Co., and who was formerly with Joseph Fahys & Co., surprised his friends by getting married last week. His many associates in the trade here extended to him their hearty felicitations on the event.

Charles Pummel, who in October last was arrested at Dayton, O., by Postoffice officials on a charge of obtaining a \$150 diamond ring from an eastern firm, was sentenced to 30 days in the workhouse and to pay \$15 costs last week. Pummel used the name of a friend who was in the jewelry business, and in this way secured the ring on memorandum. He was to pay \$25 a month until the ring was paid for. The fraud was soon discovered and goods recovered by the seller. There was not sufficient evidence as to his using the mails to defraud to warrant his being tried on that charge.

Out-of-town jewelers who replenished their stocks here the past week included: H. A. Bedel, Jackson, O.; Joseph E. Smith, Lockland, O.; Frank Fullilove, Owenton, Ky.; H. L. Eveslage, Ripley, O.; Edgar Braly, Columbia, Tenn.; Hugh Murray, Danville, Ky.; Samuel Horchow, Portsmouth, O.; E. Sensenbrenner, Circleville, O.; Julius Lusky, Nashville, Tenn.; J. V. Moross, Dayton, O.; J. M. Neth, Eaton, O.; F. M. Shull, Mount Hope, W. Va.; L. T. Vimont, Millersburg, Ky.; F. Simmerman, Felicity, O.; L. C. Diefenbaugh, Lewisburg, O., and J. H. Diefenbaugh, Ansonia, O.

A man alleged by the police to be a win-

dow smasher, who gives the name of William Hotten, now under arrest at Columbus, O., is believed to be the robber who has been smashing windows in Cincinnati for the last two months. When arrested in Columbus the man was in the act of smashing a window in a jewelry store, and when searched four gold watches were found on him. These have been identified as part of the goods stolen from the Raisbeck pawnshop last week. Hotten also answers to the description of the man who recently broke into Alber's pawnshop on Vine St. and several other stores here. At present no effort will be made to bring him here, as the Columbus authorities think they have evidence enough to try him there. If he should not be convicted, then he will be brought here to answer several charges.

Kansas City.

TRADE CONDITIONS.

The jobbers of this section are advising the retailers to order early if they want their own selection, and the result has been good. It is stated from all quarters that the manufacturers will not be able to supply the demand in many lines, and retailers have generally been quick to grasp the situation and place their orders. One salesman, just in from the road, states that he finds the retailers well stocked and prepared to take care of a big trade before the first of the year.

C. P. Kionka, of Kionka & Kionka, has returned from a trip over his northern territory, and will start out again next week.

J. H. Whitney, of the Edwards & Sloane Jewelry Co., is just in from his territory, and reports a successful business trip in Nebraska.

Otto Knaul, traveling representative with the Woodstock, Hoefler Watch & Jewelry Co., was in this city, last week, filling up his trunks.

L. E. Hendrickson, with A. C. Rosser & Co., Osage City, Kans., was in this city last week on business relating to his novel patent on a theatre hat rack.

Clem B. Altman has purchased the fixtures used by the Jaccard Jewelry Corporation in its former location, and has already installed them in his store.

Mr. Hoy, who has been with Lon Smith, Stuart, Ia., was in Kansas City, last week, accompanied by his wife. They were on their way to Parsons, Kans., where Mr. Hoy has taken a position with J. S. Pfeiffer.

Jake Levin, traveler for Kionka & Kionka, has just returned from a trip through Kansas and Oklahoma, and makes glowing reports of the business prospects. He will leave on his next trip as soon as he can stock up.

O. H. Stevens and Geo. A. Stevens, both pawnbrokers of this city, brought suit, last week, to break the will of John C. Larwell, their mother's brother, who died five years ago in Mansfield, O., leaving an estate of over a million dollars.

Mr. Marshall, who has been with J. B. Hayden, Topeka, Kans., for some time, and has lived in that city about eight years, was here for a few days, last week. He reports having bought an interest in the store of R. B. Roberts, 603 Kansas Ave., in that city.

The Jaccard Jewelry Corporation has moved into its new quarters, 1017-19 Walnut St. The furnishings of the new store

are simple, but elegant and rich, and the lighting arrangement includes subdued lights in the different display cases, so they can be illuminated whenever a customer wishes to look at the goods. A pneumatic tube system has been installed. The manufacturing department is on the fourth floor.

The following out-of-town jewelers called on the local jobbers during the past week: W. H. Meyer, Lawson, Mo.; F. J. Burgy, Brunswick, Mo.; L. Megede, Richmond, Mo.; Guy Farnsworth, Fort Scott, Kans.; C. E. Ticman, California, Mo.; C. E. Durall, Kincaid, Kans.; Mr. Fowler, of Fairfield & Fowler, Parsons, Kans.; Mrs. J. H. Whiteside, Liberty, Mo.; Geo. W. Ellis, Butler, Mo.; Gust. Carlson, Lindsay, Kans.; Lena Whiteside, with W. W. Whiteside, Liberty, Mo.; Wm. H. Haupt, Bartlesville, Ind. T.; E. P. Smith, Leesville, La.; Will T. Price, Harrisonville, Mo.

Minneapolis and St. Paul.

Mr. Caplan is a new watchmaker for S. Schaffer, 243 Nicollet Ave., Minneapolis.

The Western Mfg. Co., Minneapolis, has moved from the Sykes block to the 11th floor of the Lumber Exchange.

C. M. Thomsen, with H. Birkenhauer & Co., Minneapolis, is preparing to build a new residence for his own use.

E. J. Bronson, the Eighth Ward jeweler, Minneapolis, has awarded contracts for the erection of a residence, costing \$3,500.

Mr. Jacobson, head watchmaker for C. D. Peacock, Inc., Chicago, was in the Twin Cities on his way to Dakota last week.

L. P. Sandberg, Minneapolis, is again able to be out on crutches, after an accident which resulted in a broken leg, about two months ago.

Peter Sandecker, formerly with Johantgen & Kohl, Minneapolis, died recently in Chicago, his home, where he had gone after his health broke down.

Out-of-town jewelers in the Twin Cities last week included: John Fredell, Center City, Minn.; J. A. L. Walman, Little Falls, Minn.; E. Schmidt, Howard Lake, Minn.; E. B. Woodward, Bismarck, N. Dak.

Paul B. Erickson, traveling representative for the Reed-Bennett Co., Minneapolis, recently lost his grip at a hotel at Bemidji, Minn. It contained his personal baggage and jewelry samples. The Jewelers Protective Association at once sent a Pinkerton detective to the scene, and after making a thorough search the missing property was discovered and a good clue secured to the thieves.

Denver.

H. T. Sherman has closed his store at Victor, and begun business at Grand Valley, Colo.

L. J. Henry, Rocky Ford, passed through this city on his way east, last week, on a business trip.

E. L. Peiser, Glenwood Springs, Colo., was in Denver, last week, to meet his sister, who has just arrived from abroad.

Out-of-town jewelers who visited the local jobbers, last week, were: J. G. Hiestand, Manitou, Colo.; Mrs. W. H. Brannen, Brannen Bros., Loveland; G. W. Sherman, Victor; A. Herman, Brighton, Colo.

CHICAGO, ILL.

Watchmakers', Jewelers' and Engravers' Supplies.

Our new 432 double-size page catalogue containing 20,000 illustrations will be sent to you gratis (prepaid) on application.

FEATURES

"BLACK SHIELD" MAINSPRINGS are packed in the following manner:

Each spring is wrapped separately in oiled paper, and placed in an individual envelope printed with the name and size of movement for which it is intended.

Twelve envelopes, or one dozen mainsprings, are contained in a well-made strong box properly labeled.

Useless handling of the springs is avoided, thereby preventing rust or mixing of stock.

The name, "BLACK SHIELD" is scratched on every spring.

THE NEW MAINSPRING

"BLACK SHIELD"

MAIN-SPRINGS

FOR ALL AMERICAN WATCHES.

The Product of the Highest Attainment in Mainspring Making

TESTS

In selecting the "BLACK SHIELD" MAINSPRINGS, we were guided not alone by our own severe tests and judgment, but we distributed samples to dozens of expert watchmakers throughout the country.

The opinion of all was that the "BLACK SHIELD" MAINSPRINGS are the finest ever introduced in this country. That they are even, properly tempered, carefully finished, correctly gaged, and tips and length positively accurate.

They are of wine color, well polished, and will fit the respective movements without any filing or change whatsoever.

"Black Shield" Mainsprings are manufactured for us only by the oldest and most reputable maker in Switzerland
Per Dozen, \$1.25 Per Gross, \$13.50

Fac-Simile of Box Containing One Dozen "Black Shield" Mainsprings

"Black Shield" Mainsprings are guaranteed in every respect. No better can be had at any price
Per Gross, with 4-drawer Cabinet (capacity, 48 dozen), \$15.00

San Francisco.

L. A. Picote, of this city, is now visiting in El Paso, Tex.

S. Wolsky has opened a store in the heart of the burned district at 507A Market St.

Walter Haxe, formerly with the Bohm-Bristol Co., has again taken a position with that house.

W. D. Hogan, Fresno, Cal., was in San Francisco last week, buying stock and getting ideas for the coming holiday trade.

Charles Noack came down from Sacramento last week to do a little preliminary buying for the holiday trade at the capital.

P. J. Collins is representing the Los Angeles trade in San Francisco at present. He is looking over the jobbers' stocks and making some selections for the holidays.

In a note published last week referring to the new jewelers' building, the name Leonard Nordman instead of Leon Nordman was given as one of the board of directors.

Henry Bohm, of the Bohm-Bristol Co., left for Denver, Colo., last week, where he will remain for about one month, looking after his Denver interests. He will return to this city in time to be in the store for the holiday trade.

The store and sample rooms of Burr W. Freer, in the Kamm building, are now all torn up and will be remodeled and enlarged. The work will occupy about a week, after which the store will be in shape to do the business required.

Leo Aurich, well known in the jewelry trade here, has taken a position with Nordman Bros. in the Kamm building. During the past month or two Nordman Bros. have taken on new men at the rate of about one per week. The firm has also added a new safe to its equipment.

J. A. Sorensen & Co.'s store in the downtown retail district, on Market St., is being rapidly modernized, and is now about the finest store in what was six months ago the burned district. Two new 10-foot show cases, one 10-foot wall case and several large mirrors are being installed this week.

Mrs. Catherine Johnson, otherwise known as Kitty Eagan, who was arrested recently on the charge of stealing a bracelet from the Keystone Jewelry Store, on Van Ness Ave., was discharged from custody last week. She claimed to have taken the bracelet by mistake and that at the time she was arrested she was on her way back to the store to return it.

The finishing touches have been put on the store of A. Hirschman, at 1641 Market St., making this one of the handsomest of the new stores. The establishment contains plate glass show cases, a 22-foot wall case and other handsome fittings. It is carpeted throughout with dark green Wilton carpet with a brown marble entrance. Well-lighted offices are placed in the rear. Nearly all of the stock has been received with the exception of the silverware, which for some reason has not yet put in an appearance.

Ballbach & Bedell, Santa Cruz, Cal., have succeeded to the business of J. D. White, of that place. The new owners are Louis Ballbach, formerly with Geo. W. Ryder & Son, San Jose, Cal., and Orrin S. Bedell, at one time with S. H. Bailey & Son.

St. Louis.

W. W. Mulinix, of Kansas City, Mo., was a visitor in St. Louis last week.

Mr. and Mrs. E. Boersche, Columbia, Mo., were among the visitors in this city last week.

F. A. Henninger, formerly of Columbia, Mo., was here, last week, making purchases for his new store at California, Mo.

J. L. Freund, 816 Franklin Ave., has also leased the store at 814 Franklin Ave. and will add a stock of clothing to his jewelry business.

Morris Eisenstadt, president of the Eisenstadt Mfg. Co., was in Chicago last week on a pleasure trip. This is Mr. Eisenstadt's annual visit to the Lake City.

T. R. Donnan, formerly with A. C. Taylor & Sons, Cedar Rapids, Ia., has taken a position with the Eisenstadt Mfg. Co. as general salesman and will enter upon his duties this week.

William Weidlich, of William Weidlich & Bro., is in Omaha on a business trip. G. R. Amost, of the same firm, has returned from an extended trip through the south and southeast.

John G. Koch, a watchmaker, formerly employed by Charles Derleth, 239 Collinsville Ave., East St. Louis, Ill., is now with Joseph Mazer, South McAlester, Ind. T. Mr. Mazer left for home last week.

J. F. Daily, of J. F. Daily & Co., and Charles A. Franke, an East St. Louis newspaper man, enjoyed a hunting trip of several days at the mouth of the Missouri River. Mr. Daily brought back 14 ducks.

Goodman King, president of the Mermod, Jaccard & King Jewelry Co., returned home, Saturday, from a business trip of several weeks' duration in New York. R. Niehaus, buyer of art goods and china-ware, also returned with Mr. King.

Among the out-of-town jewelers in St. Louis last week not elsewhere mentioned were: V. E. Vulbrock, New Minden, Ill.; T. G. Willis, Edwardville, Ill.; George A. Young, Moberly, Mo.; John Ketting, Sainte Genevieve, Mo.; Claude Wheeler, Columbia, Mo., and W. H. Wheeler, Palmyra, Mo.

Two of the credit firms, J. F. Daily & Co. and Loftis Bros. & Co., have become members of the Credit Merchants' Association of St. Louis, composed mostly of credit clothing firms. Protection of the credit merchants is the object of the organization. Mr. Daily has been honored with the vice-presidency of the association.

The police authorities of this city are diligently searching for Frederick Millerman, alias Fred Oakey, of 315 Ruckford St., who is wanted on a charge of robbing a retail jewelry store at De Soto, Mo., April 15 last. Millerman was captured a short time ago, but escaped after having been in custody only a few hours.

Many jewelers attended the funeral of the late William Walsh, which took place under the auspices of the Elks, of which he was chaplain. Floral emblems were received from the Moolah Temple, Shriners; Ivanhoe Commandery, R. I.; Tuscan Lodge of Masons, and Ransom Post of the G. A. R. The services were held at St. Phillips Episcopal Church. Edwin S. Puller delivered the eulogy.

GUESSING HAS CEASED TO BE A VIRTUE.

THE MOE DIAMOND WEIGHT GAUGE is the only correct system for determining the weight of mounted diamonds.

**You Can Easily Operate
This Typewriter
Yourself**

Don't worry your correspondent.

Don't write him anything by hand that takes him time to make out—that may leave him in doubt—that he can't easily read.

And don't fill out legal papers or card memos—or make out accounts or hotel menus in your own handwriting.

It looks bad, reflects on your standing, makes people think you can't afford a stenographer, and is sometimes ambiguous.

You can write out your letters—make out an abstract—fill in an insurance policy—enter your card memos—make out your accounts, or a hotel menu—or do any kind of writing you need, on any kind, size or thickness of paper, and space any way you want on

The **OLIVER**
Typewriter

The Standard Visible Writer

You can write any of these things yourself if you do not happen to have a stenographer.

For you can easily learn, with a little practice, to write just as rapidly, and as perfectly, as an expert operator on the OLIVER. Because the OLIVER is the simplified typewriter. And you can see every word you write. About 80% more durable than any other typewriter, because it has about 80% less wearing points than most other typewriters.

80% easier to write with than these other complicated, intricate machines that require "humoring"—technical knowledge—long practice and special skill to operate.

Than machines which cannot be adjusted to any special space—with which it is impossible to write abstracts, insurance policies, or odd-sized documents except you buy expensive special attachments requiring experts to operate.

You can adjust the OLIVER to any reasonable space—you can write on any reasonable size and thickness of paper, right out to the very edge, without the aid of any expensive attachment or special skill, and your work will be neat appearing, legible and clear.

For the OLIVER is the typewriter for the doctor, the lawyer, the insurance agent, the merchant, the hotel proprietor—or any man who does his own writing.

Write us now for our booklet on the simplified features of the OLIVER.

**LEARN
JEWELERS
ENGRAVING**

"The Engraving School that Graduates Experts."
A fascinating, high-salaried and easily learned trade, taught thoroughly and practically by correspondence. Your instructor is the foremost authority and master workman in the world. We will teach the beginner better engraving by correspondence than he can gain in years of rigid apprenticeship. We will improve the skill of any engraver one hundred per cent. and make him master of the trade. The demand for competent engravers far exceeds the supply. Send for handsome, illustrated prospectus.

OUR MOTTO: The best of Everything.

**SCHARLING & Co.
SILVERSMITHS**

YOU like a large variety to select from when buying and that is a strong point with our line. We make everything in deposit goods that sells and you make no mistake in buying any article you see, for the reason that it would not be here if it was not good. All our goods are designed with great care and are made by skilled labor who know how, and it costs no more than poorly made stuff. These illustrations show one of our tea sets which is meeting with universal favor. The price makes it a very popular seller. Made in blue and white porcelain. The best illustration is only a poor example. You must see the line to appreciate the goods. Do it now.

JULES ASCHEIM
37 Maiden Lane, New York

These well-known Razors, the quality of which is warranted, possess this great advantage, that they may be used for ten years before they require actual sharpening. Before using them it is necessary to rub them on good leather strop. Le Coultre's Strops (to be had with the Razors) should be used in preference to others.

THIS CUT IS TWO-THIRDS OF REGULAR SIZE.

"SPECIAL"—Single Razors for Jewelers' Travelers at trade price.

UNITED STATES PATENTS.

ISSUE OF OCT. 30, 1904.

834,334. COMBINED KEY-RING, TAG, CIGAR-CUTTER, AND SCREW-DRIVER. CHARLES G. TAYLOR, Hartford, Conn. Filed Oct. 2, 1905. Serial No. 281,071.

As an article of manufacture an implement consisting of an oblong tag provided with a curved lower end perforated to receive a cigar-tip, and a plate shaped to tool form at its outer end, and having one extremity curved and opposite the curve an inclined cutting edge, said plate being pivoted adjacent to its edge near the edge of the tag,

and being substantially the length of the tag, whereby a long leverage is obtained, and when the plate is turned on its pivot to a position parallel with the tag the cutting edge will be concealed behind said tag, and the curved surfaces of the plate and tag will be concentric, and when the plate is turned at right angles to the tag a bearing-support of the width of said tag is provided to resist torsional strain when the tool at the end of said plate is in use.

834,373. FOUNTAIN-PEN. FRANK O. ELLIS, Philadelphia, Pa. Filed Nov. 7, 1904. Serial No. 231,628.

In a device of the class described, the combination with a pen-barrel having an end wall pro-

vided with an opening, of a piston-rod threaded throughout substantially its entire length and movable freely through said opening, and a piston threaded onto the rod within the barrel.

834,457. JEWEL-SETTER CUTTER. CARL CULMAN, St. Louis, Mo. Filed Sept. 14, 1905. Serial No. 278,511.

In a tool of the character described, the combination with a tapering stem or shank having a split or bifurcated outer end and a transversely-disposed passage formed therethrough at the inner end of said bifurcation, of a pair of cutters formed

on said bifurcated end of the shank, said cutters being arranged on each side of said bifurcation, and adapted to be expanded, a set-screw arranged in one side of the bifurcated end of the shank at right angles to said bifurcation, the inner end of said screw bearing on the opposite side of the bifurcated end, whereby upon the adjustment of the

screw inwardly or outwardly, said bifurcated ends of the shank and the cutters thereon, may be separated to a greater or less degree.

834,487. WORKMAN'S TIME RECORDER. ERIC E. PETERSON, Binghamton, N. Y., assignor of one-fourth to Arthur W. Alexander, Binghamton, N. Y., and one-fourth to John E. Jenkins, Wilkes Barre, Pa. Filed Jan. 31, 1905. Serial No. 243,572.

In a time-recorder, the combination with a framework, of time-recording-mechanism arranged therein, a carriage movable contiguous to said

time-recording mechanism and adapted to carry a sheet designed to receive records from said time-recording means, an arm engaging said carriage, and means for moving said arm bodily, laterally for actuating the carriage, and means for swinging said arm pivotally for governing the positioning of the sheet within the carriage.

834,541. FOUNTAIN-PEN. WILLIAM A. WELTY, Waterloo, Ia. Filed Jan. 18, 1906. Serial No. 296,681.

A feed-bar provided with a longitudinal ink-duct and with an elongated longitudinally-disposed ink-reservoir on each side of the duct, said reservoirs

being closed at the bottom and out of communication with the duct, the feed-bar having an air-passage opening into the duct and out of direct communication with the reservoirs.

834,542. FOUNTAIN-PEN. WILLIAM A. WELTY, Waterloo, Ia. Filed Feb. 23, 1906. Serial No. 302,554.

In a fountain-pen, the combination with a barrel having a slot provided with an inclined wall, of a compressing member housed in the barrel, a finger-piece carried by the member which projects through the slot and is provided with an inclined surface adapted to interlock with the inclined wall of the

slot, a rotatable means on the barrel for moving said finger-piece in a direction to cause its inclined surface to engage the wall of the slot, and means on the barrel for preventing endwise movement of the first-mentioned means.

834,655. EYEGLASSES. CHARLES F. BECKWITH, Boston, Mass., assignor of one-half to Thos. W. Spencer, Watertown, Mass. Filed Jan. 8, 1906. Serial No. 295,033.

The improvement in eyeglasses, consisting in a bowed spring having its terminal portions flattened, perforated and twisted to extend edgewise in the

general plane of the lenses, and adapted to be secured to the box portion of the lens-stud by horizontally-arranged fastenings transverse to said plane.

834,744. FOUNTAIN-PEN. JACOB J. MEAD, New York. Filed April 5, 1906. Serial No. 310,086.

A device of the class described, comprising a vessel adapted to contain a liquid and having

means for the barrel being of uniform diameter and the feed-channel in the tip of lesser diameter, and a head-section having an opening in its rear end adapted for connection with the body-section,

the body-section at its rear end being exteriorly reduced in diameter and provided at its reduced portion with an exterior right-hand thread, the head having an interior thread corresponding to the exterior thread of the body, a sack, one of whose ends is provided with a plug which enters and is secured in the opening at the rear end of the head-section, the opposite end of the sack having a flanged sleeve inserted therein, which sleeve is secured to the forward wall of the barrel-chamber.

834,815. CUFF-BUTTON. GEORGE KREMENTZ, Newark, N. J. Filed May 17, 1902. Serial No. 107,707.

An eccentric cuff-button having posts and braces formed of integral blanks, the blanks being sol-

dered together to form a single post and the integral braces on one blank being at an angle to the braces on the other blank.

834,856. NECKTIE-HOLDER. SAMUEL L. WORCESTER, Machias, Me. Filed Jan. 9, 1906. Serial No. 295,272.

A necktie-holder comprising an inner member

having a buttonhole, and an outer member hinged to the inner member and provided with spaced arms having projecting pins or spurs for engaging the tie.

DESIGNS.

38,298. BADGE. FRANKLIN S. FRISBIE, Boston, Mass. Filed Oct. 12, 1905. Serial No.

282,522. Term of patent 7 years.

38,299. BADGE-PIN. BENJAMIN F. MACKALL, Norfolk, Va. Filed May 11, 1906. Serial

No. 316,390. Term of patent 3 1/2 years.

38,300. SPOON OR FORK OR SIMILAR ARTICLE. HORACE G. PETTY, Fort Collins,

Colo. Filed Sept. 11, 1906. Serial No. 334,203. Term of patent 7 years.

A SOUND ARGUMENT

THE only means a manufacturer can adopt to create a **continued** demand for his product is to produce the highest quality from the best material and workmanship. The price is a second consideration. This is the **U. S. Robert** method.

The demand for his make of mainsprings is continued, and increasing steadily. The O.K. stamp of the trade's approval cannot be put on an article by the mere say-so of the manufacturer. The U. S. Robert springs were put on the market in 1885 and from the first the policy of manufacture has been to adhere to a high ideal, to insist on a uniformity of material and workmanship in order to maintain the highest standard of perfection. This is done by U. S. Robert, whose ability is widely recognized and respected by the scientific and best-known makers of mainsprings. Such being the case, the price-lowering methods of competition cannot apply here. Made in 142 different sizes for all sizes and grades of American watches.

Price \$1.25 per doz. or \$13.50 per gross, less 6% for cash.

PLEASE ORDER FROM YOUR JOBBER IN MATERIAL AND TOOLS. WHOLESALE TRADE SUPPLIED BY

(ABRIDGMENTS OF SPECIFICATIONS, 1905, FROM THE Illustrated Official Journal.)
ISSUE OF OCT. 17, 1906.

12,918. HAT FASTENINGS. E. E. EOWICK, London. June 22.

A fastening for ladies' hats consists of a pin *a*, preferably curved, provided with notches *b*, *c*, *d*, which engage with a clasp *j*, the straight bar *l* of which engages with the notch *d*, while correspond-

ing notches *k* engage with the notches *b*, *c*. The eyes *i*, *n* are sewn to the interior of the hat on opposite sides. The device may be made of bone, ivory, horn, metal, or other suitable material, and, if required, the parts *f*, *j* may be jeweled.

13,021. LANTERN PINIONS. E. H. HORN, Waterbury, Conn., U. S. June 23. (Date applied for under Patents Act, 1901, Oct. 6, 1904.)

Lantern pinions for clock and watch movements, etc., are made with the pins 7 coming flush through

one collet 4, but not through the other 3. The former collet then fits flat against the hub 9 of the wheel 8.

13,063. TIME-ALARM SIGNALS; CLOCKS. W. RAUSCH and H. GONDOLF, Düsseldorf, Germany. June 24.

Relates to time-alarm signaling-systems for use in hotels, means being provided by which all the alarms may be sounded at once in case of fire. The central clock also controls a number of electric clocks in the various rooms, and its driving-weight is periodically raised by means of a magnet, the circuit of which is controlled by the wheelwork. In the time-alarm system, the arm D,

L¹ are also connected to pins P on the board R, so that in case of fire all the pins can be connected to the battery by means of the cross-pieces

R¹ and connection G¹. This is effected by means of a catch which allows the spring R² to act. Fig. 3 shows the method of keeping the clock wound up, and the system of controlling the other clocks. The driving-weight U is connected to the clock-work proper by a pawl lever V and a ratchet-wheel W, and is carried by the armature X of the magnet Y, in circuit with the battery H¹ and the contacts *a*, *a'*, which are periodically closed by a pin *d* on the lever *e*. This lever is raised by pins *g* on the wheel *h*, and falls every five or 10 minutes to close the contacts *a*, *a'* and raise the weight U. A similar lever *e'* normally rests on pins on the other side of the wheel *h*, and when released causes the pin *d'* to close contacts *a''*, *a'''*, in circuit with the battery H² and the magnet *i* of the secondary clock *j*, the hands *o* of which are driven by ratchet-mechanism *m*, *n*.

13,083. ORNAMENTS POTTERY, ETC. W. WACHTER, Leipzig-Volkmarisdorf, Saxony, Germany. June 24.

In ornamenting porcelain, stone ware, majolica ware, bricks, metal sheets, etc., a design is transferred by means of paper, which is first coated with a gummy solution of a carbohydrate in water, and then with a glaze mixed with a vehicle consisting of a similar carbohydrate solution, to which fat, dextrin, etc., may be added. Varnish is also mentioned as a vehicle. The paper is finally printed with color containing the same mixture as a vehicle, and is applied to the article to be decorated, which is then glazed and burnt in a single firing operation. The carbohydrate solution preferably consists of 300 grams of burnt sugar dissolved in a mucilage consisting of 200 grams of carrageen in 100 grams of water.

13,128. WATCHES. J. A. CHALK, Brighton. June 26.

Bezels.—The glass and dome bezels of a hunter are made the same size, and the latter is fitted with a loose bottom, which may be replaced by a glass.

Cases, Case Springs, Pendants.—The usual case springs are replaced by a spiral spring, which is

enclosed in a tube 2. Fig. 1, and beats on spurs 3 on the cover so as to open the case when the lever lock 5, Fig. 3, is raised by depressing the pendant knob 8 against the action of the spring 7. The lever lock 5 embraces the hollow sleeve 4 through which the winding-shaft passes.

13,328. CUFF, ETC., STUDS. H. FAIRWEATHER, London. June 28.

In cuff, etc., push-through studs having helical stems, the stem is made small at one end and rounded, while at the other it is broadened out. To insert the stud, the head *b* is pushed through the button-holes of both sides of the cuff placed together, the narrow part *c'* resting in the one button-hole while the beginning of the helical part rests in the other. When the cuff is released, it springs open, thereby turning the stud through

about a right-angle by virtue of the twist on the stem, the narrow part *c'* rotating easily in its button-hole. Fig. 5 shows a modified form of stud in

which the heads *a'*, *b'* are inclined at an acute angle to the stem.

13,452. KNIFE, FORK AND SPOON RESTS. A. M. PADMORE, Lead City, S. Dak., U. S. June 29.

Two curved bars 1, 2 are united at the ends 3 and connected by a notched cross-bar 4. Notches or projecting fingers are also formed on the side

bars so that the article rests in a side and in a central notch. The holder is supported by the ends 3 and by feet 5 depending from the middle part of the side bars.

13,458. CLOCKS AND WATCHES. E. T. ARWELL, Waukomis, Okla., U. S. June 29.

Arbors, Balances, Escapements, Jeweling.—In a timepiece, contacting relatively-movable parts are provided with jeweled contacting portions. Thus,

the balance staff B, Fig. 1, and the escape-wheel arbor C¹, Fig. 2, are provided with ends 2 made of ruby, diamond, or some other jewel, to run in the ordinary jeweled end hearings 3, 4. The pallets and teeth of the escapement, Fig. 2, are provided with faces 5, 6 of ruby, diamond, or other jewel.

UNITED STATES TRADE-MARKS.

[The following trade-marks have been adjudged entitled to registration under the Act of Feb. 20, 1905, and are published in compliance with Section 6 of said act. Said section provides:

"Any person who believes he would be damaged by the registration of a mark may oppose the same by filing notice of opposition, stating the grounds therefor, in the Patent Office, within 30 days after the publication of the mark sought to be registered, which said notice of opposition shall be verified by the person filing the same before one of the officers mentioned in Section 2 of this act. If no notice of opposition is filed within said time the commissioner shall issue a certificate of registration therefor, as hereinafter provided for."

Marks which are stated to have been "Used 10 years" are registrable under the last proviso of Section 5 of said act, which is as follows:

"And provided further, that nothing herein shall prevent the registration of any mark used by the applicant or his predecessors, or by those from whom title to the mark is derived, in commerce with foreign nations or among the several States, or with Indian tribes, which was in actual and exclusive use as a trade-mark of the applicant or his predecessors from whom he derived title for 10 years next preceding the passage of this act."]

Commissioner of Patents Rejects Claims of Inventors Covering Stem-Setting Device for Watches.

WASHINGTON, D. C., Nov. 1.—The Commissioner of Patents has rendered a decision in the case of Volkman and Truax, as to the patentability of certain mechanism for timepieces. The case was appealed from a decision of the Examiner-in-Chief in which he affirmed the decision of the Primary Examiner, in rejecting claims for an application covering seven counts, the first of which was that in a stem-setting timepiece the combination of a gear-wheel forming part of a dial train, a minute-hand arbor, a pinion secured on said arbor and meshing with the gear-wheel of the dial train, an arbor, a pinion loose on the arbor and carrying the gear-wheel, a second pinion on the arbor and carrying a second-hand, an intermediate gear meshing with the first named pinion of the same arbor and the pinion of the minute-hand arbor, and a loosely mounted pinion meshing with the gear-wheel carried by the pinion on the second arbor and carrying a gear-wheel meshing with the second hand pinion.

The patents concerned in these claims are one to Thommen, under date of Dec. 4, 1883; to Terstegen, of March 22, 1888; to Bovet & Bessire, Jan. 29, 1889, and to Crook, Jan. 5, 1897. As will have been already noted, the invention covered relates to watches, clocks and like timepieces, and its object was to provide certain new and useful improvements in timepieces whereby the second-hand can be set from the stem and at any point desired, and the second-hand agrees always with the minute-hand.

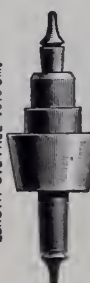

To accomplish this result the applicants positively connect the minute-hand with the second-hand by a train of gearing and provide a setting device having the usual mechanism to be thrown into engagement with the train of gearing for shifting the hands.

The first of the claims mentioned above covers the train of gearing connecting the minute and second-hands, while the second claim added to this the gearing connecting the hour-hand with the minute-hand. The Crook reference shows the hour, minute and second hands positively connected by a train of gearing substantially the same as that called for in the claims already mentioned, except for the omission of the intermediate gear *H* and the pinion *I* and the gear-wheel *N* carried thereby; but in this connection it has already been decided by the courts that the insertion of an additional gear and pinion wheel in a train of such wheels arranged to transmit motion is certainly not an invention.

To increase or decrease the number of intermediate gear-wheels in the train to accommodate the mechanism to the size of the case and still maintain the proper ratio between the rate of revolution of the minute and seconds-hands is believed to be within the skill of a mechanic familiar with the art. The device of the application did not appear to possess any particular advantage over that of the reference. To apply the setting device of Crook in the way that the Thommen device is used does not involve invention, and the decision of the Examiner-in-Chief denying patentability to same has been sustained.

THE HOROLOGICAL REVIEW.

Watch Repairing.

By H. REINECKE.

(Continued from issue of Oct. 24.)

THE next tool to be considered as of almost paramount importance is the mandril. By the name mandril we understand a lathe with a face plate and a slide rest (burin fixe). It must be incontestably admitted that such a lathe is one of the most important tools which a watchmaker can possess. There is a Swiss mandril and

into a lower-numbered steel wheel which is attached to the spindle of the lathe. The number of the teeth of the two wheels is so differentiated that the same teeth do not meet again until after a great many revolutions—a judicious precaution in order to avoid wear. The English lathe, on the other hand, is rotated by a grooved hand wheel and a smaller pulley fastened to the spindle of the lathe, the two being connected by a cord or a small twisted belt, for which arrangement a smoother action

runs true in the flat, which condition is favorable to the setting of jewels, more particularly in the plates of marine chronometer movements.

(3) Every Swiss lathe is made with a double slide rest, which is superior to the English, as the dovetails are formed at an angle of 45 degrees, while those in the English slide rests are more straight, and, furthermore, the Swiss slide rests have stop screws for adjustments for fine turning, which are wanting in the English slide rests.

In addition to these and some minor differences the Swiss mandril has a number of useful accessories which cause this tool to be considered the better of the two, and in any further description of the mandril the Swiss lathe will be considered. This lathe is used for turning disks and other forms of brass, flat and smooth, for turning recesses for Maltese stop works, for center

FIG. 1.

an English mandril. The former has been in use for a great many years, but the latter may be assumed to have been introduced at a later period, and therefore may claim improvements which certainly are distinctive features. Both have this in common: They are furnished with clamps, three in number, generally called dogs, for clipping watch plates, parts of watches, parts of other time-pieces and of marine chronometer movements.

The two differ as follows:

(1) The Swiss lathe is rotated by hand, turning a high-numbered brass wheel geared

is claimed than can be obtained by a gear which may be correct when light turning is done.

(2) The face plate of the Swiss lathe is solid, while the English face plate is crossed out, like a wheel with three arms, which are slotted lengthwise for carrying the dogs. And that these dogs in the Swiss lathe are so constructed that the clipping is done in such a manner that the back face of any object runs true in the flat, while in most of the English lathes the dogs are so constructed that the clipping by these dogs is done so that the front face of any object

wheel recesses, mainsprings, barrels and other objects; for uprighting the larger wheels in watches and in French clocks and for the setting of jewels. To be able to make such a lathe useful to its fullest extent, it is necessary that it should be in perfect order. The spindle should turn freely without play, which condition may be secured by cleanliness by a proper lubricant and the setting up of the screw, in the hollow center of which the rear end of the spindle has its bearing. For the centering of any object and fastening it in such condition by the three dogs, the spindle is pierced in its exact center, in which opening is placed a pump runner or a spindle with a projecting conical sharp point or center. This runner must be fitted with the greatest nicety, moving with freedom but without side shake, being projected by a brass spiral spring for keeping any object in the center while being fastened by the dogs. The hollow spindle of the mandril has an oblong cut made about midway through its solid part, reaching the cen-

tering runner, where a thumb-screw may enter into one of two holes, by means of which this runner may be withdrawn out of harm's way, when not in use, into a miked recess in the oblong opening.

Centering any object by means of this runner has at all times to be done with care and caution. If this operation is not always successful it may be owing, sometimes, to a hole in such an object, which has not been drilled perpendicularly, in which case the centering cannot be done by the pump-center, but will have to be done from the front by a stick of pegwood, which has been pointed at one end. This pointed end must then rest on the edge of the hole, the continued part of the pegwood backward resting on a second point on the closely placed T-rest, using the heavier free end of the pegwood as indicator, which should remain immovable, while slowly rotating the spindle of the lathe. Any inaccuracy may be rectified by gentle tapping on the edge of the loosely held object by the dogs, after which these should be tightened. Such an operation often becomes necessary when setting a jewel or uprighting a wheel.

Most of the turning in this kind of a lathe is done by the slide rest. Such a slide rest has means for adjustments for raising or lowering a cutter and for a circular motion to set a cutter to the proper angle for cutting or undercutting. In order to turn by hand with the assistance of the T-rest, some practice is needed.

The large object marked No. 1 in Fig. 1 shows the lathe without its accessories, and the three figures marked 2, 3 and 4 each represent the three dogs, used with the face plate. No. 2 shows a poppet with pierced head for a meeting center with the pump center. Plain centers (see No. 3, Fig. 1) are used also for uprighting. The top part of the head, through which the meeting center passes, is made adjustable by screws, so that it can be corrected if necessary.

Another center is seen above No. 3. This center is fitted with a wooden handle and an adjusting screw, which may be tightened by two screws when set in the proper place. This center is pierced partly on the plain end for having various small cutters fastened in the recess. Such cutters are used for boring, countersinking for screw heads, for jewel setting and other purposes. The adjusting screw near the handle is to limit the depth of such countersinks or borings.

The cutters used for the slide rest are mostly small and delicate, and are best fitted for a tool holder, when, in the case of accidents, they are easily replaced. Such tools and tool holder are here shown in Fig. 2. Readers desiring to purchase such a mandril will do well to seek the advice of an expert watchmaker who can point out the essential and weak points.

(To be continued.)

The Austrian production of china and porcelain ware is entirely confined to Bohemia, says United States Consul Ledoux. Most of the exports are to the United States and Great Britain. The best of the Bohemian glass industry customers are in Germany, Great Britain and the United States. The famous "gablonz goods," consisting of beads, buttons, jewelry, etc., are exported to all parts of the world.

Escapements as Constructed by Various Horologists.

Translated for THE JEWELERS' CIRCULAR-WEEKLY, from the *Almanac de l'Horlogerie et de la Bijouterie*.

(Continued from issue of Oct. 24.)

FIG. 19 represents the escapement in the different stages of its working, and we present the cylinder in section, in some of the positions which it assumes under the action of the teeth of the wheel. We see at 1 a tooth giving impulse to the cylinder by acting against the exit lip *s*, and communicating a movement of rotation in the direction of the arrow. At 2 the lift is terminated, and the tooth has escaped from the exit lip.

FIG. 19.

The opposite tooth has become locked against the cylinder outside of the shell, and the latter continues its rotation in the same direction by virtue of the force acquired, until this force is counterbalanced by the action of the spring, action which results in bringing back the cylinder in the opposite direction.

The extreme limit of this rotation is illustrated at 3. If the cylinder should turn further, the locked tooth would pass behind the lip *s*, and the cylinder, kept on one side by this tooth and on the other by the force of the energized spring, could not be disengaged. This is called over-banking. To avoid this result, which may be produced either when the balance (the watch being wound up) passes over large arcs, or under

the effect of shocks, the system represented in Fig. 20 has been adopted.

A pin, *i*, fixed to the rim of the balance, *B*, butts against a stud, *p*, adjusted to the heel of the balance bridge or cock, *c*, and thus prevents a more extended arc of vibration.

FIG. 20.

When the watch is going at a normal rate the cylinder does not reach the position represented in Fig. 20, or the position 3, of Fig. 19. Solicited by the spring, it returns in the opposite direction, the tooth still remaining pressed against the outer face, and this tooth may then be engaged on the inside, as seen at 4, giving an impulse to the entering pallet. At 5 the tooth is seen completely in the inside of the cylinder. The lift is terminated, and the cylinder continues to turn in the same direction. It would strike at *o* against the limb of the wheel, if the small notch *a*, of which we have spoken, was not there. This notch

FIG. 21.

enables the cylinder to furnish a more extended supplementary arc, and to arrive at the position 6.

This position is given in Fig. 21, in which the pin *i* of the balance is stopped against the stud *p* of the cock *C*. If this stop did not take place, over-banking would be produced here also, and the tooth would pass on the lip *e*.

The spring acting at the necessary moment, the direction of rotation changes, and the tooth comes out of the cylinder, repel-

ling the lip *s*, as is shown by position 1 in Fig. 19.

In Fig. 22 we have a cylinder in profile, with the tooth of the wheel in the position 6 of Fig. 19. The figure exhibits clearly the relative positions of the two mobiles and the mode of working. The tooth of the wheel, of which the inclined plane is turned from us, works with the two lips *c s*, and the limb clears the small notch *a*.

Fig. 23 exhibits another position of the cylinder and of the wheel. It is position 1

FIG. 22.

FIG. 23.

of Fig. 19. Here it may be noticed that the corners of the small notch *a* are rounded, instead of being cut at a sharp angle. An inventor has attempted by this slight modification to strengthen the cylinder, which usually breaks at one of these corners. According to experiments a cylinder thus formed would support before breaking a weight double that supported by an ordinary cylinder. This modification, so far as we know, has not been put in practice.

Another system for strengthening the

FIG. 24.

cylinder is exhibited in Fig. 24. This invention is due to the horologist Recapé and dates from about 1850. The cylinder shell is left thicker at the lower part; the piece is thus strengthened at the weakest points. This modification has not had more success than the preceding, and it does not appear why. It is probable that the makers of cylinders have appreciated the advantage resulting from the fragility of this piece.

However, we have only an embarrassment of selection, and we still see in Fig. 25 an invention designed to remedy the same in-

convenience, which was patented in 1885 by M. Anquetin, a Paris watchmaker. The inventor thus explains this improvement:

"1. The length of the inclined plane of the wheel is given to the inside diameter of the cylinder as before.

"2. A thickness of the shell is given to the exterior diameter almost double that usually adopted, so that the shell of this thicker cylinder, being beveled at the back of the exit lip, this lip thus becomes as thin as possible, and the total diameter worked is the diameter afforded by the space between the two inclined planes of the wheel, as in the ordinary cylinder.

"3. In consequence of this double thick-

FIG. 25.

ness, which exists everywhere except in the exit lip, our cylinder offers, especially in the beveled part, a resistance free from the perturbations which have been noticed."

Another inventor, while seeking to establish a more solid cylinder, has attempted to simplify the making of the wheel. His mechanism is seen in Fig. 26. The escapement piece, given in section, is, as may be readily understood, much stronger than an ordinary cylinder. It is composed of an arbor cut according to the face seen on the inside, and from a ring of special form, with an opening of about 60°, which surrounds the arbor. The wheel is entirely flat, and its teeth have a very short incline at their extremity. The inventor has evidently secured the result aimed at, but his mechanism is no longer a cylinder escapement. It recalls the first dead-beat escapement of

FIG. 26.

Tompion, illustrated in a preceding series, with this difference, that we have here a much stronger recoil on the exit pallet.

We follow the different phases of the working represented by positions 1, 2, 3 and 4. We have at 1 the locking position outside of the cylinder. This turning in the direction indicated by the arrow, the tooth penetrates to the interior, giving an impulse which may be considered null. The cylinder not having the little notch, the exit lip *s* at first causes the wheel to recoil (position 2). Then the tooth operates its impulse internally on the more extended inclined plane of the exit lip (position 3), in order to reach position 4, where the tooth may be

seen on the point of quitting the lip, and the following tooth, *b*, ready to be locked. This exterior locking has the advantage of occurring tangentially, but it is of an extent which destroys the good effect of this advantage.

In reality this mechanism, which has been offered as an improvement of the cylinder escapement, is no longer a dead-beat escapement, but rather a single-beat and semi-recoil escapement, for the action of the short incline of the teeth on the entrance lip cannot be considered as an impulse.

(To be continued.)

Street Lighting by Clockwork.

CONSUL ALBERT HALSTEAD, of Birmingham, Eng., reports that an automatic gas controller has been patented and is now on sale in England which might materially lessen the cost of public lighting in the municipalities of the United States if in practical operation it fulfils the claims of its owners.

The controller is said to be adaptable to any type of incandescent burner, to fit any lamp, and to be instantaneous in its lighting and extinguishing. The mechanism consists of a clock which can be so set as to light the gas each night and extinguish it each morning, so as to make an automatic variation of the time of lighting and extinguishing according to the calendar. In short, by means of a chart, the street lights are turned on and off, lighted and extinguished, at a different moment each day throughout the year, according to the season. This is an advantage, it is claimed, over any other controller now on the market, one adjustment a year being sufficient.

It is claimed that they would require no attention except winding once a week or a fortnight, and that once set would not have to be reset throughout the year. The gas can be turned on and off in the ordinary way, quite independent of the gas controller. This is important, as it might be necessary to turn off the gas for the renewing of the incandescent mantles.

These controllers are now on trial at Bath, and the engineer of the gas company there informs the municipal gas department in Birmingham that so far as their experience goes it gives satisfactory results. In the city of Birmingham proper there are 13,860 street lights, and in the district outside which is supplied by the municipal gas department of Birmingham there are 7,108 street lights, their caretaking costing \$102,488 per annum. To equip these street lights with this gas controller would involve an expenditure of \$153,061. The cost of operating, it is claimed, would be just one-half. The price of a controller is now \$7.29.

C. B. Williams, 45 years old, a jewelry salesman, who for several years has been employed by various jewelers of Kokomo, Ind., who sold their stock in the smaller towns, was arrested last Wednesday on a Grand Jury indictment alleging embezzlement. Williams is accused of having appropriated for his own use money and jewelry belonging to his employers, aggregating about \$700. He was released after giving bonds amounting to \$1,000.

These Are New Customers Do You Want Your Share ?

Thousands of people are writing us in answer to our national advertising.

They're asking us for the NAMES of jewelers who carry the New England line.

Shall we send them to you—or to your competitor?

Thousands of people who do not write are answering this question for themselves—are searching out the jewelers who keep the New England line. Are they customers of yours?

Mr. Jeweler, we're persistently telling the convincing story of the

New England

“The Watch for the Great American People”

to one-third of “the people” this fall. The results will show—are now showing—in new customers, increased sales—PROFITS—for every New England dealer.

Remember that this Christmas season the jewelers handling the New England line will get the trade. Are you fully prepared?

The time is short—is your stock complete? Have you the cheaper grades of New Englands as well as the higher priced?

Better communicate with us at once and learn our plans for the Christmas season. We offer you real sales-getting, profit-making aid.

THE SCOUT — Nickel Silver

The Scout nickel silver is made with two grades of movements, Nos. 363 and 369 being fitted with our regular Series G movement, 14 size, bridge construction, plain balance, gilded plates and two jewels. The movement has been thoroughly tested as a timekeeper. Nos. 363 and 369 have no extra finish.

Nos. 1363 and 1369 are fitted with the Improved Scout movement. In addition to the finer movement, Nos. 1363 and 1369 are finished with gold filled crown, gold hands and gold mat. This makes a most effective and stylish watch.

THE PADISHAH

Nickel Silver
Snap Case

No. 10

THE PADISHAH

Is Our Low
Priced Watch

Carefully and elegantly finished, it is absolutely guaranteed in every respect. The Padishah should in no way be confused with the cheap "clock" watches so prevalent on the market. It is a watch in every detail.

It is fitted with our regular Series I movement, 18 size, full gilded plates, plain balance and two jewels. The Padishah, if given ordinary care, will last a lifetime. Trade Price, \$1.25; Retail Price, \$2.00.

THE WATCH AS A TRADE LEVER

NOT ONLY is the watch a most important item in itself, but it affords a powerful stimulus to the entire business of a jewelry establishment. The importance of a time-piece is such that confidence must precede sales. Once that confidence is gained, other sales naturally follow. The good watch is a symbol of reliability. As such it is a lever to trade.

In order to reap fullest results the watch department must draw from a thoroughly dependable source of supply. These offices furnish it.

PATENT APPLIED FOR.

I ring and stop alternately for 15 minutes at intervals of 20 seconds.

I am the clock you have all been waiting for; the reliable low priced intermittent alarm—and I am just as good as I sound. There's nothing about me to get out of order—no extra wheels—nothing to ruffle your temper. I'm so simple, it's a wonder nobody thought of me before.

“Western” bred too. I have the Friction-Less Pivots and the Self-Centered wheels and the Hard Steel Pallet Escapement. I've got to be punctual.

And I am not bad looking either: pretty well built, 7 inches tall, well polished and a winsome, attractive face. Hadn't you better be the first to show me your town? I'll mean dollars in your pockets.

THE ALTERNATING.

OPTICAL DEPARTMENT

Incurable Eyestrain.

By GEORGE M. GOULD, M.D., Philadelphia, Pa., in the *Journal of the American Medical Association*.

I CAN find in text-books no systematization, no explicit statements, not even any distinct recognition of a series of clinical facts illustrated somewhat frequently in office practice and still more frequently in hospital and dispensary work. In thinking over my cases I have been surprised that so many have had eyestrain from causes beyond eradication or neutralization. The conditions being as they were, it was impossible to stop symptoms that were evidently due to what we call eyestrain. The causes simply could not be reached. We have looked at these conditions from every other standpoint except that of eyestrain, while it was precisely the eyestrain that most concerned the patient. Let us take this point of view:

Eyestrain¹ may be defined as the local reflex, or general results of ocular effort caused by congenital or acquired defects or weaknesses of the optical or sensation-making mechanisms of the eyes, by overuse of normal eyes, by injurious occupation; etc., or by diseases of other organs, which interfere with ocular function. Eyestrain is incurable, of course, when these pathogenic causes are ineradicable.

The recognition, in an individual case, of the precise reasons why eyestrain is incurable, or of the conditions impossible to remove, is highly necessary, in order:

1. That we may make the patient understand the unfortunate limits and circumstances of his life; that we may advise him against certain occupations, prescribe for him the best hygienic safeguards, whereby symptoms may be avoided, dangers lessened, etc. In such cases it is especially necessary that he understand the precise nature of the fatalism under which his life must be lived.

2. That other physicians, in ignorance of the nature of his trouble, may not err by treatment of the patient, or by operations, which cannot affect the single source of the mischief. It is bad enough that thousands of patients should be gastrologized, laryngologized, gynecologized, etc., for easily curable eyestrain, but it is far worse when the eyestrain is incurable. Hunted by their mysterious disease, patients blindly and vainly pursue relief by running from one physician to another, drift into invalidism, or into a despair which often ends in the

suicide either of self-delusion (quackery, Eddyism, etc.), or of genuine self-murder.

The causes of eyestrain that we are unable to abrogate or neutralize may be classified as follows:

1. Congenital anomalies.
2. High degree of ametropia.
3. The sequelæ of inflammatory disease, traumatism, etc.
4. Amblyopia, or other injury of ametropia.
5. Chronic heterophoria or heterotropia.
6. Interruptions or contraindications of the normal co-ordinations of dextrocularity and dextromanuality.
7. Cerebral or neural disease.
8. Systemic disease, or diseases of interrelated special organs.
9. Injurious occupations, unhygienic use of the eyes, etc.

1. *Incurable Eyestrain Due to Congenital Defects, Etc.*—The most important and most frequent of these congenital anomalies is albinism, that strange failure to secrete the customary pigment of the dermal structures of the body, of the retina, iris, etc. Many years ago I published the results of a good deal of study of "The Pernicious Influence of Albinism on the Eye." It is a pity that the lessons of that study have been so little heeded by ophthalmologists, for the pathologic significance of albinism is almost wholly confined to the eye, and there is no class of possible patients more in need of our help and none so neglected. Although we cannot do away with all of their afflictions, we may greatly mitigate them.

The crushing pressure of the lids to shut out the light produces a high degree of astigmatism, at axis 90 degrees in hyperopes, and this, with much patience in diagnosis, may be relieved. In this relief there is perhaps a doubling of the visual acuteness. But at best we can bring the albino to only about 20/50 of normal vision. Possibly also by this lessening of the amblyopia we lessen a little the nystagmus. I gather that this nystagmus of the albino is the result of a continuous and never-to-be renounced search for a portion of the retina not so exhausted by the flooding light as is the macula region, whereon the image may fall, and which will give the brain a more delimited or defined image as a stimulus.

The significance of ocular albinism pertains preponderatingly to the iris. If that could be pigmented the albino's case would not be so hopeless or grievous. In one case I tried an experiment of fitting a ¼ inch ametropia-correcting lens in the center of a deep tinted London-smoked toric lens. The sudden cessation of the nystagmus which resulted brought the man down in a swoon and I could get no repetition of the experiment.

Colobomas and many other anatomic de-

fects of the eyes may in many ways interfere with the formation of optical images. These anomalies of the fundus, I think, are not so likely to produce eyestrain as are those of the iris. For a number of years I have treated a girl with a coloboma of the iris directly below the pupil in the left eye, about ¼ inch wide at the pupillary margin and narrowing at the corneal border. While she was a child and not studying much there was not a severe eyestrain, but as she advanced in years and scholarship there was no correction of her ametropia that gave more than the palliation of her severe headaches, brought on by study. If one might dare, if there were no danger, and if the operation were surgically successful, thorough tattooing of the cornea over this rent would undoubtedly give her relief. The continuance of her studies, amount of near-work permitted, and the ordering of her life depend on the severity of her eyestrain symptoms.

There are many other kinds of congenital anomalies which might produce eyestrain, such as microphthalmos, cataracts, peripherally located pupil, malformations and malpositions of the lenses, persistent hyaloid artery, pupillary membrane, enophthalmos, etc. I have no sufficiently well-observed cases to report illustrative of the principle involved. I have no doubt I have negligently overlooked a number. In congenital cataract or in case of lenticular pigment spots occupying much of the pupillary area it may be best to permanently atropinize the eye.

2. *High Degrees of Ametropia.*—These are in one sense, perhaps, examples of congenital anomaly, especially that of hyperopia of six or more diopters. Illustrative cases have occurred in all of our practices. What we are likely to forget is that they must almost always necessarily handicap the patient, even if, as may rarely happen, the normal visual acuteness may be retained. This will arise either because amblyopia has been chronic or has been firmly established before proper glasses have been secured, or because no glasses can give perfect correction of such cases. I remember one patient whose errors were:

R. + S. 8.00 + C. 2.75 ax. 68°;
L. + S. 7.75 + C. 2.75 ax. 105°.

Neither eye had been disused and the vision in each was 20/60, later 20/50. It would have been better if this defect had been anisometropic. A second case shows the same amblyopia:

R. + S. 8.00 + C. 1.00 ax. 20° = 20/60;
L. + S. 7.50 + C. 1.00 ax. 150° = 20/60.

After six years' struggle reduced to 20/20.

¹Read in the Section on Ophthalmology of the American Medical Association, at the 57th annual session, June, 1906.

Optical Department.

In another case showing:

R. + S. 6.00 + C. 2.50 ax. 180°
L. + S. 5.75 + C. 1.75 ax. 150°

the right had been excluded and only 20/60 vision retained, while the other eye was brought to 20/20. In such cases anisometropia is a poor, but preferable blessing. If we could place our lenses (as has been dreamed of) inside the lids, and give them the same motion as the eyeball, the problem would be solved, at least in great part. It is possible, but not probable, that this may be done. In approximation to this ideal our lenses should be toric, set as close to the cornea as possible, after close cropping of the lashes.

In high astigmatism the first effect of full correction may be rejected as irritating until the ocular mechanism has become habited to it, and until the necessity becomes unconscious of turning the head instead of the eyes, in looking at objects not in the center of the field of vision. When there is high anisometropia, there may be some degree of persisting eyestrain, although I have found it will generally and eventually yield to obstinate persistence, unless the amblyopia has by neglect become incurable. I have one patient, coming to me in middle life, who is now successfully wearing over a six-diopter correction of monocular astigmatism, with re-establishment of almost lost visual acuteness, and with relief of long-existing ocular reflexes.

The sole ametropia of extreme proportions that cannot possibly produce eyestrain is simple myopia in a one-eyed person. One of my patients, a great literary genius, lived for about thirty-five years, and during this time did an enormous amount of literary labor every day, with a single eye, having about 25 diopters of uncomplicated myopia, and he did this without the use of correcting lens. His pen point was necessarily placed about three inches from the cornea. He never showed a sign of eyestrain as we define the term. His optical defect and necessity had a subtle and profound influence on his intellect and character, and on the literary qualities of his published works—but "that is another matter."

In hyperopic defects, and especially in those of high degree, there is, of course, and almost always, a greater or less admixture of astigmatism; and this demands correction with perfect nicety, in order to prevent malfunction. Toric, close-fitting lenses, usually bifocals, frequent changes, skill of the optician, and all the rest, are of the utmost importance. Moreover, in high binocular ametropias there is likely to be inco-ordination of the external ocular muscles, and also, not to be overlooked, frequent irregularities of accommodation. Partial paralysis of accommodation, or undevelopment from disuse, is likely to exist in such cases and differing in degree in the two eyes.

As to high defects note the following:

R. + S. 0.50 — C. 4.50 ax. 15° = 20/50,
L. + S. 0.50 — C. 5.50 ax. 180° = 20/50.

The anomalous axis of the right did not throw this eye out of function, because the man was a right-handed man, and the left clung to life because of its normal 180° axis.

I have a little fellow 27 months old who is wearing B. E. + Sph. 10.00, apparently with almost equal acuteness of each eye. We shall probably find some astigmatism when he is a year or two older. His strabismic eye is now straight, and the glasses are so grateful to his nervous system that the baby yells, *Wo sind meine Gläzle*, if they are left off a minute.

A man of 36 could barely count the fingers with his right eye, and no lens seemed to improve. I stuck to the problem instead of calling it "amblyopia," and I found that — Sph. 6.50 + Cyl. 9.00 ax. 10° saved the man's eye and gave him 20/50 vision. This 15.5 D. in a non-traumatic case, at least in one meridian, is the highest I have ever met. There was 6.00 D. in the left, with 20/40 vision.

3. Inflammations and Traumatism.—These may have such organic and irremediable defects in one, or even in both, eyes, that the visual act becomes thereby pathogenic. The most common of these conditions is, perhaps, the nebulous or leucomatous cornea following keratitis. In the young (and the younger the better the success) we may often lessen the opalescence by Pagenstecher's ointment and massage, and other methods of treatment. Unfortunately, Dr. Alleman's proposal of electric stimulation by the contact electrode has not, as was hoped, been adopted.

(To be continued.)

British Optical Association Seeks Representation on Examining Board by Amending Opticians' Sight Testing Bill.

THE conference between the six delegates nominated by the General Board of Opticians and six by the British Optical Association, which met at the Finsbury town hall, in the center of the old Merkenwell district, Sept. 13, came to the conclusion that peace might be brought about by so amending the bill as to make it read as follows: "Four persons to be appointed for the term of three years by the British Optical Association and four persons to be appointed for the term of three years by the Master Wardens and Company of Spectacle Makers." In the original bill the Master Wardens and Company of Spectacle Makers were the only examining body mentioned.

I understand that it was only after a discussion lasting five or six hours that the General Board of Opticians accepted the report of their delegates. First of all it was suggested that the various optical societies throughout the United Kingdom should all be included, and if this amendment to the delegates report had been accepted it would also have included the Optical Society, West Riding of Yorkshire Optical Society, Manchester and District Optical Society, Scottish Optical Association, Glasgow Optical Association, the Institute of Ophthalmic Opticians, and the Society of Chemist-Opticians. However, this was defeated, and after a deal of discussion another amendment was moved that none of the societies, examining bodies or otherwise, should be named in the bill. This was lost by one vote only, and then the report of the delegates was accepted.

Whether the result of this will be peace is doubtful, since on the one hand there are a number of people who believe that the Spectacle Makers Company has all the right on its side as well as the power. It has been argued that because the Court of the Company is composed of men who are not practical spectacle makers, therefore they have no right to "boss the trade." But, as has been well pointed out, the Court is composed of men who have not only made their names in the world of commerce, as statesmen and journalists, but they are also men who, being publicists, have had all the training necessary to act in a judicial capacity, as, for instance, the Worshipful Master who is just leaving office is Lord Burnham, the famous proprietor of the *Daily Telegraph*; another member is the chairman of a very large and important company; another is better known to fame as Sir Michael Hicks-Beach, while Sir William Hart-Dyke was recognized as one of the greatest parliamentarians of his day, let alone Sir Marcus Samuel, a name to be conjured with not only in city circles but also in the far east. One might also mention Sir Horatio Davies, at one time Lord Mayor of London, and another Lord Mayor, the exceedingly popular, clever and versatile Sir George Faudel-Phillips, and the Hon. Wellesley Peel, son of the late speaker of the House of Commons. One man on the Court—and, by the way, he is a past master of the Company—is Mr. Thornthwaite.

I personally am of opinion that a body composed of such men is more likely to act with equity and unbiased judgment than a selection of men connected with the trade, because, after all, there is no getting away from the fact that jealousy is more or less rampant; that the keenness of competition leads one to forget that he must treat his rival in a spirit of fairness. I have known instances of men, upright, decent enough fellows, forgetful of themselves and untrue to themselves when they have had to deal with their fellows in a semi-private capacity. As I have previously stated, there are cross actions for libel as between the clerk of the Worshipful Company of Spectacle Makers and the editor of the *British Optical Journal*, also the editor and proprietor of the *Dioptric Review*, which practically represents the British Optical Association.

One may well ask how can it be expected that these two bodies will sit down quietly together. For my own part, I am convinced that the report of the G. B. O. was made at a most inopportune time, and that it would have been well to have waited the issue, which is to be fought out in the courts of justice, before deciding as to an alteration in the composition of the Central Board. There is this much, however, which it is idle to obscure from one's thoughts when discussing the question, because there is no doubt whatever that the Council of the British Optical Association had made up its mind that it was going to be mentioned in the Sight-Testing Opticians' Bill, and, that being the case, it is not to be wondered at that those anxious for peace were not particularly partisans of the Spectacle Makers' Company, and should not trouble as to how it was brought about so long as the Council of the B. O. A. were appeased.

ST. GEORGE.

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan which they are utilizing in connection with their business.

Original Window Display for Thanksgiving

Drawn Expressly for The Jewelers' Circular-Weekly

A WINDOW display symbolical of the numerous traditions associated with Thanksgiving is illustrated on this page.

In the foreground is placed a copy of the Thanksgiving proclamation, and at either side of it, also connected by bunting,

kins needs no explanation. Timely articles for display on this occasion, among other things, are football emblems, college pins, etc. Autumn leaves strewn about the flat surface of the window will enhance the attractiveness of the whole exhibit. Thanksgiving Day has become a national institution since the year 1863. It originated in 1621, when, after the first harvest, a day was designated by Governor Bradford, of the Plymouth Colony, for praise and prayer.

A SIGNIFICANT THANKSGIVING DISPLAY FOR THE JEWELER'S SHOW WINDOW.

Three pumpkins, either the real product of the field or paper imitations, are connected by bunting streamers, the central one being surmounted by a miniature portrayal of the bird that made Thanksgiving famous. Two United States flags are arranged against the background as seen in the de-

are pictures of the President and of Miles Standish, or some other early Pilgrim father. The jewelry in the foreground may be arranged according to the taste and patronage of the jeweler. The arrangement of the articles in boxes in semi-circular fashion against the pump-

The observance of this day was introduced in many of the middle States during the Revolution, since which time it has extended to nearly all the States. C. W. Hoen, East St. Louis, Ill., has gone out of business.

Storekeeping Department.

A "Multum in Parvo" Show Window.

THE retail storekeeper is frequently at a loss for more space in his show window, and a merchant of Cleveland, O., has endeavored to solve the problem by an ingenious device. As will be seen, the show windows illustrated herewith, are exceptionally narrow, and it is for windows of this character that the application of this device is especially desirable. The Cleveland dealer's available window space was increased by four times in the following manner. The window floor was arranged so that it revolved like an endless chain over

electric motor concealed below the floor. The mechanism is clearly illustrated in the accompanying diagram. The application of electricity renders possible the construction of this device in any window at small cost.

Counsel for the Clerk.

THE ones who hold their positions when others are dismissed are those who, by intelligent work, make their positions hold them. The truly indispensable employe never knows that he is indispensable—he just works, and by doing, creates the place which needs him and retains him. No one but yourself can make your brains do their part. Thinking of right things to do and

What Some Jewelers Say.

CLOCKS for Wedding Gifts!—A clock makes a very nice and acceptable wedding gift, and we offer the greatest inducements to shoppers in this line. We carry a most complete and elegant line of clocks which in both ornamental and time keeping qualities cannot be excelled anywhere. Come in and see how well we can do by you. I. T. Boyd, Fall River, Mass.

Wedding Presents for June Brides.—We have the finest stock of cut glass and china we ever owned. There is a wide range in prices, but every article is of the best quality. Cut glass prices from \$1.15 up. Haviland china in berry sets, chocolate sets, ice cream sets, cake plates, bon-bon dishes, tea sets, sugars and creams, condensed milk jars, etc. Ice cream sets of 13 pieces, from \$5 to \$7. Come in and see the new flower baskets, with and without handles. W. N. Aruzen, Fall River, Mass.

People do not buy watches and jewelry and diamonds every day, but when they do buy them they like to know they are good. That's why a great many people buy things here. They have faith in the intention of this store to treat its customers fairly and honorably, and we do not think they are mistaken in this belief.—The Plumb Jewelry Store, Des Moines, Ia.

We have recently added some 70 new patterns to our already very large stock of gold filled watches. The ornamented cases are especially rich in design, and the plainer ones, particularly the new beaded patterns, have a pleasing simplicity without in any way appearing clumsy. The low price of our gold filled watches is an inducement that seldom fails to appeal to a well posted buyer. It is possible for us to sell you a very excellent watch in a great variety of styles from \$10 to \$15, and, of course, we show an even better assortment of the higher grades from \$15 to \$30. Should you at the present time be interested in purchasing a watch we feel that your acquaintance with our stock would enable you to make a most satisfactory choice.—The Plumb Jewelry Store, Des Moines, Ia.

ELECTRICALLY DRIVEN MECHANISM THAT OPERATES THE "TRAVELING" WINDOW.

two drums at each end, the window floor extending back in the store the depth of a window, and being separated by means of a black velvet cloth.

The different articles, which, in this case, were aluminum and numbered about 200, were wired to the moving window floor and produced such a striking and unique effect as to challenge the attention of large numbers of passersby. Before the instalment of this device only 50 articles could be shown, and that in the old-time stationary manner. The device was home made, simple in design, inexpensive and driven by a small

then doing them, is the habit of successful men and women.

The employe who can do only as well as he is told, will never be told as well as he can do, nor ever get a raise of salary for doing it. The man who can't do better than he is told to do, does not possess the qualities which will win for him the higher and best paying positions.—*AdSense.*

* * *

The clerk who does his work properly doesn't have to boast about it. His work speaks for itself, and more forcibly than he could speak for it.—*Geo. Wendell Bates.*

[Answers are also solicited from our readers to the questions published on this page.]

QUESTION No. 1698.—Copper Sulphite Baths for Plating.—*Kindly give me some information regarding copper plating; some new and up-to-date method.* C. S. B.

ANSWER:—The *Brass World* contains the following interesting article on copper plating, which, after testing, has been found to be excellent: The presence of sulphites in cyanide electroplating solutions is attended with good results. The use of bi-sulphite of soda in gold baths is of long standing and is now extensively used. As sulphurous acid has a reducing action it is quite probable that the action of the sulphites in the solution have a similar effect. Baths which contain sulphites deposit their metal with ease and in a rapid manner. Such a condition probably explains the reducing action of the sulphites in the bath. The use of sulphites in a copper bath is also of long standing and is now more or less extensively used. It presents nothing new. The value of sulphites in a cyanide copper bath has recently been brought to the notice of the plater by the appearance on the market of red sulphite of copper. This material is the cuprous sulphite and exists in a fine, dark red powder. It is not the sub-oxide of copper as usually believed. It dissolves readily in cyanide solutions, although not so quickly as moist carbonate of copper. An analysis of that which is sold on the market gave 60.48 per cent. of copper, which corresponds closely with the amount of copper contained in cuprous sulphite. Sub-oxide of copper (cuprous oxide) contains 88 per cent. of copper. Cuprous sulphite is readily made by taking a strong solution of sulphate of copper, heating to boiling, and then adding bi-sulphite of soda. A red precipitate of cuprous sulphites settles to the bottom as a heavy powder. It is then cooled. The precipitate that is produced is filtered out, washed and dried. It is a brick-red powder which keeps well. It is readily weighed. The fact that it is always ready for use adapts it for quick requirements. The formula which is frequently given out for use with cuprous sulphite does not contain enough cyanide of potash. In fact, the amount of cyanide is not sufficient to completely dissolve the cuprous sulphite. A slight amount remains undissolved. A trial under these conditions gave a very uneven deposit and the anodes became covered within a short time with a white deposit which prevented the current from flowing and the action stopped completely. It was found necessary to double the cyanide in order to obtain a solution in which all of the cuprous sulphite would dissolve and the anodes would be kept free from deposit. When this was done an excellent deposit of copper of a beautiful color was obtained with-

in a short time. The deposit proceeds very rapidly, and is brighter in appearance than the usual cyanide copper deposits. The bath that gave these results is made as follows:

| | |
|--------------------------|----------|
| Water | 1 gallon |
| Cyanide of potash..... | 6 ounces |
| Cuprous sulphite | 2 ounces |
| Bi-sulphite of soda..... | 2 ounces |

The cyanide is dissolved in a pint of the water and then the cuprous sulphite is dissolved. The remainder of the water is then added and the bi-sulphite of soda is dissolved. The solution should then be filtered when it is ready for use. The deposit that is formed is brighter and smoother than that which is obtained from the usual cyanide copper bath, but this may be brought about by the small amount of "metal" in the bath compared with that which is present in the usual copper bath. The metal seems to deposit more rapidly, however, and has a deep, rich color. The deposit covers well and shows no tendency to peel. Experiments carried out with antimonial-lead, one of the most difficult metals to plate successfully, indicated that the deposit is very adherent. Blistering was not encountered, although in a good cyanide copper solution low in metal, one is rarely troubled in this respect. The use of cuprous sulphite for making up a copper bath seems to possess several good features. The cuprous sulphite is always ready for use and does not require preliminary making as is the case with carbonate of copper. The deposit forms rapidly in a solution low in "metal." The color is rich and the deposit even. The deposit adheres tenaciously and is free from blisters. The ease with which the deposit is formed is shown by the fact that a current that will not injure an ordinary copper deposit causes the deposit from a cuprous sulphite solution to "burn." The ease with which a copper bath can be made up by the use of cuprous sulphite, together with the good results that are obtained, will undoubtedly cause it to become extensively used in the future. The application of the cuprous sulphite in brass and bronze baths is also conducive to as good results as in the copper solution.

QUESTION No. 1699.—Frosting on Metals.—*I wish to know the best method of producing a good "frosted" or satin finish on jewelry, silver and aluminum. I have used an old-fashioned hanger brush, but it does not produce the fine velvety appearance that I notice on many silver articles.* F. S. F.

ANSWER:—The very best frosting on all metals is produced with a sand blast. The sand blast cannot, however, always be used because it requires a powerful blower to do the work satisfactorily. When the power for the blower is obtainable it is best to

make use of a Bolland or Sippel sand blasting machine, both of which are splendidly constructed to produce fine frostings on all metals. Where the blower and sand blast cannot be used, then a swing brush, made with fine steel wire may be used. The ends of the wires should be left irregular lengths, which will produce a better finish than if the ends are cut in equal lengths. For this swing brush the speed of the lathe should not exceed 1,200 revolutions. Another much used method is the circular brass wire scratch brush, which produces a good satin if run at a very high speed. All articles to be satined should be entirely free from grease, otherwise the effect will not be clear and velvety.

QUESTION No. 1700.—Gold Ink.—*How can I make a gold ink that I can use for writing on cards.* G. I.

ANSWER:—Gold inks are usually made by crushing gold leaf with honey. Remove the honey by washing with water, which leaves the gold finely pulverized. The powder will mingle with gum water of the desired consistency for an ink. Use it with a goose quill pen.

QUESTION No. 1701.—Removing Green from Gold.—*Can you tell us how to remove green from gold?* D. & A.

ANSWER:—Cyanide of potash dissolved in water ($\frac{1}{4}$ of an ounce to a quart of distilled water), will take the green off gold.

QUESTION No. 1702.—Green Gold.—*What must I use for an alloy to make gold a green color?* W. J. A.

ANSWER:—Green gold is an alloy of 19 parts of pure gold and five parts of pure silver. This mixture will make an alloy very effective for foliated designs. Other proportions are 20 parts of pure gold with either $4\frac{1}{2}$ or $6\frac{2}{3}$ parts of silver, according to the shade required.

QUESTION No. 1703.—Cleaning Bronze Ornaments.—*How can I clean gold colored bronze ornaments, such as are often attached to clocks?* C. B. O.

ANSWER:—A well-known method of cleaning gold colored bronze articles is by washing them in a solution of concentrated lye, brushing thoroughly with a brush, then passing them through a solution made up of equal parts by weight of water, nitric acid and alum. Dry them with a cloth and gently warm them.

QUESTION No. 1704.—Brown Varnish for Metals.—*Please give me a formula for making brown varnish that can be applied to metal letters and show case trimmings.* B. V.

ANSWER:—The easiest to obtain and apply is a lacquer which can be colored the shade desired. A good brown varnish is made with 20 parts (by weight) of gum kino and five parts of gum benzoin, in 60 parts of good alcohol. This varnish dries rapidly and should be prepared cold.

QUESTION No. 1705.—24-Karat Gold.—*Will you kindly tell me how to refine gold to 24 karat?* W. J. A.

ANSWER:—To refine gold to 24 karat is something which cannot well be done by a jeweler, as it requires special appliances, which are only found in the mint or in the establishment of an assayer.

A Word About Old Vienna.

It is a matter of infinite regret that such an institution as the Imperial Porcelain Factory of Vienna no longer exists, to lead, side by side with its sister institutions in Sèvres, Copenhagen, Berlin and Meissen, the advance in the artistic and technical perfection of beautiful ceramic ware. It would be surely not only extremely interesting, but also of advantage to the pottery

porcelain would be recognized as such, and no longer float aimlessly through international channels.

The Vienna factory was not destined to share the glories of the present brilliant period of ceramic art; but it is a pleasure to recall this institution, which accomplished much at a difficult time, and prepared the ground for the sowing and reaping of to-day. The ever increasing fame of the creations of "Old Vienna" shows the permanent value of its work. Unfortunately, general opinion has been influenced, as is conceivable, by the imitations and falsifications of old Vienna porcelain which have been produced in the greatest abundance within the last 10 years. The

of white porcelain were sold, and some of this was painted in "Old Vienna" style, being thus only a partial falsification; in other cases not even the porcelain is genuine. Original pieces, although they exist in considerable numbers, are only to be found in the hands of collectors or at auctions of art objects.

As long ago as the Paris Exposition of 1878, \$100,000 was the price of a collection of genuine Old Vienna ware, consisting of

AN ODD SHAPE IN OLD VIENNA.

trade if the factory on the Danube might join those of other countries in the artistic rivalry prevalent in our time. Of yore it went on its individual way, and the art of Vienna at the present day is so entirely a growth from its own soil that the factory would doubtless give to the fundamental principles of the modern idea of art a unique and characteristic expression. Not only would the knowledge of ceramics and

INTERESTING FIGURE GROUP, OLD VIENNA.

greater part of these imitations are of the cheapest and poorest kind, made by means of colored printing and gilt stamping. But there are also some very good imitations, those, namely, from the Herender porcelain factory, distinguished by a separate mark, and the old Vienna mark, and some also with Vienna and Dresden paintings.

The former pupils of the Imperial school of porcelain manufacture, the painters Rädler and Pilz, C. Falb and J. Zasche of Vienna, have copied characteristic designs of "Old Vienna" upon specimens of the old white ware, or on Bohemian porcelain. When the factory was given up quantities

The Message of Pottery.

ALL who heard Professor Armstrong's admirable address at Longton, on the occasion of the distribution of prizes to the students of the pottery classes, will have pleasing recollections of it for years to come, says the *Pottery Gazette* of London. The practical potter and the chemical scientist must have found it intensely interesting; the pottery and chemical student would find it highly instructive, while as a purely literary effort it was, as Rawdon Smith so graphically described it, "an exceedingly charming poem in prose."

Unfortunately, the audience was not a large one, but there were some present whose hearts would throb with commendable pride when the professor reminded them that "it was the privilege of the potter to make objects of beauty," and who would be filled with a sense of the loftiness of their art when he quoted the concluding lines of Keat's beautiful poem, "On a Grecian Urn":

When old age shall this generation waste,
Thou shalt remain, in midst of other woe
Than ours, a friend to man, to whom thou sayst,
"Beauty is truth, truth beauty"—that is all
Ye know on earth and all ye need to know.

Professor Armstrong's sketch of the development of science—of the relation of science to industry, and then his dissertation on the meaning of pottery, was all, not only most instructive, but most interesting. He has done for his account of the science of pottery what Macaulay did for his "History of England"—he has made it as readable as romance. It would be well if this address could be widely circulated among pottery workers and pottery students.

The professor reminded potters of the infinite field for the application of science in their industry. "You are working with nature's materials, and we know what infinite variety she has made of them. . . . So long as you are not scientific your work will be liable to defy control. . . . Nothing is more certain than that leaders and laborers alike will benefit when science prevails throughout the industry." Could any words be more appropriate in an address to potters and pottery students? Could the "Message of Pottery" have been delivered more intelligibly?

Recent Decisions as to Duty on Marble and Bronze Statuary.

DECISIONS by the Board of United States General Appraisers, in cases involving duties on statuary, were announced recently as follows:

STATUARY—PEDESTAL.—Protest of F. B. Vandegrift & Co. against the assessment of duty by the Collector at New York. The merchandise consisted of a marble group on a pedestal, the group being classified free of duty under the provision for statuary for religious institutions under Par. 649, Tariff Act of 1897. The importers contended that the pedestal should have been classified as statuary as defined in Par. 454 and not as manufactures of marble under Par. 115. General Appraiser Waite said: "The pedestal is not of itself 'statuary' in the tariff sense, *In re Salvioli G. A. 5462* (T. D.

24758), and the Board is of opinion from an examination of the verified photograph that it is not a mere incidental part of the statue, but must be considered a distinct piece of sculpture, *In re Borgfeldt, Abstract 9303* (T. D. 26902). The claims made in the protest cannot, therefore, be sustained.

BRONZE STATUARY.—Protests of G. W. Sheldon & Co. against the assessment of duty by the Collector at Chicago. Protests overruled on the authority of *Tiffany v. United States* (71 Fed. Rep., 691), relating to bronze statuary.

Tortoise Shell from Panama.

IN a recent report, Consul James C. Kellogg, of Colon, describes the commercial aspects of the hawk's bill, or imbricated turtle (*cretmochelys imbricata*), which, with the squamous species (*cretmochelys squamata*) constitute the varieties of marine turtles that furnish the tortoise shell of trade, as follows:

The hawk's bill turtle is found only in the Gulf of Mexico and Caribbean Sea. The turtle is recognized by the low, wide head, a long, narrow mouth, the upper jaw prolonged and hooked like the beak of a hawk. The shell is flattened and serrated behind, with five vertebral and eight lateral plates overlapping one another like scales of a fish. The color is yellowish above, mottled with chestnut brown and yellowish white below. Young turtles have a black spot on the four real pairs of plates. Old turtles have a thin yellow plate on the belly, which is much sought after and commands a higher price. This hawk's bill turtle feeds on seaweeds, crabs, mollusks and fish. Being mostly carnivorous, the meat is not considered wholesome, differing in this respect from the herbivorous turtles.

The shells shipped from the Colon district are taken from turtles caught on the Lagarto and San Blas coasts of the Caribbean Sea during the months of May, June, July and August, when they approach the shore to deposit eggs, which are laid on the sandy beaches above high water mark at night. Holes are dug about one and a half feet deep, and the eggs deposited therein. Generally about three layings are made during a period of nine weeks. The eggs are lightly covered with sand and left to be hatched out by the heat of the sun.

The turtles are caught either while on shore or in the water by means of nets. As a rule, they are killed immediately after being caught, cleaned, and the shell frame washed with sands, but on the San Blas coast the Indians do not kill them, but at once proceed to remove the shell by subjecting the turtles to great heat, afterward throwing the turtles back into the sea.

By the application of heat the successive plates of shell come off very easily.

N. F. Stedman, formerly of Ladoga, Ind., is now at Waveland, Ind.

The store of A. D. Bristol, Burlington, Vt., was recently entered by burglars who tore off a screen covering a window in the rear and broke two other windows. They were heard, however, by a man who dwelt above the store, and were frightened off before securing any plunder.

NEW MANAGEMENT FOR ART METAL PLANT.

IT was recently announced that the Benedict Mfg. Co. had bought the Onondaga Metal Shops and had moved them to East Syracuse, at the same time opening a special factory to be known as the Benedict Art Studio. The company is to make hand-wrought copper, brass and iron in the form of lamps, chandeliers, electroliers, candelabra, smoking sets, desk fixtures and various other novel and useful articles. Men who learned their art from ancestors in Europe have been engaged for the art metal department, and it is expected that their efforts will be received with much favor in the trade. All articles are to be finished by a process of firing to develop the colors especially fitted for each line of work, no lacquer being used. Harry L. Benedict is the president of the company.

AN IMPORTANT EXHIBITION OF STATUARY.

MANY jewelers have visited the exhibition of American bronzes recently opened at the Gorham Co.'s building, Fifth Ave. and 36th St., New York. As noted in a prior issue, the 33 models in the collection of the late Paul Nocquet are a center of special interest. In the little room containing them the largest, which is entitled "The Cursed," is placed on a central pedestal. The crouching figure of a man in full size brings out with terrific force the suggestion of the title. An unfinished work entitled "Effort" is greatly admired. It represents groups of men trying to move an immense rock, and on each figure the tense expression of the face as well as the tightened muscles suggest human endeavor hopefully doing its utmost. This model will be enlarged and made in bronze for the Metropolitan Museum of Art. A fine playful group showing an incident in a football game, with the players piled promiscuously, is to be put into bronze and donated to Columbia University by Isaac N. Seligman. "Dancing Girl," a full length and graceful figure, has been bought by Benjamin Altman. There are a number of other sculptures in which Mr. Nocquet's sprightly fancy shows its bent. Several works of Gutzon Borglum are displayed, including reproduction in a small size of the "Mares of Diomedes," the giant production which James Stillman donated to the Metropolitan Museum of Art.

THE RAMBLER.

Norman Finch, a 13-year-old boy residing near Saranac, Mich., was recently taken into custody, accused of stealing two diamond rings, a gold watch, two small chains and several other articles from the home of W. R. Austin, a jeweler at Port Huron, Mich.

The Life and Duties of the Jewelry Traveling Salesman

By MONROE ENGELSMAN

FROM a superficial point of view, the career of a jewelry traveling salesman is an attractive one. To the uninitiated his life and duties do not appear to be onerous, but, on the contrary, easy and happy. It will be my endeavor to treat this subject with all due fairness and, by exposing some of the experiences of a traveling salesman, it may influence those who retain this view to change their minds and concur with the writer that, at its best, the "knight of the grip" has to contend with more unpleasantness than we at first believe. It will be also the effort of the writer to demonstrate and suggest certain methods which, if accepted and followed by the salesman, may prove beneficial both to himself and to the firm which he represents.

Nor will this subject be treated from a theoretical standpoint, but from actual knowledge and experience, covering a period of more than 18 years on the road; and, in view of same, it is only the desire of the writer by advancing such ideas and suggestions as may be hereafter stated in this series to raise the standard of the jewelry traveling salesman and the writer hopes that such suggestions will be considered by his readers in a friendly and fraternal spirit.

There are many qualifications required for a traveling salesman to be successful. Of course, during the period of his career there occur many incidents which retard his progress in attaining the desired result, but if he makes it a rule to follow certain methods, and to carry out general instructions, he will be benefited thereby in the long run. Experience, after all, is the best teacher and guide that will safely lead him from the crooked road of mistakes and judgment and many avoidable indiscretions to the straight path which leads toward the goal of satisfactory results.

To the inexperienced young man who is about to start on his first trip, we warn him to pay heed to the instructions given to him by his firm and follow the good advice which he may receive from his more experienced fellow traveling salesman or from any other reliable source. We warn him to abstain from indulging in the tempting and vicious habits which he will observe among some salesmen. It is very easy to acquire them, but very hard to discard them when once he is impregnated with those desires or inclinations. The experienced salesman on the road can not be too careful in refraining from pursuing and indulging in these inexcusable and pernicious habits, as he knows, or should know, that these transgressions weave a web of ruinous consequences, slowly but surely, and in the end interfere with or frustrate results which are justly expected of him.

The jewelry traveling salesman, by virtue of his peculiar calling and unusual responsibilities, is to be considered in a far different light than many others of a similar occupation; particularly he who is required to take with him a valuable stock of goods

or samples. To be the custodian of such a valuable stock there must exist, in the first place, an unquestionable faith in his integrity on the part of his employers. In the second place, it is to be considered as an important fact that mostly all sales accomplished by this salesman are goods delivered by him, so he virtually acts as an agent for his firm, and in consequence he has the power to dispose of such goods indiscriminately; for such abuse of his discretion no redress can be had by his firm except to discharge him for doing things contrary to specific instructions given to him beforehand or from time to time.

For the present it will be my endeavor to discuss the salient duties and qualifications which are required and needed in a conscientious traveling salesman, who ambitiously endeavors and labors to achieve satisfactory results for his firm. It behooves us to aid him, if possible, to attain this desire by pointing out to him the important factors which may retard or accelerate his progress.

The jewelry traveling salesman cannot overlook the fact that, in lieu of the unusual responsibility of his position, for reasons as before stated, he cannot use too much precaution, nor be too careful in seeing that his trunks, containing valuable stock, are properly checked for their destination and put on the baggage car before he enters the passenger train. When arriving at his destination he should be certain that his valuable baggage has been properly delivered to the respective hotel at which he may stop. Before retiring for the night the most valuable part of his stock or samples should be taken out of his trunks and placed in one of the safes of the hotel, for additional safety against fire or theft. It is also important that he inform his firm of his daily stops, either by telegram, letter or postal card.

To lessen his personal risk or chance losing his life, in case of fire, he should never fail, after having been assigned to a room, to ascertain where is the fire escape nearest to his room. This simple and wise precaution is, unfortunately, too frequently overlooked.

Before starting on his trip on the road the salesman should have sufficient knowledge of the merchandise which he intends to sell. During his trip he should always keep his stock properly classified, clean and presentable, as the very nature of his business makes it imperative for him not to neglect this very important feature. Before he starts out he should note and keep a memorandum of the different instructions which his firm may desire him to follow or adhere to, and he should not deviate from them without the consent of the proper authority. His firm should establish the minimum prices on his goods, but the salesman should have sufficient latitude and discretionary powers to make any prices above the lowest stipulated prices as the circumstances may warrant; the salesman is, in fact, the better judge of the prices to

be asked of the trade which he sees.

It should be borne in mind, however, that in order to gain the confidence of the trade and retain its patronage, the salesman must deal squarely and fairly at all times with his customers and never be tempted to obtain exorbitant prices from his friends, for the sake, perhaps, of temporarily benefiting himself or his firm. All transactions made by him should be clearly stated and indisputably specific, so that no controversy can ensue. By adhering strictly to this rule, the frequent and unnecessary friction which occurs either between the customer and salesman or his firm, will be eliminated.

The conscientious salesman will sell his goods at such prices, terms and conditions as he knows will meet with the approval of his firm. Should the salesman make it a practice to transgress or deviate from specific instructions given to him by his employers, he should be held financially responsible for any losses which may ensue thereby.

The question of credit is a cardinal and most vital point to be considered, and of the greatest importance to the employer. The amount of credit which is to be given to a particular concern depends largely upon the general report made by the firm's representative or by its own past experiences, and I believe that this most important responsibility of extending a stated amount of credit to the particular customer should rest solely with the firm, whose judgment should be paramount and in no way determined by the salesman.

Experience will soon teach the salesman that it will not be amiss to acquaint himself with the most important local news in the section of the country wherein he may be traveling, and in the course of a conversation with a customer in that particular locality mention the news to him. By this little lever of diplomacy he may wedge himself into the good graces of his patrons and often create a more cordial and pleasant feeling between them and himself.

A salesman should always act liberally, and not parsimoniously, toward a customer, clerk, or, in fact, any one who may likely be of some service to him. It is not necessary, however, to be extravagant in his expenditures, but he should use discretion at all times. His general expenses should never be exorbitant, but always within reason.

To close my remarks about the requisite qualifications for a salesman to be successful, I will add that politeness, diplomacy, perseverance, persuasive power and popularity are essential attributes toward the building up of a desired clientele. The knight of the grip should not lose sight of the fact, however, that his popularity can be greatly marred by making himself unpopular with his fellow traveling man or competitors. He, therefore, should exercise judicious judgment in his behavior toward them and whenever the opportunity offers itself, be ready to serve or aid his fellow traveling man and, for natural reasons, extend to them at all times a reciprocal affability and good will. Jealousy, envy or petty spite should never exist among traveling men.

Warning to the Trade!

Retailers are being called upon by a man who is selling twenty-one chains on a cloth for \$18, with swivels stamped "S. O. B. & Co.," and with a duplicate tag of ours bearing our trade-mark, attached to same. The chains are nothing more or less than brass shaded over, and will not stand acid for a single moment.

Jewelers with any experience ought to be able to discover the difference between a finished article and a rotten one.

Anyone who has been swindled by this man will please notify our house, as we want all the evidence possible, and we will do the rest.

Localities where goods have been disposed of are Pittsburg, Allegheny, McKeesport and surrounding towns.

We have two chains now in our possession that were sold by this man.

S. O. BIGNEY & CO.

We give you below an exact copy of an assay of chains manufactured by the leading chain makers of the United States.

FILLED versus SOLID WATCH CASES

IT IS ADMITTED, of course, that a Solid Case is worth more intrinsically than a Gold Filled one. The question is, "Does the former necessarily possess greater *practical wearing qualities*?"

The Wadsworth "PERMANENT"—Worthy of Its Name

QUERY:

Is not the finest type of Filled Case as capable of resisting the ordinary surface wear as if it were solid gold all through? If so, what a saving in cost! The WADSWORTH "PERMANENT" CASE answers these questions in favor of the best type of Filled Case. Nor are consummate style, form and finish lacking. Attractive prices.

Never in the history of our company have we manufactured so many high-grade movements as we are now turning out every working day.

Never in the history of our company have we been so far behind our orders.

This is convincing evidence that the retail jeweler is pushing the sale of those movements that give him the best satisfaction.

Dueber

is the name most intimately known to the Watch Trade of the United States as associated with the Watch Case industry. The name "Dueber" on any Watch Case is an absolute guarantee of good quality, artistic conception and fine workmanship.

Hampden

stands for what is peerless in American Watch Movements. For twenty-five years the name has borne an unrivaled reputation, and the Hampden high-grade movement has been a standard for imitators to work from.

Watches

are an essential part of every retail jeweler's stock, and to have the right kind of watches should be the care of every dealer. The more consideration given to this subject the more sure are Dueber-Hampden Watches to be chosen.

The W. J. JOHNSTON COMPANY

Wholesale Agents for the Leading American Watch Companies,

Fifth Avenue and Market Street, Pittsburgh, Pa.

Talent, Energy and Progression

are the qualities necessary to achieve success in this strenuous age

¶ The followers of the "let well enough alone" policy are living in the past and become the victims of the ambitious, hustling competitors who, looking into the future, constantly go forward.

¶ The forward pace in business is made more easy and quick by selling the right kind of goods; goods that are satisfying in quality and value and that add to the reputation of the merchant.

¶ *We offer you goods that have all the requisites necessary to please and satisfy your customers, that equal in value the cost, and will never mar your reputation from being associated with.*

¶ We refer to

210.—CHOCOLATE CUP.

The St. Germain.

THE WHITING COMPANY take pleasure in introducing to the Jewelry Trade, with absolute confidence in its attractive quality, a new and very effective pattern of silver and porcelain sets for the serving of Bouillon, Sherbet, Chocolate, Turkish Coffee and other beverages.

These sets consist of porcelain cups and bowls of graceful form, mounted in silver holders of delicately pierced work, and accompanied by spoons especially designed in harmonious accord with the holders. The linings are of the very finest quality of white and gilt porcelain in two styles, the decoration in the one being confined to a simple band of gold, while the other is ornamented with an elaborate acid-etched and gilt border.

Based upon a very beautiful and uncommon example of old French silver, this new pattern has been named the St. Germain, in allusion to the famous Royalist Faubourg, of old Paris, and will undoubtedly commend itself to all those desiring Silverware of individual distinction.

YOUR Christmas Buying—your gift making in particular—is made safe and easy. Buy as your guide the **Christmas DELINEATOR** (now ready). The truth and reliability of every offer of every article advertised is guaranteed by the DELINEATOR. The first, the easiest, and the best guide for holiday buying—brimful and overflowing with suggestions that are bright and accurate and practical. A holiday trip in itself!

Some of the Christmas Suggestions and everyday suggestions:

Globe-Wernicke "Elastic" Bookcases, Cincinnati, (Write for catalogue).
Meriden Britannia Co., ("Silver Plate that Wears" 1847 Rogers Bros.), Meriden, Conn.

This announcement calling attention to the most prominent advertisers is published by the Delineator in 510 prominent daily newspapers, occupying in its original form eight inches, triple column. The Meriden Britannia Co.'s "1847 ROGERS BROS." goods are the only silverware mentioned. It's your advertisement if you handle Meriden Britannia Co. goods.

The Regalia Co., (Music Boxes-Player Pianos-Ornate Clocks) New York & Chicago.

—pictured and described in full detail in the

Christmas DELINEATOR (Now Ready).

A partial list of the 510 papers—classified by states and cities—in which the Delineator's Holiday Announcement mentions Meriden Britannia Co. goods, appears below, together with dates of insertion. Besides those mentioned, papers published in Alabama, Arizona, Arkansas, Colorado, Florida, Idaho, Indiana, Indian Territory, Kansas, Kentucky, Louisiana, Maryland, Minnesota, Michigan, Mississippi, Missouri, Montana, Nebraska, Nevada, North Carolina, North Dakota, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, Washington, West Virginia, Wisconsin and Wyoming, carry the announcement.

Silver for all is the wise decision of many who bestow gifts. Table silver, toilet silver, articles for children, articles for men—there's something in the silver line for everybody. Make your selection from the famous

“1847 ROGERS BROS.”

“Silver Plate that Wears”.

For sixty years this well known brand of silver-plate has represented the highest standard of quality, finish and design.

Knives, forks, spoons, serving pieces, etc., bear the mark “1847 ROGERS BROS.” Candelabra, jewel cases, trays, dishes of all kinds, etc., are stamped  Sold by all leading dealers everywhere. Our Catalogue “66” is a valuable aid in making selections. Send for it.

MERIDEN BRITANNIA CO.,
Meriden, Conn.

(International Silver Co., Successor).

The “Royal Baby Plate” is entirely new. It cannot be upset, nor the food spilled. Encourages the child to use a spoon—the rim does it. Made exclusively by us in silver plate and sterling. Ask your dealer to show it to you.

The above advertisement will appear in the Holiday issue of the Delineator and other magazines having a circulation of over 1,500,000 and appearing about November 10th. (See opposite page.)

A Holiday Window Attraction

A new, unique and artistic Simmons Chain window posterette for your holiday displays.

Mailed postpaid upon request—if we receive your request soon.

NOTHING like it has ever been seen in a jeweler's window. It represents a graceful, girlish figure, printed in pleasing colors, in the act of swinging. By attaching a Simmons lorgnette chain to the card, the girl will appear to be swinging on a real chain.

The illustration of the figure, finely printed on plate paper, is mounted on a heavy, handsome gray pebbled board with side panels, which when bent at an angle from the center panel, allow the posterette to be stood upright in the window.

This little sketch gives a bare idea of the posterette and furnishes a suggestion for a window setting

As the number printed is limited, if you wish one of these very unusual and beautiful window attractions, write for it at once.

R. F. SIMMONS COMPANY, ATTLEBORO, MASS.

E are showing Community Silver to millions of people through the large "windows" of our full-page advertisements.

You can profitably supplement this great publicity by a tasteful display of

COMMUNITY SILVER

in your own windows.

Its beauty will enhance the Christmas brightness; its ready sales will swell your holiday profits.

COMMUNITY SILVER

THE CLASSIC

Christmas Values

The success of Community Silver is no mystery. It offers the best value for money paid. It is the most beautiful, and it wears the longest for the price.

The superiority of Community Silver plate has been proved by U.S. Government Assayer's test.

LARGE ASSORTMENT AT ALL DEALERS

ONEIDA COMMUNITY, LTD., was Founded in 1848 ONEIDA, N.Y.

AVALON

AT ABOUT THE PRICE OF ORDINARY PLATED WARE

FLOWER-DE-LUCE

BETTER THAN TRIPLE PLATE
MORE THAN TRIPLE VALUE

Example of holiday advertising to appear in Christmas Numbers of Ladies' Home Journal, etc.

The woman who reads this advertisement is influenced to buy Community Silver. The Jeweler who carries it finds his sales already half made.

The Pull of Two Engines

WHEN TWO ENGINES pull, things have to move. One engine is our General Advertising, which you see exemplified on the preceding pages. It brings the demand for

COMMUNITY SILVER

to your town—to every town. The other engine is Local Advertising, which draws consumers right to your doors.

Our magazine pages have created a tremendous demand. How is this to benefit you, personally? Consumers must know that **YOU** carry Community Silver. Tell them. Use the newspaper cuts shown on the next page. They will be furnished free.

Our magazine advertising is “on the main line”; but there’s a “switch” to the door of every jeweler who uses these cuts.

ONEIDA COMMUNITY, LTD.

NEW YORK.

We all have a goal we are striving to reach--"SUCCESS"

For the jeweler it means essentially the confidence, good-will and esteem of his trade. To establish and maintain same, it is necessary that he have goods on which he can rely fully in every respect; and which when bought by his customer, will give permanent satisfaction. Our lines, marked with the "Rose" trade-mark, are of exactly that character. Our established reputation of over 40 years is back of same, and our large list of satisfied customers is ample proof of the reliability of our assertions.

It is high time that your stock was replete with "Sellers"; we are ready now, as always, to supply the demand. Everything in the line of Diamonds, Watches and Gold Jewelry.

THE SILENT INDIVIDUAL SALESMANSHIP OF OUR EMBLEMS

TO SELL AN EMBLEM that has no real merit and for which an exorbitant price is asked, requires more than simply placing the goods before you. A personal "heart to heart talk" must be brought into play, in fact, EXPERT SALESMANSHIP is needed, to say the least, if a sale is to be created. On the other hand, take an article of real merit, such as OUR EMBLEMS, THAT ARE THE STANDARD WITH WHICH ALL OTHERS ARE COMPARED, and they are as far ahead in quality as platinum is to silver. So confident are we of their vast superiority that we are willing to STAKE OUR SALE on simply having some of our many attractive designs placed in your hands. In other words, they must be seen to be appreciated, because "seeing is believing." They have that SILENT, INDIVIDUAL SALESMANSHIP which is bound to make even the MOST SKEPTICAL REALIZE THEIR VALUE. Quality counts first. Who is better able to give it to you than we who have devoted our entire attention, in fact made a specialty of manufacturing high grade emblems for the last thirty years? Our emblems possess a GENERAL STYLE, in fact an ELEGANT, ARTISTIC effect which is appreciated by the most exacting. Their ever-increasing popularity indicates that there must be more than quality back of our goods—and that is price. We at all times invite a comparison of our prices with those of other concerns, because WE MANUFACTURE IN SUCH LARGE QUANTITIES that we can afford to undersell or give 50 per cent. better work than others for the same price. Make us prove our statements. A TRIAL ORDER WILL CONVINCe YOU. Selections sent to reliable parties. Write for catalogue at once, illustrating the MOST COMPLETE LINE OF EMBLEM JEWELRY ever published. A postal will bring it.

*Bracelets
of Distinctive
Character*

*Notable
Antique
Reproductions*

FROM CERTAIN points of view the Bracelet is one of the most important pieces of Jewelry, as it is also one of the most ancient. Its place and size make it obvious; it is necessarily prominent, and cannot fail to be noticed. It is essential that it be artistic.

For its richest effects in Jewelry this house revives the conceptions of early craftsmen in the old world, who were not hampered by modern conventional ideas. Our impressive Bracelets bear witness to this policy. Interesting examples set with Japanese Coral. Others mounted with Tourmaline, Amethyst, Sapphire, Jade, Malachite, etc. Every piece distinctive.

SOLID GOLD CHAINS

bearing our trade-mark stand for the highest achievement in gold chain manufacture. Plump quality, perfect workmanship, careful finish and attractive designs—all combined—distinguish our product.

WE SELL DIRECT TO YOU

No intermediaries, no corps of salesmen, no unnecessary expenses to add to the price—just the cost of the gold, the cost of making and a modest profit for ourselves enable you to buy the best chains at the lowest price. **SEND FOR CATALOGUE.**

Maker and Inventor 48 and 50 Maiden Lane N. Y.

WE MAKE

The Alliance Ring

The graceful style of the Alliance Ring is rapidly supplanting the use of the old style wedding ring. The joints are invisible, and whenever engraving is desired it is done in the inside surface. Can be easily separated by inserting a pin in inside pin-hole.

14 karat, 3 dwts., each, \$1.25 per dwt.; in dozen lots, \$1.10 per dwt., net.
18 karat, 3 dwts., \$1.40 per dwt.; in dozen lots, \$1.25 per dwt., net.

MADE ONLY BY

LEONARD KROWER, Manufacturing Jeweler

COMBS
THAT INVITE
COMPARISON

COMPETITION ceases to be dreaded where the appeal is one of distinctive quality. The fact that a dealer may have bought elsewhere does not deter him when he sees these goods — he simply buys again. The styles are convincing.

The features embodied in these Combs are the result of long experience in a specialized line, which nicely gauges discriminating demand.

New shapes and rich effects. Happy combinations with pearls and gem settings. A delight to womankind.

Beautiful Silver Service Presented by the State of Virginia to the United States Battleship Virginia.

IN the design and execution of the sterling silver service made for the battleship *Virginia*, American craftsmen have displayed true taste and skill. The larger pieces are notable examples of workmanship in the white metal, and every piece is of a fitting character. The ornamentation shows the proper pride in the history of the State which presents the service and in

the Commonwealth of Virginia to the United States battleship *Virginia*, 1906." On all the other pieces the title of the battleship alone appears. On a pitcher tray appears a portrait of Chief Justice Marshall. On other pieces are portraits of Patrick Henry, Captain Maury and General Lee.

There is also an allegorical picture of John Smith and Pocahontas and a beau-

PART OF THE SILVER SERVICE FOR THE BATTLESHIP "VIRGINIA."

the men of that commonwealth who have contributed to the nation's greatness. Every detail in the design has been carried out with care and fidelity.

Altogether there are 46 pieces in the service and in all 2,500 ounces of solid silver were used. It has been cleverly contrived by the artist so that while the design em-

tiful silver cigar box with a portrait of Sir Walter Raleigh, who learned in Virginia the soothing influences of tobacco. Pictures of the Natural Bridge and the rotunda of the University of Virginia also appear.

The cost of the service was about \$5,000. To the Bailey, Banks & Biddle Co., Philadelphia, Pa., credit is due for designing and making the fine service.

The vessels of the United States Navy whose presentation services have been illustrated and described in THE CIRCULAR-WEEKLY, and the dates of the issues in which these illustrations and descriptions appeared from time to time, are as follows:

| VESSELS. | ISSUE. |
|--------------|--------------|
| Maine..... | June 3, 1891 |
| Detroit..... | July 2, 1892 |

ONE OF THE LOVING CUPS.

ployed is chiefly historical, the picturesqueness of the Old Dominion will not be overlooked and the story of Virginia can be traced from piece to piece. The decorative scheme employed in the tray of the punch bowl is an etching of the old adventurers' quaintly named ships, the *Susan Constant*, *God Speed* and the *Discovery*, as they approached Jamestown in the early years of the 15th century. On the punch bowl, which stands 20½ inches high, is etched a view of the Capitol at Richmond and around the ebony bases are applied medallions of seven of Virginia's most famous sons—Presidents Washington, Jefferson, Madison, Monroe, Harrison, Tyler and Taylor.

The inscription on the punch bowl, soup tureen, tea set, tray and coffee urn is "From

NONE BETTER MADE

When you consider the patterns, quality and prices of our various lines of gold jewelry, we do not hesitate to honestly apply the above three words in describing our product.

Therefore, we stamp every ring, locket, sleeve button, vest button and shirt stud we make with our registered Trade-Mark, and this is our bond that what we say is so.

NONE BETTER MADE

LETTERS TO THE EDITOR.

A Jewelers' Convention Suggested.

ATLANTA, Ga., Oct. 31, 1906.

Editor THE JEWELERS' CIRCULAR-WEEKLY:

Permit me briefly to bring to your notice a suggestion in reference to the jewelry and allied trades, viz., the holding of a jewelers' convention during the Summer of next year.

The experience of manufacturing interests of every description of merchants—bankers, brokers, professional men, doctors, accountants, druggists, engineers, railroad, and car builders, etc.—is that trade conventions have a very healthful influence, with beneficial results in very many ways; improvements and improved methods, abuses and complaints, suggestions for better conditions and matters of general trade interests and conduct and welfare are brought out, discussed and acted upon, often resulting in action of vital importance to the industries in question.

The social features are of great benefit, as all are brought together from different sections, and getting together as kindred spirits, they become personally acquainted one with another, exchange experiences and make useful suggestions, thereby adding to the fraternal spirit of the trade, lessening petty jealousies, suspicions and bitterness.

Next year would be a most auspicious year in which to hold such a convention. There is to be the great American Jamestown Exhibition, near Norfolk, Va., an unique exhibition, such as the world has never seen before, different in all respects from its predecessors, so that visitors coming east would have much to see that would make the trip one to be long remembered.

The matter of details are easy of arrangement, or rather I should say, if approved generally by the members of our trade, committees could easily be formed to see to all the attending details, such as fares, transportation, hotels, hall for meetings, etc. Some large city with good hotel accommodations (at reasonable rates), as Washington, Baltimore or Philadelphia, would be the best location for the meetings. Surely with the active co-operation of our great trade paper, THE CIRCULAR-WEEKLY, and the personal help and support of its proprietors and the prominent members of the jewelry trade, such a convention would be sure to succeed. These are simply suggestions in their merest outline, and if placed before the trade may perhaps be a worthy beginning to a great national jewelry convention for the national good, and that of our trade in particular. Your obedient servant,

W. C.

The store of J. B. Ferguson, Princeville, Ill., has been destroyed by fire.

A. E. Warren, formerly manager of the Camden Jewelry Co., Camden, Me., has moved with his family to St. Albans, Vt., where he has taken a position as watch maker for B. B. Perkins & Co.

An international exhibition of fine arts and horticulture will be opened at Mannheim, Germany, on May 1, 1907, on the occasion of the third centenary of the foundation of that town. Full particulars may be obtained from Herr Ritter, burgomaster of Mannheim. Interest increases in the proposal for a world's fair in Berlin in 1912.

Statistics of the Jewelry and Kindred Trades

Figures of the Last Census of Manufactures as to the Clock, Watch, Jewelry, Silver-plated Ware, Optical and Other Industries.

WASHINGTON, D. C., Nov. 8.—The results of the last census of manufactures for the entire United States shows that there has been an increase from 207,562 in 1900 to 216,262 establishments in 1905, in each of which the value of the production was in excess of \$500. The total invested capital has increased from \$8,978,825,200 to \$12,686,265,673. The number of salaried employes has increased from 361,202, receiving \$380,889,091 in 1900, to \$519,751, receiving \$574,761,231 in 1905. The total average number of wage-earners reported in the census of 1900 was 4,715,023, and in that of 1905, 5,470,321, whilst their wages increased from \$2,009,735,799 to \$2,611,540,532, an increase of 16 and 29.9 per cent. respectively. The cost of materials used showed an increase from \$6,577,614,074 to \$8,503,949,476, or 29.3 per cent. The total value of the products reported in 1900 was \$11,411,121,122; in 1905 it was \$14,802,147,087, an increase of 29.7 per cent. Of all these establishments there are 24,180 for which the value of products is \$100,000 or over, only 11.2 per cent. of the total, yet they control 81.5 per cent. of the total capital invested, give employment to 71.6 per cent. of the number of wage-earners, and manufacture 79.3 per cent. of the total value of the products.

New York, Pennsylvania, Illinois and Massachusetts are, in the order named, the four leading manufacturing States. They contain 86,333, or 39.9 per cent. of the establishments of the entire country, give employment to 2,488,064, or 45.5 per cent. of the average number of wage-earners, and reported \$6,978,331,091, or 47.1 per cent. of the value of the products.

The States east of the Mississippi River and north of the Mason and Dixon line and the Ohio River contained 65.5 per cent. of the establishments in the United States, gave employment to 74.1 per cent. of the number of wage-earners, and reported 73.0 per cent. of the total value of the products.

CLOCK INDUSTRY.

Taking a comparative statement of the censuses of 1880, 1890, 1900 and 1905, we find that in the clock manufacturing industry there has been an increase from 22 establishments, with a capital of \$2,474,900 in 1880, to 27 in 1890 whose capital increased to \$5,727,202; in 1900 the number of establishments reported was 46, with a capital of \$8,792,653, and although in 1905 the number was only 38, yet the capital had increased to \$9,703,170.

The number of salaried employes was not shown in 1880, but in 1890 the returns showed 94, receiving \$127,500, or an average of \$1,356 per annum; in 1900 the number was 260, receiving \$352,536, or \$1,355 each, and in 1900 477 received \$497,163, or an average of only \$1,042 each.

In 1880 the average number of wage-earners was reported as 3,940, earning \$1,622,693; in 1890 the number fell to 3,491, although wages had increased to \$1,808,025;

in 1900 they had jumped to 6,037, earning \$2,650,703, while in 1905 it was 7,249, earning \$3,514,185. Out of the total of 3,940 reported for 1880, 2,807 were men, 630 women and 593 children. In 1890 2,942 men, 510 women and 39 children were reported. In 1900 the number of men was 4,519, of women 1,371, and of children 147, while for 1905 there are 5,087 men, 1,965 women and 197 children.

The total cost of materials used in this branch of trade in 1880 was reported as \$1,908,411; in 1890 it had decreased to \$1,457,778, increasing again in 1900 to \$3,028,606 and in 1905 to \$3,077,574. In the returns for 1880 the value of the output was given as \$4,110,267; it increased during the next 10 years to \$4,228,846, in 1900 to \$7,157,856, and in 1905 to \$8,868,000.

ELECTROPLATING.

Only \$865,898 was invested in 221 electroplating plants in 1880; in 1890 the capital had been increased to \$2,051,134 and the number to 313; in 1900 the capital had fallen again to \$1,322,261 and the number of plants to 302, and while in 1905 the returns show that there has been an increase to 312 plants the capital invested has been still further reduced to \$1,286,996.

The census of 1880 gave no information as to the number of salaried employes in these plants, but that of 1890 shows 397 receiving \$368,723; in 1900 only 115 were carried on the pay rolls, at \$92,761, and in 1905 144 at \$132,192.

The total number of wage-earners reported in 1880 was 1,441, earning \$620,848; in 1890 the number had increased to 1,765, earning \$891,752, and by 1900 it had increased still further to 2,086, earning \$949,062, but for 1905 the number had decreased to 1,943, to whom was paid wages amounting to \$1,092,835, showing a sharp advance in wages during the past five years.

Of the total number employed in 1880, 1,257 were men, 89 women and 95 children; in 1890, 1,602 men, 95 women and 68 children; 1900 shows 1,888 men, 102 women and 96 children, while in 1905 there were 1,805 men, 91 women and 47 children.

The cost of materials reported for 1880 was \$663,588, with an output valued at \$1,975,700; 1890 showed a cost of \$1,048,057, and an output of \$3,121,642; for 1900 the cost only amounted to \$783,854, and the total value of the products to \$2,719,961, while for 1905 the cost was only \$747,331 and the value \$2,965,014.

JEWELRY.

The census of 1880 showed 739 jewelry plants with a capital of \$11,431,164; in 1890 the number had jumped to 783, with capital amounting to \$22,246,508, and in 1900, notwithstanding the fact that the custom and neighborhood shops were eliminated from the reports, the number jumped to 851 and the capital to \$27,871,924, while for 1905 there has been a still further increase to 1,023 plants with combined capital amounting to \$39,678,956.

As it is in other industries, the returns for 1880 do not show how many salaried employes were carried on the pay rolls, but in 1890 the number was 1,881, receiving \$2,232,066; in 1900 the returns only showed 1,866, receiving \$1,842,293, increasing again in 1905 to 2,603, to whom was paid \$2,939,419.

The total number of wage-earners in 1880 was 12,697, earning \$6,441,688; of that number 10,050 were men, 1,998 women, and 649 children; in 1890 the total number had increased to 13,880, earning \$8,038,327, divided between 10,696 men, 2,968 women and 216 children. The census of 1900 showed 20,468 persons, receiving \$10,643,887; of that number there were 13,771 men, 6,306 women and 391 children, while out of a total of 22,080 earning \$12,592,846 in 1905 15,845 were men, 5,785 women and 450 children.

The returns for 1880 failed to show the item of miscellaneous expense, but the cost of material in that year was \$10,324,990; in 1890 the miscellaneous expense was \$1,493,545, and the cost of materials \$16,110,219; in 1900 they were reported as \$2,066,238 and \$22,234,634 respectively, while for 1905 miscellaneous had increased to \$4,161,303 and cost of materials to \$24,177,229.

The total value of the output in 1880 was reported as \$22,201,621, in 1890 at \$34,761,458, in 1900 at \$46,128,659, and in 1905 at \$53,225,681, showing a very material increase for the past five years.

JEWELRY CASES.

The statistics covering the manufacturing of jewelry cases have been combined with those for surgical and other cases, so that it is useless to give detailed statistics further than to show that in 1880 there were 17 plants with a total capital of \$62,000 and an output of \$131,670; in 1890 76 plants had a capital of \$634,900 and an output of \$1,454,053; in 1900 there was a decrease to 63 plants, in capital to \$547,753, and in output to \$1,156,977, but the last returns show 97 plants, \$1,437,835 invested and \$2,291,648 output.

LAPIDARY WORK.

Not even in the manufacturing of jewelry has there been as rapid a growth as there has in the cutting and polishing of stones. In 1880 there were 55 establishments with capital amounting to \$176,875, employing 252 persons, earning \$142,075, of whom 207 were men, 17 women, and 28 children; the cost for materials was \$226,277, and the value of the output \$544,089. In 1890 there was a decrease to 29 plants, in capital to \$100,635, and in output to \$315,604. After the passage of the Wilson Tariff Act there was a material increase in this line of work, so that in 1900 there were 60 establishments, with capital of \$3,087,390, employing 498 persons, using materials that cost \$4,655,765 and having an output valued at \$5,786,281. While the returns for 1905 show a decrease to 54 establishments, with capital of only \$2,383,862, yet they employ 507 persons, used \$6,223,675 worth of materials, and have an output valued at \$7,646,814.

OPTICAL GOODS.

In 1880 there were 62 plants engaged in manufacturing optical goods, with a capital of \$643,825. These 62 plants employed 1,988 persons, earning \$450,897; of that number

DIAMONDS

SIZES *and* PRICES *for* USUAL DEMANDS.
NOTABLE STONES, ALSO
FULL ASSORTMENT.

WHILE THIS HOUSE has long been identified with the importation of stones notable for their size, beauty and value, the fullest provision is also made to supply the more usual and ordinary demands of Jewelers for this, the most important of gems. The sale of exceptionally large and expensive diamonds is occasional; the sale of average sizes and shapes is constant. Whatever your requirements may be, it will be to your advantage to send to us.

We can and will make prices that will attract you.

ALFRED H. SMITH & CO.

IMPORTING GEM MERCHANTS

475 FIFTH AVENUE

NEW YORK

170 BROADWAY

872 were men, 113 women and 103 children. The total cost of material used was \$417,472, and the value of the output of all plants was \$1,182,142.

When 1890 census returns were made it was found that the number of establishments had jumped to 191, and the capital invested to \$2,608,176; on the payrolls were 337 salaried employes, receiving \$290,978, and 2,507 wage-earners who were paid \$1,010,374; of that number 1,868 were men, 507 women and 132 children. The miscellaneous expense was reported at \$228,028; the cost of materials used, \$1,324,305, and the value of products, including custom work and repairing, \$3,505,973.

In 1900 there was a drop to 91 in the number of establishments, but an increase in capital to \$4,212,268. The number of salaried employes jumped to 375, with combined salaries reduced to \$287,012. The number of wage-earners increased to 3,715, earning \$1,599,072; of this number 2,522 were men, 1,022 women and 171 children. Miscellaneous expense was \$440,297; cost of materials, \$2,100,622, and value of products, \$5,211,432.

By 1905 the number of establishments had increased to 122, capital to \$5,380,766; salaried employes only numbered 316, with salaries increased to \$427,072. The total number of wage-earners had increased to 4,330, earning \$1,923,225; of that number 2,948 were men, 1,098 women, and 284 children. Miscellaneous expense had increased to \$493,276, cost of materials to \$2,319,949, and value of products to \$6,116,910.

PLATED WARE.

The maximum of the plated ware business seems to have been reached in 1900. In 1880 there were 55 plants, with capital amounting to \$5,862,025, furnishing employment to 4,675 persons, earning \$2,453,361, of which 3,742 were men, 831 women, and 102 children. The outlay for materials was \$4,100,116, and the value of finished products \$8,596,181. By the year 1890 there were 68 plants, with capital amounting to \$13,150,990. On the payrolls were carried 302 salaried employes, receiving \$420,045; in addition to this there were 6,617 wage-earners to whom was paid \$3,335,260; of that number 5,480 were men, 974 women, and 163 children. The miscellaneous expense was \$1,276,431; the cost of materials, \$4,647,890, and the value of products, \$11,502,966. By the year 1900, while the number of plants was only 66, the capital had been increased to \$16,486,471; the number of salaried employes was increased to 477, receiving \$702,635; the number of wage-earners was 6,392, earning \$3,088,224, of whom 5,349 were men, 979 women, and 64 children. Miscellaneous expense was reduced to \$768,939, while the cost of materials used reached \$5,875,312. The value of products also reached the high-water mark, with a value of \$12,608,770. In 1905 the number of establishments was only 60; the capital had been decreased to \$13,830,480; the number of salaried employes to 474, receiving \$647,585; wage-earners to 6,281, although wages increased to \$3,360,425. The number of men was 5,187; women, 998, and children, 96. Miscellaneous expense increased to \$1,691,365, the cost of materials was \$5,448,619, and the value of the products \$12,138,886.

SILVERWARE.

Silversmithing and silverware returns are all combined in one at the last census. In 1880, out of a total of 77 plants, 38 were for silversmithing and 39 as silverware. The capital of both was \$1,898,098. The total number of wage-earners employed was 1,160, earning \$752,583; of that number 1,005 were men, 42 women, and 113 children. The total cost of materials at that time was \$1,130,560, and the value of products \$2,517,561.

In 1890 the number of plants was only 54, including 21 silversmiths and 30 silverware; the combined capital was \$5,728,114; 204 salaried employes received \$283,330, and 2,419 wage-earners \$4,588,751; of the 2,419, men numbered 2,260, women 143, and children 16. Miscellaneous expense was \$654,646, cost of materials \$2,333,581, and value of products \$6,435,304.

Out of 103 plants in 1900, 44 were engaged in silversmithing and 59 in silverware; the combined capital of all plants was \$11,141,929; 652 salaried employes received \$754,389. The total number of wage-earners was 5,813, to whom was paid \$3,443,142; of that number, 5,214 were men, 511 were women, and 85 children. Miscellaneous expense was \$909,896, cost of material \$5,783,645, and the value of the output \$13,505,583. In 1905 there were only 98 establishments reported, but the capital had increased to \$23,901,545; the salaried employes reached a total of 850, receiving \$1,082,579, while the total number of wage-earners reached 8,580, to whom was paid \$5,265,049. Out of that 8,580, it appeared that 7,280 were men, 1,138 women, and 162 children. The miscellaneous expense had increased to \$2,478,873, the cost of materials \$9,010,086, and the value of products \$20,700,703.

WATCH AND CLOCK MATERIALS.

In 1890 there were two establishments making clock cases and materials, and 20 in watch materials, with a combined capital of \$123,550; 324 persons were employed, to whom was paid \$101,050; of that number 228 were men, 47 women, and 49 children. The cost of material was \$149,315, and the value of the output \$350,695.

The banner year in this industry seems to have been 1890, when there were 36 establishments, with capital of \$705,647, of which number four manufactured clock cases and materials. There were 48 salaried employes on the payrolls that year, who received \$54,763; 547 wage-earners were paid \$258,422, of whom 417 were men, 116 women, and 14 children. Miscellaneous expense amounted to \$31,407, cost of material to \$326,398, and value of output at \$831,348.

In 1900 there was a decrease to 20 establishments; in capital to \$367,291; in salaried employes to 16, receiving \$20,461; in wage-earners to 331, receiving \$152,234, of whom 186 were men and 145 women. Miscellaneous expense was \$9,015, cost of material \$105,549, and value of output \$345,347.

In 1905 there was a further decline to 17 establishments, but an increase in capital to \$425,838; 25 salaried employes received \$31,794, while the number of wage-earners increased to 385, earning \$182,475. The miscellaneous expense was \$14,478, cost of materials \$107,361, and value of products \$428,692.

WATCH CASES.

In 1880 there were 27 plants engaged in the manufacture of watch cases; in 1890, 45; in 1900, 30, and in 1905, 28; yet, despite the decrease in numbers, there has been a steady increase in capital from \$1,584,740 in 1880 to \$4,727,100 in 1890, to \$8,119,292 in 1900, and still further to \$12,649,771 in 1905. In 1890 there were 190 salaried employes, to whom was paid \$219,699; in 1900 the number had increased to 235, receiving \$289,366, and in 1905 to 381, receiving \$494,783. The number of wage-earners increased from 1,758, earning \$976,011 in 1880, to 3,679 at \$1,896,587 in 1890, and in 1900 to 3,907, earning \$1,924,847, and still further to 4,221 at \$2,170,507. Cost of materials increased from \$2,812,922 to \$5,022,455 in 1890, \$4,393,647 in 1900, and \$4,428,627 in 1905. The value of the output in 1880 was \$4,589,314, in 1890 it was reported at \$8,618,479, falling in 1900 to \$7,783,960, increasing again in 1905 to \$8,626,504.

WATCHES.

In 1880 there were 11 watch factories, with a combined capital of \$4,144,327; in 1890 there were 19 factories, with a capital of \$10,106,114; in 1900, although there were only 13 factories, the capital had been increased to \$14,235,191, and in 1905 with a still greater capital of \$19,409,931, there were 14 factories. The number of salaried employes carried on the payrolls in 1890 was 80, at \$101,119; in 1900 it had increased to 165, at \$294,449, and in 1905 to 366, at \$614,356. In 1880 employment was furnished to 3,346 persons, at \$1,712,276; of that number 2,127 were men, the balance women. In 1890 the number was 6,595, and the wages \$3,587,808; in that year 3,935 of the employes were men, 2,640 were women, and 20 children. In 1900 6,880 persons were employed at \$3,586,723. Of the 6,880 persons, 3,381 were men, 3,473 women, and 26 children. By 1905 the total of persons employed in the 14 factories was 10,724, at \$6,024,400, of whom 5,457 were men, 5,245 women, and 22 children. Miscellaneous expense in 1890 was \$733,404; in 1900, \$572,080, and in 1905, \$1,445,659. The cost of material used in 1880 was \$982,224; in 1890 it was \$995,740; in 1900, \$1,291,318, and in 1905 it had increased to \$2,258,683.

The total output for the 11 factories in 1880 was \$3,271,244; the 19 factories operating in 1890 had an output valued at \$6,051,066; the 13 factories operating in 1900 turned out \$6,822,611, while in 1905 the total output had increased to \$11,866,400.

Death of George E. Childs.

Word was received last week of the death at Flint, Mich., of George E. Childs, a well-known jeweler at that place. Mr. Childs had been in business for a number of years, and was formerly a member of the firm of M. S. Elmore & Co., which concern he succeeded in 1886.

Deceased was about 55 years old and was highly regarded and respected both in the trade and in the community. His death was a severe blow to his many friends.

The residence of I. A. Samuels, Sayre, Pa., was entered recently by a thief, who stole a suit of clothes containing a watch and charm valued at about \$100.

General Appraiser Sustains an Advance of 20 Per Cent. on a Consignment of Pearls.

Thirty pearls invoiced at 18,000 francs and advanced by the Collector of New York to 26,000 francs were reappraised last week by General Appraiser T. S. Sharretts, of the Board of United States General Appraisers, at 21,600 francs. These pearls were part of a necklace to which reference was made in the issue of Oct. 10. The advance made by the Collector, amounting almost to 50 per cent., was so heavy that the case attracted considerable attention. If the advance had exceeded 50 per cent. the Government could have begun forfeiture proceedings.

The case came before General Appraiser Sharretts on an appeal from the Collector's appraisement. The name of the firm shipping the pearls, which was withheld in the early proceedings, has now been made public. The shippers were Golay, Fils & Stahl, Geneva, Switzerland. They consigned the pearls to an importing agency, who turned over the invoice to a banking concern. It was said in the course of the proceedings that the necklace of which the 30 pearls formed a part had been sold to a man named Manning, but his full name and his identity were not revealed even to the authorities.

According to a statement made at the hearing 60,000 francs was paid for the necklace, and it was the intention of the consignors, after taking the pearls from the string, to send them to New York in two or three separate shipments.

No question was raised as to the rate of duty in this case, the Collector claiming only 10 per cent., under the classification of pearls in their natural condition. If all the pearls had been brought to New York in the same package the case would have been similar to that of the Citroen pearls on which the United States is now trying to collect a 60 per cent. duty, the rate for pearls strung.

The only question in the case of the pearls from Geneva was as to the valuation. Because of the dismemberment of the necklace, the usual statement of the purchase price paid abroad was of little or no assistance in appraising the loose pearls. It was not known to the authorities whether the pearls coming at this time constituted the more valuable or the cheaper part of the necklace. There was no ready means of ascertaining just what proportion of the total price of the necklace should be properly placed on the 30 pearls in question.

When the appeal was taken to the General Appraiser he summoned a number of prominent dealers from the wholesale district to appraise the pearls and witnesses were heard for the Government and for the importers. Although he did not sustain in full the advance made by the Collector, yet the increase in value, as a result of the General Appraiser's decision, is about 20 per cent. The importers are accordingly called upon to pay not only the duty on this increased value, but also a penalty equaling the amount of the increase.

The Geneva firm sent a letter to the authorities, asking that the pearls be returned and the United States keep the duties paid on the invoice value. The writer said that the American Consul at Geneva had in-

formed the firm that this could be done. The authorities notified the shippers, however, that under the law the pearls could not be withdrawn until the duties on the advanced value and the penalties had been paid, involving altogether about \$1,000.

The inference is drawn that the customs authorities do not feel bound in any way by possible errors in statements made to foreign shippers by American consuls abroad. The consignees, in the present case, have the privilege of taking another appeal to a board of three general appraisers, but are not likely to do so.

Jewelry, Clocks, Watches, Silverware and Kindred Lines, Exported from New York.

WASHINGTON, D. C., Nov. 7.—The following were the exports of jewelry, silverware and optical goods, clocks, watches and kindred lines from the Port of New York for the week just ended:

Algoa Bay: 9 packages plated ware, \$488.
 Antwerp: 2 packages watchmaking machinery, \$400.
 Bombay: 1 package optical goods, \$101; 1 case watches, \$551.
 Buenos Ayres: 1 package plated ware, \$400; 1 case watches, \$340; 4 cases jewelry, \$5,142; 158 cases clocks, \$3,289.
 Calcutta: 4 cases watches, \$564; 10 cases clocks, \$168; 24 cases clocks, \$437.
 Cape Town: 5 packages plated ware, \$369; 16 cases clocks, \$335; 3 cases watches, \$334.
 Copenhagen: 5 cases clocks, \$145.
 Curacao: 1 case jewelry, \$1,241.
 Glasgow: 76 cases clocks, \$2,665.
 Guayaquil: 1 package plated ware, \$108.
 Hamburg: 3 cases jewelry, \$512; 1 package optical goods, \$300; 4 packages plated ware, \$174; 3 packages optical goods, \$546.
 Hamilton: 3 packages plated ware, \$295; 11 cases clocks, \$230.
 Havana: 1 package optical goods, \$202; 1 case silverware, \$334; 4 packages plated ware, \$443; 1 case jewelry, \$228.
 Havre: 1 package plated ware, \$200; 7 cases jewelry, \$622.
 Hong Kong: 53 cases clocks, \$902.
 Hull: 4 packages plated ware, \$275.
 Kingston: 3 cases jewelry, \$103.
 Liverpool: 6 packages jewelers' ashes, \$8,000; 118 cases clocks, \$2,125; 2 cases watches, \$200; 2 cases jewelry, \$455; 1 package silverware, \$615; 82 cases clocks, \$840; 2 cases watches, \$100; 1 case jewelry, \$1,000.
 London: 57 cases clocks, \$1,839; 3 packages optical goods, \$586; 162 cases clocks, \$634; 5 packages plated ware, \$811; 12 packages optical goods, \$3,313; 4 packages scopes and views, \$718; 6 cases watches, \$1,152.
 Manaoa: 1 package plated ware, \$114; 4 cases clocks, \$125.
 Manchester: 90 cases clocks, \$1,301.
 Montevideo: 3 cases jewelry, \$407; 59 cases clocks, \$1,561; 6 packages plated ware, \$557.
 Oporto: 174 cases clocks, \$2,022.
 Rio de Janeiro: 14 cases clocks, \$125.
 Santa Marta: 1 package plated ware, \$115.
 San Miguel: 36 cases clocks, \$466.
 Savanilla: 1 case jewelry, \$235.
 Shanghai: 104 cases clocks, \$1,689; 3 packages scopes and views, \$700.
 Stockholm: 1 case jewelry, \$294.
 Sydney: 160 cases clocks, \$1,692; 2 packages optical goods, \$626; 67 cases clocks, \$713.
 Tampico: 3 cases clocks, \$167.
 Trinidad: 3 packages silverware, \$132.
 Vera Cruz: 16 cases clocks, \$367.

Chas. A. Bongart has been appointed receiver for the National Self-Winding Clock Co., Champaign, Ill., by Judge Johns, of Decatur. Bonds were fixed at \$10,000.

Robert T. Chadwick, who recently disposed of his business interests in Mansfield, Mass., to H. M. Woodruff, Kennebunkport, Me., left about a week ago for California.

Pittsburg Police Hear of Other Complainants Against Alleged Check Swindler Now Under Arrest.

PITTSBURG, Pa., Nov. 8.—James Lewis, a jeweler at Columbus, O., arrived in Pittsburg this week and identified E. E. Clark, alias James or Peter Fuller, now in custody here, as a man who swindled him out of diamonds valued at \$500 by means of a worthless check. Clark's arrest was reported and his picture published in the last issue of THE CIRCULAR-WEEKLY. It was expected by the Pittsburg police that the finding of pawn checks on his person would eventually be followed by some one identifying him who had been swindled out of jewelry.

Mr. Lewis has been in Pittsburg for several days and has already located one of the diamonds; an earring has been found at a local pawnshop, and Lewis has been endeavoring to get possession of the stone. He will begin replevin proceedings to recover it.

Clark is believed to have attempted his game at the stores of jewelers in this city. Mr. Hill, of Goddard, Hill & Co., is confident that Clark is the man who was in his place of business a week or two ago; a stranger at that time asked for Mr. Goddard, who was not in, but the man, who evidently knew this, at once struck up a conversation with Mr. Hill, and said that he wanted to buy a pair of diamond earrings, a diamond ring and a brooch. Mr. Hill showed him the goods, but the stranger's actions excited his suspicions, and he watched the fellow very closely. Finally, after the man saw that he was being watched by Mr. Hill, he concluded that he must first see a party down the street, and saying, "I will let you know in 15 minutes," darted out of the door. That was the last that Mr. Hill saw of him. When Clark's arrest was announced and his description and picture published, Mr. Hill said that he is confident that he is the man who was in his store.

Clark was arraigned for a hearing earlier in the week on the charge of passing worthless checks and was held to await the action of the Grand Jury. Lewis, who came to Pittsburg to see Clark, because of descriptions and pictures published of him, will lodge an additional information against Clark, who when the local courts get through with him, may be taken back to Columbus to answer to charge of passing worthless checks in that city. The man is on parole from the Columbus Reformatory.

PITTSBURG, Pa., Nov. 9.—The Grand Jury to-day returned a true bill against E. E. Clark, who was arrested in this city for passing bogus checks. Clark is in jail and it is likely that his case will be tried soon. He is believed to be the man who has been causing jewelers in many parts of the country considerable annoyance.

The general store of A. F. Smith, Conyngham, Pa., was entered last week by burglars who made off with \$100 in cash, several watches and a large amount of jewelry. This is said to be the first large burglary which has occurred at that place in 30 years.

The Trade in London.

Good Holiday Trade Assured—Revival of Old Styles—No Strike by Case Makers—Sheffield Cutlery and the American Market—An American Consul's Error.

LONDON, Nov. 4.—We are looking forward to a good time at Christmas. Trade has, so far, been slowly but surely mounting the steps of prosperity. How far it will go remains to be seen, and, although it would be too optimistic, perhaps, to believe it will reach the topmost rung, there is expressed on all sides the hope that we shall see it reach much further than has been the case for a considerable time past.

*

There is a tendency to go back to the fashion of our forefathers and the miniature locket in all sizes and shapes, plain and jeweled, has become absolutely the rage; even the cameo, onyx and agate brooches, which had been kept as remembrances of the past and of the departed, are now being brought out, in some cases worn in their old mounts, but, as a rule, remounted in a more modern style. But, as a rule, it is not the larger of these ornaments which are being worn; very often a pair of earrings will be brought out and one perhaps made into a brooch and the other into a kind of pendant. Quite a number of people, thinking how useless it is to keep these articles in their jewel cases, are having cameos or agates, as the case may be, mounted into the top of silver and metal boxes. I have seen some very pretty arrangements in moss agate, copper and silver, and I learn that very good business is being done, not only in the mounting of these for private individuals, but by buying them up in the curiosity shops and mounting them in the ways I have described.

*

The threatened strike of the London jewel case makers has been finally settled, and on Nov. 2 terms were signed binding the Employers' Federation and the Workmen's Association for a term of five years. The arrangement settles that there shall not be more than one apprentice to every four men; that it shall be a matter of mutual arrangement between the employer and the apprentice coming out of his time as to what he shall receive for the first year as a journeyman; that it shall also be a matter of mutual arrangement between the employer and his workpeople in the particular department as to what wages shall be paid men over the age of 60. The actual wages paid, as previously agreed to between employers and employed, are unchanged, while the question of reducing the hours of labor has been waived by the men. On the other hand, the employers have agreed not to give any work to outdoor hands so long as the employes in any department in which work is done outside are not fully employed.

*

Considerable discussion has taken place in Sheffield as to what class of cutlery would best suit the American market, and much has been said with regard to competing with the Germans by the production of cheaper and more attractive cutlery. The

suggestion to make what many manufacturers call rubbish has met with very little response, and as one manufacturer well put it the foreigners bought, as indeed did the English people, Sheffield cutlery because they were of the opinion that they got something better than that which was produced elsewhere, and if this quality, which had made the reputation of Sheffield, was to be kept they could not reduce prices and enter into competition with the cheap German and American productions. The tariff walls which had been put up against English cutlery were only overcome by the reputation which Sheffield has obtained for supplying the best cutlery. It was necessary, therefore, to continue this policy. It is frankly admitted that the Sheffield manufacturers cannot compete with the attractive looking cutlery of the Germans, but, on the other hand, the Sheffield cutlers insist that they give, in proportion, much better value than do the German manufacturers.

The first meeting of the British Science Guild has been held and the guild inaugurated. Quite a number of statesmen, scientists and captains of industry were present. Sir Norman Lockyer said in explanation of the reasons for the establishment of the guild that it is necessary to make England more scientific in every branch of her activities. It is not only that men should make themselves familiar with the isolated facts of science, they must learn all those facts represent in cause and effect.

*

I note in the very useful information which Consul Frederick Bright sends to the American Government concerning the possibilities of trade in Huddersfield, he states, "it is provided by law that imported gold and silver plate must be first officially assayed, stamped, and marked before being offered for sale in the United Kingdom in the same manner as any ware made locally, but with the addition of the letter 'F.' If any imported gold or silver plate is found to be of coarser alloy than the standards, such ware is cut, broken, and defaced at the assay office. In explanation of the law quoted it may be said that the term 'silver plate,' as used, is meant to include only what is commonly known as the 'solid silver' or 'standard silver.'"

Now, Mr. Bright shows his one weak point in the information he gives. About two years ago what he says would have been perfectly correct, but in November, 1904, a law came into operation here in Great Britain which did away with the marking in the way he describes, that is, the marking of goods with the mark of the local assay office and the "Lion Passant" with the addition of the letter "F." The present method of marking is totally different, and THE CIRCULAR-WEEKLY some time since illustrated the particular marks which consist of one special mark denoting the office at which the goods are marked, together with the maker's mark only, so that foreign made silverware no longer receives, for instance, the "Lion Passant" and the Leopard's head for London, the "Lion Passant" and the Anchor for Birmingham, or the "Lion Passant" and the three Wheat-sheafs for Chester, in addition to the "F," but one single mark which shows distinctly

that it is entirely different from that placed upon British-made goods.

There is one other point, and that is with regard to American salesmen. I am in touch with practically every representative American agency here, and I can say that it has been found, almost invariably, that the English traveler is the one who does best upon the ground, and I should challenge Mr. Bright or any other American Consul located in England to prove to the contrary.

ST. GEORGE.

General Appraisers Hear Plea That Certain Coral Should be Assessed as Precious Stones.

Final arguments were heard last Thursday by General Appraiser Sharretts in the case involving the classification of articles made of coral for use as settings in jewelry, the importers having raised the claim that coral of this kind is dutiable at 10 per cent. ad valorem under the clause of the tariff law relating to precious stones. Up to this time the collector has classified all articles made of coral under Par. 115, which calls for 50 per cent. duty. This paragraph specifically mentions manufactures of various kinds, such as agate, alabaster, marble, jasper, jet and other substances, coral being included by name.

Several importers decided some time ago, as related in the issue of Oct. 10, to contest the usual classification. A. H. Washburn, of Comstock & Washburn, and J. F. Strauss were retained as counsel by these importers to present arguments in favor of classifying certain coral cut and carved for use in jewelry as a precious stone. It was shown at the hearing that in the trade a distinction is made between precious coral as used in jewelry and common reef coral. The articles in the test cases were made of the finest grades of coral, and were cut into various shapes adapting them for settings in jewelry. It was argued that these coral articles are set in precious metal in the same way as are the precious stones, and should, therefore, be classified with them for customs purposes.

On the Government's side it was contended that coral is not a mineral, it being an animal product, and therefore it cannot be a precious stone.

It was recalled that the Board has already held glass imitations of coral to be imitations of precious stones. This was the decision published in THE CIRCULAR-WEEKLY Dec. 27, 1905, sustaining the protest of A. Lorsch & Co. against a ruling by the collector at New York. General Appraiser Sharretts, who wrote the opinion in that case, said that the merchandise belonged to the class of goods commercially known as imitations of precious stones. He referred to the fact that imitation pearls by judicial determination belong to the grade of articles known as imitations of precious stones, although real pearls are differentiated in the tariff law from precious stones.

The Star Watch Case Co. has ready for distribution a very fine sign representing its new factory at Ludington, Mich. This sign is different from most of the advertising signs of to-day. It is made of highly polished wood in facsimile water colors and will be sent on request to all jewelers.

San Francisco Jeweler Captures Thief Who Confesses to Many Crimes.

SAN FRANCISCO, Cal., Nov. 7.—A. Behrend, a jeweler located at 1323 Steiner St., this city, is the hero of San Francisco, this week. Single-handed, he grappled with three murderous robbers who terrorized the city for a month past and finally succeeded in turning one of them over to the police, with the result that two men are now in custody who have already confessed to the murder of three persons here within the last few weeks, and to one robbery, for which an innocent man is now serving a term in the state prison.

For several weeks past San Francisco has been at the mercy of two or more men who have come to be known as the "gas pipe" men, who have boldly murdered and robbed in broad daylight, in the busiest parts of the city. On Nov. 3, two men, who afterward proved to be the culprits, entered Mr. Behrend's store, and one asked to see some watch chains. After examining several trays of chains they went away without buying. They returned, however, a short time afterward, and the one who did the talking said that he had changed his mind and would buy one of the chains. He handed the jeweler a \$20 gold piece in payment. About this time another man was noticed in the doorway, and just as Mr. Behrend started to go to the safe for change, one of the men rushed behind the counter and grabbed the jeweler's gun and billie, passing the latter to the other man and keeping the gun himself. The man at the door then rushed forward, drawing out an iron bar wrapped in a piece of paper.

Mr. Behrend believed that they would not shoot as that would create too much of a disturbance for their purposes. He grappled with them and though they struck him repeatedly, none of them succeeded in getting in a really telling blow. Finally, the men undertook to get away, but the jeweler clung to one of them. In the meantime the noise of the fray had attracted Mrs. Behrend and others, and finally a policeman arrived and arrested the intruder.

This man proved to be Louis Dabney, but little more than a boy, and the son of a respectable family. From the clues given by him and the description furnished by Mr. Behrend, John Siemsen, the acknowledged leader, was arrested. The latter, who posed as a contractor, was married a few days before to Hulda Von Hofen, the daughter of a jeweler, at 1972 Union St.

When confronted with the evidence, both men confessed not only to this attempt, but to the three "gas pipe" murders and to an earlier robbery.

Charles H. Robie, Austin, Pa., has sold out.

W. A. Meyer, manager of the G. W. Meyer Jewelry Co., Chattanooga, Tenn., recently returned from a trip to Meridian, Miss., where he had gone in the capacity of administrator of his father's estate.

A man giving his name as C. W. Stevens was recently arrested in Boise City, Idaho, on a charge of selling bogus jewelry. A large amount of cheap jewelry was found in his possession. He was held on the usual charge of peddling without a license.

Imports of Clocks, Watches, Jewelry and Gems Into Canada.

TORONTO, Can., Nov. 7.—The monthly report of the Department of Trade and Commerce of Canada for July, just issued, gives the value of imports in the jewelry and kindred trades as follows:

| | Month of July, | | Four months ended July 31, | |

The Boyd Mercantile Co.'s store, Boyd, Wis., was recently entered by burglars who dynamited the safe. W. D. Maxwell, a jeweler, had a large number of watches and jewelry stored in the safe and many were badly damaged by the shock. One valuable gold watch was carried away.

“Two Grainers”

We anticipated our wants for the Fall and Holiday trade early last Spring. We therefore have a large stock of the following sizes, viz.: $\frac{1}{4}$ cts., $\frac{3}{8}$ cts., $\frac{1}{2}$ cts., $\frac{5}{8}$ cts. and $\frac{3}{4}$ cts.

These goods, which are the best-selling sizes, are cut from “rough” of our importation. We can therefore offer you very advantageous prices.

Send to us for a selection and see our goods and prices before purchasing.

Death of Frederick L. DuBois.

Frederick Louis DuBois, who was a member of the old firm of Francis DuBois & Co., gold watch case manufacturers and importers in New York many years ago, died Wednesday of last week in his home, 135 Hooper St., Brooklyn. He was in his 93d year, and had been active until three months ago, when he suffered a stroke of paralysis, since which time he had been confined to his bed.

Mr. DuBois was born June 15, 1814, in Switzerland, where he learned the watch-making trade. At the age of 20 he came to New York, and here he entered into a partnership with his brother, Francis. They were among the first of the manufacturers of solid gold watch cases in this city. Their factory was for a number of years at 89 Fulton St., and was a flourishing plant as far back as 50 years or more ago. Then came a removal to the corner of Maiden Lane and Nassau St., and two years later another removal to 36 Maiden Lane. According to the recollection of men who knew the brothers, Frederick retired from the firm about the time of the second removal.

The business in the Maiden Lane location was continued under the old name by Francis DuBois, who admitted Frederick Renaud to partnership. From the manufacture of watch cases the business was changed to the importation of Swiss watches. In 1879 Francis DuBois died, and was succeeded by his son, George W. DuBois, who kept the old name until 1882. In that year F. N. Nauman entered the firm, and the name was changed to George W. DuBois & Co. Since the death of George W. DuBois, about 20 years ago, Mr. Nauman has conducted the business under his own name.

Frederick Louis DuBois lived two years in New York and then moved to old Williamsburg, then comprising fine mansions along the river bank, with farm lands stretching where the city now stands. He became a member of the First Baptist Church and continued his attendance until prevented by his last illness.

His widow, Mary E. Griffiths, who 60 years ago became Mrs. DuBoise, survives; also one son, Louis H. DuBois.

Funeral services were conducted Friday afternoon by the Rev. George D. Adams, the pastor of the First Baptist Church. The interment was in the family plot in Greenwood Cemetery.

Death of Herman J. Gundlach.

Herman Julius Gundlach, who was for a number of years in the retail business at Bedford Ave., near Grand St., Brooklyn, N. Y., died Thursday of last week at his home, 33½ Stuyvesant Ave. Death was due to cancer of the stomach, and followed a long and painful illness.

Mr. Gundlach was born in Germany, Nov. 22, 1845, and settled in Brooklyn more than 50 years ago. About 1872 he entered the jewelry business, continuing until his illness compelled him to retire.

A member of the Masons, Odd Fellows and other organizations, Mr. Gundlach was widely known in the community in which he lived, and was held in high regard. A

widow, one son, W. George Gundlach, and a daughter survive. The funeral took place Saturday evening, when services were conducted by the Rev. Dr. H. S. Knabensehuh, pastor of the Christ English Lutheran Church.

Death of Henry Springmann.

Henry Springmann, an optician, at 215 E. 96th St., New York, died suddenly last Thursday afternoon in the office of C. E. Cordeau, optician, 145 Fulton St., Manhattan. Mr. Springmann had not felt well during the day, but decided to come down town and transact urgent business. He reached the office of Mr. Cordeau at about 3:45 p. m. After delivering some work, he gasped and collapsed. Heart disease was the cause of death.

Mr. Springmann was 53 years of age, and is survived by his widow. Funeral services were held from his late residence, Sunday afternoon. Interment took place in the Lutheran Cemetery, Brooklyn.

Death of Julius Metzger.

Julius Metzger, who was long in the jewelry business in Brooklyn, and who retired several years ago, died Wednesday of last week at his home, 365 6th St., in that borough. He was 81 years old.

Mr. Metzger came to New York from Germany, where he was born, and soon after his arrival, engaged in the business which he conducted so long. He was well known in South Brooklyn, having been a member of various associations, and he was held in high regard by numerous friends. He is survived by a widow and four children.

The funeral took place Saturday afternoon, services being conducted by the Rev. Dr. Emil Roth, the pastor of the Emanuel German Lutheran Church. Interment was in Greenwood Cemetery.

Denver Firms Form Manufacturing Jewelers' Association and Elect Officers.

DENVER, Colo., Nov. 9.—The manufacturing jewelers recently met and organized an association, to be known as "The Manufacturing Jewelers' Association of Denver, Colo." The organization has been formed for the purposes of protection and the promotion of the best interests of the jewelry business of Colorado.

At the first meeting the following officers were chosen: President, Henry Bohm, of the Bohm, Allen Jewelry Co.; vice-president, Charles H. Brink, of the Boyd Park Jewelry Co.; treasurer, A. F. Wehrle, of A. F. Wehrle Co., and secretary, Charles E. Everett, of Charles Wathen & Co. The following firms of Denver are members: Bohm, Allen Jewelry Co., Boyd Park Jewelry Co., A. F. Wehrle Co., A. J. Stark & Co., Joseph I. Schwartz & Co., Syman Bros., Haberl Lapidary & Jewelry Co., George Bell Co., Denver Watch Case Co., Charles H. Clark & Co., Hallock & Addenbrooke, Charles Wathen & Co.

J. L. Murphy has sold an interest in his business at Livingston, Mont., to P. H. Murphy, his brother, formerly of Townsend, Mont.

Four Men Make Bold Attempt to Rob a New York Jewelry Dealer's Home.

Four men made their way at noon last Friday into the rooms of Michael Megurowsky, a dealer living and carrying on business on the second floor of 140 Henry St., New York, their intention evidently being to steal the jewelry from the safe. Mr. Megurowsky buys at pawnbrokers' sales and from brokers.

At the time of the attempted robbery the dealer's wife and her small daughter were alone in the apartment. A man rapped and asked for Mr. Megurowsky. On being told that the dealer was not there, the stranger produced a paper, and, saying it was a receipt for jewelry boxes delivered to her husband, asked Mrs. Megurowsky to sign it. The plan probably was for the man to strike or choke her while she was examining the paper.

In the hallway she saw three other men, who acted as if waiting for an order from their leader. Realizing that there was something wrong, she left the kitchen on the pretext of going for pen and ink with which to sign the receipt. Followed by the four men, she rushed to a front room and quickly bolted the door. Raising a window facing the street, she gave an alarm.

The men battered the door, but could not gain admittance. Then, becoming alarmed, they turned to escape. Three of them dashed down a back stairway and got away. The fourth ran to the basement and thence to the street, where he was caught by the crowd which had collected. During the chase the fugitive shot a man who tried to stop him.

Taken to police headquarters, the prisoner was said to be Harry J. Troubig, who was convicted, Dec. 30, 1903, of robbing the United States mails. In the Essex Market Court he was held in \$5,000 bail.

Man Charged With Robbing Utica Jewelers May Not Live Until His Trial.

UTICA, N. Y., Nov. 10.—It is believed the Grand Jury, now in session at Rome, will report indictments next week against the three men under arrest for the diamond robbery last August in Wineburgh's jewelry store in this city. Many witnesses were examined yesterday and to-day and the indictments will be reported when the Grand Jurors finish their work.

There are many who believe that Bliss, one of the prisoners, will never serve time for his crime. He was considered the ring-leader in the quartet of diamond thieves, and it was through him that Wineburgh & Son received back again all but three of the stolen diamonds. Bliss is seriously ill with consumption, and within the past few days he has had several hemorrhages, and the jail doctor says he cannot live with imprisonment as his future. Bliss is game, however, and tells his friends that there is not anything wrong with him. He said one lung was affected when he was arrested for the Utica job, but now both are badly affected. His sister has visited Bliss several times.

R. R. Robertson has been succeeded in business in Topeka, Kans., by Marshall & Robertson.

Trustee of Bernard Steinfeld Wants Property Which Bankrupt Claimed Had Been Stolen.

In the bankruptcy case of Bernard Steinfeld, who was formerly in business at 504 Sixth Ave., a motion has been made to direct the bankrupt to turn over property to the value of \$4,000 or the equivalent in cash to the trustee of his estate. An argument on the motion is set down for tomorrow at 10.30 o'clock before MacGrane Cox, the referee in bankruptcy, at his office, 63 Wall St. The motion is based on an affidavit made by John J. Hayden, the trustee. He says in his affidavit that he does not believe Mr. Steinfeld's story of the loss of his stock at New Haven early in the summer.

The circumstances of the reported loss were related in THE CIRCULAR-WEEKLY of July 11 last. Mr. Steinfeld said that while he was on his way to the railroad station in New Haven, thieves snatched his sample case containing his jewelry valued at \$1,000, and made their escape by running through the railroad yards. Since that time much testimony has been taken in an effort to show the improbability of this explanation. The sample case, which was found in the railroad yards, was submitted for the referee's examination, and the bankrupt was closely questioned as to the circumstances. The trustee in his affidavit charges that the missing property is being concealed from the creditors by the bankrupt.

Steinfeld owed \$5,951, according to his schedules. After reporting the loss of his sample case at New Haven, he offered to settle at 30 per cent. on the dollar, which the creditors did not accept, and involuntary proceedings in bankruptcy were begun. The available assets have since been sold and brought only \$365, and this sum will not be more than sufficient to defray the legal expenses. Unless additional assets are uncovered there will be no dividend for the creditors.

New Members Elected by the Jewelers Security Alliance.

The regular monthly meeting of the Executive Committee of the Jewelers Security Alliance was held on Friday, the following members being present: Vice-Presidents Wood and Champenois, Treasurer Karsch, Secretary Noyes and Messrs. Alford, Bowden, Brown and Stern of the committee. The following new members were admitted:

C. H. Jaquette, Scottdale, Pa., Files Voluntary Petition in Bankruptcy.

PITTSBURG, Pa., Nov. 7.—In United States District Court yesterday, Charles H. Jaquette, a jeweler of Scottdale, Westmoreland county, filed a voluntary petition in bankruptcy. His debts aggregate \$5,278, while his assets will reach \$5,535.

Mr. Jaquette has been in the jewelry business for a long time. For many years he managed the business of the Scottdale Jewelry Co., owned by A. D. Walter and J. F. Parker, and when that concern was succeeded by the J. S. Parker Co. in 1904, Mr. Jaquette started in business on his own account. In 1905 he bought out the stock of J. A. Bobbs, settling with Mr. Bobbs' creditors.

Death of John Peter Weiler.

ALLENTOWN, Pa., Nov. 8.—John Peter Weiler, one of the oldest watchmakers of Macungie, died this morning, aged 81 years. He had been in poor health for several years. Deceased was born in Longswamp Township, Berks County, Oct. 9, 1825.

Mr. Weiler learned watchmaking with Peter Hendricks. In 1849 he moved to Millerstown, now Macungie, where he resided since and conducted a watchmaking shop. He was also a skilled musician and played various instruments.

Deceased was the oldest member of Friendly Lodge, No. 85, I. O. O. F., of Macungie, and was a member of Solomon's Reformed Church. In politics Mr. Weiler was a staunch Democrat, and served several terms as burgess and councilman at Macungie.

Death of Hyman Saffir.

Hyman Saffir, of Saffir Bros., manufacturers of mountings and diamond jewelry at 51 Maiden Lane, New York, died Monday afternoon in his office. He had been ill for some time.

Mr. Saffir, who was about 40 years of age, was the senior member of the firm, which began business in May, 1901. He had been in business two years for himself before he and his brother, David Saffir, formed the firm, and he was well known in the wholesale district. The business will be continued under the name of Saffir Bros.

Robert A. Brunner, who is associated in business with his father, Ferdinand Brunner, Rutherford, N. J., was elected to a third term as Collector of that borough at the recent election, having been the unanimous nominee of both Republicans and Democrats. He has already filled the office six years. A recent issue of the Rutherford *Republican* contained an excellent likeness of the collector and a laudatory sketch of his active career as a business man, as a member of the National Guard, as a Spanish war soldier, and as a member of various civic and fraternal organizations.

Employers Looking for Arthur H. Buck, a Jewelry Salesman, Who Has Disappeared.

Abel Bros. & Co., 64 John St., are making efforts to find Arthur H. Buck, a young man who has been employed as their salesman in southern and western territory and from whom they have heard nothing since they received a letter dated Oct. 27, at Portland, Ore. He had in his possession a valuable stock. The members of the firm are also seeking information in relation to sales of jewelry on memorandum which he had reported to them, and some of the articles were found this week in a pawnshop in Boston. One of the members of the concern obtained a warrant in that city, so that the police are assisting in the search.

One theory is that Mr. Buck met with foul play.

When Mr. Buck did not write or return to New York the firm made inquiries of his sister, who lives in Boston, and of other people who might know of his whereabouts. Telegrams have also been sent to several cities along his route, but all inquiries have proved fruitless.

Mr. Buck left New York on his last trip in August. He reached Portland in October, and from there wrote to his house, saying that he contemplated going into business on his own account in that city. He asked the firm to endorse a note for him or to loan him about \$4,000 with which to buy an interest in a Portland house. A number of messages were exchanged, and the firm finally requested Mr. Buck to send in his trunk.

The letter from Mr. Buck dated Oct. 27 was received Nov. 1, and in this he said that he would return to New York by Nov. 6. He also enclosed a receipt for his trunk, which arrived Nov. 3. In the letter he said that he held back a portion of the stock which he intended to deliver on his way home to cash purchasers. The amount of the stock so held, comprising diamond rings and brooches, is valued at \$4,500.

The memorandum transactions dated back somewhat earlier. Mr. Buck reported a sale of rings and brooches valued at \$1,100 to a Boston man and 12 pieces of a similar character valued at \$1,600 to a New Orleans man. The company has been unable to locate either of the men whose names he gave. Two pieces of jewelry, valued at \$450, which were found in the Boston pawnshop, were identified as among the articles which he had reported as sold on memorandum in that city. These articles were pawned July 16 by a man who gave the name of Ralph Perkins, and the latter's identity has not been traced.

Abel Bros. & Co. request that any person knowing of Mr. Buck's whereabouts send word to the office at the firm's expense. The salesman had been with the company for upward of a year, and prior to that time as a hotel clerk in Boston and Summer resorts had sold to private trade. He is widely known among hotel men.

F. O. Cox returned to his home in Concord, N. H., last week, after having been confined in a hospital in Boston for about two weeks. Mr. Cox expects to be sufficiently recovered to resume his regular business duties in a few days.

3 MAIDEN LANE**NEW YORK**

"**GEMFINDER**" takes a melancholy pleasure in referring the trade to his advertisement of April 25th last, in the "Jewelers' Circular." Unfortunately, his prophecy has been fulfilled. Not only have Precious Stones advanced, but the end has not yet been reached. Sapphires have gone up at least 25 per cent. in the last six months, and they will go still higher.

"Gemfinder" again warns prospective buyers not to delay. All kinds of Precious Stones are scarce and prices on some may become prohibitive.

TRADE CONDITIONS.

With the election over, after one of the most exciting campaigns in the political history of the city and State, there has been an appreciable increase in the volume of business. For a fortnight before the election trade was unusually dull. At his season of the year some falling off was expected, but on account of the election it was quieter than usual. A general awakening has been experienced since the election, and the jewelers now look for a healthy normal increase of business until Thanksgiving, after which the holiday trade will have started.

Naum Rosebaum, last week, opened a retail store on 9th St., below Market St.

William Righter, with R. M. Cooper & Son, spent last week hunting grouse in the mountains of Pennsylvania.

Charles F. Haus, watchmaker, has resigned his position with C. R. Smith & Son to go with J. E. Caldwell & Co.

J. E. Caldwell & Co. have advertised a reward for the return of an 11-stone diamond bar pin, which was lost recently.

John H. Merz, Hopewell, N. J., and Mrs. Merz, were visitors to this city, last week, combining business with pleasure.

James L. Pequignot, with Z. J. Pequignot, 1322 Chestnut St., inaugurated, last week, the Winter sessions of the Browning Society, by giving a reading.

M. Solinger has resigned his position with the Bailey, Banks & Biddle Co., to take charge of the watch repairing department of C. R. Smith & Sons.

Max. Neumann, watchmaker, resigned his position last week with J. E. Caldwell & Co. and departed for El Paso, Tex., where he has secured a position.

George W. Banks, of the Bailey, Banks & Biddle Co., announced, last week, the engagement of his son, Clayton French Banks, to Miss Anna Belle Connelly.

J. Burroughs Robertson, with M. Sickles & Sons, was confined to his home, last week, by illness. Ed. Sickles, of the firm, spent a few days in New York.

Andrew Little, southern salesman for J. B. Bechtel & Co., spent part of last week on a rabbit gunning trip up the State. J. B. Bechtel starts this week on a trip through the Schuylkill Valley.

W. Weissman's retail store, 2024 Frankford Ave., was the scene of a fire, last week. The flames were extinguished after \$300 damage had been done to the place and stock. The origin is a mystery.

John Price Wetherill, who was known to metallurgists throughout the world as the inventor of the Wetherill process of magnetic separation, died at his home in this city, last week, at the age of 63 years.

Franklin Smith, a retired gold smelter, died, last week, at the age of 63 years, at his home, 1900 Venango St., after a lingering illness. For 20 years Mr. Smith had been employed in the smelting department of the United States Mint in this city.

H. B. Rote, accompanied by his wife, spent a few days in the city, last week, combining business and pleasure. Mr. Rote came here especially to purchase new fixtures and stock for the new store which he proposes to open in Chestertown, next week.

W. C. Wilkinson, head watchmaker for S. J. Lyons, 2258 N. Front St., has been taken into partnership with Mr. Lyons in

the conduct of the retail store recently opened by him at 4082 Lancaster Ave. The West Philadelphia store will be conducted under the firm name of Lyons & Wilkinson.

Frank Nelson, watchmaker, last week, resigned his position with Hoover & Smith to accept a position as watchmaker with M. Sickles & Sons. A. Root, salesman, has resigned his position with Chas. H. Hambly, 19 S. 8th St., below Market St., to accept a position as salesman for the Castelberg Jewelry Co.

Many Philadelphia jewelers are interested in the political fight in Delaware, especially since J. Frank Allee, the foremost retailer of Dover, Del., will be a candidate for re-election to the United States Senate. It is reported that his re-election will be opposed by the Du Ponts, who were successful last Tuesday.

William C. Williams, with Charles H. O'Bryon, 735 Sansom St., is receiving the congratulations of the trade upon his election, Tuesday of last week, as Common Councilman from the 18th Ward, to succeed Jacob F. Henderson, who was especially well known to members of the Jewelers' Club. Mr. Williams was elected, as had been forecasted in the last issue of THE CIRCULAR—WEEKLY, on the straight Republican ticket.

Harrisburg, Pa.

TRADE CONDITIONS.

Saturday excursions to this city on account of the new Capitol, are a big success, no less than 20,000 excursionists spending last Saturday here, and a very large number coming every day. These weekly excursions have proven of much benefit to local business men, particularly the downtown jewelers. State Capitol novelties are in much demand. It is understood that the Pennsylvania and Philadelphia & Reading Railway systems will continue these Saturday excursions as long as they pay, most assuredly over the holiday season. Local jewelers have added very materially to their stock in anticipation of a heavy season of holiday buying, and now that the elections are over, buying is expected to become greater in volume.

Mr. Lau, who had been employed at the store of P. G. Diener, has entered the service of E. G. Hoover.

L. A. Faunce, 1314 N. 3d St., recently put in a new show window, the sides of which are finished in mission wood.

Mr. Dierman, who has been employed by C. A. Carmany, Coatesville, has entered the employ of P. G. Diener as a watchmaker.

The coming session of the State Legislature will be urged to repeal the State Mercantile Tax Law and to pass a garnishee law.

Guy Herr, Lancaster, succeeds George Meade as watch repairer at the store of L. A. Faunce. Mr. Meade has gone to Watertown, N. Y.

Arthur R. Kramer, 1014 N. 3d St., is advertising his stock for sale. He will either start a new store further down town or return to his home in Carlisle.

William Edward Koch has purchased a dwelling house on McSherrystown Ave., Hanover, purely as an investment. Mr. Koch has restocked and refitted his store at 331 W. Market St., York, which will continue to be his headquarters.

P. G. Diener has leased the entire building, 408 Market St., adjoining his present

store, and will take possession April 1, 1907. The property, which has a frontage on Market St. of 29 feet, extending back 210 feet to Strawberry alley, will be considerably altered, and when the repairs are completed Mr. Diener will have the largest jewelry store in the city. His lease is for a long period.

Lancaster, Pa.

Abraham Simmons, of Pirosh & Simmons, is home from a buying trip to New York.

James Oliphant, who recently opened a store at Cleveland, O., visited friends here last week. He is a former resident of Lancaster County.

E. W. Drug, years ago a representative of the Non-Retailing Co., was in this city last week looking up old friends. He now lives in Pittsburg.

Charles G. Rhoades, formerly with Louis Weber & Sons, has gone to Lewistown, Pa., to take charge of the store of the Mifflin County Jewelry Co.

J. M. Kreider, with Ezra F. Bowman's Sons, visited Harrisburg last week. Christian M. Bowman, of the firm, paid a visit to Philadelphia last week.

C. W. Johnson, who had charge of the shipping department of the defunct firm of L. C. Reiser & Co., has taken a similar position with the H. S. Meiskey Co.

Howard Detterlein, of the Non-Retailing Co., returned last week from a trip through the west. Charles E. Foose, of the same concern, is back from a trip through the Pennsylvania country.

B. G. Kaplen, of Williamsport, who last week visited his brother-in-law, Benj. Lichtenstein, stated that he has just purchased on Market St., Williamsport, one of its finest business properties.

S. Kurtz Zook has just put in several large handsome floor cases and renovated his store, the center now being occupied by a horseshoe arrangement of cases. There are now separate departments for diamonds, gold jewelry, silverware and opera glasses.

Last Thursday W. W. Appel sent his 13-year-old errand boy to the postoffice to have a money order for \$40 cashed. The lad left Lancaster with the cash, but was arrested the same evening, and all the money but 75 cents was recovered. The jeweler did not prosecute the boy.

Among the jewelers visiting this city recently were: H. F. Andrews, Strasburg; E. P. Zane, Christiana; Joshua Bogart, Baltimore; Charles Maulick, Pittsburg; J. H. Sensenig, New Holland; Lucius Walshammer, Scranton; Henry Foehl, Columbia; Jacob Fisher, Elizabethtown; George Herr, with L. A. Faunce, Harrisburg.

According to news published in the English papers in Rhodesia, a new precious stone has been discovered in that district. It resembles the topaz, which consists of aluminum fluosilicate; but is of a light blue color, which is not usually a characteristic of a topaz, and which fact casts a shadow of doubt on its classification. The value of this stone depends largely upon the favor with which it will be received by the public.

TRADE CONDITIONS.

There has been a remarkable increase in business since the election, last week, and strange as it may appear, a distinct boom started the day afterwards, notwithstanding that the general state of business had been excellent. Following the election the Pennsylvania Railroad announced a general advance of 10 per cent. in wages, and this will cause an additional distribution of \$1,000,000 a month in the Pittsburg district, the monthly payroll here having amounted to about \$10,000,000. Merchants are jubilant over the prospect. Retail dealers have been especially busy and anticipate doing the largest holiday business in the history of local jewelry trade.

Word was received in Pittsburg last week from Zanesville, O., announcing that Grace W. Card had begun proceedings there for divorce against Harry S. Card, the son of the late W. W. Card, of this city.

Among the out-of-town merchants who were in Pittsburg last week buying goods were the following: W. R. Hill, Fayette City; A. Katzenmeyer, Burgettstown; Fred Kropff, Tarentum; Frank Bloser, New Kensington; C. A. File, Mars.

The business men's associations throughout Pennsylvania are advocating the passage of a law which will enable merchants to attach 10 per cent. of a debtor's wages or its equivalent. The organizations at Erie, Altoona, Sharon and elsewhere approve it.

Although it is more than five weeks since Samuel Shamberger, the Butler, Pa., jeweler disappeared, nothing has been heard of him. He went away several days before he was to have been sentenced at Butler, having been convicted of arson. The police are still hunting for him.

The Pennsylvania State Board of Trade held a meeting at Harrisburg last Friday which was represented at the meeting by the Pittsburg Board of Trade, Chamber of Commerce, and Merchants' and Manufacturers' Association. The passage of laws abolishing the mercantile tax was recommended.

The Merchants and Manufacturers' Association, which abandoned its trade extension tour through West Virginia last month, because local merchants were too busy to make up a party sufficiently large to guarantee the expenses of the trip, will make the trip next April, going as far as Charleston, taking in Fairmont and other important towns in the State.

F. X. Guth, of Coraopolis, whose disappearance from that place was recently noted in THE CIRCULAR-WEEKLY, has been heard from in Chicago. Guth is said to have written to his father in this city, and it is said that he will return here. Before he went away he secured some goods on memorandum, but he has promised to make a settlement with all his creditors.

J. Alexander Hardy last week, with many other Fifth Ave. property owners, appeared before city assessors to remonstrate against high assessments of property along that street. Mr. Hardy, who is senior member of the Hardy & Hayes Co., brought out the fact that he rents his own property at 225 Fifth Ave. and is himself a tenant, his store being only a few doors from the property he owns. Frontage on Fifth Ave. is assessed at \$12,000 and \$13,000 a foot front.

Bango S. Jaffe, who was brought to Pittsburg Nov. 3 by Detective Louis Leff, was up before the Grand Jury Thursday. A true bill was found against him, charging him with taking \$5,000 worth of diamonds from the Castelberg Jewelry Co. As previously stated in THE JEWELERS' CIRCULAR-WEEKLY, Jaffe fled from Pittsburg and was arrested by the New York police. Many of the articles which he is alleged to have appropriated to his own use were recovered by the police, and an effort is being made to locate the balance. The Castelberg Jewelry Co.'s net loss will not amount to as much as was first supposed.

The Pennsylvania lines west have made formal announcement that they will not issue a 1,000 mileage ticket good for bearer for \$20. The company is, however, selling a ticket for \$25 good for the person only in whose name it is made out with a refund of \$5. The Pennsylvania State Legislature will meet in January, and it is said that the railroads in this State realize that the Legislature will compel them to grant a 2-cent rate by passing the necessary legislation. Every legislator elected in the State at the recent election, with few exceptions, has promised to do so, the commercial organizations exacting from the men a pledge to carry out this programme.

North Attleboro.

Charles H. Peckham is enjoying an outing on Cape Cod.

Frank Kennedy has gone on a southern trip for the Paye & Baker Mfg. Co.

Frank O. Coombs, a well-known jeweler, was last Tuesday elected to the Massachusetts House of Representatives upon the Republican ticket.

Walter B. Ballou, of R. Blackinton & Co., who was injured several weeks ago in an automobile accident, is steadily improving, but is unable to be about.

Work is being rushed forward rapidly on the Manufacturers' building, the W. G. Clark & Co. factory, and the H. F. Barrows Co. shop. All three buildings will be ready for occupancy before spring.

Announcement was made on Friday of the dissolution of the partnership between George Robson and Percy J. Callowhill under the firm name of G. W. Robson & Co. Mr. Robson has disposed of his interest to Mr. Callowhill, but will remain in the employ of the concern until March, when he will go to England to settle up the affairs of his father's estate. Robson & Co. have been in existence several years as designers, hub and die cutters.

The Grand Jury, which convened last week at Fall River, returned an indictment against William Bebeau, Pawtucket, upon the charge of assault upon Arthur Greene, Jr., with a dangerous weapon, and with the larceny of \$3,000 from the G. K. Webster Co. Bebeau, it is alleged, took a prominent part in the famous hold-up of the Webster concern's messenger boy Aug. 22. The three men got away with the bag, only to throw it away in the chase. Two men were later arrested in Pawtucket, but Bebeau was the only man against whom sufficient evidence could be secured. The trial will be held this week in Taunton.

Attleboro.

Samuel M. Einstein, head of the Attleboro Mfg. Co., is making an effort to persuade the town authorities to give better highways in the neighborhood of his big plant.

If some dealers wanting their goods in a hurry meet with a delay they can lay it up to the mail, as some manufacturers have just received mail which went by mistake to Attleboro, England.

James Corrigan, employed by the D. F. Briggs Co., died suddenly at his home last week. He was missed from his work, a messenger was sent to the house, and the body was found in bed.

Edward P. Clafin, formerly a manufacturer; William H. Lamb, of C. H. Allen & Co., and Harold E. Sweet, of the R. F. Simmons Co., were last week elected to office in the Universalist Church.

Ira Smith, traveling salesman for the Horton, Angell Co., has returned from a trip over the far western circuit. He is contemplating a change in his work, which may cause him not to visit the Pacific slope again right away.

Major Everett S. Horton and Emmons D. Guild are arranging for a reunion and banquet the day of this publication. They will gather about them a lot of comrades who, like themselves, suffered the horrors of confederate prison pens in the Civil War.

Austin Frederick Jackson, 58, Taunton, Mass., passed away last week. He came to this country from England 30 years ago, and had been one of the most responsible employes of Reed & Barton. He was an able designer and held managerial charge of a department. In January, 1905, he left to assume a similar post with Poole & Roche, holding it to his death.

Syracuse.

The building in which the Syracuse Time Recording Co.'s plant is situated on Watson and Jefferson Sts., was part of the parcel sold recently by Rhoda Feiter to Charles E. Grouse for \$60,000.

Michael A. Hartigan, who filed a voluntary petition in bankruptcy last week has assets of \$8,172 and liabilities of \$10,918, according to the schedules filed in the petition. The value of the stock is placed at \$5,672 and the accounts at \$2,500. Mr. Hartigan did an instalment business at 213 S. Salina St., and has been established since 1885. He was well regarded in the trade and his failure caused somewhat of a surprise.

Affidavits have been filed with Referee Stone charging Trenor P. Judd, the bankrupt jeweler, with concealing property which should be turned over to Receiver Burke. The charges against Judd are made by the receiver and the latter claims the bankrupt, a short time ago, turned over some of his stock to S. T. Betts with intent to prefer him over other creditors; also that some of the jewelry stock was taken from the store to Judd's home, and that on Oct. 4 three trunks were shipped from the Judd home. Steps will be taken before the referee to recover stock which the receiver and some of the creditors claim should be included in the assets.

Canada Notes.

The Toronto Silver Plate Co., Toronto, Ont., is now selling at retail.

G. E. Jacques, Calgary, Alberta, is retiring from the jewelry business.

E. C. Fitch, manager of the Montreal branch of the Waltham Watch Co., was in Toronto, Ont., last week.

Out-of-town buyers who called on the Toronto, Ont., trade last week included: George Lees, of Thomas Lees & Son, and Norman Ellis, Hamilton, Ont.; N. Bochmer and W. G. Young, London, Ont., and C. C. Watson, Newmarket, Ont.

J. M. Whitney is closing out his business in Woodstock, Ont., preparatory to his removal to Vancouver, B. C., which has been considerably delayed by his being unable to obtain fixtures for his Vancouver establishment owing to the rush of orders.

On account of the growing importance of the Cobalt silver mining industry the Ontario government will henceforth publish regular monthly statements of the quantities of ore shipped over the Temiskaming & Northern Ontario Railway. The official statement for October, issued Nov. 8, shows a total of 2,241,530 pounds, or over 1,120 tons.

The P. W. Ellis Co., Ltd., Toronto, Ont., just finished the prize medals for the Toronto Industrial Exhibition. One side bears the head of Lord Strathcona, Canadian High Commissioner to Britain, in unusually high relief; the reverse displays the Toronto coat-of-arms, the margin bearing the inscription, "Toronto Industrial Exhibition, 1906." The edge is entirely plain. It is a handsome and striking piece of workmanship. Five hundred are struck off in gold and silver.

New Orleans, La.

Sebastian Coci, the Italian jeweler, has fitted up his Poydras St. establishment with new fixtures for the Winter season.

The New Orleans Loan Office Co. has taken new quarters in Canal St., and the establishment has been enlarged to a great extent.

Joe Traverse, the St. Charles St. jeweler and diamond setter, who was charged with buying property stolen, in connection with a burglary committed in the house of an eccentric widow in Lapeyrouse St., has been freed of the indictment lodged against him in the First City Criminal Court. The actual burglars were sent to the Criminal District Court for trial, but upon their testimony, Mr. O'Donnell, the assistant district-attorney, dismissed the count against Mr. Traverse.

The report that the United States Government would not allow the battleship *Louisiana* to come to this port to receive the silver service now being made for her caused something of a falling off in contributions toward the fund for the costly present. However, the unequivocal statement of Secretary Bonaparte to the effect that the ship would be sent here whenever the citizens desired has had the result of booming up things once more. Of the total cost of \$12,500 about \$9,000 has already been collected. The balance the committee thinks will soon be forthcoming. The service is to be placed

on exhibition in the show windows of Coleman E. Adler's Canal St. store, where all the citizens may view it before it is finally turned over to the battleship.

Omaha.

C. L. Shook, of the Shook Mfg. Co., is now making a western trip.

Harry Harmon, Afton, Ia., has sold his business interests to A. Lec.

A. L. Hockett, Red Oak, Ia., has sold his business to J. E. Carmichael.

S. W. Lindsay is renovating his store and making alterations for the holiday season.

Sol. Bergman has been confined to his home recently with an attack of stomach trouble.

R. J. Kewin, Griswold, Ia., accompanied by his wife and son, spent a few days in this city last week.

Jos. Wilson, Cleveland, O., was the guest last week of his uncle, W. H. Valhowe, of the Shook Mfg. Co.

Grover Peterson, with the Sol. Bergman Jewelry Co., is home from a business trip through the northwest.

Herman Leftert, formerly located in Council Bluffs, Ia., has gone to Portland, Ore., where he has opened a store.

Fred. Brodegaard & Co. have installed new fixtures, show cases, and made general improvements in their store on S. 10th St.

The following out-of-town jewelers were in this city last week purchasing stock: L. E. Spence, Bladen, Nebr.; W. B. Graves, Elkhorn; C. Straehle, Stanton; Mr. Sampson, of Farnham & Sampson, Blair; Mr. Gibson, Dixon; and R. D. Arnold, Coin, Ia.

Minneapolis and St. Paul.

Guy Trolley has taken a position with M. L. Finkelstein, St. Paul.

The E. A. Brown Co., St. Paul, has moved into its handsome new quarters at 87-89 E. 6th St.

William Birkenhauer, brother of Henry Birkenhauer, Minneapolis, died, last week. Interment was at St. Peter, Minn.

Rentz Bros., Minneapolis, are about to install a hot water heating plant in their manufacturing jewelry establishment.

A. L. Washburn, formerly with the Minneapolis School of Watchmaking, is now with the Stone School, in St. Paul.

A. I. Cohen, a pawnbroker, engaged in business at 220 Washington Ave. S., this city, is a patient at St. Barnabas' Hospital as the result of a conflict, last Wednesday night, with an unknown assailant, who, Mr. Cohen says, robbed him of a tray of valuable watches.

Among the out-of-town jewelers in Minneapolis and St. Paul, recently, were: J. E. Geiwitz, La Crosse, Wis.; A. J. Klimek, Little Falls, Minn.; G. R. Simons, Langford, S. Dak.; F. W. Harper, Renville, Minn.; Paul T. Hunziker, Jordan, Minn.; L. H. Bruns, Anoka, Minn.; A. J. Rost, St. Peter, Minn.

In the late election one jeweler was successful in his contest for office, and two were defeated. C. F. E. Peterson, formerly in business in South Minneapolis, was elected a member of the Park Board.

E. J. Bronson, Prohibition candidate for the School Board, and Charles M. Erickson, Public Ownership candidate for alderman, from the Sixth Ward, were defeated. In St. Paul, Jesse Foot, formerly with M. L. Finkelstein, was re-elected county treasurer.

Connecticut.

R. M. Mansfield, Wallingford, is rejoicing over the advent of a little baby daughter, born about a week ago.

H. B. Beach and H. Kayser have assigned to the International Silver Co., Meriden, a new design on a metal dish.

P. T. Ives and T. P. Dunne, Meriden, have been appointed appraisers of the jewelry left by the late Mrs. Martha C. Noxon, of Brooklyn, N. Y.

P. B. May, traveling representative of the International Silver Co., Meriden, has returned from a four weeks' trip in the interest of the concern.

E. B. Lapham, of the New York office of the Seth Thomas Clock Co., returned home on Tuesday of last week, after a brief business trip to Thomaston.

Geo. W. Fairchild & Sons, Bridgeport, on Wednesday celebrated the 41st anniversary of their business career. The store was opened to the public Nov. 14, 1865.

The Thrasher Clock Co., South Manchester, recently held a meeting in the office of the concern in the Manchester *Herald* building, and elected a board of directors.

Thomas D. Bradstreet, a director of the Seth Thomas Clock Co., Thomaston, is receiving the congratulations of his many friends owing to his recent election to the office of State Comptroller.

Sir Thomas Johnstone Lipton, the English yachtsman, was the distinguished member of a trolley party which visited the watch factories of the New England Watch Co. and that of the Scovill Mfg. Co., Waterbury, last Thursday.

The widow of W. P. Morgan, formerly of the Morgan & Allen Co., San Francisco, Cal., and her daughter, Miss Lottie Morgan, were entertained at a complimentary dinner given in their honor last Wednesday, at the home of George H. Wilcox.

Chester Kelsey, father of O. S. Kelsey, general purchasing agent for the International Silver Co., Middletown, died Tuesday of last week in Higganum, after a short illness. The deceased had been engaged in business in Middletown for over half a century.

T. I. Gwillim & Son, Bristol, have moved from the old Postoffice building into newly furnished quarters in the Root block. The optical department will be in the central part of the store, where a new dark room has been fitted up. Mr. Gwillim, the senior partner, has been identified with the jewelry business in Bristol since 1875.

The commission appointed to purchase the silver service for the battleship *Connecticut* met last Wednesday at the Capitol, and discussed matters connected with the presentation of the service at the Brooklyn Navy Yard, Nov. 21. At the time of the presentation a set of colors for the ship will also be given by the children of Norwalk.

Our Traveling Representatives

Mr. Brown, who has succeeded Mr. Dana as traveling representative for Carter, Howe & Co., was in San Francisco, Cal., for the past few days.

Henry M. Abrams, of the Henry M. Abrams Jewelry Co., San Francisco, Cal., was in Los Angeles for a few days, last week. Edward Innes, of the same house, has left for a tour of the south.

The following traveling representatives visited the trade in Lancaster, Pa., recently: Horton, Whipple, Brown & Dean Co.; Ferd. Dilsheimer; H. B. Bliss, Gorham Mfg. Co.; A. W. Bogart, Waterbury Clock Co.

Traveling representatives in Denver, Colo., last week, included: S. W. Abbey, E. Ira Richards & Co.; G. Fred Perry, F. H. Sadler & Co.; C. C. Offerman, William Smith & Co.; H. A. Reachman, Joseph H. Pink & Co.

Mr. and Mrs. Nat. Shiman, of Shiman Bros. & Co., arrived in San Francisco, Cal., a few days ago and are stopping at the Majestic. Mrs. Shiman is enjoying the western wonders while Mr. Shiman is paying his respects to the local trade.

The following traveling representatives were in Toronto, Ont., last week: George B. Kenrick, Reed & Barton; J. R. S. McLernon and T. P. Birchall, John Round & Son, Ltd., Sheffield, Eng.; Mr. Graham, W. R. Humphrey, Sheffield, Eng.; J. H. Paine, George Westenholme, Sheffield, Eng.

The following traveling representatives called on the trade in Kansas City, Mo., during the past week: Fred J. Foster, Unger Bros.; Mark Franklin, Bradley Ring Co.; Walter S. Noon, Cory Bros. Co.; Thos. E. Rogers, Riker Bros.; J. Rothschild, Kaffeman, Rothschild & Co.; Wm. J. McQuillen, Mount & Woodhull; R. H. Schley, Sloan & Co.; L. E. Smith, M. B. Bryant & Co.; George Goldberg, Untermeyer-Robbins & Co.; Melville Untermeyer, Chas. Keller & Co.; Wm. J. Tighe, Eisler & Laubheim; Emil Pick, Hammel, Riglander & Co.; H. W. Raymond, Worthington & Raymond; W. A. Moore, F. W. Gesswein Co.; R. B. Carr, Link & Angell; G. Fred Perry, F. H. Sadler & Co.; R. T. Kleckner, Theo. W. Foster & Bro. Co.

Among the out-of-town traveling men who, last week, visited Pittsburg, Pa., were the following: F. C. Winship, H. C. Fry Glass Co.; Mr. Strandberg, Sykes & Strandberg; George H. Remington, Maintien Bros. & Elliot; Mr. Somes, Bates & Bacon; Mr. Fisher, Furbish, Swift & Fisher; S. C. Corbin, Waterbury Clock Co.; H. B. Bliss, Gorham Mfg. Co.; H. S. Spang, E. Ingraham Co.; L. Barnett, L. Barnett & Co.; G. Y. Williams, Robeson Cutlery Co.; H. N. Van Bergen, Snow & Westcott; J. F. Dean, Reed & Barton; R. H. Schley, Sloan & Co.; De Forest Ely, Barbour Silver Co.; J. E. Simonson, Ludwig Nissen & Co.; Fred J. Foster, Unger Bros.; Joseph Rosenberg, Louis Strasburger's Son & Co.; Mr. Currin, Optical Mfg. Co.; A. H. Oakley, Thornton Bros. Co.; Charles T. Dougherty, Wm. L. Sexton & Co.

Traveling representatives who called on the trade in Omaha, Nebr., last week, included: E. E. Spaulding, Allsopp Bros.; a representative of the Bassett Jewelry Co.; W. S. Willis, Gorham Mfg. Co.; W. B. Howe, Bradley & Hubbard Mfg. Co.; J. Arthur Connor, Edmond E. Robert; R. T. Kleckner, Theo. W. Foster & Bro. Co.; A. S. Riley, Mandeville, Carrow & Crane; Mr. Mednikow, J. Mednikow & Co.; Wm. J. Tighe, Eisler & Laubheim; G. W. Finckenauser, Alvin Mfg. Co.; J. Rothschild, Kaffeman, Rothschild & Co.; Wm. Strauss, Louis Kaufman & Co.; S. W. Abbey, E. Ira Richards & Co.; Thos. E. Rogers, Riker Bros.; Fred. C. Kopf, Powers & Mayer; Jos. Lendan, Katz & Lendan Co.; Chas. T. Ahlborn, Kluge & Altmann; J. I. Minter, S. B. Champlin Co.; W. S. Noon, Cory Bros. Co.; Robt. S. G. Edwards, Whiting Mfg. Co.; Harry Leitstein, Herman Scheuer.

Traveling salesmen visiting Boston, Mass., during the week, included: Harold G. Tinckler, Bride &

Tinckler; William Huger, William Huger & Co.; Julian G. Hall, Carrington & Co.; John A. Abel, Abel Bros. & Co.; C. H. Crane, Strobel & Crane; C. F. Duffy, Enos Richardson & Co.; W. H. Thornton, Henry A. Kirby; John D. Dalzell, J. D. Dalzell & Co.; Samuel Howland, Joseph Frankel's Sons Co.; George A. Neumann, Alling & Co.; L. Henry Jurgens, Snow & Westcott; Benjamin Griscom, Bippart, Griscom & Osborn; D. D. Brokaw; W. F. Cory, Cory Bros. & Co.; Mr. Cellini, Cellini Mfg. Co.; George Osborn, William Smith & Co.; Mr. Royce, Dodd & Co.; David Young, White & Young; Mr. Staudinger, Charles Weller & Co.; E. M. Knapp, J. A. & S. W. Granbery; Mr. Sansbury, Sansbury & Nellis; Mr. Burgessor, Kremetz & Co.; Mr. Keller, Keller Mfg. Co.; Henry Grental, Albert Lorsch & Co.; Mr. Dreher, Jr., King & Dreher.

Among the traveling representatives who called on the trade in St. Louis, Mo., last week, were the following: F. R. Horton, Carter, Howe & Co.; Fred J. Foster, Unger Bros.; C. A. Hulstrom, International Silver Co.; C. V. Schuyler, Dominick & Haff; H. C. Rowbotham, Schrader-Wittstein Co.; R. H. Schley, Sloan & Co.; Wallace E. Welch, Hoyt, Obrig & Geiger Co.; Thomas E. Rogers, Riker Bros.; Leo Heilbrun, L. Engel Co.; C. B. Bartlett, Whiting Mfg. Co.; Mark Franklin, Bradley Ring Co.; D. Zimmerman, Zimmerman, Rees & Co.; W. H. Gregory, Strobel & Crane; O. H. Hull, Pairpoint Corporation; T. S. Sturgis, Perley Bros.; R. B. Carr, Link & Angell; Mr. Thompson, J. B. Bowden & Co.; J. Williams, Fera & Kadison; M. Kornberg, Wagner Mfg. Co.; C. T. E. Smith, Reed & Barton; J. Arthur Connor, Edmond E. Robert; Charles E. Sutton, Flint, Blood & Co.; W. A. Moore, F. W. Gesswein Co.; W. H. Hulbert, American Optical Co.; J. A. Limbach, Theodore W. Foster & Bro. Co.

Traveling representatives who called on the Cincinnati, O., trade, during the past week, included: Helmer Thompson, F. H. Noble & Co.; Mr. Ettlinger, Gattle, Ettinger & Hammel; H. T. Lambard, Gorham Co.; Theodore L. Lyons, Lyons Gem Co.; Vincent W. Henderson, Crane & Theurer; R. H. Schley, Sloan & Co.; E. G. Seymour, Shepard Mfg. Co.; C. V. Schuyler, Dominick & Haff; Lewis P. Cook, S. Sternau & Co.; A. N. Dorchester, Chapin & Hollister Co.; J. F. Dean, Reed & Barton; James R. Palmer, Henry A. Kirby; Walter S. Noon, Cory Bros. Co.; F. L. Pettee, Waterbury Clock Co.; Lee Strauss, C. P. Goldsmith & Co.; C. W. Hlickock, Gorham Co.; Leo Henle, Sussfeld, Lorsch & Co.; Alberto Schweizer, Ansonia Clock Co.; Adolph Weiss, Heinrich, Hermann & Weiss; A. Kaufman, Ingomar Goldsmith & Co.; J. M. Curtis, Meriden Silver Plate Co.; A. H. Oakley, Thornton Bros. Co.; Mr. Fisher, Furbish, Swift & Fisher; L. Smith, Bippart, Griscom & Osborn; W. R. Eliot, Meriden Cut Glass Co.; Lucien Rockwell, Poole Silver Co.

Cleveland.

The Wardell Co. recently sold out to E. I. Bailey, Thomas Bradley and Mr. Mequilet, who will continue the business under the old name.

Charles Jackson, a colored porter at the store of the F. B. Lewis Jewelry Co., in the Colonial Arcade, was arrested last week on the charge of stealing two diamond rings worth \$30 and a fountain pen from his employers. The man was held for trial.

The jewelry smuggled into this country by Mrs. Cassie Chadwick was finally declared forfeited to the United States by Judge Taylor in the United States Court here recently. The goods will be sold by the United States Marshall at auction.

The boy who found the package of jewelry lost by Morris Kirsch, a jewelry salesman of New York, was given \$25 as a reward for his honesty. The finder, Joseph Eddy, is 14 years old, and picked up the bag on his way home from work, but did not know the contents were valuable until he saw the account of the loss in the local papers.

Chas. A. Morris, Odessa, Mo., has discontinued business.

Boston.

Walter A. Perry, president of the Perry-Aldrich Co., is in New York State on a business trip.

Joseph Sonnabend, 224 Hanover St., has been succeeded by the Puritan Jewelry Co., Julius Beal, manager.

R. S. Sanderson, with the Shreve, Crump & Low Co., has been in New York for a few days on a buying trip.

M. N. Smith, of the Smith, Patterson Co., accompanied by Mrs. Smith, has been in New York during the past week.

Charles S. Patten has succeeded to the position of gold jewelry buyer and department head formerly occupied by the late Edwin H. Poor, for a number of years with the Shreve, Crump & Low Co.

Charles E. Kattelle, who has retained an office at 24 Tremont St. since closing out his business and selling his lease at that location, will have quarters hereafter in room 202, Kimball building, Tremont St.

The directors of the Waltham Watch Co. have declared initial semi-annual dividends of 1½ per cent. and 3 per cent. respectively on the common and preferred stocks. The preferred dividend is payable Dec. 3 to stock of record Nov. 10; the common dividend is payable Jan. 1 to stock of record Dec. 10.

William Whalen, the man who was caught in the act of stealing a diamond at the store of the Thomas Long Co. two months ago by R. Kelsie McKeen, of the diamond department, but escaped from the store before his arrest could be effected, was captured recently in New York and held for return to Massachusetts for trial.

The fourth meeting of the creditors of Herbert W. Richards, formerly in business under the name of George H. Richards, Jr., & Co., will be held Nov. 23 at the insolvency court in Boston. This is an old failure, and the assignees now ask permission of the court to present a final account and declare a final dividend in the case. E. A. Bigelow, treasurer of the E. Howard Clock Co., is one of the assignees, and R. R. Gilman, a Boston attorney, is the other.

Buyers in town during the week included: William Senter, Portland, Me.; E. M. Flint, St. Johnsbury, Vt.; Geo. E. Marshall, Middlebury, Vt.; J. W. Hershoff and G. A. Schmidt, Lawrence; F. R. Johnson, Campello; U. C. Smith, Brockton; J. P. Farrington, Kingston; Joseph Lajoie, Worcester; Hollis S. Howe, Concord; F. E. Cadwell, Ashburnham; Walter Peterson, Brant Rock; Starr C. Hewitt, Salem; J. H. McGovern, Haverhill; R. S. Hunt, Foxboro; C. W. Clough, Pawtucket, R. I.; E. White, Rutland, Vt.

One of the most interesting pieces of trade literature ever issued to the jewelry trade is the new tool and material catalogue issued by Swartzchild & Co., 134-138 Wabash Ave., Chicago. Most tool and material houses are satisfied to issue a catalogue of regulation size, but this interesting publication is double the size of any similar book heretofore issued. Each page measures 10 x 13½ inches, and there are 432 pages in all, illustrating over 20,000 articles. The catalogue is a fine example of bookmaking and shows skill in all the details of its intricate compilation.

GORHAM SILVER

¶ The Gorham Company direct attention to the unusually complete assortment of Gorham Silverware which has been prepared with special reference to the approaching holiday season.

¶ It is, however, necessary to reiterate that while every endeavor will be made to fill all orders promptly and comprehensively it is impossible to guarantee delivery in the case of those received at the last moment.

¶ The Jewelry Trade are therefore urged to reach an early decision as to the articles of Gorham Silver they require to complete their stocks of articles intended for the holidays, and to notify the Company of their requirements without unnecessary delay.

Few Jewelry Fail- ures During October. FAILURES in the jewelry trade during the month of October were less in number and amount of liabilities than they had been in the corresponding month of any previous year in the past decade, and if the commercial insolvencies indicate the general condition of the retail trade the position of the jewelers throughout the country is better, on the average, than it has been for many years past at the beginning of the holiday season. According to Dun's Review there were but six insolvencies among the jewelry and clock dealers last month, and the entire liabilities amount to \$16,165, or an average of \$2,694.

How the figures of last month will compare with the figures of previous years will be seen from the fact that there were 10 failures in October, 1905, with liabilities of \$16,472; five failures in October, 1904, with liabilities of \$112,003; 11 failures in October, 1903, with liabilities of \$201,954, and 14 failures in October, 1902, with liabilities of \$46,664.

The total commercial failures of October in all lines of trade were 838, with liabilities of \$10,553,714 as against 852 in October, 1905, with liabilities of \$6,751,992.

Beware the Check and Money Order Swindlers.

THE capture in Pittsburg of a man alleged to have swindled merchants with worthless checks, and the recent capture in Ohio of a money order swindler, served to call attention to the great carelessness of many jewelers in accepting checks, drafts and money orders without first making thorough inquiry as to their validity or genuineness. In not only a large number of instances did the jeweler part with his property on the presentation of the bogus order, but in some cases he gave the swindler a considerable amount of cash in change. Truly, as one prosecuting officer said when his attention was called to some of these transactions, the victims deserved no consideration or pity, and were it not for the sake of the community and the general protection of other merchants he would not lift a hand to punish the swindler.

In some sections check swindlers have been going around the country practicing in a way that makes a local bank a partner in their work or a co-victim with the merchants on whom the game is played. With a check on a bank in another State, the swindler opens an account in a local bank and then proceeds to draw upon it before the foreign check has time to come back. Sometimes a merchant will telephone to the bank and is satisfied when he learns that the swindler has opened an account; but the careful merchant should do more than this—he should ask how long the bank has had the account. With a postoffice money order the usual trick has been to buy an order for a few cents and then raise it to \$25 or \$50, but, as an Ohio postmaster well showed in his recent warning to the trade against the operations of these swindlers, no merchant should be deceived by a raised order, as every postoffice order bears, upon the side, printed figures show-

ing the maximum amount in dollars for which the order may be cashed. As all figures above this amount have been torn off by the postmaster issuing the order, this verification can in no way be counterfeited or forged. The merchant has therefore only to look on the side of the order to see if the amount of the face is within the amount printed on the side.

Jewelers in particular should be especially careful in dealing with strangers who offer money orders and checks, because the jeweler is the especial prey of swindlers of this character; first, because the large intrinsic value of the stock which he carries, and second, because most of the articles which the swindler may buy, gold or diamonds, can be quickly converted into cash at a slight discount from their purchase price. While the authorities have been successful in capturing some of the men who have been operating, there is no doubt that there are others still at large, and it therefore behooves the retail merchants of this trade not only to act with care in every case where a check or money order is presented by a stranger, but to take special pains to caution their clerks as to the danger or risk that lies in accepting anything but cash in payment for sales.

Important Congress of Jewelers Recently Held at Paris, France.

A MOST important congress of jewelers' societies was held in Paris, France, on Oct. 15, 16 and 17. The gathering was more technically of the Federation of the Syndical Chambers of Retail Jewelers, which correspond almost directly to the local jewelers' associations of this country, and it was also attended by representatives of watch and clockmakers, gold and silversmiths of France. At the opening session a number of societies were admitted to the Federation, namely, those of Lois et-Cher, Aisne, Saone et-Loire, Meuse, Gard, and the Horological Union of Brioude.

Many important questions were discussed, among others the use of the word titre (standard), several speakers suggesting that the congress declare against the use of the word by any house. The question of wholesalers retailing seemed to be considered as important in France as it has been in the United States and England, and the opinion was expressed that most of the harm that had been done grew out of the practices of jewelers sending their retail customers directly to wholesalers when they did not have in stock the articles wanted. A third question was in regard to the sale of branded or named watches, it being the general opinion that the retail dealers would do all they could to prevent manufacturers from naming and advertising watches under names, and an effort should be made to suppress the "named" watch in every possible way. The question of the Federation establishing an insurance against accident was also discussed at length, as was the matter of falsely named stones and jewels. Altogether, a considerable amount of work was accomplished and all who attended expressed themselves as being highly pleased with the results of the congress. The meetings were held at the Civil Engineers' Hotel, 19 Rue Blanche.

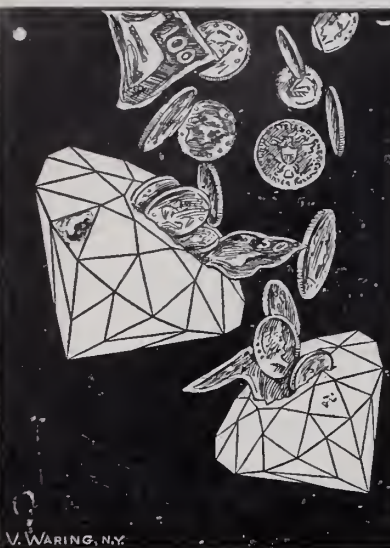

BUYERS OF DIAMONDS

Last Week's New York Arrivals.

THE CIRCULAR-WEEKLY each day posts in its office a bulletin of the latest buyers visiting New York, which every member of the trade is cordially invited to copy.

For the sum of \$10 (payable in advance), a daily list will be mailed or delivered, during the Fall season (Aug. 1—Dec. 15), to the offices of those desiring this service.

ALBANY, N. Y., F. W. Hoffman, Navarre.
 ALTOONA, PA., J. Berman, Broadway Central.
 ATLANTA, GA., Mr. Schaul (Schaul & May), 673 Madison Ave.

 SCRANTON, PA., Samuel Radin, Broadway Central.
 TERRE HAUTE, IND., M. E. Herz (A. Herz Dry Goods Co.), Woodstock.

Put your money

and get your customers to put their money in **DIAMONDS**—no better investment to-day.

Prices in the Diamond market are advancing, but **OUR PRICES HAVE NOT BEEN ADVANCED** in some time. We still have a large collection of superb Diamonds which we bought a considerable time ago at lower prices than prevail to-day.

We shall not advance prices on these stones. We are merchants and not speculators and our fair percentage of profit is all we ask. So, as long as these Diamonds last, it will be possible to buy them here under the regular market for fine stones.

V. Waring, N.Y.

CROSS & BEGUELIN

Importers and Cutters of Diamonds and Precious Stones

48 Rue de Meslay, PARIS Telephone, 2188 Cortlandt 17 Maiden Lane, NEW YORK

Buffalo, N. Y.

Nelson A. Soggs, a Niagara Falls jeweler, published a letter last week in local papers to all voters asking them to vote for the best man, irrespective of party creed or blood.

Chas. Langden, of this city, recently began a suit against Philip M. Reilly, Holland, for \$20,000 damages on the charge of alienating the affections of the plaintiff's wife, from whom he has just procured a divorce.

Detectives last week took into custody Henry E. Reimer, 23 years old, who, they claimed, had been selling cheap imitation diamond studs and rings for \$20 apiece. The man was arrested while showing his wares to a crowd watching the election returns.

Word was received from Niagara Falls last week to the effect that the customs authorities there had caught two Syrians, a man and a woman, attempting to smuggle a large quantity of watches, rings and pins into this country. The pair had come from Montreal to Toronto, and then to this country, and had been detained because they suffered from trachoma. The detention led to the discovery of the jewelry, which was seized, and the Syrians were then sent back to Canada.

While A. C. Gongwer, Hart, Mich., was displaying several rings to Miss Ellen Henion, aged 19 years, he dropped a cork from a bottle with which he was about to test the rings. He stooped to pick up the cork, and when he arose found that \$40 worth of rings had disappeared. The girl was accompanied by two young boys. The three were taken into custody charged with the theft. The police claim they have found some of the rings.

New York Notes.

Robert Samuel Cooke, who had charge of the silver department of a Brooklyn warehouse company, died last week at the residence of his son, 860 Hancock St., in that borough.

William Jones, well known among jewelry workers, died of neuralgia of the heart at the home of his mother, 98 Barclay St., Newark, N. J., Thursday morning. The deceased was in the employ of Durand & Co. for 27 years.

Vincent Dwyer, representing the John Holland Gold Pen Co., Cincinnati, O., is now located at 82 Duane St., New York. Mr. Vincent was for some time a representative of the E. Howard Hunt Pen Co., Camden, N. J.

Jefferson M. Levy, who has been among the first to get information in relation to developments in the Premier mine in South Africa, said yesterday that he did not believe the report of the recent finding of a stone larger than the Cullinan diamond.

Sanford & Bennett, 51 Maiden Lane, manufacturers of the commercial fountain pen, have purchased the gold pen shop of Edward Grau, 18 Spruce St. The firm is increasing its manufacturing capacity and has already added new machinery. The two plants will be consolidated as soon as larger quarters can be obtained.

Creditors of Hyman Gattle, whose bankruptcy proceedings have been pending for several years, are to meet Thursday at 3 o'clock in the office of John J. Townsend, referee in bankruptcy, 45 Cedar St., in order to receive bids on certain pendants and rings. The jewelry has been on inspection in the office of the trustee, Simon T. Stern, 41 Park Row.

The Waterman Realty Co. has purchased the building at 10 Cortlandt St., New York, a portion of which is occupied by the L. E. Waterman Co. L. E. Waterman holds a small amount of stocks in the Waterman Realty Co., but there is no connection between the two companies. The Realty Co. was allowed to use the Waterman name as a courtesy.

Before the Board of United States General Appraisers testimony will be taken Dec. 6 in relation to the importation by Tiffany & Co. of a quantity of silver belts, buckles, coat clasps and chatelaine bag frames. Collector Stranahan assessed the articles as jewelry, claiming a 60 per cent. duty. The importers claim that the duty should be 45 per cent., the rate for manufactures of silver.

In the daily papers was an advertisement, one day last week, asking for information as to the whereabouts of Robert Castelberg, formerly with the Castelberg National Jewelry Co., Washington, D. C. The advertiser was Mrs. Castelberg, 515 Harrison St., Seattle, Wash. The disappearance of Mr. Castelberg was noted in THE CIRCULAR—WEEKLY, Dec. 6, 1905. It was announced subsequently that all financial claims against him had been settled by relatives.

At the regular meeting of the Board of Directors of the Jewelers Board of Trade, held Nov. 8, the following firms were elected to membership: American National Jewelry Co., Chicago; James E. Blake Co., Attleboro, Mass.; Borrelli & Vitelli, New York; C. F. Breitenbach &

Co., Chicago; Electric Chain Co., Attleboro, Mass.; Goldman Bros., Chicago; J. L. Moore & Sons, Atlanta, Ga.; Henry Paulson & Co., Chicago; Schless, Brod & Co., New York.

Nathan Berger, 132 Canal St., heard a scratching against the glass pane of his show window last Wednesday night. Stepping outside he caught a young man trying to cut the window with a diamond glass cutter. The jeweler grappled with the stranger and called for help. The young man was taken into custody, and gave his name as Max Yaskowitz, of West 5th St., Coney Island. The prisoner was held on the charge of breaking the window. Mr. Berger did not care to make a charge of attempted burglary.

The Shiman-Miller Mfg. Co., 144 Maiden Lane, is about to move its jewelry factory to more commodious quarters at 391 Mulberry St., Newark, N. J. The business has outgrown its present home. New machinery and furnishings will be added to those moved from this city. The floor room in the Newark factory will comprise about 5,000 feet. An increase in the number of employes will be necessitated by the added facility for work. Simon Shiman will be in charge of the new factory. The New York office of the company will be with Shiman Bros. & Co., 87 Maiden Lane, who will continue business as usual at their present address.

Several sessions have been held in the last week in the bankruptcy case of Solomon Urbach, diamond dealer at 49 Maiden Lane. The creditors presented before Referee Francis K. Pendleton further testimony in the effort to show that Mr. Urbach's story of the loss of diamonds valued at \$40,000 in a sleeping car was not true. The proceedings before the referee have continued several weeks and a vast amount of testimony has been taken. The question for the referee to determine is whether or not an order should be issued directing Urbach to turn over to the trustee in bankruptcy the missing diamonds or the equivalent in cash. If the creditors get such an order, Urbach would have to obey or be liable for contempt of court.

Conrad Schicklering, who was the president of Schicklering Bros. & Co., the corporation now in bankruptcy, appeared Friday in the Jefferson Market Police Court, where the case charging him with grand larceny was set for trial. Because of other matters taking up Magistrate Whitman's time, he adjourned the hearing until Nov. 27, at 2 P. M., in the Tombs Police Court. The case has been repeatedly adjourned. Recently Mr. Schicklering sent word to some of the creditors that he proposed to settle the civil claims. His offer, as he explained it, was to manufacture and turn over to these creditors jewelry which they could sell and retain commissions with which to satisfy the debts. As far as is learned, none of the creditors accepted this offer.

From Cleveland, O., comes a report that Morris Kirsch, a jewelry salesman of New York, lost and subsequently recovered a quantity of his samples valued at several hundred dollars. According to the story, Mr. Kirsch, who carried his samples in a green hand bag, missed them soon after he

had taken lunch in a restaurant in that city. He did not know whether they had been taken from the table on which he placed them, beside him, as he was eating, or they had been lost after he had left the eating house. He notified the police and the local papers published an account of the loss. A 14-year-old boy named Joseph Eddy returned the bag to the salesman, who was stopping at the Hotel Euclid, the following day. The boy said that he had found the bag on the street on his way home from work. He did not open it until he went home and showed the bag to his mother. She opened it, and out rolled 25 rings set with diamonds, four stick pins and an Eagle button with a diamond setting. The mother read of the salesman's loss in the morning paper, and sent the boy with the jewelry to the salesman, who gave the lad \$25 as a reward.

David Kaiser, of David Kaiser & Co., 12 John St., will celebrate to-morrow the 40th anniversary of his connection with the jewelry trade. Twenty-eight of the 40 years he passed as a traveling salesman. He began his career Nov. 15, 1866, as an errand boy with Louis Strasburger & Co., then at 11 Maiden Lane. Within a few years he worked up to a position of trust and was sent out as a salesman. For 22 years he was connected with that firm. In January, 1888, Mr. Kaiser, together with the late Fred. W. Lewis and Adolph Luthy, formed a partnership under the style of Lewis, Kaiser & Luthy, and located at 35 Ann St., as manufacturing jewelers and diamond dealers. They continued in business until 1896, when Mr. Luthy died. As an outgrowth of this partnership the present firms of David Kaiser & Co. and F. W. Lewis & Co. were formed, Mr. Kaiser continuing the manufacturing jewelry line and Mr. Lewis the precious stone line. Factory Inspector Wm. Ford gave the Kaiser factory on John St. a percentage of 100 at the last inspection. Sixty-two men are employed in the former shop, some of whom have been with Mr. Kaiser 26 years.

Most of the creditors of Chas. A. Weber, diamond dealer at 320 Fifth Ave., against whom a bankruptcy petition was filed, as related in the issue of Oct. 24, have agreed to advance an amount of cash equal to 25 per cent. of their claims for the purpose of redeeming stock which is now held by pawnbrokers. The money is to be turned over, if the agreement becomes effective, to John R. Keim, the receiver, who will get the jewelry and sell it. From the proceeds he will then refund the 25 per cent. assessment and the surplus will be added to the bankrupt's estate for final distribution among the creditors. At the recent creditors' meeting the figures were presented, showing total liabilities on Weber's part of \$80,000, of which one-half was due on jewelry obtained on memorandum. On the \$40,000 worth of memorandum jewelry he had obtained about \$10,000 from pawnbrokers. Most of the tickets for this merchandise have been returned by the receiver to the owners, enabling them to redeem the articles from the pawnbrokers. The other class of jewelry, also valued at \$40,000, which Weber had obtained on credit he

JOHN HOLLAND FOUNTAIN PENS

Patents: July 1, '02, Nov. 21, '05, May 29, '06.

Although the originators of gold pens, and the first to develop
fountain pens, our line is the newest and most
up-to-date on the market.

We are makers of the largest line and at the most reasonable price, both for the consumer, and also bring the dealer better profits than any other pen of equal grade. Our advertisements are appearing in the best magazines and weeklies—Write for catalogue and be convinced. Every pen absolutely guaranteed.

The JOHN HOLLAND GOLD PEN CO. (Est'd 1844) 127 E. 4th St., Cincinnati, O.

Eastern Sales Department,
82 Duane Street, New York City.

New York Notes.

(Continued from page 75.)

pawned for \$20,000. It is to get back this stock that the assessment on the creditors is proposed. A question has arisen as to the attitude of some of the holders of memorandum claims, who become creditors for the amounts which they individually pay the pawnbrokers. They have other creditors to meet a share of the assessment, but several have not yet indicated their willingness to do so.

Solon H. Newmark, a diamond dealer of 69 E. 12th St., received Monday his discharge in bankruptcy of debts aggregating \$8,416.

At Tiffany & Co.'s it was said yesterday that there is no truth in the report that the company intended opening an establishment on 14th and F Sts., Washington, D. C.

The suit which was begun some time ago against the Gorham Mfg. Co. for the purpose of prohibiting it from selling the stock of the affiliated companies was withdrawn this week on the petition of the plaintiff.

Exaggerated stories were published in the Sunday daily papers in relation to Albert Wenzel, a diamond setter at 16 Maiden Lane. It was said that he was taken into custody in the upper part of Third Ave. while in a partly intoxicated condition, and was kept at the police station for a few hours in order to save him from the possible loss of a large quantity of precious stones and jewelry which were in his possession. He did not carry any such quantity of jewelry as was reported.

Silver manufacturers were interested in a report published yesterday that Director Roberts of the Mint considers it inadvisable to make any more purchases of silver bullion for the present. Last week he paid as high as 71.79 cents per ounce. The largest bid received Monday was 72 cents, and the director then rejected all bids, announcing that he would buy no more bar silver just now. According to the daily papers he said a few days ago that within two years silver will reach a price of 76 cents an ounce or better, and that before the present year is over the price will probably advance several points.

E. Torrey Carrington, sales agent of Carrington & Co., 7 Maiden Lane, and Miss Elise Jelffe were married Saturday afternoon in St. Matthew's Episcopal Church, New York, in the presence of a large assemblage of friends and relatives. M. H. Montanye, uncle of the bride, gave her away. The church was handsomely decorated. The bridesmaids included Miss Ella Carrington, a sister of the groom, whose brother, C. Blake Carrington, was one of the ushers. The bride gave a gold bracelet to her maid of honor and pearl pins to each bridesmaid; the groom gave gold scarfpins to his attendants.

George Henley, one of the three men arrested a short time ago on a charge of breaking into the store of the R. G. Winter Jewelry Co., 608 Nicollet Ave., Minneapolis, Minn., waived examination in the local police court, about a week ago, and was held for the Grand Jury on a charge of burglary. Bail was fixed at \$1,000.

Providence.

Fritz Kraus is now on a western trip for Smith Bros.

The Gorham football team won from the Fall River Rovers last Saturday by the score of 7 to 1.

After an extended illness H. E. Bellows, a local patent attorney, who has a large practice among jewelers, is able to be at his office again.

The new smelting and refining building, as well as the new bronze foundry, at the local works of the Gorham Mfg. Co., are rapidly nearing completion.

L. Lyons, formerly a foreman for William Loeb & Co., left this city last week for a trip through the west. He will probably be gone for at least two months.

Among imports in the local Custom House last week were 73 packages of imitation precious stones from Hamburg and one of the same kind from Havre.

The business of the H. N. Pervear Co. has been purchased by I. W. Sylvester and Andrew S. Copper, who will conduct the business, it is understood, under the same firm name.

Erling C. Ostby, son of E. C. Ostby, was recently married to Miss A. Helen Brown, daughter of former Governor D. Russell Brown. After the wedding there was a reception that was largely attended.

William I. Macomber, of the Wolcott Mfg. Co., and Martha Maria Gallagher were united in marriage last Monday at the Church of the Immaculate Conception in the presence of a large number of friends and acquaintances. The ceremony was performed by the pastor of the church, Rev. Fr. O'Hara. At the conclusion of the service there was a reception at the home of the bride's parents.

Word was received from Elizabeth City, N. C., last week to the effect that B. C. Brownell, claimed to represent a party of capitalists of this city was recently a guest of the Elizabeth City Chamber of Commerce to arrange for the establishment of a jewelry factory in that city. The matter has been under discussion by the principal business men of the section and an attempt is being made to get local capital interested.

Ernest Key was arraigned in the Sixth District Court last week charged with the larceny of \$200 worth of gold scrap from the firm of Potter & Buffinton, and was sentenced to the Providence County Jail for three months. Key nearly collapsed when sentence was pronounced. It was claimed by the detectives at the trial that he had taken more than was alleged in the warrant, but that it had been decided to press the complaint only for the amount specified. This was Key's first offense.

Market Price for Silver Bars.

The following are the quotations of silver bars in London and New York, as reported by Zimmerman & Forshay:

| | London. | New York. |

| " 10..... | 32 15-16d. | 71 ³ / ₄ |
| " 12..... | 32 15-16d. | 71 ³ / ₄ |

C. H. Carnes, formerly of Trinidad, Colo., is now at Albuquerque, N. Mex.

New Stores and Enterprises.

M. O. Brittain is a new jeweler in Laramie, Wyo.

C. O. Chambers recently began business in Sidney, Ia.

Otto Williams has opened a store in Dexter, Kans.

H. A. Seidel recently commenced business in Stanton, Nebr.

Chas. E. Schults has engaged in business in Howell, Nebr.

Orris Gurney has opened a watch repairing shop in Alta, Ia.

A. DeVries has opened a new jewelry store in Wapato, Wash.

Wheeler & Co. have engaged in the jewelry business in Winlock, Wash.

A. A. Whaley will shortly open a retail jewelry store in Wallace, Idaho.

Will T. Price will open a store in Harrisonville, Mo., in the near future.

F. Donnerberg has engaged in the retail jewelry business in Vancouver, Wash.

J. B. Schultz, formerly of Clarissa, Minn., has begun business in Browerville, Minn.

N. Rosenbaum recently started in business at 9th St., below Market St., Philadelphia, Pa.

F. H. Albert opened a store in Lodi, Cal., recently. He was formerly with Shreve & Co., San Francisco, Cal.

R. C. Bates, Dec. 1, will open a jewelry store in the Keplinger block, Alliance, O. He will also conduct an optical department, which will be in charge of his wife, a graduate optician.

W. B. Lodge, until recently with the Mawhinney & Ryan Co., Omaha, Nebr., has organized a company, known as W. B. Lodge & Co., in Lander, Wyo., where the concern will engage in the retail jewelry business.

A certificate of incorporation was filed last week by the Sterling Jewelry Co., New York, with an authorized capital of \$5,000. The incorporators, as named, are: Jacob Perlen, W. H. Simons, Edward Weiss, all of New York.

The Universal Watch Distributing Co., New York, was incorporated, last week, with an authorized capital of \$300,000 and with the following directors: Albert Bruns, Brooklyn; W. J. Pollock and F. C. Wheeler, New York.

Harry I. Kistler has leased the second floor of the building at 715 Hamilton St., Allentown, Pa., where he will shortly start in business as a manufacturer of jewelry. Mr. Kistler was formerly in the employ of Faust & Sterner.

The Waterville Corporation, of Waterbury, has filed a certificate of incorporation with the State Secretary of Connecticut to conduct a business in brass, copper and other metals and metallic compounds. The capital stock is \$5,000, all paid in. The incorporators were: H. S. Chase, Irwin S. Chase, F. S. Chase and A. R. Kimble, of Waterbury, and R. J. Ashworth, of Watertown.

William P. Harman, 2933 Bernard St., Baltimore, Md., was arrested recently in Denver, Colo., for diamond robberies. He confessed to stealing gems valued at \$900, but refused to give the names of his victims. A pawn ticket found on him showed he had pawned a \$75 ring in Baltimore, Md.

Ball's Official Standard R. R. Watches

WHAT WOULD YOU GIVE FOR A LIFELONG CUSTOMER?

Try this plan:

Sell your next watch customer a "Ball."

Its reliable performance will convince him you are a dealer to be depended on—he'll keep coming back for other things.

The watch will win you his business and friendship for always.

Write for booklet, and watch this space.

We want to add a lot of new friends to the Ball family of railroad watch dealers.

VOL. LIII.

CHICAGO, WEDNESDAY, NOVEMBER 14, 1906.

No. 15.

Chicago Notes.

B. H. Sanafelder, with McRae & Keeler, is on a visit to the factory.

Col. T. P. Moody, the jewelry auctioneer, is holding a sale at Hattiesburg.

Harry J. Miller, with Hutchison & Huestis, has returned from a middle western trip.

F. E. Jack, manager of the Queen City Silver Co., Cincinnati, O., was a visitor here last week.

H. Nathan, auctioneer of this city, is selling a stock of jewelry for G. H. Vahl, of Milwaukee, Wis.

J. A. Lucas is making a visit to Eastern manufacturers relative to representation for the coming year.

James Frank Heald, Sheridan, Wyo., stopped here a few days ago on his way home from Boston.

A. Goldstandt, formerly with Herbert L. Joseph & Co., is now manager for the Jackson Jewelry Co., this city.

Albert Cohn, representing Wm. Loeb & Co., is making a trip to New Orleans. From there he goes east to the factory.

T. C. Boylan, with Manning, Bowman & Co., is on a visit to the New York office and the factory at Meriden, Conn.

T. V. Moreau, Minneapolis, Minn., spent a few days here last week and attended the Chicago-Minnesota football game.

Al. Paulson, of Henry Paulson & Co., is in San Francisco at the branch store of this firm, which they recently opened there.

Graffe & Stanek recently made up a large sterling silver stein for a Racine (Wis.) firm, to be presented to Robert Fitzsimmons.

The Seth Thomas Clock Co. recently installed tower clocks for A. E. Henry, Rockford, Ill., and for the Rockford City Hall building.

A new buggy belonging to Emil Braude and used by one of his city salesmen was recently destroyed by fire in the barn where it was kept.

F. J. Kinzelman, doing business as the Chicago Watch Repair Co., has removed from 67 Wabash Ave. to room 500, Heyworth building.

Mr. Bear, of Powers & Bear, Grant City, Mo., was in Chicago for a few days buying Fall stock. Mr. Bear, who is a son-in-law of R. L. Powers, only recently became his

partner, as he was formerly employed by Graf & Kettlewell, Carson, Ia.

C. H. Hulburd, president of the Elgin National Watch Co., recently attained to the title of grandfather, of which fact he is justly proud. C. V. Dickinson, manager of the company, is making a business trip to New York and other eastern points.

L. A. Martin, who recently bought out C. A. Vanderburg, of Superior, Wis., has been spending some time in this city buying goods to restock his store. Mr. Vanderburg will locate in San Francisco about the first of the year or sooner, and is now in the east buying his stock.

Otto Young has donated the land at the northwest corner of 64th St. and South Park Ave. for the erection of the Memorial Institute of Infectious Diseases of Chicago. The trustees of the institute have the money to go ahead with the building, but have not been able to get the necessary consent of adjoining property owners.

The Manufacturing Jewelers' Association of Chicago, an organization which came into existence as a result of the recent jewelry workers' strike, has arranged for monthly gatherings at which prominent speakers will be engaged to address them. The first meeting will be held at the Union Restaurant on the evening of Nov. 19. At this meeting, which will be on the order of a banquet, the organization will be addressed by Frederick W. Job and Herman Winslow, both well known authorities on labor troubles, aside from the speakers among their own numbers. The members hope by such means as this to foster a closer relation among themselves as well as between themselves and their employees. Thirty-four firms will be represented at the meeting.

B. J. Hagaman, 5454 Wentworth Ave., who has been prominently before the public because of the robbery of his store five years ago by men alleged to have been associated with Police Inspector Lavin, was robbed again last Friday night and badly beaten by two armed men. Mr. Hagaman was alone in the store when a man entered and requested to know how much it would cost to fix a clock. On being told he then asked to be shown some watches. Three watches were displayed, and at this time another man entered, who shoved a revolver under Hagaman's nose and ordered him to put up

his hands. The first man grabbed the watches and ran out of the store, while the jeweler was putting up a strong fight with the other, who severely battered his face and then also ran out of the store. Several persons were attracted to the store by this time and gave chase, succeeding in capturing the first robber in an alley close by.

The *Chicago Chronicle*, in a recent editorial, takes considerable space in its columns to berate the fact that Hyman, Berg & Co. have erected an "unsightly mounted clock on the corner of the sidewalk as an advertisement," and then continues at great length, finally ending in this strain: "How can the Merchants' Club or anybody else make this city beautiful when there is such a city government and when it permits and encourages such eyesores, blemishes and obstructions in the principal streets?" The fact is, as previously stated in these columns, the mounting of the clock above referred to is of pure bronze and was made from special drawings at a total expense of several thousands of dollars. It is an object of admiration of thousands of people daily, as it not only is a beautiful work of art, but gives the hurrying passer-by the time of day and at night it is brilliantly lighted. Competent judges say that it is one of the most beautiful works of this kind in the United States.

The following were among the buyers in this city during the past week: Mrs. M. Tinsley, Harlan, Ia.; J. A. Bills, Vinton, Ia.; F. A. Marean, Belvidere, Ill.; John C. Woelfle, Peoria, Ill.; E. W. Kelly, Sullivan, Ind.; Charles Jelliff, of Pickering & Jelliff, Mansfield, O.; W. C. Boggs, Ft. Dodge, Ia.; Mr. Lyon, Wauseon, O.; C. H. Lang, Mankato, Minn.; S. Simons, of the Simons Jewelry Co., Davenport, Ia.; John Schmelzer, Centralia, Ill.; Frank C. Hyde, Appleton, Wis.; F. J. Kellogg, Woodhull, Ill.; Mr. Snyder, Snyder & Co., Fairfield, Ia.; J. H. Schmith, Clinton, Ill.; H. W. Harde, Holland, Mich.; L. Stocker, Macomb, Ill.; G. E. Lofgren, Mediapolis, Ia.; T. Norton, Armour, S. Dak.; C. A. Brown, Elgin, Ill.; O. L. Gilmore, Fisher, Ill.; C. W. Roskie, Portage, Wis.; Oscar C. Cobb, Iowa Falls, Ia.; Bert Tall, South Haven, Mich.; Mr. Brown, of Downey & Brown, Lincoln, Ill.; E. L. Dickey, Spencer, Ia.; Edward Waare, Hancock, Mich.; Jacob Segerstrom, Rhine-

**Panorama Alarm and Octagon
Gun-Metal Watches**

2572 Open face; panorama; gun metal..... **\$3.75**
Illustrations show dial and back view,
with one moving panorama picture exposed.

A very attractive novelty which met with general favor wherever introduced. The watch performs the functions of a regular timekeeper, and in addition, portrays a number of moving pictures revolving in proper ratio to the second hand; a complete revolution every minute. The usual combination consists of six aluminum photographs of stage celebrities and others. Movements are nickel cylinder $\frac{3}{4}$ plate, well finished throughout, the best of their class. Fancy dial, raised colored enameled figures; red, blue, green, etc., fancy gold hands. The cases are made of one piece, hermetically sealed, dust and damp-proof, very thin, consistent with size. Flat, French pendant, oval bow and crown.

2556 Gun metal black; alarm **\$6.50** **2555** Gun metal black; octagon **\$9.00**

Wakum 16 size black gun-metal anchor pocket alarm watches, sterling reflector on bezel, silver bow and crown, guaranteed to perform accurately the functions of a reliable timekeeper, cream colored enameled porcelain Arabic dials, steel hour and minute hands, gold alarm indicator. The alarm attachment is useful for various purposes. It acts in the capacity of a faithful reminder of appointments through the day or night; a substitute for the alarm at night, or hotel boy when traveling. The extra strong joint case back when open as shown by the illustration, becomes a desirable desk watch. Indispensable to physicians, attorneys, merchants and others. When closed it is no larger than any ordinary watch.

The demand for the unusual prompts us to place on the market octagon and square gun metal thin model gent's watches. The Anchor movements are high-grade, guaranteed strictly reliable timekeepers, equipped with ivory dials and raised colored enameled figures, gold hands. The cases are extremely thin, beveled edges, beveled backs and corners. This style should appeal particularly to those who are always seeking individuality.

lander, Wis.; E. Jeanmairet, Mt. Carroll, Ill.; F. A. Robinson, Tripoli, Ia.; G. A. Howe, Duncan, Ind. T.; Will G. Curley, Geneseo, Ill.; T. J. Ellis, Jonesboro, Ark.; W. S. Still, Delavan, Ill.; E. A. Shelter, DeKalb, Ill.; M. N. Berg, Duluth, Minn.; W. O. Barnes, Lyons, Nebr.; N. Peterson, Superior, Wis.; Charles Price, Jacksonville, Ill.; Harry Martin, Kahoka, Mo.; C. E. Doolittle, Brodhead, Wis.; H. O. Thomas, Hampton, Ia.; R. C. Kiep, Joliet, Ill.

Cincinnati.

A. A. Spiegel, of the Gustave Fox Co., is home from a six weeks' trip south and southeast.

Fred Minderman, of Joseph Noterman & Co., has been elected a Councilman of Covington, Ky.

C. C. Stoner and W. S. Fawcett, of Linder & Co., leave this week on regular trips west and through Ohio.

R. C. Bates, Alliance, O., purchased stock here in the past week for the new store which he is about to open.

J. C. Daller, Jr., and John Haslam, of the Clemens, Oskamp Co., will this week call on their trade in the south and west.

T. E. Bundy, Huntington, W. Va., has bought out the pawn business of J. Boiarsky at that place, and will run it in connection with his jewelry business.

Charles Mikelsell and Charles Martin were burned out in the big Mehrum building fire at Hamilton, O., last week. An estimate of their losses has not yet been made.

Wallenstein, Mayer & Co. had a narrow escape last week from a fire which started at the rear of their building. The fire department arrived in time to prevent serious loss.

After Jan. 1 Lindenberg & Fox will occupy quarters on the seventh floor of the Harrison building, E. 4th St., where they will have better facilities for conducting their growing business.

The John Holland Gold Pen Co. has appointed V. C. Dwyer, formerly representative of the Howard Hunt Pen Co., as representative at their New York office in the Stationers' building, 82 Duane St.

Edward Nass, who, it is alleged, entered Michael Reitman's engraving shop at 1402 John St., last week, and stole eight gold watches, has been arrested and is now awaiting examination on the charge of grand larceny.

Herman E. Promnitz has just completed a handsome diamond locket valued at \$2,000. Louis Rauch and Charles Rauch have started on their regular trips south and west. Arthur Rheinberger, with this house as city salesman, has resumed business after an illness.

The Oskamp Jewelry Co. on election evening, suffered another accident to its window. This time the police had arrested a colored boy named George Wilson, at 5th and Vine Sts., and were in wait for a patrol wagon, when a mob of people in pursuit of Wilson rushed on and knocked the officers and the boy through the window.

A. J. Thoma, of Thoma Bros., was subpoenaed as a witness to appear before the Grand Jury at Sandusky, O., Nov. 12, when the case against Johnson & Levy, of Fostoria, came up. The defendants, it is al-

leged, received goods from Jesse Varnes, who has been serving his time in jail for having stolen a trunk from Fred Thoma, of Thoma Bros., nearly two years ago.

Herman Keck, of the Herman Keck Mfg. Co., is expected to return this week on the *New York* from a month's stay in Europe. Mr. Keck's company is now increasing the size of its plant by an addition of 100 mills, which will soon be in operation. Fred Fehr, bookkeeper for this house, has succeeded the late Simon Hesse as salesman, and will make his initial trip in the south about Nov. 17.

Out-of-town jewelers here the past week replenishing their stock included: Will Keller, of S. E. Barlow, Georgetown, Ky.; Rudolph Bentel, Hamilton, O.; H. C. Reed, Blanchester, O.; E. H. Davidson, Waverly, O.; P. H. Linnehan, Birmingham, Ala.; B. J. Dillard, Lebanon, Tenn.; Charles E. Seng, Louisville, Ky.; I. Adler, Lexington, Ky.; Theodore Seitz, Robinson, Ill.; Sam Horchow, Portsmouth, O.; J. A. Bagby, Greenup, Ky.; E. Sensenbrenner, Circleville, O.; George G. Mead, Parkersburg, W. Va.; Mr. Whitehead, Winchester, Ky.; Fred A. Ende, New Bremen, O.; Frank Fullilove, Owenton, Ky.; G. H. Hansgen, Bethel, O.; Frank B. Cary, Lebanon, O.; J. W. Tufts, Loveland, O.; Charles Sederberg, Milford, O.; Joseph E. Smith, Lockland, O.; B. H. Davidson, Waverly, O.; F. J. Beaven, Williamson, W. Va.; Chase Hofman and wife, Springfield, and Fred G. Wittlinger, Middletown, O.

St. Louis.

S. Van Raalte has just returned from an extended trip abroad.

J. R. Mercer, a Kansas City retail jeweler, was a visitor in this city, last week.

Edwin Massa, of the Bauman-Massa Jewelry Co., is on a trip through Missouri and Arkansas.

L. J. Empfield, Paragould, Ark., has established his son in the jewelry business at the same place.

C. G. Derleth, East St. Louis, is making extensive improvements in his store on Collinsville Ave.

Fritz Courvoisier, 7109 South Broadway, has returned from a pleasant hunting trip of several weeks.

Newton Owen, of the Benedict, Mfg. Co., with headquarters here, is on a visit to the factory at Syracuse.

Jules Franklin and S. C. Powell, of S. C. Powell & Co., New York, called on the trade here, last week.

H. C. Grawe has decided to move, Nov. 15, from his present place of business, 411 Washington Ave., to 611 No. Broadway.

Edward Gotsch has opened a new store on Olive St., near Sarah St. He is a son of E. H. Gotsch, the Easton Ave. jeweler.

The Wright Chemical Co., Jefferson Ave. and Olive St., has added a jewelry and watch repairing department, with Mr. Fuller in charge.

E. Schoenle has returned from a trip through Southeast Missouri and Arkansas for the Maschmeyer-Richards Silver Co. He reports a good business.

The Mermod, Jaccard & King Jewelry Co. is enlarging its silverware department. A stairway has been removed, and additional display cases are being put in.

Among the out-of-town visiting jewelers in this city, last week, were: C. Burckhardt, Red Bud, Ill.; J. F. Stewart, Albion, Ill.; J. L. Mullins, Hillsboro, Ill.; J. Harvell, Litchfield, Ill.; M. Harris, Des Loges, Mo.; F. G. Wehrle, Belleville, Ill.

Phillip Finkel, 803 N. 7th St., reported to Chief of Detectives Desmond that while he was traveling in Jefferson County, Mo., Oct. 6, jewelry valued at \$150 was stolen. The missing property includes four gold watches, several rings, chains, etc.

A game of association football will be played Sunday morning between the married and single men of the Mermod, Jaccard & King Jewelry Co., at Kulages Park. Tom Kinsella is captain of the benedicts, and Fred Harnagle of the bachelors. A lively game is anticipated.

Much regret is being expressed by jewelers in this city at the defeat in the recent city election of Patrick J. Clifford, who was a candidate for re-election to the office of License Collector. Mr. Clifford refused licenses to many fakirs, and otherwise conducted his office so as to please the legitimate jeweler. At the annual banquet of the Retail Jewelers' Association, in March, Mr. Clifford was one of the speakers. He has been a guest of the jewelers on several other occasions.

A newspaper dispatch from San Francisco, Cal., stated that W. B. Wooldridge, a traveling representative for a jewelry company in St. Louis, had been arrested there on the charge of the theft of between \$400 and \$500, money which he was alleged to have obtained by forging business men's names to jewelry orders and selling the jewelry when it arrived from his firm. Inquiry at various jewelry establishments here revealed the fact that no such salesman travels out of this city.

Pacific Coast Notes.

H. H. Hooper, Whittier, Cal., has sold his store at that place to John Parker.

T. A. Henderson, formerly of Douglas, Ariz., is now in Cananea, Mex., looking for a location for a jewelry store.

P. Benson, Kennett, Cal., who has been at Weed, Cal., with the intention of starting a store, has given up that plan and returned to Kennett.

T. A. Blakely, San Bernardino, Cal., has received a report from the superintendent of his gem mines at Pala, Cal., that a rich strike of kunzite has been made at the mine, 15 pounds being taken from one pocket.

Adolf Braese, John Thiel and Edward Schill, formerly employed in the trade in San Francisco, have associated under the name of the Pacific Silver Mfg. Co. and established themselves at 507 San Pedro, Los Angeles, Cal., to manufacture silver.

Ting Ment, formerly of San Francisco, Cal., but who was burned out in the April fire, has opened a manufacturing plant in Los Angeles, Cal., where he will make all sorts of jewelry and ornamental goods out of jade and gold. He now has in his employ 10 men and is operating under the name of the Ten Chong Co. Besides the manufacturing end of the business, the Ten Chong Co. will import and deal in Chinese novelties of various sorts.

SWARTCHILD & CO.

ESTABLISHED 1870.

138 Wabash Avenue

CHICAGO, ILL.

Watchmakers', Jewelers' and Engravers' Supplies.

Our new 432 double-size page catalogue containing 20,000 illustrations will be sent to you gratis (prepaid) on application.

FEATURES

"BLACK SHIELD" MAINSPRINGS are packed in the following manner:

Each spring is wrapped separately in oiled paper, and placed in an individual envelope printed with the name and size of movement for which it is intended.

Twelve envelopes, or one dozen mainsprings, are contained in a well-made strong box properly labeled.

Useless handling of the springs is avoided, thereby preventing rust or mixing of stock.

The name, "BLACK SHIELD" is scratched on every spring.

THE NEW MAINSPRING

"BLACK SHIELD"

MAIN-SPRINGS

FOR ALL AMERICAN WATCHES.

The Product of the Highest Attainment in Mainspring Making

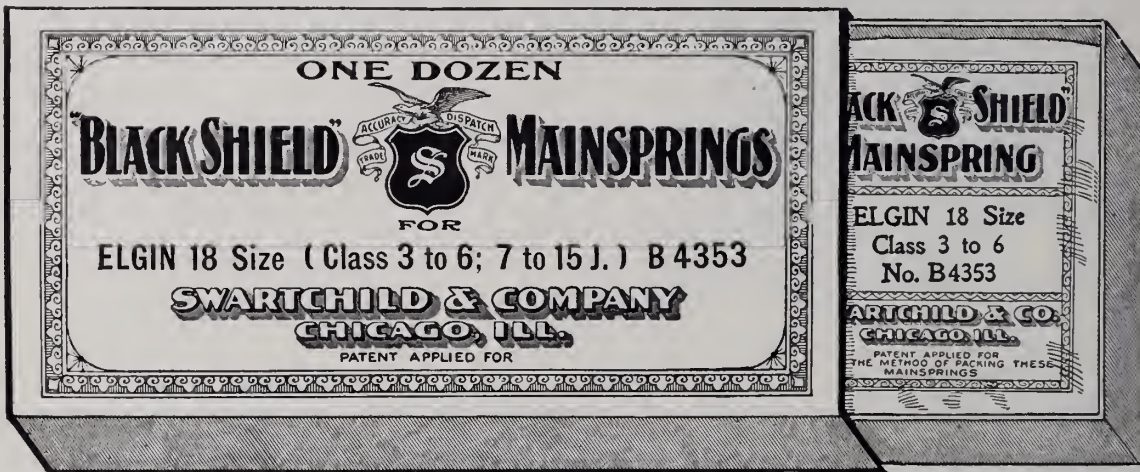

TESTS

In selecting the "BLACK SHIELD" MAINSPRINGS, we were guided not alone by our own severe tests and judgment, but we distributed samples to dozens of expert watchmakers throughout the country.

The opinion of all was that the "BLACK SHIELD" MAINSPRINGS are the finest ever introduced in this country. That they are even, properly tempered, carefully finished, correctly gaged, and tips and length positively accurate.

They are of wine color, well polished, and will fit the respective movements without any filing or change whatsoever.

"Black Shield" Mainsprings are manufactured for us only by the oldest and most reputable maker in Switzerland
Per Dozen, \$13.50
Per Gross, \$13.50

Fac-Simile of Box Containing One Dozen "Black Shield" Mainsprings

"Black Shield" Mainsprings are guaranteed in every respect. No better can be had at any price
Per Gross, with 4-Drawer Cabinet (capacity, 48 dozen), \$15.00

OGDEN & CLARKSON, 11 West 27th St., N. Y.

Pacific Northwest.

W. O. Truax, Santa Monica, Cal., has moved into larger quarters on 3d St., in that town.

The store of W. C. Adam, Newport, Wash., was entered by burglars a few days ago. The value of the loot stolen is about \$60.

The store of Mr. Bradberry, Toppenish, near North Yakima, Wash., while still uncompleted, was destroyed by fire a few days ago.

Giesler Bros.' store, on Broad St., Payette, Idaho, was robbed of goods valued at \$100, last week, by burglars who entered the store at night through a cellar door.

C. E. Sturges has secured a store at 813 Riverside Ave., Spokane, Wash., where he is about to open a retail jewelry establishment. Mr. Sturges was formerly in the jewelry business at Boise, Idaho.

G. L. Semler, jeweler, 62 N. 3d St., Portland, Ore., reported to the police, recently, that some one entered his room through a transom and stole jewelry, old gold, watch chains and seven watches. There is no clue.

The new store of S. A. Andrews, which was opened at Tacoma, Wash., last week, is one of the handsomest in the northwest. The interior finishings are of plate glass and oak and there is a lavish use of electric lights and mirrors. Besides the regular jewelry lines the new store is equipped with cut glass and bric-à-brac departments.

W. F. Laraway, Hood River, Ore., had an elaborate display at the recent fair in that town. Among the novelties on display was "A new tubular route to China," which purported to give the explorer a look through the earth to China, and a wonderful glass clock, which was originally made by Mr. Laraway for the Centennial Exposition in 1875.

The store of R. H. Wilson, Ocean Park, Cal., was entered by thieves, a few days ago, and robbed of goods valued at \$1,000. Mr. Wilson includes in his loss the following: One dozen bracelets, a half dozen fobs, three dozen gold watches, one diamond ring, seven other rings, several pins and articles of smaller value. The goods were taken from the show window.

After obtaining a gold watch from A. & C. Feldenheimer, Portland, Ore., by means of a bogus check on a local bank, Dan Currier, a fashionably dressed youth of 20 years, was captured in sensational style by Detective Sergeant Jones recently, shortly after he had attempted to pass a bogus check on Jaeger Bros., in payment for a second gold watch. After being arrested at 250½ 6th St., Currier managed to escape from his captor and ran five blocks before he was overhauled. During the chase Jones fired four shots after the fugitive. The speedy capture of the man was due largely to the quick wit of E. J. Jaeger, a member of the firm of Jaeger Bros., who formed the plan for Currier's undoing and brought it to a successful climax with the aid of Sergeant Jones.

A. Krugman, an auctioneer in the employ of the Goldstein store on Second Ave., Seattle, Wash., was convicted in the police court a short time ago of misrepresenting the quality and the value of a gold watch

that had been sold to Alexander Smith. Judge Gordon assessed a fine of \$100 and costs. A notice of appeal to the Superior Court was taken. The court was convinced that the evidence showed that Krugman had told Smith that the watch was worth \$21 and sold it for \$7, and that it was gold filled when the proof showed that it is plated. An expert jeweler from one of the large downtown stores testified that the case was thinly gold plated. The police have had a great deal of trouble with alleged bogus jewelry auction houses, and the conviction of Krugman is the first one they have made.

Denver.

J. Berklang has taken a position as engraver with J. C. Bloom & Co.

C. F. Syman, of Syman Bros., is home from an eastern trip in the interest of his firm.

Edward Lehman, of the Edward Lehman Jewelry Co., has gone to Chicago on business.

Henry Bohm, of the Bohm, Allen Jewelry Co., has returned from his trip to San Francisco, Cal.

Boyd Park, president of the Boyd Park Jewelry Co., Salt Lake City, visited the Denver store for a few days, last week.

The A. F. Wehrle Jewelry Co. has opened a branch store at 1608 Tremont St., where it will do gem cutting. New machinery has been added and the facilities for gem cutting have been increased.

The following out-of-town jewelers visited the Denver jobbers, last week: J. D. Diehl, Rico, Colo.; O. S. Evans, Farmington, N. Mex.; J. H. Nelson, Colorado Springs, Colo.; George Hennings, Silverton, Colo.; Frank J. Barnhart, Clayton, N. Mex.; S. J. Brawley, Encampment, Wyo.; R. C. Yanks, with George C. Smith, Breckenridge, Colo.; E. B. Pullen, Elbert, Colo.; S. R. Burger, Leadville.

An effort is being made to induce every jeweler in Denver to become affiliated with the body which has been formed to deal with the journeymen who want higher wages. Several weeks ago the journeymen jewelers of Denver formed an organization to promote their own interests and to obtain a shorter working day with increased wages. Every large jewelry house in the city would be affected, and it was felt that in case any demands were made by the union they would be in a better position to deal with the workmen as a body and not individually. Although the matter of forming an association has been agitated for several years, this is the first time anything definite has been done.

The store of John M. Hall, Ellenville, N. Y., was entered by thieves, a short time ago, and silverware and second-hand watches valued at about \$40 were stolen.

According to recent statistics of the jewelry trade in Los Angeles, Cal., there are 21 firms and individuals engaged in the manufacture of jewelry in that city. These give employment in their manufacturing departments to 241 expert jewelers and engravers. They turn out goods each month of the average value of \$40,167.

San Francisco.

John Hood, Santa Rosa, was here last week ordering holiday stock.

S. F. Hollander, Eureka, Cal., is enlarging his store. He is also adding a well stocked cut glass department.

Charles Niner was in the city from Pleasanton, Cal., early in the week ordering stock from the local jobbers.

M. Hetzler, Haywards, Cal., spent most of Monday, Nov. 5, in the Kamm building, in this city, visiting the wholesalers quartered there.

Emil Geiland, an eastern jeweler, has arrived in San Diego, Cal., to become foreman of the manufacturing department of the store of Mr. Ernsting.

H. J. Niemi, one of San Francisco's best known watchmakers, has gone into partnership with Gus Solomon, and the new firm has opened a store on Stuart St., near Market St.

The carpenters have finished their work in the office of the Burr W. Freer Co., 717 Market St. Mr. Freer has increased his force to eight well-trained men and is making preparations to handle a big holiday trade.

Nordman Bros. have secured the services of an experienced salesman to take the place of Leo Aurich, who resigned a few weeks ago. They have just let contracts for what are claimed will be the finest fixtures in town.

The changes in the wholesale warerooms of the W. E. Graves Co. are now well under way. The new plate glass display cases are installed, and by another week the remainder of the fixtures will be in good shape for effective use.

Mayer & Weinschenk, supply dealers at 717 Market St., are busy remodeling their store and increasing its capacity. This firm has recently increased its working force considerably and is now in shape to take care of a heavy trade.

The California Jewelry Co., this city, recently purchased the last of the famous Silverberg diamonds, at El Paso, Tex. The sale was made by Silverberg Bros., of El Paso, with whom the gems were pawned about four years ago.

Those wholesalers who have been in touch with the new firm of Powell, McKee & Co., who will open a store in Sacramento, this week, state that judging by the fixtures and stock ordered the new store will be one of the finest in the capital.

The San Francisco Jewelry Co. has opened a store on Fillmore St., near Turk St. The store contains 12 beautiful plate glass show cases and a long succession of wall cases built into the wall. A well appointed office is located in the rear.

Shreve & Co., of this city, have begun an extensive advertising campaign in order to let the coast know that they are again in full running order and ready not only to supply a full line of jewelry and fine glass and silverware, but also to turn out special orders at their factory.

N. H. Burger, of the El Dorado Gem & Gold Mining Co., Placerville, Cal., is arranging to remove the Pacific Coast headquarters of the company to Los Angeles, Cal.

News Gleanings.

Wm. Seeger, Marysville, Cal., has sold out.
 E. Kienzler, Rockwell, Ia., is now located at Delhi, Minn.
 A. B. Ellis, Hartford, Kans., has moved from that place.
 G. E. Ellis has bought out H. R. Cox, Johnston City, Ill.
 Kyers Bros. & Co. have succeeded W. Edward Koch, York, Pa.
 S. T. Schneider, Bonne Terre, Mo., has sold out to H. Chambers.
 F. M. Smith has sold his store in Woodbine, Ia., to L. B. Hoyer.
 R. M. Gardner, Kilkenny, Minn., has moved to Vernon, N. Dak.
 W. W. Akenhead, White Pigeon, Mich., has sold out to A. Dutton.
 T. D. Johnson moved recently from Hartsville to Newman, S. C.
 J. E. Carmichael has bought the stock of Hockett & Co., Red Oak, Ia.
 John Riley, Winnebago, Minn., was a recent visitor in Mason City, Ia.
 Edward W. Price, South Orange, N. J., has sold out to Oscar A. Dohm.
 Leon M. Giles, Leonardville, N. Y., has sold his business to John Owens.
 Wm. G. Ober, formerly of Wildwood, N. J., is now at Holly Beach, in the same State.
 Harry T. Hughes, Malvern, Ark., has sold his business to A. W. Brassler, of that place.
 Gish & Jones, Auburn, Ill., have dissolved. George Jones continuing the business.
 The business of Charles Everts, Gould, O., who died recently at that place, has been closed.
 Chris. Bergsvik, Yankton, S. Dak., returned last week from a business trip to Chicago.
 J. Nielson & Son, Biloxi, Miss., have renovated the interior of their store on Reyner St.
 Hoge & Elliott, Santa Paula, Cal., have dissolved partnership, A. W. Elliott continuing alone.
 Sumner Clarke, Red Bank, N. J., is disposing of his stock at auction prior to discontinuing business.
 C. W. Evans & Co., Ashland, O., are closing out their stock at auction, prior to discontinuing business.
 Mark Ridout, Rushford, Minn., has gone to Dickinson, N. Dak., where he will take a position with T. J. Greene & Co.
 C. C. Dodson & Sons, Knoxville, Tenn., will hereafter continue business under the firm name of the Dodson Jewelry Co.
 C. Buekna, druggist and jeweler, Erie, Colo., recently turned over his stock to an assignee for the benefit of his creditors.
 J. J. Sweeney, of the J. J. Sweeney Jewelry Co., Houston, Tex., returned home recently from a purchasing trip to New York.
 The business formerly conducted by the Field & Cole Co., Inc., Los Angeles, Cal., will hereafter be known as Field & Walton.
 Robert L. Wright has purchased a new building on Main St., Fort Payne, Ala., into which he is about to move his jewelry stock.
 According to Vice-Consul Donald Mitchell, the production of diamonds in British Guiana during 1905 was 5,315 carats against 10,990 carats in 1904.

H. J. Doane, Delavan, Wis., has admitted his brother, Frank Doane, as a partner in his business, which will be continued under the name of Doane Bros.
 Reports from Frankfort, Ky., last week stated that the Kentucky Transvaal Diamond Mine Co. of Carter County had been incorporated with a \$100,000 capital stock to mine for diamonds in that county.
 C. H. Kittrell, Sandersville, Ga., recently sold out to E. L. Scarborough and R. E. Strange, who will continue the business under the name of Scarborough & Strange. The new owners were formerly in the employ of Mr. Kittrell.
 S. D. Grossman, retail jeweler, Brockton, Mass., was fined \$50 in police court last week for alleged larceny of a ring from Edward T. Kersey, of the same city. Kersey testified he took the ring to Mr. Grossman to learn its value, whereupon the jeweler claimed it was his and kept it. Mr. Grossman appealed.

The postmaster at Iola, Kans., recently received from the Assistant Postmaster General a ruling to the effect that papers containing the advertisement of the Merchant Jewelry Co. could not be sent through the mails because the concern advertised an offer to present a diamond ring under circumstances which the department claims made the distribution a lottery.

W. J. Timms, 4 W. Alabama St., Atlanta, Ga., bought out the entire jewelry business of Julius R. Watts Co., 28 Whitehall St., in the same city, and will continue the business at that address. Mr. Timms is the watch inspector for the Southern, Seaboard, Georgia and Western and Atlantic railroads, and will now have one of the largest watch repairing departments in the south.

No trace has been discovered of the thieves who on the night of Aug. 10 broke into the store of the C. G. Bergman Co., Charleston, W. Va., and got away with jewelry valued in all at \$700. The robbers forced an entrance into the workroom by removing the bricks from the rear wall of the building and then broke the door into the store with a crowbar. The goods taken consisted principally of plated locketts and charms, gold beads, dog collars, emblem goods and opera glasses.

Robert Hendershot, who had been sentenced for robbing the store of F. P. Blair, Bellefonte, Pa., a short time ago, made two attempts to escape from jail. The last time when the prisoners were locked up for the night, a search of Hendershot's cell showed that he had sawed a hole in the floor big enough to get through and had then carefully replaced the boards awaiting a favorable opportunity to get down into the cellar, when escape would have been comparatively easy. The officials are at a loss to know where he secured the saw.

In the course of a recent report Consul-General Peters, at St. Gall, Switzerland, transmitted statistics of the imports and exports of that country for the year 1905, according to which the value of the watches and clocks imported into Switzerland during that time amount to \$269,003, while the value of the exports of these products was \$23,827,958. The value of the clocks that were sent to the United States from Swit-

zerland amount to \$61,043, during the first six months of 1906, while the value of the same products exported from Switzerland to the United States was \$736,553.

Frank Kelley, the thief who was recently convicted at Binghamton, N. Y., on the charge of stealing from the jewelry store of Judson S. Newing, 86 Court St., that city, was taken before Justice Sewell in the Supreme Court after he had been sentenced, as noted in the last issue of THE CIRCULAR-WEEKLY, in order to have the term modified. The sentence was then changed from a maximum of four years and three months to a minimum of three years and six months instead of a minimum of three years and 10 months, as originally ordered. Later Kelley was taken to Auburn prison by Detective Stephens and Sheriff Seaman.

In the course of the report of West Australia, Consular Agent Harry R. Burrill furnishes some interesting statistics as to the importation of the principal articles used in the country. Among other lines which he mentions the amount of clocks brought in during 1905 is given as \$60,000; jewelry, \$275,000, and watches, \$75,000. Of the total clocks, the United Kingdom supplied \$15,000; Germany, \$5,000, and the United States, \$30,000, while \$1,000 came from other parts of the Commonwealth. Of the total jewelry \$130,000 came from the United Kingdom; \$50,000 from Germany; \$15,000 from the United States, and \$70,000 from other parts of Australia. Of the watches, 50 watches came from the United Kingdom, 4,000 from Germany, and 15,000 from the United States.

Albany.

Otto H. Fasoldt & Co., jewelers, at 32 N. Pearl St., began an auction sale of stock and fixtures on Saturday. It is stated the sale is caused by the dissolution of the firm. John F. Turner and A. E. Gates are in charge of the sale. Fasoldt went into voluntary bankruptcy only a short time ago.

Clarence Clages, 17 years old, was arrested last week while attempting to sell a diamond ring on S. Pearl St. for \$3. The police claim that the ring had been stolen from the jewelry store of P. H. Salmson, 460 Fulton St., Troy, N. Y., where the prisoner had been employed, while the boy claimed, on the other hand, that he had found it in a discarded box and believed that it was a cheap ring left by a drummer. He was taken to police headquarters and turned over to the Troy authorities on a warrant which had been sworn out in that city.

CONTRACTS.

8. CONTRACTS OF INFANTS.

(Continued from the issue of Oct. 8.)

Infants, or minors, are persons, male or female, under the age of 21 years. In all but a few States, however, females become of age at 18. The law relating to infants' contracts is for the protection of the infant himself. He is assumed not to be able to protect himself. The age limit, 21 years, was fixed in the law many years ago. Perhaps were the law to be formulated anew the limit would be set lower. Young men and young women enter upon business life nowadays earlier than formerly. However, in no jurisdiction, so far as we have learned, has there been any serious attempt made to set the limit of infancy lower than 21 years, except, as stated, in the case of females.

It is common to hear it said that an infant's contracts are void, that one under age cannot make a binding contract. This is an unsafe statement of the rule, if indeed, not an incorrect one. It were better to say that infants' contracts are voidable—that is, he may avoid them if he so desires—but there are even exceptions to this, as we shall see. If an infant's contracts were void neither party could be held to them, but it is clear in the law that if the infant wants the contract to stand he can compel its performance on the part of the adult dealing with him; in other words, the plea of infancy is a personal privilege, and one of age who makes a contract with an infant is bound so long as the infant performs his part of the contract.

A contract that is voidable on the part of the infant may, upon his reaching maturity, be ratified by him, in which case both parties will be bound. Where his contract is voidable, as is generally the case, he must avoid it before he becomes of age or at once after becoming of age, or he will be held as having ratified it.

There are instances where the contract of an infant is valid and cannot be avoided by him. These contracts are such as are made for the necessities of life under certain circumstances. In a sense it is scarcely proper, however, to say that he is bound by his contract for necessities. He is, strictly speaking, not bound as on a contract at all; in other words, not bound to pay the price that he agrees to pay, but only for the reasonable value.

A question arises as to what are necessities. By "necessaries" is not meant what is absolutely necessary to barely keep the infant alive. The rule as generally stated is that the infant is bound for the value of such necessities as are reasonably useful in maintaining him properly considering his station in life. What, therefore, would be deemed a necessary with one person would not be deemed so with another. A poor boy not moving in society that is accustomed to evening dress would not be held bound on a contract to buy a full dress suit. A boy whose station in life, whose associates and circumstances, require the use of evening dress, with the alternative of his appearing ridiculous, would be held bound under such a contract on the theory that

the suit was a necessity. A contract for articles of mere luxury or ornament made by an infant would not be valid and binding on him.

Then, again, it must be shown, in order that a contract for necessities be held good, that the infant was not supplied with them by his parents, guardians, or otherwise. The same rule that is stated above holds with reference to contracts for medical attendance in sickness, and for the expense of a common school education. Contracts made by the infant for these, when not furnished by the parent or guardian, or otherwise, would be upheld as valid. Food and clothing, of course, come under the rule. A contract for a college education would not be binding. In other words, whatever the infant contracts for, in order that the contract be valid or binding upon him, must be reasonable in quantity, quality and kind, and suited to his station in life, and not be furnished him by parents, guardians or from other source.

Contracts entered into by an infant to conduct a business or relating to a business are voidable. One who pays a child money on a contract with him for service does so at his peril. The child's earnings belong to the father and not to the child, particularly if the child lives with the father. If the child, however, has been emancipated the rule is different.

As to property generally, the infant may take property and hold it, but once it is his he cannot make a contract selling it or conveying it that is not voidable by him.

In the matter of the ratification of a contract by one who has reached maturity, it should be stated that the ratification must be of the whole contract. One ratifying a contract made in infancy cannot ratify part and avoid part; he must either ratify all or avoid all. One who has bought property in infancy and not paid for it cannot, upon reaching maturity, keep the property and avoid the contract as to payment. And so with an infant who has obtained property on a contract; if he desires to disaffirm the contract he must return the property. He cannot both retain the property and refuse to pay for it. If, however, he has wasted or squandered or lost or destroyed the property and cannot return it, he is not held liable for it.

In this connection it is interesting to note that in general an infant is liable for fraud, slander, assault, conversion and other common law torts in the same way as an adult is; but generally it has been held that when an infant falsely represents himself to be of age and thereby induces another to make a contract with him, the infant is not liable.

It has been reported by the officers of the cruiser *Denver*, one of the Navy's men-of-war to receive costly silver services from the States after which they have been named, that four of the handsome silver loving cups attached to the service are missing and have been missing for about two weeks, at which time the officers entertained society people of Havana aboard the cruiser. The *Denver* is now lying at League Island, and efforts are being made to locate the missing silver, since its absence spoils the completeness and effect of the expensive display service.

Kansas City.

C. P. Kionka, of Kionka & Kionka, has started out on a southern trip, after spending a week in the house.

S. C. Lee, formerly with A. C. Hahn, has taken a position in the engraving department of Gurney & Ware.

Jake Levin, traveling representative for Kionka & Kionka, has just started out on a trip over his Iowa territory.

L. P. H. Hatch, Goodland, Kans., was in this city, last week, accompanied by his bride; the wedding took place Nov. 1.

W. E. Crellin, of the wholesale firm of Ward & Crellin, was in this city, last week, filling up his trunks. He goes out on the road again this week.

P. N. Nelson, Colorado and western Kansas representative of the C. B. Norton Jewelry Co., was in the home office, last week, refilling his trunks.

The following pupils enrolled at the Southwestern Optical College, during the past week: S. H. Gatch, M.D., Coyle, Okla.; Wm. E. Burkholder, Kansas City, Mo.; G. D. Palmer, Palmerville, N. C.

The following out-of-town jewelers called on the local jobbers during the past week: W. N. Kirkman, Edgerton, Mo.; Walter Sperling, Seneca, Kans.; J. H. Webb, Smithville, Mo.; Arthur Kroencke, Concordia, Mo.; J. Goldstein, Oklahoma City, Okla.; W. R. Pearce, Gardner, Kans.; R. H. Morehouse, Topeka, Kans.; A. E. Gordon, Shreveport, La.; Mr. Meredith, of Meeker & Meredith, Chanute, Kans.

News from the Optical Trade.

John R. Appleby, Minneapolis, Minn., has opened offices at 237 Center St., Winona, Minn.

J. H. Hukill, secretary of the Nebraska State Optical Society, was in Omaha, Nebr., last week, securing new members.

John Morehouse, with the Kennedy Optical Co., Detroit, Mich., was a visitor in Omaha, Nebr., during the past week.

A. M. Rankine, with the Columbian Optical Co., Denver, Colo., has just returned from a business trip in the northwest.

Fred Dunn, with F. A. Hardy & Co., Detroit, Mich., was recently confined to a hotel in Omaha, Nebr., for two weeks, on account of illness.

Gustave Moritz, St. Louis, Mo., will remove about Jan. 1 from his store, 622 Locust St., to the building formerly occupied by the Grand Leader at the corner of Broadway and Washington St.

T. M. Fisher, Auburn, N. Y., and Fisher & Swart, opticians, of the same place, have been succeeded in business by L. D. Leach and B. O. Simpson, who will continue the business under the name of Leach & Simpson.

Out of the six persons who took the recent examination for licenses to practice optometry in the State of Oregon only one passed—A. S. Huey, of Roseburg, in that State. The next examination will be held in Portland, about Jan. 18, 1907.

The stock of W. P. Hopwood, Lewisburg, Tenn., was slightly damaged by removal during a fire which broke out Nov. 2 in the building occupied by him.

Diamonds Set Without Cost

means a lot of money saved during the year.

This you can do very easily if you put the above assertion to the test. Bring me a platinum mounting with the requisite number of diamonds, and after I have set the article you will admit that through my skilful and artistic setting the diamonds have gained in brilliancy and quality, and that as a result your mounting has improved greatly and has enhanced three times the value you paid for the setting. At the same time your customers are satisfied with all the orders you turn out. You can also compete with all those who are slow to grasp the importance of these facts.

A trial will convince you of the above. I can refer you to the most reliable houses in the jewelry trade, who will testify to my reliability and to the skilful manner in which I execute my settings on fine.

UNITED STATES PATENTS.

ISSUE OF NOV. 6, 1906.

834,884. LENS-FOCUSING DEVICE. FRANK A. BROWNELL, Rochester, N. Y., assignor to the Eastman Kodak Co., Rochester, N. Y. Filed Aug. 3, 1904. Serial No. 219,286.
The combination with a camera, embodying a bed and a relatively adjustable lens-support and a

focusing-screen supported on the bed, of a plurality of stepped shoulders on the adjustable part, a stop on the bed and means for adjusting it into alignment with one or another of said shoulders.

834,943. STUD-PROTECTOR. ISAAC STEINBERG, Providence, R. I., assignor to Goldsmith & Harzberg, Providence, R. I. Filed Jan. 9, 1906. Serial No. 295,323.

A device of the character described, comprising hinged members having a shank-receiving socket and a passageway leading to said socket, and

means tending to move said hinged members together in a direction to close said passageway, said means consisting of a spring binding-strip encircling and embracing the edges of said members.

834,979. SALT AND PEPPER CRUET HOLDER. MARTIN HERMAN, Maitland, Colo. Filed Dec. 16, 1905. Serial No. 292,084.

In a device of the kind described, comprising a metal plate having a serrated edge, lugs formed on the end of said plate adapted to pass through open-

ings in the plate when the ends of the plate are bent back to form cylinders, the spurs formed by the serrated edge adapted to be turned upwardly to form the bottom for the cylinders, and an arm projecting upwardly from said plate and back upon itself to form a hook.

835,228. COLLAR-SUPPORTER. FRANK B.

REYNOLDS, Providence, R. I. Filed May 31, 1906. Serial No. 319,461.

As an article of manufacture the improved collar-

supporter herein described, the same comprising an integral or one-piece bar having the stock thereof bent to produce a pair of parallel longitudinally-extending tubes open throughout their length and being in substantial contact with each other, and a pair of independent pins removably mounted in said tubes.

835,267. SELF-FILLING FOUNTAIN-PEN. JACOB ULLRICH, Hoboken, N. J. Filed April 9, 1906. Serial No. 310,592.

A fountain-pen provided with a hollow handle, an inclosed flexible ink-bag, a presser-bar engaging said

ink-bag, and outwardly-extending push-pin on said presser-bar, and a tubular sleeve axially slidable on the handle and having a forward slot adapted to engage the push-pin.

835,299. EYEGLASSES. CLAIR H. BROWN, Detroit, Mich. Filed March 15, 1906. Serial No. 306,229.

In eyeglasses, the combination with lenses, of studs connected to the lenses and having in their front and rear faces vertical grooves with shoulders at each side thereof, a bridge-spring located above

the studs and having downwardly-extending ends which fit in the grooves in one of said faces, the said spring and its ends extending in a plane substantially parallel to that of the lenses, guards having upwardly-extending arms the ends of which fit in the grooves in the other face of the studs, and a screw extending through said ends and the stud, securing the same together.

DESIGNS.

38,305. TOP FOR POWDER-RECEPTACLES. JOHN H. GOSS, Waterbury, Conn., assignor to the Scovill Mfg. Co., Waterbury, Conn.

Filed July 26, 1906. Serial No. 327,968. Term of patent 14 years.

38,306. METAL DISH. HENRY B. BEACH and HENRY KAYSER, Meriden, Conn., assignors

to the International Silver Co., Meriden, Conn. Filed Sept. 10, 1906. Serial No. 334,068. Term of patent 7 years.

UNITED STATES TRADE-MARKS.

[The following trade-marks have been adjudged entitled to registration under the Act of Feb. 20, 1905, and are published in compliance with Section 6 of said act. Said section provides:

"Any person who believes he would be damaged by the registration of a mark may oppose the same by filing notice of opposition, stating the grounds therefor, in the Patent Office, within 30 days after the publication of the mark sought to be registered, which said notice of opposition shall be verified by the person filing the same before one of the officers mentioned in Section 2 of this act. If no notice of opposition is filed within said time the

commissioner shall issue a certificate of registration therefor, as hereinafter provided for."

Marks which are stated to have been "Used 10 years" are registrable under the last proviso of Section 5 of said act, which is as follows:

"And provided further, that nothing herein shall prevent the registration of any mark used by the applicant or his predecessor, or by those from whom title to the mark is derived, in commerce with foreign nations or among the several States, or with Indian tribes, which was in actual and exclusive use as a trade-mark of the applicant or his predecessors from whom he derived title for 10 years next preceding the passage of this act."

PUBLISHED NOV. 6, 1906.

Ser. No. **12,922.** (CLASS 61. JEWELRY, AND SOLID AND PRECIOUS-METAL WARE.) C. H. ALLEN & Co., Attleboro, Mass. Filed Sept. 22, 1905.

GOLDINE

Particular description of goods.—Collar and cuff buttons.

Ser. No. **16,592.** (CLASS 63. MEASURING AND SCIENTIFIC APPARATUS, APPLIANCES AND INSTRUMENTS.) F. A. HARDY & Co., Chicago. Filed Jan. 29, 1906.

Particular description of goods.—Lenses for eyeglasses and spectacles.

Ser. No. **20,038.** (CLASS 30. CROCKERY, EARTHEN WARE, AND PORCELAIN.) THE OWEN CHINA Co., Minerva, O. Filed June 4, 1906.

SWASTIKA

Particular description of goods.—Vases, mugs, tankards, and clock cases of porcelain or semi-porcelain material.

Ser. No. **20,703.** (CLASS 11. JEWELRY, AND SOLID AND PLATED PRECIOUS-METAL WARE.) E. M. WEINBERG & Co., New York. Filed July 2, 1906.

Particular description of goods.—Chains, chain trimmings, bracelets, brooches, tie-clasps, scarf-pins, bib-pins and buttons made of precious metal.

Ser. No. **20,792.** (CLASS 61. JEWELRY, AND SOLID AND PLATED PRECIOUS-METAL WARE.) INTERNATIONAL SILVER Co., Meriden, Conn. Filed July 9, 1906. Used 10 years.

HOLMES & EDWARDS

Particular description of goods.—Imitation silver-ware for table use, including knives, forks and spoons.

TRADE-MARKS REGISTERED NOV. 6, 1906.

67,221. CERTAIN SOLID OR PLATED PRECIOUS-METAL WARE. LANDERS, FRARY & CLARK, New Britain, Conn.

Filed May 16, 1906. Serial No. 19,599. Published Sept. 11, 1906.

UNITED STATES PATENTS THAT HAVE EXPIRED.

[Reported especially for THE JEWELERS' CIRCULAR-WEEKLY by R. W. Bishop, Patent Attorney, Washington, D. C.]

Issued Nov. 5, 1889.

BRITISH PATENTS.

(ABRIDGMENTS OF SPECIFICATIONS, 1905, FROM *The Illustrated Official Journal.*)

ISSUE OF OCT. 24, 1906.

13,536. FLOWER HOLDERS OR VASES. E. G. CAMELINAT, Birmingham. July 1.

A rose bowl or holder *a* for cut flowers is combined with a removable or fixed receptacle *d*, which may be used either for cut flowers or as a jardinière for a potted plant. The fixed or remov-

able top *b* of the bowl is formed either of perforated metal *e* or of wire netting to receive the cut flowers, and the receptacle *d* may be formed with or without a bottom *h*. The bowl may be provided with two or more receptacles *d*.

13,663. COLLAR, ETC., STUDS. G. TAYLOR, London, and T. MORTON, Birmingham. July 3. Grant of patent opposed.

In order to facilitate the passage of a stud of the type shown in Figs. 3 and 4, an introducer, shaped as shown in Figs. 1 and 2, is inserted in

the shank *8a* of the stud, Fig. 3, and removed when the stud has passed the buttonholes. When not in use, the introducer is inserted in a spring and pocket having a ring for attachment to a key-ring.

3,731. STUDS. C. C. G. ALFORD and A. H. ALFORD (trading as Alford Bros.), both of London. July 4.

A two-part collar, shirt, etc., stud *b* is inserted by means of a tag-like instrument *c*, having a spring shank *c'*, preferably split, to pass on to the hollow shank *b'* of the stud.

13,749. CARVING-FORKS. F. G. SCOTT, Sydenham, Kent. July 4.

The guard 2 is made from a separate piece of metal and is formed with a hole in it through which is passed the tang 3 of the fork 1. The

handle and guard are held in position by a nut screwing on the end of the tang which extends right through the handle. The guard is thus always in position.

13,767. FLOWER-VASES. R. TURLEY, "Twickenbury," near Birmingham. July 4.

Flower receptacles consist of a body part *a* to contain water and a removable perforated cover *b* to serve as a carrier for flowers or for flower vases or holders. The cover *b* is centered by one or more depending stems *e* which engage with

corresponding sockets *d* formed in the lower part. The depending stems *e* may be made hollow to serve as carriers for flower-vases. As a modification some or the whole of the perforations in the cover are fitted with additional sockets to receive vases.

13,768. PENS. G. SWEETSER, London. July 4.

A fountain pen *a* is fitted with a lightly-packed piston *d* on a rod *c* terminating in a screw cap or handle *c'*. To fill the pen, the piston is first drawn to the top, and the air thereby expelled. The piston is then pushed down until it reaches the enlarged or grooved part *e* which allows the ink to be sucked in. A valve, formed by the

piston-rod or otherwise may be fitted in the piston *d*, or a cup-leather instead of the loose packing, also a valve *f*, and seating *f'* may be provided to prevent leakage when the pen is not in use. The nib portion is sometimes arranged to have a sheath over it, to allow the pen to be filled from a shallow receptacle, or the cap is arranged to act as a sheath for this purpose.

Complete specifications accepted Oct. 17, 1906.
1905.

25,622. HAIR-BAND HOLDER. BACHMANN. 1906.

3,250. ELECTRIC ALARM CLOCK. ROTHWELL. 8,436. BRACELET. STARK, DAUB & DAUB.

10,084. WAIST AND SKIRT HOLDER. HOPE, HOPE & LAWRENCE.

Applications filed Oct. 8 to Oct. 13, 1906.

22,165. WATCH WRISTLET. ROBERT GEORGE and FREDERICK JARVIS, Clapton, London.

22,209. EYEGLASS MOUNTING. E. M. CARD, Kingston-on-Thames. Complete specification.

22,253. ELECTRIC TIMEPIECE. A. L. RAWLINGS, Taunton.

22,288. TIME-INDICATOR. E. H. CULMER, London.

22,321. WATCH PENDANT. J. F. KING, London. Complete specification.

22,396. BRACELET FASTENING. MINNIE F. EDE, London.

22,450. MATCH BOX. JOSEPH FEARNHEAD, Bolton.

22,469. STUD. S. J. PRESCOTT and G. H. FOSTER, London.

22,581. HAT-FASTENER. ANDREW DUFF, Glasgow.

22,620. HAT-FASTENER. W. H. WAKFER and SAMUEL PECK, London.

22,633. UMBRELLAS AND CANES. J. A.

DICKIS and ARTHUR HART, Strand, London.

22,662. EYEGLASSES. G. R. GRIMES, Birmingham.

22,666. CALENDAR. W. E. BEAUVOISIN, London.

Recent Customs Decisions As to Imitation Precious Stones, Jewelry and Kindred Lines.

Decisions in cases involving duties on precious stones, imitations, jewelry and kindred lines have been announced in the last week by the Board of United States General Appraisers, New York, as follows:

IMITATION PRECIOUS STONES DECORATED.—Protest of J. Mamluck & Co. against the assessment of duty by the collector of customs at New York. The importers contended that imitations of rock crystals, caochon in form, on which dogs' heads had been painted by hand, were dutiable under the provision in Par. 435, Tariff Act of 1897, for imitation precious stones not ornamented or decorated. Protest overruled.

IMITATION PRECIOUS STONES MOUNTED ON SCREWS.—Protest of Pitt & Scott (Ltd.), against the assessment of duty by the collector of customs at New York. The protest related to imitation precious stones set with metal and having a screw attached by means of which they may be used in mounting combs. The Board overruled the importer's contention that they were within the provision in Par. 435, Tariff Act of 1897, for imitation precious stones not mounted or set.

GUTTA-PERCHA FOUNTAIN PENS—PENHOLDERS.—Protests of Hensel, Bruckmann & Lorbacher against the assessment of duty by the collector of customs at New York. The merchandise consisted of so-called fountain pens, classified as manufactures of gutta-percha under Par. 450, Tariff Act of 1897, and claimed dutiable as penholders under Par. 187. Protest overruled. McClelland, General Appraiser: "The question, therefore, is whether such article, minus the pen point, is a penholder within the meaning of said Par. 187. A similar question was disposed of by the Board in the Illfelder case, protest, by an unpublished decision dated Nov. 4, 1903, the only difference being that in that case the article was of metal, and here it is hard rubber or gutta-percha. The Board held in said Illfelder case that the article was not a penholder, as that term is commonly understood, no effort having been made to prove a contrary commercial understanding."

Monthly Meeting of the Executive Committee of the Jewelers League.

The regular monthly meeting of the executive committee of the Jewelers League of New York was held at the organization's office Wednesday, the following being present: President Street, Vice-Presidents Karsch, Greason, Hodenpyl and Wormser, Messrs. Gough, Sloan, Jung, Bowden, and Secretary Marsellus, of the committee. The usual routine of business was transacted, such as approving the treasurer's report, granting changes of beneficiaries, etc. Payment was authorized to the beneficiary of Ernest Scholl, deceased.

Members were admitted from Baltimore, Brooklyn, Chicago, New York, Elgin, Ill., Wilkes Barre, Pa., Fort Worth, Tex., Sedalia, Mo., and Troy, N. Y.

Samuel H. Levy, of L. & M. Kahn & Co., of New York, was unanimously elected a member of the executive committee, to fill the vacancy in that body.

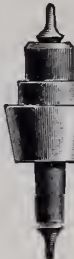

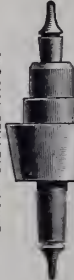

The next regular monthly meeting of the executive committee will be held Wednesday, Dec. 5.

P. E. Willman, Vernon, Ind., has been succeeded by H. E. Willman.

J. J. Buser, Freedom, Pa., has sold out to J. Allen, Coraopolis. Mr. Buser will engage in business in Mount Pleasant.

Orders for Balance Staffs should State the Size, model, grade and number desired.

THE HOROLOGICAL REVIEW.

Watch With Two Sets of Hands.

THIS invention, patented in Germany under No. 168334, by James Rochat, of l'Abbaye, Switzerland, has contrivances, (1) for impelling a pair of hands turning round an hour and minute dial disposed eccentrically to the center of the watch and symmetrically with the seconds dial; (2) for arresting, and (3) for setting the above-mentioned hands, combined with an arrangement for setting the hands turning round the ordinary hour dial.

Fig. 1 gives a front view of the watch movement seen from the dial side, in which the dial and parts above have been removed. Fig. 2 gives a view similar to No. 1; all the parts, however, except the dial and the hands, are shown. Fig. 3

FIG. 1.

is provided with a screw passing through the shell of the wheel *b* and engaging in a cavity in the arbor *a* in such a manner that the latter can drive the wheel *b* and the minute work with light friction.

The arresting contrivance for this indicating work consists of tongs *f*, revolvable round its outer end, and the two arms of which enclose the small wheel *b*. Above *f* is a lever *g*, fixed by a screw to the watch plate and released by a pushpiece *h*, screwed to the plate and passing through under the lid. The lever *g* carries a shoulder *q*, engaging between the arms of the tongs *f* and causing the latter to open or close, according to the position of the pushpiece *h*, so that the little wheel *b* can be made to revolve or be arrested at pleasure. The direction of the movement of

FIG. 2.

shows a section along *x-x*, and Fig. 4, a section along *y-y* of Fig. 2.

The dial (not shown) has, in addition to the ordinary hour circle, two dials disposed eccentrically and symmetrically to the center, one showing the seconds, the other the hour and minute divisions. On the latter, a pair of hands turn, the impelling mechanism of which consists of an arbor "a," provided with a gear whose teeth engage with the barrel; the arbor passes through the center of the third wheel *i* of the setting mechanism. On this arbor is a small wheel *b* for carrying the minute hand; it engages with a minute wheel *c* which is geared with a wheel *d*; the latter serves for fixing the hour hand and is provided with a shell.

A small nut *e* with a slit is fitted to the wheel *b*, running loose on the arbor *a*; it

the lever and pushpiece is indicated in Fig. 2 by arrows.

The setting of the ordinary watch hands and of the hands turning round the eccentric dial with hour and minute divisions is performed by means of a wheel *p*, engaging with the wheel *i*, and fixed to a rocking-bar *k*, oscillating below the gear *i*. Levers *l* and *m* are arranged on either side of the winding arbor. Each of these levers has an arm *s* and *t*, actuating the contrate wheel in the usual manner, and pushing it aside to bring it into gear with the minute wheel in the usual manner, and pushing it aside to bring it into gear with the minute works *c* and *c*₁, according as one or the other lever is pressed down. A spring *u*, inserted into the plate under the

lever *m* brings the movable gear back to its original position. Another spring *o*, screwed into the plate and passing between two pins fastened to the rocking-bar *k*, keeps the latter in its position, so that when the levers *l* and *m* are at rest, the wheel *p* is entirely independent of the minute works *c* and *c*₁. A second pin is fixed to the lever *l*; it strikes against the lever *g*, opens the closed tongs *f* and releases the little wheel *b* when the minute work *c* is set. If the other lever *m*, actuating the minute work *c*₁, is pressed down, the tongs *f* remain closed, for the wheel *i* remains free and transmits its motion immediately to the wheel *p* and the minute wheel *c*.

By means of the mechanism, which we have described, the watch is furnished with two contrivances for indicating the hours and minutes, one of which can be set in motion or stopped at pleasure without in any way arresting the main work.

The watch can be used as an hour and minute counter, for the hand revolving round the eccentric dial with hour and

FIG. 3.

FIG. 4.

minute divisions, can be stopped at any moment, while the hands traveling on the ordinary hour-dials, continue their revolution, thus recording the time that has elapsed since this moment.

The watch can also be used for keeping a record of a particular instant of time, or the two works can be set during a journey in such a manner that the different times of two countries can be indicated while crossing the frontier.

E. A. Jensen, a watchmaker of Johnson, 12 miles east of Tecumseh, Nebr., about a week ago, lost several repairing implements during a fire.

Charles Veicht, Milwaukee, Wis., was arrested last week on a charge of assault and battery, preferred against him by Mrs. L. Carlin. The plaintiff claims that the jeweler slapped her and ejected her from his store.

The case of Earl Fouts, who was arrested recently on a charge of looting the store of W. W. Bugg, Jackson, Mich., was concluded in the local police court last week, and Fouts was held to await examination by the Circuit Court, bail being fixed at \$500.

Wise Dealers Set Store by the ELGIN

The wide-awake dealer knows the value of a good stock of Elgin Watches. He knows that they are a good criterion by which to have the public judge his store.

He knows that Elgin customers are satisfied customers, and that satisfied customers are the very foundation of successful business. The

ELGIN WATCH

is the World's Standard Timekeeper

See Jobbers' List for prices or write the Company.

Every dealer is invited to send for the Elgin Art Booklet, "Timemakers and Timekeepers," illustrating the history and development of the watch.

THE WATCH IN HOLIDAY TRADE

IT IS APPROPRIATE at this time to emphasize the importance of the Watch in Holiday Trade. It is admirably suitable for presentation purposes, and experience justifies the expectation of substantial sales every year arising from this special demand. Unlike many insignificant articles which are bought for gifts, the watch runs into money and affords profits which are worth while.

This Holiday demand naturally calls for watches of the best class. These Offices carry all leading American watches, and render thoroughly satisfactory service.

OPTICAL DEPARTMENT

Incurable Eyestrain.

By GEORGE M. GOULD, M.D., Philadelphia, Pa., in the *Journal of the American Medical Association*.

(Continued from issue of Nov. 7.)

A PROFOUND impression was left on my mind by the history of one patient, a man sent to me by a general physician, with the ready-made diagnosis of "migraine." The man had never had sick headache, so his disease was not "migraine"; the general physician could not cure this patient's headaches, so he sent him to me. I at once notified the physician: 1, that the man never had had "migraine"; 2, that the man's headaches were caused by eyestrain; 3, that in all probability I could not cure the man of his eyestrain headaches. This was because he had a nebulous cornea of the left eye, also a very high mixed astigmatism, giving about 20/50 vision. I ordered glasses, and impressed on the patient the necessity of returning soon and frequently.

Pursued by the relentless mystery of his pain, the man fled to the neurologist, who drugged and massaged him without relief; the neurologist then turned him over to the rhinologist, who took out all the turbinates of one side of the nose, saying those of the other side must be taken out, and eventually the frontal sinus opened up "by two holes." The man fled. In this man's case, I shall exclude the left eye from vision, if I can get him out of the hands of the operating rhinologists and the neurologists.

These untransparent corneas almost always cause eyestrain, sometimes of a most grievous severity. I fear we greatly neglect to take this fact into consideration, and dismiss without explanations to the patient, and sometimes without correction of the ametropia. In rare cases, possibly the ametropic correction may not, especially at first, give relief; it may more rarely even increase the eyestrain, by stimulating the waning and fading effort and possibility of helpful and useful fusion which must be finally renounced. The problem then becomes most complex and perplexing, and demands the highest judgment and skill to meet it.

But purposely to exclude an eye from vision under such circumstances is a hazardous procedure, and needs long pondering. I have not, I think, been compelled to do so more than once, while final success has generally followed ingenuity and persistence to save. I have had one most instructive case which astonishingly proved the wisdom of *nil desperandum*. It was that of a man nearly frozen to death. The keratitis had produced such a dense leukoma, and apparently ruined eyeball that several good oculists advised enucleation, fearing symp-

thetic inflammation of the other imperfect, but still functional eye. Enucleation was not allowed, and later the better fellow was utterly ruined, and now with the eye pronounced doomed, the man has 20/40 vision and lives a useful life. Incurable eyestrain is a necessary result of conical cornea.

The adherent irises following neglected or badly treated iritis are often sad evidences of professional ignorance and lack of skill. If occlusion of the pupil is added, not much is left except despair, and "making the best of it." I judge that an artificial pupil generally only adds to the misery. In such cases hope of cure being renounced, the choice may lie between *laissez-faire*, or hastening the exclusion of the eye, or of the cortical center, from participation in vision. But, first, there should be a desperate attempt at ametropic correction, for, with it, nature may keep up the struggle with less pain, and with less eyestrain; even a small degree of vision preserved in one eye, avoids the danger of blows, injuries, etc., upon the blind side of the head. Rents at the corneal border of the iris, causing double pupil, etc., inevitably produce eyestrain until nature excludes the eye from visual influence.

Should tattooing sometimes be tried before it is too late? I have one patient with traumatic rupture of the iris, the pupillary edge being attached to the cornea. There is also an undiagnosable irregular astigmatism. The eye is too good to exclude from vision, and the patient's symptoms are not those of traction on the adherent iris; they are due to eyestrain, but I cannot relieve them. For 10 years I treated a patient, one of whose eyes had been ruined by a faulty operation. There were three artificial pupils. I had to exclude the eye from vision until the sensation was dulled and denied.

Cicatrices in or near the cornea from wounds, injuries and operations, and producing irregular astigmatism, not seldom as we all know, cause eyestrain.

Bungling operations on the lids, entropion, ectropion, etc., have also an influence in making the visual act harder to carry out. One of my patients had a fistulous opening on the cheek through which the tears trickled all her life. It was made by a great surgeon 25 years ago in an attempt to open a tear-duct in dacryocystitis. She had had enough of operations, and would not dream of more. "Weeping eyes" suffused with tears are somewhat common, with eyestrain as an inevitable result.

There is in my mind little doubt that the chief cause of senile cataract is uncorrected or miscorrected ametropia. In eyes preciously long and properly glassed it does

not occur. We all know how incipient cataract often increases eyestrain and necessitates frequent changes in refraction. "The headache of incipient cataract" has become a familiar term. If the cataract is monocular and is advancing, I think it generally advisable to exclude the eye somewhat early. Usually the earliest stages do not affect the center of the pupillary area. When the clear space chosen for vision is at one side of the pupil, eyestrain inevitably follows from the effort to get the macula in line with it.

I have had cases in which vitreous opacities seemed to cause or increase eyestrain. They oftener cause the patient great worry and quacks make much money out of them. *Musca volitantes* do not cause eyestrain, if they are really physiologic, as properly speaking they generally are. One has constantly to calm the fears of patients in reference to them.

Ametropic choroidoretinitis is very common, indeed, almost always exists in long uncorrected ametropia. It is a perfect example of the "vicious circle" of disease, for it is the result of eyestrain, the local effect, and at once it becomes the cause of further eyestrain, both local and general.

Other forms of choroiditis, and of retinchoroiditis, do not usually produce eyestrain unless the macula region is implicated, and unless it has ended in floating vitreous opacities. If one macula is destroyed or badly injured, eyestrain is inevitable until the eye is dulled to functionlessness. If both eyes are affected, the eyestrain must be persistent. I had a patient with both maculas so equally and irremediably hurt that new maculas had formed above the old ones. I sent him to live on a western ranch, where he is happy.

Tenotomomania usually results in incurable eyestrain. After the muscle-tailor has done his work there is not much we can do, except to apply the proper glasses and wait for Nature's possible undoing of the injury through years of suffering. I remember one patient who had no phorias whatever after 28 tenotomies by one graduate tenotomist. The machinery of head and body was largely devoted to getting his head in position to see every degree of change of image. His ocular muscles had been surgically paralyzed.

4. *Amblyopia or other Injury of Ametropia*.—I have elsewhere published a study of "Aniblyopiatrics," or the cure of amblyopia, when it is curable. The majority of patients have some degree of ametropic choroidoretinitis or amblyopia from eyestrain, and the majority of these are entirely curable. In extreme cases it is not curable.

Optical Department.

The eyestrain of incurable amblyopia usually depends on the amount of near work done. A young lady patient of mine with 20/40 vision from old uncorrected astigmatism was free from symptoms in her home, but when she went to college there was great suffering. In childhood, in a very few years, strabismus will often render the eye visually useless, even though made cosmetically useful by surgical operation. I had one patient with what I called squint hemianopsia, the temporal half, vertically, of the retina being wholly blind. One may never be sure how much the amblyopia from disuse which follows the eyestrain exclusion of an eye from visual function is due to retinal or cortical causes. And one can also never be sure that the worst cases may not be improved by long and patient amblyopiatic methods.

Some years ago a European physician found a couple of children supposedly blind in a blind asylum, who still had some perception of light. He educated this remnant of function, first, in distinctions of light; second, of color; and third, of form, until the children were taught to read and were rescued from a life of blindness. A blind patient over 50 years old has been suddenly brought to perfect physical and sensational vision by operation, but it took some years to perfect intellectual vision.

The lesson in all cases of amblyopia is that we should trust nature and help her by ingenuity and patience to improve amblyopia, and to renounce only when the impossible is demonstrated. I have had but one case in which I had to exclude the eye from vision, because the little improvement possible was a little improvement, and was not further improvable. The influence of dextrocularity in conjunction, of course, with dextromanuality will usually result in the retention of better visual acuity in the right, even with greater ametropia in the right. Nature will always aid more to save the right-eye vision than the left in the dextral.

Accommodationlessness, that is, undeveloped accommodation, may be a result of chronic exclusion of one eye from function or near work, caused, of course, by ametropia. I have had at least three patients whose ametropia was such that one eye was used for near only, and the other only for distance. The latter eye had no accommodational power. If caught early enough in life the defect may be remedied by bifocal lenses. If the patient has passed adolescence, such a device will scarcely prove successful, and the established habit must be permitted to continue; but some eyestrain will also persist. The least intermixture of stigmatism will demand glasses, e. g.,

R. — S. 2.50 — C. 0.50 ax. 50°.

L. — Cyl. 0.25 ax. 140°.

and fusion will come at once.

Subnormal accommodation is far more frequent than is supposed, and its existence has been a prolific source of many of our past failures to relieve eyestrain. We must be on our watch for it in every patient. None of my successes have been more brilliant or satisfying both to patient and oculist than the half hundred in the past few

years, by attention to this most important condition. I now have a child of nine, and another of 12, wearing bifocal lenses with admirable results. I have found a few cases in which the subnormality differs in the two eyes. Only the best conscience and the most expert intellect may rightly decide when to persist in stimulating or coaxing an amblyopic eye into use, and when to exclude it.

5. *Heterophoria*.—This cause of eyestrain appears to me refractional in origin and innervational in mechanism, but when it is too high, or of too long standing, it may produce eyestrain, either because too great injury has been done, or because reinstatement of orthophoria is impossible. Preventable all such conditions are, but I have not seen tenotomy of service. In the young if orthophoria is possible, by operation, it is possible by means of glasses, orthoptic exercises, etc. And without proper glasses no operation is useful, because it was the ametropia that produced the heterophoria.

Strabismus has the same law with the exception that its genesis is in childhood, is quickly established, and the irreparable injury sooner completed. With strabismus fixed eyestrain ceases, because nature has despaired of help, and has renounced effort. Heterophoria is the cry of the dying eye for help; heterotropia is its epitaph. The strabismic death may sometimes be only resignation and coma, and resuscitation still be possible. Undoubtedly we frequently give up the struggle too quickly. But it is murder to delay intervention, as I was taught, until the child should be seven years old. Such ophthalmology should be put on trial for murder in the second degree. I have cured strabismus by glasses alone in patients over 30 years of age.

In those patients reaching us over 40 to 50 years of age, with high heterophoria, would it be wise to advise operation? I hardly think so. One of the best illustrative cases I have was that of a woman who had 33° of esophoria. I should have lost my patient if I had demanded operation. I incorporated with her ametropic correction 13° prisms in each eye for distance, and 7° for near, and she has never for years had enough discomfort to make her think of operation. By a marvel of the optician's art her lenses are not very heavy or unsightly.

6. *Interruptions or Contradictions of the Normal Co-ordination of Dextrocularity and Dextromanuality*.—When traumatism, inflammation or other cause conflicts with or extinguishes the established co-ordination of dextrocularity and dextromanuality so that the left eye (in the dextral) must take up the proper dextral function of the right, eyestrain, at least for a time, almost inevitably results. There is an awkwardness, indecision, slowness, etc., of action, thought or vision, probably of all three, which may be more or less lasting. I have had a number of such cases, but the particulars are too numerous to find room here.

7. *Cerebral or Nerve Disease Occasionally Causes Eyestrain*.—Paralysis of accommodation, not from peripheral causes, but from cerebral ones, may exist, overlooked, in one or both eyes. Some eyestrain will still exist even with bifocal lenses. Failure

of detection may be caused by the cycloplegia and may be present without a noticeable mydriasis. I have had a number of such cases.

(To be continued.)

Optical Notes and Briefs.

Mr. Fairborn, with E. Kirstein Sons Co., Rochester, N. Y., was a visitor in Omaha, Nebr., recently.

Philip Klein, Los Angeles, Cal., has been elected a member of the board of directors of the Chamber of Commerce.

Mr. Hurlbert, with the American Optical Co., Southbridge, Mass., was in Omaha, Nebr., last week, calling on the trade.

Dr. Goldstein, eye specialist, will practise optometry in Tampa, Fla., during the winter months.

The Kentucky State Optical Association has decided to meet next Spring at Lexington, Ky. The present officers are: President, C. H. Bowen; secretary, L. J. Bachus.

The Keystone Jewelry Co., San Francisco, Cal., has completed the equipment of its optical department, in charge of N. Manasse, probably the oldest optician in that city.

The Van Ness Ave. store of the Chinn-Beretta Optical Co., San Francisco, Cal., is at last ready for business. All the new fixtures have been put in and the interior decorations have just been completed.

The Standard Optical Co., San Francisco, Cal., has brought suit against C. Halberg and H. Calleman to restrain the latter from conducting business under the name of the Standard Optical & Jewelry Business.

Henry Kahn & Co., San Francisco, Cal., have installed one of the largest optical safes in the city in the Van Ness Ave. store, at a cost of \$2,000, and have put in a new fitting room on the mirror plan. Dr. M. Lohrner has been added to their list of opticians.

The Standard Optical Co. recently opened an attractive store on Van Ness Ave., San Francisco, Cal. The interior is finished in old Colonial style and is very roomy and artistic. The examining room is in the rear and is fitted to accommodate four opticians.

The Chinn-Beretta Optical Co., Oakland, Cal., which has establishments in five towns, is preparing to open on a small scale a school for the study of mechanical optics. At present the students will be restricted to five in number. The course will include three years of study.

Edwin Bourke Connolly, of the J. R. Jenkel Optical Co., San Francisco, Cal., has invented and will have patented a new axis finder which he calls the "Instantaneous." He claims that the same work can be done with this instrument in less time than it can be done with other apparatus of its kind. He says his invention can be manufactured and sold at \$1.

William R. G. Phair, Wellington G. Maybee, Richard F. Reid, Rosalind C. Phair and Adeline Maybee, Winnipeg, Man., have begun business under the laws of Manitoba as "The Western Optical Co., Ltd.," to manufacture and deal in optical goods, etc., with a capital of \$25,000. W. G. Maybee was formerly in business at St. Catharines, Ont.

RETAIL JEWELERS ADVERTISING

Elementary Lessons in Advertising, Including Some Practical Information Regarding Type

KNOWLEDGE of types and display is necessary in order that ads. may be made as powerful as possible, says the *Reader and Canadian Jeweler*. The compositors on almost all newspapers are good fellows and will do the best they can—partly as a matter of personal pride—to make ads. attractive, and bring out their salient points. But they cannot be expected to know of themselves exactly what the ad-man wants, and it is essential that at least fairly definite instructions be given them.

And yet a knowledge of types and display is the smallest part of advertising. What really counts is the language of the ad—which depends entirely on the mind of the man who writes it.

Whoever said "words are meant to conceal thoughts" knew nothing of advertising. Here, words are meant to express thoughts. And, unless the thoughts amount to something, the words cannot.

WHY HIS ADS. ARE BEST.

Successful advertising is a matter of the heart—to heart to heart. The man whose ads. are best is the man who knows people—their lives, their aims, their thoughts. He thinks with them and for them, and necessarily writes in language they cannot resist.

If an adman is a student of human nature, though he may not be a brilliant man, he can write good ads. But no matter how clever he is, or how broad his education otherwise, if he knows not his fellows—has no place in his heart for them—his ads. cannot be good.

All this by way of introduction; now to something more technical.

TECHNICAL INFORMATION.

All types, rule, cuts, etc., are .918 of an inch high; hence the term, "type-high."

Formerly the body size of types was designated by name—nonpareil, brevier, etc. Owing to the absence of a uniform standard, sizes of the same name from different type foundries varied. The adoption some years ago of the "point system" by all the typefounders of the United States brought about an absolute uniformity of the different sizes.

HOW TYPE IS KNOWN.

The point system is based on an inch having 72 fractional parts, termed "points," each size of type being designated according to its fractional relation to an inch, expressed in points; thus, 8-point is eight twenty-seconds of an inch, 14-point is fourteen seventy-seconds of an inch, etc.

The following table gives the names of the different sizes according to the old sys-

tem, also their relative sizes under the point system:

| Point names. | Old names. |
|---------------|---------------|
| 3½-point | Brittiant. |
| 4 or 4½-point | Diamond. |
| 5-point | Pearl. |
| 5½-point | Agate. |
| 6-point | Nonpareil. |
| 7-point | Minion. |
| 8-point | Brevier. |
| 9-point | Bourgeois. |
| 10-point | Long Primer. |
| 11-point | Small Pica. |
| 12-point | Pica. |
| 14-point | English. |
| 18-point | Great Primer. |

Publications basing their advertising rates upon a given price per agate line continue to employ the old-size agate, that body being the most practical because 14 lines of it make exactly one inch, whereas neither 14 lines of 5-point nor 5½-point do, the former making two points less than an inch, the latter five points more.

Under the old system, sizes larger than 18-point were designated by a multiple of a smaller size; thus, two-line pica, double English, three-line great primer, etc.

WHAT THE EM IS.

An "em" is the square of the body of a type, of whatever size.

Most newspaper columns are 13 ems pica wide, although some are 12 or 12½ ems pica. Magazine columns are almost always wider.

Type is divided into two classes—"body" and "display." The former is that in which reading matter—newspapers, books, etc., is set, while the latter, which is always different in face from body type, is used for headings and for lines that are to be made especially prominent.

DISPLAY TYPE FACES.

Display or job faces are rarely to be found smaller than 6-point. The sizes usually to be had descend in even numbers of points only, as follows: 6-point; 8-point; 10-point; 12-point; 14-point, frequently; 16-point, not frequently; 18-point; 20 point, not frequently; 22-point, not frequently; 24-point; 28-point, not frequently; 30-point; 36-point; 42-point, frequently; 48 point; 54-point, not frequently; 60-point and 72-point.

Type may be set "solid" or "leaded." When solid, the lines of type are close against each other; when leaded, thin strips of metal—usually two points, or one thirty-sixth of an inch in thickness—are between the lines.

NUMBER OF WORDS TO SQUARE INCH.

The approximate number of words to the square inch. in the various sizes of body type, is as follows:

When set solid:

| | |
|--------------|--------------|
| 5½-point—63. | 9-point—28. |
| 6-point—47. | 10-point—21. |
| 7-point—38. | 11-point—17. |
| 8-point—32. | 12-point—14. |

When leaded with 2-point leads:

| | |
|--------------|--------------|
| 5½-point—46. | 9-point—21. |
| 6-point—34. | 10-point—16. |
| 7-point—27. | 11-point—14. |
| 8-point—23. | 12-point—11. |

The space between lines, at ends of lines, or at top and bottom of an ad. is called "white space."

WHAT IS MEANT BY "DISPLAY."

"Display" in advertising means three things, the word being used interchangeably and always understood in its proper connection: Type other than body type, in which lines, words or figures meant to be prominent are set; a manner of setting unlike that used for news or editorial matter; an ad. largely set in display type, or in which white space is a feature.

White space is often considered to be as valuable for purpose of display as is display type. An ad. can be made very striking, even though display lines may not be especially large, by the use of white space through and around it.

SIZES MOST USED FOR ITEMS.

Nonpareil—or 6-point—type is the size most often used for items in retail advertising, although many stores consider that 8-point is as small as will be read by any considerable part of the public.

The adman should decide on the sizes of type he wants for "body matter"—introductory and items. He will not go far wrong if he adopts the following rule:

If items are in 6-point, introductory in 8-point.

If items are in 8-point, introductory in 10-point.

For single and double column measurements, 8 or 10-point is large enough for introductory—indeed, 10-point is sufficient size for three columns, but beyond that width, 12-point is a better size.

For headlines, the sizes to be used should be about as follows:

| |
|--------------------------|
| Single column, 12-point. |
| Double column, 18-point. |
| Three columns, 24-point. |
| Four columns, 36-point. |

Above four columns the size may depend entirely on the traits of the particular ad.

If a second display is to be used under a headline, it should be 6 to 12 points smaller.

MUCH LEFT TO COMPOSITORS.

It is hardly practicable to mark the size type in which every display line is to be set. The best plan is to select a certain style of type for all display lines, and leave the size to the compositors—except that headlines should be of uniform size for single-column widths, double-column widths, and so on.

As, however, all headlines of each width should be the same size, after an ad. is set up satisfactorily count the letters in a line of each size, and do not write more than that number of letters for any lines intended to be of similar length.

(To be continued.)

Frank W. Swearingen, Topeka, Kans., has opened a branch store at St. Mary's, Kans. Albert Wilson will have charge of the new establishment.

ment in the issue of Nov. 28.*

The Window Display During Horse Show Week
Seasonable Suggestions for the Enterprising Jeweler

WITH the approach of the Horse Show at Madison Square Garden, New York, it behooves the enterprising retail jeweler not only to equip himself with merchandise fashioned to enlist the attention

Around an equine statue mounted on a base of arbitrary height "horsey" jewelry always associated with the event, should be artistically distributed, interspersed with a few well-assorted riding crops, spurs, bits,

A SUGGESTION FOR A STRIKING HORSE SHOW WINDOW DISPLAY.
(Drawn expressly for THE JEWELERS' CIRCULAR-WEEKLY.)

of the large number who attend the event, but to display it in a manner that will arouse the interest of prospective purchasers.

Illustrated herewith is an original suggestion which may serve as a nucleus capable of much elaboration. The illustration requires but little explanation. The rosettes securing the various streamers should be designed to represent the ribbons awarded to prize-winning contestants. The streamers may be made of black or russet velvet to represent reins. The back drop and floor covering should harmonize with the general arrangements, and should be of such material as will fittingly reflect the articles displayed. A red or black plush answers his purpose very effectively.

etc. The large horseshoe might be studded with topical small pieces of diamond jewelry, such as horseshoe scarf pins, brooches, etc. Potted palms and ferns, banked in both corners amid a profusion of yellow and white chrysanthemums, will lend the necessary Fall suggestiveness. Aside from offering the jeweler an opportunity to exercise his ingenuity as a decorator, a display of the nature suggested emphasizes his progressiveness and draws attention to his general stock. The Horse Show at New York is a social event of national importance, as its patrons, exhibitors and visitors are drawn from all over the country—a fact which should appeal particularly to jewelers who have stores in towns with fashionable suburbs.

How the German Jewelry Trade is Meeting Trade Evils.

IT is certain that at the present time Germany is the European country whose trade development and industrial methods are watched with keenest interest in America. This is doubtless because the Germans have acquired a reputation for studiousness and thoroughness which soon makes them experts in whatever subjects they take up. Among recent reports from Germany, one from the German Jewelers' Association is of particular interest in showing how the Germans are resorting to the principle of trade combinations to protect their own interests, says the *New York Commercial*.

The German National Association of Goldsmiths has been suffering from many of the difficulties and anxieties which beset similar bodies in Great Britain and America. It appears from the transactions of this body that 24 of the leading German manufacturers of silver plate and kindred goods have signed a uniform price agreement, the purpose of which is the abolition of unfair competition in the trade. The manufacturers have promised not to sell any goods to retail dealers who cut prices.

Other items of discussion at the convention included the establishing of an assaying office for precious metals for the special purpose of the association, and the institution of insurance against burglary because the German insurance companies demand too high a premium for jewelers' goods. The association also discussed the introduction of a metrical carat weight, which would be the same all over the world, the present carat weight for precious stones varying in different countries.

Not less interesting is a report of meetings of several branches of the German wholesale jewelry trade. It appears that all the sections of the wholesale trade wish the price agreement for certain staple articles to be extended to still other articles, because the agreement has proven to be of the greatest advantage to the wholesale and retail dealers. It was agreed that wholesalers who do not sell staple lines at the arranged prices shall be liable to fines, the money to be given to a watchmakers' school or for other beneficent purposes.

So it seems that trade combinations and concerted movements on the part of producers or merchants for their own protection are not solely American institutions.

Precious Stones Brilliantly and Grotesquely Portrayed by Attractively Designed Advertising Floats

THE Priests of Pallas, of Kansas City, Mo., have for the past 22 years given a parade each Fall. In former times it was made up of floats, drawn on wagons by six and eight-horse teams. Light was thrown on the floats from torches carried alongside. Since about the year 1900, however, the floats have been built on cars, and run over the street car tracks. Electricity has been used to give them both brilliance and motion, and the parades have really become things of beauty. Each year the floats represent some new group. In former times they portrayed mythological subjects, but last year they took up flowers, and this year they represented jewels.

As the subject of the parade is a secret each year until it really comes on the street, there were no photographs of the floats, but the accompanying illustrations were made from the original drawings, made by Fawcett Robinson, who designs all the Kansas City floats, and who has of late years been designing the floats used in Los Angeles, Cal. Of course, these drawings are not nearly so complete as the floats, but they give a fair idea of what the completed float looked like. Of course, the reader will have to use his own imagination to supply the beautiful colors produced by the proper handling of the electric lights. Some of the stones had a very natural appearance.

The following description, taken from a local daily exchange, describes the floats in their order in the procession:

"First came the 'Amethyst.' Beneath a shimmering canopy of gauze sat nine young women gowned in rich amethystine hues, under a blazing festoon of lights of many colors, a very riot of red and white and blue, with gorgeous sunbursts spangling and encrusting the whole. Drapery arranged in cunning ring effects carried out the ideas most effectively.

"The Turquoise' was represented by a beautiful arbor of blue and white, with fountains playing in the front and rear.

"The Opal' was represented by a beautiful white crescent typifying a cocoon, from which a beautiful butterfly had emerged, and upon the butterfly were seated girls, producing a very striking effect. Great crimson circles at the back and blue in front framed other maidens, all gowned in opal.

"The Topaz' was one of the prettiest in the parade, a marvelous creation of scroll work, and the whole constituting a perfect blaze of the symbolic color of the float.

"The Sapphire' was a fantastic creation in blue, with a pretty but rather scared looking young woman mounted upon a monstrous bug of unknown entomological antecedents or proclivities. But it was pretty all the same, and nobody got the blues looking at it.

"The Diamond' was a blinding dream in pure white, representing a diamond with dozens of facets and in the interior a bevy of handsome young women. The yellow

setting of the gigantic ring made an effective contrast.

"The Garnet' was another fantastic affair, representing a monstrous lightning bug ridden by a young woman. The electric manipulation of the automatic lighter was particularly ingenious.

"The Emerald'—blessed be the green isle it called to mind, with the shamrocks

"The Moonstone' was a 'comic,' a tremendous silver 'Man in the Moon,' who had a wicked but rather labored wink to his eye.

"The Ruby' was a beautiful barge effect, with a great flaming heart for a sail and a bevy of beauties riding peacefully along to the haven where the red heart led

"The Pearl' represented an opening shell discharging the treasures which it had contained, and the dainty effect was strongly contrasted with the sea serpents and other marine effects that added *vraisemblance* to the whole.

"The Coral' was one of the novelties of the parade. A gigantic, cunningly wrought fish was suspended high in the air, and or

ROUGH SKETCHES OF FLOATS RECENTLY SEEN IN KANSAS CITY, MO.

growing all along the side and with the bonny lasses bechune the four sides of it! That was one of the most 'taking' of the entire parade, that great harp of gold on a field of green. No wonder it was greeted with cheers as it passed along the route, for it told its story without a word. Inside the harp were Irish colleens in gowns of green.

its back was seated a mermaid. Down in the water gleamed great scarlet flashes of coral, making the effect striking in the extreme.

"The Tourmaline' was an effective conceit in red, representing a canopy beneath which sat a number of young women gowned in red.

"The Catseye' brought the parade to

Storekeeping Department.

close. This was evidently under the auspices of the Order of Hoo Hoo, for it was a monstrous black cat, dimly outlined in white lights and with the spot light thrown on the head, whence gleamed most realistic catseyes and from which protruded whiskers some feet in length. The cat had a lever trick of humping its back as though it had just caught sight of a dog, and the float caused many a laugh along the route of the parade."

It is fitting here to give a criticism by an expert in precious stones, E. Kionka, of the firm of Kionka & Kionka. He sent the following to a local paper:

"The splendor of last night's parade is in our minds yet, and who did not enjoy it? But we take the liberty to give an expert's opinion on the different stones represented.

"The amethyst never came from Siberia. It was entirely too light in color, although it showed much fire. The turquoise was too blue and missed the mellow tint so characteristic of the fine kind. The opal was very fiery, but had too much blue in it. We prefer the flaky green, yellow and red shades of the Hungarian stone. The topaz was a good specimen and its straw color would have taken the fancy of any connoisseur. The sapphire was a very cheap grade and could be bought for a few dollars a carat. The diamond was the most valuable of all, and according to the prices at present would readily sell at \$170 a carat. It was slightly off color, but altogether a very lively stone. The garnet was a very poor imitation. It had neither the brown tint of the Bohemian stone nor the dark red of the American. The emerald had a good color and was a clear stone and very sparkling. The moonstone, with its mellow, melancholy light and winking dreamy eyes, was one of the best we ever have seen and should command a good price on account of its size.

"The ruby was too red. We think it ought to have been reconstructed and it would have then been a more perfect specimen of its kind. The pearl was too yellow, although it could pass as a first quality fresh water pearl. On account of its size the coral was a very valuable piece. We missed in the tourmaline the rose tint. It was too dark to be a good specimen. The catseye—there was a cat, and there was an eye. It was indeed real and we could even see it wink. Altogether it was a very nice collection of precious imitation stones, and must have made any stone dealer happy to see represented so much sweetness and loveliness."

J. Williams, at one time engaged in the retail jewelry business with his father in Lynchburg, Va., under the name of J. Williams & Son, died at his residence at that place, 100 S. Church St., about a week ago, aged 72 years. The deceased later engaged in the dry goods business. He entered the Confederate service at the outbreak of the Civil War, and was afterwards commissioned a captain in the quartermaster's department, with headquarters in Lynchburg. He served with honor at the battle of Five Forks.

The Value of a Customer.

WHAT'S the cash value of a customer? Of course they vary. Some are worth much good American money each year, some are less valuable, but all should have a market value to you, or you should cut out their trade. You are not in business for fun. Every customer of the retail catalogue house is an asset.

tomer, without appearing to show favoritism. You should go to the limit with any customer whose trade is valuable.

And by the same measure, you should know the undesirable trade that it would be to your advantage to cut out. With this class of trade, make a quick shift. Make them pay for their goods, and if they are not willing, see that the goods are not taken away from your store.

ANOTHER WINDOW DISPLAY BY THE DIAMOND & JEWELRY CREDIT CO., LOUISVILLE, KY.

They capitalize their assets. When a customer pays his bills he becomes an asset. If he simply runs an account to be liquidated years afterward he is a liability, and his trade is not worth having.

The merchant can readily put a value on each customer. If he is of value, you should put forth more strenuous efforts to hold his trade. You should put yourself out to satisfy the demands that he may make upon your establishment and get the goods as speedily as possible. You should go out of your way to cater to this cus-

Better pay attention to the customers who have a market value than to fool away your time with old liabilities.—*The Hardware Trade.*

George J. Snyder, for some time in the employ of Jules Wendell & Son, Oswego, N. Y., died recently, aged 34 years.

A quantity of jewelry taken from Earl Fouts, arrested in Hamilton, O., has been identified by W. W. Bugg, Jackson, Mich., as part of a lot of plunder which was stolen from his establishment a short time ago.

Workshop Notes & Queries

[Answers are also solicited from our readers to the questions published on this page.]

QUESTION No. 1706.—To Restore the Luster to Gold.—How can I restore the fresh appearance of colored gold articles of jewelry? C. K.

ANSWER:—Such articles will occasionally assume a brown color, more especially when the carat of the gold is less than 15 carats. This brown color is due to a tarnish of the low carat gold under the colored surface, produced by some gas or foul air. It may be removed by means of the following composition: Bicarbonate of soda, 60 grammes; chloride of lime, 25 grammes; chloride of soda, 15 grammes; distilled water, 250 grammes. Stir the ingredients lively in the water and dip the jewelry in the solution till the tarnish disappears. Rinse in clean water and then in alcohol; dry in sawdust. After use decant the fluid for future use and eject the sediment.

QUESTION No. 1707.—Removing Green from Gold.—Some time ago we asked how to remove green from gold. Used bank of 10 electric lights, voltage 110, and 3/4 oz. cyanide potassium to 1 qt. of distilled water as you directed, but did not obtain good results. Please let us know if there is any other advice you may be able to give.

ANSWER:—For depositing or stripping gold or silver a dynamo or a Smec battery is usually employed, but the voltage, at the highest, should not exceed 10 volts. To strip small articles in a quart solution, a small battery, which costs but a few dollars, will answer. The cyanide and water solution are much used to remove the green from gold, or to strip a deposit from the article. Use the pieces to be stripped as an anode, or wired to the positive pole, employing a piece of copper double the size of the object to be stripped as a cathode. The green is often difficult to remove by the above process, and will require a stronger solution to accomplish it. Then the following will be found to give good results: In 1 1/4 qts. of hot water dissolve 1 lb. of yellow prussiate of potash, and to clear this add 3 ozs. of cyanide of potassium, using the solution warm in connection with the electric current.

QUESTION No. 1708.—Mainspring Barrel.—For what purpose is the dot on the mainspring barrel? J. A. R.

ANSWER:—If there is a dot on the barrel, you will also find a dot near one of the two notches in the cover. If there is only one notch in the cover it will probably have no dot. The cover should always be placed over the barrel so that its dotted notches or notch, as the case may be, comes near the dot in the barrel. It is in this position that the barrel has been

trued by the manufacturer. Should you neglect to make both dots coincide, it is very likely that your barrel will run untrue and rub against the center wheel. Even if the cover is put in the exact position, it is not always certain that the barrel will run true; the safest way is always to test the barrel to make sure it is true.

Clock-Brass.

IT is frequently said that the manufacture of clocks constitutes the largest single consumption of brass sheet. When one realizes the enormous quantity of clocks that are manufactured, he does not wonder that such a statement is made. The rich

FIG. 1.

and poor alike are consumers of clocks, and when an article is used by practically everyone the consumption must certainly be large. (See brass clock works, Fig. 1.)

It is usually supposed that any kind of metal may be used in clock brass, but this is not so. A clock mixture, to be sure, must be high in lead; but it is necessary to adhere pretty closely to a standard mixture if the best results are desired. Where the brass manufacturer gains in advantage over other varieties of brass is in the use of washings. Washings are always difficult to use in a brass mill, but if clock brass is manufactured they can be used in it to a good advantage.

The old formula for clock brass and one used to-day by one or two of the mills which make the clock brass consist of:

| | |
|--------|----------------------------------|
| Copper |2 parts, or 66.0 per cent. |
| Zinc |1 part, or 32.5 per cent. |
| Lead |1 1/2 lbs. or 1.5 per cent. |

to 100 lbs. of mixture.

This mixture, however, is rather expensive, and nearly all of the mills have substituted a cheaper one. The following mixture is practically the standard one now in use:

| | |
|--------|------------------------------------|
| Copper |5 parts, or 62.50 per cent. |
| Zinc |3 parts, or 35.75 per cent. |
| Lead |1 3/4 lbs., or 1.75 per cent. |

to 100 lbs. of mixture.

Clock brass does not contain as large an amount of lead as screw rod, and it is a matter of surprise to many persons that more lead is not added. The object of keeping the lead to about 1.75 per cent. is so that the sheet metal may be rolled with large reductions. It has been found that it is more economical to roll the brass with heavy "pinches" than to add a larger amount of lead and be obliged to roll it with a light reduction.

The lead is added to the brass, of course, to impart free cutting qualities to it. As

FIG. 2.

will be seen in Fig. 2, a clock frame contains a large number of small holes. These are drilled and the drills are run at a high speed. The brass, therefore, must cut very freely in the drilling.

In the manufacture of clock brass a large amount of washings are used. If the washings do not contain tin or nickel, twenty-five pounds to 100 pounds of mixture may safely be used. As brass mill washings are a variable quantity, it is unsafe to use them unless it is known that they are practically free from tin. Tin hardens the clock brass and is to be avoided.—*The Brass World*.

A patrolman was attracted to the store of Milton C. Alford, on Dakota Ave., Huron, S. Dak., a short time ago, by the ringing of a burglar alarm, which the jeweler has attached to two doors. A rear door was found open, but there was no trace of the thieves, who had evidently been frightened off.

R. D. Tench, Jarratt, Sussex Co., Va., recently furnished the police of Petersburg, in the same State, with a description of a negro who is charged with breaking into the store and stealing a number of watches. Within an hour afterward Policeman Ragland, of that place, had arrested John White, on whose person were found four timepieces.

Royal Copenhagen Ceramics with Artistic Silver Mountings.

SOME Danish art silversmiths are turning out very handsome work in silver mountings for porcelain articles of the Royal Copenhagen factory. Some from the workshop of Michelson shown in the illustration are reproduced from the *Deutsche Goldschmiede Zeitung*, and formed part of a long article on Copenhagen craftsmanship.

In mounting porcelain articles, the metal ornament is first carefully fitted to the ob-

ject, in shape, then embossed and chased, chiseled or sawed out, and finally gilded or oxidized and fastened on. The decorations are not reproduced in castings or by electrotyping, because each piece must have the character of hand work; and the vases, bowls, etc., differ greatly in shape, as the form changes somewhat in burning.

High Prices for Old English Porcelain.

AT Christie's, in London, recently, a pair of Worcester vases, painted with exotic birds and flowers, 15 inches high, were sold for 400 guineas. A tea service

The Ceramic Collection of Prince Albrecht of Prussia.

THE death (Sept. 13) of the Regent of Brunswick, Prince Albrecht of Prussia, calls to mind his remarkable collection of examples of ceramic art, commenced by his mother, Marianne of the Netherlands, completed by himself, and enriched with many valuable specimens, both modern and antique. The castle of Camenz, in Silesia, an imposing square edifice of Anglo-Saxon architecture, contains the collection. It was gathered together out of many lands, during the journeys of the prince in Spain, England, France, Japan, Russia, Greece, etc., and is exhibited in a number of rooms arranged for the purpose and decorated with groups of the ceramic objects.

One sees hundreds of rare and splendid terra-cotta figures and vases, bowls and ornamental objects in Japanese porcelain and majolica from the period of Louis XVI. and William I. of the Netherlands, whose historic worth has led the directors of several museums to offer large sums of money for them, but all such offers have been refused.

A special room is devoted to German porcelain of all descriptions richly painted for the most part, including specimens belonging to aristocratic households from the time of the Great Elector to the present time, representing, in addition to historic worth, great intrinsic value. In the large reception hall of the castle, splendidly furnished, there are also many ceramic ornaments, vases, table services and other objects.

The wonderful collection of old Dutch tiles, in all varieties and colors, from the 15th and 16th centuries, is also worthy of notice; and there are collections of stone ware from the days of Marianne of the Netherlands, showing that the old Dutch specimens of this work surpass in many respects any modern productions. The treasures are always willingly shown to visitors, and will repay careful study.

In commenting upon the National Competition of Schools of Art, a writer in the *Studio* refers to a set of glazed tiles in majolica, the work of Mr. Machin, of Borselen, to whom the examiners have awarded a gold medal. The treatment is purely conventional, masses of richly covered floral ornament in two shades of greenish-blue, skilfully contrasted with the plain spaces of the background. All the outlines in this pattern, as also in the next described, are of moulded relief, with slightly sunk matrices or casements between, somewhat after the principle of champléve enamel work.

ROYAL COPENHAGEN POTTERY RICHLY MOUNTED WITH SILVER.

ject, in shape, then embossed and chased, chiseled or sawed out, and finally gilded or oxidized and fastened on. The decorations are not reproduced in castings or by electrotyping, because each piece must have the character of hand work; and the vases, bowls, etc., differ greatly in shape, as the form changes somewhat in burning.

The productions of the Copenhagen porcelain factory are always beautiful in themselves, and with the added effect of the silver mountings they are unusually rich in appearance, particularly as the mountings are always suited to the ceramic decoration. Vases decorated with marine motifs have a mounting of seaweed, iris or reeds; and if they are painted with flowers or foliage, the same plants are used in the design of the mounting, often laid around

of similar ware, comprising 37 pieces, painted with exotic birds and insects, realized 340 guineas; another set of 22 items, painted with fruit and marked with the Dresden crossed swords in blue, changed hands for 310 guineas, while 300 guineas was paid for three encrusted Bow vases, with covers formed as bouquets of flowers. A pair of large Chelsea vases fetched 280 guineas.

In the course of excavations for building purposes at Horsham, England, several large specimens of old pottery have been discovered. They are not quite perfect, being chipped, and some being minus small parts. There are four large jars with handles, and two large urns, with dark green glaze. They are supposed to belong to the thirteenth century.

Look for the Pouyat Marks

Some of the reasons why dealers in Art-Porcelains should be interested in Pouyat China:

- It is a notable ware historically; famous since 1783.
- It is recognized as the finest modern product of the celebrated Limoges potteries.
- Its unflinching supremacy is certified by a long series of medals and awards, including five bestowals of the Cross of the Legion of Honor upon successive heads of the Pouyat house.
- It offers the widest choice of artistic designs, the widest range of prices.
- Finally, all Pouyat ADVERTISING is designed to stimulate the business of LOCAL DEALERS.
- If your jobber does not handle Pouyat China, we will inform you where to obtain it.

The Location of the Jamestown Exposition.

NEWPORT NEWS, Va., Oct. 31, 1906.

Editor THE JEWELERS' CIRCULAR—WEEKLY:

In a recent issue you allude to the Jamestown Exposition, which is to be held next year, and refer to Norfolk as the exposition city. I beg to correct you in this. The exposition is to be held on the shores of Hampton Roads, at a point midway between Newport News and Norfolk. Within a radius of 10 miles from the grounds are, besides these two cities, Portsmouth, Hampton and Old Point Comfort, all of which places are equally interested in the exposition, and will share in the entertainment of the crowds expected next year from May until November.

As is generally known, the exposition is to be held in commemoration of the first permanent English settlement at Jamestown, in 1607. The exposition idea was first conceived by Newport News business men, who contemplated holding the celebration at Jamestown itself; but as the project assumed larger proportions the fact that Jamestown is 30 miles from Newport News (the nearest city of any size) it was decided to be advisable to hold it upon Hampton Roads.

This point is a peculiarly desirable selection, as the Roads will easily accommodate the enormous fleets of foreign and American warships which will be present during the entire term of the exposition, and is within easy distance from Williamsburg, the old colonial capital, Yorktown, the site of Cornwallis' surrender, and many other historical points. Directly opposite the grounds is the spot where the *Monitor* and *Merrimac* fight took place, and that interesting event will be reproduced several times during the exposition by two vessels built on the *Monitor* and *Merrimac* plans.

A permanent point of interest is the enormous plant of the Newport News Shipbuilding & Dry Dock Co., where battleships and cruisers of the latest types may be seen in all stages of construction.

The several cities interested in the exposition will be taxed to accommodate next year's crowds, but extraordinary preparations are being made for entertainment, and everyone coming here may be assured of comfortable hotel facilities and a hearty welcome from residents of the "Mother of States."

Very truly,

J. R. SPRAGUE.

Recent Reappraisements of Marbles, China, Earthen Ware and Kindred Lines.

REAPPRAISEMENTS have been announced recently by the Board of United States General Appraisers, New York, as follows:

MARBLE STATUARY.—From Italian Sculptured Marble Co., Carrara, exported —, entered at New York (File No. 41729); findings of Somerville, G. A.: 1 statue, "Angel," 2 ft. 6 in., entered at 90, advanced to 110 lire. Add case.

MANUFACTURED MARBLE.—From S. Geo. Grisommo, Venice, exported —, entered at New York (File No. 41874); findings of Somerville, G. A.: 1 vase, labria stone, and 1 small figure for fountain, Carrara marble, entered at 150 lire for all; reappraised at 150 lire for vase and 50 lire for figure.

DECORATED EARTHEN WARE.—From Uyeyanagi, Kobe, exported Feb. 13 to May 22, 1906, entered at New York (File Nos. 40000, 40408, 40457, 40728, 40980, 41289, 41431); findings of Hay,

G. A.: Imari creamers, entered at 24.32 yen for 128 pieces; do., cracker jars, 10117, entered at .32 yen each; do., bowls, 10137, 5¾, entered at .09 yen each; plates, 10136, 11½, entered at 1.50 yen per set of 3; chocolate pots, 10115, entered at .46 yen each; do. 10116, entered at .70 yen each; creamers, 10111A, 5¾, entered at 1.75 yen for 10 pieces; do., 10112A, 5½, entered at .11 yen each; do., 4¾, 10113A, entered at .13 yen each; pitchers, 10114 1, 9½, entered at .40 yen each; cracker jars, 10118 7, entered at .42 yen each; plates, 10122, entered at 5.58 yen for 3 dozen.

DECORATED EARTHEN WARE.—From Tashiroya & Kawamatsu, Kobe, exported April 24 and May 18, 1906, entered at Chicago (File Nos. 40907 and 40909); findings of Waite, G. A.: Cups and saucers, entered at 1.18, advanced to 1.20 yen per dozen; plates, entered at 1.15, advanced to 1.30 yen per dozen; cups and saucers, entered at 1.25, advanced to 1.50 yen per dozen; chocolate sets, entered at .90, advanced to 1.10 yen per set; bowls, entered at .52, advanced to .65 yen each; sugar and creams, entered at .21, advanced to .26 yen per set. And similar goods. Add cases and packing. Add inland freight.

Diamonds That Get Lost.

AT what figure can we estimate the diamonds that get lost? says *Le Diamant*, of Paris. One can only reply approximately. Although it seems enormous, it appears that one can place at 15 per cent, the diamonds that no longer belong to anybody.

First of all, what do we mean by "lost diamonds"? When a stone goes astray, it generally occurs that, if the owner does not find it again, it has fallen into other hands. It is not lost to commerce. It is not thus, however, when a diamond, badly set, for example, falls to the ground. At least, unless it be of size sufficiently important to attract attention, one must see there is little chance of it being saved.

In the city it goes directly into the gutter and thence to the sewer. In the country, on the main road, it becomes covered up by the pebbles and earth that are stirred up by vehicles and pedestrians. One can feel sure in this case the gems are lost to the world and will never return to usefulness.

But, one will say, we are still far from the 15 per cent. given as the actual loss of diamonds! There are, after all, not such a great number that get lost and never found again. That is true, but it is necessary to take into account numerous other sources of loss, such as those occurring in fires, shipwreck, etc. Again, there are persons who express in their wills the formal desire to be decorated with their jewels when dead. This is customary in some countries.

All these causes explain easily how nearly a sixth of the diamonds can completely disappear.

The Bank of France every year has a big balance coming from bills that are never presented for payment. It is therefore not at all surprising that the same should happen with precious stones.

In this reckoning is not computed the losses arising from recutting. The splintered fragments and pieces are serviceable still in some way or other. We do not admit bort, black diamonds and diamonds used in the industries, but refer only to gem qualities.

One might mention the 25 per cent. indicated by the loss on rose-cut stones. Of all stones these roses show the greatest loss.

NEW EFFECTS IN COALPORT CHINA.

THE line of Coalport china now being shown in the salesrooms of Davidson Bros., 12 Barclay St., New York, is even more comprehensive than usual, containing many samples that appeal especially to the jewelry trade. The borders, in encrusted and plain effects, including heavy gold ornamentation, show much variety, all of a character that is approved by the dictates of good taste. There is now on hand a stock of import samples which are being sold to the retail trade.

ANNUAL DIARY AGAIN WELCOME.

THE *Pottery Gazette*, London, England, has issued its annual "Diary and Trade Directory for 1907," and copies have just been received by the trade in this country. This yearly publication has become a welcome visitor to the china and glass merchants, as it contains besides the diary a mass of interesting information relating to the trades, all presented in a handy form. The book, which is 9 by 11½ inches, is attractively bound in black cloth. Among the features is an English buyers' guide, scale and price lists of various kinds, railroad and shipping regulations, a list of importers and a list of British pottery trade-marks.

FINE CLOCKS IN GREAT VARIETY.

AT the show rooms of Harris & Harrington, 12 Barclay St., New York, the collection of hall and mantel clocks is one of the finest and most varied, in the assortment displayed, that has ever before been shown to the trade at this season of the year. An entirely new line of clocks, the designs of which are in the style of Louis XIV., XV. and XVI., is now prominent in the exhibit. These styles are followed in an artistic manner, making a most graceful and attractive display. A strong call for this style of workmanship is heard in the trade, and as a result the samples shown are of much wider variety than in past years. Among the many novelties shown is a crystal ball clock, designed as a yacht prize. The crystal case is artistically mounted in bronze and the decorative work is carefully executed. A small anchor containing a thermometer and a compass help in carrying out the nautical effect. An attractive mantel clock is supported by a chariot, which in turn rests upon a base of white marble. Arranged about the clock are seven bronze cupids. All the draperies, the chariot and the raised ornamentation are in mercury gold.

The Life and Duties of the Jewelry Traveling Salesman

By MONROE ENGELSMAN

(Continued from issue of Nov. 7.)

A CHEERFUL disposition is one of the traits with which every salesman should be imbued, as this characteristic is really a part of his "stock in trade," as it reacts upon himself, his customer and upon all those with whom he may come in contact. No matter what provocations may arise, the traveler should not get ruffled or appear downcast or discouraged. He will soon learn the truth of, "Laugh and the world will laugh with you." His complaints may be justifiable, but no one desires or cares to listen to his tales of woe; the least said about them the better. To put it in other words, "Tell your troubles to the policeman."

These observations and suggestions, trivial as they may seem to the casual man, are indeed good pointers for the inexperienced as well as the experienced salesman to know and make use of.

As stated at the beginning of this article, the life of a jewelry salesman may appear, from a superficial point of view, a fascinating and pleasant one, but in reality it is not so. His life is similar to that of an actor who, on the stage, is well groomed, while portraying his respective part, aided by pleasing scenic effects, with intense vivaciousness, to the edification of his audience, but we must go behind the scenes to enable us to ascertain the true life of the actor. When you listen to his story, your ideas and opinions will change. He will tell you of his many failures, but few triumphs; his anxieties and vexations; his expectations and realizations; his trials and tribulations; in fact, all the vicissitudes which an actor experiences in the course of his career before he reaches the pinnacle or near the top of the histrionic ladder of fame.

And thus it is with the life and duties of the jewelry traveling salesman. He, too, meets with varied experiences, but in a different way. To become a successful salesman he must be a good actor, playing well his part upon the real stage of life. He must be a good judge of human nature; he must be quick to observe and grasp at an opportunity which may appeal to him as being advantageous and favorable to accomplishing a sale. In other words, he must play or act well his part to gain his end. The buyer, who is really his audience, will eventually succumb to his persuasive or perhaps diplomatic powers and become hypnotized, as it were, into buying of him, although it may have been contrary to his fixed intentions. Frequently the salesman is called upon to act a part subservient to his personal feeling or inclination, but is prompted to do so for the benefit of his firm.

Let us here go behind the scenes, as it were, and gather from the salesman profitable information, which he is competent to give us by virtue of his knowledge and experiences. We will be able to appreciate his strenuous calling and treat him more considerately and sympathetically than we have perhaps manifested in the past. There-

fore, let us obtain from the experienced traveler his views regarding the true life which he is compelled to follow:

"The young man," he will say, "who is about to take his first trip on the road supposes and believes, like all the rest, that his path will be a bed of roses, and his life full of sunshine, but later, when, by experience, he finds he must travel over roads of thorny difficulties, and frequently and unexpectedly meet with the storms of disappointment, which are bound to occur during the course of his career, his former ideas become somewhat modified, and he reaches ultimately the same conclusion as we old travelers do, that at its best 'it is a dog's life.'"

"Between the ages of 20 and 30 the vitality of a traveling salesman is at its greatest, but as he grows older the strenuous life of a traveler has a tendency of weakening his physical condition, particularly his nerve system, and, although his ability and experience gained by years may better qualify him to be a more valuable and important adjunct to the financial interests of his employers, and in consequence be more sought after, nevertheless we cannot lose sight of the fact that his energy decreases as his years increase.

"It is but natural that this condition invariably prevails, when we consider the worry, care, anxiety and responsibility attached to the career of a jewelry salesman. Oftentimes we are compelled to take our meals (such as they are) at unseasonable hours; then, again, we travel at all hours of the day or night, in order to save time. And surely this mode of life wears on the body. Besides these unpleasantnesses, we must contend frequently with poor hotel accommodations and bad railroads.

"You can easily imagine our humor and mortification, after meeting with some of these experiences as mentioned, when we open our mail only to find that the tone of the firm's letter is inconsiderate and, to say the least, discouraging.

"Our efforts and intentions may be ever so good, but we are prevented at times from achieving profitable results through no fault of our own; it may be due to causes over which we have absolutely no control, and notwithstanding this we may be expected to accomplish satisfactory work. For instance, our samples or stock may be ill-assorted or our prices or facilities to get or retain the patronage of the trade may not be equal to those of our more fortunate competitors, and it is unreasonable upon the part of the firm to expect the best results under such disadvantages. It is impossible for us to overcome these obstacles, and we naturally look to our firm to help us by strengthening the weak links that are required to be replaced by better and stronger facilities that will aid to stimulate and increase trade.

"We may be ever so faithful to our trust and continue to serve our respective firms for many years until ripe old age overcomes

us and a younger or perhaps more active salesman steps into our shoes and reaps the benefit of the well earned patronage which we have gained.

"Few salesmen save or lay away anything for old age or rainy days. Often we hear of a man, after a long career, being retired on account of old age, but we never hear of his being pensioned, as he has almost a right to expect. Neither are there provisions made by any firm in the way of paying for premiums on insurance policies, against accidents, sickness or death, which may occur to the salesman during the performance of his respective duties for his firm. Invariably, however, we find funds paid by the firm for insuring their stock against the risk of fire, accidents or theft. In the highest sense of the word, is not the life of a human being more worthy of protection than merchandise? Is it not reasonable and fair to ask that our firm should pay and insure us in favor of ourselves while in their employment? It may be aggravating and unpleasant for a firm to replace a disabled salesman in the midst or height of a business season, but why do we not consider that the disabled salesman is cut off from making a livelihood, while if he was insured, as suggested above, his circumstances would be at least improved."

(To be continued.)

Amber Found in Considerable Quantities at Santo Domingo.

IT is an interesting fact that Santo Domingo is one of the few places in the world where amber occurs in any considerable quantities. As is well known, the bulk of the supply used in the arts comes from the neighborhood of Königsberg, on the Baltic seacoast.

There it occurs in the lower oligocene, and appears to have been deposited originally in glauconitic beds of a clayey nature, which was afterward eroded by wave action and the amber distributed, though much of it is taken from beds in which it was originally entombed.

Amber is simply fossilized rosin, derived apparently from certain coniferous trees. The conditions under which it occurs in Santo Domingo do not appear to differ substantially from those on the Baltic seacoast.

It is found near Santiago City, associated with lignite, sandstone and conglomerates. These beds probably belong to the oligocene formation and are found containing amber at a number of places on the north coast, as well as on both flanks of the Monte Cristi range. It also frequently occurs in the streams flowing through these beds.

The amber is usually in ovate lumps, ranging from the size of a pea to a man's fist, often flattened, dull on the exterior, being covered with a kind of brownish crust. None of these deposits has been studied scientifically, although several abortive attempts have been made to operate them for commercial purposes.—*Cassier's Magazine*.

J. F. King, of J. F. King & Son, Jasonville, Ind., has gone out of business. Edward F. King, the son, will continue the business.

A SOUND ARGUMENT

THE only means a manufacturer can adopt to create a **continued** demand for his product is to produce the highest quality from the best material and workmanship. The price is a second consideration. This is the **U. S. Robert** method.

The demand for his make of mainsprings is continued, and increasing steadily. The O.K. stamp of the trade's approval cannot be put on an article by the mere say-so of the manufacturer. The U. S. Robert springs were put on the market in 1885 and from the first the policy of manufacture has been to adhere to a high ideal, to insist on a uniformity of material and workmanship in order to maintain the highest standard of perfection. This is done by U. S. Robert, whose ability is widely recognized and respected by the scientific and best-known makers of mainsprings. Such being the case, the price-lowering methods of competition cannot apply here. Made in 142 different sizes for all sizes and grades of American watches.

Price \$1.25 per doz. or \$13.50 per gross, less 6% for cash.

**You Can Easily Operate
This Typewriter
Yourself**

Don't worry your correspondent.

Don't write him anything by hand that takes him time to make out—that may leave him in doubt—that he can't easily read.

And don't fill out legal papers or card memos—or make out accounts or hotel menus in your own handwriting.

It looks bad, reflects on your standing, makes people think you can't afford a stenographer, and is sometimes ambiguous.

You can write out your letters—make out an abstract—fill in an insurance policy—enter your card memos—make out your accounts, or a hotel menu—or do any kind of writing you need, on any kind, size or thickness of paper, and space any way you want on

The **OLIVER**
Typewriter

The Standard Visible Writer

You can write any of these things yourself if you do not happen to have a stenographer.

For you can easily learn, with a little practice, to write just as rapidly, and as perfectly, as an expert operator on the OLIVER. Because the OLIVER is the simplified typewriter. And you can see every word you write. About 80% more durable than any other typewriter, because it has about 80% less wearing points than most other typewriters.

80% easier to write with than these other complicated, intricate machines that require "humoring"—technical knowledge—long practice and special skill to operate.

Than machines which cannot be adjusted to any special space—with which it is impossible to write abstracts, insurance policies, or odd-sized documents except you buy expensive special attachments requiring experts to operate.

You can adjust the OLIVER to any reasonable space—you can write on any reasonable size and thickness of paper, right out to the very edge, without the aid of any expensive attachment or special skill, and your work will be neat appearing, legible and clear.

For the OLIVER is the typewriter for the doctor, the lawyer, the insurance agent, the merchant, the hotel proprietor—or any man who does his own writing.

Write us now for our hooklet on the simplified features of the OLIVER.

Fahys

A new feature embodied in

Fahys "Permanent" Gold Filled Case

is a combination of green and yellow gold color effects—for instance, a rich yellow gold ground with the fancy engine turning in pale green.

The contrast is very marked and the effect adds more real beauty than one would imagine possible.

JOSEPH FAHYS & CO.

YOU KNOW WHERE YOU ARE

You may walk this street in absolute safety day or night.

We guarantee you against overcharging or misrepresentation here. You can be sure, if you purchase, you are getting just what you think you are buying.

NEW YORK

Warning to the Trade!

Retailers are being called upon by a man who is selling twenty-one chains on a cloth for \$18, with swivels stamped "S. O. B. & Co.," and with a duplicate tag of ours bearing our trade-mark, attached to same. The chains are nothing more or less than brass shaded over, and will not stand acid for a single moment.

Jewelers with any experience ought to be able to discover the difference between a finished article and a rotten one.

Anyone who has been swindled by this man will please notify our house, as we want all the evidence possible, and we will do the rest.

Localities where goods have been disposed of are Pittsburg, Allegheny, McKeesport and surrounding towns.

We have two chains now in our possession that were sold by this man.

S. O. BIGNEY & CO.

We give you below an exact copy of an assay of chains manufactured by the leading chain makers of the United States.

1-10 GOLD FILLED WATCH CHAINS, MINUS BAR AND SWIVEL.

| Number | Gross Weight Ounces | Dec. | Fineness Gold 1000ths | Value | Maker | Chain Number | Cost |

FILLED versus SOLID WATCH CASES

IT IS ADMITTED, of course, that a Solid Case is worth more intrinsically than a Gold Filled one. The question is, "Does the former necessarily possess greater *practical wearing qualities*?"

The Wadsworth "PERMANENT"—Worthy of Its Name

QUERY:

Is not the finest type of Filled Case as capable of resisting the ordinary surface wear as if it were solid gold all through? If so, what a saving in cost! The WADSWORTH "PERMANENT" CASE answers these questions in favor of the best type of Filled Case. Nor are consummate style, form and finish lacking. Attractive prices.

Never in the history of our company have we manufactured so many high-grade movements as we are now turning out every working day.

Never in the history of our company have we been so far behind our orders.

This is convincing evidence that the retail jeweler is pushing the sale of those movements that give him the best satisfaction.

ILLINOIS WATCH COMPANY

SPRINGFIELD

YOU may depend upon it—the cream of the Holiday business this year will go to the jeweler who offers the most attractive selection of high-quality goods of *known makes*.

The buying public can afford the best in all lines and, naturally, they'll choose the things in each line that they know about.

In the case of watch and lorgnette chains, you can make no mistake in featuring **SIMMONS CHAINS**.

There are none better—none so well known; they are in the selling class with the best advertised watches, silver wares and the like; they are the sort of goods that the better class of trade demands. Aren't you catering to that class this year?

R. F. SIMMONS COMPANY

Main Office and Works, **ATTLEBORO, MASS.**

SALESROOMS, 9-13 MAIDEN LANE, NEW YORK.

42 MADISON ST. (HEYWORTH BLDG.), CHICAGO.

Dueber

is the name most intimately known to the Watch Trade of the United States as associated with the Watch Case industry. The name "Dueber" on any Watch Case is an absolute guarantee of good quality, artistic conception and fine workmanship.

Hampden

stands for what is peerless in American Watch Movements. For twenty-five years the name has borne an unrivaled reputation, and the Hampden high-grade movement has been a standard for imitators to work from.

Watches

are an essential part of every retail jeweler's stock, and to have the right kind of watches should be the care of every dealer. The more consideration given to this subject the more sure are Dueber-Hampden Watches to be chosen.

The W. J. JOHNSTON COMPANY

Wholesale Agents for the Leading American Watch Companies,

Fifth Avenue and Market Street, Pittsburgh, Pa.

Talent, Energy and Progression

are the qualities necessary to achieve success in this strenuous age

¶ The followers of the "let well enough alone" policy are living in the past and become the victims of the ambitious, hustling competitors who, looking into the future, constantly go forward.

¶ The forward pace in business is made more easy and quick by selling the right kind of goods; goods that are satisfying in quality and value and that add to the reputation of the merchant.

¶ *We offer you goods that have all the requisites necessary to please and satisfy your customers, that equal in value the cost, and will never mar your reputation from being associated with.*

¶ We refer to

Warranted to give satisfaction

GLOBE FILLED

W. & S. B.★ 1-8

Warranted 20 Years

Not sold to Department Stores or Retail Mail Order Houses.

WEARBEST

W. & S. B.★ Chains are finished by the WEARBEST secret hardening process and will wear a third longer than chains, of the same quality, finished by the usual and ordinary method.

Chains finished in the ordinary manner are left with softened links as a result of soldering and the wearing qualities are greatly reduced.

The WEARBEST process hardens the gold and overcomes the effects of soldering; puts on gold where all other methods remove it; produces the most beautiful finish obtainable.

Every Retail Jeweler gets a premium

In addition to many hundred styles of Hair Brushes, we make the necessary articles to completely "fit up" the highest quality of Leather Bags and Suit Cases.

"HOWARD'S QUALITY"

Silver Deposit Ware

THE ever-increasing popularity of Silver Deposit Ware leads the Whiting Company to direct particular attention to the attractive and very complete line now shown by them at prices which will, on examination, be found to compare most favorably with those demanded for articles of a similar character but of markedly inferior quality.

¶ As the accompanying illustrations will serve to indicate, this artistic ware is notable for the markedly decorative effect which it insures at a comparatively moderate cost.

¶ At the same time it may be pointed out that while these particular examples shown are suggestive of one of its most effective applications, the Deposit process can with equal fitness be adapted to every desirable form of ceramic or glass ware, thus very materially widening the range of its utility.

¶ Among the articles in this ware offered by the Whiting Company, complete, are

Tea and Coffee Services.
Liquor Sets.
Sherbet and Champagne Cups.
Whiskey Jugs and Bottles.
Cock-tail Glasses.
Lemonade Glasses.
Claret and Cordial Glasses.
High-Ball Glasses.

The Pull of Two Engines

WHEN TWO ENGINES pull, things have to move. One engine is our General Advertising. It brings the demand for

COMMUNITY SILVER

to your town—to every town. The other engine is Local Advertising, which draws consumers right to your doors.

Our magazine pages have created a tremendous demand. How is this to benefit you, personally? Consumers must know that YOU carry Community Silver. Tell them. Use the newspaper cuts shown on the following pages. They will be furnished free.

Our magazine advertising is on the “main line”; but there’s a “switch” to the door of every jeweler who uses these cuts.

*The Garnet's
Sudden
Popularity*

*Its Effect
Upon The
Supply*

THE HOLIDAY GEM this season is pre-eminently the Garnet, the warmest and most genial of gems. Grande dames of old wore this gem when they had their portraits painted by the great masters. It is now embodied in a splendid revival of fine old jewelry which has become the reigning fad.

So suddenly has this vogue sprung into existence, that the miners and producers were not prepared for so extraordinary a demand. The result is that the few houses fortunate enough to have a supply absolutely control the situation. The supply will be comparatively scarce for some time. We can supply you.

Jewelers! School Seals are Popular.

Seals are very popular, and we show here only a few of the many made for the different schools last year.

For a State School or University no pin would be more appropriate than one with the Coat of Arms of the State in the center. If the school has no official seal, let us make a pin for you showing the characteristics of this design. If you do not care to have pin made in either of these ways, substitute the year and class initials and have the class motto in the circle.

We make seals in two sizes and three different ways, as you will see by the illustrations. Advise us regarding your wishes, stating quality and quantity desired, and we will be pleased to have prepared a colored sketch embodying your ideas, and forward with prices.

Send for our new catalog of Flag and Class pins. You can make more money handling Bastian's than any other. Special designs and estimates free of charge.

*A Standard
For Barrettes*

*Day, Clark
& Company*

14 KARAT
ONLY

25
Maiden Lane
New York

FEMININE TASTE insisting on a tidy coiffure, adopts the Barrette as a means to that end. Like the back comb, it occupies a central position—an artistic vantage point. It affords a decorative opportunity. Its form and design should accord to a nicety with its place and purpose. It needs to be considered on its own individual basis, as a distinctive piece of jewelry. Though smaller than the comb, it may excel it in richness and beauty. The high standard here set for the Barrette is very evident in the product shown.

Graceful Festoon Necklace Designed by a Southern Jeweler.

WHAT can be done by a young man of talent with no other education in jewelry designing than that which is to be obtained from a careful perusal of the articles and illustrations which have appeared from time to time in THE CIRCULAR-WEEKLY is shown in the beautiful festoon necklace of diamonds and beryls mounted in platinum illustrated below on this page. This beautiful and graceful piece of jewelry is the work of Harry J. Sage, of the Arthur M. Field Co., Asheville, N. C., and was made in the workshop of that concern. It contains 141 diamonds and 12 North Carolina blue beryls in distinctly artistic combination.

In speaking of the designer and his work Mr. Field said: "Mr. Sage received his instruction and knowledge of designing materially through studying the designs and art objects which have been published in THE JEWELERS' CIRCULAR-WEEKLY from me to time. Of course, he has strong natural talent, as is evident from his work, but at this he was able to develop and train for himself by the aid of suggestions which

THE CIRCULAR-WEEKLY has given him in its many articles and illustrations."

The light and distinctly French effect of the design, combined with the American idea of grace, is seldom met with in this country, and is purely southern in its originality. Both Mr. Sage and the Arthur M. Field Co. have reason to be proud of the work.

The Jewelry Trade at Birmingham.

IN a recent report Consul Albert Halstead, at Birmingham, England, gives the following interesting facts as to the jewelry trade of that district:

Birmingham is the center of jewelry manufacture in the United Kingdom. Here are trained jewelers of the most skilful kind. Jewelry workmen have emigrated from Birmingham to the United States in such large numbers that a few years ago in one of the largest silverware manufactories in America there were employed 600 men who had learned their trade in the Birmingham district. Not a little jewelry was formerly exported from this district to the United States, but the development of the art in all classes of jewelry in America has ma-

terially reduced Birmingham's exports. Still the trade here is reported to be better than for some time, although manufacturers complain that things are not as they were. The keen competition of German cheap and imitation jewelry has so seriously interfered with Birmingham manufacturers that they now make comparatively little imitation jewelry. Much nine-karat gold jewelry is still made here, but the finer type of jewelry is Birmingham's staple.

The Birmingham *Daily Mail* shows how adept fakirs have become in recent years, now that the prices of genuine precious stones of the highest quality have greatly increased. The diamond seems to be the only stone that resists successful imitation. The ruby, sapphire, emerald and pearl are skilfully imitated. Defective white pearls can be converted into brown or even black ones, says the consul.

The retail jewelry store of Mr. Peters, Dawson, Yukon Territory, was entered by thieves one night recently during the proprietor's absence, and jewelry and nuggets valued at about \$1,500 were stolen. It is supposed that a pick or crowbar had been used in order to break the padlock.

GRACEFUL FESTOON NECKLACE OF DIAMONDS AND BERYLS DESIGNED BY A YOUNG JEWELER OF NORTH CAROLINA.

NONE BETTER MADE

When you consider the patterns, quality and prices of our various lines of gold jewelry, we do not hesitate to honestly apply the above three words in describing our product.

Therefore, we stamp every ring, locket, sleeve button, vest button and shirt stud we make with our registered Trade-Mark, and this is our bond that what we say is so.

NONE BETTER MADE

The Roosevelt Cup.

THE Roosevelt Cup, the grand prize in the international yachting match between the United States and Germany which took place off Marblehead recently, is one of the notable trophies of the year in American yachting. It is not a challenge cup, but becomes the property of the boat owner who first scores three victories in the class of six boats of the German sloop or special class that are competing in the match.

The cup was manufactured in New England, and represents in its design the ideas of a Boston firm of silversmiths, for whom it was executed at Providence, R. I. Its value is above \$1,000. The design is symbolic of the sea, and its decoration also suggests the international character of the contest for which it is the chief trophy.

The prize is best described as a two-handled loving cup, the obverse having the German and American flags entwined in enamel supported by two sea horses and shells. Below the panel, which has a German inscription, is the Imperial German eagle with the burgee of the Kaiserlichen Yacht Club in enamel. On the reverse the German and American flags are entwined, the decoration being the same as the obverse, excepting that under the panel the American eagle is introduced, surmounting the burgee of the Eastern Yacht Club.

The main decoration embraces sea weed, dolphins and sea horses. The total height of the cup is 21 inches, and the diameter 12 inches. It rests on a base of green marble 8 inches high. The inscriptions are as follows:

*The Roosevelt Cup
given by the Eastern Yacht Club under the
auspices of the President of the United
States of America to the winner of the
German-American races*

*Marblehead
September 1906*

*Roosevelt Pokal
mit Genehmigung des Praesidenten der
Vereinigten Staaten von Amerika gegeben
vom Eastern Yacht Club dem Sieger im
Amerikanisch-Deutschen Rennen.*

*Marblehead
September 1906*

The cup was on exhibition at the Eastern Yacht Club station at Marblehead, together with the minor trophies in the match, which are silver cups, one being given for first and one for second prize in each race.

It is reported from London that in the course of the search made in the waters of Tobermery Bay for the treasure which went down with the galleys of the Spanish Armada, some curious articles have been brought to light. First in interest is a silver salver, of considerable value. A similar one having been found some time ago, it is thought that the divers are coming near to the chest which contained all the silver vessels and altar pieces. In the last few weeks a loaded mortar has been found, hand grenade, also loaded, a short sword, arquebuses, and water and liquor flasks of fantastic shapes.

Handsome Silver Service for the Battleship "Connecticut" to be Presented To-day.

THE handsome silver service for the battleship *Connecticut*, which was illustrated and described in THE CIRCULAR-WEEKLY March 14, is to be formally presented to the battleship to-day by the commission from the State of Connecticut appointed by the governor to act for the people of that commonwealth, from whom he present comes.

As previously noted the service, which consists of 36 pieces, was made by the International Silver Co., Meriden, Conn., from designs submitted in competition and which met with the approval of the commission. The illustrations, which previously appeared in THE CIRCULAR-WEEKLY, showed the centerpiece and punch bowl, and were made from the designs. Herewith are shown the principal pieces of the service grouped and photographed from the finished work. Altogether the pieces unite to form one of the most magnificent silver services ever designed for a boat of the navy.

Many of the great events of Connecticut's history are to be found commemorated by the artist and silversmith in the design and decoration of the pieces. Naturally, the famous Charter Oak finds a place in the design, while oak leaves and acorns are employed throughout the general scheme of ornamentation.

The punch bowl is of large size and great beauty of design, standing on a round plateau, which reflects and multiplies its many beauties. About the base of the plateau is modeled in high relief an ornamentation of oak leaves and acorns, with the seal of Connecticut in the center. At the foot of the base supporting the punch bowl runs a simple colonial border, above which is a finely modeled American eagle in high relief. On the opposite side is a model of the first *Connecticut*, built in Middletown in 1776. A panel cleverly etched on one side of the bowl represents the combat between the *Constitution* and the *Guerriere*. The *Guerriere* is shown in the foreground, while the *Constitution* is apparently little harmed by the encounter. On the opposite side is etched the capitol at Hartford.

The same rich ornamentation of the oak leaf and acorn is carried around the upper edge of the bowl. The handles are modeled accurately after the prow of the old Hartford, Admiral Farragut's flagship. The original is at the Capitol at Hartford, and is a choice specimen of hand carving and graceful design. The punch bowl is surrounded by 24 goblets, having the State and navy seals on opposite sides. A ladle goes with the punch bowl, having similar ornamentation, and the words "United States Battleship *Connecticut*" modeled in relief down the length of the handle. In diam-

eter, the punch bowl is about two feet, being 15 inches in height, and having a capacity of six gallons.

There are two oval dishes on high standards, on one of which there is a panel descriptive of the fight between the *Monitor* and *Merrimac*. On the opposite side there is an etched portrait of Gideon Welles, who was a native of Glastonbury, and Secretary of the Navy during Lincoln's administration. It was during his term of office that ironclads were first used in war, and when the battleship *Connecticut* was launched, a

shades with beaded fringe. On the ebony base of the centerpiece is a shield with the following inscription etched thereon: *Presented to U. S. Battleship Connecticut by the State of Connecticut.*

The finely etched panel on one side of the bowl represents the third war vessel named *Connecticut*, and the etching on the other side represents the second *Connecticut*. The present battleship is the fourth of that name. The first *Connecticut* was a very small boat, built and used up on Lake Champlain in 1776, and was either captured

THE PRINCIPAL PIECES OF THE "CONNECTICUT'S" SILVER SERVICE.

granddaughter of Gideon Welles, Miss Alice B. Welles, did the christening honors. The companion dish is decorated on one side with an etching of the noble memorial arch which stands at the entrance to Bushnell Park, Hartford. On the opposite side is etched the portrait of Admiral Foote, who was born at New Haven.

However, the largest and most elaborate article in the silver service is the centerpiece, oval in shape. The plateau is decorated in keeping with the other pieces, at either end of which rise in graceful curves the three-light candelabra, which are surmounted by pierced cuirasses, having the oak leaf design etched and set over blue

or destroyed in a naval battle on that lake. The second *Connecticut*, a much larger boat, was built at Middletown, Conn., in 1798, and was in commission only three years when it was sold by the government to private parties. The third *Connecticut* was a side-wheel steam vessel, bought from some steamship company and used in the Civil War to carry supplies. A wire mesh fitted over the bowl serves to hold out flowers.

On one side of the base of the centerpiece is modeled in relief, with great directness of execution and vigor, the historic old Charter Oak as it appeared in the later years of its life, some of its branches gone, but still a delight to all who saw it.

PRECIOUS STONES

CLOSE RELATIONS WITH GEM MARKETS,
FAVORABLE BUYING *and* SELLING FACILI-
TIES, WIDE RANGE *of* GEMS *at* REASON-
ABLE PRICES.

SUCH RELATIONS as this house sustains with the gem markets of the world can not be quickly or easily attained; they represent the growth of years. Yet every customer derives the benefit of these perfected facilities for buying and selling. Mature judgment in selection affords the trade a perfect basis of assurance.

Realizing that the requirements of the trade are varied, not only as to stones but as to sizes and prices, ample provision has been made to meet the popular demands in these respects, while not failing to provide for the comparatively limited constituency who call for the more expensive examples.

Tiffany Pearl Case Argued on Final Appeal

Court to Decide as to Whether Assorted Pearls May be Properly Assessed for Duty as a Necklace or as in Their Natural State.

In the United States Circuit Court of Appeals, second circuit, at New York, arguments were heard Thursday in the case of the United States vs. Tiffany & Co., involving the duty on 59 pearls which were imported in July, 1902. The case brings before the highest court questions as to the duty on pearls when they are loose and when they are strung as a necklace or article of jewelry. It is more than likely that the decision will have a bearing on the troyen and other pending cases in which the issues are similar. The facts were reviewed in the issue of October.

D. Macon Webster appeared as counsel for the importers and the United States as represented by J. Osgood Nichols, assistant United States attorney. The case was in the form of an appeal from the judgment rendered against the Government after a trial before Judge Cox and a jury of the United States Circuit Court, June 1, 1905.

In the statements of facts made by both sides, it was admitted that the pearls were imported in four packages, each lot being wrapped in tissue paper. There was no assorting of the pearls in the separate packages. The invoice value of the 59 pearls was \$16,244. On the entry the importers paid a 10 per cent. duty under the classification of Par. 430 of the Tariff Law, providing for "pearls in their natural state, not strung or set."

Ten months after the entry and delivery of the goods, the Government caused re-liquidation at the rate of 60 per cent., demanding of the importers an additional sum of \$8,122. The reliquidation was based on the idea that the pearls really constituted a necklace or article of jewelry, and therefore came within the provisions of Par. 34, providing for articles commonly known as jewelry, including "pearls set or strung."

The importers pursued the usual course in filing a protest against reliquidation, but declined to pay the additional duty before the determination of the case. This refusal brought about one of the issues in the case. The importers, in such cases, are not obliged to tie up capital pending litigation, and will give them a distinct advantage.

Mr. Nichols in his argument laid much stress on the fact that the importers did not pay the additional duties. He claimed that under Section 14 of the Customs Administration Act, the importers not having made such payment are barred from contesting the correctness of the collector's decision as to the rate of duty and the total amount. According to the attorney's contention, the only proper way for the importers to proceed was first to pay the duty, then to file a protest with the Board of United States General Appraisers, and to carry the case, if desired, to the courts. Instead of this course being pursued, it has been necessary for the Government to bring suit to recover the duties.

Mr. Webster in his argument said that

that question as to the classification of merchandise was not excluded from the consideration of the court by the fact that the additional duties had been paid. While the protest must be filed within 10 days, he said, there is no time restriction as to paying the additional duties. If the Government is unwilling to await such payment, it has a remedy to bring an action against the importers, as it has done in this case, to recover the duties.

Mr. Webster argued that the delivery of the merchandise to his client had separated this case from those in which the demand for additional duty is made while the merchandise still remains in the custody of the United States. When the Government still has the merchandise the usual way is for the importer to pay the increased duties because he is obliged to do so in order to get his property, and he then files a protest with the General Appraisers. His clients, said the lawyer, were not obliged to pay the additional duty in order to get the merchandise, because they had already received it. They could not, without absurdity, comply with the usual form in which importers protest against the necessity of making such payment.

The second issue as to the classification of the pearls, which will be regarded the most interesting is based directly on the necklace question. Mr. Nichols declared that the Neresheimer case, and a former Tiffany case, both of which have been cited as precedents, have no bearing on the present issues. In the older cases, the attorney said, the pearls were loose pearls, not selected, assorted or adapted in condition at the time of importation for anything except to be put into a general stock of pearls. In the case at bar, on the contrary, he said, the pearls had been selected with a view to uniformity and color, luster and appropriate gradation of size for the purpose of being set or strung. He claimed that the additional value of the aggregate collection of pearls over the individual pearls which had been absent in the first Tiffany case was present now.

The evidence of the court below showed that the pearls had been selected at Tiffany & Co.'s store, in Paris, by Morris Guggenheim for the purpose of forming a necklace. After their importation, the pearls were assorted at the New York store of Tiffany & Co., and delivered to Mr. Guggenheim as the buyer.

Mr. Nichols argued that it is not material whether the pearls were strung with no more knowledge than that exercised by Mr. Guggenheim. The attorney said that pearls strung in any manner, whether by an expert or otherwise, come within the scope of the jewelry clause.

The attorney emphasized the fact that Par. 434 in speaking of jewelry specifically includes unfinished as well as finished jewelry. It was unimportant, he said, whether or not the necklace was unfinished in a re-

spect so trifling as the stringing. Mr. Nichols said on this branch of his case:

That the collection of pearls in question was in fact imported as a necklace and that as such it possessed greater value than the component pearls would have if unselected and unsorted, is not, however, open to question. In the case at bar this increment did not result from the skill displayed by Mr. Moss, the Tiffany expert who strung the pearls, for he admits that he did not increase their aggregate value by stringing them, but it did result from the capital hazarded and locked up by the act of setting apart and keeping together this large number of valuable pearls for a unique and distinct purpose and withdrawing each individual pearl from the possibility of a more immediate sale and profit.

It is clear that no purchaser could expect to obtain a necklace of this character for the value of the component pearls after the selection or assortment has been made and the pearls kept together awaiting an uncertain and difficult sale in bulk for the restricted purpose of a necklace.

On assembling a necklace for sale there must be added to the cost of the pearls the interest upon the capital thus locked up for the probable excess of time during which they must be held for sale in this form over the lesser time during which they would have to be held for sale as individual pearls.

If the purchaser seeks to select the pearls himself, as was done by Mr. Guggenheim, there must be provided for the purpose of such selection so large a stock of drilled pearls unfitted to any other purpose than that of being the subject of such selection that again a heavy charge must be added to the original price of the individual pearls to represent the interest upon the capital invested in so expensive an enterprise.

Now the intent of the Tariff Act was that while precious stones and pearls might be imported into this country in their natural state free or at a minimum rate of duty, the large amounts of capital necessarily invested in the production and sale of articles of jewelry, finished or unfinished, should be invested in this country rather than abroad, and that the business should be transacted here rather than elsewhere.

It seems that only a misconception of the plain spirit and intent of the act as well as a misunderstanding of the obvious meaning of its language could enable one, in a case such as that at bar, to place weight upon a distinction no more substantial than that involved in a few hours' work of a clerk in placing a number of pearls already selected as a necklace upon a cord—services worth at the most a few dollars—and to ignore the great expenditure of capital involved in making these elaborate collections of drilled pearls fitted for only one distinct purpose, and which must be kept together under conditions of great expense and for long periods awaiting sale in a very restricted market.

A necklace of this character has that unique increment of value which is necessarily and invariably associated with "collections" which are in demand as such, and it was as a collection of this necessarily unique character and increased value that these pearls were imported.

Mr. Webster claimed that the real question was the condition of the pearls at the time of importation. He argued that if the pearls then did not constitute a necklace it was not material whether they were originally a necklace or were subsequently made into one. On this point he said:

Whether or not the pearls in suit had been originally a necklace, and afterwards were made into a necklace, is immaterial, for at the time of importation they were undoubtedly not a necklace, and were, in fact, merely loose pearls not strung or set, and were so classified by the appraiser, who examined them, and by the collector, who assessed them.

At the trial in the lower court, the question of fact before the jury was whether the pearls in question were nearer to "pearls in their natural state" than to "pearls set or strung" at the time the merchandise was imported into this country. The jury very promptly answered this question in favor of the defendant.

The uncontradicted testimony was, that the pearls in question had never been strung or set together as a necklace or any other article of jewelry; that they were simply selected from a lot of loose pearls by the purchaser, who was not an expert or dealer, to be made up for his own use after they had been brought to this country; and experts, who had seen the pearls here, testified

that their selection and assortment was not of a kind that made that particular lot of pearls worth more than the aggregate value of the individual pearls composing it. Tiffany v. U. S. (C. C. C.), 112 Fed. Rep., 674, supra.

The testimony of Gen. George W. Mindil, a diamond and pearl expert in the Government's service, shows that there were four packages of pearls, 13 in one, 21 in another, 15 in the third, and 10 in the fourth. That the pearls were loose in tissue paper packages. That they were not in plush boxes. They came in same as all pearls of this character come in. There was no assortment with reference to size or color in these individual papers (cols. 67, 68).

Tenhroock Morse, an expert in the mounting or stringing of pearls, testified that he saw the 59 pearls in question when they came from the Custom House. He said: "They were not mounted or strung; they were loose in papers; not assorted as to sizes, color or luster, or anything; simply loose pearls; that it takes the services of an expert to string pearls such as these were when they came to me, in assorting for size, color and shape and duster, so that they will all blend near together."

The Government contends that the selection, such as was made by Morris Guggenheim at the defendant's Paris branch, constituted a necklace. There is no evidence that Mr. Guggenheim was an expert, and that the selection and assortment of the 59 pearls, such as was made by him as to luster, size and color, produced a collocation of pearls similar to the collocation found in the articles of jewelry known as necklaces or strung pearls, where time and skilled labor produced not merely a collection, but an aggregation such that the string of pearls thus produced is worth more than the aggregate values of the individual pearls composing it. On the contrary, the evidence shows that the pearls had no such value and the jury so found.

At the end of the argument briefs were submitted and decision was reserved.

Jewelry, Clocks, Watches, Silverware and Kindred Lines Exported from New York.

WASHINGTON, D. C., Nov. 14.—The following were the exports of jewelry, silverware and optical goods, clocks, watches and kindred lines from the Port of New York for the week just ended:

- Berlin: 2 cases clocks, \$100.
- Bombay: 1 case clocks, \$125; 2 cases watches, \$190; 18 cases clocks, \$161.
- Bremen: 1 case jewelry, \$275; 1 case silverware, \$100; 7 packages plated ware, \$1,045.
- Cartagena: 2 cases clocks, \$142.
- Chaux de Fonds: 2 cases watches, \$100.
- Christiania: 14 cases clocks, \$514.
- Colon: 1 case silverware, \$284; 1 case clocks, \$247.
- Constantinople: 4 cases clocks, \$152.
- Genoa: 4 cases clocks, \$256; 1 package optical goods, \$142.
- Guayaquil: 1 case watches, \$170.
- Halifax: 17 cases clocks, \$244.
- Hamburg: 1 case watches, \$1,540; 2 packages optical goods, \$329; 12 cases clocks, \$326.
- Havre: 1 case clocks, \$162.
- Kingston: 2 cases watches, \$121.
- Liverpool: 1 case silverware, \$700; 2 cases jewelry, \$600; 60 cases clocks, \$1,149; 2 cases jewelry, \$1,053; 2 cases watches, \$250; 1 case silverware, \$5,467; 1 package plated ware, \$120.
- London: 46 cases clocks, \$1,546; 41 cases clocks, \$1,986; 9 packages optical goods, \$1,541; 4 packages stereoscopic goods, \$700; 3 packages silversmiths' sundries, \$1,104; 34 cases watches, \$7,561; 3 packages plated ware, \$438.
- Melbourne: 42 packages plated ware, \$3,373; 3 packages stereoscopic goods, \$1,050; 278 cases clocks, \$4,291; 3 packages optical goods, \$163; 1 case jewelry, \$145; 5 cases watches, \$540.
- Rio de Janeiro: 1 case jewelry, \$130; 83 cases clocks, \$1,348; 1 case jewelry, \$807.
- Sheffield: 4 cases sterling silver sheets, \$14,000.
- Southampton: 6 cases clocks, \$308.
- St. Johns: 37 cases clocks, \$458.
- Surinam: 1 package optical goods, \$123.
- Wellington: 10 cases clocks, \$357.

The dissolution is announced of the firm of Lieberman & Krohn, Detroit, Mich. Henry Krohn will continue the business.

New Building to be Erected in the Wholesale Jewelry District of New York.

Four buildings at 45, 47, and 49 John St., and 5 Dutch St., New York, are to be torn down to make way for a 12-story building which is to be erected by Simon and D. J. Frankel, composing the North Ward Realty Co. The plot, which is at the northwest corner of the two streets mentioned, is 75x113 ft., making 8,200 sq. ft. in all. Work is to begin on the structure May 1, 1907, and one year later it is to be ready for the occupants.

There was talk several months ago, as reported in THE CIRCULAR-WEEKLY at the time, of the erection of a modern structure in place of the old four-story buildings that now stand on the site, but no public announcement has before been made as to the identity of the men in the enterprise. The fact that the Messrs. Frankel have bought the property for the purpose of improving it was made known this week by the Charles F. Noyes Co., through whom the purchases were made and who will have charge of the renting of the new building.

The building is to be erected with a view to meeting the particular demands and requirements of the jewelry trade. The Messrs. Frankel, members of Joseph Frankel's Sons Co., have experience that will assist greatly in carrying out their intention. The architects are Howell & Stokes, who have designed many of the largest downtown buildings, such as the "Woodbridge," "Wyllys," "Royal and Queen," "Stokes," and the building for the Title Guarantee & Trust Co.

The building will have three fast running elevators, and all the latest approved devices for the comfort and convenience of the tenants. Certain floors are to be reserved for light approved manufacturing so that a tenant can manufacture, and, at the same time, have offices and salesroom on the same floor. Two of the elevators will be strictly for passenger and custom use.

The third elevator, which will be exceptionally large, will be used for carrying safes, freight, etc. This elevator will also be used by factory employes so that the building can be rapidly emptied at the morning, noon and night hours. Arrangements have been made so access to this freight elevator will be from Dutch St. by a separate entrance through the basement. The customers or persons having occasion to use the two passenger elevators, will not come in contact with employes or porters handling freight on the third elevator.

The main entrance to the building, to be located on John St., is to be one of the handsomest in the downtown section.

The plot upon which this building is to be erected is peculiarly well adapted for the proposed building. Being a corner, excellent light is permanently assured. It has nearly 200 running feet of direct light from the streets, and, in addition to this, will have valuable direct north light and north-west light from the rear and side, owing to the low buildings that adjoin it. The upper floors of the building will have permanent light on all four sides.

While plans have not been drawn for the building, the store and basement has been leased for 21 years. Leases of four

other entire floors have been requested by representative jewelry firms. The entire building will be rented, it is expected, from the plans before the building is commenced.

Receiver Appointed for the T. F. Tuttle Silver Co., Boston, Mass., on Petition of Stockholders.

Boston, Mass., Nov. 17.—The T. F. Tuttle Silver Mfg. Co. has been petitioned into the hands of a receiver, as a result of action by some of the stockholders, after a meeting held on Nov. 6. Judge Fessenden appointed Marshall P. Thompson, an attorney of this city, as the receiver, and the establishment in the Washington building, in this city is closed temporarily pending an adjustment of the differences in regard to management.

It appears from a statement by T. F. Tuttle that the factory of the company, in Malden, Mass., having a capacity of 60 hands, and employing up to the present time 25 workmen regularly, is the property of Mr. Tuttle, while the machinery, etc., is held by the company. In the Washington building 14 hands are employed.

Since the receivership was ordered, Harrison Jones, one of the workmen for the corporation, and T. F. Tuttle have formed a company to be known as the Tuttle Mfg. Co., to carry on a silversmith and plating business. They have taken quarters at 21 Bromfield St.

Whether the business of the corporation will be sold or the friction adjusted so as to permit of a merger of the two concerns is now an open question. Developments of the coming week promise to be interesting.

Developments in the Bankruptcy of Chas. H. Jaquette, Scottsdale, Pa.

PITTSBURG, Pa., Nov. 16.—An injunction has been granted by Referee in Bankruptcy James E. Keenan, of Westmoreland County, restraining Sheriff George J. Seanor from selling the stock and fixtures of Charles Henry Jaquette, against whom a judgment had been obtained by A. F. Meyers, a creditor. Jaquette is a Scottsdale jeweler, and last week, as published in THE CIRCULAR-WEEKLY, filed a petition in voluntary bankruptcy in the United States District Court because Meyers had an execution issued against him on his failure to pay a judgment note of \$3,500. The stock was advertised to be sold Nov. 9, but the sale was discontinued because of the court proceedings.

Jaquette's assets amount to \$5,535.01 and his liabilities \$5,278.42, as noted in the last issue. It appears that Jaquette delivered to Meyers a judgment note for the amount stated on June 21, 1905, to secure the purchase price of a store. The particulars regarding the transfer of this store were published at the time.

Jaquette has a long list of creditors, among whom are: D. V. Brown, \$124; P. A. Coon Silver Co., \$97; Dennison Mfg. Co., \$7; Thomas J. Dunn, \$27; Empire Jewelry Co., \$36; Gale Mfg. Co., \$39; R. H. Ingersoll & Bro., \$36; Heeren Bros. & Co., \$13; I. Herzog, \$101; Jewelry Supply Co., \$72; Louis Hoffman & Co., \$25; M. Miller & Bro., \$27; Newark Jewelry Co., \$102; Pittsburg Diamond Cutting Co., \$18; Porter & Stoner, \$20; Richon Mfg. Co., \$131; H. M. Smith & Co., \$48; Wendell & Co., \$55; Owens & Ferguson, \$102; Murphy & Co., \$90; Scottsdale Bank, \$250; H. Y. Rogers, \$63; Scottsdale Independent, \$24; Scottsdale Observer, \$21.

In his schedule of assets Jaquette sets forth that he is the owner of a cemetery lot valued at \$150. His stock in trade, which includes jewelry, is valued at \$4,595; fixtures, \$650; cash on hand, \$53.55, which is in the hands of A. P. Byrne, trustee. He has a number of insurance policies, all of which are made payable to his wife. He claims \$300 worth of goods under the exemption act, and his tools, which are valued at \$650.

A hearing was to have been held to-day at 10 o'clock to hear objections to the making of the injunction permanent, granted by the referee, restraining the sheriff from selling the bankrupt's goods at public sale, but no objection was offered and the injunction stands.

Last Honors Paid to the Late Hyman Saffir.

The funeral of the late Hyman Saffir, of Saffir Bros., manufacturers of mountings and diamond jewelry, at 51 Maiden Lane, New York, whose death was noted in last week's issue, was held from his late residence, 1048 Clay Ave., the Bronx, Tuesday of last week, and was largely attended. Interment was in Washington Cemetery.

Mr. Saffir was born in Bialystock, Russia, 45 years ago, and came to this country 17 years ago. He was for some time in the employ of houses in the wholesale jewelry district, and for eight years had been in business for himself, at first alone, and

then in partnership with his brother, David Saffir.

The deceased is survived by a widow and seven children; also by three brothers and two sisters.

Pittsburg Firm to Retire from Business Owing to High Rental of Store.

PITTSBURG, Pa., Nov. 15.—Formal announcement was made to the trade yesterday that Graf & Niemann would retire from business because of their failure to secure a suitable location, the firm refusing to re-lease its present quarters at 210 6th St., because of the high rental. The firm pays \$6,000 a year and wants the rent reduced to \$5,000; failing to make such an agreement, the partners will dispose of the store and pay all creditors Jan. 1, 1907.

Graf & Niemann have been in business for 20 years, the firm being composed of O. C. Graf and C. F. Niemann. It is one of the old-established houses in the city.

A year ago the Pittsburg representative of THE CIRCULAR-WEEKLY called attention to the exorbitant rents in this city, because of rapid advances in property valuations. In fact there was such an advance in rentals last year, that many jewelers were forced to move. Graf & Niemann cannot get a suitable location without paying an excessive rental, and so declare it is better to retire from business.

"Our going out of business is conditional," said Mr. Graf. "If we can re-lease at a rental of \$5,000 a year, we will continue in business; if not, we will retire for a year or two until we can find a suitable location or buy a property that will supply our needs."

The firm has decided to conduct a clearance sale which will not be advertised generally until Nov. 25. During the last five or six months, Mr. Niemann has given a great deal of his time to the Parkersburg Iron & Steel Co., of which he is a director.

Patent Suit Commenced by North Attleboro Concern May Involve Many Manufacturers.

NORTH ATTLEBORO, Mass., Nov. 17.—What promises to be one of the biggest patent suits ever held in this section, was begun Thursday by Philip Lettre, patent maker for the T. I. Smith Co., who has brought an action of tort against Charles O. Mason and J. Frank Mason, of the Mason Box Co. Mr. Lettre alleges in his declaration conspiracy and slander of patent. He claims \$20,000 damages.

The suit is over an alleged illegal use by the Mason Box Co. of a faster for boxes which Mr. Lettre is said to have patented. The Mason Box Co., it is said, not only manufactured and sold the faster, but threatened others if they purchased from T. I. Smith & Co. It is said by interested parties that several other prominent jewelry supply houses in this section of the country will also be forced to become defendants in similar suits.

A thief recently attempted to rob the show window in the store of Mrs. I. R. Sherman, Orlando, Fla. He had cut a corner out of the glass in the window, but was frightened away before securing any of the stock on display.

Court Refuses Temporary Receiver of Stevens & Co. Pending Litigation Between the Partners.

PROVIDENCE, R. I., Nov. 19.—Much interest has been aroused in local jewelry circles over the affairs of Stevens & Co., makers of optical goods, with a factory at 172 Potters Ave., a disagreement between the members of the firm having raised an interesting condition of affairs in the concern. Publicity was given the affair by the filing of a petition for a temporary injunction and the appointment of a receiver by Albert E. Lenz, one of the two members of the firm. The bill was brought against Frederick L. Stevens, the other member.

The case came up in the Superior Court before Judge Brown, and John A. Arnold was at first made a temporary receiver, but upon a full hearing of the case, Judge Brown decided that there was no need for a receiver, that the concern was fully solvent, and that the business was prospering in spite of the differences between the partners.

The bill of complaint sets forth that the articles of agreement were entered into Jan. 3, 1901, forming a co-partnership for 10 years for the purpose of manufacturing and selling all kinds of optical goods. It is said that each partner agreed to contribute \$4,000 and to give his entire time and skill for the profit and benefit of the co-partnership. It is claimed that Stevens transferred and assigned to Albert E. Lenz certain letters patent to be used exclusively for the benefit of the business. The business commenced Jan. 3, 1901, and has continued up to the present time.

Lenz claims that Stevens has for a period of several months disregarded the rights of his co-partner, and has used the capital funds for the development of another line of business. He states that the actions and attitude of Stevens toward him have brought about such a condition as to render the continuation of the co-partnership impossible, and the co-partnership assets are in danger of depreciation by reason of the relations between the partners.

Lenz further alleged that Stevens had made drawings of the machinery and has taken these drawings from the place of business for the purpose of equipping and maintaining another manufactory in optical goods in express contravention of the provisions of the co-partnership. The complainant asked that the respondent be restrained from disposing of the property or from paying out money and collecting or receiving the co-partnership debts, or interfering with the business in any way.

On behalf of Mr. Stevens it was claimed that he had done nothing contrary to the agreement existing between the co-partners, that the business was prospering and was making money, and that the other allegations made by Mr. Lenz in his declaration were not in accordance with the facts.

The matter is still pending in the courts and there promises to be some interesting developments before the end of the difficulty is reached. Edwards & Angell are counsel for Mr. Lenz, while Mr. Stevens's interests are being looked after by Herbert A. Rice.

F. A. Robinson, Tripoli, Ia., returned from a buying trip to Chicago recently.

Creditors Win on Appeal.

Weinreb & Merker Must Pay Over \$18,200 to Bankruptcy Trustee or be Punished for Contempt.

Weinreb & Merker, who were manufacturers at 40 Maiden Lane, New York, until Aug. 4, 1903, when an involuntary petition in bankruptcy was filed against them, must pay to the trustee of their estate for the benefit of creditors \$18,200 in cash or be punished for contempt of court under the terms of an order granted several days ago by Judge Holt, of the United States District Court. The case was carried to the Supreme Court of the United States, and decisions adverse to the bankrupts were rendered at the various stages of the litigation, so the creditors believe that the final chapter has been reached.

The order applies to both members of the firm and fellows close upon a decision of the United States Supreme Court, denying an application for a writ of *certiorari*. An order directing the members of the bankrupt firm to pay over the money was granted in the first week of January, 1905, by Judge Holt. From that order the bankrupts took an appeal in the United States Circuit Court of Appeals. This court confirmed Judge Holt's decision. Then the application for a writ of *certiorari* was made, and its denial came Oct. 16 last. Then the case came again before Judge Holt on the motion to punish for contempt, and the motion was granted.

Pending the various appeals, the members of the firm made efforts to effect a settlement with their creditors. At one time a cash offer of \$9,000 was declined.

When the argument was heard by Judge Holt on the motion to punish for contempt, the attorneys for the bankrupt firm offered in court to turn over to the trustee the business of the corporation, which they now manage. It was said that this corporation was organized with the capital furnished by friends of the bankrupts, and that these friends were back of the offer. This proposal was also declined by the attorney for the trustee.

In the schedules filed by Weinreb & Merker in the first week of January, 1904, the liabilities were given as \$90,234, the actual assets included \$292 in cash and \$286 in bills receivable, besides stock on hand and tools. Altogether, about \$10,000 has been realized.

An offer of settlement at 15 per cent. was made, and this was subsequently increased to 25 per cent. Some of the creditors were in favor of accepting the latter offer. Others, headed by H. Z. & H. Oppenheimer, opposed a settlement. The opposition was based on the fact that the bankrupts had offered no tangible evidence as to where their assets had gone. H. Z. Oppenheimer said that if one firm could obtain a settlement in this manner others would be tempted to follow their example.

Joseph Rosensweig was retained as attorney and has had charge of the interests of the trustee and of the creditors all through the litigation. The bankrupt firm has been represented successively by Fried & Czaki, Joel M. Marx and Marx & Byrne.

Early in the proceedings the attorney for the trustee made his motion for an order

directing the bankrupts to turn over the missing assets. Judge Holt, in giving the order, handed down quite a lengthy opinion, which was published in full in THE CIRCULAR-WEEKLY, June 7, 1905. The judge pointed out that Weinreb & Merker's sales in 1902 aggregated more than \$70,000, and in seven months of 1903, up to the time of the failure, aggregated nearly \$80,000. About the middle of July the bankrupts drew from the bank \$18,200, and both went to Europe. The creditors, in beginning bankruptcy proceedings, were obliged to serve the subpoenas by publication.

After Messrs. Weinreb and Merker returned to New York they were examined and at first refused to say what they had done with the \$18,200, declaring that answers would tend to incriminate and degrade them. Later the partners told the story about buying diamonds from a supposed smuggler, the transactions being conducted with cash and no receipts or evidences in writing of any kind having passed between buyer and seller.

Judge Holt said that this story was extremely improbable and was just the kind of story that bankrupts who had been planning a fraudulent bankruptcy and had drawn \$18,200 in cash for the purpose of hiding it from the creditors, would tell. He said that he could not avoid reaching the conclusion that the story was an entire fabrication.

In addition to the \$18,200 which the bankrupts drew out in cash, the judge said, that there was a deficiency of other assets amounting to \$60,000.

"Yeggmen" Blow Open Safe of a Jewelry Store at Endicott, N. Y.

BINGHAMTON, N. Y., Nov. 15.—Word was received from Endicott yesterday to the effect that three "yeggmen" had broken into the jewelry store of Roy L. Leonard in that town early in the morning, blown open the safe and taken a large quantity of watches, trinkets and money, in all amounting to \$500. The force of the explosion shattered the safe and broke the plate glass windows in the front of the store and generally disturbed the whole town, but the robbers escaped.

When the explosion occurred a man who resides opposite the store ran to his window in time to see three men leaving the wrecked building and running in the direction of the Erie Railroad. The constable was summoned and he traced the thieves by the footprints in the snow to the station, but here trace was lost, and it is believed that they boarded a passing freight train. Mr. Leonard was summoned to the store and discovered that little was left in the safe with the exception of a few spoons and three bracelets.

Mr. Leonard has been in business in Endicott but a short time. He began business at Binghamton, from which city he moved to Union in 1894, and from Union here. Though he carried but a small stock, he did a good business, as he is an expert practical man.

Calvin Burns, Pana, Ill., has been succeeded in business by Elmo M. Burns, formerly of Peshtigo, Wis.

The Silverware Stocks Co.

Sale by the Gorham Mfg. Co. of Stock in Associated Companies Takes Place at Providence.

The plans of the Gorham Mfg. Co. for the disposal of the subsidiary companies now owned by it, that were interrupted by a temporary injunction, can now be carried out, the plaintiff having discontinued the suit, as noted in last week's issue.

The public auction of the various stocks, which was finally advertised for Saturday, took place, and the offer of the Silverware Stocks Co., organized for the purpose of their purchase, was accepted. This is the first step in carrying out the company's plans.

These plans call for the sale to the Silverware Stocks Co., whose stock is to be sold pro rata to the stockholders of the Gorham Mfg. Co. In other words, the Gorham company ceases to be the owner of any of these companies, and the ownership is vested in the individual stockholders of the Gorham company. Each of these corporations is placed in exactly the same position in which it was before its acquirement by the Gorham Mfg. Co., each having its own business and its own individual organization, enjoying the same freedom of action that any independent concern possesses.

This relieves the organization of the Gorham Mfg. Co. of any care or responsibility as to the conduct of these different companies. This was the object sought by the present plan from the start, and every stockholder, except one, was in favor of its adoption. It is understood that at the present moment every shareholder is in favor of the plan, and that every share of stock will be subscribed pro rata among the shareholders of the Gorham Mfg. Co.

PROVIDENCE, R. I., Nov. 19.—The following statement in regard to the transfer of stock of the Gorham affiliated companies was made at the office of the company on Saturday:

"The advertised sale of the share stocks belonging to the Gorham Mfg. Co., which, by advertisement, were to be sold at public auction at 11 o'clock to-day, at the office of the Gorham Mfg. Co., was held and the stocks were offered.

"The terms of sale were announced, the upset price of \$1,627,440 was announced, and the stocks were offered in accordance with the resolution of the directors of the Gorham Mfg. Co. and in accordance with the advertised notice.

"First, the stocks were offered in separate lots, as advertised, and no bid was received for any of the separate lots. The stocks were then offered as one lot, and no one bid was received for the lot. The upset price was announced at \$1,627,440, hence there was no sale of the stocks at auction.

"In accordance with the terms of the resolution of the board of directors and the offer of the Silverware Stocks Co., which was duly accepted, the stocks now become the property of the Silverware Stocks Co. and will, in a short time, be properly transferred to that corporation."

F. B. Downard, Marengo, Ia., has disposed of his interests at that place to J. E. Eckert.

THE PEARL IS PRE-EMINENT,

Gem Examiner Removed.

Gen. Geo. W. Mindil Dismissed by Treasury Department After Many Years of Service.

Surprise was quite generally expressed last week in customs circles and in the jewelry trade when it became known that Gen. George W. Mindil, examiner of precious stones at the Port of New York, had been dismissed from the service by Leslie M. Shaw, Secretary of the Treasury. This action was the result of the investigation conducted several weeks ago by Burton Parker, chief of the special agents employed by the Treasury Department.

No appointment to fill the vacancy has as yet been made, and Col. Edward S. Fowler, the Appraiser of the Port, has intimated that he will not make one, at least for the present, as he has now two examiners, W. B. Treadwell and Frederick Rosenberg, who have been assisting General Mindil for two years.

The appraiser said that after this, instead of the examination of precious stones being entrusted to one man, as in the past, two examiners would pass on each importation, checking off each entry. The practice has been for one examiner to pass on each importation, the assignment being made by General Mindil as the senior examiner. The new plan, said the appraiser, will be more business like. The increase in the value of imports of precious stones, especially of diamonds, is given as one of the reasons calling for the change in methods.

General Mindil left Tuesday of last week his office in which he has been chief examiner of precious stones since 1895. He went to Washington toward the end of the week. Telegrams received from that city said that he had applied to Secretary Shaw to take up the case again, and that the secretary had refused to do so. Friends of General Mindil say that the end of the case has not yet been reached.

The investigation began soon after an invoice accompanying an importation of diamonds by Eduard Van Dam was advanced in value 30 to 40 per cent. on various items, as published in the issue of Aug. 29.

General Mindil was in Montreal, Can., on his vacation at the time, and the advance was ordered by Appraiser Fowler on the advice of Mr. Treadwell. Subsequently Mr. Van Dam paid the duty on the advanced prices together with penalties. It was said at the time that the circumstances of this advance formed the basis on which charges were preferred against General Mindil.

The exact nature of the charges has not been revealed. According to report, the authorities suspected that if the General had been in the city when Mr. Van Dam's diamonds arrived there would have been no advances, as there had been no important advances for a considerable period before his occurrence. It was the theory of some officials, according to the reports, that undervaluations had been practiced at this port to a considerable extent.

Friends said that if there was anything wrong in General Mindil's intentions toward the Van Dam diamonds he would not have gone away just at the time when the shipment was known to be coming. The investigation was secret and the proceedings

have not been divulged except by rumors.

After General Mindil returned from Washington, he gave out the following statement to the press:

"The secretary was very affable, received me courteously, and spoke kindly. I did not ask for reinstatement, only for vindication, and an honorable discharge. The interview, however, demonstrated that the secretary had fully determined in his mind as to the merits of the case from the standpoint of the accuser's story, which originated at the public stores.

"My written denials seem to have been either ignored or overlooked by him, and he appears to have no idea of the observance of the official regulations in the case. Some of the important evidence that I submitted appears to have been passed over without an effort having been made to verify it by his investigating committee, and the secretary now in arguing proceeds as if it did not exist. He seemed surprised when I directed his attention to the same. In a word, he holds that I did not follow the rules and the regulations in the matter of the reappraisement of the Van Dam invoice, while I hold exactly the contrary.

Although he did not directly say so, he implied that other invoices of precious stones undervalued may have been passed previously, and that having the unanimous approbation of the diamond trade as to my integrity and ability is nothing to my credit. He deprecated the efforts of the trade made a few years ago with the President, with Congress and with himself to have my salary increased, and thought that such action was unseemly and abnormal. It had never been done regarding the examiners in the other trades.

He would have accepted my resignation had it been tendered in the beginning, but I told him that such action on my part then would have been misconstrued by the public, as an acknowledgment of the truth of the charges.

Nor did he communicate his intentions in this regard to me at any time previous to this interview. On the contrary, from documents in his own handwriting, and from expressions regarding me made by the secretary to ex-Appraiser Whitehead, as well as to a committee consisting of two distinguished New York City congressmen, a highly respected State senator and a veteran ex-judge, who called upon him on other business, I had every reason to believe that he would act favorably. In conclusion, the secretary appears to be of the opinion that I am altogether too popular with the diamond trade, and intimated that this was not for the best interests of the service.

This commendatory opinion of the trade is owing, not to any favoritism shown by me, but to the fact that all importers have been treated justly and fairly, and that my office for 11 years has been conducted on the level. Who is best capable of judging, the hundreds engaged in the trade or the one man at the head of the Treasury Department?

Arthur H. Buck, Missing Jewelry Salesman, Not Yet Located by His Employers.

Information as to the whereabouts of Arthur H. Buck, the salesman of Abel Bros. & Co., 64 John St., New York, is still being diligently sought by the company. The circumstances were related somewhat at length in the last issue. Since then the police of this city and of Boston have assisted in trying to find the missing salesman, but thus far the efforts have been unsuccessful. Mr. Buck is 33 years of age, and, according to the description of him that has been sent out, he is six feet one inch high, of medium build, weighing about 150 pounds. He has a slight stoop, his hair is black, his eyes are gray, his face is thin and his nose and chin are prominent.

ARTHUR H. BUCK, MISSING SALESMAN.

He wears eyeglasses. He is a rapid talker and of generally agreeable presence.

As Mr. Buck was widely known along the route in the south and west and among hotel men generally, the company is hopeful of hearing within a short time something that may assist in the search. Any information about him may be sent to the company's office at its expense.

Death of Russell D. Gordon.

Boston, Mass., Nov. 17.—Roswell D. Gordon, of Gordon & Burgin, Jewelers building, this city, died Nov. 13, at his home in Sharon, Mass., after an illness from tuberculosis of three years' duration.

Mr. Gordon was 56 years of age. In his younger years he was a traveling salesman in small jewelry and novelty lines. About 20 years ago he formed a partnership with Clarence Burgin, and they started in business at the corner of Washington and Winter Sts., later removing to the Jewelers building. About eight years ago, Mr. Burgin withdrew from the firm and more recently Mrs. Gordon, during the illness of her husband, has conducted the business. The funeral of Mr. Gordon took place today at Sharon.

leged Window Smasher Held by the Police of Columbus, O.

COLUMBUS, O., Nov. 19.—George Hotten, 10 was recently arrested after smashing jewelers' plate glass show windows in this city, has been indicted by the Grand Jury and is now in jail awaiting trial. The police have had Hotten photographed, and are anxious to hear if there are any charges against him in other cities.

As recently told in these columns, Hotten was captured directly after the show window of the jewelry store of Davidson Bros. had been broken, and he had gotten away with about two dozen watches. A messenger boy who noticed the broken window reported it to the police, who captured Hotten a few minutes later. The prisoner is said to be wanted in Cincinnati to answer a charge of robbing the window of Edward L. Raisbeck, 618 Vine St., as several

GEORGE HOTTEN, ALLEGED WINDOW ROBBER.

watches stolen from Mr. Raisbeck have been found in pawnshops here. He will probably be surrendered to the Cincinnati authorities until the local charges are disposed of.

Samuel Hochhaus Files a Voluntary Petition in Bankruptcy at New York.

Samuel Hochhaus, a diamond dealer who resides at 27 W. 27th St., with an office at 71 Nassau St., New York, filed on Tuesday last a voluntary petition in bankruptcy in the United States District Court. The schedules showed total liabilities to be \$756,756, of which \$1,943 is a secured claim of the State Bank in Grand St. The unsecured debts amount to \$7,813. There is also a contingent indebtedness of \$2,132.

The State Bank holds as security for its diamond customers' notes to the amount of \$132. One of the unsecured creditors is Urbach, who was some time ago placed in bankruptcy by creditors after he had reported the loss of his stock in trade in a sleeping car. The amount due to Mr. Urbach is \$650. Other unsecured creditors are: National Park Bank, \$1,300; William Hochhaus, \$2,000; Jacob Macher, \$600; Dr. Joseph Weiner, Jr., \$500; P. Hempstone, \$700; Leo Hecht, \$522; Kleinberg & Probsin, \$255.

In speaking of the bankruptcy to a CIRCULAR-WEEKLY reporter, Mr. Hochhaus stated that the petition grew out of the sus-

pension of the firm of J. Hochhaus & Son, which occurred some time ago. This firm of which the petitioner was a junior member in charge of the New York branch, became embarrassed, but settled with all the creditors on the basis of 100 cents with the exception of one bank in New York. The settlement was made in notes, cash and merchandise, and among the notes was one for \$705 by Barnett Goldstein, which note was given to Gustave Goldwasser. Mr. Goldwasser sold the note without recourse to I. Hochberger, who in turn sold it to Mr. Macher. Later Goldstein failed and settled with his creditors, Mr. Macher settling with him as a creditor on the note. Then, Mr. Hochhaus stated, Macher sued him for the balance as an indorser and got a judgment. Being unable to meet this judgment he decided to file the petition in bankruptcy. He will continue in business, he says, as a diamond broker and salesman.

Death of Edward W. Bohle.

St. Louis, Mo., Nov. 16.—Edward W. Bohle, of the firm of Bierbaum & Bohle, 2106 N. 11th St., one of the best-known jewelers in this city, took his own life here, Monday. Grief over the death of his wife, last September, is given as the cause of the deed.

After his wife died, Mr. Bohle lived with his aged mother, Mrs. Charlotte Bohle, above the jewelry store. Last Monday he called a servant to the room, and when she reached him he was gasping for breath. He told the girl he had taken cyanide of potassium. She secured a physician, but the patient's condition was beyond medical aid.

The greater part of the 36 years of Mr. Bohle's life had been spent in association with Frederick W. Bierbaum, senior member of the firm. Mr. Bohle entered Mr. Bierbaum's employ as an apprentice when but 14 years old, and by diligent effort gradually advanced until he became a partner in the business.

The death of Mr. Bohle is deeply regretted by the members of the jewelry trade, by whom he was well liked, and high encomiums were passed upon his character. He was treasurer of the Retail Jewelers' Association of Missouri, and has ever been an active spirit in the affairs of that organization.

The funeral of Mr. Bohle took place Thursday, interment being in Bellefontaine Cemetery, the Rev. Dr. Klemme, of St. John's Church, officiating. The funeral arrangements were in charge of the Knights of Pythias, of which he was a member. He was also a member of the Red Men, North St. Louis Business Men's Association and Social Turners.

A floral tribute was sent by the members of the Retail Jewelers' Association. Among the jewelers present at the funeral services were the following: Herman Mauch, John Zeitler, Joseph Ebeling, Otto Kortkamp, Otto Steiner, W. F. Kemper, G. Eckhardt, Edward A. Gotsch, George R. Stumpf, M. Eisenstadt, Otto Pieffer, Morris Bauman and Moses Strauss.

According to report, A. W. Lord, optician, Reno, Nev., has made a lucky hit in a mining stock deal, cleaning up \$42,000 on an investment of \$2,500 made only a few weeks ago.

Man Who Swindled Jeweler With a Raised Money Order Convicted at Richmond, Ky.

CINCINNATI, Nov. 17.—Thomas Ward, alias James Hart, arrested in October at Piqua, O., by Cincinnati postoffice authorities, on a charge of having raised a money order from 35c. to \$35, and passing it on at Louis Hooge's jewelry store in Paris, Ky., has been tried at Richmond, Ky., and found guilty of the charge. Sentence will be pronounced this week.

Hart is over 60 years of age, and said he had come from Nashville, Tenn., to Cincinnati when he purchased the money order last September. Hart represents

THOMAS WARD, ALIAS JAMES HART.

himself to be an old railroad employe of Nashville, which, he claims, is his home.

When arrested, Ward was brought to Cincinnati and then taken to Covington, Ky., to await trial, at which he pleaded guilty, and then withdrew plea stating that he did not know the order had been raised until his arrest. Court was then about to adjourn and he was transferred to Richmond, Ky., where the next session of court convened. His case came up this week and he was found guilty of the charge.

Jewelers' Gold Bars Withdrawn and Exchanged at New York.

Week Ended Nov. 17, 1906.

The U. S. Assay Office reports:

| | |
|--|--------------|
| Gold bars exchanged for gold coin..... | \$491,390.18 |
| Gold bars paid depositors..... | 105,134.30 |
| Total | \$596,524.48 |

The Diamond Markets.

ANTWERP, Nov. 10.—Business conditions here have been excellent during the month of October and prices remain very firm. Large brilliants of very good cut and color are readily sold, and the number of sales is large. Large Antwerp roses are particularly in demand, but are very scarce. It is expected that there will be an advance of 5 per cent. on all sorts of roses in the course of the present month. Several local merchants have been transacting business with China for some time past.

A report from the Gilde der Antwerpse Diamantverherd shows that there were only three workmen out of 930 that are without employment.

Louis Birnbaum will hereafter be associated with S. Himmelblau in business under the style of S. Himmelblau & Co. The firm of Chapuis, Flandrin & Co., this city, which was formed Aug. 22, 1906, will hereafter be known as Chapuis & Co., J. A. Chapuis having entire charge of the business.

The following buyers were in Antwerp during the past fortnight:

Messrs. Van Moppes, Langbaeck, Lambert Frères, Emile Weill, Ormand Lévy, Mura, Rapaport, Mitacoupolo, Mund Frères, Matheossian, Paris; Messrs. Bronkowitz, Wolfsohn, Ingfeld, Strauss, Lunzer, Fischman, Canon, London; Mr. Smith, Anton Rosenbach, of W. L. Rosenfeld, and Hofmann, of Eichberg & Co., New York; Messrs. Braun, Gross, Bellack, Holder, Vienna; Mr. Van Gulk, Goch; Mr. Gauss, Hanau; Mr. Weisager, Riga; Mr. Leiner, Nurenberg; Mr. Ginsberg and Mend Bros., Berlin; Mr. Helbein, Odessa; Mendelsohn, Manchester; Mr. Polling, Moses Ayres; Mr. Wallavych, Madrid; M. Benruhi, Salonique; Mr. Bernblum, Lystok; Mr. Siebenberg, Warsaw; Mr. Levey, Milan.

AMSTERDAM, Nov. 9.—The large demand for mélee of all qualities continues, and extensive sales are made in sizes ranging from one-quarter size to three grains. Large sales are in better demand again. The American merchants continue to be the largest buyers, and during the month of October the five following firms had representatives in this city: Messrs. Zimmermann, Es & Co., Eichberg & Co., Fox Bros. & Co., L. & M. Kahn & Co. and I. Baum. Among other buyers who were here during the past week are the following: Messrs. Benhardt, Hamburg; J. B. Kaufmann, London; M. Hahn & Co., Lambert Frères & Co., A. & E. Worms, Mr. Jollasse, Paris; A. Neresheimer, Munich; H. Klein and A. Himmelschein, Antwerp; A. Cohen & S. Birmingham.

A new diamond factory of 60 mills will be erected at Bossum for H. Philipean, who has at present a smaller factory at Bossum.

PARIS, Nov. 10.—October has been a very good month for the diamond trade, and the merchants who do business with the important houses of Rue de la Paix and those whose principal customers are exporters must have been very well satisfied. The market for pearls, fine colored stones, diamonds and roses is particularly good.

Stones of fine quality are always in demand at very high prices.

There were two failures at the end of the month, one being among the oldest and largest firms of the city, and had been engaged in the diamond and pearl business for 35 years. It is supposed that too large purchases at Antwerp were the cause of failure. Probably 80 per cent. will be offered in settlement. The other house to fail is a new one, transacting business in pearls as a specialty.

The marriage of Miss Marion Hahn, daughter of Maurice Hahn, of M. Hahn & Co., to Theodore Rodrigues-Ely, was celebrated on Oct. 16.

Maurice Brower, New York, has opened new offices here at 54 Rue Lafayette. The offices of Lefschetz & Barell have been removed to 18 Rue Grange-Bateliere. The office of Hector Pacine, formerly at 9 Rue Lamartine, is now at 28 Boulevard des Italiens.

A new firm has been established here under the name of Blum Pere et Fils, with a capital of 320,000 francs.

Mr. Chevolleau has retired from Andre Aron & Co., 27 Rue Lafitte, and the firm will be continued by Messrs. Kinsbourg and Aron under the old firm style.

Jewelry Salesman Robbed of Sample Case While Visiting Philadelphia Jobbing House.

PHILADELPHIA, Pa., Nov. 20.—C. F. Willem, salesman for T. G. Frothingham & Co., a North Attleboro firm, with offices at 13 Maiden Lane, New York, was robbed yesterday of a sample case containing diamonds, brooches, mountings, etc., valued at \$4,000.

The salesman went into M. Sickles & Sons' store on Chestnut St., carrying two cases of jewelry. He carelessly left one case near the entrance in the salesroom, and carried the other to the office. When he returned to the salesroom the case left there was gone.

It is supposed that a sneak thief entered the room in his absence and took the case. The police were at once notified, and also the New York office of the Jewelers Protective Union.

Optical Notes and Briefs

J. G. Goble has opened an optical establishment at the store of the Medford Jewelry Co., Medford, Ore.

T. F. McBride, optician, formerly at Albuquerque, N. Mex., died recently at St. Vincent's Hospital, Santa Fe, aged 37 years. Mr. McBride at one time resided in Lebanon, Mo.

The regular monthly meeting of the New England Association of Opticians was held last evening at Young's Hotel, Boston, Mass. The important feature of the meeting was a lecture by President Albert A. Carter, whose subject was "The Anatomy of the Eye."

The next annual meeting of the Nebraska State Optical Association will be held Jan. 15 to 17, inclusive. The convention will be held in Walsh Hall, Lincoln. Plans are now being arranged for an interesting programme and many men prominent in the optometrical profession have been secured to deliver addresses.

Alleged Jewelry Thief Saws Bars of Pennsylvania Jail and Escapes.

PITTSBURG, Pa., Nov. 16.—Fred Hayes, Haysborough, who was about 10 days ago arrested on complaint of stealing a number of watches, escaped from the Haysborough jail last night and is now at large. The entire county detective force and city detective force are searching for him. He was placed in jail about a week ago and was ordered sent to the workhouse for 60 days. He went to sleep last night on a rude bench in the jail, and this morning it was discovered that he had sawed through two heavy bars and then crawled through the opening, making his escape from the jail.

Hayes, when he was arrested 10 days ago, was brought to Pittsburg and photographed,

FRED HAYES, ARRESTED AT PITTSBURG.

because Capt. James W. Egan, of the detective bureau, desired to keep "tab" on him, as he does on all jewelry thieves. Following the work of taking his measurements he was returned to Haysborough, and ever since that time Capt. Egan has been investigating the man's record.

He was charged with taking watches valued at \$1,000, but had insisted that there were others who had been interested in the job, and the police were endeavoring to find out if this was true. Hayes is said to live in Duquesne.

The police refuse to say at present how Hayes got the jewelry, or from whom it was stolen, but the victim is said to be a Pittsburg jewelry house.

Market Price for Silver Bars.

Miss Florence Hamilton, daughter of Mr. and Mrs. Ralph S. Hamilton, was married to Dr. F. V. Hussey last Wednesday. The wedding was a society event and was largely attended.

The firm style of Midwood-Read Co., manufacturers at 116 Chestnut St., has been changed to Wm. A. Read Co. The firm was formerly known as Read & Litch, prior to changing the style to the Midwood-Read Co.

William Loeb has disposed of his interests in the firm which bears his name, William Loeb & Co., Manufacturers' building, to Louis Lyons, who has been associated with him for some time past, in the financial end of the business. No details regarding the price paid have been made public.

At the Gorham works was completed last week the statue of Jefferson Davis, a memorial which will be put in place in the city of Richmond, Va., at no far distant date. The sculptor, Edward Valentine, accompanied by a party of prominent Virginians, visited the works last week and inspected the statue, which is of bronze and finished in the artistic way for which the Gorham works are celebrated.

The Mackey Jewelry Co. is to be known hereafter as Mackey & Elias (Inc). Louis Elias, formerly a salesman for Rothschild Bros. Co., Attleboro, having been admitted to the concern. The concern was established in 1903 as Mackey, Kronwide & Co. and was incorporated in April, 1904, as the Mackey & Kronwide Co. Mr. Kronwide withdrew in August, 1904, and since that time Mr. Mackey has continued the business as the Mackey Jewelry Co.

Some of the local manufacturing jewelers received last week copies of a circular which has occasioned considerable amusement. The writers are known under the name of the "Sublime Brotherhood of the Zaques" and claim to hail from South America. They have apparently been hit by the Bryan boom and are out with a war against the present Chief Executive, saying that the manufacturers who vote for Roosevelt will be boycotted and excluded from South American trade.

It is understood that Mr. Loeb has retained the right and patents to the William Loeb & Co. ring, and that these will be manufactured by Mr. Lyons and sold through Mr. Loeb. Just what the firm style of the concern will be has not been determined, though there seems to be probability that it will be known as the William Loeb Co., according to our informant. Mr. Loeb retains his interest in the Parisian Mfg. Co., but whether or not he will start in some other business or what his plans are he is at present keeping to himself.

In the store of Jacob Grubb, Wheeling, W. Va., there was recently on exhibit a handsome painting of Captain Joseph Paris, which has been the subject of considerable comment.

Arthur E. Smith & Co., Woonsocket, R. I., recently presented to the Y. M. C. a beautiful silver trophy to be contested by the basket ball teams formed among the youths of that association.

Our Traveling Representatives

G. M. Braham, of A. & J. Plaut, Cincinnati, O., gives on his regular trip southeast, this week.

C. F. Rednall, of the Alphonse Judis Co., San Francisco, Cal., is now traveling in the northern part of the State.

C. B. Goldsmith and Lee Kahn, of Lindenberg & Co., Cincinnati, O., have started on their respective trips.

Melvill Cohen, a traveling representative for J. Lehrberger & Co., San Francisco, Cal., has returned from a short trip to the south.

I. Plamandon was in southern California, last week, in the interest of Henry M. Abrams. He is to return to San Francisco, Cal., in a few days. Among the representatives of the trade who visited Los Angeles, Cal., last week, were: Henry H. Jacobson, Jacobson Bros.; H. E. Franke, and R. Overman.

Julius A. Young, of the J. A. Young Co., San Francisco, Cal., returned from his trip to the south last week, and started at once for an extended tour of the Pacific northwest.

Among the traveling representatives in San Francisco, Cal., during the past week, were: J. Lipper, Wiener, Gaisen & Naigtes; Louis Freund, Henry Freund & Bro.; Frank Herrick, Deitsch Bros.

The following traveling representatives called on the trade in Kansas City, Mo., during the past week: Wallace E. Welch, Hoyt, Ohrig & Geiger Co.; K. D. Yeaton, S. Sternau & Co.; F. R. Horn, Carter, Howe & Co.; J. H. Mednikow, J. H. Iednikow & Co.; Louis Berger; J. E. Simonson, Ludwig Nissen & Co.; Geo. W. Birnbaum, Julius Wodiska, John W. Case, H. F. Carpenter & Son; Geo. W. Whittemore, Sessions Clock Co.; H. S. Oyes, Bates & Bacon; F. L. Pettee, Waterbury Clock Co.

Traveling men visiting Boston, Mass., during the week, included: E. F. Skinner, Roy Watch Case Co.; Col. John L. Shepherd, Keystone Watch Case Co.; Mr. Upham, Empire Cut Glass Co.; Mr. Brown, Ostby & Barton Co.; Mr. Strashurger, Sternau & Co.; Mr. Molds, New Haven Clock Co.; Charles L. Power; Benj. Wyman; Mr. Wallenstein, Silhermann, Kohn & Wallenstein; C. E. Lott, J. B. Bowden & Co.; E. W. Martin, Martin, Copeland & Co.; J. R. Scofield, T. W. Adams Co.; William Matschke, A. Joralemon & Son; Edward D. Hicks, William S. Hicks' Sons; Mr. Peck, Chas. S. Crossman Co.; Mr. Terrill, Traub Jewelry Mfg. Co.; Jerome C. Adler, Chas. Adler's Sons.

Traveling representatives who called on the Cincinnati, O., trade, during the past week, included: I. W. Raymond, Worthington & Raymond; Max S. Cohn, Max G. Cohn & Co.; Benj. J. Schloss, A. Wallach & Co.; Thomas E. Rogers, Riker Bros.; William G. Andrews, C. Sydney Smith & Co.; Burgesson Mead, Barbour Silver Co.; I. Ettinger, Hattle, Ettinger & Hammel; A. J. Parker, Osmun Parker Mfg. Co.; I. Price, Louis Strashurger's on & Co.; Percy D. Lucas, Frank W. Smith Co.; Elmer Thompson, F. H. Noble & Co.; Mr. Hecker, Martin, Copeland & Co.; Harry Kenyon, Parks Bros. & Rogers; Mr. Cohn, Daggett & Clap Co.; Mr. Whiting, Whiting & Davis; Arthur Bradshaw, International Silver Co.; J. M. Morrow, American Watch Case Co.

Among the traveling representatives visiting the trade in Lancaster, Pa., recently, were Fred Lapam, Carter, Howe & Co.; Walter R. Lipsett, Joseph Nelson & Co.; T. D. Baily, Robert S. Gatter; J. G. Walker, Pairpoint Corporation; George M. Gite, Dueber-Hampden Watch Works; H. B. Bliss, Gorham Mfg. Co.; J. Taylor Ashby, Fairchild & Co.; A. W. Bogart, Waterbury Clock Co.; W. R. Parker, M. A. Mead & Co.; R. S. Saunders, Payne Baker Mfg. Co.; F. Van Olinda, New England Watch Co.; Morris Weil; Ferd. Levy, Ferd. Levy Co.; C. A. Crist, L. E. Waterman Co.; George Melville, West Silver Co.; Walter S. Mays, McIntyre, Magee & Brown; W. L. Blackinton, Kinney Co.; R. M. Huffeld, H. Bealwear & Co.

Traveling representatives in Omaha, Neb., during the past week, included: Norman L. Strauss, Jacob Strauss & Sons; Charles E. Howes, E. L. Logee & Co.; George W. Birnbaum, Julius Wodiska; W. I. Goodfellow, King & Eisele; W. F. Adams, Simpson, Hall, Miller & Co.; Martin Dattelbaum, Dattelbaum & Friedman; R. P. Swanwick, Link & Angell; B. J. Hirshorn, Hodenpyl & Walker; E. A. Moore, Sykes & Strandberg; G. W. Finckenauer, Alvin Mfg. Co.; Fred J. Foster, Unger Bros.; Carl H. Weideman, Borrelli & Vitelli; C. P. Kionka, Kionka & Kionka; T. W. Agnew, New Haven Clock Co.; K. D. Yeaton, S. Sternau & Co.; R. T. Kleckner, Theodore W. Foster & Bro. Co.; James R. Palmer, Henry A. Kirby, George W. Whittemore, Sessions Clock Co.; Fred Pettee, Waterbury Clock Co.; R. W. Cohen, George H. Cahoon & Co.; L. W. Arnold, Western Clock Mfg. Co.

Indianapolis.

TRADE CONDITIONS.

Business commenced to boom just as soon as the election was over. It is better now, merchants say, than it was at this time last year. October was better than the October of 1905, and the first half of November shows an increase of between 12 and 20 per cent. Pleasant Fall weather may be in part responsible. The Merchants' Association and Commercial Club are refunding traction and railroad fares to persons coming here to shop, and this has stimulated business. Local merchants anticipate a record-breaking holiday business.

John Wimmer, who broke a leg recently by falling on the street, is gradually regaining his former strength.

Henry Wert, who died recently in the Lutheran Hospital, Ft. Wayne, was well known in this city. He was formerly in business at South Milford, Ind., and he frequently visited the jobbers and manufacturers of this city.

The Marion County Grand Jury is investigating the incendiary fire which was started in the basement of the building occupied by Horace Comstock. It is thought that indictments against two persons will be returned.

An itinerant jeweler, giving the name of R. J. Rees, was recently stricken with paralysis here, while peddling jewelry. He was taken to the City Hospital, where he said he at one time was a prosperous jeweler in Cincinnati. The police are trying to locate his relatives.

Advertisements have been inserted in the daily papers for information concerning the whereabouts of Jonus Godson, who is supposed to have been in the jewelry business in South Illinois St. several years ago. Godson, it seems, has fallen heir to part of an estate in Germany. Lawyers so far have been unable to find any trace of the man.

It is reported that the Claypool building at Illinois and Washington Sts., in which Carl Rost is located, is to be razed to make room for a 17-story structure. Extensive improvements in the American Central Life building, in which Ikko Matsumoto has his manufacturing plant, have just been completed. Three stories were added and new finishings installed throughout.

The police recently found a quantity of new jewelry in a vacant house, which they entered for the purpose of arresting a tramp. Rings, bracelets, charms, chains and numerous novelties, all worth about \$175, were in the collection. It is thought that the merchandise was stolen from an express car, as an empty box with the address obliterated was found near the house.

Among the out-of-town jewelers who visited the local jobbers and manufacturers last week were: J. A. Pickett, Newcastle; Aaron Pursell, Noblesville; J. A. Meissen, Cicero; D. S. Whitaker, Lebanon; H. Wheeler, Dana; N. W. Myer, Crawfordsville; E. O. Collins, Franklin; J. F. Harding, Brownsburg; F. Pennington, Knightstown; H. E. Kinnear, Marion; Mrs. B. Maier, Edinburg; George L. Spahr, Lebanon; H. F. Bennett, Lapel; H. A. Robert, Veedersburg; A. R. Cooper, Mooresville; J. W. Thompson, Danville; Miss Flora L. Dennis, Westfield; John W. Hudson, Fortville; Fred W. Green, Elwood; A. B. Westberry, Rankin; Dr. Conwell, Sulphur Springs, and J. H. Wetz, Van Buren.

The police are searching for a man wearing a Vandyke beard and giving his name as D. Clark, who is declared to have systematically defrauded Louis Haase, a jewelry jobber in the Postal Telegraph building. Mr. Haase holds a worthless check for \$168 and is out seven gold watches. When the man with the Vandyke beard first appeared in Haase's office he bought a gold watch for \$34. He offered in payment a check which Haase ascertained was "O. K." by referring to the Hamilton Trust Co., of Noblesville, the bank on which the check was drawn. Clark represented himself as a business man of Noblesville, and left an engraved card which read "D. Clark, with Clark & Co., dealers in household goods, 264 9th St., Noblesville, Ind." Several days later Clark again appeared at the jeweler's when the proprietor was out of the city. He talked with the girl in charge of the office and finally selected seven gold watches. He tendered his check for \$168, and it was accepted. When Haase returned he telephoned the trust company and found that Clark had no funds in the bank. He notified the police, and then went to Noblesville to investigate. He found that Clark had deposited \$75 in the trust company bank, and with this sum he had managed to win the confidence not only of Haase but of other merchants. After issuing several checks, he withdrew what balance he had, and then proceeded to issue worthless checks.

Canada Notes.

The stock of C. R. Elliott, jeweler and optician, Toronto, Ont., has been seized by the bailiff.

Walter Baker and Sidney L. Kent, both with B. & H. B. Kent, Toronto, Ont., have returned from a successful hunting trip to the Parry Sound district, where they each secured two deer, the limit allowed by law.

On Sunday night, of last week, burglars entered the second-hand store of Alex. Wardaugh, Belleville, Ont., gaining entrance through a back window, and stole between 40 and 50 watches and other jewelry, valued at about \$400.

The following Ontario jewelers called on the Toronto, Ont., trade, last week: N. McLeod, Cannington; A. B. Wilson, Georgetown; George Hynds, Acton; T. C. W. Watson and L. Atkinson, Newmarket; E. S. Cole, Niagara Falls; Wm. Bushy and W. H. Smith, Oakville; R. M. Bell, Erin, and J. E. McIntosh, Mount Forest.

"**GEMFINDER**" takes a melancholy pleasure in referring the trade to his advertisement of April 25th last, in the "Jewelers' Circular." Unfortunately, his prophecy has been fulfilled. Not only have Precious Stones advanced, but the end has not yet been reached. Sapphires have gone up at least 25 per cent. in the last six months, and they will go still higher.

"Gemfinder" again warns prospective buyers not to delay. All kinds of Precious Stones are scarce and prices on some may become prohibitive.

SEND FOR SELECTION

Lancaster, Pa.

TRADE CONDITIONS.

The annual Lancaster County Teachers' Institute, which kept nearly 700 teachers here all last week, and brought many more persons to Lancaster to attend the institute, proved decidedly beneficial to the jewelry trade. Some of the stores are now dressing up for the Christmas holidays.

John A. Irwin, McConnellsburg, was in New York and Lancaster last week.

Abram L. Barr, with Augustus Rhoads, was married in Philadelphia last Thursday to Miss Minnie G. Bear, Brownstown.

B. H. Prowell, Harrisburg, and O. M. Nelson, Ridgway, Pa., have entered the Ezra F. Bowman Technical School as students in watchmaking.

Harry Lichtenstein, of Williamsport, stopped over in Lancaster last week to see his brother, B. F. Lichtenstein, being en route to Philadelphia on business.

A message from Los Angeles, Cal., Nov. 14, announced the death of Jerome Hilliard, a former jeweler of Lancaster County. He was 63 years old. A son survives in Lancaster.

Among the visiting jewelers last week were: B. J. Broomell, Washington, D. C.; I. S. Hauck, Brownstown; S. H. Miller, Mt. Joy; W. J. Kinnerd, Baltimore; W. F. Steele, Altoona; George L. Hepp, Litz.

Charles D. Rood, president of the Hamilton Watch Co., last week entertained Dr. I. W. Howerth, of the faculty of the University of Chicago, who was here as one of the lecturers at the Lancaster County Teachers' Institute.

The local jewelers have been rather indignant over the action of Watt & Shand, one of the largest Lancaster dry goods firms, in giving office room right in their store to an eye specialist, and offering to sell "\$5 gold-filled spectacles or eyeglasses for \$1, with free examinations."

Baltimore.

James H. Langdon on Thursday was sentenced to the penitentiary for three years for passing a bogus check for \$215 on J. W. Mealy & Sons Co., of this city. Langdon is the son of Samuel P. Langdon, a well-known resident of Philadelphia.

L. D. Insley, 2108 E. Fayette St., this city who said he was president of the Independent Jewelry Co., became engaged in a dispute with Joseph Megary on Tuesday night of last week, and was arrested in company with Megary. Both were fined \$10 and costs.

Ralph E. Bunker, alias Edward A. Abbett, 22 years of age, who is wanted in the city on a charge of the larceny of nearly \$2,000 worth of jewelry belonging to the Castleberg National Jewelry Co., by whom he was employed as salesman, was arrested in Keokuk, Ia., recently. Arrangements have been made for his return to Baltimore.

John C. A. Riecke, a jeweler at 649 Light St., this city, who was arrested a short time ago charged with feloniously entering the store of M. Levi & Bro., 426 Light St., Oct. 21, and stealing therefrom watches and jewelry worth \$2,000, on Wednesday was committed for the action of the criminal court by Justice Cox, of the Southern police station. The accused insists that he was sick at the time the robbery took place, and was unable to leave his home.

TRADE-MARKS

OF THE JEWELRY AND KINDRED TRADES.
Over 4,000 Marks. Second Edition. Price, \$3 00.
The Jewelers' Circular Pub. Co., 11 John St., N. Y.

Connecticut.

The new clock for Stamford's town hall has arrived and will be installed this week.

Robert L. Stannis, an employe of the R. Wallace & Sons Mfg. Co., Wallingford, died Nov. 13, at his home in Meriden, of cerebro-spinal meningitis.

W. R. Upson, for several years optician with the Upson Jewelry Co., Waterbury, has opened optical parlors of his own at 70 Bank St.

The International Silver Co., Meriden, recently secured four new trade-marks, one on silverplated hollow ware and three on silver plated flat ware for table use.

Isaac Brush, Bridgeport, is about to return from the jewelry business which he has conducted in that city for the past 23 years. His stock is being disposed of by James L. Hand, of New York.

Albert L. Pelton, son of W. A. Pelton, superintendent of factory "X," International Silver Co., Meriden, and Miss Bertha Louise Benker will be united in marriage, Wednesday afternoon, Nov. 28.

The International Silver Co., Meriden, last week purchased the old John Donohue place on Pratt St., Meriden. With the new acquisition the concern has a large strip of property extending from Harbor Brook to Pratt St.

A large four-dial post clock was shipped Nov. 15 from the Thomaston station by the Seth Thomas Clock Co., Thomaston, to Oakland, Cal. The clock is one of the largest made by the concern in several months.

Frederick Ratcliff died suddenly on Tuesday of last week, in Portland. The deceased had been for 14 years employed as superintendent of the Pairpont Corporation, New Bedford, Mass. He is survived by a widow and one son.

Chas. M. Royce, an employe at the factory of the Waterbury Clock Co., Waterbury, was severely injured one day last week. Some one opened the door which leads into the blacksmith's shop, and theutch struck Royce in the thigh, painfully lacerating it. Several stitches were put in the wound.

Mayor Landers, New Britain, received an invitation to attend the presentation of the silver service by the State to the battleship *Connecticut* at the Brooklyn Navy Yard, at 3.30 this afternoon. A special train will be run for the trip, and luncheon will be served on the transfer steamer and on the train on the way home.

David Zaslave, a diamond expert, testified before Judge Cowell at the Waterbury City Court, Nov. 15, as to the value of a lot of jewelry stolen by George Marsh from J. H. Barne, who alleged that one of the diamond studs stolen was valued at \$100. According to the testimony of Mr. Zaslave the "valuable" stud was worth about 10 cents.

The number of those in the employ of the factory of the International Silver Co., Wallingford, who hold governmental positions is rather remarkable. Here are two members of the Legislature, two members of the Court of Burgesses, two engineers of the fire department, two town assessors and one borough assessor, one election commissioner and one tax collector.

The first annual meeting of the Thresher Clock Co. was held at Manchester, Nov. 7, when the stockholders elected the following directors: M. S. Chapman, H. O. Bowers, J. T. Robertson, Charles E. Norton, Sam. P. Thresher and John O. Shares. The officers elected are: President, S. P. Thresher; secretary, C. E. Norton; treasurer, Judge H. O. Bowers, who succeeds J. T. Robertson.

At the recent annual meeting of the Manchester Business Men's Association, held in Odd Fellows' Hall, South Manchester, the secretary in his report announced the advent of the Thresher Clock Co. during the past year as a desirable business acquisition to the town, and continued to say that, with the new concern, not only had a new industry been added, but several good citizens as well.

The Shelton factory of the International Silver Co. will shortly be greatly enlarged. The addition will be 97 by 37 feet, outside dimensions, and four stories high, including the basement, much of which will be above the street level. The building will be of brick and similar in design to the present factory. This will give the concern over 13,000 square feet of floor space, all of which will be available for manufacturing purposes.

The new blower which has been in course of construction in the case department of the Seth Thomas Clock Co., Thomaston, for several months past, was tested for the first time, about a week ago. Only one blower has so far been attached, as the equipment is far from completed. The object of the blower is to remove instantly all shavings, dust, etc., which may come from materials or machines. The refuse is carried through pipes to a tank located on a frame brick structure on the outside of the building, from which tank it is deposited in the boiler room below.

Philadelphia.

E. M. Bracher, 929 Chestnut St., is reported to be seriously ill at his home in Jenkintown with rheumatism.

William Latham has resigned his position with the material department of M. Sickles & Sons to take a position as watchmaker with William Gibbons, 40th and Market Sts.

John G. Buseman, retailer, is making alterations to his store at 2828 Germantown Ave. A new bulk window and metal ceilings are the principal features of the improvements.

Francis B. Wallen, 405 Broadway, Camden, celebrated the third anniversary of his store last week. The store was appropriately decorated with potted plants and exotics for the occasion.

George Welzell, manufacturing jeweler, 125 S. 7th St., has the sympathy of the trade of the wholesale district on account of the serious illness of his wife, who was operated upon last week.

Visitors to the local trade last week included: S. Bell, Atlantic City, N. J.; Joseph Loeb, Reading, Pa.; David Krauss, North Wales, H. S. Kratz, Souderton, and H. M. Bolte, Jr., Atlantic City, N. J.

Francis Schultz, a watchmaker, died last week at the age of 80 years at his home, 1803 N. 7th St. Mr. Schultz has been retired from active business for many years,

and was only slightly known to present-day jewelers and watchmakers.

Frank Scheunit, retailer, 2661 German-town Ave., was one of those injured last week in the wreck of a passenger train on the Pennsylvania Railroad near Wildwood, N. J. Mr. Scheunit escaped with an injury to a leg which, while painful, is not expected to incapacitate him for any length of time.

Julius and Oscar Hardegg, manufacturing jewelers, will open an establishment this week at 726 Sansom St., where they have leased quarters. Both are recognized in the trade as skilled artisans, and have been employed by Philadelphia retailers in various capacities for some years. J. Hardegg recently conducted a retail store in Sellersville, Pa.

William C. Williams, with Charles H. O'Bryon, 735 Sansom St., will be sworn in as member of Councils from the 18th Ward next week. Friends in the jewelry trade are preparing to show their appreciation of Mr. Williams' entré into public life by subscribing to a floral tribute to be presented to him when he takes his seat as one of the city fathers.

I. E. Fredrich, who sold out his business as a manufacturing jeweler at 8th and Sansom Sts., recently, to S. Sagorsky, formerly of 6th and Bainbridge Sts., will open this week a retail store at 1130 Broadway, Camden, N. J. Mr. Sagorsky has remodeled the store at 716 S. 8th St. and combined the force there with that of his old store. He is now making a specialty of fine repairing.

R. M. Cooper, of R. M. Cooper & Son, jobbers, 726 Sansom St., attended last week the 103d birthday anniversary festivities of his grandmother, Mrs. Mary A. Marriner Cooper. The centenarian is the mother and grandmother of a family of watchmakers and jewelers, and R. M. Cooper, who conducts the wholesale material establishment on Sansom St., is now the only one of the family actively engaged in the business. He was the recipient last week of congratulations from friends in the trade on his grandmother's anniversary. Mr. Cooper and two uncles, both past 70 years, were until recently active in the trade, but have now retired.

Harrisburg, Pa.

About 5,000 people came to Harrisburg Saturday on the regular capital excursion. The railroads propose to continue these weekly excursions for at least one month.

Efforts of the authorities to secure the importation of the magnificent stained glass windows for the new St. Patrick's Roman Catholic Cathedral from Germany free of duty have failed, and the contractors, Meyer & Co., of Munich, have been directed to ship the windows at once. A duty of \$8,000 on the \$20,000 windows will have to be paid.

The store of Mrs. A. W. Hopwood, Lewisburg, Tenn., was recently damaged by fire. All the stock is reported to have been saved.

M. Berman, Altoona, Pa., has been awarded the contract to supply class pins to the class of 1907, at the Altoona High School. During the past five or six years the contract was given to out-of-town firms.

TOURMALINE

is known under various names. Some of the varieties are **RED**,
called **RUBELLITE, SIBERITE** and **SIBERIAN RUBY**.
GREEN or **BRAZILIAN EMERALD**.
BLUE or **INDICOLITE**.

We have a good line of red and green and some blue Tourmalines

New Stores and Enterprises.

J. D. Webb will soon begin business in Smithville, Mo.

W. C. Schreiter has opened a store at La Crosse, Wis.

J. S. Stewart & Bros. are new jewelers in Darlington, S. C.

G. Heitkemper, Jr., is opening a store in Klamath Falls, Ore.

Fred Halleck has engaged in the jewelry business in Greeley, Nebr.

Scribner & Stone recently commenced business in Priest River, Idaho.

E. J. Wiggins will open a jewelry store at 410 E. 63d St., Chicago, Dec. 1.

Mesch & Willman is the name of a new wholesale jewelry house at 4th and Main Sts., Cincinnati, O.

Frank Bessie is about to open a store at Fort Wayne, Ind., under the name of the Bessie Jewelry Co.

Henry Borlovitz opened a newly furnished store at 242 Main St., Paterson, N. J., about a week ago.

I. E. Fredrich, a former manufacturer will open a retail jewelry store at 117 Broadway, Camden, N. J., this week.

Henry Beschinen, formerly of Livermore, Cal., has removed to Niles, Cal., where he is arranging to open a store.

O. B. Knight & Co. are opening a jewelry store on Portage Ave., Winnipeg, Man. Mr. Knight was formerly with T. J. Porte Co., Ltd., of that city.

J. W. Puetz opened his handsomely furnished store at 110 W. Market St., Lima, O., Thursday. There is a first-class optical department connected with the establishment.

Robert T. Garmen, Altoona, Pa., has purchased a three-story brick building at the southeast corner of Pennsylvania Ave and 10th St., and will open a jewelry store there, equipped with every modern improvement.

The A. H. Denny Co., manufacturers of jewelry, silverware, etc., to conduct a store in this city, was incorporated last week with a capital of \$5,000. The incorporators are E. H. Beals, J. W. Persons and L. E. French, all of Buffalo.

The Crystal Optical Co. has leased quarters at 206 S. Michigan St., South Bend, Ind., where business was begun last week. The members of the firm are Louis Swartzburg and Sigmund Hoffman. Mr. Hoffman formerly resided in Chicago.

I. Nussbaum, who for six years had been with Prentlike Bros., Cleveland, O.; I. C. Gellmer and E. Grossman, both of Goldsmith Bros., of the same place, have formed a co-partnership under the style of Nussbaum, Gellmer & Grossman, with offices at 1386 6th St., N. W., Cleveland, where they will conduct a wholesale and jobbing jewelry business.

At the third annual Arts and Crafts Exhibition, held at George W. Benson's shop at Buffalo, N. Y., recently, there were some fine exhibits of art jewelry, copper and brass ware and pottery. Among the jewelry were some beautiful pendants, necklaces and pins, while the pottery consisted of Gruby, Neocomb, teo and other wares.

Turquoise, The Fashionable Necklace.

Turquoise
is the
Birth-Stone
for
December.

In the holiday stocks of progressive jewelers, this Fall, will be found the handsome and popular

TOLTEC TURQUOISE NECKLACES.

The Turquoise, being the birth-stone for December, makes this beautiful gem particularly desirable for a holiday gift; and it is also now the leading favorite with people of fashion.

In hardness, durability and color, the "Toltec" Turquoise are unequaled by any others in the world, and are the only genuine Turquoise capable of being matched up in necklaces.

WE SELL ONLY THROUGH THE TRADE.

"Beautiful Woman's Beautiful Jewel," a dainty brochure telling all about the product of the only mines in the world where turquoise can be found sufficiently perfect in form and color for a necklace, will be sent free on request to readers of this paper.

Factory: 35 Rue des Trois Bornes, Paris, France

Pittsburg.

Gillespie Bros. have added several new salesmen to their force, because of the approaching holiday trade. The firm will also add a diamond room to its establishment.

John Meenan, who was charged with stealing eight watches and some silverware from the store of Bernard Gross in Fifth Ave., Sept. 27 last, when arraigned in court last week, pleaded guilty and was sentenced to the Western Penitentiary for two years.

William S. Walker, known as "Diamond Bill," and well known to all jewelers, was convicted of a serious charge in the Criminal Court, last week, after the jury had been out 90 hours. Three charges were laid against him, but he was convicted of only one count.

The Grand Jury, last week, returned a true bill against Bango S. Jaffe, the salesman who is alleged to have stolen diamonds valued at \$5,000 from the Castelberg Jewelry Co., and then suddenly left the city, he was in New York. It is expected that Jaffe will be given a speedy trial.

J. C. Wasson, manager of the jewelry department for Joseph Horne & Co., last week, in a long interview published in a local newspaper, suggested that the city build the proposed subways. Mr. Wasson is a member of Pittsburg councils, being president of the Rapid Transit Commission of that body and prominent in its affairs as well as managing one of the largest jewelry departments in the city.

A reign of terror appears to have broken out in the Pittsburg shopping district during the last 10 days, and robberies are numerous, but up to the present the jewelers have apparently escaped. They are not jubilant over it, however, for they are living in dread until the police department gets the condition under control. The city last week authorized the employment of 200 additional policemen, or an increase in the force of nearly one-third.

The trade was, last week, visited by the following out-of-town merchants: D. L. Cleeland, Butler; H. A. Jackson, Saltsburg; J. Linnenbrink, Rochester; J. C. Keith, Elwood City; Geo. Eckert, Jeanette, Pa.; R. A. Noble, Wellsville, O.; Thomas Tomlinson, Jeanette, Pa.; J. B. Bruce, Burgettstown, Pa.; J. F. Murphy, Dawson, Pa.; Frank Murdock, Ligonier; E. H. Schaefer, Beaver Falls; Margileth & McFarland, Springfield, O.

The Grand Jury, last week, found a true bill against E. E. Clark, alias James or Peter Fuller, the check swindler, who was identified by James Lewis, a Columbus jeweler, as the man who had robbed him of diamonds worth \$500 by giving him a bogus check. Clark cannot be taken to Columbus until after he answers the Pittsburg charges lodged against him of passing fraudulent checks. Clark is said to be wanted in a number of cities.

Joseph Otto Horne, aged 46, a son of the late Joseph Horne, of the Joseph Horne Co., and a brother of Durbin Horne, of the same company, died last week in New York of pneumonia. For several years he had made California his home, but went to New York shortly after the earthquake. The funeral took place from the

residence of his brother, Durbin Horne, in this city. The deceased was a member of Allegheny Select Councils for two terms.

The Pittsburg police on Saturday arrested Henry Bilder and George Fineman, who are suspected of being implicated in a jewelry robbery with Fred Hayes, who escaped from the Haysborough jail, the day he had been sentenced to 60 days in the workhouse. The two men were arrested while trying to sell watches to foreigners. Bilder had nine watches and Fineman carried 11. When Hayes was arrested several days ago he had many watches that he could not account for, but protested that others besides himself were interested with him. The two men are being held until more can be learned about them.

Goddard, Hill & Co. have just sold to a Pittsburg one of the handsomest Elk emblems ever made in this city. It is of special design and arrived last week from the Gustave Fox Co., makers. The man for whom it was made is a member of Pittsburg Lodge B. P. O. E., and it cost \$250. On either side of the dial are two large deer, and just below the dial are two American flags showing the regulation colors, the flags being in relief design. Between the flagstaves is a one-carat diamond, and just under this is the Royal Arch Keystone, an emblem of the Masonic fraternity. Under this are the elk's teeth, two in number, typical of the emblem of the order.

A Philadelphia jewelry salesman, last week, had a bad scare while in this city. For a time he supposed that he had lost two sample cases containing \$5,000 worth of jewelry, but they were later restored to him. The salesman notified Capt. James W. Eagan, superintendent of police, of his supposed loss, but when Capt. Eagan was seen by THE CIRCULAR-WEEKLY correspondent, he could not give the name of the salesman or the house he represented, though he vouched for the truth of the story. It appears that the salesman left the Hotel Henry in company with a negro employe, who carried his sample cases. Half way to East Liberty, the negro became involved in a dispute with the conductor of the car, and the negro was put off. The salesman proceeded on his way, and the conductor kicked the salesman's cases out on the rear vestibule of the car. The salesman looked for his negro assistant, but could not find him. In the scramble to look for the negro, the sample case containing the jewelry was snugly tucked away in a corner of the vestibule of the car and was overlooked. The salesman at once communicated with police headquarters by telephone, reporting his supposed loss. Three or four detectives were detailed to trail the negro, and it looked as if something serious might happen to the porter, but after a few hours' search, the police were rewarded by finding the cases at the Oakland car barns, the conductor having dumped the case in a waiting room, where it was found by the owner.

Kors Bros., Independence, Kans., have ordered new fixtures for their store, which will be thoroughly remodeled.

R. E. Stacy recently began business in Elberton, Ga. He formerly conducted a jewelry store in Waynesboro, Ga.

Attleboro.

James E. Blake, of the James E. Blake Co., was painfully hurt by a fall on the stone steps at the new railroad station last week.

Preparations are in progress to present at the next session of Congress a petition bearing the signatures of all the manufacturers for a post office building in Attleboro.

Work was started last Friday on a large addition to the R. F. Simmons Co.'s factory on N. Main St. It will be built of brick and will be used for manufacturing purposes, principally to accommodate the heavy machinery of the stock department. The addition over all, will be 139 feet long and 68 feet wide. It will be one story in height and will be built on the north end of the building, off the engine room.

The Attleboro manufacturing jewelers share with their neighbors in Providence the distinction of receiving letters from the "Sublime Brotherhood of the Zaques," threatening to cut off their South American trade if they do not use their influence for Democratic success in the next national Presidential campaign. Attleboro has so little South American jewelry trade that even if the absurd threat were to be taken seriously it would still be a trivial matter. Various efforts have been made to get a foothold there, but the German manufacturer has proven too wily and able a competitor.

North Attleboro.

Fred A. Howard, of Frank M. Whiting & Co., was in New York last week.

John Mirril is contemplating opening a retail jewelry store in Milford, Mass.

George W. Whiting has returned from a short eastern trip in the interests of Sturtevant & Whiting.

The employes of the George L. Paine Co., W. G. Clark & Co., J. J. Sommer & Co., Casper & Mandalian and F. L. Shepardson were given a holiday Saturday. A pulley broke shortly after 7 o'clock and made it impossible to obtain power in the building for the balance of the day.

A local manufacturer who had been missing articles of jewelry with great regularity of late, and recently determined to put a stop to the thefts, stayed up one night, hiding in a closet, after having purposely left several bracelets lying on a table. Shortly after midnight a noise was heard, and the manufacturer, upon peering out, discovered a good-sized rat making off with one of the bracelets.

William Bebeau admitted to Judge White at the Taunton Superior Court, Friday, that he was guilty of the charge of assaulting Arthur L. Greene, Jr., messenger boy of G. K. Webster & Co., and robbing the payroll of the concern of a little over \$3,000. Bebeau entered a plea of *nolo*. Petitions were presented signed by prominent Pawtucket city officials asking for clemency, but the court was obdurate and sentenced Bebeau to not less than 12 years nor more than 15 years' confinement in prison. The first three days of his sentence will be passed in solitary confinement.

Fred. T. Webber & Co., Danville, Ill., have been succeeded by Webber & Turnell.

GORHAM SILVER

FOR CHRISTMAS AND NEW YEAR.

¶ A short five weeks and Christmas Day will be past and gone. Already the more desirable class of the retail jeweler's customers are arriving at a decision as to the form their Christmas gifts shall take. In a majority of cases that decision revolves around some article of Gorham Silverware.

¶ For this reason the discreet jeweler will take advantage of this final opportunity to replenish his stock of Gorham Silver, especially designed for Christmas and New Year gifts. He will also recognize that in order to avoid an otherwise inevitable disappointment he must forward his necessary orders without delay.

Reconstructed Gems and Other Imitations.

THE increase in the number of reconstructed and scientific rubies sold in this market within the past few years has not only made the question of the identification of these stones an important one in the jewelry trade, but incidentally has brought up a number of other questions of more or less importance which in time are bound to affect the business of jewelers at large. One of these questions relates to the use of the name "reconstructed" as applied not only to scientific rubies but to imitation stones of other kinds. The advertiser and magazine writer having made the public familiar with the term "reconstructed," dealers and importers find it profitable to apply the name to other imitations of gems of an entirely different character; the newspapers having told the world that the "reconstructed" ruby is identical in many properties with the ruby of nature, the term seems to carry to the general mind, when applied to a gem of any kind, the idea that the gem in question is similar to the earth-born stone, except that the crystallization is produced by man instead of by nature; consequently many people who would never consider the question of buying an imitation stone will be interested in a gem, not genuine, offered under the name of "reconstructed." It behooves jewelers, therefore, to refrain from being a party in any way to the use of the term when applied to a doublet, a triplet, or a paste facsimile or any other ordinary imitation gem.

Though the fact may not be generally known, it is possible for the members of the jewelry trade, by their practice, to give a definition to the term "reconstructed" as applied to gems that will be absolutely upheld and adhered to by the courts of law in this country, as the meaning of a word in trade and commerce is as clearly recognized in the interpretation of a law or a contract as is the technical or exact meaning to be found in dictionaries; in fact, the trade and commerce meaning will often be upheld as against the latter as more clearly expressing the idea in the minds of the parties involved in a transaction. Therefore, if the jewelry trade at large—importers, wholesalers and retailers—will agree in their use of the word "reconstructed" to apply it to a definite and distinct class of artificial product, they can establish this meaning so thoroughly and soundly that the illegitimate and fraudulent advertiser or dealer who tries to thrust upon the public a cheap imitation on the strength or reputation of these scientific reproductions can avail himself of no technicality under which to escape prosecution or being shown up for what he actually is.

What applies to the word "reconstructed" also applies to the words "synthetic" and "scientific," but the differentiation between the three has not been clearly adhered to even by the trade itself so far, and it would therefore seem better to take one word—the best known and most generally descriptive—with which to designate gems made through an imitation of nature's processes, in contrast to articles manufactured in an ordinary way to imitate the gems themselves. The "scientific" and "reconstructed" rubies have become known to the public, and are probably here to stay. It is

distinctly up to the jeweler now to protect himself and his trade by clearly differentiating between these stones and the natural stones, on one hand, and the horde of cheap imitations on the other. This can only be done by a proper designation, clearly defining the status and class of the product, which term is itself absolutely limited to this class of artificial stone.

There are on the market to-day "reconstructed" and "scientific" emeralds and sapphires, some of which are no more than hard glass and others ordinary doublets, yet there is hardly a jeweler who buys these who does not think they are made by the same process as that used to produce the "reconstructed" or the "synthetic" ruby. Many of these are sold without any representation as to the way they are made, and therefore the misunderstanding as to the character of the jewel in the mind of the purchaser is due solely to the name used.

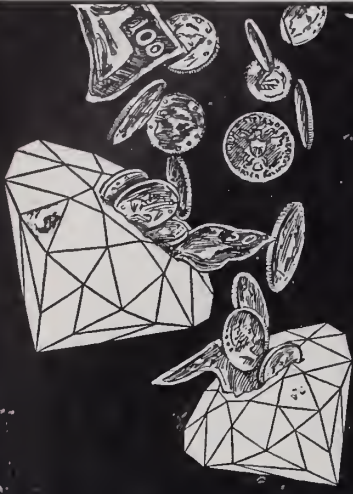

Such a condition is wrong and can be remedied only by all classes of trade adhering strictly to terms, the meaning of which all understand. Would it not therefore be wise to agree absolutely on the meaning of the word "reconstructed" at once and use the word within that meaning. THE CIRCULAR-WEEKLY would like to hear from both importers and dealers in gems on the subject.

Prices Steadily Advancing.

OWING to the many and decided advances that have been made in the price of the raw materials which enter into the lines handled by the jewelry and kindred trades, particularly in the case of precious stones, silver and platinum, retailers and jobbers must not be surprised if distinct advances are made in the prices of the finished products which they both handle, and it will be well for them and their customers if on all occasions they make plain the conditions which will necessitate such advances. Another factor is the increase in labor cost which is being felt in every line in the trade. At a recent meeting of the manufacturers in Providence the matter of advancing prices in certain lines of jewelry was taken up, and it seemed to be the general opinion that under present conditions these advances should soon be made. As one manufacturer pointed out, many of the prices quoted now were made two or three years ago, and some of them early last Spring, when the conditions were entirely different from the present—when platinum was \$1.10 per dwt, instead of \$1.90 as at present, when certain precious stones were worth \$3 and to-day are worth \$6, when certain workmen are getting \$20 a week who to-day are getting \$35, and when silver was 64 cents per ounce when to-day it is over 71 cents.

In order that the retailer may escape the uncomfortable position that the manufacturer finds himself in to-day, he must begin to educate his customers up to the fact that the market is rising on almost every line that he handles, and that the purchaser of to-day will have a decided advantage in price over the purchaser of the same article a month or six months hence. He must teach the maxim, "He buys cheap who buys quickly."

BUYERS OF DIAMONDS

Put your money

and get your customers to put their money in **DIAMONDS**—no better investment to-day.

Prices in the Diamond market are advancing, but **OUR PRICES HAVE NOT BEEN ADVANCED** in some time. We still have a large collection of superb Diamonds which we bought a considerable time ago at lower prices than prevail to-day.

We shall not advance prices on these stones. We are merchants and not speculators and our fair percentage of profit is all we ask. So, as long as these Diamonds last, it will be possible to buy them here under the regular market for fine stones.

New Orleans, La.

TRADE CONDITIONS.

Business conditions in New Orleans are reported by jewelers to be very good, with a promise of an early increase in trade. Most of the dealers, anticipating a brisk Fall and Winter season, after a prosperous Summer, have made large purchases of holiday stock.

L. Mayer has opened a jewelry store in Poydras St., between Carondelet and St. Charles St.

The Robbert Optical Co. has recently had a large display sign made for the front of its building in Carondelet St.

William Crago, 1619 Dryades St., expects soon to enlarge his establishment and add thereto an optical department.

The handsome diamond bracelet presented to Miss Theresa Lafarno by the Crescent City Charity Association was supplied by Eugene Barbier, 308 Royal St.

The Weinfurter Jewelry Palace is undergoing very extensive repairs, and the entire front of the building is being remodeled and painted in cherry. Next Saturday M. Weinfurter will celebrate his 36th anniversary in business.

A. M. Hill, 635 Canal St., who is now selling out his stock, intending to return from business, confessed judgment in the Civil District Court, a few days ago, on a suit brought by Jonas & Brod, on a promissory note, dated December, 1905. The amount involved was \$409, less \$136, previously paid.

Coleman E. Adler has filed a suit in the Civil District Court against Joseph Buddecke, one of his former customers, to recover the purchase of a gold scarf crest, watch and a diamond ring, amounting in value to \$169.25. Buddecke paid \$50 on the debt, bringing the amount to \$119.25. The debt has been standing since July, 1903.

O. D. Bowlby, Lensburg, Man., has reopened his store after having been confined to his home by a severe illness.

New York Notes.

A judgment for \$113 obtained last December by Tiffany & Co. in a suit against Albert Lee was last week satisfied.

A report that Dr. George F. Kunz, of Tiffany & Co., had organized an expedition to search for diamonds in Canada is denied. The James E. Blake Co., 37 Maiden Lane, has moved into larger quarters, going from the ninth to the seventh floor of the same building.

Congratulations on his 82d birthday were received last Friday from a host of friends by John E. Shepard, who counts 65 years of activity in the Maiden Lane district.

In one of the several evening classes of the Manhattan Trade School opened last week at 209 E. 23d St., girls and young women are taught to make boxes for jewelry and silverware.

Rose Swartz, a servant girl, employed by Oliver M. Farrand, 3 Maiden Lane, was badly beaten Monday afternoon by a stranger whom she refused admittance to the home of Mr. Farrand, 238 W. 113th St. From Butte, Mont., comes word that B. Hirschfeld, 65 years old, who said that he was a jewelry salesman of New York, had been struck by a cab, and that his injuries will confine him to the hotel for several days.

Wilson Bryant, who was formerly with Amerden & Foster, and more recently in business in Saratoga, has opened a store at 90 Fifth Ave. Clarence Block, until recently with J. W. Block, 9 Maiden Lane, is with Mr. Bryant.

General Appraiser W. S. Sharretts, who passes on most of the jewelry cases brought in appeal before the Board of United States General Appraisers, is passing a vacation at his old home in Baltimore, Md., and will resume his duties here early in December.

Brooches and chains, imported by Cohn Rosenberger were held last week by the Board of United States General Appraisers to be dutiable at 60 per cent. as jewelry. A quantity of buckles, clasps and muff chains was held to be dutiable at 45 per cent. as manufactures of metal.

A quantity of diamonds, semi-precious stones and pearl-handled knives were taken last week from Otto Graf, who said that he was a jeweler at Indianapolis, Ind., and who was a passenger on the *Friedrich der Grosse*. The customs officers say that he failed to declare the property.

At the sale last Thursday of jewelry belonging to the estate of Hyman Gattle, bankrupt dealer, formerly of 65 Nassau St., the highest bid was received from the Brooklyn Purchasing Syndicate and its offer was accepted. The jewelry, consisting of rings and pendants, was tied up until recently by litigation.

A 16-story office building is to be erected in the triangle bounded by Maiden Lane, William and Liberty Sts. by the German Insurance Co., which recently bought the lot on the easterly angle and now owns the entire plot except the site of the Wolfe building on William St. The new structure is to be ready for occupancy by May, 1908.

Eisenmann Bros., importers of pearls and precious stones, formerly of 21 Maiden Lane, have moved to 452 Fifth Ave., where

they occupy commodious quarters on the second floor. Excellent light is afforded by several large windows facing the new public library. The rooms are finished in black walnut and, with the carefully selected furniture, present an attractive appearance.

When a pearl dealer reads the stories which are being printed these days in the daily papers of the finding of valuable gems by people eating clams or oysters in various restaurants, he generally smiles. The dealers say that the stories are usually designed either to advertise the restaurant or the finder of the supposed gem, who is not uncommonly an actor or actress. It is also said that these stories help the oyster business.

Detectives arrested last Friday a 22-year-old laborer, Morris Bleischer, of 268 Ave. B, on the charge of being one of the four men who tried to rob the apartment of Michael Megurowsky, a dealer at 140 Henry St., as was told in last week's issue. The prisoner is also accused of trying to shoot one of the detectives at the time that the arrest was made. This is the second arrest made in the case, the first being that of Harry J. Troubig, who has been held in \$5,000 bail.

Tariff revision was the subject of an elaborate address delivered last night by James W. Van Cleave, the president of the National Association of Manufacturers, which has its offices at 170 Broadway, New York. He spoke before the Home Market Club, Boston, Mass. The speaker advocated the creation by the present Congress of a tariff commission and a pledge in the Republican platform of 1908 to revise the tariff directly after the next President is inaugurated.

Herman Bach, a retailer at 1538 Broadway, recently had on exhibition a snuff box of unusual workmanship and design, which was presented, it is said, by his majesty Emperor Wilhelm I. of Germany to Count Edward Von Taaffe, Prime Minister of Austria. This snuff box, wrought of 18 karat gold, is enameled in blue and studded with diamonds. The imperial coat of arms is handsomely hand chased. The box, which is about four inches long by three wide, was brought from Germany by a friend of Mr. Bach.

Reports which have been circulating in the last few days in the Maiden Lane district as to the purchase of a watch case company are denied with emphasis. The rumor, the origin of which could not be traced, was to the effect that the Waltham Watch Co. had bought the Roy Watch Case Co. A representative of the Waltham Watch Co. said that there is absolutely no truth in the report, and that the company has had no plant of the kind under consideration. Albert L. Stearns, the president of the Roy Watch Case Co., said that the rumor was false and that the company is not to be sold to anyone. He said that there has been no change in the management, and that there have been no negotiations looking to any sale or any change.

Following the announcement made last week by the Waltham Watch Co., of semi-annual dividends at the rate of six per cent. on preferred and three per cent. on common stock, many favorable comments on the prosperous condition and conservative management of the company were published in the commercial and financial papers of New

York. It has been given out that the company is now turning out 3,000 watch movements a day, and that this number will shortly be increased and extensions to the Waltham plant are nearing completion. The cost of the extensions is to be met by the sale of a portion of the \$1,000,000 of preferred stock held in the treasury. It is said that the company is now earning nearly 8 per cent. on the common stock.

Stories of a watch, said to have been owned by Marie Antoinette, have been published in the last week in the daily papers, several of which treated the subject in a humorous manner, indicating a lack of belief in details. The watch, set in a golden lyre and ornamented with pearl designs, was shown to reporters in the office of Bytton Bros., 63 Park Row. Freitas de Branco, of Funchal, Island of Madeira, came to New York several weeks ago, it was said, in search of the time-piece, which had been stolen 14 years ago from his family. According to one account he got the watch from a longshoreman in Brooklyn, who had been a servant of the family and came to New York about the time that the keepsake disappeared. Another report was that the watch was found in a Canal St. pawnshop.

Invoice values of the silver belts, buckles, girdles and cloak clasps, which were imported recently by Tiffany & Co., and about which a question has arisen as to whether or not they are to be classified as jewelry for customs purposes, range from \$16 to \$200. The same company some time ago brought in a quantity of costly hand bags, which, after a contest in the courts, were finally classified as manufactures of metal dutiable at 45 per cent. D. Macon Webster, counsel for the company, will claim, when the case concerning the later imports is argued early next month before the Board of United States General Appraisers, that these articles are no more to be considered jewelry than were the hand clasps. The Government will claim that silver articles now in question are personal ornaments, of the character of jewelry, and are therefore dutiable at 60 per cent.

About 600 people were present at the fourth annual entertainment and reception given Saturday evening last in the Yorkville Casino, 210 E. 86th St., by the Julius King Optical Co. Social Club. Besides the members and their families there were present representatives from other optical and jewelry companies. The club comprises both office and factory forces, and both were represented on the programme of the entertainment given in the early part of the evening. H. L. Warren, the president, delivered the opening address and then followed many numbers, including vocal selections by W. Comer; recitation, E. Grady; comic songs, M. J. Hayes; selections by King's double quartette, W. Comer, C. P. Holker, F. Wexler, E. Atzert, B. Daly, E. H. Madlener, C. Wexler, and A. A. Pabst. The final turn was a one-act farce, "Wanted, a Confidential Clerk," in which parts were taken by P. McCarron, E. Atzert, A. A. Pabst, B. Daly, F. Wexler and J. H. Field. Twenty-four dancing numbers followed, and the evening passed most enjoyable for all. Following is a list of the officers: H. L. Warren, presi-

(Continued from page 75.)

lent; E. H. Madlenger, vice-president; R. T. Brown, treasurer; A. M. Bossong, secretary; M. M. Cohen, sergeant-at-arms.

The Adolph Levy Co., 996 Broadway, Brooklyn, has added a line of jewelry to its optical and surgical lines.

Morris Rosenbaum, of Rosenbaum & Adler, returned last week on the *Kaiser Wilhelm II.*, after a trip to Paris, Amsterdam and Antwerp.

Harry Z. Oppenheimer, of H. Z. & H. Oppenheimer, and Mrs. Oppenheimer, were among the passengers sailing yesterday on the *Kaiser Wilhelm II.*

Leopold H. Herzfelder, with David Mayer, will be married to-day in the Hotel Knickerbocker, the bride being Miss Katharine Appelbaum. Mr. Herzfelder and his bride will sail to-morrow on the *Amerika* for a European trip.

Charles M. Pope, who was arrested in September on a charge of converting jewelry valued at \$1,200 obtained on memorandum from Frederick Keim, 258 Fifth Ave., was recently sent to Bloomingdale, having been declared insane.

R. V. Hurd, a retail jeweler at 126 W. 64th St., was notified last Friday of the arrest of Walter J. O'Neill, also known as 'Heill, who was formerly a clerk in the jeweler's employ, and who is accused of stealing, in July last, jewelry to the value of \$3,100. The property, including diamond rings, set with rubies, pearls and emeralds, was entrusted to the young man to deliver to E. B. Hayden, 75 Nassau St., for the purpose of making repairs. The clerk disappeared with the jewelry, it is charged, and also with \$150, which he collected on Mr. Hurd's account from the United States Assay Office. Since then the police have been looking for him. It is said that O'Neill left the city for a time, but recently returned to Brooklyn and obtained employment as an orderly in the Beth Israel Hospital. He did not remain long in that institution. Two detectives recognized the young man on the east side last Friday and arrested him after a lively chase. He was held Saturday morning in the Jefferson Market Court in \$2,000 bail on a charge of grand larceny to await the trial of the Grand Jury.

Newark.

John E. Le Comber died Nov. 12 at his home, 501 Bloomfield Ave., Bloomfield.

O. A. Bohm, who for 16 years had been employed by Chas. Hartdegen & Co., has bought the business of E. W. Price, South Orange, N. J.

A verdict of \$112 was awarded recently by the Second District Court to John Burak, jeweler, who brought suit for damages because he had been bitten by a bulldog belonging to William F. Jackson.

Creditors of Joseph B. Ludwig, Paterson, N. J., were, Nov. 5, adjudicated a bankrupt. They will hold their first meeting Friday at 11 o'clock in the District Court room, City Hall Building, in that city. The schedules indicate total liabilities of \$6,398 and no assets.

Druggists and others in Trenton who have been sued on notes and drafts given for cases of cheap jewelry installed in their stores by the Lyons Taylor Co., of Iowa, are vigorously defending the cases. An attorney representing the defendants is trying to arrange for the cross-examination of witnesses in Iowa. The defendants claim that they did not understand the character of the contracts which they are said to have made.

News Gleanings.

The Denver Mfg. Jewelers' Association held its regular meeting, Nov. 15, in Denver, Colo.

I. W. Siles has purchased the jewelry business of E. L. Smart, in Socorro, N. Mex.

Frank J. Flannery, Newnan, Ga., has moved to 1 E. Broad St., adjoining the new bank building.

The stock and fixtures of Henry L. Prill, Bradford, N. Y., were disposed of at auction, recently.

Meyer A. Lesser, Fort Worth, Tex., has moved from 1200 to 611 Main St. The new quarters have been entirely renovated and remodeled for his use.

J. Nielsen, formerly of 1124 Polk St., San Francisco, Cal., has opened a new store at Palo Alto, Cal., to which point he has removed with his family.

J. Ramser, Rock Island, Ill., for some time watch inspector for the C. R. I. & T. Railway, has also been appointed inspector for the C. B. & Q. Railroad.

C. M. Hunnicutt, Rockville, Ind., on Friday suffered a loss of \$1,000 by a fire which broke out in the building occupied by him, causing a total loss to the town of about \$28,000.

The retail jewelry store of Robert M. Hutcherson, Greenville, Tex., was destroyed by fire last Wednesday. The loss is estimated at \$6,000. The insurance amounted to \$3,000.

The regular monthly meeting of the Milwaukee Jewelers' Club was held last Wednesday evening at the Republican House, Milwaukee, Wis. The Club now has an active membership of 65 and is growing.

N. F. Babb, Stratford, Ont., and A. Gillies, an employe, were charged with the retention of a gold ring, last week, by Bella Bell, of Shakespeare, Ont., who claimed that a gold ring she took to be made over was not returned to her. Mr. Babb was, yesterday, discharged by the magistrate, the case against Gillies being held over.

Albert Swink has announced his intention of engaging in business in Quincy, Ill., about Dec. 7. Mr. Swink formerly conducted a store at 620 Hampshire St., at that place, and sold out to Arthur F. Odell, agreeing at the time not to re-engage in business until the expiration of the year. It is alleged that Mr. Odell objected strenuously when Swink, about a month ago, opened a repairing shop at 616 Hampshire St., on the ground that Swink was violating the agreement made at the time he sold his business. The repair shop was consequently closed.

The monthly meeting of the Rochester Optical Society was recently held in the office of Clark & Bowen, Rochester, N. Y., with 20 members present. Mr. Doane gave

a lecture on the external disease of the eyes. Mr. Benedict made a motion that a rising vote of thanks be extended to the doctor for his trouble, which was seconded by Mr. Arrington and carried unanimously. After the lecture the minutes of the last meeting were read and approved. Mr. Bissell suggested that the name of the society be changed to the Rochester Optometrical Society. The suggestion will be acted upon at the next meeting, Dec. 11, 1906. Mr. Bissell then made a motion that Mr. Sweeting act as secretary *pro tem* the balance of the meeting, which motion was carried.

Another step was taken recently in the law suit of Sherman R. Miller, Detroit, Mich., against the Williams Bros. Mfg. Co., of Naubuc, when Attorney William W. Hyde argued the plaintiff's motion for an order requiring the defendant to separate defenses. In the complaint it is alleged that the company agreed to sell nickel plated silverware of which 25 per cent. should be silver and that only 18 per cent. was silver. Between May 1, 1902, and Feb. 1, 1905, the amount of the silverware sold was \$165,255, and the difference in the percentage of silver amounted to \$5,763.95. Suit was brought on the ground of breach of claim of warrantee. Attorney Harrison B. Freeman argued that the goods delivered were equal to the samples and that it was impracticable to separate the company's defense.

Boston.

August Sweetland, of the house of C. W. Sweetland, has been on a business trip in Maine.

Wolf Abrams, father of Mark Abrams, bookkeeper for Gordon & Burgin, died on Thursday last.

George T. Geer, watchmaker, 387 Washington St., has gone out of business owing to foreclosure, and removed to Denver, Colo.

Ezra Charles Fitch, son of Ezra C. Fitch, president of the Waltham Watch Co., was married Nov. 16 to Miss Ethel Tucker, of Boston. They will reside in Montreal, where Mr. Fitch is connected with the Montreal office of the company.

The certificate of incorporation of Baldwin & Whitcomb, to deal in jewelry in this city has been filed. The capital is \$10,000 and the officers are: President, C. G. Whitcomb, Holbrook; treasurer, W. H. Baldwin, Roslindale.

Buyers in town during the week included: A. Vincent, Jr., Lewiston, Me.; J. F. Burgess, Camden, Me.; Henry Lemay, Manchester, N. H.; L. P. Austin, Barre, Vt.; J. G. Sterns, Souris, P. E. I.; F. Metz, Fitchburg, Mass.; E. F. Welch, Westboro, Mass.

Ex-Alderman Frederick S. Perkins, who died at his home in Waltham early last week, was an old employe of the Waltham Watch Co. Mr. Perkins was born in Gloucester 50 years ago. He came to Waltham about 25 years ago, and had been employed at the watch factory nearly all of the time.

E. V. Roddin & Co., Chicago, have finished mailing out the very large edition of their catalogue for this year. From a typographical standpoint, or in any other respect, it is well nigh perfect and replete with good illustrations.

Ball's Official Standard R. R. Watches

WHAT WOULD YOU GIVE FOR A LIFELONG CUSTOMER?

Try this plan:

Sell your next watch customer a "Ball."

Its reliable performance will convince him you are a dealer to be depended on—he'll keep coming back for other things.

The watch will win you his business and friendship for always.

Write for booklet, and watch this space.

We want to add a lot of new friends to the Ball family of railroad watch dealers.

VOL. LIII.

CHICAGO, WEDNESDAY, NOVEMBER 21, 1906.

No. 16.

Chicago Notes.

C. M. McFatrige was in the city recently buying the opening stock for his store at Moravia, Ia.

A. H. Frandsen, Monmouth, Ill., has been spending some time here taking a special course in optics.

L. H. Vohon, with Lewis Finkelstein, Minneapolis, made a brief business visit to his city last week.

Edward Lehman, of the Edward Lehman jewelry Co., Denver, Colo., was here for a few days last week.

C. L. Caligan and A. Ellbogen, with Sprochnle & Co., have left for their final trips for the season.

R. T. Kleckner, of the Chicago office of the Theo. W. Foster & Bro. Co., is in from his last trip for the season.

C. A. Rouse, after an absence from business for over a year, has returned to the sales force of L. H. Schafer & Co.

Seth E. Thomas, of the Seth Thomas Clock Co., Thomaston, Conn., visited the Chicago office for a few days recently.

William A. Fay and Fred R. Sheridan are making a trip to Milwaukee. This will practically close their work for the season.

W. C. Schreiter, who has opened a new store at La Crosse, Wis., was in this city several days recently, selecting his stock.

Harry Smith, of the Geneva Optical Co., as returned from a trip to Iowa and leaves this week for his final trip for the season.

Frederick Laue, retail jeweler at 2416 Kensington Ave., has removed to his fine new store on Michigan Ave., near 115th St.

The Seth Thomas Clock Co. will soon erect a four-dial street clock for David Goldman, Milwaukee, in front of his new store.

Bernard Weinstein, 533 S. Halstead St., left the hospital last week, where he had been confined with a severe attack of rheumatism.

E. C. Jacob, in the Columbus Memorial building, has opened a jewelry store at McHenry, Ill., which he will conduct as a branch enterprise.

A. Hirsch, of A. Hirsch & Co., has returned from a five weeks' trip in the east. During this time he visited Atlantic City, Philadelphia and Washington.

The suit of the International Silver Co. vs. Lyons will come up for hearing this

week, as will also the suit of Samuel Lyons vs. the International Silver Co.

Izri W. Lederer, of the S. & B. Lederer Co., Providence, R. I., stopped at the Chicago office last week for a few days on his return from a trip to the Coast.

E. J. Wiggins, manager for J. F. Dailey & Co., 68 E. Washington St., will leave that concern Dec. 1 to open a jewelry store of his own at 410 E. 63d St., this city.

C. Berstock, formerly with Wieboldt & Co., and Emil Noel, formerly at Seattle, have arranged to represent F. W. H. Schmidt in Wisconsin and Illinois, respectively.

Ernest L. Dayton, son of E. A. Dayton, wholesale jeweler here, has taken a position with Edward Lehman Co., Denver, Colo., to take charge of the material department.

J. A. Sommer, who was formerly in the jewelry business at Hinsdale, a suburb of Chicago, has now returned from an extended trip to Denmark and will reopen a jewelry store in the same village during the coming week.

A. L. Wiffin, who recently embarked in business for himself at Ritzville, Wash., writes that business is good in that town. The style of the firm is A. L. Wiffin & Co., successors to William Weiland.

Harry H. Morris, said to be a diamond broker, has been held for the Federal Grand Jury in \$4,000 bail to stand trial at Springfield, on the charge of sending improper letters through the United States mails to a young woman in White Water, Wis.

Charles H. Hulburd, of the Elgin National Watch Co., is named in the suit for \$50,000 damages recently instituted in the Circuit Court by Mrs. Cora McElheny, of 281 N. State St., who seeks to recover for injuries received last September, having been struck by Mr. Hulburd's automobile while it was in charge of his chauffeur, Herbert Patterson. Mr. Hulburd was in Europe at the time and knows nothing about the occurrence. He claims he is in no way responsible.

The plant of the American Cutlery Co., 189-203 Mather St., was destroyed by fire on the night of Nov. 14. The damage to the company is roundly estimated at \$500,000. The warehouse of the company was filled with goods, which were to have been

shipped out by the following week to fill orders. More than 400 persons employed by the company will be thrown out of work. The burned building, which was very old, will be replaced by new ones as soon as possible.

The robber apprehended by the police in the recent Hagaman robbery, gives his real name as William Campau, claiming to be a member of the great Campau family, of Detroit, and nephew of Daniel J. Campau. He claims to have attempted many occupations and failed in all of them, and that dire want urged him to commit the robbery. He has been held to the Criminal Court in bonds of \$5,000. Mr. Hagaman, in his testimony before the justice, said that he was firm in the belief that Campau and his companion entered the store for the purpose of robbing him, and that they were not prompted or hired to make the attack on him.

Among the buyers in the city during the past week are the following: J. E. Wuerten, Montpelier, Ind.; S. N. Jenkins, Richmond, Ind.; Wayne Bigwood, of John M. Bigwood, Terre Haute, Ind.; A. H. Richards, El Paso, Tex.; J. D. Jenkins, of Jenkins & Salzman, El Paso, Ill.; N. A. Hneman, W. McHenry, Ill.; J. L. Bonar, Morris, Ill.; Jay B. Johnson, Goodland, Ind.; Mr. Snyder, Fairfield, Ia.; Crowley E. Cole, Atlantic, Ia.; C. H. Lovell, W. Chicago, Ill.; C. E. Hodgen, Kokomo, Ind.; Wm. Hellberg, Marshalltown, Ia.; H. W. Butzine, Port Washington, Wis.; George B. Stager and wife, Winona, Minn.; Fred P. Beswick, Racine, Wis.; Ernest Eimar, Muskegon, Mich.; David M. Rinaldo, Hot Springs, Ark.; Andrew E. Rush, McComb, Ill.; E. N. Canada, Winchester, Ind.

Charles Moe, inventor of the diamond gauge, is placing on the market another invention which has caused universal praise among jewelers in Chicago. This invention is an adjustable display ring for showing loose diamonds and precious stones. Any stone from $\frac{3}{8}$ carat to 4 carats can be displayed so as to give a prospective customer an idea how the stone will look when mounted. They are made in Tiffany style mountings from specially alloyed spring gold, and are made in sizes from 7 to 9.

book.

L. A. EPPENSTEIN & CO.

133 Wabash Ave.
CHICAGO, ILL.

Pendulum Exposed Movement Square and Eight-Day Watches

2552 Gun metal black, exposed movement **\$6.00**

2553 Silver plain exposed movement **8.50**

A novel feature in watchmaking is shown by the reverse position of the movement. All parts are clearly visible through the crystal. The dial surface only covers a small portion. Every visible part is handsomely engraved on a gilt background. An attractive novelty combined with excellent timekeeping qualities. Gold reflecting rim surrounding the bezel.

2351 Pendulum gun metal black **\$7.50**

The interior construction is the same as any high grade movement. The visible gold pendulum attachment aims to imitate accurately the motion of a clock. The dials are handsomely decorated in colored design, arranged to produce a clock effect. The cases are bassine shape, thin metal, solid back. Silver bezel reflector, silver bow and crown, beveled pendant.

2554 Gun metal black, square **\$9.00**

The demand for the unusual prompts us to place on the market square gun metal thin model gent's watches. The Anchor movements are high grade, guaranteed strictly reliable timekeepers, equipped with ivory dials and raised colored enameled figures, gold hands. The cases are extremely thin bassine edges, beveled backs and corners. This style should appeal particularly to those who are always seeking individuality.

2548—\$5.75 | **2549**—\$6.75 | **2550**—\$6.75

Gun Metal, 8-day. | Silver, Plain and E. T., 8-day. | Gold Filled, plain or E. T.

Eight-day watches, made in gun metal, silver and gold filled. The movements are anchor, bridge model, fully guaranteed accurate timekeepers, will run eight days with one winding, visible balance arrangement supported on a highly polished, heavily gilded bridge system, embossed gold and silver metal dial, decorated with colored enameled designs, black hands. Eight-day movements should especially appeal to those WHO FREQUENTLY FORGET TO WIND THEIR WATCHES. Black gun metal cases, half bassine, silver bow and crown, silver reflector on bezel, silver and gold filled cases, plain, engine turned or top and bottom engraved.

San Francisco.

D. Landa has just returned from a five months' pleasure trip to Europe.

F. A. Fano has opened an attractive store on Fillmore St., between Eddy and Golden Gate Ave.

W. Hill came in from Lodi, Cal., early last week, to do some buying for his Christmas trade.

T. Lundy is now displaying a fine line of old and opera glasses at his store on Market St., near 3d St.

P. J. Gillms, a member of the Stockton trade, is now in San Francisco looking at various sample lines.

J. B. Whitney & Co. report the arrival of their Fall and Winter shipments of cloaks, in which the campaign is about to begin.

Art. Kocher, of Rudolph Kocher & Son, San Jose, Cal., was in this city in the early part of the week visiting the jobbing houses.

Rapid progress is being made on the reconstruction of the old Shreve building, and the bulk of the damaged stone and masonry has been removed.

Charles Bianstad, who has been with Amersmith & Field on Van Ness Ave., has resigned his position and may decide to enter the trade entirely.

A. Behrend, the jeweler who was assaulted and robbed in his store last week, by the notorious robber and murderer, Siemen, is slowly recovering from his injuries. S. H. Collins has decided to return to the jewelry trade in view of the fine prospects for the holiday season. He has opened with a complete line at the corner of Sacramento and Fillmore Sts.

The business houses handling men's and women's clothing in this city seem to have taken quite a fancy to the handling of jewelry specialties, and a number of them have recently taken up one or more lines on a fairly extensive scale.

J. C. Kruger, Denver, Colo., has been placed in charge of the material department of Nordman Bros.' extensive establishment at 717 Market St. This company's large shipments of holiday goods are arriving en masse and are cramping the concern somewhat for room.

Work was begun this week on the proposed new jewelers' building, in which most of the wholesale jewelers of the city will be located. So far the work is chiefly preliminary, as the lot is covered with debris, and it will take some time to prepare the ground for the foundation.

The Elgin National Watch Co. has leased three rooms in the newly reconstructed Mutual Bank building and will hereafter have its headquarters there. A reception room, fitting room and a private office have been fitted up, the fittings being of oak throughout. John J. Morse, manager of the company in this city, says that the prospects for trade in San Francisco and throughout the coast are excellent.

The Alphonse Judis Co. has rented one-half of the fourth floor of the Mutual Bank building and is now partially moved in and doing business there. Mr. Judis is determined to make this store one of the handsomest and best equipped wholesale houses in this city. The wooden fixtures are entirely of oak, and the equipment includes a number of large new safes. Alphonse Judis

has been ill, and although he is not yet able to return to work, he is nevertheless much improved.

J. S. Lehrberger & Co., who have been in Oakland, Cal., since the big fire, have returned to this city once more, and have taken offices and salesrooms on the fifth floor of the Mutual Bank building, at 704 Market St. The interior walls of this floor have been removed to accommodate the company, and heavy oak fixtures are now being installed. The company's complete jobbing stock will be in place by the end of the week. The office force will consist of six men for the present.

Kansas City

H. C. Kionka, of Kionka & Wagner, is expected in this city this week.

A. A. Marvin, Blue Rapids, Kans., was here last week on his way to St. Louis.

R. N. Eaton, of Eaton & Pease, is out in the country this week, on a duck hunt.

J. H. Gentry has just enrolled as a pupil at the Kansas City Polytechnic Institute.

Kansas City jobbers have just received another notice of an advance in watch glass.

L. Edelsteine, watchmaker, left last week for Columbus, Nebr., where he will take a position.

The Woodstock-Hoefler Watch & Jewelry Co. has begun working nights, owing to the rush of orders.

E. Mishkind, Sioux City, Ia., has just been added to the working force of the Meyer Jewelry Co.

E. O. Girard, formerly with the Woodstock-Hoefler Watch & Jewelry Co., has resigned and gone to Chicago.

Arnold Buchmann, Clay Center, Kans., stopped off in this city a couple of days last week, while on a trip to St. Louis.

C. O. Detterich, who covers Missouri and Arkansas for the Edwards & Sloane Jewelry Co., paid the house a visit last week.

J. D. Webb was in Kansas City last week buying an opening stock of jewelry for a store which he is opening in Smithville, Mo.

Courtney Clifton, who had been with the Meyer Jewelry Co. for some time, has resigned and taken a position with A. C. Hahn.

Leslie Burland, of the material department of the Meyer Jewelry Co., has gone out on the road for that firm, and is making a Kansas trip.

Mr. Levin, St. Joseph, Mo., has decided to open a new store in this city, at 8th and Walnut Sts., about the first of the year. It will be in charge of his son, Ed. Levin.

The Hassig & Krieke Watch & Jewelry Co. has begun to operate its factory both day and night, and there is every indication that night work will continue for the balance of the season.

The following out-of-town jewelers called on the local jobbers during the past week: H. E. Tucker, Higginville, Mo.; Otto Burkland, Osawatimie, Kans.; Walter Sperling, Seneca, Kans.; J. A. Anderson, Stromsburg, Nebr.; Mrs. J. H. Whiteside, Liberty, Mo.; A. A. Marvin, Blue Rapids, Kans.; C. L. Dockhorn, Oskaloosa, Kans.; J. P. Whitaker, of J. P. Whitaker & Co., Ottawa, Kans.; George Baer, Lee's Summit, Mo.; Mr. Brown, of the Brown Pharmacy, Bosworth, Mo.; S. Leibowitz, St. Joseph, Mo.

Cincinnati.

Hugo Lindenberg, of Lindenberg & Fox, is arranging to go on an extended southern trip this week.

Joseph Phillips, president of the Sterling Glass Co., is in the east, making arrangements by which the company expects to extend the capacity of the business very extensively.

Joe Mesch and W. F. Willman, for some years traveling salesmen for S. & H. Gilsey, have opened a wholesale jewelry business under the firm name of Mesch & Willman. They will occupy the entire second floor of the Furguson building at 4th and Main Sts.

Jacob Frohman, of Frohman & Co., is receiving many telegrams and telephone messages from friends congratulating him on his narrow escape Wednesday last. Mr. Frohman was leaving a street car at Reading road and Rockdale Ave., and owing to his poor eyesight, stepped directly in front of an approaching automobile. He was knocked down and the automobile partially passed over his legs, but was stopped while still on top of him. A crowd gathered and the machine was lifted from the unfortunate man, but much to the surprise of the crowd, Mr. Frohman picked up his hat and pursued his way to his home. His physician states there are no bones broken. Bad bruises will keep him from business for two or three weeks, however, and, though painful, these are not serious.

The Homan Mfg. Co. has completed its new plant, which is a most modern, perfect factory in every respect. It is considered a great acquisition to the business portion of Cincinnati, as it is a fine business block. The structure is brick and the main building consists of three stories. It covers the greater portion of a plot of ground measuring 350 feet on Hulbert Ave., about 200 feet on Finley St., and has a frontage of about 200 feet on Western Ave. The company has its own electrical plant, which supplies the building with heat and power. The sprinkler system also installed has a tank with a capacity of 30,000 gallons. The building is now being equipped with new and modern machinery and will be ready for operation the first part of next January.

Out-of-town dealers who replenished their stock here, last week, included: Mr. Kelly, Atlanta, Ga.; A. P. Humphrey, Bellefontaine, O.; E. F. Starks, Newport, Ind.; Philip Horr, Aurora, Ind.; J. A. Worrell, Washington Court House, O.; E. De Voss, Wilmington, O.; John McCorkle, Hinton, W. Va.; John Cripe, Mulberry, Ind.; Mr. Morrow, Lancaster, O.; E. G. Correll, Somerset, Ky.; John Robinson, Mt. Sterling, Ky.; Will Shire, Paris, Ky.; George Klein, Muncie, Ind.; C. L. Mel-lott, Woodfield, O.; H. C. Reed, Blanchester, Mo.; Fred G. Wittlinger, Middletown, O.; Ed. Miller and Horace Fuller, of Krouse & Co., Columbus, O.; Frank Hop-ping, Harrison, O.; E. Israel, Harrison, O.; H. E. Batelle, Mason, O.; A. M. Stamm, Williamsburg, O.; Thomas G. Lucas, Hamersville, O.; E. Meyer, Madison, Ind.; D. C. Oberholtzer & Son, Centerburg, O.; O. F. McWaters, Somerset, Ky.; Will Schaible, Troy, O.

CHICAGO, ILL.

Watchmakers', Jewelers' and Engravers' Supplies.

Our new 432 double-size page catalogue containing 20,000 illustrations will be sent to you gratis (prepaid) on application.

FEATURES

"BLACK SHIELD" MAINSPRINGS are packed in the following manner:

Each spring is wrapped separately in oiled paper, and placed in an individual envelope printed with the name and size of movement for which it is intended.

Twelve envelopes, or one dozen mainsprings, are contained in a well-made strong box properly labeled.

Useless handling of the springs is avoided, thereby preventing rust or mixing of stock.

The name, "BLACK SHIELD" is scratched on every spring.

THE NEW MAINSPRING

"BLACK SHIELD"

MAIN-SPRINGS

FOR ALL AMERICAN WATCHES.

The Product of the Highest Attainment in Mainspring Making

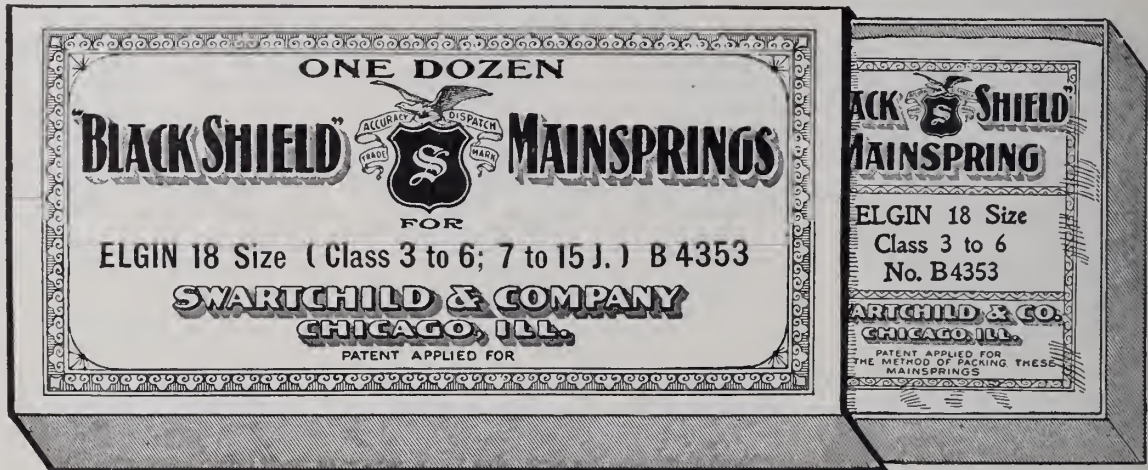

TESTS

In selecting the "BLACK SHIELD" MAINSPRINGS, we were guided not alone by our own severe tests and judgment, but we distributed samples to dozens of expert watchmakers throughout the country.

The opinion of all was that the "BLACK SHIELD" MAINSPRINGS are the finest ever introduced in this country. That they are even, properly tempered, carefully finished, correctly gaged, and tips and lengths positively accurate.

They are of wine color, well polished, and will fit the respective movements without any filing or change whatsoever.

"Black Shield" Mainsprings are manufactured for us only by the oldest and most reputable maker in Switzerland
Per Dozen, \$1.25 Per Gross, \$13.50

Fac-Simile of Box Containing One Dozen "Black Shield" Mainsprings

"Black Shield" Mainsprings are guaranteed in every respect. No better can be had at any price.
Per Gross, with 4-Drawer Cabinet Capacity, 48 dozen, \$15.00

St. Louis.

J. A. Nelsch, 1125 N. Vandeventer Ave., is remodeling his store and adding new fixtures for the holiday trade.

J. F. Dailey, of J. F. Dailey & Co., has returned from another hunting trip to the mouth of the Missouri river.

John Schmid, 1419 Market St., has been confined to his home for the last three or four weeks with an attack of rheumatism.

F. A. Henninger, California, Mo., who was here last week, announced that he has purchased the stock of J. W. Acklin, at that place.

The association football game last week between the married and single men employed by the Mermod, Jaccard & King Jewelry Co. was won by the benedicts.

The Mermod, Jaccard & King Jewelry Co. recently installed what is said to be the largest case for the display of silver in St. Louis. It is 35 feet long, 6½ feet high and five feet wide.

James J. Burke, president of the Brooks Jewelry & Optical Co., is a member of the "Burkes," a team in the Grand Bowling League. For several seasons the team was known as the Brooks.

Frank Bessie, formerly of Cincinnati, and more recently with J. F. Zeitler, 2013 Salisbury St., will shortly establish a jewelry store at Fort Wayne, Ind., under the name of the Bessie Jewelry Co.

F. Goeggel, who has been with Whelan-Aehle-Hutchinson Jewelry Co. as a watchmaker since that firm's inception in 1901, has resigned on account of ill-health. He has been succeeded by C. J. Eckhold, formerly with the C. F. Gauen Jewelry Co., 103 Market St., who, in turn, is succeeded by Theodore Friedlander, formerly of Chicago.

Many visiting jewelers were in this city last week, making heavy purchases for the holiday trade. All of the visitors report excellent prospects, and the indications point to an extraordinarily heavy holiday trade, among the visitors were the following: C. Bowden, Ripley, Tenn.; E. J. Baumann, Ste. Genevieve, Mo.; H. Hines, Staunton, Ill.; E. L. Hainz, West Salem, Ill.; W. T. Woolford, Potosi, Mo.; Fred Simon, Collinsville, Ill.; John Koetting, Ste. Genevieve, Mo.; Mr. Linderman, of the Clayton Mercantile Co., Clayton, Ill.; G. W. Cameron, Poplar Bluff, Mo.; H. W. Foerste, Okawville, Ill.; Robert Tetley, Farmington, Mo.; Mr. Harvell, Litchfield, Ill.; J. E. Fields, Leadwood, Mo.

Pacific Coast Notes.

F. J. Shorey, Portland, Ore., is spending short time at Kalama and other points in Washington.

G. Heitkemper, Sr., Portland, Ore., is sitting in Klamath Falls, Ore., where his son, G. Heitkemper, Jr., is opening a store.

J. D. McGary, Moscow, Idaho, recently found a number of rubies on Ruby Creek, Idaho. The gems have already been cut and polished at Denver, Colo.

The crusade in Seattle, Wash., against the auctioneers and others who are alleged to be misrepresenting goods offered for sale continues. A. Krugman, an auctioneer, who was recently arrested, was found guilty and

fined \$100 for selling a watch worth \$2.50 for \$7. Mr. Krugman has filed a bond and will appeal the case.

The chief of police of Walla Walla, Wash., has received a telegram from Stone & Co., Chicago, stating that F. R. Gibson, a traveling representative of the house, was supposed to be in that vicinity endeavoring to sell a trunkful of jewelry, and asking the chief to be on the lookout for him. Mr. Gibson had already left Walla Walla when the telegram arrived.

Denver.

Joseph Richdale has taken charge of the material department of Daniel S. Park & Co.

L. Lehman, of the Edward Lehman Jewelry Co., has returned from his business trip to Chicago.

E. A. Inskip, with F. A. Hardy & Co., is back from Chicago, where he had gone for a short visit.

E. L. Dayton, Chicago, is now managing the tool and material department of the Edward Lehman Jewelry Co.

Albert Brightman has gone to Routt County, Colorado, on a hunting expedition. He is after the one deer allowed by law each season.

F. L. Bentz, representative for W. W. Hamilton & Co., has returned to Denver. He is still ill and will be unable to resume active work for some time.

H. H. Frumess is remodeling his store. He is placing the optical department in the gallery, thus giving more space for the display of the regular jewelry line.

J. W. Edmunds, Delta, Colo., who was attacked by typhoid fever, while in Denver, several weeks ago, has recovered sufficiently to allow him to leave the hospital and start for home.

Out-of-town jewelers who called on the trade here last week, included: V. E. Blake, Fort Collins, Colo.; W. J. Peyser, Colorado Springs; Mrs. Yardley, Yardley Bros., Greeley, Colo.; W. F. Hankins, Kremlin, Colo.; L. P. Boyle, Canon City, Colo.; M. O. Brittain, Larimer, Wyo.; Ben. Cohn, Leadville, Colo.; J. F. Barnhart, Clayton, N. Mex.; Joseph Astraean, Amarillo, Tex.; J. Hebbler, Clark Y. Hebbler, Fairplay, Colo.; Eugene Evans, American Jewelry Co., Leadville, Colo.

Pacific Northwest.

L. C. Swain, Richmond, Cal., is moving into new quarters in the Ludwig building.

Arthur Everitt, Albuquerque, N. Mex., is spending a short vacation at Santa Fe, N. Mex.

H. L. Smith, formerly of Livermore, Cal., is now conducting a curio store at San Diego, Cal.

W. A. Truslow, Redlands, Cal., has moved his store to a new location at 209 Orange St., in the same town.

The H. J. Whitley Co., Los Angeles, Cal., is removing from its present location at 345 South Broadway to a location next door.

Hans T. Hansen, formerly of Chicago, has bought the property of Paul Andersen, at Haywards, Cal., and will go into business in that town.

George Hobb, Raton, N. Mex., has returned from a three weeks' trip to Kansas

City and other points in Missouri, where he has been visiting relatives.

Balbach & Bedell have purchased the business of the late J. D. White, at Skyland, Cal. Mr. Balbach was formerly with Geo. W. Ryder & Son, at San Jose, Cal., and Mr. Bedell with S. H. Bailey, at Santa Cruz, Cal.

Oliver Walker recently pleaded guilty to a charge of forgery in the Circuit Court of Eugene, Ore. Walker had forged the name of W. B. Andrew, of Eugene, to a check for \$15, which he passed on J. O. Watts, a local jeweler, and was arrested at Cottage Grove, about three hours later.

Numerous complaints are made against two or three so-called jewelry concerns in Los Angeles which are alleged to be selling goods of the cheapest possible sort as solid gold. The chief of police of the city admits that the swindle is going on constantly, but claims to be powerless to act in the matter, as there is no ordinance properly covering the offense.

Toledo, O.

TRADE CONDITIONS.

The outlook for a good holiday business is exceptionally fine at present. Owing to an uninterrupted season of prosperity, the average citizen of this city seems to have money left for ornaments and as a result the bulk of Christmas shopping, such as has already been done, is for the better grade of presents. As a rule Toledo jewelers do not remember the time when jewelry figured so largely in early holiday shopping as in this season.

Alfred J. Heesen, at 321 Adams St., has enlarged his staff by the acquisition of A. H. Blascha, expert watchmaker, and Donald McKay, engraver.

The Merrill, Broer Co., whose offices are on the third floor of the Smith & Baker building, has found it necessary to increase the amount of floor space, and recently added a large apartment, which now gives the concern at least one-fourth of the entire third floor of a comparatively large building.

The new building for J. J. Freeman & Co. is nearing completion, and when completed will be the only structure in Toledo devoted entirely to the jewelry business. Plans call for a thoroughly modern building, and in every way are the furnishings to be in keeping with the exterior. The very best in every line of furniture has been provided.

Toledo jewelers are having trouble to obtain bracelets at present, owing to the general unprecedented demand for these articles for Christmas presents. Some merchants state that it is practically impossible to buy them from the manufacturers, owing to a demand which is not limited to any nation, but which has the entire civilized world in its grasp at present. While both ankle and wrist bracelets are shown, the demand is limited practically to the latter kind, and jewelers who introduced the ankle bracelet to Toledo are not satisfied with the way Toledoans have taken to the fad.

Harry Engle has been succeeded in business in Trenton, Mo., by Engle & Pennell.

Charles A. Shourds, Jr., Atlantic City, N. J., was recently succeeded by Shourds & Co.

Omaha.

The store of C. B. McCullough, Weldon, Ia., was completely destroyed by fire recently.

Oscar Homann, with Brown & Borsheim, has returned from a visit to his home in Des Moines, Ia.

The wife of S. W. Lindsay has gained quite a reputation as a china ware artist. Recent examples of her work are seen in the show window in Mr. Lindsay's store.

The wife of Albert Edholm, and small daughter, left last week for southern California, where they will remain during the Winter for the benefit of Mrs. Edholm's health.

R. L. Powers, Grant City, Mo., who has formed a partnership with a Mr. Bear, was here last week buying stock and fixtures for his store, which he expects to enlarge on his return.

A farmer's team, tied to the large street sign in front of Fritz Sandwall's jewelry store, South Omaha, recently, took fright and, breaking loose, dashed into the store, completely demolishing windows, front door and sign.

The following out-of-town jewelers were in this city last week, purchasing stock: Mr. Munstom, Spencer, S. Dak.; Mr. Smilly, West Point, Nebr.; W. E. Burrell, Fairbury; C. E. Ellis, Broken Bow, and I. G. Howard, Fairfield.

J. H. McDonald, Allen, Nebr.; Edw. Culler, Evans, Colo., and I. Muthira, Stanton, Nebr., were in this city, last week, and placed orders with one of the wholesale houses for goods for new jewelry stores which they will open at once.

Minneapolis and St. Paul.

O. Larson, Bowdle, S. Dak., was in the Twin Cities, recently, buying fixtures for his new building.

John Iverson has left O. T. Thompson, Minneapolis, and taken a position with the Paegel Jewelry Mfg. Co.

B. L. Gittelson, with S. Gittelson, Minneapolis, went to Chicago last week to view the Minnesota-Chicago football game.

Henry Birkenhauer, of H. Birkenhauer Co., Minneapolis, is about to take a trip to Duluth and the Iron Range country, in company with A. E. Madsen.

Al. Thorsen, who has been a student at the Minneapolis School of Watchmaking, Minneapolis, has taken a position with Stabrooks & Sullivan, Blackduck, Minn.

Recent out-of-town visitors to the trade in Minneapolis, included: C. A. Westerman, St. James, Minn.; a representative of Stabrooks & Sullivan, Blackduck, Minn.; Wm. Follett, Sandstone, Minn.; L. J. Hunter & Co., Tracy, Minn.; J. L. Williams, Ambrota, Minn.; O. Larsen, Bowdle, S. Dak.

Leases granted to S. Jacobs & Co., Minneapolis, have been formally filed, covering the property at 526 and 528 Nicollet Ave. and 46 S. 6th St., and to Leopold Metzger, the same firm, to 524 Nicollet Ave.

S. Jacobs & Co. have held these leases for some time, but they have just been made a matter of record.

L. A. Martin is now engaged in business at 701 Tower Ave., Superior, Wis.

WHICH IS CONTAINED A LIST OF THE LATEST PATENTS GRANTED BY THE UNITED STATES AND GREAT BRITAIN, THE UNITED STATES PATENTS THAT HAVE EXPIRED AND THE REGISTERED TRADE-MARKS.]

UNITED STATES PATENTS.

ISSUE OF NOV. 13, 1906.

85,510. ELECTRIC CLOCK. PETER G. GIROUD, New York, assignor to the American Electrical Novelty & Mfg. Co., New York. Filed Oct. 25, 1905. Serial No. 284,290.

In an electric clock, the combination of a clock-mechanism and escapement, a motor therefor, electric means for storing power in the clock-motor, a circuit controlling the electric means, a circuit-closing member

actuated by the motor-driven movement of the clock-train, and an impulse-spring, the circuit-closing member and impulse-spring having interlocking means whereby a quick circuiting movement is imparted to the circuit-closing member.

5,593. CUFF-HOLDER. FREDERICK W. BARRETT, Springfield, O. Filed May 28, 1904. Serial No. 210,204.

An adjustable cuff-holder comprising a casing or housing of resilient metal having one side roughened, a bar adapted to slide in said housing, a

resilient projection on said bar adapted to engage the rough side of said resilient housing, and means carried by said housing and said bar for engaging the parts to be connected.

5,762. WATCH-STAND. MAX KOLLER, Winterthur, Switzerland. Filed Sept. 27, 1905. Serial No. 280,338.

watch-holder or stand comprising in combination a support *b* for the watch, an electric lamp *h*, a casing therefor provided with circuit-

closing means *i* and a source of current, a receiver *d* for said casing provided with a reflector *f* adapted to throw the rays of light upon the watch, and a spring *k* engaging the casing and normally holding the latter in a position to open said circuit-closing means.

835,828. GOGGLES. EMIL B. MEYROWITZ, New York. Filed Dec. 26, 1905. Serial No. 293,312.

A goggle comprising a base-plate having an interior rim with notches or spaced openings around

its edge, and a window frame or holder arranged to nest or telescope over said rim so as to leave an annular space therebetween.

835,912. DOUBLE CIGAR-CUTTER. JOSEPH L. OBERMAYER, New York. Filed Feb. 3, 1906. Serial No. 299,340.

A cigar-cutter, comprising a pair of shearing members pivotally connected together, each of said shearing members being provided with separate

cutting edges directed oppositely, each cutting edge of each shearing member mating a particular cutting edge of the other shearing member.

835,964. MACHINE FOR SAWING DIAMONDS. WILLIAM LOESSER, New York, assignor to Marcus Van Wozel and Joachim Van Wozel, New York. Filed Jan. 6, 1906. Renewed Sept. 29, 1906. Serial No. 336,803.

In a machine for sawing diamonds, the combination with the dop-holder, the dop, and rotary saw-blade, of a guide for the upper part of the saw-blade disposed below the head of the dop.

836,037. CIGAR-TIP CUTTER. CHRISTIAN HIERING and ALBERT FULLER, Newark, N. J., assignors to the J. E. Mergott Co., Newark, N. J. Original application filed Nov. 15, 1905. Serial No. 287,418. Divided and this application filed Jan. 11, 1906. Serial No. 295,561.

In a match-box or other receptacle, the combination of a box-body, the sides and edges of said

body extended beyond the bottom thereof, a cutting edge formed upon one of the extended sides, a curved slot located in one of said extended sides,

a box-like cover hinged to one edge of said body for inclosing the extended edges and sides thereof, said cover being provided in one of its sides with an aperture, a projection from one edge of said cover extending into said curved slot for limiting the opening of said cover and means for locking the cover in closed position.

836,057. EYEGLASS CONNECTION. SAMUEL N. STONE, Attleboro, Mass. Filed Feb. 15, 1906. Serial No. 301,197.

In an eyeglass connection, the combination with a lens-post, of a box interiorly formed to receive the end of said post, the said box having a closed top pierced by a screw-hole, the said box having

two opposite continuous side walls and two opposite side walls provided with corresponding openings, the top and all said side walls of the box being formed integrally, a bow-spring, a nose-guard, the ends of the bow-spring and nose-guard being passed one upon the other through the said openings of the side walls of the box and through the ends of the bow-spring and nose-guard and into the lens-post whereby all parts are secured together, substantially as described.

DESIGNS.

38,311. LAMP-SHADE. ERNEST D. TERRY, New York, assignor to the Phoenix Glass Co.,

Pittsburg, Pa. Filed July 23, 1906. Serial No. 327,442. Term of patent 7 years.

UNITED STATES TRADE-MARKS.

[The following trade-marks have been adjudged entitled to registration under the Act of Feb. 20, 1905, and are published in compliance with Section 6 of said act. Said section provides:

"Any person who believes he would be damaged by the registration of a mark may oppose the same by filing notice of opposition, stating the grounds therefor, in the Patent Office, within 30 days after the publication of the mark sought to be registered, which said notice of opposition shall be verified by the person filing the same before one of the officers mentioned in Section 2 of this act. If no notice of opposition is filed within said time the commissioner shall issue a certificate of registration therefor, as hereinafter provided for."

Marks which are stated to have been "Used 10 years" are registrable under the last proviso of Section 5 of said act, which is as follows:

"And provided further, that nothing herein shall prevent the registration of any mark used by the applicant or his predecessor, or by those from whom title to the mark is derived, in commerce with foreign nations or among the several States, or with Indian tribes, which was in actual and exclusive use as a trade-mark of the applicant or his predecessors from whom he derived title for 10 years next preceding the passage of this act."]

BRITISH PATENTS.

(ABRIDGMENTS OF SPECIFICATIONS, 1905, FROM The Illustrated Official Journal.)

ISSUE OF OCT. 31, 1906.

13,941. PENDANTS, ETC. T. WILCOX (trading as M. Wilcox & Son), Birmingham. July 6.

A locket or pendant has a recess 1, Fig. 3, for a photograph mirror, etc., which is exposed to view by pressure on the elongated ends 10, 11 of the pivoted sections 6, 7, normally closed about the stop 12. Permanent exposure may be obtained by suspending the locket by the ring 33. These sections may be connected by a spring tending to

close them. They may also be arranged at the back as well as the front of the locket, etc., or they may each have the hollow form shown at 19, 20, Fig. 7. Fig. 9 shows a double locket, etc. The photographs, etc., 26, 27, may be exposed one at a time by pressure on the end of the corresponding section only. A brooch may be formed by the attachment of a pin and catch.

14,106. EYEGLASSES. H. BRINKHAUS, Berlin. July 8.

The bridge and plaquets of a pair of eyeglasses are formed integrally of a spring *a* of the form

shown. The ends of the spring are connected to the lens frames by flexible parts *c* which can be expanded or contracted to adjust the glasses for inter-ocular distance, etc.

14,213. BELTS. A. PREUSS, Posen, Germany. July 10. (Date applied for under Patents Act, 1901, May 23.)

A metal belt *a* which may be worn round the

waist, arm., etc., is fastened by a letter or cipher permutation lock *b*. A pocket *d*, fastened at *c*, is attached to the belt over the fastening *b* in such a manner that the latter can only be got at by opening the pocket.

14,355. EYEGLASSES. J. D. LEWIS, St. Paul,

TAVANNES WATCH CO.

131 Wabash Ave., CHICAGO

2 Maiden Lane, NEW YORK

Minn., U. S. July 12. (Date applied for under Patents Act, 1901, Jan. 20.)
The lens clamps and nose-grips of a pair of eyeglasses are pivoted to a rigid bridge, springs provided to act on the nose-grips and to ep the lenses normally in the same plane. The

clamps 5 carry pivots 6 engaging lugs carried on the rigid bridge 3 and the nose-grips 11 as shown. The lens clamps and the nose-grips are held in position by springs 10, 14, respectively, and the relative motion of the parts is limited by shanks 6¹ of the upright parts 8, 12, carried by the bridge 3 and the nose-grips. The lenses 2 are normally in the same plane, but are bent forward when it is desired to put the glasses in place.

Description of the New Method of Treating Blue Ground for Recovery of Diamonds.

If a new method of treating the blue ground of the diamond mines in South Africa is all that reports indicate, quite a revolution in the industry will be effected, decreasing expenses of mining and possibly increasing the average amount of diamonds recovered. The following description of the scheme was published in a recent issue of the *Transvaal Leader*:

The inventor is Christopher Hamilton, who has been concerned with mining enterprises in all parts of the world. It has been said that Mr. Hamilton has discovered a new element in the blue, the presence of which has always been suspected by analytical chemists; but more than this, he has discovered a reagent, the action of which causes the immediate disintegration of the hardest blue.

The mining representative of the *Leader* was prevailed upon to see one of the earliest tests made with this remarkable solution. A piece of hard blue (or hardibank) from a good depth, from one of the Pretoria mines, was taken. It was impossible to make any impression upon this piece of rock, either with the hands or by stamping upon it. Mr. Hamilton placed about a teaspoonful of the solution in a tumbler, diluted to full measure, and poured it over the specimen. Almost instantly it permeated the mass, and within half a minute it was easy to break off large pieces. With a slight blow on the side of the box, it was broken in half. The cleavage showed that the solution had permeated the entire mass. Previously some of the hardest blue from various mines in the Orange River Colony had been "solutionized" with equally favorable results. A few seconds' action (not necessarily immersion) makes the hardibank easily frangible, and further treatment makes it crumble. The metamorphosis is so remarkable that it is absolutely necessary that the treatment should be seen before it is believed.

In actual practice the rock would be

passed direct from the mine shaft through the solution into pans, and the inventor is confident that it will require nothing more than the action of the "fingers" of the scrapers to entirely disintegrate it. The solution does not require the aid of any pressure or grinding process.

Mr. Hamilton has already prepared plans of special treatment tanks, and has arranged a method of passing the blue through the solution. It is calculated that the cost of this treatment will be less than 1d. per load, as against something in the neighborhood of a couple of shillings by direct treatment. Of course, the cost of mining would be the same in both cases, unless, indeed, it were possible to loosen the rock *in situ* by the use of this solution. That does not seem to be without the bonds of rationality.

Besides the economy which this scheme effects, the breakage of diamonds is entirely prevented.

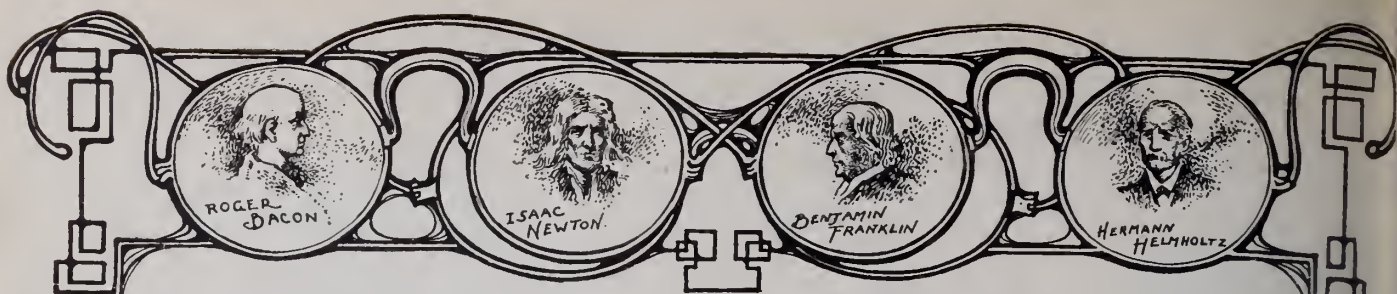

Recent Publications.

EXPORTERS' ENCYCLOPAEDIA. A complete guide for export shipping, 1907. 16mo, 663 pp. Published by the Exporters' Encyclopaedia Co., New York. Price, \$5.

THIS volume, which is the third edition of a most valuable and handy work for exporters throughout the world, contains a vast amount of valuable information arranged clearly and concisely so that it can be easily referred to. The book has already obtained a large circulation among manufacturers and exporters generally, and its 1907 edition will prove even more valuable and welcome than did its predecessors.

In brief, the book gives the names and addresses of all transfer companies, both steam and rail, from New York, Philadelphia, Boston, Baltimore, New Orleans and other large ports; tells of the places reached by these companies; every point for which bills of lading may be obtained and gives complete list of inland cities and towns, telling how they may best be reached; it explains all the requirements and arrangements of consular documents, with full particulars as to consular charges, and shows *facsimile* invoices with English translations for all countries: Particularly valuable is the information regarding the requirements of different foreign governments and the instructions how to bill, mark, ship, insure and consign goods and how to arrange bills of lading, customs house clearance, drafts, etc.

Dr. A. H. Bowen, of the Rochester School of Optometry, gave a very interesting lecture on the anatomy and physiology of the eye before the Buffalo Optometrical Society recently at the Lafayette Hotel, in Buffalo, N. Y. A large attendance greeted him. He illustrated his description with real eyes dissected, etc., and blackboard drawings in colors. The next subject, which will be "Light," will be even more interesting. An instructive series is booked. John F. Lang was admitted as a member. The new constitution, which will be published very soon, will contain names of members in good standing and the code of ethics. The next regular meeting will be held Dec. 6 in room 139, Lafayette Hotel, Buffalo, N. Y.

OPTICAL DEPARTMENT

Eye Diseases Which the Optometrist Should Recognize.

(Second of a series of lectures delivered before the O. S. C. N. Y., by E. LEROY RYER.)
(Continued from issue of Oct. 24.)

Diseases of the Cornea.

A KNOWLEDGE of the diseases and injuries of the cornea is essential to the optometrist insofar as it permits him to impress his patients so effected with the importance of placing themselves in the proper hands.

Many other diseases come and go without leaving any serious results, but not so with corneal diseases, which, almost invariably, leave some opacity, with resulting loss of visual acuity. In several classes of cases sight is destroyed completely. Moreover, corneal diseases are of very frequent occurrence. It is estimated that in cases of blindness one out of every four is due to corneal affections. Furthermore, statistics show that corneal diseases constitute about one-third of all ophthalmic disturbances.

Two points concerning the cornea should be kept in mind: first, that it is, of all portions of the eyeball, most exposed to external injuries; and secondly, that it is unsupplied with blood vessels and unprepared, therefore, to cope with disease germs and to properly nourish itself during and after an attack.

Phlyctenular Keratitis.

Nature of the disease—

Its chief feature is a small blister near the margin or limbus of the cornea. The situation of the blisters vary. They may be wholly on the cornea; they may be entirely on the sclera; or they may be on both the cornea and the sclera.

When the blisters are on the scleral conjunctive the disease should be termed phlyctenular conjunctivitis, and only when the blisters form on the cornea is it a true case of phlyctenular keratitis. If the blisters are on the cornea they will be of a grayish color, if on the scleral conjunctiva they will appear red. If they confine themselves to the scleral region, no permanent damage is apt to result. Corneal blisters, however, may turn into ulcers, and they usually leave scars, which interfere with vision throughout life, or an ulcer may be formed that will destroy the entire cornea.

It is almost exclusively a disease of childhood, adults being very rarely affected. A child is often unable to see even large objects for weeks after the disease is cured.

Phlyctenules on the scleral conjunctiva are apt to extend to the cornea. The disease often follows an attack of measles or scarlatina.

How to recognize it—

The phlyctenules, or blisters, as I have called them for the sake of simplicity, may be readily discovered by oblique illumination, and an optometrist should inspect every eye by this means before proceeding with his work.

Be careful not to confound a phlyctenule with a pinguecula, that small, harmless, yellow elevation on the upper inner margin of the cornea.

The other principal symptoms are acute pain, photophobia, blepharospasm and lachrymation, that is, an overflow of tears. The nose discharges as well as the eyes, and eczema of the eyelids, face and external ear often accompanies this disease.

Causes—

Scrofula is considered the main cause. Poor nutrition often causes it in apparently healthy children.

What the optometrist should do—

As the treatment is purely medical, the optometrist should advise seeing a physician who will order proper food, tonics, etc., and apply the necessary local treatment.

Interstitial Keratitis.

Nature of the disease—

The name usually applied to this disease is parenchymatous keratitis. The latter term is really preferable, inasmuch as parenchyma means the true or proper substance of an organ, and thus, parenchymatous keratitis could be readily defined as inflammation of the most important tissue of the cornea.

It is well to note here that the cornea is composed of five distinct layers. Approaching it from the front we would first strike the epithelial layer, epithelium meaning the outside skin. Directly under this lies the anterior limiting membrane, or Bowman's membrane, which acts as a protective coat to the cornea proper. It is this layer that offers considerable resistance to ulcerous growths, and it is also believed to maintain the normal corneal curve.

Under Bowman's membrane lies the substantia propria, the real cornea, which is composed of 60 layers and forms the greater part of the thickness of the cornea. Beyond this layer lies the posterior limiting membrane, or Descemet's membrane, the most resisting layer of the cornea. Under this lies a layer of endothelial cells.

To sum up briefly: Interstitial or parenchymatous keratitis is that condition wherein the substantia propria or deeper layers of the cornea are inflamed. It is a disease of childhood, usually occurring between the fifth and 15th years of age. One eye is usually affected before the other, but prob-

ably will be eventually attacked. An attack usually lasts for some months, and may linger two or three years. If properly cared for, the disease may impair vision but little in some cases, however, vision is entirely lost.

The uveal tract, consisting of the choroid, ciliary body, and iris as a whole, is apt to become involved, causing choroiditis, cyclitis and iritis. Posterior synechia may accompany it, this being a condition wherein the iris becomes stuck to the crystalline lens. Glaucoma may also occur.

How to recognize it—

The disease commences as a light grayish opacity at some point near the corneal margin. This opaque spot soon forms an opaque ring surrounding the margin of the cornea, then it works toward the center until the entire cornea becomes opaque and looks like a piece of ground glass or like a piece of glass that has been breathed on and made steamy or misty. The opacity, not of an even intensity, some spots looking like a light, thin cloud, while other spots may be so densely opaque as to hide the iris. You can estimate to what stage the disease has progressed by the nature of the opacity, for in the early stages the margin is most clouded, while in the more advanced stages the center is densely opaque and the margin less so. Vision will be blurred. The eyes will water freely (lachrymation) and be slightly intolerable of bright light (slight photophobia), and an abnormal accumulation of blood in the sclera around the margin of the cornea will give the margin a reddish hue (hyperemia). There will not be much pain in most cases. The pupil remains normal and there is no tenderness on pressure.

Causes—

When occurring in children the cause is usually inherited syphilis, and all the well known symptoms of syphilis will be present. Occurring in adults, it is not usually due to inherited syphilis. It is believed that it may come from exposure to cold, tubercular disease, scrofula, or rheumatism.

What the optometrist should do—

Make no test, impress patient with danger of the disease and advise seeking medical attention at once, so as to check the disease if possible, and thereby prevent the iris, choroid and ciliary becoming involved.

Ulceration of the Cornea.

Nature of the disease—

The chief dangers which accompany corneal ulcers are the opacities and scars which even the slightest of them are apt to leave behind. The cornea may be perforated, allowing the aqueous to escape.

Optical Department.

The iris and lens to come forward to the cornea. If the iris become stuck to the cornea the condition is called anterior synechia; if the iris becomes stuck to the crystalline lens it is called posterior synechia. Bowman's and Descemet's membranes greatly protect the substantia propria, or the real cornea, but should these be pierced it will be found that Bowman's membrane never reforms over the affected part, and Descemet's seldom reforms completely.

Sometimes a small lump of pus forms in the aqueous humor of the anterior chamber. Such a condition is called hypopyon, and is of a most serious nature. If the hypopyon is of considerable size it is apt to reduce necrosis of the cornea, that is, turn the cornea into dead tissue and thereby destroy vision. Hypopyon may transform a case of simple inflammation of the cornea into keratitis complicated with iritis or even glaucoma.

How to recognize it—

Corneal ulcers are varied in nature, but are not required of the optometrist to differentiate the various classes. The subjective symptoms are confusing. Congestion, pain, overflowing of tears, lowered visual acuity, and blepharospasm may or may not exist.

Inasmuch, however, as any form is or may become dangerous, every cornea should be inspected, and, upon any signs of ulcerous growths appearing, the patient should be warned. But if keratitis exist the three following symptoms must accompany it: (1) Corneal disturbances of some sort, (2) inequalities in the curvature of or dull spots in the cornea, and (3) ciliary injection, which is an excess of blood in the veins directly surrounding the cornea. To note corneal inequalities and dull spots, oblique illumination should be employed and the cornea inspected from different points of view.

Causes—

Usually the cornea is rendered susceptible to disease by an injury from a foreign body, by a general debilitated condition, or by undue exposure as would be caused by xerophthalmia. Then with the cornea in a weakened condition ulcers may be caused by the germs from other diseases.

What the optometrist should do—

Advise medical treatment.

(To be continued.)

The fourth annual meeting of the Rhode Island Society of Optometry was held last week and the following officers were elected: President, Dr. J. F. Dodge; first vice-president, Fred S. Neff; second vice-president, W. T. Wilson; third vice-president, W. Cunningham; recording secretary, J. W. Ferris; financial secretary, S. A. Dodge, Pawtucket; treasurer, H. Fellman, Woonsocket; executive committee, C. T. Baxter, Peter Ochs and Clarence I. Holmes. The various reports presented showed the society to be in a prosperous condition and with the outlook most encouraging the members are looking forward to another successful year.

Pennsylvania Optical Society Enjoys a "Smoker" and Quiz.

THE Pennsylvania Optical Society held a smoker and quiz at the Continental Hotel, Philadelphia, on Tuesday evening, Nov. 13. While the attendance was not very large, the interest manifested in the various practical questions was great, every one present giving his experience or bringing forth problems he had to solve in his own business.

Among some of the most practical questions were the following:

(1) What shall I do with a customer who takes a pair of frameless glasses that I put up for him without a defect in the lenses, and, in a day or two, brings them back broken or chipped and says they were broken or cracked when delivered, insisting upon having a new lens inserted without charge?

(2) What can be done with the fake optician who comes into our towns and sells spectacles with plane glasses, and if an old person wants glasses for reading and distance he supplies a pair with one lens for near and the other for far sight?

(3) On a prescription like the following, + 1. Cyl. ax. 90° combined with - 2. Cyl. ax. 45°, add for reading 2.50 segment, what would be the most practical way of filling this order? Also what would be the most likely to give the best results when in use before the eye?

(4) Prescriptions are frequently written out with a different amount added on the two eyes for presbyopia; for instance,

For distance: Right + 1. Left + 2.

Add for reading: Right + 3. Left + 2.

To what extent is this justified by the condition of the eye as a general rule, and are there many cases which such a prescription would be likely to correct?

(5) An acquaintance of the writer is afflicted with conical cornea of both eyes. This has been progressing for some years, and has reached the point where, even to the ordinary observer, the cone is quite perceptible when viewed from the side. And the irregular appearance of the reflection from the front surface of the cornea is also readily noticed even by one who is not familiar with the subject. What could be suggested as a means of obtaining at least partial vision, as the party in question is dependent upon herself for support?

(6) In the fogging system is it better to test both eyes together or separately?

(7) When you correct with strong cylindrical lenses at oblique angles, why does everything look crooked to your patient and what is the remedy?

These and other questions were talked over and discussed with much profit to all present.

James M. Dean, a dealer in optical goods at 708 13th St., N. W., Washington, D. C., while mentally deranged recently attempted to commit suicide. He has been committed to St. Elizabeth's Insane Asylum. A petition asking that a receiver be appointed to look after the interests of Mr. Dean has been filed by his brother, Wm. E. Dean.

J. C. Hutson, of the J. C. Hutson Optical Co., Omaha, Nebr., has gone to Denver, Colo., on a business trip.

Regular Monthly Meeting of the Optometrical Society of the City of New York.

PRESIDENT OFFENHAUSER called to order the regular monthly meeting of the Optometrical Society of the City of New York, at 8 p. m., Wednesday, Nov. 14. Having lately undergone a number of operations, Mr. Offenhauser was too weak to preside during the entire business session, and retired after thanking the members for the sympathetic interest they had shown during his illness.

Mr. Dilworth acted as chairman. Mr. Ryer again urged that the members be given credit for correct work done during the two years' course, and that unless a member attended 75 per cent. of the lectures and quizzes, he should not be permitted to take the final examination. A motion embodying these points was carried.

The election of officers for the year 1907 resulted as follows: President, Willard B. Fisher; first vice-president, John E. Meyer; second vice-president, P. A. Dilworth; treasurer, Charles W. Ripper; recording secretary, Albert Cohen; financial secretary, Robert Levin. Executive Committee: E. Le Roy Ryer (chairman); A. Jay Cross, A. M. Frankel, F. B. Marchant and P. A. Dilworth.

President-elect Willard B. Fisher was conducted to the chair with due ceremony, and responded to the determined call, "Speech." Mr. Fisher is in thorough accord with the educational movements of the society, and expressed those sentiments forcibly, and all look forward to next year as one that will be fraught with momentous problems successfully encountered.

The business session adjourned and R. M. Lockwood conducted the regular quiz. Following this E. Le Roy Ryer continued his lectures, "Diseases Which the Optometrist Should Recognize," which lecture is published in part in this issue of THE CIRCULAR—WEEKLY.

Arthur A. Lyman, Bridgeport, Conn., and Frank D. Jackson, Brooklyn, N. Y., were elected to membership in the society.

The Codes of Ethics, which are artistically printed on parchment paper, were distributed, after which the meeting adjourned until the second Wednesday in January.

A Whale's Eye.

HERE are two photographs, taken by C. A. Pode, of a whale's eye, or, rather, the bone surrounding it. The bone was obtained from a Lapp at Tromsø, Norway,

THE HOROLOGICAL REVIEW.

Watch Repairing.

By H. REINECKE.

(Continued from issue of Nov. 7.)

A GREAT improvement has been introduced of late years by the makers of the Swiss mandrils. This improvement consists in making the threads of the feeding screws of the slides of the tool rests according to the units of some measurement, such as the English inch or the millimeter. The subdivisions are laid down in thousandths of an inch or in hundredths of a millimeter on the rims of the buttons or thumb-pieces for turning the feeding screws, and are properly marked for the accompanying index pieces. The convenience of such an arrangement cannot be overestimated. One must be careful, however, to estimate such measurements only in one direction or to make due allowance for the back lash of the screw bearings when turned in the opposite direction.

A more extended use of the mandril may be had in the absence of a wheel cutting engine, when such a tool may be improvised in the following manner: A solid brass chuck of about 1½ inches in diameter, with a steady pin in its center, fitting in the pump center hole and previously turned true on its back, may be fastened by three screw bolts in the three slots of the face plate, after which the front of this chuck may be prepared for the reception of blanks, to be fastened by cement, screws or other means. This chuck, which can be about one inch in height, may be turned with a substantial shoulder for having fitted upon one or several index plates, supplied with several rows of holes on its face in the case of a single index plate, or with cuts on the edges in the case of several index plates.

A suitable index for either kind is to be fastened to the bar of the lathe. A cutter spindle to be rotated by the foot is to be attached to the slide rest, by means of which serrated cutters or fly cutters may be used. A superficial ocular examination of a regular wheel cutting engine, afforded by a virtuous watch tool merchant, will impart the instruction necessary to enable a good watch repairer to cut all the wheels needed for ordinary repairs by such an attachment, until further experience or instruction suggests the purchase of a more complete tool of its kind.

The attaching of such a chuck to a mandril may lead a zealous and ingenious watch-repairer to provide some other mechanical

devices, which will extend the utility of a mandril beyond his earlier anticipations.

Of great utility, as an auxiliary to the mandril, is the old-fashioned Swiss uprighting and drilling tool, illustrated herewith. The true upright position of the runner, with male and female center, may be verified at all times after long use by fitting a brass collar, fastened by a screw, on its upper end, marked *a*. On the lower end

PRIMITIVE STYLE OF SWISS DRILLING TOOL.

of this runner is fastened in a similar manner a brass arm. This arm should be long enough to allow its outer end to reach to the edge of the face plate, and in it, a short distance apart, are drilled about three holes, of such a size as to hold a sharp center for being shifted from one hole to the other, and projecting below sufficiently to reach the face plate when the runner, by its collar, rests on the top of the tool's frame. In rotating the center runner its upright position may be verified if the point of sharp center in the arm touches the face in every part of its circle. Any deficiency in this respect could be corrected by a sharp file, by which the uneven parts of the face plate may be removed. With the assistance of the three clamps a watch plate or frame, or any other piece of metal, may be uprighted and the pivot holes, etc., may be

pierced perpendicularly by means of a whalebone bow with different sizes of drills. Such an operation is often required when such pieces are to be placed on the mandril for further manipulation. Such an uprighting tool will answer for pretty much all other purposes for which such tools are generally intended. The maker of a locking spring for a chronometer could hardly do without it.

(To be continued.)

C. T. Higginbotham Makes Reply to a Recent Criticism.

SOUTH BEND, Ind., Nov. 14, 1906.

Editor THE JEWELERS' CIRCULAR-WEEKLY:

Your journal of Oct. 17 contained an article by Mr. F. R. Cunningham, criticising a lecture delivered in July before the Retail Jewelers' Association of Illinois. This criticism makes several erroneous statements, and is so misleading in many respects that it becomes incumbent upon me to make reply.

It does not require a scientific training to recognize the fact that an angle of 60 degrees will span 3½ points, said points 24 degrees apart. Consequently my statement that the pallets span 3½ teeth is perfectly correct. A reference to the accompanying sketch clearly demonstrates this apparent anomaly. The statement which he makes, that in an escapement having 30 degrees roller action and 10 degrees fork action the radius from the center of the roller to the face of the jewel pin is one-fourth the distance between the balance and pallet centers is near the truth, but not exact. As a matter of fact, the radius to the roller pin face is more than one-fourth, and the distance to the end of the fork slot is more than three-fourths, the difference in excess being the respective lengths of the radii and the secants of half those arcs.

The statement attributed to me, that the jewel pin distance is one-third, was a mistake in reporting the lecture. Had Mr. Cunningham listened to that lecture he would have heard me say that the distance from the center of the roller to the face of the jewel pin was approximately one-third as much as the distance from the pallet center to the end of the fork slot, which is much nearer the truth than that the distances are three-fourths and one-fourth. Furthermore, to illustrate the lecture, I used a model having these proportions.

As to the word cohesion used in my lec-

*Time
O my friend
is money!*

—BULWER-LYTTON.

And in this money making age there is an enormous and increasing demand for accurate timekeepers. This means that time is money for the dealer who carries a stock of

NEW YORK OFFICE, 11 John Street.
SAN FRANCISCO OFFICE, 704 Market St.

ure, it clearly expresses the idea intended to be conveyed.

There was nothing whatever to justify him in saying that I seemed to favor the two-piece fork and pallets. I specifically stated that I desired to leave my audience free to judge the respective merits on all disputed points. But to say that the "two-piece fork and pallets is a practically obsolete type" is very far from the fact. Some of the largest manufacturers now use this form.

We will now take up for consideration the effect of drawing out or pushing in the pallet stones. Mr. Cunningham, speaking of the receiving stone, says: "No drawing it will increase the angle of impulse and as stated." Then he immediately proceeds to stultify himself by saying: "If the one were drawn out and the pallet swung the fork in the opposite direction, i.e., the receiving end moved away from the heel, it would increase the angles of draft and impulse on both stones." By what process of reasoning he arrives at this con-

clusion is difficult to conceive. It must be apparent to the merest novice that drawing out or pushing in one stone in no wise affects the impulse of the other; it will, it is true, increase or decrease the arc of oscillation of the fork, but this must not be confounded with the arc of impulse, for the reason that the angle included in the locking, which delivers no impulse, must be deducted from the arc of oscillation. Thus, if the arc of oscillation of the fork be 10 degrees commencing at the locking point of a pallet stone and the locking be $1\frac{1}{4}$ degrees, as recommended by Mr. Cunningham, the impulse will be $8\frac{3}{4}$ degrees.

In considering the effect of moving the pallet stones in or out, it will be necessary to go somewhat into detail. Each impulse delivered by the escape wheel as measured from its center embraces an arc of 12 degrees, less the arc embraced by the drop. Each impulse as measured from the pallet center is in proportion to the angles formed by the impulse faces of the pallet stones and the escape wheel teeth with respect to radial lines from the pallet center. A line from this center tangent to the locking corner of the escape wheel tooth at the instant of unlocking, and another radial line tangent with the other extremity of the impulse face at the instant of dropping,

will embrace the angle of impulse of the wheel tooth.

Two radial lines each tangent with an extremity of the impulse face of the pallet stone will embrace the angle of impulse of that stone. These two arcs added together comprise the arc of impulse of the pallet and fork. The former undergoes practically no change whether the stones be moved in or out, but the latter changes in a marked degree with even slight movements. The accompanying figure illustrates this fact clearly. Let us suppose that the receiving stone as represented in full lines is at the normal position. The arc of impulse is embraced by the radial lines B B; if pushed into the position indicated by the upper dotted line, this arc will be reduced to that embraced by the lines A A, and if drawn out to the position indicated by the lower dotted lines the arc will be increased to that embraced by the lines C C. Referring to the discharging stone, we find the normal position embraced between lines Y Y and the other two positions by lines X X and Z Z, respectively. Thus it will be seen that drawing out the receiving stone increases the arc of impulse of that stone, and drawing out the discharging stone decreases its impulse, and vice versa, exactly as I stated.

Referring to the slide, Mr. Cunningham says: "Slide, as every watchmaker knows, is a necessary evil." Admitting this, what should we say of locking? Is not this also a necessary evil, even to a greater degree than slide? The escapement, in unlocking, causes a certain amount of recoil of the escape wheel. This is to say, the train is forced backward against the power of the mainspring to an infinitesimal amount. The resistance offered by the slide, on the contrary, is in part compensated for by a slight impulse delivered by the escape wheel tooth while sliding up the incline of the stone. He recommends $1\frac{1}{4}$ -degree lock and one-quarter degree slide, giving as a reason that the rounding of the pallet stone corner and the possibility of inaccuracy of the escape wheel requires this amount for safety.

Now, is it not true that if the escape wheel were sufficiently out of round or the teeth inaccurate enough to endanger locking, with three-fourths of a degree, as I prefer, that it would be quite as liable to endanger escaping with only one-quarter of a degree? Therefore, I maintain that three-fourths degree lock and three-fourths slide will be much the safest amount. Three-hundredths of a millimeter may seem very small when compared with the human hair, but it should be borne in mind that the old saying used to express great accuracy, "within a hair's breadth," does not express close work when applied to the construction of watch parts. A fraction of a hair's breadth in variation would be fatal in many cases. Adjusters realize the importance of having the locking as light as is consistent with safety, and the three-hundredths of a millimeter, upwards of one-thousandth of an inch, is quite sufficient.

The method proposed by Mr. Cunningham for adjusting the pallet action is extremely faulty. Let us suppose that the fork does not bear its true relation to the pallets, and

after having adjusted the fork and roller action we attempt to overcome the error by moving the pallet stones in or out, which I presume is what he means by "setting the pallet stones to conform." It is quite evident that we shall have impaired the action between the impulse faces of the escape wheel teeth and pallet stones. For this reason the correct way is to first adjust the escape and pallet action, then set the fork to conform.

(Signed) CHAS. T. HIGGINBOTHAM,
Supt. South Bend Watch Co.

A Novel Watch.

A WATCH house of Chaux de Fonds, Switzerland, has marketed a novel kind of watch, intended to indicate the dates of the month in a new and simple manner.

A revolving disk is placed in the bottom

A NEW CALENDAR WATCH.

of a watch case, which disk shows the figures of the dates, which correspond to the seven days of the week through an opening in the bottom of the case. The accompanying illustration makes the design perfectly plain and indicates its adaptability to any style of watch.

Clock-Making in Japan.

A DISPATCH from Yokohama announces that the industry of clock-making at Nagoya, whose output enjoys such a good reputation in Japan, is very prosperous at present, and that the manufacturers find it difficult to supply the demand.

The total production at Nagoya in March of this year was 32,385 pieces. The quality of clocks at Nagoya is constantly improving, thanks to a more and more rigid inspection of the finished pieces, and the number rejected after inspection was only eight in a thousand.

Because of the active demand and the increased cost of raw materials, particularly copper, prices have advanced. They are now, according to the *Japan Chronicle*, 29 yens a dozen.

J. C. Larsen has bought the store of Falle J. Post, Tyler, Minn. Mr. Post contemplates moving to Owatonna.

Escapements as Constructed by Various Horologists.

Translated for THE JEWELERS' CIRCULAR-WEEKLY, from the *Almanac de l'Horlogerie et de la Bijouterie*

(Continued from issue of Nov. 7.)

ALLAUD, a watchmaker, exhibited in 1834 different escapements, among which was the one represented in Fig. 27, which he called the inclined cylinder escapement. This invention was also designed to obtain a less fragile cylinder and a more simple wheel.

The cylinder is, so to speak, suspended from the staff T, and the wheel, R, passing before the staff, effects its lockings as in the ordinary escapement. The lifts, on the contrary, are accomplished in a different manner; they take place against the lips *e s* of a special form, on which the inclines of the wheel operate.

In our figure the tooth *a* is locked on the

FIG. 27.

side of the cylinder. This mobile, turning from right to left, the tooth is engaged on the inside, repelling the lip *e*, and it will be arrested against the uncut part of the cylinder. After this new locking, the direction of rotation of the cylinder having changed under the action of the spring, the tooth will be engaged by the lip *s*.

The inventor states that he placed this mechanism in a small traveling clock, where it went for eight years without interruption. He does not speak of the results obtained with reference to the accuracy of the rates.

The cylinder staff is perpendicular to that of the wheel, but it is easy to construct the escapement with two parallel staffs. In this case the wheel takes the form seen in perspective at the bottom of the figure—it is, the teeth are simply made at right angles.

In Fig. 28 another form of the escapement may be seen, which may, like the preceding, be established with perpendicular or parallel staffs.

Here the wheel is not more simple than in the ordinary cylinder escapement. The teeth are formed in the same way, and the cam which supports them may be either perpendicular to the plane of the wheel, or in the same plane, to correspond with the

arrangement adopted for the arbors of the escapement.

The lower pivot of the balance staff is supported by the bridge P. A special arm, *d*, connects this staff with the cylinder properly so called, which is below the bridge P.

FIG. 28.

In the principal figure we see a section of the cylinder C, with the profile of the wheel, showing the form of the two pieces and their respective positions.

The arrangement of this mechanism is similar to that of the pin recoil escapement, represented in Fig. 27 in the Almanac of 1904.

The form of the cylinder recalls one of

FIG. 29.

the constructions adopted by Breguet for his ruby cylinders. All watchmakers have heard of the stone or tile cylinder of Breguet. Few have seen one, and still fewer have ever had occasion to make one.

The idea of the ruby cylinder was the result of the rapid wear of the steel cylinder, at the time when its manufacture had not reached the point that it occupies to-day.

In the ruby cylinder the working part alone is of stone, and it is formed of a half

cylinder, of which the height is nearly triple the thickness of the teeth of the escape wheel. This piece, which is also called a tile, owes this to its resemblance in form to the ridge-tile of a roof. It is inserted in a piece of steel, of which the preparation is one of the most difficult in horology.

In Fig. 29 we see the arrangement called "the crank." This is the tile inserted in two corresponding grooves of the steel piece *dd'*. The two parts of this piece are con-

FIG. 30.

nected by a steel guard-pin, which is behind the exit lip *s*, and not seen in our illustration. It is this guard-pin which gives to the piece the form of a crank. The upper plug, T, is of one piece with the boss or seat, and is adjusted on the cylindrical part *d*.

Another construction of the stone cylinder appears in Fig. 30. The tile, C, is carried by the lower extremity of the crank, and is below the pivot of the lower plug, T'. It is this construction which has doubtless been imitated in producing the escapement illustrated in Fig. 28.

The ruby cylinder may be said to be indestructible under a normal rate, but it is more fragile than a steel cylinder. The friction during the locking is less than with a steel cylinder, and it has been remarked

FIG. 31.

from this fact that it is not adjusted so well until the oil after a few months of use has assumed more consistency.

We have already examined several escapements connected with two pendulums or two balances. There must have been at a certain time an inventor whose fixed idea was that two regulating organs could be better adjusted than a single one, and who has attempted to apply this idea to various known escapements.

In Fig. 31 this attempt may be seen as connected with the cylinder escapement. The illustration is a copy of one published

SAN FRANCISCO.
LONDON, ENG.

by Ferdinand Berthoud, without comment. Of the balances, B, is mounted on the cylinder, and is therefore actuated directly by the scape wheel, G. By the intervention of a gear the balance, A, mounted on a separate staff, is obliged to participate in all the movements of the escapement.

The combination of these two balances, in the form given to their arms in order to allow of a certain extent of vibration, is very curious, but we do not believe that such a mechanism can be made to work.

Another inventor has sought to make the cylinder escapement a detached escapement, and has succeeded in isolating the regulator at its place, the balance—from the escapement wheel or the cylinder. This construction appears in Fig. 32.

As we see the cylinder C, pivoting as usual between the plate C and the cock D. It carries the spring s, attached exteriorly to the stud a. This spring, which may have a few turns, has no regulating function.

At the place of the balance is an arm A, fitted at a right angle, of which the

FIG. 32.

extremity, a', comes below the upper surface of the cock. Between the two bridges E F is fastened on the cock D pivots a second staff carrying the balance B, as also a collet, to which is attached the regulating spring s', of which the exterior extremity is fixed at a' on the arm A.

The impulse is communicated to the balance by the simple displacement of the point of attachment a' of the spring s, and the balance vibrates in complete independence.

This displacement of the attachment-point of the spring is secured by the usual action of the scape wheel (which we have not represented) with the cylinder C. The rotation of the arm A, which takes the place of the balance, maintains the movement of the detached balance. This oscillation is much less in extent than in the ordinary cylinder escapement, and the cylinder which we have represented with a small nut, may be constructed without this feature.

Maintained by the impulses communicated to the spring s', the vibrations of the balance B may, on the contrary, be quite extended, and they are operated in complete freedom.

THE END.

Baker, Sheridan, Wyo., recently reported the loss of a valuable diamond ring, which he avers was stolen by a woman who visited his store ostensibly to make a purchase.

The Selometer.

THE selometer, as its name implies (secon-depth, metron-measure), is an instrument designed to measure the exact depth of the recess in the watch plates and bridges, but can also be used with advantage by mechanics, as it can be constructed in other dimensions. The object to be measured is placed on the movable platform, which is then slowly raised until the article comes in contact with the fixed shoulder seen at the base of the rack. The needle in the center will then rest on the bottom of the recess and the dial will give you the depth of the recess in hundredths of millimeters.

The selometer consists of an iron pedes-

INSTRUMENT DESIGNED TO MEASURE DEPTH OF RECESS IN WATCH PLATES, ETC.

tal of elegant yet strong design, having at its upper end the dial and measuring needle, and at its lower end the movable platform, which can be raised and lowered by means of a lever, to allow the article to be measured to be inserted between it and the needle.

The dial is made of silvered metal and divided into hundredths and half-hundredths of millimeters. After a few days' use, one can easily measure to a thousandth part of a millimeter. The shoulder is interchangeable and is held in position by a milled nut.

To regulate the instrument it is only necessary to remove the shoulder by loosening the milled nut and then lengthen or shorten the measuring needle by means of the two small keys, delivered with each instrument.

The movable platform can be kept down

by inserting the piece of wood in the groove above the lever after pressing the same down as far as possible. Under the button, placed at the top of the rack, will be found a small stop-ring and nut, which can be used to hold the measuring needle in any required position, and will be found useful in cases where the recesses to be measured are of uniform depth.

In order to use the instrument, lower the platform by pressing down the lever as far as possible, and place the object to be measured on this platform. Slowly relax pressure on the lever, thereby allowing the platform to rise, at the same time being careful to see that the needle rests in the recess to be measured until the article comes in contact with the fixed shoulder. The dial will then show you the exact depth. The great advantage of the selometer is that it measures entirely by itself. There is absolutely no need whatever to touch the arbor, and therefore errors caused through the different strengths of pressure, as with the ordinary micrometer, are entirely avoided.

A Jeweler's Dissertation on Clock Ticks.

“NOT all people,” said the jeweler, “like the ticking of a clock; it is a pleasant sound to most people, but not to all.

Some people, clock lovers these, couldn't sleep without a clock in the same room. Its ticking is company and it scares away the spooks. Such people would wake up if the clock should stop in the middle of the night.

“But there are other people who can't sleep with a clock in the same room and who if they found themselves in a strange place anywhere with a clock in their sleeping apartment would stop the clock before they went to bed.

“Of course, there is much of habit in this; but we have our fancies about clocks, as we do about all things else.”—N. Y. Sun.

Members of New York Watchmakers' Society Hear Interesting Lecture.

A VERY interesting lecture was delivered at the recent meeting of the New York Watchmakers' Society, by Joseph Menzel, head watchmaker for Tiffany & Co. His subject was the “Barrel and Mainspring.” An interesting discussion, which lasted about two hours, followed. Much of it was illustrated by stereopticon views and special drawings. Many of Mr. Menzel's deductions were the result of personal investigation and facts never before published, showing what a thorough study the speaker had made of his subject. He proved that the smallest defect in the action of either barrel or mainspring is apt to manifest itself in the rate of the watch.

Watchmakers from all parts of the city listened to the lecture, the clearness of which was not obscured by mathematical calculations. After a vote of thanks had been tendered Mr. Menzel by those present, refreshments followed, and a reception to the visiting craftsmen held the assemblage together for some time. Another lecture, it was announced, will take place in the near future, notice of which will be given in due time.

“And It’s a New England”

A CHRISTMAS watch must give delight, but genuine satisfaction follows upon finding that it will give real service during the years to come—upon finding that “It’s a *New England*”—an accurate time keeper built to give the highest degree of watch-satisfaction—and guaranteed to do it.

This Christmas you, too, have the opportunity to give genuine delight by accepting from us a Christmas guide to worthy presents—the new New England Blue Book of Watches for Ladies or Red Book of Watches for Men. The coupon below, if filled out today, will bring you free the book you want; will give you hundreds of graceful designs and styles to choose from—each a little gem of artistic beauty combining the maximum of service.

A CHRISTMAS WINDOW DISPLAY.

Designed expressly for The Jewelers' Circular-Weekly, will be illustrated in this department in the issue of Nov. 28.

How the Jeweler Can Meet the Competition of the Mail-Order House.

(Continued from issue of Oct. 24.)

AS soon as you understand each other and find out exactly what is needed by the community, you can show the people plainly what their patronage will do for you and the community, and also what the lack of it will do, so they can determine how they will benefit by trading at home.

They probably complain about the lack of variety in your stock, and you can show them that the town will turn itself into a big general store, one merchant carrying one line and one another, so all their wants can be supplied, if they will buy at home, but that merchants cannot afford to carry large stocks of goods unless they sell them, and the home patronage is all you have to depend upon.

United effort by all your merchants will give you a hold on your home trade which you never dreamed of getting. There is more to be made by all clubbing together to build up the town and make more trade than by each one trying to get a little business away from the store next door by some small trick.

The quality fight is the only reasonable fight for the retailer to make against the mail-order house, and the mail-order houses have almost cornered all of the good quality talks for their own use. The retailer has all the good end of it yet, however, if he will get busy and begin talking and advertising quality.

This is one of the best years this country has ever experienced in which to sell good stock on its merits. Everyone is prospering, and very few are looking for cheap goods. It is not the price but the quality talk which gets the most attention. When the price is low and it is still possible to make a quality talk, of course there is still more of an advantage, but people are now demanding quality.

This is exactly the condition which should enable the retailer to make a winning fight against the mail-order house. If you can get at the real quality of the goods which you sell and those that your competitors sell, you can nearly always show where the difference in cost comes in, if you are only asking a fair profit. You are handling the right goods, because you are selling them to people whom you want to retain as customers. Now, the quicker your customer is informed as to the harmony of price and

An Odd Display Consisting of Mammoth Grapes Represented by Colored Balloons.

NOW and again it is necessary to use a startling leviathan device to actually force the eyes of the passing public on your window in spite of the numerous other attractive show windows of your neighbors. Art, both pictorial and realistic, has been so thoroughly done in show window trims that it is becoming very difficult to bring forth something both original and startling.

All these requisites are contained in the following proposition, and one most admirable feature, that will appeal to the heart of the retailer with a very small trade, and a consequently reduced bank balance, is the fact that this "magnificent" effect is attained at a strictly nominal cost.

The only articles to be purchased are a sufficiency of toy rubber balloons, a few cents' worth of dye, and, perhaps, a sheet or so of green paper.

The next process is to dye your balloons the desired grape color. Plum color (purple) is probably the best adapted for the purpose. Of course, if preferred, the lighter pinkish or green grapes may be imitated, but it is not so easy to attain a true grape resemblance in these colors.

Now cut out a few leaves from green paper, shaped as in Fig. 3. These leaves must, of course, be in proportion to the enlarged size of grape. The flatness of the paper can be broken by getting the paper thoroughly moistened through and then pressing it between uneven surfaces of cloth pads. When dry, each must be attached to a short length of string, which must be wound around with green paper to represent the leaf stalk.

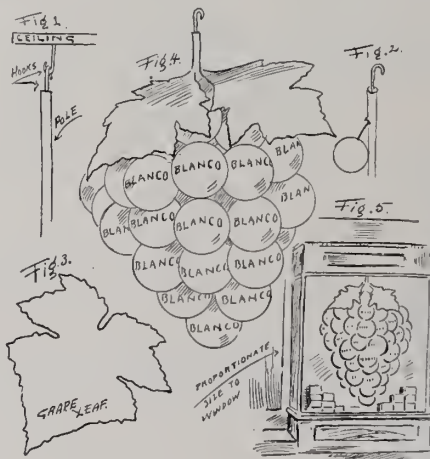

With a short pole and two hooks for suspending the grapes from the ceiling, as in Fig. 1, the parts are now ready for assembling.

The balloons may be fastened to the stick or pole (see Fig. 2), the length of string attachments being regulated to permit the spheres to form a contour, as in Fig. 4. Next wedge out the balloons from stick with crumpled-up paper.

If you can spare a little more time in the construction, a core, or body, over which to

group the balloons can be made thus: Sew two oval pieces of cloth together so as to form an egg-shaped bag, similar to a football. Stuff the bag with paper, or excelsior, and hang it from the ceiling.

Next attach the balloons to the bag, bringing all your ingenuity into play, so that while they leave no visible surface of the

DESIGN FOR DISPLAY OF HUGE GRAPES.

bag they yet retain the shape of a grape cluster. Some irregularity of grouping the spheres is necessary. A few at least must project further from the core than others, of course.

Now pose the vine leaves over the bunch and your grapes will present in your show window the appearance depicted in Fig. 5.

One very valuable advantage this giant grape display contains is that it can be made any size to suit a small or the very largest of show windows by increasing or diminishing the number of balloons used.—C. W. Coumbe in the *Tobacco Leaf*.

Alex. Gibson is about to open a jewelry store in the Kersee building at Woodstock, Ont., Can. Repairs and alterations have been in progress for several weeks at the store.

Storekeeping Department.

ality, the quicker you can count on his judgment being worth something in buying back. The sooner your neighbor develops good judgment, if your goods are right, the sooner you will get his trade, for he will not buy without seeing when his judgment tells him your goods are of the best quality, and at the right prices for that quality.

The people are not demanding cheap things; they are demanding good things, and dealers who are looking for cheap goods with which to fight the mail-order houses had better put their ear to the ground and find out what grades of goods are being

instead of retailers taking advantage of a quality argument and working it for all that is in it, a great many of them are spring on their rights, and their townsmen are actually sending their orders to the mail-order houses "because the home merchants have nothing that is good any more."

Many retailers are unquestionably looking for cheap goods with which to meet competition, but many others are buying good goods, regardless of price, if the quality is fine, and they are right. If they will now go a little further and advertise the fact that they are buying the best that the market affords, they will get some of the money going to the mail-order houses.

Do not try to make your customers believe that poor stock is good. That policy will never make you a dollar; get the right goods, and then never lose an opportunity of calling attention to the fact that you have them. It is one thing to have good stock and another to make everyone in your community know that you have it.

The mail-order houses have spent thousands of dollars and years of time advertising the fine selections which can be made in their immense stocks, for they are striving to sell the better quality of goods, where there is more profit. Retailers will do well to follow the same plan if they want a reputation which will draw trade. They do not carry such a varied stock, but they can gain the reputation of carrying the very best obtainable in each particular line, and with plenty of money in the country it is a good time to have a quality reputation.

(To be continued.) F. A. P.

Show Window Gossip.

On a Fifth Ave. window, New York, was carelessly spread a heap of amber in crosses, crosses, pendants, both of the clear and the clouded variety, that was enough to excite the amber enthusiast's gasp with admiration. Nothing so appeals to the lover of the gem as the ornamental minerals (be they precious or semi-precious) as a careless disposition of them, says a writer in the *Time*. A heap of unset stones is always more tempting than any number of those that would be in conventional settings.

A number of trophies which had been awarded as prizes for the winners of the local automobile race on the fair grounds in Bethlehem, Pa., were displayed in the show windows in the store of H. H. Greiner, of Philadelphia, several days before the event.

A Representative Store of Quebec, Can.

QUEBEC, Can., has many attractively furnished jewelry stores, but, considering the economical apportionment of store space and convenient interior arrangement, there is none more interesting than that of Emile Jacot, at 128 St. Joseph St. The store is 20 feet wide and 49 feet long, the height of the ceiling being 11 feet 11 inches. The plate glass show windows are seven feet wide and seven feet high, the display space being 30 inches deep. The counter cases, of which there are three on each side of the store, are each eight feet long.

The dimensions of the wall cases are eight feet by eight feet, access to their contents being obtained by means of a lifting sash. Above the wall cases are cupboards equipped with sliding doors and made narrower than the wall cases, in order

obtained as thin as it is practical for foundries to make it.

The large rectangular-shaped device well in the rear of the establishment is a mirror, which was treated with soap and whiting in order to allow the photograph to be taken.

The lighting facilities of this store are excellent, the light being from the front. A prismatic glass, four feet high, erected above the front plate glass, helps to distribute the light evenly. The large mirror, reflecting as it does from its position, also helps to make the store light uniform, and prevents the strong light that comes from the rear windows from mingling with and confusing the light in the store.

The office, located behind the mirror, is encased in glass. The work benches are near the rear windows. No inner or invisible lights are required by day, the

INTERIOR VIEW OF THE STORE OF EMILE JACOT, QUEBEC, CAN.

to allow a free run to the lifting sash. All of these cases are of the same wood, namely, black walnut finished in a red tint, in imitation of old mahogany. The cupboards are used by Mr. Jacot for the storage of reserve stock.

There is a total absence of projections in the moulding, but a brass trimming at the base of the latter relieves the monotony and harmonizes with the brass grille work at the base of the counters.

This brass grille work, visible in the illustration, serves as a screen for the heating apparatus—a novel use for the heretofore lost space between the drawers and the front of the counters.

The hot water pipes, behind this screen, are placed horizontally along the whole length of the counters and give a very uniform moderate heat just where it is needed, avoiding the draughts so common with strong radiators placed at distant points. A carefully fitted sheet of zinc prevents too much heat in the counter, and acts as a reflector. The brass grille was

electric light being called into requisition only on very cloudy days. The cellar staircase makes necessary the protruding section on the left, in the rear portion of the store. This section is eight feet high, which is the same height as the telephone room at the diagonal portion extending from the rear end of the wall case. Beyond the staircase is a space sufficient to be of much utility. Above this is one closet, 20 feet long, with sliding doors in which the necessary silverware boxes are kept from dust and light.

Rather an appropriate sale, considering the recent advance in the price of silverware, was advertised recently by G. W. Fairchild & Sons, Bridgeport, Conn. The firm called attention to the special sale of silver plated spoons and forks, which were advertised as desirable Thanksgiving gifts.

At the formal opening of the new store of Cleis & Clauer, 517 S. Main St., Elkhart, Ind., a short time ago, souvenirs and music were supplied to patrons.

[Answers are also solicited from our readers to the questions published on this page.]

QUESTION No. 1709.—Steel Strike Solution.—How can I make a good striking solution, suitable for silver plating steel articles? I have a good silver solution for silver depositing, and all I wish to know how to prepare the strike. S. S. S.

ANSWER:—A solution to be used for a strike for silver plating steel is the same as the regular silver solution, excepting that the solution is much stronger in cyanide and weaker in silver. For one gallon of water use two pounds of cyanide, and to this add one-half pint of regular silver solution. It is best to use two striking solutions for knives, the above for the preliminary and the regular strike by using two parts of silver solution instead of the one-half pint. For the anode a steel or carbon rod may be used, and a small piece of silver attached to this to prevent the solution from becoming impoverished. When in constant use the solution should be repaired once or twice a week by adding a small quantity of silver solution.

QUESTION No. 1710.—Polishing Soap for Silver.—Please give me a formula for making a good soap for silver. P. S.

ANSWER:—One of the best polishing soaps for silver is prepared by using 80 parts of white soap cut in thin shavings and dissolved in a little water. To this add 18 parts of burned magnesia, and two parts of finely powdered rouge. After heating and mingling the parts thoroughly, add water until the desired consistency is obtained. Another excellent soap is made by using 100 parts of white or yellow soap dissolved thin, four parts of powdered tin precipitate, eight parts of salvolatile, 16 parts of alkali, powdered as fine as possible. All the ingredients should be finely powdered and free from grit to prevent scratching.

QUESTION No. 1711.—Tinning with Amalgam.—How can I tin over some small iron pins with tin amalgam? T. A.

ANSWER:—Small iron articles—pins, for example—can be coated with tin amalgam by melting this under water, immersing the articles, well pickled, and heating them for a while.

QUESTION No. 1712.—Filling for Engraved Letters.—What is the best black ink for filling in engraved letters on metal? F. E.

ANSWER:—For filling in lettering and programs upon silver a mixture of lamp black and beeswax melted together, or what is known to the trade as heel ball, which can be purchased of any shoemaker, is effective. After moistening the heel ball with oil, rub it into the lettering until it is filled with black. The article is then wiped clean

with a towel, but no rubbing or polishing should be done until thoroughly dry.

QUESTION No. 1713.—Paint for Deposition on Glass.—Can you give me any information regarding the preparation of silver paint used upon glass ware as deposit work on the same? The paint is put on the glass and then burned in, leaving a metallic surface. I want to know how to prepare this paint. I have tried the following with very poor results: Sulphur was dissolved in oil of lavender to the thickness of paint. Silver chloride was dissolved in sulphuric ether (I found silver chloride insoluble in the ether); the two substances were mixed and boiled to the thickness of paint. I desire a paint that will fuse at as low a temperature as possible. H. V.

ANSWER:—For glass, porcelain and pottery the nitrate of silver solution is used where a completely covered surface is wanted. Lead and silver paint are used for partial ornamentation. The article to receive the deposit should be thoroughly clean, potash being employed for this purpose. A good strong solution of potassium cyanide is used after the work has been in the potash. The article is then removed and scratch brushed. If the article is of such a shape that it can be filled with sand or shot, so much the better. The article is filled, and a cork or plug is used for sealing it, the edges of which ware should be painted. Before sealing, a wire should be run through the cork, which should be secured inside, leaving it about 12 inches long on the outside. Keep the work in clean water until ready for use. It should then be suspended from the rod, having a basin underneath to catch the solution as it is poured over the work, until a coating has been formed upon the latter. This requires about 10 minutes. When this is done a wire must be connected to the one which has been run through the cork and allowed to rest lightly upon the surface of the object, which is to receive the deposit. A very slow striking solution is then used and the article is at once placed in the regular plating bath. The solutions, of which there are several, are made as follows: Dissolve $\frac{1}{2}$ oz. of nitrate of silver in $\frac{1}{2}$ pt. of water and keep it in a bottle marked No. 1. Dissolve 4 sticks of pure caustic potash and label it No. 2. Dissolve 8 ozs. of grape sugar in 16 ozs. of water, and when dissolved, 1 oz. of pure tartaric acid and $\frac{1}{4}$ oz. of absolute alcohol. This forms solution No. 3. Take equal parts of solution 1 and 2 and mix them well together, then add a sufficient quantity of ammonia to precipitate the

silver. Shake well and add one-third quantity of the other solution already mixed. This solution is now ready for use and is poured on the work as described before. Another method for depositing gold or silver used on fine art work is to triturate neutral platinum chloride with enough lavender oil to form an easy flowing syrup. Of this preparation a scarcely perceptible film is applied by means of a small brush to the article to be ornamented. When dry, the article is heated in a muffle to a dark red heat. At this temperature the essential oil volatilizes partially, while another portion is decomposed and reduces the platinum chloride to metallic platinum. The result is a coating of metal which has a finely polished surface. When cold, the article is immediately immersed in a solution of nitric acid, which does not attack the platinum, but removes all impurities that might make the surface dull. Wash in clean water and connect with a wire to receive the deposit. A cheaper method used at the present time is a paint composed of lead and silver mixed with oil of lavender. This paint can be bought already mixed on the market, but can be made easily by dissolving 5 ozs. of fine silver in equal parts of nitric acid and hot water. When all is dissolved, precipitate with salt, adding enough to throw down all the silver contained in the solution. Wash thoroughly to remove all acid and then add enough sulphuric acid to saturate the chloride thoroughly and insert pieces of sheet iron about one-half an inch apart all through the chloride. Allow it to stand over night. The action of the acid upon the iron will change the white chloride to a gray metallic silver powder. Then remove what pieces of iron remain and wash in several waters to get rid of all acid, and dry. The two parts of above silver powder and one part borate of lead cost about 75 cents per pound. Mix both with lavender oil, using enough to make an easy flowing paint. Paint on evenly and not too thick. When finished, allow to dry thoroughly and the article is then ready for baking, which is done in a muffle. After this scratch brush, wire and put on the deposit.

A Novel Discovery Claimed to Have Been Made by a Hungarian Chemist.

THE Hungarian chemist, Brunn, claims to have discovered a liquid chemical compound which renders certain kinds of matter proof against the effects of time. He asserts that it doubles the density of nearly every kind of stone and renders it water proof. It imparts to all metals qualities which defy oxygen and rust.

The professor says while traveling in Greece 25 years ago he noticed that the mortar in stones of ruins which were known to be over 2,000 years old was as hard, fresh, and tenacious as if it had been made only a year. He secured a piece of the mortar and has been working on it ever since until now, when, he says, he has discovered the secret. His discovery, he claims, will, at the least, double the life of metal exposed to the air.

Royal Sèvres and the Great Annual Output of Counterfeits and Imitations.

LOOKING around in the curiosity stores of Paris we find everywhere conspicuously exhibited Sèvres cups, Sèvres statuettes, Sèvres plates, all of them bearing genuine manufacture marks, says a writer in *Harper's Weekly*. Unfortunately, these Sèvres are brutal, horrible, distasteful counterfeits, made in Berlin or even in Paris: for the manufacture of false Sèvres has gained nearly incredible expansion.

Year by year 16,000,000 francs worth of spurious Sèvres are made, which are sold in Europe and in America, and give a return of 48,000,000 francs. A false Sèvres plate, epoch of the Empire, has a manufacturing value of three francs, and sells at six francs to the commission merchant, who in turn conveys it to the curiosity dealer for nine francs. From this stage on any statement of prices becomes impossible: two plates of false Sèvres, similar to each other in every particular and made of the same material, sell, just according to the place they happen to be in, at the second-hand store in Orléans, for 12 francs, at a profit of three francs; at the antique store in London for 175 francs, at 170 francs profit. Who wants to buy counterfeit Sèvres need not to look for secret factories; the counterfeits come to your house, if you have an open store, as they are traded in drummers. Nor is it to be presumed that one is confronted with cunning imitations. The forgers do not employ experts in ceramics, nor even especially skilled workmen. The manufacture marks of Sèvres are placed on china wares such as when the manufacturers of Limoges would be ashamed of.

It must be remembered that the great Sèvres factory under the various governments of France has had since the beginning of the enterprise has continuously varied the signature of its products; there is the double capital L used during the reigns of the kings; there is the N of the Emperor; there is the full inscription "Manufacture Impériale de Sèvres"; the letter L of the powerless King Louis XVIII.; the X of Charles X.; there are to be found the initials L. P. of the Citizen Emperor, the S of the white Sèvres, or the words "doré à Sèvres" on the large decorative pieces; there is, finally, the cipher of the French Republic as it is still used by the factory. Visiting hundreds of art stores, according to the species of articles carried by the firm, you will find Sèvres ware with the royal, the imperial or the present emblems. Still, the Directorate of the Fine Arts, the Ministry of Commerce, the rec-

ord office for trade marks, and even the factory itself are compelled to submit to this traffic in counterfeits, which, by the ugliness of the imitation tends to discredit the genuine product; for the administrations lack any weapon for protecting their rights. Under the present legal situation it is impossible to do anything against people who sell false "old Sèvres"—that is, the majority of the sellers.

Sèvres is imitated and signed with false marks mostly in Germany, and sold to South America. There is no international treaty which warrants legal proceedings. The old manufacture marks of the monarchical and the imperial times are not now employed in Sèvres, and cannot be

OLD ROYAL SEVRES PLATE.

claimed as proprietary marks by the factory. In order to begin legal prosecutions the factory would have to register the marks again and to make some articles, such as were made in former times, but by so doing would become a forger itself. The often attacked factory of Sèvres is intimately connected with the history of France.

Lord Lytton had placed on one shelf five genuine Sèvres cups, with the factory marks of five different epochs. The shapes, the decorations, the colors of each cup expressed a whole governmental period, and the Minister, pointing to the cups, used to say: "This is the history of France in porcelain poetry."

Sometimes the factories of spurious Sèvres cause their customers great embarrassment. At a banquet given last spring a dinner service with the marks of Sèvres appeared on the table. One of the guests praised it. "It is a family treasure," the host said; "Napoleon gave it to my grandfather." Everyone expressed their admiration. Only the Secretary of Fine Arts

smiled discreetly; he had recognized the Sèvres of Leipsic, pattern of 1906.

The illustration herewith shows a round dish of old Sèvres. It has a green ground, with an edge moderately pressed in at regular intervals, giving it a wavy appearance. The nosegay covering the center, painted in delicate colors, is surrounded by a wreath in relief formed of rococo scrollwork and flowers; three shell-shaped medallions also decorate it, and the center painting is richly embellished with gold. Between the various medallions the beautiful deep green ground appears, upon the outside of the rim is the same division.

The dish bears the Sèvres mark, 1760, and formed part of the von Pannwitz collection, having formerly been exhibited at the Berlin Museum of Arts and Crafts.

How the Ancient Potters Dried and Polished Their Clay.

THE piece of potter's clay, having been turned and fashioned, comes from the turner and adjuster and now needs drying. Opinions differ as to the method of procedure of ancient days. According to M. Reichhold, drying in the air suffices; after several days the argile obtains the indispensable cohesion and acquires a hardness analogous to that of leather, permitting designing, carving and painting. It will prove very fragile if it becomes quite dry. That which proves that the vases were still a little moist before being decorated is that several of them have received blows in transporting or in the manipulation of the pieces, and depressions are still visible in the baked pottery.

Some chemists, in accordance with treatises on ceramics, express another opinion. They think that a warming up, that is to say, a light firing, was indispensable. For would a piece of unbaked pottery support itself while being humidified by an abundant application of color as that of priming? Would it not fall into liquefaction?

But practical men whom I have consulted are in accord with M. Reichhold, that in practice, painting on argile air dried is easily carried out with some precaution, and becomes better incorporated with the earth. All that is necessary is to seize the opportune moment of desiccation for the painting.

This favorable state lasts rarely several days, therefore the work has to be done rapidly. In this it is similar to fresco somewhat. After drying one has to proceed with polishing, which contributes to the surface a fine finish and closes all the pores of the argile.—M. Pottier, in *L'Art Pour Tous*.

How a Repair Job Led to the Recovery of Stolen Jewelry.

IN a story emanating from Newburg, N. Y., recently, various papers published the following account of the strange recovery of a lot of stolen jewelry:

"Some of the jewelry which was stolen on June 12 last from Lyon's, 45 Water st., has just been returned in a rather odd manner. The store, while retaining the old name of Lyon's, is conducted by Jansen & Goodruff. On June 12 it was discovered at during the night some one had taken a large stone and, having broken the window, had extracted a considerable amount of jewelry and trinkets, fobs, charms and lockets to the value of \$170, forming the bulk of the booty.

Nothing was heard of the case after, until Saturday night, when a gentleman from Cornwall entered the store. He had a fob which had become broken and which he desired repaired. At the store this was recognized as one of the fobs which had been taken at the time of the robbery. He was asked where he had obtained it and he said that his son had given it to him. The gentleman is a physician and went on to explain how the boy had obtained it. He said that during the Summer boys had been swimming in the river between the O. & N. railroad yard and Mead & Taft's, and he had found the articles in the water. It was common knowledge in Cornwall, he said, that this was true, and a very considerable part of the property could be found among the boys of the village. His son had obtained this fob by trading an air gun with another boy.

The name of this boy was given, and on Sunday the members of the firm went to Cornwall for the purpose of pursuing the investigation further. They found that conditions were about as the doctor had said and they came across quite a quantity of missing jewelry and will probably find more. Some of the lockets plainly bore evidence of having been for some time in the water.

It is believed that the theft was perpetrated by some tramps. Having escaped from Newburg, it is supposed they proceeded down the West Shore tracks to Cornwall. Arriving in that village, they probably feared capture with the stolen property on them. They therefore, as believed, threw the jewelry into the river, where some of it was recovered a few days later by the Cornwall men while in swimming. It is not believed that any arrests will follow.

The list of articles which have been missing follows: A hoop bracelet of gold, set with one diamond and two rubies; a gold hoop bracelet, Roman color; a hoop bracelet of gold, polished; another hoop bracelet of gold, polished; a hoop bracelet of gold, chased on top; a gold link bracelet, set with amethysts; a gold link bracelet, locket top; two Carmen bracelets, locket top; six gold filled chain fobs; two gold lockets, plain Roman finish, and about 17 gold filled lockets, some plain and some with stones."

Wm. F. Crow, Haynesville, La., has gone to Cloughton, La.

Getting Pearls in the Philippines.

PEARLING at Jolo, which lies at the southwestern extremity of the Philippine group, is a mysterious industry. A large amount of capital and thousands of lives are risked each year in delving into ocean depths for the great, rough-shelled bivalve which occasionally contains a pearl worth a king's ransom. Because of the great risk involved and the possible fortune to be gained, the industry has a fascination scarcely to be resisted by those who have once experienced it. Because of the great variety of people who search for pearls, the vast area of the hunting grounds, the centuries-old customs of the Moros and the special laws covering the industry, no statistics can be obtained which will approximate the profits. The business is therefore mysterious.

Pearling is a game of hazard for high stakes. The pearler must risk capital and human life. He must brave the sea and go prepared to fight for his rights with savage men, and he must pay the taxes and divide the profits with the shrewd traders from Ceylon and Singapore. Sometimes, says *The Far Eastern Review*, fortune smiles. Three years ago a single pearl was marketed in the Celebes for 36,000 pesos. Such finds rarely come to public notice. Shrewd traders are always on hand to snatch them away from the ignorant and fearful divers, and the jewel is first exposed for sale in London or Paris or a Dutch port.

The Moros have three ways of getting the pearl shells out of the sea. One is by actual diving, one by dredging and a third by a three-pronged catcher let down by a rattan rope. This last method can be used only when the sea is absolutely calm, because the least ripple will prevent the fisherman from seeing the shell at the bottom of the sea. When the first method is employed the diver always says his prayers before he goes down. In the days when shells were plentiful the diver went down to a depth of from eight to 12 fathoms, but now there are men who even go as deep as 20 fathoms.

In former times the divers were supposed to give the biggest pearls to the Sultan, but when the natives came to learn the value of money they secretly sold them to the travelers. As a consequence, when it came to the knowledge of the Sultan that one of his subjects had suddenly become rich he concluded that a pearl must have been sold, else how did he obtain all these fine things in so short a space of time? A messenger would be sent out at once to fine the man a large sum of money.

Special laws have now been made by the Philippine Commission covering the pearling industry. The Sultan and his followers have no longer any legal right to collect fines, but so far the ignorant people still fear the power of the Sultan and have not yet gained sufficient confidence in the American Government to accept its guarantee of protection.

R. H. Ansell, Edmonton, Alberta, who attempted to leave the country after having become heavily involved in debt, has been arrested at Battleford. Ansell recently obtained a quantity of jewelry from K. C. Pickel, of Edmonton, valued at \$295, on which he had paid only a small amount.

FALL NOVELTIES IN DOMESTIC POTTERY.

A NEW and attractive line of domestic pottery is on exhibition in the sales rooms of the J. B. Owens Pottery Co., 70 W. Broadway, New York. The art tendencies are shown in the hard, fine underglaze decorations and the blending of colors in the patterns. The glaze is smooth, firm and durable, and shows skill and unusual care in preparation. The subjects of the decorations are numerous, including fruit, flowers and birds. Grecian and antique shapes are reproduced. In this a 16-piece set, carefully assorted, is offered to the trade. A line of pottery in dark coloring is also shown. Mr. Ling, who represents the pottery company, also represents the Wayne Cut Glass Co., Honesdale, Pa., and Henry Nicolai, Hamonton, N. J. The cut glass display is carefully selected and contains a variety of pieces, including large jugs and punch bowls.

COFFEE MACHINES IN NEW FORMS.

SEVERAL additions have been made recently to the shapes and sizes in which the Sterna coffee machines are made and the new samples, now shown in the manufacturers' salesrooms, at Broadway and Park Pl., New York, are proving attractive to the trade. One of the additions is a handy little machine in which may be prepared exactly one pint, or about two portions of coffee. The sizes now range from this minimum up to larger ones in which three and a half pints of coffee may be distilled at one time. All the shapes and sizes are made in silver plate, nickel plate and copper; the inside of each is plated with successive layers of tin and silver. Besides these percolators, which comprise in their equipment an alcohol lamp, a new lot of percolator pots for gas stoves and ranges is now made in sizes of one, two and three pints. The principle on which the coffee is prepared is the same as when the alcohol is used as the fuel, and these coffee pots, it is expected, will prove quite convenient to people who prefer to obtain the heat from the kitchen range. These percolator pots are handsomely modeled and finished, a feature being the non-heating ebonized handles. Among other novelties now shown are pleasing mahogany trays set in silver-plated, copper and brass rims with inlaid wood centers. The trays are in round, oblong and oval shapes and in several sizes.

THE RAMBLER.

The Life and Duties of the Jewelry Traveling Salesman

By MONROE ENGELSMAN

(Continued from issue of Nov. 14.)

THE salesman's firm should be always on the alert and willing to improve its facilities when required. If, then, any firm desires to receive the best results from its travelers it must not overlook the just complaints of its representative, nor treat him as if he were no factor toward acquiring successful business. The salesman is the medium by which depends largely the success of any business, and for that reason the writer trusts the firm will consider worthy of consideration any practical or feasible ideas or suggestions which he may offer and which will have the tendency to improve its business and at the same time improve the condition and facilities of the salesman.

In an economic sense capital and labor are needful factors to increase wealth, and should, therefore, work in harmony; their interests are relatively identical—when they are not antagonized each other they are materially affected. If we recognize and accept this statement as being true, it will be very easy for the firm and its representative to appreciate the fact that the best results can be obtained by each of them only when there exists between them harmony and good feeling. A just standard compensation should be given and accepted by both of them. This much mooted problem of remuneration can be solved and the writer feels confident that all concerned will be satisfied on this score by following adopting the following suggestion:

Let the actual results of a salesman's efforts be the guide and basis by which he shall receive his just and true compensation. In the first place, he should have a fixed weekly drawing allowance and the balance of his compensation shall be adjusted on a percentage of the actual profits derived from his personal part and the result of his labors; all expenses, moneys drawn and actual losses attributed to him should be deducted from the actual profits, also deducting the amount of interest on the capital invested for him, and when this is ascertained the salesman should be compensated in accordance with an agreed and stipulated percentage of profits so accrued, which percentage has been satisfactorily arranged between both parties.

The actual cost of the goods sold by the salesman could be distinctly and indisputably shown by keeping a separate book of accounts, which could be easily verified. Of course, it could be expressly agreed and understood between employer and salesman that any losses incurred by the salesman, but from sales which were made at the express desire of his firm, should not be figured against the account of the representative, but, in justice to him, should be fully borne by the firm. On the other hand, however, any losses made by or through the negligence of the salesman, by virtue of any transactions made by him, contrary to the specific instructions of his firm, should be solely borne by the salesman, and upon the full adjustment of his account he should

be held liable and pay for such disobedience.

By participating in the profits and losses of the business on the plan, as suggested here, the troublesome question of salary would be entirely eliminated. The solution of an adequate division arising from the assistance of capital and labor could be determined, at least as far as the jewelry business is concerned.

By the adoption of some of the most important ideas and suggestions here expressed, the methods as pursued at the present burdened will be lessened to a great extent, and the writer feels confident in saying that the salesman's life will be equally profitable by these changes, and the manifold duties with which he is at present burdened will be lessened to a great extent. If I have succeeded in influencing some of those who are interested in the trade to adopt some of these views the task has not been in vain.

THE END.

The Class of Merchants Wanted in the Retail Jewelers' Associations.

(By A. C. GRAUL, President of the Pennsylvania Retail Jewelers' Association.)

THE question often arises, Do we want (or need) this or that man or firm in our association? Here is the man whose business amounts to hundreds of thousands annually, while, at the other extreme, we see the man whose sales may not exceed \$500 per year; there is the man whose sales range from \$2,000 to \$10,000, while again we consider those who sell from \$40,000 to \$50,000 worth of stock annually. There are the men who hold their business down to a clean "cash on delivery" basis, and, again, there are the others who cater very much to the people who prefer to buy on credit and who will accept their pay in stipulated instalments. Each is a factor of importance in the business whose influence is felt and appreciated by his neighbors in business and by the community in which he lives. Each is also appreciated by manufacturer and jobber.

Now, which of these various classes of jewelers do we want and need in the retail jewelers' associations? The answer is obvious. We want and need them all. Each will add to our prestige and, what is of more importance, to our strength.

The large retailer may feel that he is doing too much business to "bother" with an association which he does not feel the pressing need for, although he will no doubt acknowledge that certain lines of trade and business which once were of importance to him have gone to the department store and the mail order concern; but as he has grown in other directions he does not miss that very much, and fancies they are no menace to him. Likewise he argues that his business prestige is sufficient to hold at bay the encroachments of the retailing jobber. But let us remind him that the security and prosperity

of the preferred in society is at all times based on the well-being of the substrata. If it were not for the average dealer, whose great numbers place him in intimate touch with so many units of the consumer, then the batteries of the department store and the mail order house would be directed against the larger jeweler and he would then feel more the effect of this competition.

The prosperous retailer certainly needs a live organization, and if he is conscious of his best interest he will be a member without delay. The average or medium class dealer needs the organization all the time for the direct protective possibilities, and also for the sake of the variety of ideas which come constantly to him through contact with his brother jewelers at the meetings and conventions. The man of the country town, the village and the hamlet sometimes thinks his membership is of no consequence, but I want to say that without him the organization is not complete, and to leave him out of consideration and without protection exposes the most vulnerable part of the craft to the encroachments of the mail order house.

We need them all, and aspire and purpose to benefit them all. In the consummation of the objects of our associations there is hope and encouragement for all, the great, the small, the credit house and the spot cash man.

The cost of membership is light, and the consciousness of doing something unselfish—something for your fellow man, is elevating and gratifying, and if you never derived any other good, that alone would be worth more than the cost. Therefore, I say, come, join with us, do us good and we will do you good. "Let us reason together."

Diamond Formation in California.

AN engineer from South Africa, J. Arthur Harding, who has just completed a trip through the gem belt of San Diego and Riverside counties, in California, says that he found diamond formation near the boundary line between the two counties. In this connection he says: "In the latter part of September I made an extended trip throughout the so-called gem belt of the two counties. There is unmistakable surface evidence that diamonds might be found in the range of mountains lying between Oak Grove Valley on the south and the Cahuilla Indian Reservation on the north.

"The range of mountains lies near the boundary line of the two counties. I also found in this locality lepidolite and pegmatite granites in that peculiar quality that would indicate extensive tourmaline deposits. I am of the opinion that when this territory is thoroughly prospected diamonds of an excellent quality will be found. The tourmaline gems in these hills appear to be harder and of a superior quality to those found a few miles further south. Extensive operations are going on, and from appearances the results must be satisfactory."

The business formerly conducted by James R. Campbell, Stamford, Conn., will in future be continued under the firm style of the Campbell & Thamer Co.

**You Can Easily Operate
This Typewriter
Yourself**

Don't worry your correspondent.

Don't write him anything by hand that takes him time to make out—that may leave him in doubt—that he can't easily read.

And don't fill out legal papers or card memos—or make out accounts or hotel menus in your own handwriting.

It looks bad, reflects on your standing, makes people think you can't afford a stenographer, and is sometimes ambiguous.

You can write out your letters—make out an abstract—fill in an insurance policy—enter your card memos—make out your accounts, or a hotel menu—or do any kind of writing you need, on any kind, size or thickness of paper, and space any way you want on

The **OLIVER**
Typewriter

The Standard Visible Writer

You can write any of these things yourself if you do not happen to have a stenographer.

For you can easily learn, with a little practice, to write just as rapidly, and as perfectly, as an expert operator on the OLIVER. Because the OLIVER is the simplified typewriter. And you can see every word you write. About 80% more durable than any other typewriter, because it has about 80% less wearing points than most other typewriters.

80% easier to write with than these other complicated, intricate machines that require "humoring"—technical knowledge—long practice and special skill to operate.

These machines which cannot be adjusted to any special space—with which it is impossible to write abstracts, insurance policies, or odd-sized documents except you buy expensive special attachments requiring experts to operate.

You can adjust the OLIVER to any reasonable space—you can write on any reasonable size and thickness of paper, right out to the very edge, without the aid of any expensive attachment or special skill, and your work will be neat appearing, legible and clear.

For the OLIVER is the typewriter for the doctor, the lawyer, the insurance agent, the merchant, the hotel proprietor—or any man who does his own writing.

Write us now for our booklet on the simplified features of the OLIVER.

A SOUND ARGUMENT

THE only means a manufacturer can adopt to create a **continued** demand for his product is to produce the highest quality from the best material and workmanship. The price is a second consideration. This is the **U. S. Robert** method.

The demand for his make of mainsprings is continued, and increasing steadily. The O.K. stamp of the trade's approval cannot be put on an article by the mere say-so of the manufacturer. The U. S. Robert springs were put on the market in 1885 and from the first the policy of manufacture has been to adhere to a high ideal, to insist on a uniformity of material and workmanship in order to maintain the highest standard of perfection. This is done by U. S. Robert, whose ability is widely recognized and respected by the scientific and best-known makers of mainsprings. Such being the case, the price-lowering methods of competition cannot apply here. Made in 142 different sizes for all sizes and grades of American watches.

Price \$1.25 per doz. or \$13.50 per gross, less 6% for cash.

NEW YORK

Warning to the Trade!

Retailers are being called upon by a man who is selling twenty-one chains on a cloth for \$18, with swivels stamped "S. O. B. & Co.," and with a duplicate tag of ours bearing our trade-mark, attached to same. The chains are nothing more or less than brass shaded over, and will not stand acid for a single moment.

Jewelers with any experience ought to be able to discover the difference between a finished article and a rotten one.

Anyone who has been swindled by this man will please notify our house, as we want all the evidence possible, and we will do the rest.

Localities where goods have been disposed of are Pittsburg, Allegheny, McKeesport and surrounding towns.

We have two chains now in our possession that were sold by this man.

S. O. BIGNEY & CO.

We give you below an exact copy of an assay of chains manufactured by the leading chain makers of the United States.

1-10 GOLD FILLED WATCH CHAINS, MINUS BAR AND SWIVEL.

| Number | Gross Weight | | Finess Gold 1000ths | Value | Maker | Chain Number | Cost |
|--------|--------------|------|---------------------|--------|----------------------------|--------------|--------|

The REPAIRING

END OF YOUR BUSINESS IS THE
MOST IMPORTANT PART OF IT

More people come into your store to leave work than to purchase goods.

Almost every one of your good customers became so through your repair department.

Progressive jewelers know this and concentrate their efforts on the repair department of their business. They give it the most prominent place in their stores; they emphasize it in all their advertisements; they keep themselves and their employes thoroughly informed in the costs of all kinds of work, new ideas and methods; they are courteous and accommodating to repair customers; have all work ready when promised; and do only such work at home as they can do well.

They send all the rest to us.

We devote our entire time, energy, capital, and twenty-five years' experience to this important branch of the jewelry business; employ and educate the best help that can be obtained; systematize and inspect the work, and use every modern method to produce the best work promptly at reasonable prices.

It is to your interest to do business with us, it is to our interest to have you.

Let us work together.

FILLED versus SOLID WATCH CASES

IT IS ADMITTED, of course, that a Solid Case is worth more intrinsically than a Gold Filled one. The question is, "Does the former necessarily possess greater *practical wearing qualities?*"

The Wadsworth "PERMANENT"—Worthy of Its Name

QUERY:

Is not the finest type of Filled Case as capable of resisting the ordinary surface wear as if it were solid gold all through? If so, what a saving in cost! The WADSWORTH "PERMANENT" CASE answers these questions in favor of the best type of Filled Case. Nor are consummate style, form and finish lacking. Attractive prices.

Never in the history of our company have we manufactured so many high-grade movements as we are now turning out every working day.

Never in the history of our company have we been so far behind our orders.

This is convincing evidence that the retail jeweler is pushing the sale of those movements that give him the best satisfaction.

ILLINOIS WATCH COMPANY

SPRINGFIELD

OLD RELIABLE

W. & S. B. ★ 1-10

Warranted to give satisfaction

GLOBE FILLED

W. & S. B. ★ 1-8

Warranted 20 Years

Not sold to Department Stores or Retail Mail Order Houses.

WEARBEST

W. & S. B. ★ Chains are finished by the WEARBEST secret hardening process and will wear a third longer than chains, of the same quality, finished by the usual and ordinary method.

Chains finished in the ordinary manner are left with softened links as a result of soldering and the wearing qualities are greatly reduced.

The WEARBEST process hardens the gold and overcomes the effects of soldering; produces the most beautiful finish obtainable.

Every Retail Jeweler gets a premium

Dueber

is the name most intimately known to the Watch Trade of the United States as associated with the Watch Case industry. The name "Dueber" on any Watch Case is an absolute guarantee of good quality, artistic conception and fine workmanship.

Hampden

stands for what is peerless in American Watch Movements. For twenty-five years the name has borne an unrivaled reputation, and the Hampden high-grade movement has been a standard for imitators to work from.

Watches

are an essential part of every retail jeweler's stock, and to have the right kind of watches should be the care of every dealer. The more consideration given to this subject the more sure are Dueber-Hampden Watches to be chosen.

The W. J. JOHNSTON COMPANY

Wholesale Agents for the Leading American Watch Companies,

Fifth Avenue and Market Street, Pittsburgh, Pa.

Talent, Energy and Progression

are the qualities necessary to achieve success in this strenuous age

¶ The followers of the "let well enough alone" policy are living in the past and become the victims of the ambitious, hustling competitors who, looking into the future, constantly go forward.

¶ The forward pace in business is made more easy and quick by selling the right kind of goods; goods that are satisfying in quality and value and that add to the reputation of the merchant.

¶ *We offer you goods that have all the requisites necessary to please and satisfy your customers, that equal in value the cost, and will never mar your reputation from being associated with.*

¶ We refer to

Not Magic but Actual Fact

No sleight-of-hand necessary to make money out of Keller Jewelry Mfg. Co.'s goods. The superb designs and clever workmanship are patent to every prospective purchaser. The dealer doesn't have to guarantee the quality *with mental reservations*, and if he does add a little extra profit on goods of this brand, they're worth it.

So, you see, the handling and selling of Keller Fine Gold Jewelry is "neither the doing of penance nor the committing of crime."

Brooches, Cuff-Buttons, Scarf Pins, Locketts, Bracelets, Fobs, Tie Clasps, Rings, Crosses, Neck Chains and Lorgnette Chains, Etc.

The new line of Rose Colored goods is replete with sparkling specimens of 20th Century jewelery. Selection packages to responsible parties where our representatives cannot call.

TRADE MARK
STERLING 1000

THE busiest three weeks of the year are right ahead—just a word, before the actual Holiday rush is on, regarding one important advantage in carrying Simmons Chains.

There's scarcely a wholesale jewelry house of prominence in the country that doesn't carry the Simmons line, or that can't fill your order for Simmons Chains promptly.

Wherever you are located, if you find your assortment of patterns is getting broken at any time, you are practically certain of getting the chains you want—and of getting them quickly—by sending to your nearest jobber for them.

BRACELETS

Actual Size—Best Quality Rolled Plate

Are one of the leading money makers of the present prosperous season.

Our experience in the making reaches back for years—and our present line, comprising over 600 different styles, bears ample proof that we have profited by this long prestige, and that it is not a hit-or-miss proposition we present to you, but definite and clear-cut ideas, artistically and intelligently carried out.

Any leading jobber will be glad to show you these goods—and an inspection of the goods will prove conclusively their worth to you.

WHITING & DAVIS

PLAINVILLE, MASS.

New York Office - - 7 Maiden Lane

Our Class Pins

Are individualized by certain important characteristics, among them being the quantity of material utilized, our class pins having twice the thickness of the ordinary class of goods. The excellent workmanship, which will bear the minutest inspection, is the product of the most skilled labor obtainable, and while our pins will bring fifty per cent. more at retail on account of their attractiveness, uniqueness and general superiority, they do not cost any more than the ordinary makes. A special die is cut for each order and all pins are struck with hydraulic pressure, thus insuring better workmanship and perfect uniformity, which cannot be obtained by methods of manufacture in shops that do not make a specialty of class pins. The pins here illustrated are a few of our latest designs selected from our catalogue No. 24. We are always more than pleased to submit special designs and our designing department only awaits the pleasure of serving you. A trial order will convince you.

*The Garnet's
Sudden
Popularity*

*Its Effect
Upon The
Supply*

THE HOLIDAY GEM this season is pre-eminently the Garnet, the warmest and most genial of gems. Grande dames of old wore this gem when they had their portraits painted by the great masters. It is now embodied in a splendid revival of fine old jewelry which has become the reigning fad.

So suddenly has this vogue sprung into existence, that the miners and producers were not prepared for so extraordinary a demand. The result is that the few houses fortunate enough to have a supply absolutely control the situation. The supply will be comparatively scarce for some time. We can supply you.

Maiden Lane
New York

FEMININE TASTE insisting on a tidy coiffure, adopts the Barrette as a means to that end. Like the back comb, it occupies a central position—an artistic vantage point. It affords a decorative opportunity. Its form and design should accord to a nicety with its place and purpose. It needs to be considered on its own individual basis, as a distinctive piece of jewelry. Though smaller than the comb, it may excel it in richness and beauty. The high standard here set for the Barrette is very evident in the product shown.

SILVERSMITHS

YOU like a large variety to select from when buying and that is a strong point with our line. We make everything in deposit goods that sells and you make no mistake in buying an article you see, for the reason that it would not be here if it was not good. All our goods are designed with great care and are made by skilled labor who know how, and it costs no more than poorly made stuff. These illustrations show one of our teaset sets which is meeting with universal favor. The price makes it a very popular set. Made in blue and white porcelain. The best illustration is only a poor example. You must see the line to appreciate the goods. Do it now.

REMARKABLE SCIENTIFIC PROPERTIES OF GOLD ALLOYS INTERESTING TO PRACTICAL MEN.

Translated Especially for The Jewelers' Circular-Weekly

MICRO-METALLOGRAPHY has proved very useful in the examination of metals and their alloys, and has often been able to explain the cause of some failure in dealing with such compositions. An expert has recently discovered new properties in gold, the more remarkable because they show a certain relationship to steel, which has similar properties. Gold is the most ductile and malleable of all metals, but according to Maxime Forest often loses this property through very small admixtures of other substances, which have the effect of making it so brittle that it will break with the least bending. Its fracture itself, in this case, is usually

mass of small regular points. Such gold, mixed with copper, makes a very ductile and malleable alloy, a strong contrast to the first named. It is thus proved that the presence of lead, even in very small quantities, materially changes the physical properties of gold. If the pure gold in question, after treatment with *aqua regia*, is tested, in an alloy of 900/1000, we find a whole system of tiny crystals, consisting of a compound of copper and gold. If one-half of a thousandth part of lead be added to this alloy, it is so changed that it cannot be hammered or rolled without breaking. If the alloy is now examined under the microscope, it will be seen that the crystals

sults. Eighteen-karat gold and also pure silver, mixed with copper, will always present difficulties in rolling, etc., which experts have so far vainly sought to remedy.

A Golden Book in the Metropolitan Museum.

THE term "book of gold" is frequently applied to works of supreme excellence, but it is not often that a real book of pure gold can be seen, says the *Bulletin of the Metropolitan Museum of Art*. Such a book has been presented to the Museum by Samuel Putnam Avery, and has been placed on exhibition, not alone as a curiosity but as an example of the goldsmith's art of that part of the Indo-Chinese peninsula called Annam, where it was made. While now a part of Cochin-China and belonging to France, Annam was formerly a part of China, and its art shows this close relation.

The book consists of four leaves; two of them, covered with ornament in the style

FIG. 1.—BRITTLE GOLD CONTAINING LEAD.

FIG. 2.—GOLD, 900 FINE; MALLEABLE.

FIG. 3.—GOLD, 900 FINE; BRITTLE.

homogeneous in structure, and crystalline; this brittle gold is mixed with pure copper, as is generally done for goldsmith's work, it not only retains its brittleness, but becomes even more so, and is rendered unfit for jewelry, stamping, etc. It was discovered by Peligot, in 1868, that traces of lead would make gold brittle. Later, in 1902 Kirke Rose, of the London mint, observed that this property was caused by traces of tellurium, lead, or bismuth. These impurities, in very small quantities, often only one-fourth or one-half of a thousandth part, had little effect upon the gold alone, but as soon as it was alloyed with copper, it became unfit for use. The ordinary methods of testing do not always reveal the causes of such a condition, but the processes of micro-metallography make their discovery easier.

Micro-metallography, says Fr. Joseph, in the *Journal der Goldschmiedekunst*, makes it possible for us to determine the structure of alloys with ease, just as by analysis. Solid gold from Madagascar, for example, which is very brittle and crystalline, shows no deviations when tested by ordinary methods. Under the microscope, however, after treatment with *aqua regia*, it has the peculiar structure shown in Fig. 1, where a very large number of characteristic crystals may be observed, separated by ridges of silver chloride. Subjected to chemical analysis, it appears that this gold contains more than 1/1000 part of lead and a little silver.

Absolutely pure gold gives a very different result, illustrated in Fig. 2. Here is a

at the circumference have increased considerably in size, and can be easily distinguished from each other.

It is very difficult to purify or refine gold sufficiently to remove these extremely small quantities of foreign substances, and attempts have been made in England and France to remedy the brittleness by subjecting the metal to different degrees of heat. In some cases it has been rendered less brittle by this treatment, in others it has been made more so.

The thermal properties have to do with the inner structure of the gold only in the same way that they affect steel similarly mixed with carbon or other metals. Experiments have been made industrially, and Figs. 2 and 3 show the difference between an alloy of copper and gold, brittle before annealing, and the same after heating, become flexible and malleable, showing that the gold, in this case, is comparable to refined gold of 90 per cent. If the grouping of the crystals is changed by heating and subsequent cooling, the little crystals are changed into a polygonal system, as shown in Fig. 3, and are identical with the crystals of gold which contain lead. As a matter of fact, gold almost always contains as much as one-half of a thousandth part of lead.

The similarity between such formations of gold, when it contains traces of other metals, and steel, whose structure is likewise altered in the same way, under the same conditions, is noteworthy. The knowledge of it, only attained by means of micro-metallography, may lead to valuable re-

of the brocaded silk bindings of a Chinese book, serve as covers, the others are filled with the text, engraved in regular columns inclosed within lines, as in an ordinary Chinese book. The subject of the text is an imperial decree by Gya-long, Emperor of Annam, conferring a patent of exalted rank upon his deceased grandmother. It takes the form of a prayer offered up to the deceased, who is described as "the Tender, Fairy-like, Kind, Sage, Chaste, Docile, Graceful, Quiet Consort," and is signed by the Emperor as "Her humble subject."

The volume measures 5½ by 10 inches, weighs 31.755 ounces Troy, and is of the fineness of 95.836, or 23 karat.

Dr. George F. Kunz, in a note written when this book was exhibited at the Grolier Club in April, 1903, says: "The alloy is of silver and some other substance whose properties tend to change the gold to a ruddy color on exposure. The color of the covers, which seems peculiar to the gold objects of Annam, Siam and Burma, is evidently due to the beautiful tarnish caused by the action of time, or by some component part of the gold. That the color is partly tarnish is evidenced by the fact that only the cover and that part of the inner leaves near the holes through which the rings pass, show it. The gold is just as it was taken from the alluvial river washings; the sheets were evidently hammered out, and not rolled as they would have been by European workmen. The ornamentation was made by flat chasing, the lettering by means of a tracing tool; a beader and hard chasing-hammer were also used.

The Larter Shirt Stud does all that any button back stud can do, and does it better.

The Larter Stud does even more, for it can be worn in any style of shirt, including the coat shirt.

The largest stock of shirt studs in the world.

A Handsome Example of the Silversmith's Art from New South Wales.

THE people of New South Wales recently presented to the Earl of Jersey, on the occasion of his visit, the fine casket illustrated on the front cover of this issue. The casket, oblong in shape, is a magnificent specimen of the silversmith's art, executed by Hardy Bros., Sydney, New South Wales, and is of massive, hand wrought, fine silver throughout. As a completed piece it weighs about 150 ounces, being of the full size sanctioned by custom for such presentations. Its measurements over all are about 13 inches in length, six inches in width and eight and a half inches in height.

In character the work may be described as modern renaissance, or what is sometimes called the "new art," and is from a design by Mr. Mitchellhill, of the New South Wales Government Printer's staff. The general impression conveyed is that of solidity, massiveness and strength, without too much elaboration of detail; but a richness of effect and relief of the surfaces are secured by the added heraldic work on the panelings. The curved sides of the base are of polished silver, the legs or supports extending outward over the corners, being of hammered silver, oxidized.

On the front are two panels of mother-of-pearl mosaic in antique gold setting, and placed centrally between them is a shield enameled with the arms of New South Wales in colors, surrounded by a wreath of waratahs wrought in silver. The ends of the casket are adorned with shields bearing in raised letters the date and place of presentation, and the plain polished surface of the back is broken by a large laurel wreath, wrought and frosted. The hinged lid, somewhat dome-shaped, had its polished surface relieved by slight repoussé panels, leading off to ornamental corners and serves as a base for a shield with the Jersey's coat-of-arms, blazoned in enamel. The modeling of this group has been done with much delicacy and skill. To the left and right of this central group are placed modeled plaques of the family crests of Childs and Villiers.

The casket is accompanied by a handsome address. As a ground work or foundation for the address the material used in the medieval illuminated missals has been adapted, and it is engrossed on heavy, warm-colored vellum by John Sands, of Sydney. It is mounted on a heavy gilt roller, the ends of which are fashioned into representations of an earl's coronet, and to form the foot of the scroll a shaped end or foot piece is adopted. The center of this design consists of the entwined Jersey ciphers. Through the cipher is passed a deep crimson ribbon used to secure the scroll when rolled up.

As a recognition of the eminent service cordially rendered to the people of New South Wales, the intention kept in view when they have been to present to their august visitor a souvenir which will rank as a heirloom, and being a combination of the work of their cleverest designers, artists and silversmiths will remain also a memorial of the present state of the art craftsmanship of New South Wales.

C. A. B.

Census Figures Analyzed.

What the Statistics of the Jewelry Industry Indicate as to Conditions in Massachusetts and New Jersey.

If the jewelry manufacturers of Massachusetts and New Jersey are holding their own, as the present demand for their goods early indicates, the result is uncommonly creditable, for conditions to-day are notably better than they were even a few years ago. The man who directs a big present-day jewelry business, grapples with all its problems and keeps his balance on the right side of the books, without being a petty tyrant to his help, is doing a task not appreciated by his fellows in the same line. The Federal Census Bureau last week issued a set of reports which emphasizes these facts.

Census reports look like pretty dull reading as a rule, but a little logic applied to their imposing rows of figures makes the matter light up instructively. Below are a few notions gathered from these new reports, and at the end a comparative table, showing something of conditions in Massachusetts and New Jersey, and also in two of the western States. The Massachusetts figures were collected in 131 of the leading jewelry plants of the State, nearly two-thirds of those thus visited being in Attleboro. The New Jersey figures were secured in 113 plants of that State, the Wisconsin data from 12 manufacturers and the Illinois statistics in 43 factories. They emphatically demonstrate a few points of importance.

In Massachusetts in five years the number of jewelry establishments has decreased. Although more business is done, from the point of view, this can hardly be taken to mean anything except that conditions do not encourage new men to enter the industry. Yet Massachusetts has a natural advantage to which the report refers interestingly. In agriculture and mining it ranks high down in the scale. Consequently from the earliest days it has developed a manufacturing population. Consequently, again, it is the abode of generations of skilled artists and craftsmen. Yet these skilled men recently shun venturing on their own accounts, for while the capital invested has increased almost 100 per cent. in five years the establishments are in less hands than before.

This increase of capital, by the way, is not wholly a proof of expansion. The annual product for the State last year was under the product for five years ago. Part of the added capital has been needed to offset a jump of almost 150 per cent. in general operating expenses, excluding labor and raw material. It is clear, then, that the Massachusetts jewelry manufacturer is a man who has to keep on the alert all the time to overcome handicaps and snatch a share of the trade.

The New Jersey man, according to this same set of reports, does not languish on a bed of roses, but has to roll up his sleeves at a hustle. While jewelry making has fallen in rank from 19th to 23d in Massachusetts, it has gone down from 14th to 18th in New Jersey in the same five years. Expense of operating has gone up nearly 10 per cent., cost of materials has gone up

20 per cent. and the increase in number of establishments is far below the increase rate in total capitalization.

These facts do not necessarily inspire pessimism. The jewelry industry is not alone in some of the handicaps named. Yet Massachusetts and New Jersey can find special food for thought.

In the country at large the number of jewelry establishments has increased 50 per cent. in the last five years. The gain is obviously outside of Massachusetts and New Jersey. In other words, while cost of operating goes up competition goes up, too.

Below are some interesting figures from the reports:

| | Massachusetts. | New Jersey. | Wisconsin. | Illinois. |
|--------------------------------------|----------------|-------------|------------|-------------|
| Number of establishments..... | 131 | 113 | 12 | 43 |
| Land | \$94,361 | \$58,400 | | \$6,550 |
| Buildings | \$423,451 | \$119,300 | | \$29,435 |
| Machinery and tools..... | \$1,701,423 | \$652,677 | \$23,904 | \$150,467 |
| Cash and sundries..... | \$6,485,274 | \$6,371,726 | \$50,179 | \$640,451 |
| Number of proprietors..... | 187 | 176 | 11 | 51 |
| Number of salaried officials..... | 509 | 386 | 4 | 135 |
| Their salaries..... | \$596,197 | \$524,339 | \$3,810 | \$124,382 |
| Total number wage earners..... | 5,626 | 2,988 | 77 | 713 |
| Their wages..... | \$2,820,136 | \$1,839,421 | \$40,731 | \$456,458 |

| Their wages..... | \$2,085,850 | \$1,555,553 | \$38,891 | \$435,869 |
| Women over 16 employed..... | 1,996 | 759 | 6 | 51 |
| Their wages..... | \$713,792 | \$272,840 | \$1,502 | \$19,231 |
| Children under 16 employed..... | 106 | 58 | 2 | 5 |
| Their wages..... | \$20,492 | \$11,028 | \$338 | \$1,358 |
| Rent of works..... | \$112,260 | \$64,164 | \$4,591 | \$48,456 |
| Taxes | \$31,734 | \$12,470 | \$337 | \$2,297 |
| Rent of offices..... | \$679,261 | \$635,274 | \$2,518 | \$67,618 |
| Contract work..... | \$9,707 | \$9,872 | \$100 | \$4,240 |
| Cost of principal materials..... | \$3,664,838 | \$4,602,373 | \$36,274 | \$790,990 |
| Fuel and rent of power and heat..... | \$68,370 | \$44,453 | \$1,578 | \$10,248 |
| Value of annual product..... | \$10,073,595 | \$9,303,646 | \$125,853 | \$1,754,875 |

Recent Customs Decisions on Jewelry, Gems and Kindred Lines.

Decisions of the Board of United States General Appraisers, New York, in cases involving duties on jewelry and kindred lines, have been announced, in the last week, as follows:

JEWELRY.—Protest of A. & E. Leather Goods Co. and protest of R. H. Macy & Co. against the assessment of duty by the Collector of Customs of New York. This merchandise was held to have been properly classified as jewelry under Par. 434, Tariff Act of 1897.

IMITATION PRECIOUS STONES, PIERCED—BEADS.—Protest of Goldberg & Co. and protest 109944, etc., of B. Ulmann & Co. against the assessment of duty by the Collector of Customs of New York. The merchandise covered by these decisions consisted of small articles of paste, pierced vertically with two holes in either end, the backs of some of which were covered with foil. Those which were so covered were held dutiable as imitation precious stones under Par. 435, Tariff Act of 1897, as claimed by the importers, on the authority of G. A. 6380 (T. D. 27420). Those which were not so covered, were held to have been properly classified as beads under Par. 408.

ORNAMENTS—JEWELRY.—Protest of Levis-Zukoski Mer. Co. and protest of J. Peterka against the assessment of duty by the Surveyor of Customs at St. Louis. The importers objected to the classification of the merchandise as jewelry under Par. 434, Tariff Act of 1897. This contention was overruled as to watch chains. The other goods, consisting of ornaments of various kinds, were held dutiable as manufactures

of the component of chief value. G. A. 6130 (T. D. 26653) and G. A. 6374 (T. D. 27382) followed.

Jewelry, Clocks, Watches, Silverware and Kindred Lines Exported from New York.

WASHINGTON, D. C., Nov. 21.—The following were the exports of jewelry, silverware and optical goods, clocks, watches and kindred lines from the Port of New York for the week just ended:

Antwerp: 1 case jewelry, \$500.
Auckland: 1 package optical goods, \$124; 30 cases clocks, \$541; 5 cases watches, \$585.
Barcelona: 3 cases jewelry, \$155.

- Bombay: 4 cases watches, \$530.
- Bremen: 4 cases plated ware, \$430; 1 case silverware, \$355; 1 case watches, \$136; 1 package optical goods, \$347.
- Buenos Ayres: 9 cases plated ware, \$2,047; 8 cases plated ware, \$1,393; 28 cases clocks, \$1,388.
- Calcutta: 800 cases clocks, \$648.
- Cartagena: 1 case jewelry, \$115.
- Colon: 1 case watches, \$927.
- Corinto: 2 cases silverware, \$116.
- Curacao: 1 case jewelry, \$446.
- Demerara: 3 cases plated ware, \$363.
- Hamburg: 7 packages optical goods, \$1,273; 1 package optical goods, \$250; 2 cases jewelry, \$185; 3 cases clocks, \$156; 2 cases watches, \$6,460.
- Havana: 12 cases plated ware, \$3,922.
- Havre: 6 packages optical goods, \$620; 2 cases watches, \$1,000.
- Liverpool: 1 package optical goods, \$205; 1 case jewelry, \$1,000; 10 cases clocks, \$155; 1 package optical goods, \$250; 101 cases clocks, \$1,456; 1 case jewelry, \$500; 21 packages scopes and views, \$1,025.
- London: 2 cases plated ware, \$179; 11 packages optical goods, \$3,450; 25 cases watches, \$5,181; 300 cases clocks, \$4,449; 103 cases clocks, \$2,363.
- Melbourne: 19 cases clocks, \$207; 53 cases clocks, \$617; 1 case jewelry, \$167; 3 cases plated ware, \$172; 1 package optical goods, \$116.
- Mombassa: 16 cases clocks, \$204.
- Montevideo: 108 cases clocks, \$903.
- Para: 14 cases plated ware, \$158; 9 cases clocks, \$341.
- Porto Alegre: 23 cases clocks, \$339.
- Rio de Janeiro: 5 cases watches, \$1,148; 1 case jewelry, \$116; 55 cases clocks, \$2,624.
- Santander: 5 packages optical goods, \$554.
- Santiago: 1 package optical goods, \$115; 1 case jewelry, \$115.
- Sevilla: 3 cases clocks, \$248.
- Singapore: 1 case watches, \$174; 1 case plated ware, \$138.
- Southampton: 1 case jewelry, \$174; 2 cases silverware, \$200; 4 packages optical goods, \$350.
- Sydney: 117 cases clocks, \$2,270; 6 cases plated ware, \$225; 31 cases clocks, \$475.
- Valparaiso: 11 cases clocks, \$133.
- Valencia: 2 packages optical goods, \$115.
- Yokohama: 150 cases clocks, \$6,273.

Summer Clarke, formerly of Red Bank, N. J., has moved to Saranac Lake, N. Y.

PRECIOUS STONES

CLOSE RELATIONS WITH GEM MARKETS, FAVORABLE BUYING *and* SELLING FACILITIES, WIDE RANGE *of* GEMS *at* REASONABLE PRICES.

SUCH RELATIONS as this house sustains with the gem markets of the world can not be quickly or easily attained; they represent the growth of years. Yet every customer derives the benefit of these perfected facilities for buying and selling. Mature judgment in selection affords the trade a perfect basis of assurance.

Realizing that the requirements of the trade are varied, not only as to stones but as to sizes and prices, ample provision has been made to meet the popular demands in these respects, while not failing to provide for the comparatively limited constituency who call for the more expensive examples.

The News of London.

Holiday Trade Improving—Clock and Watchmakers' Guild Progressing—Important Hall Marking Case on Appeal—New Australian Tariff.

LONDON, Nov. 15.—The prospect for the Christmas trade is very satisfactory, and my prognostications of last month are being realized by the London jewelers. Indeed, reports from all parts of the country go to show that there is a definite movement in an upward direction, and that the welfar and fancy trades are at last beginning to get their share of the work. Pearls and opals, and white stones generally, are particularly fashionable just now. Moonstones are coming into favor, and set in oxidized silver make an extremely effective ornament.

*

Nothing has been more surprising or more interesting than the huge success which has attended those who by their earnestness secured the De Beers mines, but it is perhaps not so generally known as it might be that an American is the man who probably did as much as did Cecil Rhodes to insure the successful issue of the great South African diamond monopoly. I mention this particularly because at the present time there are a number of English schoolmasters and mistresses belonging to elementary and technical schools visiting the United States under the aegis of Alfred Mosely, who made his fortune in South Africa, and because he has stated that the reason why he has such an admiration for American methods is because of his knowledge of the American engineer to whom I have alluded. This is what Mr. Mosely gives as his reason for keenly believing in American methods: "Gardner F. Williams, the American mining engineer, who directs the diamond output of the world." This tribute to an American, and this reason for the visitation of so many educationalists, must be of considerable interest to the jewelry trade of America.

*

The Lord Mayor's show this year was particularly interesting owing to the procession of past Lord Mayors of London, including Sir Hugh Middleton, the great goldsmith, who "brought the new river to London." This great undertaking, which at the time practically brought the goldsmith to poverty, developed into one of the greatest monopolies of the 19th century. It shares alone fetching fabulous sums. The Lord Mayor-elect being a member of the Worshipful Company of Spectacle Makers' and the Silver Wire Drawers' companies, the masters and wardens of the respective companies took part in the procession, while the banners of the various past masters were carried before the vehicles conveying the officers of the guilds.

*

The Clock and Watch Makers' Guild is going along steadily so far, and will hold a special meeting on Jan. 3 in order to elect its first general council. Already two provincial horological societies have decided to affiliate and a third is making the necessary arrangements to meet and discuss the matter. Coventry, the English center

of watchmaking, will shortly be asked to decide as to what it will do in the matter of forming a branch of the Guild.

*

An important case concerning the hall-marking, in Great Britain, of foreign-made watch cases came on for hearing last month. It is set down in the list of the Court of Appeal as the case of the Wardens and Commonalty of the Mystery of Goldsmiths vs. William Wyatt. As I write it is being heard before the Master of the Rolls and Lord Justices Cozens-Hardy and Farwell. It is an appeal of the Worshipful Company of Goldsmiths from the judgment of Justice Channell, in which he stated that foreign-made watch cases containing movements were not "plate" within the meaning of the act, and need not therefore go to the British Halls to be marked; inasmuch as the case was only an accessory to the main thing, *i.e.*, the movement, the article did not come within the meaning of gold and silver plate; and the appeal is instituted to upset the judgment which he gave for the defendant. The Goldsmiths Company has, by statutes and charters, the privilege of searching, assaying, marking and regulating wrought plate, so as to ascertain the standard for the safety of the public. The defendant, William Wyatt, sold in March, 1905, two silver and two gold watches which were of foreign manufacture and had not been assayed, stamped or marked with the marks of any duly authorized British assay office. The question which is now before the Appeal Court is as to whether the watch cases were respectively gold and silver plate within the meaning of Sections 59 and 60 of the Customs Act of 1842 and the Hall Marking of Foreign Plate Act of 1904, and whether the defendant was liable to penalties under the first-named act in respect to exposing for sale and selling the watches. J. Eldon Bankes, speaking on behalf of the Goldsmiths Company, alleges that a watch case must be admitted to come within the meaning of the word "plate," and not the less so because it contains the works of a watch. In my next letter I hope to be in a position to give the judgment in this very important case, which affects manufacturers of foreign watches in Switzerland and America who happen to send their movements into this country in gold or silver cases.

*

There is at present being held at the Whitechapel Art Gallery an extremely interesting exhibition of Jewish art, including specimens of the coinage of the Maccabees and some elaborate wedding and betrothal rings, charms and other antiquities of considerable interest. The collection is a superb one, and among the objects which have been loaned is the great silver ark from the famous Sassoon collection.

*

The new bill which the Commonwealth of Australia has passed, giving preference to English over foreign goods to the extent of 10 per cent. ad valorem so far as silver plate, silver and leather goods are concerned, is one of those reciprocal acts on the part of the Colonies which we here have been anticipating and hoping for some time. There are, however, a number of very important questions which arise over the entry of goods into the country, and I have

heard on very good authority that the following points are worth taking note of by American as well as English exporters. All carded goods must have the name of the country of origin on the face thereof. American clocks, like other American-made goods, must also have the legend "Made in America" thereon. In no case will "made for" so-and-so be accepted as sufficient, the name of the country of origin must also be given. Rolled gold watch cases of English make with a movement made in Switzerland, providing the greater cost of production is in the case itself, are to be labeled as British made, while Waltham movements in an English case will be marked with the name of that country in which the parts are put together as the place of origin, so that if the movement is put into an English case in England it will be called an English watch, and if put together in America it is an American watch! Certainly a very strange manner in which to decide an extremely knotty point. Wherever a watch bears the name of an Australian seller it must have either on the plate or on the dial the name of the country of origin.

ST. GEORGE.

Fourth Quarterly Public Sale of Ivory at Antwerp, Belgium.

ANTWERP, Nov. 8.—The fourth quarterly public sale of ivory took place Oct. 30 and 31, the exposed and sold quantities amounting to 73,972 kilos, composing: 42,151½ kilos Congo (hard), 1,651½ kilos Congo (soft), 21,903½ kilos Angola, 1,674½ kilos Cameroon, 1,527 kilos Gabon, 148 kilos Ambrize, 3,796 kilos Senegal, 106½ kilos Mozambique, 25 kilos Siam, 30 kilos hippopotamus teeth, 958½ kilos ivory of Mammoth (bad quality). The amount sold was less than the average, there having been 97,393 kilos in 1905, 77,115 kilos in 1904, 103,449 kilos in 1903, 84,101 kilos in 1902, 81,779 kilos in 1901, 85,071 kilos in 1900, 76,681 kilos in 1899, 50,000 kilos in 1898, 75,000 kilos in 1897, 60,000 kilos in 1896, 71,000 kilos in 1895.

The bidding commenced very quietly for the large Central African teeth, which formed the principal lots at the beginning, but all the other qualities were much in demand. This light demand for large teeth of Central Africa was indicated by a decline of 2 to 4 francs per kilo, taken on an average of quality which was inferior to former lots. The large teeth of Angola and Gabon sorts, on the contrary, have been sold very easily at prices showing practically no difference from the rates of July.

Bangles of all weights were sold with an advance of 3 to 5 francs per kilo, as was also the scrivellous, while teeth for billiard balls increased 1 to 3 francs per kilo over former prices.

The Senegal ivory, of which the quantities were, as usual, most important, sold very well at the former values for large and medium teeth, and with a rise of 3 to 5 francs for bangles and scrivellous.

The actual stock on hand is of about 97,000 kilos, against 96,000 kilos in 1905, 96,000 kilos in 1904, 145,000 kilos in 1903, 142,000 kilos in 1902, 112,500 kilos in 1901, 98,500 kilos in 1900, 102,500 kilos in 1899, 80,000 kilos in 1898, 61,000 kilos in 1897, 62,000 kilos in 1896.

Destructive Fire at Attleboro.

Jewelry Town's Second Largest Conflagration Damages Shops of W. H. Wilmarth & Co., and the P. J. Cummings Co.

ATTLEBORO, Mass., Nov. 24.—W. H. Wilmarth & Co., Inc., and the P. J. Cummings Co., Attleboro, Mass., suffered by fire last Tuesday, their plants in the Wilmarth building on Hazel St. being damaged to an extent estimated at \$75,000. Recuperation will be prompt. The P. J. Cummings Co. has already resumed operations on a limited scale, and the Wilmarth concern announced it would resume the shipment of orders by Monday, Dec. 3. The cause of the fire has not been ascertained. It started, so far as can be learned, in a small room in the basement used principally for the storage of wood and paper boxes. It was discovered during the noon hour. Telephone and bell alarms were sent for the fire department. In a little over an

The bulk of the damage was confined to the "L" and to the headhouse containing the offices. The main building, extending nearly 200 feet east from the burned section, sustained only smoke and water damage, and confusion due to the entrance of firemen and persons bent on saving goods. In this main section work is already resumed, and offices are partitioned off at the extreme east end, just opposite from where they were before.

The blaze was discovered at 12:15, Tuesday noon, Nov. 20. Several employees of both corporations were eating lunches in the factory. Miss Emma Couillard, sitting in the Wilmarth packing room, detected smoke. Making prompt investigation, she found a brisk fire already in progress below her. She ran to the office to give the alarm. William F. Stowe, member and head salesman of the Wilmarth concern, was at work at his desk. He jumped to the telephone and was notifying the central fire station, when Henry Thurber, an em-

ployee, reached Box 46 and rang it. Mr. Stowe started to save some valuable papers, but a dense volume of smoke rolled in upon him and he was forced to climb out a window to escape suffocation. The spread of the flames was rapid. In the large open rooms the fire started a draft like a furnace. There was no sprinkler system. The building contains no vaults, and a number of safes are used for the safe keeping of books, samples and stock. At this time practically all safes were open. The samples were exposed. In the Cummings office two trunkfuls of them were spread out. Books and documents were about the offices. Workbenches held hundreds of dollars' worth of stock. A less propitious time for the blaze would have been hard to find. Fortunately, few of the help, under 20, were about, and all had plenty of time to escape at leisure.

The firemen arrived promptly. The water superintendent, to help the firemen, ordered full pressure on the mains. The first lines of hose could not stand it and burst, so a trilling delay was experienced from this cause. When sufficient lines were attached to divide the pressure the force of the water was like that of a hydraulic ram. Window sashes were torn out like paper. The water tore its way about the burning section in a manner rarely equaled at a fire in this town. Attleboro has the largest standpipe in the world. Adding to this the extra pump pressure, the water service for that hour was phenomenal.

There was more than one volunteer helper. Edward A. Sweeney, secretary of the Wilmarth corporation, was for years a fireman, assistant chief of the department. His home is nearby and he was quickly at hand. Throwing off his coat, he dashed into the office, only to be driven back by smoke. A second time he tried, and again had to retreat. Summoning all his determination he rushed in a third time, loaded his arms with the most essen-

THE WILMARTH BUILDING AS IT LOOKED DIRECTLY AFTER THE FIRE.

(From Photo. by Bates, Attleboro.)

ential books, and came safely out, depositing them in a nearby dwelling. From then forward, soaked with water, blackened with smoke, but cool as only an old-time fireman can be, he directed those who carried out other things for safe keeping.

To Mr. Sweeney, inside the burning building, surrounded by smoke, water and turmoil, came 15 offers of help inside of 30 minutes. That number of firms, 14 in Attleboro, and one outside, offered to place at his disposal part of their equipment, so little time might be lost on the flood of orders which has made the plant one of the busiest. He has not found it necessary to accept any, but will get along in his damaged structure.

There were other volunteers besides Mr. Sweeney. Charles Selby, foreman for the Cummings concern, led a detachment of men who tried with what means came to their hands, to check the blaze when it penetrated into the second story. Willard A. Engley, a retired manufacturer, for-

the worst danger was over, considered a highly creditable "stop," considering there was no sprinkler system. The adjustment of insurance will take place this week. Until it is effected, the principals in the two concerns are unwilling to make official statement of their losses in detail. The most they cared to say thus early was that \$75,000 would cover damage to both plants and the build-

The factory consists of a main section 200 feet long, 40 feet wide and two stories high, with a high-studded basement. The offices were located in a head-house at the western end of the building. Near this headhouse was an "L," running to the south, at right angles to the rest of the structure. W. H. Wilmarth & Co. occupied the basement and the first floor; the P. J. Cummings Co., the second floor. The fire started in the basement at a point near where the "L" to the south branches from the main factory.

The firemen arrived promptly. The water superintendent, to help the firemen, ordered full pressure on the mains. The

LONDON OFFICE, 22 Holborn Viaduct

erly of Engley, Wetherell & Co., joined W. F. Stowe, followed the lead of Mr. Sweeney in saving samples and other valuables from the headhouse.

At the end of an hour, the main fire was under control. An insidious blaze crept down the under side of the main factory, popping out at intervals all the rest of the forenoon, but it was suppressed promptly each time.

By 4 o'clock in the afternoon it was possible to size up the situation. In the Wilmarth plant the main damage was to the offices, packing room, coloring room and stock room, with smoke and water damage in the other departments. In the Cummings plant the main damage was to the office, coloring, stock and packing rooms.

The employees, between 60 to 70, from the Cummings plant, and about 170 from the Wilmarth shop, stood about and figured their chances. Some promptly sought their shops, and many of them were set to work. The majority decided to await the word from their own employers, and the present outlook is that everyone who remained loyal will remain on the payroll. This cannot be stated officially, but is from credible authority. One man who had been employed by the Wilmarth concern announced he should look elsewhere for work and asked for his pay on the spot. The remark will linger in his memory.

The P. J. Cummings Co. was handicapped somewhat by the absence of the head of the company. Mr. Cummings had been called to Salem, Mass., on business. An effort was made to communicate with him by wire, but it was unsuccessful. He returned, however, and was at the shop at 4 P. M. He announced, without hesitation, that he should resume with little delay. Mr. Sweeney, of the Wilmarth company, and his partner, Emmons D. Guild, were less prompt in their decision. The building was placed under guard for the night.

Wednesday morning an expert examined the building and pronounced the east wing, really the main shop, safe for resumption of business. Expert examination of the power plant showed it all ready. Accordingly, a small army of men was set to work putting this section in readiness.

"I shall have the wheels turning tomorrow," said Mr. Cummings, cheerfully. It was true to his word. He had notified the employees the night previous, through messengers posted in the center of the town, to report as usual, and nearly all saw them and responded.

Fifty insurance companies had issued policies, and the statement was semi-officially made that the loss will be cared for in full, and a prompt adjustment seems assured. Repairs to the building, restoring it to practically the original form, will be made with the least possible delay.

Incidental to the fire the assistant chief of the fire department and two hosemen were severely cut by flying glass.

Burglars who recently broke into the general store of Chas. Carter, Pinkstaff, 1 1/2 miles west of Vincennes, Ind., stole jewelry and other stock valued at about \$500. Bloodhounds were placed on the trail, but without success.

Liabilities and Assets of Charles A. Weber as Shown by His Bankruptcy Schedules.

Schedules in bankruptcy of Charles A. Weber, who was a diamond broker at 320 Fifth Ave., New York, until the middle of October, when creditors placed him in bankruptcy, were filed Friday of last week. Mr. Weber's affairs have been considerably complicated by his pawning both stock which he had obtained on credit and articles which he had on memorandum.

The schedules give his total liabilities as \$91,479.77, of which \$59,008.77 is unsecured and \$32,471 is secured. The assets include stock in the receiver's hands valued at \$1,626.52, and other stock in the possession of pawnbrokers valued at \$4,285. There is due the bankrupt on open account \$1,349. There are several other small items, the total nominal value of the assets being \$47,604.36.

To secure the debts amounting to \$32,471, jewelry to the value of \$44,285 has been pledged. Among the secured creditors are: The Garfield National Bank, which holds a note for \$3,500; Henry C. Brewster, banker and former Congressman of Rochester, N. Y., who has a pearl necklace valued at \$4,850 as security for a debt of \$9,500, and R. Simpson & Co., who advanced \$12,150 on jewelry, the valuation of which is \$25,100. Included in the jewelry held by this company is a necklace valued at \$6,300, and another valued at \$9,500, also 345 unset diamonds valued at \$3,500. Charles Lang & Co. advanced to the bankrupt \$4,325, and took in security jewelry to the value of \$7,850, including a diamond chain which alone is valued at \$3,000. Henry McAleenan advanced \$1,965 on a pearl pin and other pieces of jewelry valued altogether at \$3,975. J. E. Lemon & Co. advanced \$951 on jewelry.

Of the \$59,008.77 owed to the unsecured creditors, \$27,695.31 is due on notes.

The holders of notes include: Maurice Brower, \$2,075; Eisenmann Bros., \$6,200; Jos. Frankel's Sons, \$990.12; Adolph J. Grinberg & Son, \$1,600; Kleinschmidt, Howland & Co., \$7,281.88; Australian Opal Co., \$550; David C. Townsend & Co., \$3,798.31; A. Rosenthal & Son, \$350; Saunders, Meurer & Co., \$4,635; Durand & Co., \$275.

Those who hold neither notes nor jewelry have claims aggregating \$31,313.46. A list of creditors whose unsecured claims exceed \$100 is as follows: Kleinschmidt, Howland & Co., \$3,680; Fredk. W. Lewis & Co., \$600; David C. Townsend & Co., \$1,167; F. B. Hurd, \$600; G. B. Hurd, \$3,900; L. B. Stone, \$775; Eisenmann Bros., \$2,500; Ludeke & Heiser, \$2,000; James H. Penniman, Philadelphia, \$600; Mrs. L. L. Knefke, Delaford, Waterloo Park, England, \$4,500; Goodfriend Bros., \$421; N. H. White & Co., \$144; Courtois, Bush & Garrigues, Newark, N. J., \$150; Charles Weller Co., \$164; Goldstone Bros., \$245; David L. Gluck, \$400; Rudolph & Snedeker, \$1,400; Theodore B. Starr, \$1,800; C. G. Riehl, \$700; F. E. Lester, \$2,200; Saunders, Meurer & Co., \$2,864.

John R. Keim, the receiver in bankruptcy, several weeks ago received authority from the court to return to the owners 10 pawn tickets calling for jewelry which Mr. Weber had on memorandum, and which

he had pawned for \$14,625. This jewelry included three pearl necklaces and other pearls and diamond jewelry.

In making application to the court for permission to return these tickets the receiver's attorney, Philip Carpenter, said that the articles had never belonged to Mr. Weber. The bankrupt also submitted an affidavit to the effect that he had not owned the articles. The owners of this jewelry are included in the list of creditors on open ground, each to the extent of the money which he paid to redeem his own jewelry.

The receiver has also received authority from the court to redeem the jewelry which Mr. Weber pledged after buying on credit. In carrying out this operation Mr. Weber expects to receive an assessment from each creditor equal to 25 per cent. of the amount of his claim. The jewelry is to be sold, according as it is redeemed, and the proceeds used in redeeming more until all the equities of the creditors have been obtained.

Death of Emanuel Marks.

Troy, N. Y., Nov. 21.—Emanuel Marks, one of the oldest citizens of Troy, and at one time one of the best known jewelers of this section, passed away Sunday. The funeral services were held yesterday from his late residence.

Mr. Marks was a native of Germany, having been born in Bavaria Nov. 17, 1823, and consequently had just entered his 84th year. He came to this country in 1845, settling in what was then West Troy, and after some years spent in the peddling business started in the jewelry trade, opening a small store which later grew to be one of the most prominent establishments in the city. For many years Mr. Marks was in business in partnership with his son under the style of E. Marks & Son, but the firm met with reverses in 1885, and after settling with the creditors the deceased continued business alone for a long time. In 1897 he was the victim of one of the most notable robberies which have ever occurred in this city.

Mr. Marks conducted business successfully until April 16, 1904, when he retired and was succeeded by his son, Benjamin Marks, and David Saxe, under the firm style of Marks & Saxe, who continued the store, which was then as now at 10 3d St. The firm dissolved about a year ago, since which time Bernhart Marks has continued the business alone. The late Mr. Marks was a man of genial disposition, kindly manner, with a capacity for making many and strong friends. He was noted for his business ability as well as strict integrity, and for this he was highly respected both in the trade and in the community. He was one of the oldest Masons in the State, was prominent in the B'Nai Bereth and one of the founders of the Third Street Temple, this city.

Deceased was married in August, 1850, to Flora Bresfield, and she with two sons and four daughters survive him.

Chas. Ebersold has returned to Groton, S. Dak., from Minneapolis, Minn., where he has been taking a course in engraving and watchmaking, and taken a position with Fred Terhune.

Reconstructed and Scientific Gems

Why the Use of the Terms in Regard to Certain Imitation Stones is a Deception

Much interest is evinced in the trade in the discussion as to the proper definition of the terms "reconstructed," "synthetic" and "scientific," as applied to the artificial production of precious stones. Articles published in THE CIRCULAR-WEEKLY, describing the processes of making reconstructed rubies and of the claims made in behalf of imitation emeralds and sapphires and doublets, are said by prominent importers and dealers to have assisted materially in clearing up doubts on the subject. Last week's editorial on the need of differentiating between the various products and selling each for exactly what it was especially commended, as opening a door for valuable educational work.

In the last week a representative of THE CIRCULAR-WEEKLY called on a number of men who are recognized as authorities on this subject, and all agreed that the ruby is the only stone that has been reconstructed manufactured of the same materials as the true stones, and that claims of a similar result accomplished with emeralds, sapphires or other stones are fraudulent. While the diamond has been produced artificially, the product, it is agreed, is of the quality of bort and not of gem diamonds.

M. D. Rothschild, of the American Gem and Pearl Co., said yesterday: "In my opinion the word 'reconstructed' should be limited in its use in the trade to products, the component parts of which are essentially the component parts of the true ones that they are intended to imitate. A reconstructed stone, in order to be entitled to the name, should have all the physical qualities of the true stones, such as hardness, specific gravity, refraction, diachroism and resistance or susceptibility to acids.

"This would include rubies made by several processes. One of these processes produces the class of reconstructed stones which have been known by that name from the first. Strictly and scientifically speaking, perhaps, this is the only reconstructed one, although I would not limit, for trade purposes, the use of the word to this particular class of products. In this process small rubies are fused together and there is added coloring matter; or, masses of fused alumina are used and to them are added small rubies to build up a block or rod.

"The synthetic ruby is made by taking alumina and chromium or other coloring matter, producing in the crucible a group of crystals with all the characteristics, including crystallization of true rubies. This method, as far as I know, has been successful only in producing small specimens, and rubies of commercial size are probably not made in this way.

"The simplest method and the one most commonly used is to make the so-called scientific ruby, as was described fully in THE CIRCULAR-WEEKLY of Oct. 24. This method produces the pear-shaped body called the cat, and furnishes nearly all, or perhaps

all, of the reconstructed rubies of commerce.

"Altogether outside of the class of reconstructed stones I place those that are made in the form of doublets or triplets. Emerald doublets or triplets are made by joining two pieces of true light-colored emeralds with coloring matter placed where the pieces are joined. This gives a deep emerald color which the stones did not naturally possess. Another common style of doublets is composed of a thin sheet of garnet placed on top of a piece of glass of red, green or blue color. This given to the article the appearance of ruby emerald or sapphire as may be desired. The stone and the glass are fired together. These doublets have always been made in great quantities, but are not to be classed with reconstructed stones any more than are articles made altogether of paste or glass.

"While the best of the so-called reconstructed rubies are only imitation rubies, and should be classed as such for all purposes, it is a fact that there are very superior imitations. Any effort to palm off glass, no matter how hard it is, for reconstructed ruby, sapphire or emerald, is clearly a fraud. The so-called colored or dyed aquamarine emeralds, which have come under my notice, are nothing but glass.

"THE CIRCULAR-WEEKLY has performed a splendid service in calling attention to the distinction that should be observed in the trade between the various artificial products. This is an educational work which I regard as of the utmost importance to the jewelry and precious stones trades."

John Lamont, of John Lamont & Son, disapproved the use of the word "reconstructed," except to define the class of rubies made by fusing and massing smaller rubies or ruby dust. "This was the early process," he said, "of making artificial rubies of the same material as the natural ruby. People in the trade will remember that when these reconstructed stones began to appear they commanded high prices, some selling at \$75 to \$125 a carat. These stones were really reconstructed, because they were built up from true stones. Few, if any, of these stones are now being made, but there are some on the market that were made before the process was practically superseded by the scientific method of making rubies. This method was accidentally discovered and grew out of another discovery. In the extraction of aluminum from clay an improved and cheaper process was devised and during the early experiments the possibilities of making scientific rubies were seen. It may be said that the scientific ruby became a sort of by-product in the aluminum.

"A scientific ruby is, to my mind, the most perfect imitation of a precious stone that has ever been made. It excels even the reconstructed ruby, because in the latter we were always bothered with the dark

spot in the center, and this is not present in the scientific stone.

"It will be to the benefit of the trade to distinguish sharply between natural and artificial stones, and between different kinds of artificial stones. No other kind of stone than the ruby has as yet been produced artificially for the market. Reports of sapphires and emeralds being reconstructed are not true."

Dr. Geo. F. Kunz, of Tiffany & Co., said that the word reconstructed should be limited strictly to a stone made of particles or masses of the same substances as a natural stone united in any possible manner. These should be distinguished from other kinds of artificial or scientific stones. "The reconstructed stone bears about the same relation," he said, "as ice bears toward the crystallization of water. There is not in a reconstructed stone a well defined crystallization, and evidences of fusion are always present in such a stone."

Decision Awaited on Interesting Question as to Duty on Rough Reconstructed Rubies.

General Appraiser Sharretts, who will return to New York in a few days from a vacation passed at his old home in Baltimore, Md., is expected to give a decision shortly on the classification of a quantity of reconstructed rubies in the rough. The General Appraiser remarked in a recent conversation that in some respects this is one of the most complicated problems relating to precious stones that has lately been presented. The Government contends that the assessment should be 20 per cent. under Section 6 of the Tariff Law relating to non-enumerated manufactures. Albert Lorsch & Co., the importers, claim that the reconstructed rubies are true precious stones and, being in the rough condition, are entitled to entry free of duty.

The same kind of stones when cut are regularly admitted at 10 per cent. as precious stones cut but not set under Par. 435 of the Tariff Law. The question as to the cut stones was decided by the board last April on a protest made by Albert Lorsch & Co. against an assessment of duty by the Collector at New York. In that case, also, the Collector claimed that the articles were non-enumerated manufactures.

At the trial there was conflicting evidence, leaving a doubt, as the board said in its opinion, whether the articles were produced synthetically from certain chemical elements or are genuine rubies molded into compact form. The board did not say in its opinion that the reconstructed rubies are precious stones, but evaded this by holding that they were dutiable, at 10 per cent., either directly or by similitude as precious stones. In the case of the rough reconstructed rubies, the similitude clause will not apply as it cannot be evoked to put any article on the free list.

There seems no escape for the board, this time, from the responsibility of saying whether or not these laboratory products are precious stones. Should the Government, which lost in the former case, win the present issue, the stone which has been cut and polished would be assessed at 10 per cent., and 20 per cent. would be imposed on the rough material.

THE PEARL IS PRE-EMINENT,

the leader of Gem Stones, and the most accessible to all classes. We make a specialty of the popular grades of Pearls, evenly matched in colors, shapes and sizes, in

- ROUND WHITE PEARLS
- ROUND TINTED PEARLS
- BOUTON PEARLS
- ORIENTAL BAROQUE PEARLS
- HALF PEARLS

We call special attention to our extensive stock of OPALS, in standard qualities, shapes and sizes. Also to the fine cut, clearness and brilliancy of our RECONSTRUCTED RUBY, comparing in all essentials with the finer qualities of the natural ruby.

Death of Hyman Grabowski.

Hyman Grabowski, who for upward of 20 years had been a traveling salesman for Matelbaum & Friedman, 45 John St., New York, died Friday last at the residence of his brother, S. Grabowski, 120 E. 90th St., New York. The deceased salesman was widely known in the trade, especially in Pennsylvania and in the south, where he had traveled for so long a time.

Mr. Grabowski was born in Münstadt, Germany, July 22, 1850, and at the age of 21 came to New York. Immediately thereafter he obtained employment in the jewelry business. He represented his firm with

THE LATE HYMAN GRABOWSKI.

marked fidelity and was held in high esteem by his employers and associates. Since last January he had been confined to his bed. Mr. Grabowski was a member of the Sons of Benjamin, the Odd Fellows and other fraternities. The burial took place Sunday at Washington Cemetery.

Death of Edward F. Roche.

TAUNTON, Mass., Nov. 21.—Edward F. Roche, treasurer and clerk of the Poole Silver Co., died early to-day at his home, 10 Broadway. He had been in poor health for the past few years, but was able to attend to his duties at the factory until yesterday.

Mr. Roche was born in this city, and as a young man he took up the silversmith's trade. He learned the business thoroughly at the factory of J. W. Tufts in Boston, where he formed the acquaintance of his future partner, George Poole. When the latter became foreman of a factory at Shelburne Falls he engaged Mr. Roche to work there, where they remained for about three years, coming to Taunton in the Spring of 1886, when they took employment with the West Silver Co. They remained in the employ of that concern until 1892, when for a year they were employed by Reid & Barton.

In 1894 Messrs. Poole and Roche formed a partnership with Louis Busiere and started a business of their own in a modest way, but they soon had a flourishing industry that grew very rapidly until it reached its present proportions.

Mr. Roche was a man of genial and kindly disposition, who made friends rapidly

and always retained them. For years he had been prominent in a number of societies, being a member of Taunton Council 82, Knights of Columbus, Taunton Lodge 150, B. P. O. E., Taunton Court 79, M. C. O. F., and the Wolfe Tone Club. He was also an ex-alderman.

Death of Frank H. Gale.

NORFOLK, Va., Nov. 21.—The news received here Monday that Frank Higgins Gale, of the Paul-Gale-Greenwood Jewelry Co., had died at Clifton Springs, N. Y., Saturday, caused deep sorrow and regret not only among Mr. Gale's many friends, but throughout the business community in which he was both prominent and popular. The remains were brought here for interment.

Mr. Gale, who was 53 years old, had been actively identified with the business interests of Norfolk since 1876, in which year he entered the jewelry business in the firm of Chapman & Gale. After the dissolution of this firm, Mr. Gale continued alone, and then as the Gale Jewelry Co. He built up a large and extensive trade. He was well known from one end of the State to the other as well as to a large number of people of the north who visited this section.

When the Paul-Gale-Greenwood Jewelry Co. was formed early this year Mr. Gale consolidated his business with those of the old firm of D. P. Paul and Fred. Greenwood and the company was incorporated with a capital stock of \$200,000, Mr. Gale becoming the vice-president. His associates in the business were Fred. Greenwood, president; J. E. Cole, secretary, and D. P. Paul, treasurer and general manager. Mr. Gale's death will not interfere with the business of the company, though his presence will be missed deeply by his associates and employes of the concern.

Deceased was a native of Norfolk and always took pride in the city of his birth in which he spent his entire business career. He was prominent in the affairs of Brambleton Ward before that was admitted to the city and was a member of its local board and identified with many of the improvements in that section. He was a member of the Business Men's Association, The Retail Merchants' Association, Chamber of Commerce, and was also identified with several fraternities, among others the Royal Arcanum and Knights of Pythias.

Mr. Gale married Miss Millie Winston, of this city, who died a number of years ago, leaving two daughters, Louise and Blanche, of whom the former was with him at the time of his death in Clifton Springs. The remains were brought to Norfolk Monday night and the funeral took place yesterday afternoon from the Free Mason St. Baptist Church, of which the deceased had been a member for many years. The services were conducted by the Rev. Dr. M. S. Dines.

Besides his daughters, Mr. Gale is survived by three brothers, Thomas and J. D. Gale, of Norfolk, and Dr. Joseph A. Gale, of Roanoke.

Fire, recently, started in the store of J. F. Browne, Enderlin, N. Dak., but was quickly extinguished. Considerable damage was done to the stock.

Pittsburg Police Begin a Crusade Against Itinerant Vendors of Jewelry and Watches.

PITTSBURG, Pa., Nov. 24.—The police of Pittsburg have begun a crusade against itinerant disposers of cheap watches and jewelry. The police regard this class of men as nothing short of dangerous, for most of the jewelry peddled by them among the foreigners is said to go through a sort of "fence" or clearing house where such articles stolen from foreigners are deposited. Many arrests have been made, the latest being that of four men who were taken in a house in "Our Alley," said to be a rendezvous for thieves of the cheap, though dangerous class. The principal prisoner among them is a young Lithuanian. He poses as a jewelry salesman, but he has twice served terms for robbery, and cannot account for the many articles now in his possession.

Finding no one to prosecute the prisoner, Magistrate Frank J. Brady himself disposed of the case, ordering the man to forfeit \$50 or to serve 60 days in the workhouse. The police say that he operates between this city and Cleveland. His three companions, who proved that they were never arrested before, were let off with a fine of \$10, which they paid.

In the Laurel Ave. district, a thickly populated foreign settlement, itinerant jewelry vendors have been operating extensively of late. Inspector R. H. Robinson last week caused the arrest of two young foreigners who were trying to sell watches in the neighborhood. They had 27 timepieces, many of them being of fair value. It was at first supposed that these men were confederates of Edward Hays, who escaped from jail as noted last week, but they proved they had no connection with him. The men are still being held until they can satisfactorily explain where they obtained the watches they were selling.

1 Maiden Lane, New York.

eward Offered for Thief Who Stole Traveler's Sample Case in Philadelphia Jobbing House.

C. F. Willemin, 13 Maiden Lane, the New York representative of T. G. Frothingham & Co., returned last week from Philadelphia, where he had been robbed of a sample case containing diamond brooches, mountings, etc., valued at \$4,000, as related in last week's issue. In the report which came from Philadelphia, there was an erroneous statement of the circumstances of the robbery, indicating that Mr. Willemin had been careless in leaving his case in the lesroom of the jewelry store where the theft occurred.

At the office of the Jewelers Protective Union it was said that there is no reason for charging the salesman with any recklessness whatever, and it was said at this office that he is regarded as an exceptionally experienced and trustworthy man. Similar statements were made by others who have long known the salesman. He has been for many years in the employ of T. G. Frothingham & Co.

Mr. Willemin said that he entered the jewelry store in the latter part of the afternoon and was accompanied by his porter, who carried two cases, which were placed under the long counter extending through the store. The salesman then waited for an opportunity to get the attention of one of the buyers for the firm. In about three-quarters of an hour one of the buyers beckoned him to show his samples. The buyer at the time stood behind the counter, a few feet away from where the cases had been left.

Mr. Willemin took up one of the cases and carried it to where the buyer stood. The case was opened on the counter and Mr. Willemin was busy for a quarter of an hour showing his samples. During this time three salesmen stood behind the counter, so that anybody taking the case ran the risk of being seen by any one of them, as well as by the buyer and the salesman, all being within a few feet of the spot where the case stood.

When Mr. Willemin turned, after the lapse of 15 minutes, the case was gone, and nobody had seen it go.

The supposition is that a sneak thief was operating in the store under the guise of a purchaser. It is considered not unlikely that he had originally an intention of stealing something from the diamond room, but a favorable opportunity did not present itself to do so and he took Mr. Willemin's sample case.

PHILADELPHIA, Pa., Nov. 24.—Despite the best efforts of the city detective department and the Pinkerton Detective Agency the thief who so shrewdly and cleverly made his late Monday afternoon with the sample case of C. F. Willemin has not been found. The theft is to the trade of this city one of the most surprising and puzzling of recent years. With a store full of salesmen, watchmakers and jewelers, it is mystifying to the detectives that a total stranger should have found an opportunity to steal a sample case.

Mr. Willemin left the case under a counter while he took another case to the rear and displayed his goods to Harry C. Barry,

one of the staff of M. Sickles & Sons. While the salesman transacted his business with Mr. Barry, and while his sample case carrier waited outside, the thief who was observed to loiter near the entrance to the store picked up the case and walked out.

It was only when Mr. Willemin, having finished his business, started to go that he awoke to the fact of his sample case not being where he left it. The salesmen and watchmakers near the door, as well as the carrier who stood outside, were able to furnish only a vague description of the man who is believed to have stolen the sample case.

While T. G. Frothingham & Co. have widely advertised a reward of \$1,000 for the culprit's arrest and conviction and \$500 for the recovery of the jewelry, no one has yet come forward with any information of value.

The city detectives are reported to be of the opinion that a notorious burglar who was recently released from the Eastern Penitentiary planned the theft. This burglar is also suspected of two other big jewelry robberies in private houses in this city last week.

The missing case was of black leather, was 15 inches in height, 15 inches in length and 10 inches wide. It contained 250 scarfpins, 150 diamond mountings, 400 14-karat brooch mountings, a number of which are set with sapphires and rubies, and 70 pairs of gold link cuff buttons.

Pennsylvania Jeweler Brought Back from New York to Answer to a Serious Charge.

LANCASTER, Pa., Nov. 22.—M. T. Reineman, son of the late August Reineman, who recently closed out his jewelry business at Chambersburg, Pa., has been held to answer a serious charge.

The prisoner, a man of over 35 years, with a wife and three children, is accused of having induced a 16-year-old girl, daughter of a railroad engineer, to leave her home and elope with him. The pair were in Albany, N. Y., when Reineman was

arrested. Requisition papers were granted, but for fear of mob violence the authorities did not venture to take the prisoner to Chambersburg after he was brought back to Pennsylvania. His trial will not be long delayed.

Liabilities and Assets of H. M. Arabian, Providence, R. I., as Shown by His Schedules.

PROVIDENCE, R. I., Nov. 26.—A list of creditors of Hampick M. Arabian, who conducted the Arabian Jewelry Co., and who was recently adjudged a bankrupt, has been filed with the referee in bankruptcy. The secured and unsecured claims amount to \$6,971.94. The assets amount to \$41.06, consisting of stock in trade to the value of \$30, tools valued at \$10 and a deposit of \$1.06 in a local bank.

Under the secured claims Charles J. Heimberger holds a mortgage of \$500 on real estate in Warwick and Reuben Berberian two mortgages, one for \$1,500 and one for \$2,000 on building lots in the Norwood Station and Fairlawn plots, Warwick.

The unsecured claims have a total of \$2,936.94, made up as follows: Anna Bollette, labor, \$18; Annie Cahill, labor, \$9; Margaret McCabe, labor, \$4; Tony Ross, labor, \$4; Thomas McWilliams, \$8; W. H. Miller & Son, \$2; Henry Lederer & Bros., \$12; Nightengale & Childs Co., Boston, \$6; New Acme Plating Co., \$28; Senzen & Rueckat, 70 cents; R. G. Dunn & Co., \$55; Providence Art Metal Co., \$1; Thurston Mfg. Co., \$4; L. Kranz & Co., \$17; Calvin Dean, \$20; the Manufacturers' Supply Co., \$6; H. Nordlinger's Sons, \$282; Electric Chain Co., \$3; Leo Popper & Sons, \$82; Thompson & Thompson, \$84; John Allen, \$431; Cornell & Andrews, \$68; Alfred Vester & Sons, \$2; Thomas Lind & Co., \$107; Heimberger & Pearson, \$147; D. M. Watkins & Co., \$187, all for merchandise; A. D. Avedisian, M. D., for medical attendance, \$170; Economical Card Co., \$32; Jenckes Box Co., \$6; Brennan H. Critchley, \$40; Waterbury Brass Co., \$125; N. Levy, \$10; G. A. Riccius, \$15; B. F. Drakenfield, \$30; Giragos Baroomagian, \$98; Sarkis Avakelian, \$35.

In addition, the statement shows that Mr. Arabian owes C. H. Field, for rent, \$100; S. & B. Lederer Co., rent, \$125; Massachusetts Collection Agency, notes for \$167; M. C. Meagher & Co., note for \$60; State of Rhode Island, Superior Court records, \$300 for bond over recognizance to Sixth Judicial District Court in the case of Patrick Egan vs. Edward Dombrosky, complaint for assault and battery, defaulted June 29, 1906; Hunter C. White and Frederic C. Hull, judgment for \$55 and costs in the case of Hunter C. White et al. vs. Stephen H. Messer et al., in the Sixth District Court.

Fine Coral a Precious Stone.

United States General Appraisers Sustain Claim That Variety Used in Jewelry Is Dutiable at Ten Per Cent.

In the test case relating to the classification of coral manufactures, intended as settings in jewelry, the Board of United States General Appraisers, New York, on Wednesday last decided that the articles were properly dutiable at 10 per cent. as precious stones cut but not set. This overruled the decision of the Collector, who claimed 45 per cent. under the clause of the tariff law which enumerates manufactures of various kinds, including coral.

The test case was brought by Garreud Griser, New York, who were represented by J. F. Strauss as counsel. Whether the government will accept the decision as final or will appeal to the courts is not yet announced.

The opinion in the case, written by General Appraiser Sharretts, was sent to New York from his home in Baltimore, where he has been for a couple of weeks. He says: The protestants in this case claim that 31 pieces of coral, cut but not set, valued at 25 cents per gramme, or a total of \$262.96, are dutiable at 10 per cent. ad valorem, under the provision of Par. 435 of the Tariff Act of 1897, for precious stones cut but not set. They were classified by the collector as manufactures of coral and assessed with duty at 30 per cent. ad valorem, under Par. 115 of said act.

Coral—intended to be mounted as jewelry—a precious stone, then on the authority of *United States vs. United States* (135 Fed. Rep., 242), would seem to be dutiable under Par. 435 as intended, and not under Par. 115 where assessed; the court in the case cited having held that the tariff provision for precious stones, cut but not set, is a more specific enumeration than the provision for manufactures of rock crystal, which substance, like coral, is provided for *co nomine* under Par. 115.

Under the caption of "Precious Stones, Their Characters and Occurrence," Prof. Max Bauer, who is recognized by the precious stone and jewelry trade as a standard authority, on page 601 of his work, speaking of red or precious coral, describes it as a material almost as important for decorative purposes as a precious stone. Clearly the inference deducible from this language is that, however important coral may be, it is not scientifically known as a precious stone; indeed it will hardly be contended that this substance, which is of animal and not of mineral origin, is actually stone, either precious or semi-precious.

Yet, it is not what an article actually may be that the technical or scientific understanding, but how it is known and designated by the trade to deal at wholesale in such articles, that dominates its classification for tariff purposes. So well known is this principle of revenue law that variations are deemed unnecessary. The term "precious stones" has a trade meaning which includes many varieties of semi-precious stones, such as agate, onyx, jasper, rock crystal and other similar materials not scientifically comprehended within the term "precious stones," but which, in *United States vs. Morrison* (100 Fed. Rep., 635), were held to be dutiable as such. Scientifically, pearls are not precious stones; nevertheless they are classified as such in trade.

In *United States vs. Morrison* (179 U. S. 456), Justice McKenna, who delivered the opinion of the court, said: "In the Act of 1890 pearls are not included as in some prior acts, with the diamonds and rubies as precious stones." In the prior acts referred to in this Supreme Court decision, it is manifest that Congress adopted the commercial understanding to the exclusion of technical correctness when it classified pearls as precious stones. This rule applies to pearls, why should it not equally apply to coral, a somewhat kindred substance? Indeed, certain forms of coral when set have been mistaken for pearls, even by those well qualified to perceive the difference.

Par. 435 provides for diamonds and other precious stones advanced in condition or value from

their natural state, which implies that the articles cut or advanced in value must have been, in their original condition, either scientifically or commercially known as precious stones. In consonance with this understanding in G. A. 5763 (T. D. 25512), this Board held that shell cameos, although intended for setting as jewelry, were not included in Par. 435 for the reason that conch shells, from which cameos are usually cut, were never known as precious stones. In the present case then, we are confronted with two propositions:

1. Are the articles in their imported condition known commercially as precious stones?

2. Was the coral in its natural condition classified in trade as a precious stone?

That the affirmative must obtain as to both propositions is shown by the overwhelming testimony of competent dealers in diamonds and other precious stones, who appeared as witnesses in this case; hence we find that the disputed merchandise is precious stones cut but not set. Our finding, however, is not intended to include all varieties of coral, but is limited to the expensive kind (such as that now before us), susceptible of taking a high polish and usually cut by a lapidary.

Based upon our finding, we sustain the protest and reverse the Collector's decision.

Death of John W. Morris.

FREDERICK, Md., Nov. 23.—A telegram has been received here announcing the death this morning at Hartford, Conn., of John W. Morris, who for 29 years was engaged in the jewelry business in Frederick.

Mr. Morris, who was a native of Springfield, Mass., where he was born in May, 1844, came here and started in business in 1875. He sold this store in 1904 and retired from business, and the following year went to Hartford to live with his sister. Kidney disease was the cause of his death.

Trans-Atlantic Voyagers.

TO EUROPE.

Sailing on the *Kaiser Wilhelm II.* last week were: Lee Reichman, of Jos. F. Fink & Co., New York; Jules Franklin, New York; Harry Z. Oppenheimer, of H. Z. & H. Oppenheimer, New York.

Leopold Herzfelder, with David Mayer, New York, and Mrs. Herzfelder, sailed last Thursday on the *Amerika*.

Frederick A. Jeanne, Paris, sailed last week on the *New York*.

Wilfred Buckley, of Samuel Buckley & Co., sailed last Wednesday on the *Baltic*.

E. Arnstein, of Arnstein Bros. & Co., New York, will sail to-morrow on *La Provence*; also on the same boat, B. Hyman, of Hirsch & Hyman, New York.

FROM EUROPE.

S. L. Van Wezel, New York, returned recently on the *Potsdam*.

Morris Rosenbaum, of Rosenbaum & Adler, New York, returned recently on the *Kaiser Wilhelm II.*

Jacob Franks, of the Rockford Watch Co., has leased to the La Salle Theater Co. the property at 251 to 255 Clark St., Chicago.

H. B. Crawford, who has been well known in the china and art metal trades for some time, has gone to Chicago to take the position of manager of the china and bronze departments of Spaulding & Co.

Morris Rubin, Paterson, N. J., announced several days ago an offer to his creditors to settle at 20 per cent., of which he proposed to pay 10 per cent. in cash and 10 per cent. in notes. He said that his business has not prospered since the flood in that city.

Advances on Diamond Importations Not Sustained by General Appraisers. Customs Officials Deny Reports as to New Policy.

Attention has been called this week to the fact that Appraiser Edward S. Fowler, of the port of New York, had advanced two shipments of diamonds and that the advances had not been sustained when the importer appealed to General Appraiser McClelland, the official reappraisements confirming the invoice. The assertion was made in one of the daily papers that the action of the Appraiser is indicative of a general tendency on the part of the two examiners who now pass on importations of precious stones. This policy, it was further said, is due to remarks made by Secretary Shaw, of the Treasury Department, expressive of his belief that there have been habitual undervaluations at this port.

It was hinted that as Win. B. Treadwell and Frederick Rosenberg, the present examiners, are comparatively inexperienced in passing on diamonds, arbitrary action now and then with delays in the delivery of precious stones may be expected for a time. Mr. Treadwell, it was explained, gave most of his attention, while Gen. Geo. W. Mindil was chief examiner, to the examination of imitation precious stones. The other examiner, Frederick Rosenberg, passed chiefly on clocks, watches and jewelry.

It was said yesterday at the Appraisers' Stores that the advances on both shipments were made by Gen. Mindil on the last day before he left office, and that the reports as to Mr. Treadwell originally appraising the goods were untrue. The diamonds were shipped by Boxhorn Bros., Paris, to Irving Baum, 71 Nassau St., New York.

A customs official said that the articles appearing in some of the daily papers are in nature of guesswork, and that no definite instructions have been received from Washington indicating any change in the policy of the department, which has always been to give to importations the true market value. The official said further that while the two present examiners may not have had extensive experience in passing diamond importations, yet this would come in time and that whoever was assigned to perform those duties would necessarily have to gain experience as he went along.

According to talk among customs employes there is some expectation of another appointment to the position of examiner. While Mr. Treadwell is now the senior examiner and passes on diamonds, yet he has not, it is said, received any permanent assignment to the position, and the question of filling the position which General Mindil vacated is still open. Some believe that Mr. Treadwell will continue as the examiner in charge of the diamond imports.

Various reports are circulating to the effect that General Mindil's friends have begun a campaign for the purpose of showing that he was not fairly treated. It is also said to be likely that representations will be made at Washington because one of the employes in the service is a brother of an officer in a large jewelry house. Some importers have privately expressed the opinion that this is a valid ground for objections, while others say that criticism based on such grounds would be absurd.

"GEMFINDER" takes a melancholy pleasure in referring the trade to his advertisement of April 25th last, in the "Jewelers' Circular." Unfortunately, his prophecy has been fulfilled. Not only have Precious Stones advanced, but the end has not yet been reached. Sapphires have gone up at least 25 per cent. in the last six months, and they will go still higher.

"Gemfinder" again warns prospective buyers not to delay. All kinds of Precious Stones are scarce and prices on some may become prohibitive.

PRACTICAL LETTERING WITH ORIGINAL SYSTEM FOR SPACING. A Complete Spacing Guide, by Thomas Gimhard. Published by the Norman W. Henley Co., New York. Price, 60 cents.

THIS is a practical work for the beginner in engraving, engineering and other cases where a knowledge of good lettering is required, and shows a rapid and accurate method of becoming a good letterer with a little practice. Although volumes have been written on the subject of lettering, until the appearance of the present work there has been no treatise giving the systematic method for spacing. It is obvious that the most elaborate lettering of the expert will not produce a pleasing effect unless the space between the ever-varying shapes between the letters is harmonious so as to appear uniform to the untrained as well as the trained eye. It is therefore easy to see that the volume will prove valuable to any older workers on letters as well as to beginners.

The author claims to have solved the problem involved in the proper spacing of letters in the 676 combinations possible in the alphabet and the plain and invariable principles governing the variations in space laid down by him are put forth in clear and comprehensive language.

The popular price of the treatise will permit it to go into the hands of every student who wishes to learn as well as every professional letterer who desires to simplify and improve his work.

"New Designs in Useful, Ornamental and Artistic Jewelry" is the title of an attractive booklet which is being furnished to the trade by the Keller Jewelry Mfg. Co., 64 Nassau St., New York. The 16 pages printed on enameled paper are bound in dark green covers with lettering in black and red. The name of the manufacturers does not appear anywhere on the book, and on the front cover is a panel on which is to be printed the names of retailers who handle the company's products. The specialties, which are handsomely illustrated, include cuff buttons, scarf pins, hat pins, rings, lockets, brooches, fobs, crosses, bracelets, lorgnettes and neck chains. The illustrations are the exact size of the articles presented, and a brief description of the style and finish of the articles represented on each page is given at the bottom.

Harrisburg, Pa.

Mr. and Mrs. C. Ross Boas attended the day races at Mercersburg College on the 17th inst.

Henry C. Closter, 4th and Market Sts., has sent out a large number of finger ring measures with his holiday season letter.

The West End Business Men's Association elected permanent officers last week. I. A. Faunce is secretary, and E. L. Rinkenbach is one of the active members.

The Chagru Jewel Co., having stores in Baltimore, New York and Atlantic City, has leased 30 feet of space in the Market St. store of the Jerauld Shoe Co., and has opened for business with Charles Gruderman, the proprietor, temporarily in charge. P. G. Diener, 410 Market St., has been nominated as treasurer of the Harrisburg

Merchants' Association, whose annual election will be held in January. The other officers nominated are: F. A. Duttonhofer, president; Ira Wert, first vice-president; E. J. Roe, second vice-president; R. F. Cook, secretary. The association has endorsed the movement for a new garnishee law.

Kansas City.

The Jaccard Jewelry Corporation will hold its grand opening in the new store, Dec. 3.

E. Curtis Ilkenhaus, Kansas City, Kans., has enrolled as a pupil with the Kansas City Polytechnic Institute.

J. R. Hauschildt, formerly of Eskridge, Kans., has purchased the retail jewelry business of the Esslinger Jewelry Co., in this city.

Harry Paulson, a recent graduate of the Kansas City Polytechnic Institute, has taken a position as watchmaker with a retail jeweler of Fort Worth, Tex.

George Gardner, formerly in Pittsburg, Kans., was in this city last week, buying an opening stock of jewelry for a store which he is opening in Pawhuska, Okla.

C. P. Kionka, of Kionka & Kionka, was here for a couple of days last week, from a short trip through Texas. He has gone out on another short trip before the holidays.

Fred Doebler, head of the engraving department of the Meyer Jewelry Co., who had been laid up several days by an attack of pleurisy, is again able to attend to his duties.

There was a small fire in the manufacturing jewelry establishment of L. Weizelbaum, in the Missouri building, the early part of last week, caused by an overheated vent pipe extending from a gas stove. The loss was nominal.

The Cady & Olmstead Jewelry Co. has added to its force two new salesmen, in preparation for holiday trade—Mr. Nelson, formerly in the optical department of the Emery, Bird, Thayer Dry Goods Co., and Mr. Schneer, formerly engaged in the retail jewelry business for himself in Albuquerque, N. Mex.

S. F. Ricker, Emporia, Kans., was in the city several days of last week, as a witness before the Federal Court, in a case against an employe of the local postoffice, who was sent to the penitentiary for robbing the mails. A watch which Mr. Ricker had sent here to be repaired was one of the packages stolen, and found in his possession.

The following out-of-town jewelers were in this city last week: G. H. Church, Oak Grove, Mo.; C. L. Dockhorn, Oskaloosa, Kans.; W. S. Noble, Drexel, Mo.; F. N. Conklin, Watonga, Okla.; C. B. Libby, Weir, Kans.; C. D. Sandison, Huntsville, Mo.; W. C. Stairs, Hennessey, Okla.; B. H. Beatte, Woodward, Okla.; Fred Beatte, Gage, Okla.; W. H. Meyer, Lawson, Mo.; S. H. Ledden, Sedan, Kans.

Kionka & Kionka received a package through the mail last week, which was in the big wreck on the Rock Island at the Cimarron river about two months ago. The package was in the mail car, which floated down the river, and while the paper box was hardly recognizable as such, the contents were in good condition.

San Francisco.

Harry Jacoby, Oroville, Cal., was in town last week.

F. F. Daunt, Merced, Cal., was here last week, replenishing stock.

A. F. Dohrowsky, Redding, Cal., made a trip to this city last week.

L. Goodman, Stockton, Cal., was here the earlier part of last week, ordering holiday stock.

Neill O'Neil is now doing business in connection with J. R. Jenkel, in the latter's store.

Geo. M. Franklin, who has been occupying only half a store, has leased the whole store.

A. S. Levin recently opened a store on Van Ness Ave., with a full line of all kinds of jewelry.

Alphonse Judis, proprietor of the Alphonse Judis Co., who has been very ill, is convalescent.

J. R. Jenkel, Van Ness Ave., has just received a hardwood 20-foot wall case from Portland, Ore.

The California Jewelry Co. has moved into the Mutual Savings Bank building at 704 Market St.

Adolph Hirschman, 1611 Van Ness Ave., has added Thos. Kelley, a former employe of Shreve & Co., to its force of salesmen.

J. B. Tucker, who had been with Shreve & Co., for 18 years, has taken a position as traveling representative with the J. A. Young Co.

Among the out-of-town jewelers here last week, not elsewhere mentioned, were: M. Saier, Fresno; Mr. Feagans, of Brock & Feagans, Los Angeles.

Jas. A. Sorensen Co. has added an additional man to its Mission St. store and secured the services of H. Rainisch and A. C. Schuck, both watchmakers, for their Market St. store.

O. Blomquist, a watchmaker and jeweler, formerly with Shreve & Co., has opened a neat little store of his own at 1132 Geary St. The store contains two large show cases and the same number of wall cases.

Anna L. Silveira has opened a Portuguese jewelry store at 72 Jackson St., with four large show cases. This store will not handle the more expensive kinds of jewelry, but will cater more to the wants of the Portuguese and Italian element in that district.

The W. K. Vanderslice Co. is regretting the loss of its oldtime bookkeeper, William H. Hazell, who has been keeping the books of this company for the past 20 years. Mr. Hazell is going into business for himself. His place has been filled by P. E. Hill, who will act as bookkeeper and assistant cashier. Percy Stearns has been employed as assistant bookkeeper.

The San Francisco offices of Joseph Fahys & Co., New York, have recently been moved to larger quarters in the Mutual Savings Bank building on Market St. Besides getting increased room the company acquired a better location in this building into which a number of the largest manufacturers and jobbers are moving their offices. James C. Blythe, who has charge of the local offices of Joseph Fahys & Co., has stocked the new quarters with a large supply of watch cases.

NEW YORK:

9-11-13 MAIDEN LANE

PROVIDENCE: 256 Westminster St.
PARIS: 10 Rue Cadet

Lancaster, Pa.

Guy K. Herr, Harrisburg, spent a few days among Lancaster friends last week.

J. L. Hepp, Lititz, has been elected a trustee of Linden Hall Seminary, Lititz.

Archie K. May, York, and Samuel R.uffman, of Belleville, Pa., have been blessed with sons.

Orton Clawson, manager of "The Jewelry Store," Belle Vernon, Pa., was married a few days ago.

R. A. Wallick, Wrightsville, who is remodeling his store, was in Lancaster, last week, buying new fixtures.

V. F. Meiskey, of the H. S. Meiskey Co., has gone to the Allegheny Mountains with a party of friends to hunt deer.

A. H. Rosenstein, president of the Lancaster Silver Plate Co., and his wife, spent a few days last week in Philadelphia.

The Hamilton Watch Co.'s factory employees have organized a strong football team, with Philip F. Finger as manager.

Will R. Whitlow, a local engraver, died, Saturday, from consumption, aged 37 years. He had been an invalid two years.

F. A. Peters and H. S. Meiskey, of the H. S. Meiskey Co., have been elected directors of the Lititz Lithograph & Printing Co.

I. E. Randall, optician at S. Kurtz & Sons, was called to his home in Hammondsport, N. Y., last week, by the death of his sister.

Fred Crane, of Mandeville, Carrow & Crane, will spend Thanksgiving with S. Kurtz & Sons, who entertains him at dinner every year on this day.

Mrs. Maria Bowman, mother of the late J. A. F. Bowman, and grandmother of the members of the firm of Ezra F. Bowman's Sons, died Nov. 21, aged 86 years.

Charles Rhoades, who recently went from this city to Lewistown, Pa., to take charge of the Mifflin County Jewelry Co.'s establishment, has already greatly improved that establishment.

Among other jewelers visiting in Lancaster recently were: J. H. Sensenig, New Holland; M. Berman, Harrisburg; H. C. Lehl, Columbia; I. I. Cohen, York; E. G. Lover, Harrisburg; Phares J. Musser, Granton; H. F. Andrews, Strasburg; Archie P. Scottwood, Chattanooga, Tenn.; S. H. Miller, Mt. Joy; E. W. Shullenberger, Newville.

Canada Notes.

Alfred B. White, Pictou, N. S., has succeeded.

J. E. Jacques, Calgary, Alberta, is giving up the jewelry business.

I. B. Breckels is opening a jewelry store at Killaloe Station, Ont.

V. B. Shakespeare, Victoria, B. C., is disposing of his stock by auction.

P. Morris, Vancouver, B. C., has sold his jewelry business to E. Wagner.

V. P. Bromley, Balcarres, Sask., has made an assignment to James Wassel.

Madore Freedman, diamond merchant, Montreal, will sail from New York for Liverpool on the *Vaterland*, Dec. 5.

V. K. George, of the Standard Silver Co., Toronto, Ont., went to Cobalt last week in the interests of the Foster mine,

which is very much in evidence at present on the stock market. Construction and development work are being pushed very rapidly.

B. Savage, Jr., Guelph, Ont., and Alexander Moffatt, Brantford, Ont., were among provincial buyers visiting Toronto, Ont., last week.

An attempt was made a few days since to swindle M. Cochenthaler, Montreal, by a man giving the name of J. G. Stewart, 30 Fort St., who attempted to obtain a valuable diamond ring by tendering a bogus check. Investigation proved that he was an American named Doyle, who was boarding at the address given, and who was also negotiating with a piano firm for an expensive instrument. So far as known he had not succeeded in obtaining any goods.

New Stores and Enterprises.

George Gardner recently opened a store in Pawhuska, Okla.

John B. Blackshaw began business in St. Johnsbury, Vt., last week.

P. Riley Jones has opened a jewelry and optical store in Pasadena, Cal.

Phelps & Tasker are about to engage in business in Kenmare, N. Dak.

E. F. Day has started in business in White Sulphur Springs, Mont.

John Rafael has opened a jewelry store at 80 Jackson St., San Francisco, Cal.

R. McComb is a new jeweler in Hamilton, O., where he has opened a store at 11 S. 3d St.

George G. Meade, optician, recently opened optical parlors on 4th St., Parkersburg, W. Va.

The Hecht Jewelry & Loan Co. has been incorporated in Beaumont, Tex., with a capital stock of \$5,000.

E. F. Schneider has commenced business as a jeweler and repairer in the Hotel Royal, North Yam Hill, Ore.

C. A. Paulsen, formerly with Burr W. Freer, San Francisco, Cal., will open a jewelry store at Point Richmond, Cal., about Dec. 1.

The Omaha Optical Co. has been incorporated in the State of Nebraska to manufacture optical goods with a capital stock of \$10,000. The proprietors are Wm. G. Elwood and A. Riggs.

The Greer Mfg. Co. is the name of a new concern recently incorporated in Atlanta, Ga., by M. Greer, P. S. Etherige and D. S. Keefer, with a capital stock of \$25,000. The concern will buy, sell and manufacture jewelry and jewelers' supplies.

The store of R. M. Hutcherson, Greenville, Tex., was recently destroyed by fire. The loss amounted to \$6,000; the stock was insured for \$3,000.

The first meeting of the creditors of W. R. Austin, Port Huron, Mich., was held Nov. 17, and the attorney for the Jewelers Board of Trade was elected trustee of the bankrupt. Mr. Austin was examined with the result that some additional assets were disclosed, including 500 shares of a gold mining company, an equity in the lyraphone, a launch and other articles. The bankrupt's books were not in a satisfactory state, nor did his answers disclose all the information desired, so that the examination will continue.

Indianapolis.

Many of the local stores have prepared elaborate Thanksgiving displays. Notable among these are J. H. Reed, Charles Mayer & Co., Carl L. Rost and Gray, Gribben & Gray.

Fred W. Eisele, formerly associated with his father, W. J. Eisele, in the retail jewelry business, has been made treasurer of the Capital Auto Co., and will devote his entire time to the business of this concern.

Ed Craft, of the A. P. Craft Co., is suffering from a severe attack of rheumatism. He is able to attend to business, but he is compelled to walk with crutches. The A. P. Craft Co. has completed improvements in its offices and plant.

Chris. Bernloehr & Bros., with rooms in the Arcade, are looking for a new location, their present store having been leased to a brokerage firm. The jewelry firm will have to move by Jan. 1. It has a number of desirable store rooms in sight.

"A Mighty Hunter" is the caption of a long article in *The Columbian*, published by the Columbia Club of this city, in which J. C. Sipe is described as one of the best hunters of big game in the State. Many skins and heads, trophies of the chase secured by Mr. Sipe, were exhibited in the club's parlors recently. O. N. Allen, formerly of Parsons, Kans., has succeeded J. C. Taylor, Mr. Sipe's former manager.

Word was received here recently that a quantity of diamonds, semi-precious stones and pearl-handled knives had been taken from Otto Graf, who said he was a jeweler at this city, and who was a passenger on the *Friedrich der Grosse*. There is no jeweler in this city of that name. The name Otto Graf appears in the city directory, but the vocation given is that of a barber. The address is 815 S. Meridian St. The merchandise was seized because the owner failed to declare it.

Out-of-town jewelers who visited the local jobbers and manufacturers recently included: Samuel Prager, Terre Haute; Mrs. B. Maier, Edinburg; Philip Adler, Lebanon; J. L. Hastings, Sheridan; J. A. Meissen, Cicero; A. C. Kinnear, Marion; Charles Ham, Franklin; A. A. Gardner, Lebanon; H. A. Robert, Veedersburg; S. N. Jenkins, Richmond; E. N. Canada, Winchester; C. E. Hodgen, Kokomo, and J. B. Johnson, Goodland. Several of these came to the city to attend the semi-annual convocation of the Scottish Rite Masons.

Local police authorities believe that the man named Clark, who was indicted in Pittsburg last week for passing a fraudulent check for \$500 on a jeweler in Columbus, in payment for diamonds, is the same D. Clark who defrauded Louis Haase, a jeweler in this city, by passing off on him a worthless check for \$168. The check was given in payment for seven gold watches, and was drawn on the Hamilton Trust Co., Noblesville, Ind. Clark, it is said, is wanted in Pittsburg, Columbus, Indianapolis and various other cities for defrauding jewelers. The man who defrauded Haase wore a Vandyke beard, was well dressed, and a smooth talker.

J. D. Harshman, Salem, Ia., has sold out to Chas. W. Davidson.

Diamonds Set Without Cost

means a lot of money saved during the year.

This you can do very easily if you put the above assertion to the test. Bring me a platinum mounting with the requisite number of diamonds, and after I have set the article you will admit that through my skilful and artistic setting the diamonds have gained in brilliancy and quality, and that as a result your mounting has improved greatly and has enhanced three times the value you paid for the setting. At the same time your customers are satisfied with all the orders you turn out. You can also compete with all those who are slow to grasp the importance of these facts.

A trial will convince you of the above. I can refer you to the most reliable houses in the jewelry trade, who will testify to my reliability and to the skilful manner in which I execute my settings on fine.

Platinum Mountings,

Philadelphia.

F. L. Davis, watchmaker, has resigned his position with J. E. Caldwell & Co.

J. B. Bechtel, of J. B. Bechtel & Co., returned, Friday, from a trip through the Lehigh Valley.

Harry Lanz, of the Koshland & Italic Co., returned, last week, from a business trip through the State.

As manufacturing jewelers, Oscar and Julius Hardegg propose to open their new establishment at 726 Sansom St., this week.

Frank Johnson, watchmaker, last week resigned his position with J. H. Shuler, Norristown, and contemplates locating in this city.

Charles H. Butts, with the George H. Miller & Son Co., Pawtucket, R. I., was one of the traveling men here during the week.

A. Large, formerly of Parkersburg, who bought out the retail store of A. Grimley, 4618 Lancaster Ave., completed last week, extensive alterations to his store.

Thomas Bunston, watchmaker and jeweler, Haddonfield, N. J., returned, last week, from an extended pleasure trip through the south. Mr. Bunston is organist for St. John's Episcopal Church, Camden.

William Schick, who formerly conducted a retail store at 1602 Market St., but who about three years ago removed to Camden, N. J., has leased a hotel near Doylestown, Pa., and will remove there with his family this week.

Francis B. Wallen, Camden, N. J., who, a few years ago, opened a jewelry establishment now popularly known as "Wallen's Gift Store," celebrated his third anniversary last week, and the occasion was the subject of considerable comment in local papers.

The first meeting of the creditors of Alfred Mayer, formerly trading as Alfred Mayer & Co., who were adjudged bankrupts last August, was held before the referee Monday. The meeting was held in the offices of Theodore M. Etting, in the Trade building.

Peter Korn, 10th and Chestnut Sts., is making extensive alterations to his retail store. While the alterations are being made his business is suspended. It is reported that the house intends to give up the auction part of the business and confine its efforts exclusively to the retail trade.

William Jerome Friel, reported to have been an employe of the Gorham Mfg. Co., New York, died last week at his home, 3323 Walnut St., this city, at the age of 30 years. Mr. Friel had been ill two years and suffered from a complication of diseases. He was a member of the Royal Arcanum.

Announcement was formally made to the public by card last week that Klopfer, Penberg & Co. have succeeded to the jewelry business of the Joseph Castelberg Jewelry Co., 1111 Market St. Both Mr. Klopfer and Mr. Greenberg have been long connected with the Castelberg Jewelry Co. and will continue the business along the same lines.

Carroll, 1513 Susquehanna Ave., announces that he proposes, shortly after the

holidays, to remove to Atlantic City. Mrs. Carroll conducts a hotel there and Mr. Carroll intends to do watch repairing and badge-making in Atlantic City. The stock and fixtures of the Philadelphia store are being disposed of at forced sale in anticipation of the removal.

John W. Ford, a retailer of E. Girard Ave., and a member of Councils from the northeastern section of the city, was honored, last week, by being appointed chairman of the Joint Special Committee of Councils on the celebration of the dawn of the New Year. Mr. Ford is taking an active interest in the event.

Among the out-of-town retailers purchasing goods from local wholesalers during the week were: Gus Ritezen, Ashton, Pa.; John MacPherson, Mauch Chunk, Pa.; Joseph Loeb, Reading, Pa.; Henry Bolte, Jr., Atlantic City, N. J., who stopped off in the city from an extended business trip to New York; Isaac Laning, Bridgeton, N. J.; Homer Vernon, Ambler, Pa.; G. H. Horner, Wildwood, N. J.; H. L. Phillips, Smyrna, Del.; E. L. Thomas and J. H. Shuler, Norristown, Pa.

Connecticut

Mayor Landers, New Britain, was the toastmaster at the Dutch supper of the Kennelworth Club last week.

W. L. Smith, a retail jeweler, and eight other merchants of Seymour, are planning for an elaborate Christmas opening, to begin on Wednesday, Dec. 5.

Work on the addition to the Shelton factory of the International Silver Co. is now well under way. No time will be lost to have the building ready for occupancy in record time.

Levi P. Stone, superintendent in the case department of the Sessions Clock Co., Forestville, recently purchased a parcel of real estate on Main St., directly opposite the factory of the Sessions Clock Co.

Representative-elect Wm. Carter Welton, of Warren, is a son of H. Welton and Azra Welton. His father, who was engaged in the manufacture of clocks in Terryville, represented Plymouth in the Legislature in 1842.

Among those present at the recent presentation of a silver service by the State of Connecticut to the battleship of the same name were Gen. George H. Ford, New Haven, and George H. Wilcox and George M. Curtis, of Meriden.

Thomas Hurley, who for many years had been employed by the New Haven Clock Co., died Wednesday evening at his late residence, 223 Franklin St., New Haven. The deceased was 65 years old, and is survived by a widow and two daughters.

A fire caused by an overheated kiln broke out in the shellac room in the factory of the New Haven Clock Co., New Haven, Sunday night, Nov. 18, and after nearly two hours' hard work was extinguished. The loss does not exceed \$300 and is fully covered by insurance.

Hiram N. Osborne and wife, Forestville, on Tuesday evening of last week, celebrated their golden wedding. The couple have lived in Forestville for over half a century, 40 years of which have been spent in the house which they now occupy. Mr. Osborne was formerly a skilled watchmaker,

having been employed by the old E. N. Welsh Clock Co. He retired from active work a few years ago.

Ians Schuman-Heink, son of Madam Schuman-Heink, the well-known opera singer, is now a resident of New Haven, where he has entered the employ of the New Haven Clock Co. Mr. Schuman-Heink is studying English during his leisure moments with a well-known instructor in Yale University.

Jason M. Clemence, who, in 1840, entered the employ of H. Welton & Co., the pioneer clock makers of Terryville, and who subsequently engaged in the manufacture of locks, died at his home on North Main St., Terryville, about a week ago, aged 88 years. The deceased was born in Torrington, and was twice married.

Fire early last Wednesday morning destroyed the north end of the three-story wooden factory of the H. C. Thompson Clock Co., Bristol. The loss is estimated at about \$8,000, mostly on stock, nearly all the damage having been done by water. The building, which is the oldest in the town, and was built over 100 years ago, was insured.

Among the floral offerings at the recent funeral of Clement Clark, in Ansonia, was a magnificent one from the Wm. L. Gilbert Clock Co.'s employes in the form of a clock made of violets and roses, the hands of which pointed to the hour when Mr. Clark met his sudden death. Mr. Clark, while at work as an apprentice in the employ of the building company, lost his life in a fall from a structure which was in process of erection for the clock company.

A young buck deer made his debut in the business district of New London, Nov. 19, and performed some eccentric stunts, including a wild plunge through the front door in the jewelry store of Max Lewyant, at 455 Bank St. The deer landed in the interior of the store, which is not very large, and before Mrs. Lewyant, who was the only occupant at the time, could recover from the fright the animal had turned around and leaped out again through the hole which he had made. He was finally corralled and sent "back to the woods."

New Orleans, La.

J. Julius Weinfurter, in celebrating the 36th anniversary of his start in business, gave his friends and customers handsome souvenirs of the occasion last week.

D. A. Walter, watchmaker and jeweler, has taken a much larger building, next door to his old store in Bourbon St. The establishment has been very handsomely fitted up.

The citizens of New Orleans and of those parishes in the State which have contributed to the fund for the battleship *Louisiana's* silverware, are waiting on the Navy Department to present the service. The *Louisiana* has been used by President Roosevelt on his trip to the Panama Canal region, and it is not just certain when the ship will be free to come to this port. The silver service is meantime ready, save for a few finishing touches which can be put on in a few days, and sufficient money to pay the price necessary to insure its delivery to the committee is in the hands of the treasurer. Coleman E. Adler has the contract for the service.

GORHAM SILVER

THANKSGIVING, 1906

¶ Apart from its religious and ethical significance, Thanksgiving Day serves as a convenient reminder to progressive Jewelers that Christmas and New Year's Days are within measurable distance.

¶ Jewelers are apt to recognize that Thanksgiving Day must not find them unprepared for the demands which will surely be made upon their stocks of Gorham Silverware, when the rush of Christmas gift purchasing begins.

¶ The endeavor to repair the omissions due to lack of foresight, or under-estimation of trade conditions, must inevitably result in disappointment, inconvenience and irritation, due to the fact that the Gorham Company are unable to guarantee prompt delivery on belated Christmas orders.

¶ The remedy is an obvious one—order at once.

| Gems of the Past Century..... | 119 |

THE formal announcement last week to the effect that a prominent Pittsburg jewelry house is about to retire from business owing to the fact that it could not secure suitable quarters at a proper rental, reflects a rather unusual condition in the real estate world in the "Smoky City." A year ago a note in this journal called attention to the extremely high rentals that jewelers of Pittsburg were being forced to pay, owing to the rapid advances in property valuation, and it would seem that the condition, instead of growing better, has grown worse as it went on. The rentals are not out of proportion to the cost of the land, but in the sections which are suitable to the jewelry trade rents are so high as to materially affect normal or legitimate profits of the merchants who wish to do a conservative business.

Government Attorney's Ingenious Plea.

IN the case now on final appeal before the United States courts, which involves the question as to when assorted pearls may properly be classified as a necklace, the United States Attorney has put forth an ingenious claim in support of the contention that the pearls had been advanced in value by the assortment for necklace purposes. In brief, this is to the effect that outside of the value of the labor of assorting the pearls there is an additional cost because the gems are kept together awaiting an uncertain time at which they may be sold in bulk for the restricted purpose of a necklace; that, he declared, ties up capital which might otherwise be available if the pearls could be sold singly or in small groups for other purposes.

While presented as an argument in the United States Circuit Court of Appeals by the Government's attorney, this point should more properly be considered a question of fact to be determined by the evidence, and if the Government wishes to rely on any such contention, clear and explicit evidence to the effect that capital was tied up in the importation of collections of pearls for necklaces should have been introduced in the way of testimony by some reputable importers. As far as THE CIRCULAR-WEEKLY is able to learn, most of the pearl importers claim that no capital whatsoever is tied up in necklaces, because when a necklace as a whole will not sell as easily or as quickly as would the individual pearls, it is quite a common custom to break up the necklace and sell the pearls separately; and, in fact, as some importers clearly show, even when they have assorted and selected pearls for necklaces and have offered them as such, there is always a strong doubt as to whether the stones will eventually be used for this purpose—all depending upon the demand for the individual pearls.

It is, therefore, to be hoped that in deciding the question the United States Circuit Court of Appeals will in no way be influenced by this special plea of the Government's attorney, unless it can find somewhere in the records of the case clear evidence supporting the same as a question of fact. There are several points in the suit in question of vital interest to the trade, and the decision of the court is anxiously awaited by all classes of trade, both wholesale and retail.

Misuse of Words THE suggestion "Reconstructed" made in the last issue of THE CIRCULAR-WEEKLY that something should be done to stop the loose and general use of words like "reconstructed" when applied to imitation gems which are in no way made scientifically, or of the component materials of the genuine stones which they resemble, seems to have met with much favor in many sections of the trade, and from comments made to representatives of THE CIRCULAR-WEEKLY it seems that the practice of selling, under such names, imitation gems which have never been reproduced in any way scientifically is done on an even more extensive scale than people have any idea of; many jewelers, both wholesale and retail, have, it seems, been induced by sharpers who use the term in connection with their product to buy and sell grades of imitation stones that they otherwise would not have touched. This applies particularly to certain so-called "reconstructed" sapphires, which are nothing but glass and reconstructed emeralds which are nothing more than two pieces of quartz or aquamarine with coloring matter between the halves.

Unfortunately many retailers are not gemists, nor have they sufficient knowledge to be able to test for themselves all the stones which they handle. These people rely to a great extent on the jobber and importer with whom they deal, and when such jobbers and importers innocently or through ignorance or carelessness buy and sell as reconstructed or scientific imitation stones that have no right to the name, the fraud of which they are the first victim continues right down the line until the stones are in the hands of the consumer. Therefore, it is to the interest of the jobber, importer and retailer to identify every so-called scientific imitation of a precious stone and to prevent it being described by any terms that are misleading or confusing. The man who misrepresents an imitation of the precious stone is to be considered just as big an enemy to the trade as he who sells brass for gold or glass for diamonds. The deception is no less a fraud in one case than in the other, and the man who wilfully deceives deserves to forfeit the respect of his customers and brother merchants alike.

Jewelers' Gold Bars Withdrawn and Exchange at New York.

Week Ended Nov. 24, 1906.

The U. S. Office reports:

| | |
|--|--------------|
| Gold bars exchanged for gold coin..... | \$506,806.62 |
| Gold bars paid depositors..... | 86,153.20 |
| Total..... | \$592,959.82 |

Of this the gold bars exchanged for gold coin are reported as follows:

| | |
|--------------|--------------|
| Nov. 19..... | \$164,897.07 |
| " 20..... | 78,709.13 |
| " 21..... | 62,571.30 |
| " 22..... | 82,084.23 |
| " 23..... | 41,354.52 |
| " 24..... | 77,190.37 |
| Total..... | \$506,806.62 |

Henry Birks & Sons, Montreal, Que., have completed arrangements for taking over one of the oldest establishments on the Pacific coast, that of Geo. E. Trorey, Vancouver, B. C. The concern will then have a chain of five stores in Montreal, Toronto, Ottawa, Winnipeg and Vancouver.

BUYERS OF DIAMONDS

Put your money

and get your customers to put their money in **DIAMONDS**—no better investment to-day.

Prices in the Diamond market are advancing, but **OUR PRICES HAVE NOT BEEN ADVANCED** in some time. We still have a large collection of superb Diamonds which we bought a considerable time ago at lower prices than prevail to-day.

We shall not advance prices on these stones. We are merchants and not speculators and our fair percentage of profit is all we ask. So, as long as these Diamonds last, it will be possible to buy them here under the regular market for fine stones.

Optical Notes and Briefs.

The Chinn-Berretta Optical Co., 1557 Van Ness Ave., San Francisco, Cal., has added a new plate glass show case, with marble base.

A new optical store was opened last week on Sutter St., near Van Ness Ave., San Francisco, Cal., under the name of Kaufman's Optical Co. The store is equipped with every modern optical appliance.

Henry Kahn & Co., opticians, San Francisco, Cal., have secured the services of E. A. Benson, president of the California College of Optometry. This company has also added to its force J. E. Shafer, as salesman.

M. C. Kenney, for the past six years with M. E. & A. M. Kenney, opticians, Utica, N. Y., has resigned his position to go on the road for a concern in Pennsylvania. Upon his resignation Mr. Kenney was presented by the firm with a handsome leather satchel case.

The Washington State Association of Opticians held its annual meeting in Bellingham, Wash., recently, with an attendance from various parts of the State. A banquet was given at the Hotel Byron. The officers of the association are: President, I. Capps, Seattle; vice-president, L. I. Breen, Bellingham; treasurer, Charles G. Hacon, Seattle; secretary, G. A. Lembke, Tacoma.

New York Notes.

Aaron Bros., 14 Maiden Lane, are out of business.

John Hicks, Long Branch, N. J., recently sold his building lot on Belmont Ave.

L. Barnett, 469 5th St., Brooklyn, recently opened a jewelry store at 114 Livingston St., in the same borough.

Ladd & Co., who were located at 5th St. and Jackson Ave., Long Island City, L. I., have gone out of business.

Wilfred Buckley, of Samuel Buckley & Co., 100 William St., sailed last Wednesday for London on the *Baltic*.

Asher Green, with M. J. Averbeck, 18 Maiden Lane, returned last week from an extended southern trip of several months.

J. Philips, who was traveling salesman for R., L. & M. Friedlander, 30 Maiden Lane, is no longer connected with the house.

Joseph E. Judels, now with H. Z. & H. Oppenheimer, will on Dec. 1 enter the employ of H. A. Groen & Bro. as a city salesman.

Edward C. Wineburgh, a traveler well known in the northwest, was a visitor this week at the office of THE JEWELERS' CIRCULAR—WEEKLY.

Joseph Guntzberger, with his father, Isidore Guntzberger, 11 John St., is confined to his home as the result of a nasal operation, and on his recovery will go to Europe.

Dr. George F. Kunz, of Tiffany & Co., delivered an address last Saturday afternoon at the unveiling of the tablet marking the site of McGowan's Pass Tavern.

Leo Heilbrun & Bro., who were at 25 Maiden Lane, New York, have discontinued business. Leo Heilbrun is at present with Fred Kaufman & Co., 565 Broadway, New York.

Circulars have been sent out in the last week to stockholders of the Gorham Mfg. Co., stating the condition on which they may subscribe for the stock of the Silverware Stock Co.

Detectives are trying to find a quantity of jewelry bearing the Tiffany trade-mark, which has been stolen, it is said, from one of the company's customers, who bought the articles a short time ago.

In the report of the Republican State Committee, made public last week, the list of contributions to its campaign fund includes \$500 from the Jewelers' Roosevelt Fairbanks Republican Club.

A number of cups are being made by the F. Monroe Co., 28 Barclay St., for the honor of the *Rudder*, and will be offered as trophies at coming boat races. One cup will cost \$1,000 and four others will cost \$250 each.

Charles Crogan and Wm. J. Rincaid, both of Jersey City, who were selling 10-cent articles as jewelry at Perth Amboy, were arrested last week and sentenced to 30 days each in the county jail on the charge of intoxication.

A large plate glass window in the store of Wolfsheim & Sachs, 40 Maiden Lane, was broken Monday evening by the shaft of a truck wagon which had been standing in front of the store. Another wagon ran against the truck, forcing the horses and shaft against the glass.

The Sterling Jewelry Co., which was recently incorporated to manufacture and deal

in jewelry, has opened a store at 54 W. 34th St. Jacob Perlin is the president of the company, and Wm. H. Simons the secretary. Mr. Simons was formerly located at Columbus, O., as a member of the Simons Optical Co.

Charged with breaking a show window in the store of Price & Rosenbaum, Brooklyn, and stealing a quantity of jewelry, a young man named Charles Neal, of 493 Lorimer St., was last week held in \$500 bail for Grand Jury. It was said that he had stolen the jewelry for the purpose of giving it to a young woman, who did not know that the gifts were stolen.

London reports recall the death of Ernest Schwabacher, the chairman of the Vaal River Diamond Co., who, on being confronted with bankruptcy, last February, committed suicide. His creditors, to whom he owed £100,000, had a lien on his shares in the diamond company. These shares have advanced rapidly in value since his death, and are now said to be worth more than £500,000, so that he was on the verge of wealth when he killed himself.

Its 16th annual masquerade and civic ball will be given Thursday evening in the Yorkville Casino, 86th St., near Second Ave., by the Watchmakers and Jewelers' Benevolent Association. It is expected that there will be a large attendance of the members and their families and friends. The officers of this association are: President, L. Lewis; 1st vice-president, H. Berkowitz; 2nd vice-president, J. Goldes; treasurer, J. Shapiro; recording secretary, P. Salias; financial secretary, M. Slavitt; sergeant-at-arms, A. Spandorfer; trustees, P. Hersh, A. Schwarzbach, J. Rainess. The ball committee comprises J. Goldes, M. Bolotin, P. Hersh, M. Kameron, J. Rainess and L. Klein; floor manager, Max Kleinman.

William Zeckendorf, who had interests in the jewelry trade and was the father-in-law of Jules Asheim, 37 Maiden Lane, died Thursday last in his home at Far Rockaway, L. I. He was a native of Hanover, Germany, where he was born June 5, 1842. At the age of 14 he came to New York. For many years he was engaged with his brothers Aaron and Louis, in the general mercantile business in Santa Fe, N. Mex. During the Civil War Mr. Zeckendorf distinguished himself as a lieutenant in the Kit Carson regiment of volunteers. In 1891 he retired from business and since has devoted much of his leisure to the problems of chess, having been a member of the Manhattan Chess Club. He is survived by a widow, one son and two daughters.

When Mrs. Margaret F. Pastorfield was arraigned recently in the Jefferson Market Court on the charge of forgery, Assistant District Attorney Krotel asked that the charge be changed to bribery. Mrs. Pastorfield is the woman who tried to sell for \$100,000 a crucifix with a carving which she said was the work of Michael Angelo. The woman's lawyer submitted letters to show that his client was out of her head at times. Mr. Krotel charged that this was an attempt to evade justice, and said that there have been too many efforts of late to save prisoners charged with crime by saying that they were insane. He cited the case of Charles M. Pope, who was sent to Bloomingdale after being arrested on the charge

of converting a quantity of jewelry which he had obtained on memorandum from Frederick Keim.

In the case of Manuel Suarez, of the United States of Colombia, whose emeralds were seized several months ago by customs authorities because he did not declare them on his arrival at New York, the question of forfeiture is to be tried, it is expected, during the December term of the United States District Court. Assistant United States Attorney Dennison has taken charge of the proceedings. The criminal case, which began directly after the seizure, was afterward discontinued, pending the trial of the civil issue in which the question is as to the right of the Government to retain and sell the stones. The defense claims that there was no intention of violating the customs law, and that the failure of Mr. Suarez to mention the emeralds in his declaration was due to his ignorance of the requirement, and the fact that he did not understand the language of the inspectors when they asked him about his baggage.

Invitations to the sixth annual dinner of the 24 Karat Club of New York, to be held at Delmonico's Friday evening, Jan. 25, were sent out this week by President Leo Wormser and the dinner committee. The attendance will be limited to 300, and seats will be assigned in the order in which subscriptions are received. Members are expected on receipt of the invitation to notify the committee of the number of tickets they desire. A change is to be made this year in using long instead of small round tables, and this will permit, it is expected, an improvement in the service. The entertainment committee is making preparations to introduce novel and pleasing features. A trip to Washington will be made at the opening of Congress in the first week of December by the speakers' committee, which expects to arrange for addresses by several men of national prominence. The dinner committee, to which application for tickets may be made, is composed of Chas. F. Brinck, Wm. T. Gough, David Kaiser, Wm. H. Kinna and Harry C. Larter.

Imitation sapphires and emeralds were offered to a number of people in the trade in the last week at \$1.25 to \$3 a carat under the representation that they were reconstructed stones. The seller was a resident of Paris and represented a house of that city. According to his talk, he sold considerable quantities of the imitation stones. One of the wholesale dealers to whom the Parisian tried to make sales questioned whether the stones had a right to any title except that of glass imitations. The New York dealer offered to buy a quantity if the seller would give a memorandum describing the articles as "reconstructed" stones. This the Parisian would not do. While he called the stones "reconstructed" in his oral representation he was not willing to put his claim in writing. The New York dealer, who is acknowledged to be an expert in his knowledge of precious stones and imitations, said that from his cursory examination of the articles he was left in little doubt that they were made altogether of glass or paste. He said that presuming that the imitations are glass the seller was obtaining prices far too high if he sold them at the figures mentioned.

The Greatest Improvement Ever Made
in a Chafing Dish.

Pure, clean, durable. It is constructed that food can come in contact with the Ivory Enameled Dish. The top rim being plated, the complete Chafing Dish has the same appearance as when made entirely of metal.

"METEOR" CIRCULATING Coffee Percolator

Over 100 Styles and Sizes

In making coffee, there is one way to secure the full flavor, and that is by using Meteor Circulating Coffee percolator. With it you are always assured the most delicious coffee possible and in a remarkably short time. In boiling coffee you develop its harmful properties and right here is the secret of the "Meteor."

The coffee is never boiled. The grounds never enter the reservoir containing the pure filtered coffee. Not only does the "Meteor" produce the purest and most healthful coffee but it actually

SAVES ONE-THIRD in the amount of Coffee Used.

Equally desirable for Tea

News Gleanings.

Anderton & Son, Dayton, O., are selling out their stock.

J. C. Walton, Fort Worth, Tex., has sold his stock to a Mr. Ballew.

Weber Bros., Lancaster, Wis., have added an optical department.

O. D. Johnson, Wenatchee, Wash., has considerably enlarged his store building.

F. M. Durgin, Kemebunk, Me., is on a hunting trip in the northern Maine woods.

The J. Herbert Hall Co., Pasadena, Cal., recently added new fixtures and a new store front.

George L. Bannister, Los Angeles, Cal., has just completed improvements in the interior and exterior of his store.

Julius Lehman has bought an interest in E. Carlson's business, Ashland, Wis., Carlson & Lehman being the new firm name.

Wm. J. Adler, 1625 Board Walk, Atlantic City, N. J., will, in a few days, open a new store at the next square, farther town.

The stock of C. F. Askins, bankrupt, Shekopi, Wis., was disposed of at auction, Nov. 21, by order of the bankruptcy court.

E. N. Whitcomb, Berlin, N. H., has been on a hunting trip, and returned with two deer and a fine black bear as trophies of his hunt as a marksman.

I. G. Timpane, now located at St. John and Rensselaer Sts., Cohoes, N. Y., about Jan. will remove his stock to a building which he recently purchased.

C. H. Harris, optician, and H. W. Johnson, a jeweler of Chattanooga, Tenn., have formed a partnership and begun business at E. 8th St., under the name of Harris & Johnson.

Evans & Sons, 32-34 Columbia St., Utica, N. Y., recently had on exhibition the handsome jewel presented to Right Worshipful Wm. W. Johnson, district deputy grand master of the 26th Masonic District, by Masonic friends in Utica.

Henry De Winstanley, a jeweler of Glens Falls, N. Y., who mysteriously disappeared some time ago, was heard from for the first time about a week ago, his wife having received a letter which stated that he is in Texas. De Winstanley is believed to be residing with a brother near Dallas, Tex.

A. S. Haskins and Dr. W. B. Fitch have changed rooms in the Belknap block, on Railroad St., St. Johnsbury, Vt., and Mr. Haskins is back in the south store, which has been remodeled. Mr. Haskins will divide his time between the store and his optical work, to which he will give his personal attention.

Dr. G. Moritz, who now occupies the store at the southeast corner of 7th and Cust Sts., St. Louis, Mo., with a stock of optical goods, has effected a lease of the store being built in a portion of the old Grand-Leader building, 607 North Broadway, for 10 years and eight months at a rental of \$4,500 a year.

It was erroneously reported in the issue of THE CIRCULAR-WEEKLY of Nov. 21, that the business of the late Henry N. Prill, Bedford, Pa., had been disposed of at auction. This report, received from a Penn-

sylvania exchange, is without foundation, as the business will be continued as usual. The executrix of the estate is Miss Amelia Prill.

Eighteen members of the recently organized Detroit Jewelers Board of Trade attended the regular monthly meeting at the Griswold House recently. The meeting was preceded by a supper. It is planned to make these suppers a regular feature of the meetings in the future, in order to promote a feeling of good fellowship.

Benjamin F. Carlen, a watchmaker, located at 8 Congress St., E., Detroit, Mich., has been made the defendant in a suit brought by Mary A. Esser, for the recovery of four silver pins which she alleges Carlen lost. The watchmaker offered to settle by paying her 25 cents each for the pins, but the woman declared that they were valued at \$5 apiece, and consequently demands \$20.

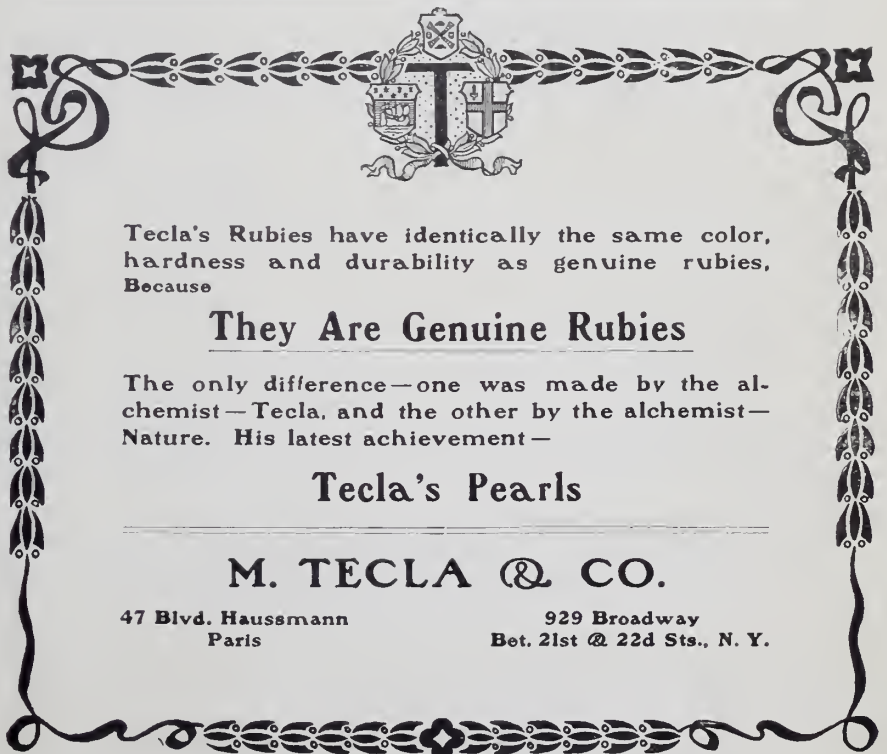

Efforts are being made to locate William Ashton Sharman, formerly of Leek, Eng., a working jeweler, who in 1902 was employed at his trade in Mobile, Ala., and it is stated that he will hear of something to his advantage by communicating with J. P. Fellowes-Smith, Leek, England. Anyone giving information which will lead to the tracing of Mr. Sharman will be suitably rewarded by Mr. Fellowes-Smith.

Consular Agent Frank Graham, of Christchurch, and Consul-General William A. Prickett, of Auckland, have made excellent detailed reports on the New England International Exhibition, which opened Nov. 2. This exposition is the most important one ever held in Australasia. It covers 14 acres, and the cost of the main buildings is estimated at \$500,000, though the entire expenditures before opening were probably three times that sum. All nations were invited to exhibit, and it is much to be regretted that American manufacturers did not respond to the 7,000 copies of the official

notice which were sent to representative firms in the United States.

The officers of the Brown Jewelry Co., Winston-Salem, N. C., against whom an involuntary petition in bankruptcy was recently filed, were: C. M. Brown, president; R. C. Click, vice-president; W. N. Poindexter, secretary and treasurer. These were also the incorporators of the company when it was formed early this year. The concern had an authorized capital of \$10,000, of which \$3,000 is claimed to have been paid in. Mr. Brown, the president of the company, was formerly in business at Abbotts Creek and High Point, and in 1891 came to Winston-Salem. In January he transferred his stock to Mr. Poindexter and the company was incorporated. Mr. Click and Mr. Poindexter are prominent merchants of that section, and connected with several big corporations.

After eluding the police and detectives for over a year, Ralph E. Bunker, charged with the larceny of over \$900 worth of jewelry from the Castellberg National Jewelry Co., Baltimore, Md., was arrested in Illinois, and brought back to Baltimore, last Thursday. Burke was employed as a salesman by the firm and it was on Nov. 13, 1905, that he walked out of the store with his sample case and never returned. A picture and description of the fugitive was sent broadcast, but he was successful in his flight until arrested in Illinois for horse stealing. His picture taken there was sent to the local detective department and it was then his identity was established. The Fidelity & Deposit Co., his bondsmen, sent Detective Spandauer there with requisition papers to bring him to Baltimore for trial. When arrested he gave the name of Edward A. Ebbitt, and told a pitiful story, but when confronted with the facts admitted his identity. An additional charge has also been registered by the Gay St. Novelty Co., of Baltimore.

Tecla's Rubies have identically the same color, hardness and durability as genuine rubies, Because

They Are Genuine Rubies

The only difference—one was made by the alchemist—Tecla, and the other by the alchemist—Nature. His latest achievement—

Manufacturers and Jobbers. Complete Material Department

373 WASHINGTON STREET,

BOSTON, MASS.

Providence.

B. A. Ballou, of B. A. Ballou & Co., Inc., is in Europe on a vacation trip, accompanied by members of his family.

Friends of Marcus W. Morton, secretary of the Manufacturing Jewelers' Board of Trade, will be pleased to learn that he is recovering from an attack of pleurisy.

Water accidentally left running in the building occupied in part by the Weybosset Jewelry Co., 219 Weybosset St., caused some little damage in one of the offices one night last week.

John McCaffrey, a jeweler employed by one of the Eddy St. concerns, had the index finger of his right hand crushed while at work one day last week. His injury was dressed at the Emergency Hospital.

The first meeting of the creditors of Albro & Kettley, who recently went into bankruptcy, was held last week at the office of Referee in Bankruptcy Barrows; E. C. Stiness was elected trustee, with bond of \$300.

Michael H. Barrett lost his suit for \$10,000 damages against the Brown & Sharpe Mfg. Co. He asked for this amount of damages for injuries he claimed to have received as a result of molten metal splashing upon him from a ladle. The court held that he had not exercised due care and had no proof of negligence by the company had been shown.

Following the announcement of the sale of his interests by Mr. Loeb came the incorporation last week of a concern to be known as the William Loeb Co., the incorporators being Louis Lyons, Stephen S. Donnell and John Doran. As was foreshadowed in last week's announcement, Mr. Loeb allows the continuance of the use of his name in connection with the concern. The latter is formed for the purpose of engaging in the business of manufacturing, buying and selling jewelry, jewelry trays and display stands and the amount of capital stock is \$100,000. Mr. Lyons had been associated with Mr. Loeb for some time and Mr. Donnell has for a number of years been foreman for Mr. Loeb.

Charles Genett, a jeweler in the employ of the Bassett Jewelry Co., was arrested, last week, charged with the theft of metal scraps from the company by which he was employed. He was adjudged guilty, when arraigned in the Sixth District Court, and was sentenced to 30 days in the Providence County Jail. He was detected as a result of the ringing of a burglar alarm connected with the company's safe. Another warrant was sworn out against him Saturday, charging him with having diverted the current of electricity supplied by the Narragansett Electric Lighting Co. What disposition will be made of this case remains to be seen. The value of the scraps which Genett is alleged to have stolen was fixed by the warrant as \$2.50. It is believed, however, that he had abstracted more than that amount.

Burglars who recently broke into the retail jewelry store of W. W. Wormood, Duquaque, Ia., escaped with six gold watches and 14 gold medals, which Mr. Wormood had won as prizes for his marksmanship in various parts of the country.

North Attleboro.

G. Herbert French and wife are spending a few weeks in Washington.

Frank C. Whiting returned last week from a trip for Whiting & Davis.

W. G. Clark & Co. are working until 7 p. m.; George Robson & Co. work until 9.

Louis Blackinton, coast representative of the W. & S. Blackinton Co., is at the factory.

A big clock will adorn the outside of the new factory that the H. F. Barrows Co. is building at Chestnut and Washington Sts.

John E. Tweedy, Orin W. Clifford, Edward A. Cummings, Daniel Chisholm, Elton B. Fisher, Fred B. Brigham and Louis D. Barrows enjoyed an automobile ride to New Haven last Friday to attend the Harvard and Yale football game.

All firms located in the Totten building were idle for three days last week. The accident to the engine mentioned in last week's issue was more serious than at first anticipated, and it was late Tuesday afternoon when the power was again furnished.

The conviction of William Bebeau for stealing the payroll of G. H. Webster & Co. has led to quite a number of applications for the reward of \$500 offered by Mr. Webster. The police of North Attleboro, Pawtucket and several outsiders have entered claims for the money.

The power in the Company Shops stopped for a half hour last Friday. One of the employes, whose duty it was to clean machinery, crawled into a covered run through which power is transmitted to other buildings and fell asleep. His head was within several inches of the belting and it appeared as if only a miracle preserved his life. The power was shut off and the man was dragged to a place of safety.

Attleboro.

The Cohannet Silver Co., Taunton, has increased its floor space to handle the rush of holiday orders.

The James E. Blake Co. believes a shipment of silverware it sent to a San Francisco concern last week will rank among the largest ever sent from the east. The express charges were \$160.

An effort is being made to secure the signature of every jewelry manufacturer to the petition to Congress for a new post office building. Many improvements in both postal and express service are urgently desired.

Hon. S. O. Bigney, of S. O. Bigney & Co., personally started last week the erection of his new factory, County and Wall Sts. He cut down two trees and turned the first spadeful of earth. The new structure will be shaped like a letter "L," the short arm facing County street, the long section running back at right angles to the street. The short arm will join the façade of the present Bigney factory, making it that much longer. The long section will run back parallel to the two long wings of the present structure. S. O. Bigney & Co. will occupy the greater part of the building, which will be of brick and have four floors.

S. B. Bailey, Los Angeles, Cal., has just added a new front to his store.

Boston.

The Passmore Gem Co. has added a repair department, in charge of William A. Kelley.

Henry Cowan is on a business trip through New York State and the Lake region.

H. L. Gruber, formerly at 355 Washington St., has removed to the Jewelers' building, Room 74.

Harry J. Ogden has moved from 384A Washington St. to the Washington building, Rooms 713-714.

Pinkham & Smith, opticians, 288-290 Boylston St., have established a branch store at 13½ Bromfield St.

Buyers in town during the week included A. E. Gornsey, Sanford, Me., and A. E. Muzzey, South Berwick, Me.

Henry W. Langlan, formerly engraver for Bigelow, Kennard & Co., has taken quarters in the Washington building as general engraver for the trade.

In the Court of Probate and insolvency, Friday, the assignees in the case of Herbert W. Richards were instructed to make the final payment in settlement with creditors. It is anticipated that about two per cent. will be disbursed. The previous payments were 40 per cent.

Marshall P. Thompson, who has been appointed receiver of the T. F. Tuttle Silver Co. in proceedings for a voluntary dissolution of the concern, as noted last week, has notified all creditors to present itemized claims to him at the earliest possible moment at 31 State St., this city.

The E. Howard Clock Co. is installing two master and 65 subsidiary clocks in the Normal and Latin group of Boston schools. There will be a four-dial tower clock also on one of the buildings. The company has just placed 30 clocks in the DeWitt Clinton high school, New York City.

J. F. Brown, a Cambridge jeweler, located near Harvard Sq., reported to the police, last Saturday morning, the theft of a fine Howard watch movement, taken by a thief of good address, who grabbed it and made good his escape while negotiations for a case to fit the movement were in progress.

The clock on Park St. Church, known as "Brimstone Corner," one of the most conspicuous tower timepieces in Boston, which has been out of commission for several weeks, has been restored by the E. Howard Clock Co. to its usual condition of reliability, much to the gratification of thousands of citizens.

The Federal Census Bureau last week issued a report showing it found one blind jeweler, 11 deaf jewelers and 18 deaf clock and watchmakers in the country at the time of the last census. It did not say where the blind man was located.

The Paris *Figaro* tells of some curious clocks. First is the one on the "Petit Palais," whose hands have not moved for six years. The dial still shows the hour of 10 minutes past 6, the time of the closing of the Exposition. On an old house in Paris is a clock beneath the dial plate of which the pedestrian who glances up to see the time reads the inscription, "Wanderer, it is far later than you think!"

Ball's Official Standard R. R. Watches

WHAT WOULD YOU GIVE FOR A LIFELONG CUSTOMER?

Try this plan:

Sell your next watch customer a "Ball."

Its reliable performance will convince him you are a dealer to be depended on—he'll keep coming back for other things.

The watch will win you his business and friendship for always.

Write for booklet, and watch this space.

We want to add a lot of new friends to the Ball family of railroad watch dealers.

CHICAGO, WEDNESDAY, NOVEMBER 28, 1906.

No. 17.

Chicago Notes.

Benjamin Shindles has opened a jewelry store at Oglesby, Ill.

Frank Hough, with Mount & Woodhull, is in this city last week.

A. M. Robertson, of C. M. Robertson & Co., is making a trip in the southwest.

F. H. Nelson, of the Watson & Newell's Chicago house, is in from his Fall trip.

Al. Paulson is now on the road for Henry Paulson & Co.'s San Francisco branch.

W. S. Sparrow has returned from a month's hunting trip to New Brunswick, Canada.

Holsman & Alter are now working until 5 p. m. on weekdays and half a day on Saturdays.

A. M. Dueber, of the Dueber Watch Case Co., Canton, O., visited the Chicago trade last week.

James Burke, of the Brooks Jewelry & Optical Co., St. Louis, Mo., was in this city recently.

H. M. Carle, of the Keystone Watch Case Co., made a trip to St. Louis and Kansas City, last week.

A. W. Levy, of the Chicago office of Iron L. Strasburger & Co., is making a trip to St. Louis.

Charles H. Tew, with the E. Howard Watch Co., passed through here last week on his way to the northwest.

S. Randall, formerly of Muscoda, Wis., is in this city recently. He has about decided to locate at Moline, Ill.

W. A. Moore, Jr., has severed his connections with Alfred H. Smith & Co., to enter another line of business.

O. R. Helmstein, who has a store at La Grange, a suburb of Chicago, has opened another store in the suburb of Berwyn.

Archie Tegtmeyer, who was formerly at 4 Grove St., Milwaukee, Wis., opened his new store at 392 National Ave. on Nov. 20.

Mrs. E. C. Draper, St. Anne, Ill., has moved her store to Rochester, Ind. Mrs. Draper was in this city recently, adding to her stock.

P. H. Winterberg, with Sproehle & Co., is in from a trip for a few days last week. He leaves this week for his last trip for the season.

The family of Walter Stevens, who represents the Bay State Optical Co. in Chicago, has been increased by the arrival, last week, of a girl baby.

Dr. Harry Weber, formerly manager of the Pittsburg store of Loftis Bros. & Co., is now with the instalment jewelry house of Jones & Dreyer, this city.

John Erickson was recently in this city, getting together a new stock of goods for his store at Mapleton, Ia. Mr. Erickson formerly had a repair store at Lake View, Ia.

C. F. Steiner has sold his store at Madison, Nebr., to A. G. Clang and bought out J. E. Smith at Albion, Nebr. Mr. Steiner was recently in this market, replenishing his stock.

N. B. Goldstein, formerly jewelry buyer for the Jones Dry Goods Co., Kansas City, Mo., is now jewelry buyer for the Boston Store, Milwaukee, Wis. The department is owned by Stone Bros., this city.

J. S. Mayer, representing the Mauser Mfg. Co. here, will go to the factory at Mt. Vernon, N. Y., for the month of December to meet the trade. He will make a short stop at Detroit on his way there.

The Keystone Watch Case Co., the Crescent Watch Case Co. and the Philadelphia Watch Case Co. will remove from their present several quarters to a suite of rooms on the 10th floor of the Heyworth building about the first of January.

The suit of the International Silver Co. against Samuel Lyons in the United States Court, before Judge Landis, was continued from last Thursday to Monday of this week. A jury has been selected and sworn and the testimony will be heard this week.

A man answering to the description of Albert Raymond, alias "One Armed," was arrested here last week for being connected with the attempted robbery of B. J. Hagamann's jewelry store. As Mr. Hagamann failed to identify him the suspect was discharged.

A decree for separate maintenance was granted to Mrs. Helen Hobbs by Judge McEwen on Wednesday from John G. Hobbs, retail jeweler, at 437 47th St., who was accused of cruelty. Mrs. Hobbs was given the custody of their son, Morris, 14 years old.

Delia Paltrovitch, wife of Victor Paltrovitch, of the Victor Watch & Jewelry Co.,

this city, died Nov. 22 at her home, 4244 Vincennes Ave. The funeral services were held at the family residence, 4244 Vincennes Ave., Sunday. The interment was at Isaiah Cemetery.

At the regular monthly meeting of the Chicago Jewelers' Association Nov. 26, it was decided to have the annual banquet in January. The entertainment committee, composed of Lem W. Flershem, A. L. Sercomb and M. A. Mead, will decide on the date and arrangements.

Almer Klein, son of F. C. Klein, of F. C. Klein & Bro., has completed his studies at Oberstein Idar, Germany, and is now a full-fledged precious stone and diamond cutter. He has spent a year and four months at his trade and will reach home by Christmas. Oberstein is the native town of F. C. Klein.

For the third time in so many months the jewelry store of S. J. Trocky, 167 S. Halstead St., was robbed last week, this time by two thieves aided by a small boy. They secured jewelry in the display window valued at \$200. A heavy cobblestone, wrapped in a newspaper, was used to break the glass. The burglary occurred at about 2 o'clock in the morning.

A package of jewelry sent by F. & F. Felger, Newark, N. J., valued at about \$500, to S. K. Huston, Heyworth building, was missed by the drivers of a Wells, Fargo Co. express wagon one morning last week. The man in charge of the wagon saw the package just a short while before he missed it, as he was delivering a package at the Columbus building. Detectives are making a search for the stolen jewelry.

Louis Rieger, 52 years old, died here recently after an illness of four weeks. He was, at the time of his death, foreman of the shop of Schrader-Wittstein Co., where he had been employed for several months past. Mr. Rieger was known among the trade in this city and, previous to his employment with the Schrader-Wittstein Co., was foreman of the Aurora branch of Wilson & Co. Some eight years ago he was in partnership with A. L. Williams, under the firm name of the Rieger-Williams Co.

Otto H. Marquardt, 168 Cullom Ave., this city, filed his voluntary petition in bankruptcy in the United States District Court last week, in which he scheduled lia-

ALL QUOTATIONS SUBJECT TO 6 PER CENT. DISCOUNT ONLY

ties amounting to \$71,975 and assets as of Oct. Mr. Marquardt was formerly president of the Marquardt & Scott Co., in the Main Building. The firm was forced into bankruptcy nearly two years ago and paid 50 cents on the dollar. Creditors of the firm are said to have pressed Marquardt in an effort to get the balance, and in order to absolve any personal obligation he filed a petition.

Louis Weber, the senior member of the department store of Louis Weber & Co., died here Wednesday, of heart failure. He was stricken while at his desk in his store. A physician was summoned and Mr. Weber was taken to his home, 4354 Grand boulevard, but died shortly before reaching there. Mr. Weber has been in business in Chicago for over 40 years, having come from Germany. He has always been identified with charities and was a supporter of the Michael Rees Hospital. A widow and eight children survive him.

Marcus Spronz, who has been selling jewelry around town for the past 12 years, was held up several days ago at 5 o'clock in the evening as he was waiting for a car. He was struck on the jaw by the butt end of a revolver and otherwise suffered injury. His assailant made away with his satchel containing jewelry valued at \$1,600. The robber overlooked Spronz's small case containing considerable diamond jewelry. Spronz's trade is principally among grocery stores in the outlying districts and is well thought of among the trade. This is the second time he has been robbed.

The following buyers were in the city during the past week: R. W. Rastall, Traverse City, Mich.; R. E. Lincoln, Plano, Tex.; Mr. Bunde, of Charles A. Gossard, Washington Court House, O.; Mr. Flegel, of the Flegel Jewelry Co., Racine, Wis.; Mr. and Mrs. A. O. Elliott, Savanna, Ill.; L. Marsh, Ft. Dodge, Ia.; O. G. Johnson, Florence, Wis.; Mrs. M. E. Bowley, Moline, Ill.; J. R. Losey, Plymouth, Ind.; W. Ford, Freeport, Ill.; E. L. Thayer, Rockford, Ill.; C. J. Linden, Kankakee, Ill.; George N. Conklin, Marquette, Mich.; Ed. A. Marean, Belvidere, Ill.; Carl I. Sepsion, Moline, Ill.; Charles Eustis, of Curtis Bros., Minneapolis, Minn.; F. A. Appeland, Elgin, Ill.; C. W. Hotchkiss, Edmore, I. T.; M. N. Berg, Duluth, Minn.; Joseph Wellstein, Milwaukee, Wis. The meeting of the Manufacturing Jewelers' Association of Chicago, held here Nov. 19, was attended by all the members as well as a few invited speakers. An important movement was started at this meeting, which is to affiliate with the other associations of manufacturing jewelers in all the large cities of the United States. This association has already been assured of the co-operation of the associations in Buffalo, New York, Providence and Newark in the east; also of those in Cincinnati, Louisville and Milwaukee. The members of the local association are pleased that they should have taken the initiative in this movement, ascribing it to the fact that they were successful in curbing the strike which threatened them a few weeks ago. While the proposed national organization is not for the sole purpose of dealing with labor troubles, yet the principle of thorough preparedness undoubtedly applies. The next

meeting will be held in January, at which time the national organization will be perfected and a general policy decided upon.

Toledo, O.

The Toledo Cut Glass Co. is occupying several downtown store windows to display its line of holiday goods.

E. D. Libbey, head of the Libbey Cut Glass Co., of this city, has just given the Toledo Museum of Art several fine masterpieces from the concern's factory.

J. G. Kapp, 415 Summit St., who a member of the Toledo Board of Education, is an active candidate for member of the Board of Directors of the Lincoln Club, of the city.

Uncle Sam has been having considerable trouble of late with his clocks in the local Government building. Several times during the past few days they have "gone on a strike" and a visit to the jeweler's shop has only resulted in temporary relief. Through them Col. George W. Waldorf, custodian of the building, has been made the butt of numerous jokes, and several theories have been advanced to account for the stopping, but the erection of an addition to the building, which has occasioned considerable jarring, seems to hold the secret.

Peoria, Ill.

TRADE CONDITIONS.

Holiday business in Peoria, Ill., is picking up very briskly and from present indications should surpass all previous years.

Ed. Miller is now with Henry Meyer, 1317 S. Adams St.

Mr. Field has opened a jewelry store at 309 S. Adams St., in the building formerly occupied by the old establishment of J. C. Weiting.

Mr. Weisser, formerly of the Goldstein-Weisser Jewelry Co., has just opened a handsome store at 205 S. Adams St. under the name of the Weisser Jewelry & Optical Co.

F. J. Bahni, formerly with the Bradley Polytechnic Institute, has started in business under the name of F. J. Bahni & Co., as manufacturing jewelers, at 117-119 S. Adams St., in rooms 10 and 11. Frank Sehnert, formerly with C. L. Crawford & Co., has accepted a position with Mr. Bahni, as has Paul F. Stephenson, for the past five years with S. Lazarus, Chicago.

Columbus, O.

Milton B. Terrell, who calls himself "The Irish Pawnbroker," has opened a pawnshop and jewelry store at 20 E. Town St. His store is a neat one and his stock well selected and much better displayed than the usual store of its kind.

The White-Haines Optical Co. has leased new quarters for its wholesale department on the second floor at the southwest corner of Long and High Sts. The business outgrew the quarters at 72 N. High St. The retail business will be continued at the latter location in charge of Mr. Haines, and Mr. White will have charge of the wholesale department.

Pacific Coast Notes.

O. M. Stone, Mendocino, Cal., spent several days in San Francisco, recently, buying stock.

G. W. Robbins has just moved to new quarters in the Highland Park building, Highland Park, Cal.

W. C. Talcott, Anaheim, Cal., has decided to close his store and make an extended tour of the continent.

F. E. Wolfarth, Covina, Cal., is putting in additional fixtures and arranging for a better display of his stock.

A man was recently arrested at Oakland, Cal., who gave the name of G. A. Culvert. He is suspected of having robbed one or more jewelry stores. The police found on him a number of diamonds, watches, medallions, lockets, etc.

Manson & Bay announce an alteration sale at their store in Redlands, Cal. While the alterations are under way the firm will occupy temporary quarters in an adjoining building. When the changes are completed the house will have about twice as much store space as at present.

A. F. Dobrowsky, Redding, Cal., has written a personal letter to the Chief of Police, asking him to search for one Rudolph Hecevary, who, the jeweler alleges, rented a shotgun from him, entered a house and stole a pair of solid gold link cuff buttons. The description of the man is light-brown pompadour hair, heavy face, five feet, six inches, in height. He is 33 years of age.

Denver.

C. R. Brasier, Los Angeles, has resumed his position with Joseph I. Schwartz, at 918 16th St.

Word was received here, last week, of the death of Oscar Parker, Colorado Springs.

Walter W. McCausland, Attleboro, Mass., is spending a few days in this city looking for a location.

Colonel J. D. Lewis passed through this city on his way to his mountain ranch at Sedalia, Colo., last week.

Rufus E. Hawkins, with the Edward Lehman Jewelry Co., has returned from his trip through the northwest.

The Manufacturing Jewelers' Association of Denver at its last meeting considered the advisability of entering the national organization.

The Lewis Jewelers' Supply Co. has leased the entire third floor of the Arapahoe building. The concern will be in its enlarged quarters by Dec. 1.

Joseph I. Schwartz is planning extensive alterations for his store. New fixtures are being installed and all the decorations will be finished before the holiday rush.

Out-of-town jewelers in this city, last week, included: C. A. Beghtol, Canon City, Colo.; J. Freshman, Cripple Creek, Colo., and W. F. Hankins, Kremmling, Colo.

J. C. Bloom & Co. have found a trace of William Fleishman, who disappeared last Summer, with a quantity of stock belonging to several Denver jobbers. He has been located in Missouri and it is expected that he has been arrested by this time.

SWARTCHILD & CO.

138 Wabash Avenue

CHICAGO, ILL.

Watchmakers', Jewelers' and Engravers' Supplies.

ESTABLISHED 1870.

Our new 432 double-size page catalogue containing 20,000 illustrations will be sent to you gratis (prepaid) on application.

FEATURES

"BLACK SHIELD" MAINSPRINGS are packed in the following manner: Each spring is wrapped separately in oiled paper, and placed in an individual envelope printed with the name and size of movement for which it is intended. Twelve envelopes, or one dozen mainsprings, are contained in a well-made strong box properly labeled. Useless handling of the springs is avoided, thereby preventing rust or mixing of stock. The name, "BLACK SHIELD" is scratched on every spring.

THE NEW MAINSPRING

"BLACK SHIELD"

MAIN-SPRINGS

FOR ALL AMERICAN WATCHES.

The Product of the Highest Attainment in Mainspring Making

TESTS

In selecting the "BLACK SHIELD" MAINSPRINGS, we were guided not alone by our own severe tests and judgment, but we distributed samples to dozens of expert watchmakers throughout the country. The opinion of all was that the "BLACK SHIELD" MAINSPRINGS are the finest ever introduced in this country. That they are even, properly tempered, carefully finished, correctly gaged, and tips and length positively accurate. They are of wine color, well polished, and will fit the respective movements without any filing or change whatsoever.

"Black Shield" Mainsprings are manufactured for us only by the oldest and most reputable maker in Switzerland
Per Dozen, \$1.25 Per Gross, \$13.50

Fac-Simile of Box Containing One Dozen "Black Shield" Mainsprings

"Black Shield" Mainsprings are guaranteed in every respect. No better can be had at any price. Per Gross, with 4-Drawer Cabinet (capacity, 48 dozen), \$15.00

HOLSMAN & ALTER, Wholesale Jewelers, 176-178-180 East Madison Street CHICAGO, ILL.

St. Louis.

Julius Friton will shortly remove from 7 South Broadway to 119 N. 7th St.

Eggert & Fisher, have removed into the Victoria building, at 8th and Locust Sts.

Joseph Flashner, of Hirsh & Flashner, New York, made his first visit to the local trade last week.

C. F. Gash, Fredericktown, Mo., was in this city last week, taking the Scottish Rite degree in Masonry.

James J. Burke, president of the Brooks Jewelry & Optical Co., was in Chicago last week on a business trip.

William Weidlich, of William Weidlich & Bro., is making a western trip. He is expected in Thanksgiving Day.

J. Reed Elliott, who travels in the far west for this firm, has just completed a 16 weeks' trip, and will remain in this city until Jan. 1.

George G. Gambrell, treasurer of the Eisenstadt Mfg. Co., has been confined to his home for about a week, owing to an ulcerated tooth.

Brener & Co. will shortly open a retail jewelry department at 605 Pine St. The factory will continue in its present location in the *Globe-Democrat* building.

Ellsworth Bauman, of the L. Bauman Jewelry Co., returned Friday from a trip through southern Iowa and northern Missouri, and departed later for a tour of Kansas.

W. A. Gill, 612 Olive St., announces that he will shortly dispose of all of his interests in this city. Mr. Gill has not definitely decided upon his plans for the future, but he expects to go east.

The North End Business Men's League has had several warm discussions over the question of trading stamps. The opposition to their continuance is very strong, but nothing has yet been done.

Flowers in profusion were placed in the office of Morris Eisenstadt, president of the Eisenstadt Mfg. Co., Thursday, the occasion being his 49th birthday anniversary. The flowers came from employes and other friends.

Ed. Massa, vice-president of the Bauman-Massa Jewelry Co., has returned from a special trip through Kansas and Oklahoma, and S. H. Lowenstein, of the same firm, is back from a tour of Kansas and Oklahoma.

A. M. Zerweck, East St. Louis, has gone to Fort Wayne, Ind., to attend the opening of his new jewelry store, which will be conducted under the name of the Besse Jewelry Co., at 910 Calhoun St. Frank Besse is manager.

In East St. Louis Charles Cummings and James Fleming were fined \$100 and costs last week on the charge of selling jewelry without a license, in default of which they were sent to jail. The men were loaded down with cheap stuff.

Among the out-of-town jewelers in St. Louis last week were the following: I. B. Morris, Perry, Mo.; Anderson Blanton, Paris, Mo.; Fred Simon, Collinsville, Ill.; E. L. Bersche, Columbia, Ill.; J. C. Reidel, with Cook's (Wilber T. Cook) Jewelry Store, Paris, Ill.

Frederick W. Drosten, representing the Union Club and the 13th Ward, was one of

the speakers at the recent public hearing before the Railroad Committee of the House of Delegates on the question of granting a franchise to an elevated railway. Mr. Drosten opposed the plan.

Charles Cummings and James Fleming, who claim St. Louis as their homes, were fined \$100 and costs in Magistrate Evans' court recently, on a charge of selling jewelry without a license. It is said the men were loaded down with cheap jewelry when taken into custody. They were unable to pay the fine and costs, and were sent to jail.

Morris Eisenstadt is chairman of the committee of jewelers to solicit contributions for the Saturday and Sunday Hospital Association, a charitable organization, which makes an annual collection. The other members of the committee are: George J. Hess, of Hess & Culbertson; Sam H. Bauman, August Kurtzborn, John Bolland, Herman Mauch and F. W. Drosten.

Cincinnati.

A. M. Plaut, of the National Jewelry Co., is on a trip through West Virginia.

Sig. Strauss, of Lindenberg, Strauss & Co., is kept away from business by illness.

Howard H. McEwen, formerly with S. & H. Gilsey, is now connected with D. Jacobs & Co.

J. H. Mesch and W. F. Willman, of Mesch & Willman, left, last week, on a trip to New York.

D. Gutmann, of L. Gutmann & Sons, and his bride have returned from a honeymoon spent in the east.

Alfred H. Beer, Versailles, Ind., was here last week as guest of Joseph Kramer, of Lindner & Co.

Andrew Alich, 930 W. Liberty St., and Anthony Schemel, 1953 Central Ave., are remodeling their stores by installing new glass fronts.

Peter Henry has moved from his old stand on Vine St. into the Lion building, where he has more comfortable quarters on the third floor.

Jacob Frohman, of Frohman & Co., is reported to be improving, though still suffering from the effect of the accident reported last week.

S. & H. Gilsey have added to their road force William Johnson and Harry Royer, who will take charge of the southern territory and make their first trips Jan. 1. Mr. Horwitz, formerly city salesman for this house, is now traveling in the south.

Walter H. Wilkening, formerly in business in the Sinton building, has taken a position as manager for Charles E. Levi, diamond broker, 509 Vine St. Walton Levi, former manager, has gone into business with his father, Andrew Levi, W. 5th St.

Thomas Ward, alias James Hart, who, as told in THE CIRCULAR—WEEKLY last week, was tried and convicted at Richmond, Ky., on a charge of raising a money order and passing it on a jeweler at Paris, Ky., has since been sentenced to two years in the penitentiary at Atlanta, Ga.

A message which arrived Thursday allayed the fears of the friends of Sol Fox, of Fox Bros. & Co., as it informed them of his safe arrival after an alarming experience on board the *Kaiser Wilhelm Der Grosse*. The report of the collision of this

steamer, on which Mr. Fox was a passenger, caused great anxiety for awhile.

The mystery surrounding one of a series of window robberies in Covington, Ky., was cleared up last week when Frank Berger, white, and Clarence Proctor, colored, both under 10 years of age, were arrested on a charge of having smashed one of the large plate glass windows in M. C. Motch's jewelry store and having stolen three watches. Both lads confessed and were arraigned in Juvenile Court on a charge of house-breaking and larceny. The boys will be placed in the reform school.

Out-of-town dealers who were here buying Christmas stock included: P. J. Murphy, Maysville, Ky.; Frank B. Carey, Lebanon, O.; A. M. Stamm, Williamsburg, O.; C. A. Gossard, Washington Court House, O.; Mrs. R. Moss, Owensboro, Ky.; Mrs. E. Mueller, Hamilton, O.; C. C. Ackerman, Connersville, Ind.; Dan Bacarac, Central, O.; Williams & Walker, Columbus, O.; Charles Scorum, Lyonville, O.; H. Creighton, Morrow, O.; Mrs. E. Tiffany, Xenia, O.; William Shire, of Shire & Fithian, Paris, Ky.; T. E. Bundy, Huntington, W. Va.; John Selbert, Frankfort, Ky.; Frank Emmerling, Hillsboro, O.; J. S. Clements and wife, Brownstown, Ind.; Mr. Patridge and wife, Wellston, O.; J. H. Sherwood, Brooksville, Ky.; C. G. Schlenker, Eaton, O.; Edward Israel, Harrison, O.; H. Pisinger, Lawrenceburg, Ind.; M. F. Conly, Louisa, Ky.; C. K. Weaver, Miamisburg, O.; Hopper & Robb, Mayslick, Ky.; James H. Bovard, Newcastle, Ky.

Minneapolis and St. Paul.

L. P. Sandberg has joined the watchmaking force of John D. Bodfors, Minneapolis.

George W. Wooley, St. Paul, has returned from a hunting trip in Northern Minnesota, and brought back a deer.

It is understood that Sischo & Beard, St. Paul, will shortly move to larger quarters on the 7th St. side of the Ryan building, as soon as the building is completed. They will occupy the fifth floor.

Kirschner & Renich, Minneapolis, have just installed a complete electro-plating plant, operated by a dynamo and motor instead of a battery. They have also added a powerful cutting machine to their plant.

S. B. Millard, representing the Geneva Optical Co., Minneapolis, is still incapacitated, owing to injuries received in a railroad accident, a couple of months ago. He expects to return to the road about the first of the year.

The new store of the E. A. Brown Co., St. Paul, is handsomely fitted up. The center of the room is occupied by a plate glass horse-shoe show case. There is an exquisitely equipped rest room, a cut glass room designed in gold and ivory, and a diamond room.

Among the out-of-town jewelers in the Twin Cities last week, were: F. C. Arns, Doland, S. Dak.; a representative of Grinnell & Co., Valley City, N. Dak.; Chas. J. Webb, Byron, Minn.; John Schroeder, Graceville, Minn.; C. M. Krogh, Comfrey, Minn.; C. G. Rein, New Ulm, Minn.; a representative of Bucklin & Williams, New Rockford, N. Dak.; M. Weinstein, Webster, S. Dak.

Extra Holiday Bargains

At a Saving of 50 per cent. to the purchaser

One Hundred Thousand Dollars worth of WATCHES, DIAMONDS, JEWELRY, SILVERWARE, CUT GLASS, BRIC-A-BRAC, etc., to be sold lower than you can buy them for elsewhere.

These goods were purchased when business was dull and at a time when the factories needed the money. We are now in a position to offer them to you. Goods are scarce and high, and we are in a position to fill your orders for less money than any other house in the United States.

A trial order will convince you that our prices are far below the market.

JOS. BROWN & COMPANY

Fifth Avenue and Madison Street, Chicago, Ill.

Omaha.

J. L. Borsheim, of Cooper & Borsheim is the proud father of a baby girl.

B. Kridelbaugh, Alliance, Nebr., has taken a position with T. L. Combs & Co.

J. C. Hutson, of the Hutson Optical Co., is making a brief trip to the Pacific Coast.

E. E. Shultz, Ainsworth, Nebr., came to this city, last week, to have an operation performed.

J. H. Riffe, Craig, Mo., was in this city last week, to see his brother, who is confined in a local hospital. He replenished stock before returning home.

Ward O'Neill, Ashland, Nebr.; John Mudra, Stanton; H. Oberholtzer, Weeping Water; Hilmer Anderson, Tremont; Mr. Farnham, Blair; H. Turner, Exira, Ia., and Mr. McDermott, Guernsey, Wyo. were in this city, during the past week, replenishing their stocks.

Fire started in a box of inflammable material, which had been placed on a radiator under a table at the Mawhinney Ryan Co.'s store, last week. The flames were discovered and extinguished before the arrival of the firemen. Diligent search had failed to reveal the source of the gathering smoke, and an alarm had been turned in before the fire was located. The store room was thoroughly filled with smoke for several moments, but no serious damage was done.

Pacific Northwest.

The creditors of the Mitchell Smit Jewelry Co., Baker City, Ore., are offering the stock for sale.

Wm. Friedlander's store, Portland, Ore. was partially destroyed by fire, last week. The loss is placed at \$2,000, fully covered by insurance.

F. G. Rauch, Chewelah, Wash., made a short trip to Spokane, last week, to meet his family which had come from the east.

E. D. Elwood, Medford, Ore., is now spending some time at Oakland, where he expects to remain until he can get possession of his new store at Medford.

C. E. Sturges has leased quarters at 81 Riverside Ave., Spokane, Wash., and will open a jewelry store and repairing establishment at once. Mr. Sturges was for 1 years in business at Boise, Idaho.

John Erickson, Grand Forks, N. Dak. has taken a position as head of the manufacturing department of the store of Kristian Falkenberg, Walla Walla, Wash. Mr. Falkenberg is planning to increase the facilities of the repairing department.

F. Garfinkle, a dealer in second-hand wares at 31½ N. 3d St., Portland, Ore. was recently taken into custody upon the complaint of Detective Captain Bruin, who charges Garfinkle with receiving stolen property. It is alleged that pieces of jewelry stolen recently by J. H. King, who later confessed, from W. B. Streeter, of Portland, were found in Garfinkle's establishment. The articles, it is alleged, had not been listed on Garfinkle's books as is required by the city ordinance.

Jules Renaud's Son, Keokuk, Ia., has moved into new and better quarters at 61 Main St.

A SOUND ARGUMENT

THE only means a manufacturer can adopt to create a **continued** demand for his product is to produce the highest quality from the best material and workmanship. The price is a second consideration. This is the **U. S. Robert** method.

The demand for his make of mainsprings is continued, and increasing steadily. The O.K. stamp of the trade's approval cannot be put on an article by the mere say-so of the manufacturer. The U. S. Robert springs were put on the market in 1885 and from the first the policy of manufacture has been to adhere to a high ideal, to insist on a uniformity of material and workmanship in order to maintain the highest standard of perfection. This is done by U. S. Robert, whose ability is widely recognized and respected by the scientific and best-known makers of mainsprings. Such being the case, the price-lowering methods of competition cannot apply here. Made in 142 different sizes for all sizes and grades of American watches.

Price \$1.25 per doz. or \$13.50 per gross, less 6% for cash.

PATENT DEPARTMENT

WHICH IS CONTAINED A LIST OF THE LATEST PATENTS GRANTED BY THE UNITED STATES AND GREAT BRITAIN, THE UNITED STATES PATENTS THAT HAVE BEEN ISSUED AND THE REGISTERED TRADE-MARKS.]

UNITED STATES PATENTS.

ISSUE OF NOV. 20, 1906.

5,076. EYEGLASS-GUARD. LEO F. ADI, Albany, N. Y. Filed March 19, 1906. Serial No. 306,718.

Nose-guard for eyeglasses embodying an attaching end, separate lower bearing-pad extending inwardly therefrom and a resilient arm extending from a point above the lower pad thence inwardly beneath and rearwardly and upwardly over it, the free end of said arm constituting an upper bearing-pad.

6,080. BRACELET. JOHN BENNETT, Attleboro, Mass., assignor to the Electric Chain Co. Filed Dec. 20, 1905. Renewed Sept. 4, 1906. Serial No. 333,099.

In an article of the class described, the combination with a fabric strip of tubes upon the ends

the fabric strip, a lazy-tongs strip intermediate tubes, and slidable members in the tubes pivoted to the extremities of the lazy-tongs strip.

6,108. POCKET-SEAL. HARRY S. FOLGER, Chicago. Filed Sept. 29, 1905. Serial No. 280,573.

In a seal of the kind described, the combination with a frame formed with a countersink and an opening of a counter-carrying plate provided with

central boss for engaging said countersink and peripheral projection for engaging said opening, the means for securing said plate to said frame.

6,109. BRACELET. OVE L. GAMMELGAARD, Attleboro, Mass., assignor to the Electric Chain Co. Filed May 24, 1906. Serial No. 318,459. (Model.)

The combination with the crossed arms and set-

ting member of a lazy-tongs bracelet, of lateral links upon the setting member, and links pivoted to the plates and to the adjacent crossed arms.

836,147. LENS-CLAMP. HEWLETT SCUDDER and RICHARD K. HOHMANN, San Diego, Cal. Filed Nov. 7, 1905. Serial No. 286,315.

The combination with an eyeglass-lens formed with edge notches, of a clamp-strip comprising a length of spring material having end lugs to engage the notches, means projecting from opposite sides of the strips adjacent the lugs and bearing on the

surfaces of the lens, a lens-post projecting from the strip, and means projecting from opposite sides of the strip in alignment with the post, said means being adapted to embrace the lens at the bearing-point of the post, the strip being adapted to bear throughout its entire length on the edge of the lens, whereby the ears are effective in preventing independent movement of said strip.

836,180. SELF-FILLING FOUNTAIN PEN. ROY CONKLIN, Toledo, O. Filed Feb. 23, 1906. Serial No. 302,141.

A fountain-pen, provided with a hollow handle, an inclosed flexible ink-bag, a presser bar engaging said ink-bag, an outwardly-extending projection on said presser-bar, and a tubular sleeve axially slid-

able on the handle and having a forward slot adapted to engage with said projection.

836,183. HAT-FASTENER. JOHN J. DUKET, Toledo, O. Filed Jan. 7, 1905. Serial No. 240,040.

In a hat-fastener, the combination of a tined hair-pin, and a holder-pin having pointed end portions extending oppositely, the holder-pin being provided with guides to receive, each a tine of the

hair-pin, the tines of the hair-pin being movable lengthwise back and forth through the guides transverse the holder-pin, and the holder-pin being movable, for its attachment and detachment, lengthwise back and forth transverse a tine of the hair-pin.

836,236. EYEGLASS-MOUNTING. WILLIAM E. ARNOLD, Janesville, Wis. Filed June 9, 1903. Serial No. 160,783.

A single-piece eyeglass mounting, comprising a bow having its ends continued downward to form the main nose-guard members, lens-clamping wings formed integral with the bow and arranged on lines approximately parallel with the sides of the bow and main nose-guard members, stud members

projecting centrally from the lens-clamping wings and provided with openings near the extremities, and a pair of integral arms extending upwardly and rearwardly from the bow at a point approximately opposite the stud members and arranged to engage with the sides of the nose at a point above a horizontal plane which includes the axes of the lenses, the arms and the main nose-guard members springing from a common point at the end of the bow proper, and each being independently adjustable from said point.

836,262. STICK-PIN. MICHAEL KENNEDY, Providence, R. I., assignor to the Lees Finding

Co., Providence, R. I. Filed March 1, 1906. Serial No. 303,726.

A stick-pin, consisting in the combination with

the lead member, having on its rear surface a hub struck up or swaged from the material thereof and having a square socket therein, of a pin member having a square shank fitted to said socket and having also retaining-grooves into which the upper edge of said socketed hub enters, as and for the purpose set forth.

836,445. METHOD FOR PROTECTING THE INSIDE OF VESSELS DURING THE PROCESS OF ORNAMENTATION. ELIAS L. TOY, Buffalo, N. Y. Filed May 6, 1905. Serial No. 259,251.

The method for protecting the inside of vessels during the process of ornamentation which consists in placing a collapsible bag within a vessel and then inflating the bag until the bag becomes tense

and completely closes the vessel and extends over and covers the upper edge of the vessel, and the union between the bag and the vessel becomes airtight so that the bag is held to the inside wall and the upper edge of the vessel by atmospheric pressure and retaining the pressure within the bag during the process of ornamentation.

836,479. JEWEL-SETTING. WALTER B. ALLEN, Attleboro, Mass., assignor to Allen, McNeerney & Co., Attleboro, Mass. Filed July 31, 1906. Serial No. 328,520.

In a jewel-setting, the combination with a plate or base having a funnel-shaped orifice, of a tubular

gem-holder having one end provided with divergent branches adapted to hold the gem, the said gem-holder being fashioned to fit the orifice in said plate and having an expanded mouth upon the lower surface of the said plate whereby the gem-holder is secured in the plate.

836,498. COLLAR-SUPPORT. AGNES HAVILAND, New Orleans La. Filed May 16, 1906. Serial No. 317,156.

A support of the class described provided at opposite ends with apertures therethrough, a guard disposed intermediate of the ends of the support,

a securing device co-operating with one of said apertures, and a securing device adapted to engage material at the other aperture and enter said guard.

836,516. COMBINED FOUNTAIN-PEN, BLOTTER AND OTHER APPLIANCE. HENRY I. LURYE and NATHANIEL H. LEWIS, New York. Filed March 7, 1906. Serial No. 304,723.

A fountain-pen and a blotter carried by or portable with the pen and a suitable case for the

lotter, said case being made to form a part of an

xtension of the pen or its handle part.
36,534. DEVICE FOR SECURING SCARF-PINS. ABRAHAM RAINESS, New York. Filed March 3, 1906. Serial No. 304,002.

In a scarf-pin securing and protecting device an inner part having a triangular vertical channel

rough which the pin passes and a lateral side seating them, a small ball located within said lateral opening, and means for pressing the ball against the pin whereby the pin is pressed against the sides of the triangular channel.

36,598. CALENDAR FOR WATCH CASES. ANDREW W. McCULLOUGH, Homer City, Pa. Filed Sept. 20, 1905. Serial No. 279,365.

A calendar for watches comprising, in combination with the cover of a watch having its edge turned, forming a flange, disks held frictionally

y said flange and adapted to rotate axially with pivotal connections with each other, one of said disks being divided by radial lines into spaces corresponding to the number of days in a week and adapted to disclose numerals indicating the days of the month, the other disk designed to disclose intervals, abbreviations for the days of the week, is set forth.

36,599. MOUNTING FOR EYEGLASSES. EDWIN F. MCKEE and EINAR OFTEDAHL, St. Louis, Mo., assignors to the Standard Optical Co., Geneva, N. Y. Filed Dec. 5, 1905. Serial No. 290,401.

In combination with a lens having a bolt-hole near one edge and a plurality of recesses radiating therefrom, of a lens-clamp comprising a one-piece bifurcated metal strip fitted to opposite

faces of the lens and provided with bolt-holes aligned with the bolt-hole in the lens, said strap being free from engagement with the periphery of the lens and having a plurality of projections each seated in one of the recesses in said lens, and a clamping-bolt passed through the apertures in the strap and lens.

DESIGNS.

38,313. BADGE. CHARLES H. WILKINS, Norfolk,

Va. Filed Oct. 26, 1906. Serial No. 340,781.
 Term of patent 3½ years.

38,314. BADGE. CHARLES H. WILKINS, Norfolk,

Va. Filed Oct. 26, 1906. Serial No. 340,782.

Term of patent 3½ years.

UNITED STATES TRADE-MARKS.

[The following trade-marks have been adjudged entitled to registration under the Act of Feb. 20, 1905, and are published in compliance with Section 6 of said act. Said section provides:

"Any person who believes he would be damaged by the registration of a mark may oppose the same by filing notice of opposition, stating the grounds therefor, in the Patent Office, within 30 days after the publication of the mark sought to be registered, which said notice of opposition shall be verified by the person filing the same before one of the officers mentioned in Section 2 of this act. If no notice of opposition is filed within said time the commissioner shall issue a certificate of registration therefore, as hereinafter provided for."

Marks which are stated to have been "Used 10 years" are registrable under the last proviso of Section 5 of said act, which is as follows:

"And provided further, that nothing herein shall prevent the registration of any mark used by the applicant or his predecessor, or by those from whom title to the mark is derived, in commerce with foreign nations or among the several States, or with Indian tribes, which was in actual and exclusive use as a trade-mark of the applicant or his predecessors from whom he derived title for 10 years next preceding the passage of this act."

PUBLISHED NOV. 20, 1906.

Ser. No. **2,623.** (CLASS 38. RUBBER AND MINOR PLASTICS NOT OTHERWISE CLASSIFIED.) RICE & HOCHSTER, New York. Filed April 21, 1905.

The seal is red.

Particular description of goods.—Horn, rubber and celluloid hair-pins and hair ornaments.

Ser. No. **11,415.** (CLASS 59. HOROLOGICAL INSTRUMENTS.) HAMMEL, RIGLANDER & Co., New York. Filed Aug. 8, 1905.

PENCIL Co., New York. Filed Oct. 23, 1906.

FLASH

Particular description of goods.—Fountain-pens.

BRITISH PATENTS.

(ABRIDGMENTS OF SPECIFICATIONS, 1905, FROM *The Illustrated Official Journal.*)

ISSUE OF NOV. 7, 1906

14,404. TELL-TALE CLOCKS. G. POPOFF and J. M. SIMEONOFF, Sofia, Bulgaria.

In a tell-tale clock, each pin *i* of a series is lifted at a predetermined time to the higher of the positions shown in Fig. 2, and must be replaced by a watchman during a short interval after the lifting. A disk *y*, struck by a hammer *x*, gives audible warning that a pin has been lifted. Each pin is normally retained by the engagement of a disk *m* on the minute spindle with the upper of two grooves on the pin. This disk has one notch, and when this notch reaches a pin, a spring *r* is adapted to lift the pin as shown in Fig. 2, an indicator *n* showing on the clock-dial the time of

lifting. The holding-disk *m* thereafter engages the lower pin-groove and keeps the pin in its raised position unless the watchman is in time to replace it. The spring *r* is carried by a lever *s* hinged to the holding-disk and pressed up by another spring. Fixed springs *q* on an upper dial-plate depress a bent end of the lifting-spring *r* before it reaches each movable pin *i*. The watchman can depress the hinged lever *s* by means of a button on the case acting through a bolt *v*, and so hold the lifted pin down until it is retained by the holding-disk *m*. The lower ends of the pins are guided by two slotted plates *g*, *h*, Fig. 5, the lower one *g* of which is movable through a stud *f* by a rotatable cover *b*, Fig. 2, which is normally held by a lock *e*. If the cover *b* and plate *g* are turned as indicated by an arrow in Fig. 5, the pins *i* are released from the holding-disk *m*, and can be reset as desired.

14,410. ORNAMENTS. E. JABULOWSKY and A. BOURQUIN, Pforzheim, Germany.

Metal articles, particularly of oxidized steel, are ornamented with photographic metal pictures, which are deposited directly on the metal and melted on to it. A sensitized layer consisting of six grammes of gum arabic, 10 grammes of manna dissolved in 45 grammes of distilled water, 45 grammes of cold saturated potassium chromate solution, and 12 drops of glycerine, is placed on a glass plate, which is dried and exposed in the usual manner under a negative. The picture is then powdered with pure white silver and covered with collodion of two per cent. After the collodion has dried, the picture film with the collodion layer is cut to size and removed from the glass in a bath of 300 grammes distilled water with 10 grammes of ammonia. The loosened film is spread on the metal surface, which is then heated until the collodion layer is removed and the picture united with the metal.

14,037. EYEGLASSES. G. SPILLER, London.

Relates to a method of fixing the lenses of rimless glasses. The spring arms *b*, *b'* fixed to the

bridge *A*, fit in a groove cut in the periphery of

the lens, the inturned ends *e* engaging suitably-cut notches.

Complete specifications accepted Oct. 31, 1906.

24,147. PENHOLDER. ROSS, 1906.

7,095. FOUNTAIN PEN. KNIGHT.

9,902. CANDLE EXTINGUISHER. STEVENSON.

12,405. CLOCK-STRIKING MECHANISM. KIENZLE.

15,450. CANDLESTICK. BULPITT.

16,175. PENCIL-CASE. PENKALA.

Applications filed Oct. 22 to Oct. 27, 1906.

23,339. CUTTER ATTACHMENT FOR EGG-SPOONS. PETER BULL and FREDERICK BULL, Jr., Walsall.

23,355. INKSTAND AND PAPER-WEIGHT. T. W. PLANT, Chiswick, Middlesex.

23,470. BROOCHES, PENDANTS, ETC. THOMAS WILCOX, Birmingham.

23,473. STUD. JOSEPH WALKER, Birmingham.

23,507. SAFETY DEVICE FOR BROOCHES. H. A. IVES and D. W. JEFFERY, London.

23,568. TELESCOPE. FERDINAND PUTZ, London. Complete specification.

23,630. TIME INDICATOR. S. R. VON GRUDZINSKI, London. Complete specification.

23,671. WATCH HOLDER. H. E. GOWAN and HERBERT AUSTIN, London.

23,858. MATCH BOX. J. R. H. DUKE, London.

23,938. TEA-POT. SAM MENDEL, Manchester.

UNITED STATES PATENTS THAT HAVE EXPIRED.

[Reported especially for THE JEWELERS' CIRCULAR-WEEKLY by R. W. Bishop, Patent Attorney, Washington, D. C.]

Issued Nov. 19, 1889.

415,293. INKSTAND. J. H. HAYDEN, Raton, N. Mex.

415,563. UMBRELLA. DAVID ROSE, Lancaster, Pa.

415,632. WATCH. HENRI GERBER, St. Imier, and HENRI AUDEMARS, Brassus, assignors to Ernest Francillon & Co., St. Imier, Switzerland.

415,658. POCKETBOOK. ERNST SCHNOPF, Brooklyn, N. Y.

415,659. BUTTON. J. T. THORNTON, Providence, R. I.

415,669. WATCH CASE SPRING. H. R. GAUL, Philadelphia, Pa., assignor to the Keystone Watch Case Co., same place.

415,678. WATCH CASE. FRITZ MINK, Philadelphia, Pa., assignor to the Keystone Watch Case Co., same place.

Design issued Nov. 15, 1892, for 14 years.

21,988. SPOON. PAULDING FARNHAM, New York, assignor to Tiffany & Co., same place.

Design issued Nov. 21, 1899, for 7 years.
31,849. MOUNTING FOR BOOK OR ALBUM COVERS. W. H. ISBISTER, Philadelphia, Pa.

Designs issued May 19, 1903, for 3½ years.
36,330. CUP. R. L. JOHNSON, Hanley, England
36,331. COVERED DISH. R. L. JOHNSON, Hanley, England.

Pittsburg.

H. O. Scott, 2845 Penn Ave., is erecting a handsome street clock in front of his place of business.

Henry Terheyden is a director of the Oshkosh Mining Co. recently organized to develop a copper mine in Idaho.

The Business Men's Association of the Sewickley valley gave a banquet last week which was attended by the jewelers of that place.

A. E. Seidle has been nominated as director of the Pittsburg Board of Trade which will hold its annual election of officers Dec. 17.

Edwin W. Drury, well known to the jewelry trade as a traveling salesman, who quit the road some time ago, is now engaged in the brokerage business in this city.

C. D. Stewart, formerly with F. A. Sackett, New York, as a traveling salesman, has accepted a position with S. Day & Co., and goes with that firm Jan. 1.

Graf & Niemann, of 210 6th St., have settled as yet whether or not they will go out of business. In the meantime they are clearing their stock, hoping to make satisfactory terms with the present landlord of their building.

Among the out-of-town merchants who visited Pittsburg last week on buying trips were the following: Charles E. Hart at Fred Koehler, Sharon; J. Furtwangler Greensburg; Charles A. Loughman, Braodock; E. H. Kennerdell, Tarentum; E. Priese, Homestead.

Arthur P. Byrne, Scottsdale, Pa., has been appointed receiver for Charles Henry J.quette, of the same town, who recently filed a voluntary petition in bankruptcy, and the court has approved of the selection. Mr. Byrne has given a bond for \$5,000 for the faithful discharge of his duties and has taken possession of the store and will liquidate Mr. Jaquette's affairs as soon as convenient.

Bango S. Jaffe, the salesman employed by the Castelberg Jewelry Co., who, after having absconded to New York with \$5,000 worth of the company's goods was captured and brought back to Pittsburg, was arraigned last week in criminal court and entered a plea of guilty to the charges made against him. The value of the diamonds and jewelry which Jaffe took has been estimated at various sums up to \$9,000. There are several counts of larceny against Jaffe so that the sentence imposed on him of ten years in the workhouse was not surprising even considering the fact that he had thrown himself on the mercy of the court and did not fight requisition. Most of the articles which Jaffe stole have been recovered. He made false leases, on the installment plan, and used the names of reputable citizens, taking the diamonds supposed to have been sold and pawning them. Some pieces have been recovered in local pawnshops.

OPTICAL DEPARTMENT

Diseases Which the Optometrist Should Recognize.

Second of a series of lectures delivered before the O. S. C. N. Y., by E. LeROY RYER.
(Continued from issue of Nov. 21.)

Pannus.

Nature of the disease—

Formation of blood vessels in the cornea is called pannus. Sometimes blood vessels appear in the substantia propria which later disappear. Normally, the cornea contains no blood vessels, but it is the white corpuscles in blood that fight disease germs, and when the cornea is seriously affected blood vessels are formed to carry food into the midst of the diseased tissue to help strengthen it by more direct nourishment, to help absorb waste matter, and to keep up the otherwise unequal fight against the invading microbes. In other cases, however, blood vessels are formed which do not disappear, and these are the true cases of pannus.

Pannus invariably follows in the wake of some other disease. Usually the vessels lie between the epithelial layer and Bowman's membrane, but may go deeper, in which case they will cause complete loss of vision.

How to recognize it—

The symptoms are easily recognized, consisting first of a grayish discoloration of the cornea, and secondly of a network of fine blood vessels. Low visual acuity normally accompanies this condition.

Causes—

Trachoma, phlyctenular keratitis, trichiasis, lagophthalmia, etc., may cause it, although some claim that trachoma is the only true cause.

What the optometrist should do—

Advise medical treatment for a twofold reason—first, to take care of the pannus, and, secondly, to take proper care of the primary disease, whatever it may be.

Opacities of the Eye.

Nature of the affections—

Corneal maculae is the term usually applied to such cases, macula meaning a spot. Should the cornea be completely filled with maculae, the condition is known as sclerosis of the cornea.

Corneal opacities are divided into three classes. If the opacity be very light and discoverable only with the aid of oblique illumination, it is called a nebula; if the spot be sufficiently opaque to be discovered by daylight, it is called a macula; and leucoma is the name given to a bright white, non-translucent spot.

How to recognize them—

Either by oblique illumination or by direct inspection. If the opacity lie within the pupillary area, vision will be interfered with and care must be exercised not to confound these spots with opacities of the crystalline lens.

Causes—

Corneal opacities are usually the results of injuries to or ulcers in the cornea. They are scars.

What the optometrist should do—

If they do not interfere with vision nothing need be done, but if they do affect vision medical opinion should be sought as to the advisability of performing an iridectomy—that is, creating an artificial pupil by operating.

Staphyloma.

Nature and causes of the disease—

Staphyloma is usually the result of a perforating corneal ulcer. Sometimes, where the ulcerous growth has been extensive, the entire cornea is destroyed and a new membrane formed in its place. This new membrane is first a layer of lymph formed from the exposed iris; it soon becomes a membrane which, while firm, is not as resistant as the cornea, and which, therefore, is forced to bulge out by the normal intraocular tension. This membrane or false cornea is always opaque and usually about the same color as the sclera. Upon bulging it looks like a bunch of grapes, and the term staphyloma is from a Greek word meaning a bunch of grapes.

Sometimes an ulcer will cause a weakening and consequent bulging in a limited portion of the cornea only, and then the staphyloma is not "total." Staphyloma may or may not be progressive; if total, it often increases to an enormous size.

How to recognize it—

The symptoms are self-evident. If the iris be involved, which is often the case, severe pain will accompany it.

What the optometrist should do—

Treatment is operative, so it must be referred to the physician.

Arcus Senilis.

Nature of the affection—

This condition is frequent, and, as its name implies, it is confined chiefly to elderly persons, although I saw it in a young man 19 years of age, and it has been seen in childhood upon rare occasions. Many people confound this harmless condition with cataract, and some unscrupulous physicians and optometrists have taken advantage of this mistake and frightened a patient into

taking treatment or glasses. It becomes developed without previous inflammation. Strictly speaking, it cannot be classified as a disease because no functional changes are caused by it nor does it interfere in any way with other diseases or wounds of the eye. A belief, amounting almost to superstition, is quite prevalent among certain classes that arcus senilis interferes with the healing of the wound made by a cataract operation; the belief is unfounded. This condition is known also as gerontoxon. It is often hereditary.

How to recognize it—

It appears as a narrow white or grayish band a little inside of the outer margin of the cornea. This ring is wider at the top and bottom, and is often almost imperceptible at the sides. Its outer edge is sharply defined, and a narrow strip of iris can be plainly seen between the ring and the limbus or margin of the cornea.

Causes—

It was believed at one time to be due to fatty changes, but this is not the case. A degenerative change in the cells of the cornea is the cause. When it appears in the young it is usually inherited.

What the optometrist should do—

Examine the eyes and order glasses as though nothing but the refractive error existed. Be careful not to deceive the patient by permitting or causing him to believe that the condition is a dangerous one. No medical treatment is needed.

Conical Cornea.

Nature and causes of the disease—

This condition is also known as keratoconus. The cornea is altered in shape to that of a cone; this cone shape is brought about by the central part of the cornea gradually wasting away because of a lack of nutrition. The intraocular tension then pushes this weakened portion of the cornea forward, producing the cone-shaped protrusion. Sometimes the central part of the cornea is congenitally weak. Except for a dull spot occasionally at the apex of the cone the cornea remains clear. The apex of the cone is not always exactly at the center of the cornea. Vision is always impaired, and in extreme cases may be nearly destroyed. Usually both eyes are attacked, but one will not be affected until a considerable while after the other. The disease occurs most frequently between the ages of 15 and 30 years.

How to recognize it—

In the early stages it is difficult to discover. The cornea looks normal except

Optical Department.

that oblique illumination may show a slight central cloudiness. One of the first symptoms is the appearance of myopia. As the cone increases the vision becomes worse and minus lenses no longer give the desired improvement, and irregular astigmatism presents itself. One is apt to mistake a case of conical cornea for one of myopia combined with a high degree of astigmatism.

The advanced cases are easily recognized by a side view of the cornea which shows the conical formation, so it is to the early cases that we must give more careful attention. One of the best ways of making an early diagnosis is by using the skiascope and noting the dark, obscure circle around the center of the cornea; this shadowy ring seen in the fundus reflex will usually be about midway between the margin and center of the cornea—that is, instead of seeing a uniform, pinkish reflex the size of the pupil, you will see a small pinkish central spot, then a dark shadowy ring, and then a pinkish ring around that.

The corneal reflex of any object will appear smaller at the center than elsewhere on the cornea owing to the increased curvature at this point.

The keratoscope or Placido's disc affords an excellent test, and the peculiar distortion of the mires of an ophthalmometer affords another means of discovering the irregular astigmatism and the probable accompanying conical cornea. When the fundus is examined with the ophthalmoscope the details appear distorted.

The myopic and astigmatic symptoms not only increase, but, unlike those of regular compound myopic astigmatism, cannot be overcome with lenses.

What the optometrist should do—

Operative treatment not being very effectual in most cases, the optometrist is fully justified in giving any lenses that will improve vision.

Pinhole and stenopæic discs are often of considerable use, and may be employed with impunity. A special form of slit has been found very helpful in some cases; this slit is horizontal, and from the outer edge of the opaque metal disc gradually narrows down almost to a point at the center. Words viewed through the middle of such a triangular slit are distinctly seen. A series of pinholes in single disc has also been used to advantage. I would suggest using a deep concave disc for this purpose—that is, a metal disc formed like a coquille lens and containing 10 or 12 small circular apertures.

Glass shells (called contact glasses) which fit over the cornea and under the lids have been tried, but they irritate and are admitted to be of little practical value. Hyperbolic lenses also proved to be of very limited value.

The patient may be told that several operations are performed which sometimes give relief. Myotics, by contracting the pupil aid to some extent, especially where the apex of the cone is not centrally located.

Episcleritis.

Nature of the disease—

Inflammation of the sclera is dangerous,

but not common, and extreme caution must be taken not to confuse it with iritis, cyclitis or conjunctivitis, which is often done on account of the redness of the white of the eye that each produces.

Episcleritis is quite a harmless disease. Both eyes are often affected, and an attack usually lasts a very long time and leaves behind a dusky, grayish discoloration of the sclera. Under the conjunctiva lies Tenon's capsule, and between this and the sclera is a loose connective tissue called the episclera. It is this that usually becomes inflamed first, and from here that the inflammation goes deeper to the real sclera. It attacks senior adults more often than young people or children, and women more frequently than men.

How to recognize it—

A purplish rather than red spot appears a little way from the margin of the cornea, usually between the corneal margin and the insertion of a rectus muscle. It does not entirely surround the cornea, but one spot will disappear and an adjoining spot become affected until the whole circumference of the sclera will have been attacked. In the early stages the symptoms are so similar that it is almost impossible to tell whether the case is one of episcleritis or scleritis, and episcleritis may be considered a superficial or milder form of scleritis. Pain seldom accompanies this disease. The inflammation is always confined to the forward half of the eyeball.

We have noted elsewhere that it is difficult to differentiate between inflammation of the sclera and iritis, cyclitis and conjunctivitis and the following points may prove to be of service: To differentiate conjunctivitis from episcleritis, move the conjunctiva, and if the congested blood vessels move with it we may rest assured that it is the conjunctiva that is inflamed because were it the episclera or the sclera itself that were affected the blood vessels could not be shoved about. In cyclitis and iritis the inflammation is confined to the part immediately surrounding the cornea, and is red rather than purplish. Moreover, in iritis the iris has a characteristic appearance, being discolored to a greenish or yellowish hue, lusterless, and not susceptible to the influence of light.

Cause—

Rheumatism, Scrofula, or Syphilis.

What the optometrist should do—

Advise medical treatment.

Scleritis.

Nature of the disease—

Here the entire forward sclera is more apt to be affected at once than the episcleritis, although cases often occur where only a single spot is affected at one time. This disease causes the sclera to become thinner and softer, which in turn causes staphyloma of the anterior part of the eyeball. It may thin or weaken only a portion and not the whole of the anterior surface of the sclera, in which case the staphyloma will be confined to that portion, but whether the staphyloma be partial or complete it will be of a bluish gray appearance due to the uveal tract shining through thinned sclera.

Both eyes are usually affected and complications may set in, such as iritis, cyclitis,

choroiditis and opacity of the cornea and vitreous humor.

Total loss of vision may result.

How to recognize it—

The same means may be used to differentiate it from conjunctivitis as were suggested in episcleritis. The bluish tinge and staphyloma are marked symptoms. A watery discharge, pain and photophobia may be pronounced.

It usually occurs in young adults, and it attacks females more often than males.

Causes—

Rheumatism, scrofula, congenital syphilis and menstrual disorders are believed to be the most frequent causes.

What the optometrist should do—

Treatment not being entirely local, the trouble usually being due to one of the above causal diseases, medical attendance should be ordered at once.

(End of second lecture.)

Incurable Eyestrain.

By GEORGE M. GOULD, M.D., Philadelphia, Pa., in the *Journal of the American Medical Association*.

(Continued from issue of Nov. 14.)

PERMANENT myosis may cause incurable eyestrain because of evident optical reasons. I had one such case in which a famous neurologist could find no evidence of neurologic disease to account for it, and we both failed to bring about any alleviation of the symptoms patently eyestrain in nature. I had a theory that the myosis in this man's case was due to a tiny corneal opacity in the center of the pupil. My neurologic friend scorned such a philosophy.

Slight nystagmus, with small and almost undetectable excursions, flutterings, or tremblings, may, as will be readily understood, produce eyestrain. In one patient, a woman of 50, there was the most rare symptom of rotary nystagmus, which no glasses could cure. And I have had on case of monocular nystagmus that to some degree caused incurable eyestrain, although the young man had only 3/200 vision in the affected eye. Possibly the diplopia of paralytic strabismus may not be properly classed as eyestrain, and yet in one sense it is so. I have had to put two such eyes out of function by a steamed or ground glass, slightly obscure as not to attract attention and which would not allow vision.

There is no evidence that color blindness may co-operate in producing eyestrain, but it is possible that it may do so. Certainly in the beginning stages of optic atrophy there would probably be such an effect. I have reported a remarkable instance of hereditary optic atrophy occurring only in males, transmitted only by females, taking place from 28 to 34 years of age, and running through six generations. While the disease was in its early stages and more insidious, one of these patients had decided eyestrain symptoms, not to be relieved by any means, of course. I have had several patients in whom tremor of the head was a source of eyestrain.

I recently discovered one of the most unsuspected ways in which a disease of the central nervous system may produce eyestrain. I have no doubt that my little re-

Optical Department.

ort is so far unique. My glasses had failed, in part, to relieve in a woman of 40 the symptoms of decided eyestrain in reading, not in writing. There was no subnormality of accommodation or other discoverable cause of the perplexing fact, until I noticed that her hands had a rapid and constant tremor. I placed her newspaper in a magazine against a solid body, or in a book-rest, and the shivering was stopped, which caused ocular tiring.

8. *Disease of the General System.*—This condition, affecting directly or indirectly the nutrition or functions of the eye, may sometimes have some effect in causing eyestrain. This factor has been so ludicrously over-emphasized in the past that it needs no more than mention here. Many "conervatives" who care nothing for scientific refraction problems have practically thrown the baby away with the bath, and have vainly sought to resolve all eyestrain into a systemic disease. Although 99/100 of their attention is ludicrously untrue, there is, nevertheless, a possible 1/100 of truth in it. Although diseases of the nose and accessory organs may rarely affect the eyes, the rhinologist, and surely the operative rhinologist, will have little work to do when the enormous influence of eyestrain on the nose is recognized. Much the same may be said of the gynecologist, the otiotomist, the astrologist, and even the general physician.

9. *Eyestrain Due to Unhygienic Occupation, Use, or Abuse of the Eyes.*—In our offices we have constant evidence of these causes. Most of these cases are obviably remediable, and their consideration goes over into the chapter on hygiene of the eye. This is indeed a chapter which, speaking absolutely, still remains unwritten, and which, when written, will not become popular reading for a century. During this waiting-time millions of eyes will be ruined and vast reserves of health foolishly wasted. But in a minority of cases we find ourselves unable to prevent eyestrain, so plainly present. I have often run across the prejudice of employers, school trustees, and especially of railroad officials, against spectacles, even though the employe suffer and the lives of trainloads of people are jeopardized. The trainmen or switchmen say that the superintendent will probably "lay them off" as too old, whether presbyopic or not, if they show themselves in glasses. We should manage to convince the officials of the double folly of their ways.

Half of the clerks, stenographers, book-keepers, etc., are compelled to carry on their work with poor lights, wrongly placed lights, etc., and when the lighting of their desks is good, the employe himself omits many other wise measures preventing eyestrain. Our school desks and commercial desks are universally flat, but when ophthalmology becomes ophthalmologic, and when civilization becomes civilized, they will be made sharply pitched.

The unphysiologic, unophthalmologic, outrageously stupid writing posture of the occidental world begets a big deal of eyestrain, and most of the lateral spinal curvature which curses 27 per cent. of our school

children. That we look sharply downward on our writing, etc., instead of off, from, and slightly downward, that we pathogenically angle our paper, are other sources of eyestrain, which we shall long and vainly struggle to change. There are many other occupations which variously contribute to the conditions of eyestrain.

Lastly comes the fact on which is based the whole theory of the origin of eyestrain, namely, the impossibility of the long and continuous innervation and contraction of any single muscle or set of muscles in the human body. Rhythm is the law of life, and surely of muscular contractility. The modern human eye is often put to tasks which it is incapable of carrying out. Normalized accommodation (that is, accommodation without any ametropic morbidizing), is in fact always subnormal, when it is required to be executed with scarcely a break or change for hours, almost a whole day, and for all days of the year and life. Nature never made the eye for such work, and has not outfitted it with an adequate mechanism.

[THE END.]

Types of Bogus Optometrists.

BOSTON, Mass., Nov. 28, 1906.

Editor THE JEWELERS' CIRCULAR—WEEKLY:

OPTOMETRY offers peculiar advantages to the unscrupulous "money-getter." Glasses are a necessity, not a luxury; people, in general, are desperately afraid of going blind and are, therefore, easily gulled into purchasing a pair of glasses, "especially ground, pebbles with unlimited medicinal powers," at an exorbitant price. The capital required to start in the optical business is comparatively small; the percentage of profit on the cheap lines of good is remarkably high; and everybody seems to be a fool when it comes to getting a pair of glasses, ready to listen to the most outlandish gibberish and more willing to pay a high price to some smooth-talking itinerant than a moderate price to some well-established optometrist, the quality of whose reputation may first be ascertained.

The advantages, then, being numerous and tempting, there has been no lack of men ready to make the most of those advantages, and in consequence the unscrupulous element forms a large portion of the calling and will continue to do so, to a considerable extent, so long as there are no laws to regulate these practices.

The man who travels through the little country towns finds the readiest victims. In the first place, the farmer is more apt to be simple minded enough to think that men are honest, and when "Dr. Know-it-All," the "celebrated eye specialist of New York and London," calls, he believes him to be a godsend, listens with open-eyed wonder to his tales of marvelous cures, and wilts when told that unless he be doubly careful he will lose his sight and may lose it in any case, his only hope being to wear these "medicated lenses," which cost \$30, the frames, of course, being "solid gold cased."

Again, the farmer, unable to get to a city or town supporting a local optometrist, has to get his glasses, if he gets any at all, from the swell peddler who comes around

once in a long time, and even though he be shrewd enough to suspect the "doctor," he still wants the glasses and makes the best bargain he can with him, knowing he will be cheated, but willing to be, to a certain extent, under the circumstances.

Then there exists the semi-fakir, a more dangerous element than the typical fakir, because the latter may be recognized by certain well known signs, whereas the man who has just sufficient knowledge and the required boldness and effrontery to pass off as a first-class optometrist, is the really dangerous man, dangerous both to the public and to the optometrical profession, and should be eradicated without mercy.

O. P.

The Trouble With His Eyes.

FOR a man of his age, Grandfather Sampson had a remarkably good sight, but the time had come when he could no longer see well enough to read ordinary print. Yielding to the inevitable, he went to an optician's and had his eyes fitted with a pair of spectacles.

He wore them only while reading, but his delight in his new aids to vision was unbounded. To be able to read once more was like having a new lease of life. At the end of a week, however, he began to have misgivings. The spectacles were hurting his eyes. The words on the printed page grew blurred and dim.

"The trouble is," he said to himself, "that I have been overdoing it. My eyes haven't got used to the things yet."

For a week longer he used the glasses less frequently, but this did no good. His powers of vision seemed steadily to fail, and in great distress he went back to the optician's.

"See here," he said, "when I got these things they were all right, but now I can't use them at all. What do you suppose is the trouble?"

"Let me see the glasses," said the optician.

Grandfather Sampson handed them over. The optician wiped them carefully and put them back on his eyes.

"What do you think is the trouble, Mr. Sampson?" he asked.

"Nothing—now!" exclaimed the old gentleman, picking up a scrap of newspaper that lay on the show case and holding it up before him. "I can read with them as well as ever. Was that all they needed?"

"That was all."

"Say,"—the old man lowered his voice—"don't say anything about this to my folks, will you?"—*Youth's Companion.*

A. E. Mathews, optician, Spokane, Wash., is spending a few days at Tekoa, Wash.

F. W. Binford, formerly in the optical business at Whittier, Cal., has moved to Los Angeles, where he will locate permanently.

Charles Lee recently entered the stores of H. Plumb and F. T. Parritt, Des Moines, Ia., and stole a watch from each store. He afterwards went to the police station and confessed. He said he slipped the watch up his sleeve in each case. It is thought he wanted to be sent to jail for the Winter months.

THE HOROLOGICAL REVIEW

Remarkable Sun Dial that Announces the Hour

Translated expressly for The Jewelers' Circular-Weekly, from *La Nature*.

THE perfection attained in the manufacture of low-priced timepieces has almost caused the employment of sun dials to be forgotten. Nearly every one has a pocket watch, and has no need of consult-public clocks except when he wishes to compare the time. But to find one which will give the exact hour is not always easy.

Longitudes gives the operations necessary. But this guide, which consists of a vertical or horizontal line, does not prevent the problem from being complicated by the need of several corrections.

It is known that the time which separates two successive passages of the sun at the meridian is not always the same, and that,

noon, and at Nice it is 47 minutes after noon; at two points in France the real deviation is, therefore, considerable. These calculations, although simple, become troublesome by repetition, and necessitate having always at hand a table of the equation of time. It is necessary to watch for the moment to observe the passage of the shadow on the meridian. It was to avoid this necessity that our fathers installed the legendary cannon of the Palais Royal, of which the discharge announced to the public the passage of the sun at the meridian. But, besides the calculation necessary, the cannon must be loaded after each detonation, and then, as the sun constantly changes

FIG. 1.

FIG. 2.

In provincial towns we have often found, even in the silence of the night we heard the midnight hour strike, provided there were any considerable number of clocks, that there was a period of 10 minutes before they had all given the 12 strokes.

We have, it is true, the railway station; but we have the legal time, which may vary from that of other clocks. The most convenient plan is to have one's own guide, showing the passage of the sun over the meridian, and thus the exact time. This guide, determined by the north-south direction, may be readily established in several ways—by means of the compass, by the observation of heights corresponding in line with the sun, and by the position of the polar star. The *Annuaire du Bureau des*

in consequence of this lack of uniformity, there is, except for four days in the year, always a difference between the time of a clock adjusted exactly (mean time) and the time indicated by a solar dial (true time).

This difference, called the equation of time, amounts on the 10th of February to a retardation of 14½ minutes, and on the 3d of November to a gain of 16½ minutes of the solar hour, or a total variation of 31 minutes. Besides, the legal time for the whole of France has been since 1891 the Paris time, and it follows that, according as a locality is to the west or to the east of Paris, it is necessary to add to the local time or to subtract from it.

The sun dial at Brest indicates noon, when at Paris it marks 27 minutes after

in its inclination to the horizon, it is necessary almost every day to remove the lens which concentrates the solar rays on the cannon.

It was quite natural to think of replacing the cannon with electricity, which lends itself to all possible employments, and then produce automatically both the inclination of the lens and the correction of the equation of time. In the apparatus which we will describe these results have been obtained with certainty.

The apparatus is supported entirely by a platform, AB, mounted on adjusting screws (Fig. 1, No. 1). CD is a frame, movable on two pivots, C and D, established in such a way that the line which passes through these pivots is in the meridian and parallel

An Argument for the ELGIN Dealer

The records of the Weather Bureau show a difference of 181 degrees between the extremes of heat and cold in the United States. A watch to be adapted to the use of the traveler must be able to maintain its accuracy under widely varying conditions of temperature. One reason why the

ELGIN Watch

is pre-eminently the traveler's watch is found in the fact that all Elgin Watches are tested by oven heat and by refrigeration before leaving the factory. Their wonderful timekeeping qualities are undisturbed by extremes of temperature, damp or drought, jar or jolt, or by varying positions.

LOWEST UNITED STATES TEMPERATURE 63° BELOW

HIGHEST UNITED STATES TEMPERATURE 118° ABOVE

The above is one of the many good arguments for the Elgin Watch, all of which help the dealer to sell Elgins.

See Jobbers' list for prices or write the Company.

Every dealer is invited to send for the Elgin Art Booklet, "Timemakers and Timekeepers," illustrating the history and development of the watch.

ELGIN NATIONAL WATCH COMPANY

Factories, ELGIN, Illinois, U. S. A.

NEW YORK OFFICE, 11 John Street.

SAN FRANCISCO OFFICE, 704 Market St.

to the axis of the globe. Clockwork, EE', for bi-monthly rewinding, is placed on the frame to the west of the meridian, in such a way that its weight tends always to bring back the frame on that side. The barrel, which carries a tooth, F, makes a revolution in three days and actuates a wheel, G, of 122 teeth, which accomplishes a revolution in 366 days, or the space of a year. The arbor of this wheel is placed according to the axis of the globe, as CD, and supported by the frame.

On the same arbor is keyed a hollow cylinder, K, cut by an oblique plane, on the edge of which is a roller, L, fixed to a rod connected with a small chain, M, which rolls on a sector, N; the center of rotation, *f*, is situated also in the line CD. This sector actuates a lens, O, of which the focus is projected on CD. The whole is borne by the frame. The summit, A, of the section serves as a support to the roller on June 22; the lower point, *b*, retains it on Dec. 22, and all the intermediate positions accord with the declination of the sun for each day. The focal axis of the lens, from the highest to the lowest point, is displaced by an angle of $46^{\circ} 51'$, or double the obliquity of the ecliptic. It is thus always placed in the direction of the solar rays.

On the same arbor is fixed a cam, H H', of which the contour has been determined by a succession of points, whose distance at the center of rotation represents for each day the value of the equation of time. The greatest deviation, *Zd*, corresponds to Feb. 10 (retardation 14 minutes, 27 seconds), and the smallest deviation, *Zm*, corresponds to Nov. 3 (gain 16 minutes, 20 seconds). On the contour rests a roller, I, mounted between two plates, J J', which slide on two supports established on the fixed frame. A small chain, S, attached to one end of these plates, passes over the pulley, Q, fixed on the same frame, and is attached by the other extremity to the sector P P'. This sector is solidly connected with the movable frame, and acts in the following way:

The weight of E tends to incline the frame and all the organs which it bears to the left of the reader; the chain retains the sector and exercises at the same time a traction on J'; but when the cam turns it presents itself as a support to the roller I, of the points of the contour, of which the distance at the center diminishes, the slide J J' advances towards the left, the chain is thrown off and allows P' to remove from the pulley Q; the whole frame participates in this movement, and, pivoting around C and D, inclines to the left; when the distance to the center increases anew it returns to the right, as may be seen in the design (Fig. 1, No. 2).

At Paris the true noon is in accordance with the mean noon on April 16, June 15, Sept. 1 and Dec. 25. On these days the frame does not incline either to the right or to the left, and the focal axis of the lens is exactly in the plane of the meridian. When the sun passes to the meridian after the mean noon the lens, on inclining to the right, comes into its direction before the true noon (solar); when it passes before the mean noon the lens inclines to the left, and it is only in its direction after its

passage to the meridian. The focal axis is thus displaced by a total angle of $7^{\circ} 42'$, corresponding to a deviation of 31 minutes. In this double movement of right ascension and declination the focus of the lens is always projected to the same point, *f*.

There, where the calorific rays are concentrated, is placed the small barometric chamber T of a U-tube, which contains mercury, and at T ether. Two insulated iron wires descend to the mercury and are connected with one or several electric bells, placed at a convenient distance. When the focus is formed on P, the ether is dilated, the mercury presses, which, on contact with the bare extremities of the wires, establishes the current, works the bell, and the mean noon is furnished to those interested without any derangement (Fig. 1, No. 3).

The apparatus may be installed at any point of the country by regulating it once for all by means of the screws. Very ordinary clockwork is sufficient. A variation of an hour a day cannot vitiate the result. It is sufficient to bring it back to the point at the time of rewinding. By fixing on the frame a rod prolonging the axis CD, and surrounding it with a concentric semi-cylinder attached to the frame, a sun dial is produced, giving the different hours in mean time, over equal divisions placed on the inside of the cylinder.

Nautical Observatory to Be Established in New York.

DR. CHARLES LANE POOR, Professor of Astronomy in Columbia University, announced in an address he delivered before the New York Academy of Sciences Monday that Frederick G. Bourne, Cornelius Vanderbilt and several other well-known men of New York have agreed to apply to the city authorities and the State Legislature for a charter to found the New York Observatory and Nautical Museum. These same men have agreed, he added, to raise an endowment for the proposed institution, and also to purchase all the instruments and apparatus that will be required. The new museum shall have the same privileges and be governed in a manner similar to that of the Metropolitan Museum of Art and the American Museum of Natural History.

Scientific papers in Europe announced some time ago that an institution of this kind was to be established in New York. The facts first became known abroad when Mr. Vanderbilt and his associates began to make inquiries as to the management and equipment of similar institutions in France and elsewhere. Until Dr. Poor made his announcement, however, the identity of the gentlemen back of the enterprise was not revealed.

A man who entered the store of F. M. Joslin & Co., Malden, Mass., on Tuesday night of last week, grabbed several scarf pins valued at \$186 and escaped before he could be apprehended. The police have a good description of the thief.

A fire broke out in the basement of the store of Wm. Friedlander, 268 Washington St., Portland, Ore., about a week ago. The jeweler's loss, according to a dispatch, was \$2,000, which is fully covered by insurance. The damage was due principally to smoke.

Standard Time in Different Countries

(Compiled for THE JEWELERS' CIRCULAR-WEEKLY by CHAS. A. BRASSLER.)

THE whole German Empire has a uniform time, adopted April 1, 1893, the Central European time, so called, which is exactly one hour faster than the time of the Greenwich meridian. The same standard is in use in Austria, Hungary, Italy, Switzerland, Denmark, Norway and Sweden; that is, in all the countries which are traversed somewhere near their center from east to west, by the 15th meridian east of Greenwich.

The West European time is the time of the Greenwich meridian, and is used in England, Holland, Belgium, Luxembourg and Spain. France, out of national vanity, holds to the time of Paris, both for herself and for her colonies in Algiers and Tunis, although this time is only nine minutes faster than Greenwich time. It is a peculiar circumstance that the French, who are called "behind the times" in many things, should persist so obstinately in being a few minutes ahead of the English on the clock.

The East European time is the same as the time of St. Petersburg, which is 2 hours, 1 minute and 13 seconds faster than Greenwich time. This standard is used in European Russia, Turkey in Europe, Roumania and Bulgaria.

In Cape Colony the railway standard time is an hour and a half faster than Greenwich time, in Japan nine hours faster.

Australia has four different standards: East Australia, eight hours faster than Greenwich; South Australia, nine hours; Victoria, Queensland and Tasmania, 10 hours, and New Zealand, 11½ hours.

The division of the day into 24 hours (from one midnight to another) has been officially established in Italy, Belgium, Canada and British India; at present, however, only for use in railway and telegraphic communication.

In the United States the railroad time is divided into four zones, called Eastern, Central, Mountain and Pacific, which, reckoned from east to west, are exactly five, six, seven and eight hours slower than Greenwich time. These standards have also been officially adopted in Canada.

The necessity of adopting a uniform standard of time with which the local time of all places may be compared had been felt for many years in the United States, and became urgent with the increase of facilities for communication. The differences of local time arise from the use of solar motion as a time-measurer. We call the time noon when the sun is opposite the meridian of the place where we are living, and, as a consequence of the sun's motion from east to west, the more easterly of two places will have the earlier time, the time difference in hours being exactly one-fifteenth of the longitudinal difference in degrees. In other words, 15 degrees of longitude correspond to a time difference of exactly one hour, as there are 360 degrees in the earth's circumference, which, divided by 24 hours, gives 15 degrees to an hour.

Traveling at the rate of 50 miles an hour, due east or west, we must change our watches four minutes every hour, in this latitude, to keep exact local time. Peculiar

An exceptionally attractive design, the decorations of which produce a rare effect.

A novel Brocade design—green with moire background.

An Art Nouveau pattern of which the Clover Leaf is the prevailing subject. The deep yellow cut background of border contrasting finely with field of moire. A touch of green on edge of backs to lend variety.

difficulties were encountered in this country on account of its vast longitudinal extent, using a difference of four hours between the times of Atlantic and Pacific towns, and the inconvenience became very serious with the extension of the railroad and telegraph stems.

Previous to the adoption of the present standard the managers of the several railroads made their arrangements so as to conform to the local time of the most important stations on their respective lines. The movements of the trains were controlled by about 75 stations in different parts of the country, and a traveler over a comparatively short distance might have to set his watch several times in the course of his journey if he wished to keep correct time.

The first movement which resulted in the adoption of the present time system is contained in a report on the subject by the American Metrological Society, which was submitted to a meeting of the General Time Convention, held on Oct. 13, 1881, proposing a single standard for the whole country, and suggesting the hour theory as an alternative proposition. The matter was by resolution referred to the secretary, J. T. Allen, and recommendations of a practical character were invited from persons interested. The proposal to fix one standard of time for the whole country is supported by many competent authorities, but though preferable from a scientific point of view, it was found to be impracticable on account of the many discrepancies which would occur between time of the clock and solar time. Even if the standard meridian were located in the center, there would be a difference of two hours from local time at the eastern and western extremities.

The system which found most favor, and which was finally adopted, proposed the division of the country into four time sections, each of 15 degrees longitude, an exact equivalent of one hour ($7\frac{1}{2}$ degrees, or 30 minutes on each side of a meridian), commencing with the 75th meridian. Inside each of these sections time was to be uniform, the time of each section differing from that next to it by exactly one hour. A scheme was drawn up by the secretary of the convention, in accordance with these principles, and at a meeting of the convention, held in April, 1883, the following solutions were adopted:

- (1). That all roads now using Boston, New York, Philadelphia, Baltimore, Toronto, Hamilton or Washington time, or standards based upon meridians east of these points, or adjacent thereto, shall be governed by the 75th meridian, or Eastern time, four minutes slower than New York time.
- (2). That all roads now using Columbus, Savannah, Atlanta, Cincinnati, Louisville, Indianapolis, Chicago, Jefferson City, St. Paul, or Kansas City time, or standards based upon meridians adjacent thereto, shall be governed by the 90th meridian time, or called Central time, one hour slower than Eastern time, and nine minutes slower than Chicago time.
- (3). That west of the above-named sections all roads shall be run by the 105th and the 120th meridian times, respectively,

two and three hours slower than Eastern time.

(4). That all changes from one hour standard to another shall be made at the termini of roads or at the ends of divisions.

The first (Eastern) section includes all territory between the Atlantic coast and an irregular line drawn from Detroit to Charleston, S. C., the latter being its most southern point. The second (Central) section includes all the territory between the last-named line and an irregular line from Bismarck, N. Dak., to the mouth of the Rio Grande. The third (Mountain) section includes all the territory between the last-named line and nearly the western borders of Idaho, Utah and Arizona. The Fourth (Pacific) section covers the rest of the country to the Pacific coast.

The advantages of this method of reckoning time are obvious. All towns in the country, instead of regulating their business by their own local time, make use of the time of the nearest of the standard meridians, and as the adjacent standard meridians differ in time by one hour only, the difference in time in actual use in any two of the cities will be an exact number of hours, instead of a number of hours, minutes and seconds. A traveler, therefore, wishing to reset his watch need only change the hour without paying attention to the minutes. Having proceeded, *e. g.*, from New York to any town within the Central time zone, he has no need of consulting any of the local clocks, but has simply to set his watch one hour slower than New York time.

All points east of the Rocky Mountains get the time every day from the U. S. Naval Observatory at Washington. The territory west of the Rockies takes the time from the Observatory at Mare Island Navy Yard, near San Francisco. The signals are sent out, according to a recent writer, when it is noon at Washington, and, three hours later, when it is noon at San Francisco. Chicago gets its time when it is noon at Washington. The signal begins at exactly five minutes before the hour. Then the sounders in the telegraph offices connected with Washington begin to tick off the seconds, with breaks of five seconds at the end of each minute and a break of 10 seconds before the end of the fifth and final minute; then comes the noon signal.

The time thus sent out is very accurate. The transmitting clock that gives the signals is corrected shortly before noon each day from the mean of three standard clocks which are rated with star sights, with a meridian transit instrument. The noon signal rarely errs more than two-tenths of a second, although according to the Government bulletin an additional error of a tenth of a second may be caused by the relays in use on long telegraph lines. Electrical transmission over a continuous wire is practically instantaneous.

The time signal has been sent from Washington to the Lick Observatory, California, in $5/100$ of a second; to the National Observatory in the City of Mexico, in $1/19$ of a second; to Greenwich, England, in 1.33 seconds; to Sydney, Australia, in 3.5 seconds, and to Wellington, New Zealand, in four seconds.

"Old-Timer," a Bone of Contention.

AN old mahogany clock, whose weights were used for Yankee bullets in the Revolutionary War, has caused a serious quarrel between Miss Mary Andrews, aged 81, and her brother, Charles S. Andrews, aged 83, one of the oldest living graduates of the Yale Law School. Both want the clock and both intend to fight in court to get it, says the *New York Sun*.

The old clock, still ticking off the time, was seized by Deputy Sheriff Stockwell recently and carried out of the home of Mr. Andrews, where it had been for years. The Sheriff will wind up the clock until the court decides which of the litigants is entitled to it.

According to Miss Andrews the ancient timepiece belonged to her and her late sister, Miss Julia Andrews. Her sister gave it to the son of Mr. Andrews in her presence, but she, as one of the owners in it, did not consent to the transfer. By the death of her sister she says she became sole owner of the clock.

The seizure of the clock is the culmination of trouble that has been brewing for some time in the Andrews family. Miss Mary Andrews for many years lived next door to her brother here. Some time ago she changed her home, but left behind her the old clock and her old hair trunk.

The clock is about eight feet high and on the face is engraved in steel: "David Lowery, Newington, April, 1774." It belonged to the grandfather of the litigants. The present weights, which replace those which were melted into bullets in '76, are chunks of iron.

The father of the claimants of the clock was Prof. Nathan Andrews, author of "Andrews' Latin Grammar."

Horological Notes.

THE old astronomical clock at Hampton Court Palace recently took a fit into its head and refused to go. This was caused by the slipping of a pin and as a consequence it is now being thoroughly overhauled. It is stated that the clock has gone without stopping through an accident for over a century! The clock is a restoration of the original which was erected in 1540, when Henry VIII. and Queen Catherine Howard resided at Hampton Court. Little remains of the original except the pictorial dial with its three disks showing the hours of the day, the days of the month, the motion of the sun and moon, the moon's age, phases, quarters, etc. This old clock is in the first and second quadrangles, the pictorial dial showing in the first court and the ordinary face, added in 1649, in the second.

* * *

One of the most noted makers of hall clocks was Samuel Muliken, Newburyport, Mass., who died in 1756. The best sample of his work has been found recently in the home of Mrs. S. Herbert Wilkins, Salem, Mass. The clock has a solid mahogany case, brass works and face that included a calendar.

N. Babb, a jeweler of Stratford, Ont., has been exonerated of the charge of the retention of a gold ring preferred against him, recently, by a young woman.

Ample Provision for Watch Demands

IT SOMETIMES HAPPENS that the extra pressure of Holiday demands overtaxes the facilities of supply, causing confusion and delay in the filling of orders. This is all the more annoying when the orders are marked "Rush," and there is a time limit on the availability of the object for the consumer's purpose. If it comes too late he does not want it.

It is important that the Trade should realize that these Offices make the fullest and most ample provision for all Watch demands, and are prepared for every exigency.

MUNSEY'S MAGAZINE—ADVE

The TEST of a Good Watch

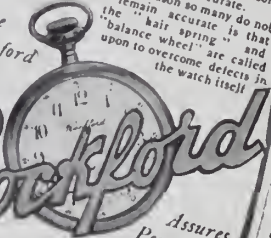

McCLURE'S MAGAZINE

begins the new because perhaps it more at hand reading

How Can we Know a Good Watch?

BY the time it keeps. Not while it is new, but for the years it must serve you. For the common fault in watches is that they become inaccurate. There is no reason why a watch should not remain accurate. The reason so many do not remain accurate is that the "hair spring" and "balance wheel" are called upon to overcome defects in the watch itself.

The Rockford Test

Assures Permanent Accuracy

Time for a Lifetime

The Rockford Test bars any watch from being a final test for accuracy, that will be perfect and the product of the

EVERYBODY'S MAGAZINE

The Rockford Watch Test

EVERY Rockford Watch is run without a hairspring before it gets one. Because that proves perfect parts accurately put together. And when a watch that has passed this Rockford Test is properly "adjusted," it will remain an accurate keeper.

proper purpose of "adjusting" is to remove outside natural conditions and inaccuracies—such as the wrong position and the expansion and contraction caused by heat and cold. The frequent adjustment upon to overcome defects in the watch.

COLLIER'S

Proving Watch Perfection

TWO things cause inaccurate time-keeping in a watch, broadly speaking: Defects in the watch itself and outside natural causes, such as the effect on a watch of the constantly changing position in which it is carried and the expansion and contraction caused by heat and cold.

Rockford

RETAIL JEWELERS ADVERTISING

Elementary Lessons in Advertising, Including Some Practical Information Regarding Type

(Continued from issue of Nov. 14.)

TO SECURE INDIVIDUALITY.

An ad. should have individuality—a personality of its own—just as most people have.

To that end, the adman should choose in a newspaper's supply some one "series"—i. e., the several sizes in which the type is made—of a display type, and use that type in all his ads. in that paper.

If he advertises in a number of papers, he should have all his ads. look alike. He should, if possible, get the papers to use a particular type for him alone; failing in that, he would probably, as many advertisers find it advisable to buy his own display type—different from any the papers have—which in any event he can be sure of its exclusive use.

WHEN THE LINE IS "INDENTED."

"Indentation" is the setting in of a line or body of type by a blank space at the beginning of the left-hand side, shown in the first line of a paragraph, which is variously indented an em or more, according to the length of the line—the longer the line the greater the indentation.

"Hanging indentation" is an equal indentation of all lines of a paragraph except the first, which is longer than the others and hangs over them. Hanging indentation is used mostly in setting items, the introductory lines set in the regular, or "paragraph" indentation. In single-column items, the hanging indentation is usually "one and two"—first line indented one em and following lines two ems. In wider measure the indentation is greater, but proportionate.

CONDITIONS THAT GOVERN DISPLAY.

Effective display" in an ad. consists in the quick and clear bringing to the eye—and back of the eye the mind—of the reader the one thing that will be most interesting.

With a large proportion of people, price alone is the first consideration; others will be attracted by the name of the article; still others by conjunction of name and price.

There can be no hard-and-fast rule as to effective display. It must, in its details, be governed by the character of the store, its goods, and the class of people appealed to. As a general proposition, display of some sort is essential to a retail ad. But the adman must decide for himself what he will do.

OBTAINED BY VARIOUS MEANS.

There are numerous methods of setting display: The straight line or heading in the center of the width above body matter, perpendicular reinforced by other straight lines (also centered) about the middle or at the foot of the body matter; the straight line set to the

left or right; heads or side-heads set in "boxes" of rule; side heads without boxes; figures that are "cut-in" (partially or entirely surrounded by type) which may be either front or back of an item; figures as large as all the lines of body type in which an item is set; figures in boxes; and so on. Styles of display may be borrowed, adapted or invented, according to the inclination or ingenuity of the adman.

BASIS FOR USE OF DISPLAY.

To hark back, display should be devised and carried out with consideration of the character of the store, its goods, and the class of people it caters to.

Large type for figures is undoubtedly necessary for some stores. They cannot draw anything like as much business without it.

There are people who have to be hit with a club before they can comprehend; others understand and act on a bow or a smile.

It is useless to smile at whoever needs a club; and it is not only gratuitous, but offensive, to show a bludgeon to the other one.

So the thing to do is the *apropos* thing—remembering, however, that civilization is spreading, and good manners are sometimes contagious.

What has just been said about the figures in an ad. applies also to the general display. Use bold, black type if it is necessary—but only then.

AS TO THE QUOTING OF PRICES.

There will always be difference of opinion as to whether many or few prices should appear in an ad. Conditions should settle that matter. Where there are no fixed conditions a little experimenting will bring about a conclusion.

CAN SPACE BE WASTED?

Occasionally some one talks learnedly about "wasting space" in an ad. It is a grave question whether this is possible—up to, of course, an admittedly insane limit.

By "wasting space" is meant seeming extravagance of display or use of white space.

Who can say positively that this manner of setting is any more wasteful than the jamming into an ad. of every letter of small type it can hold?

Do what seems best along this line, after "trying out" both these methods, as well as the middle ground.

[THE END.]

Roland Turner was recently taken into custody in Cripple Creek, Colo., on a charge of larceny, preferred against him by J. H. Johnson, his former employer.

What Some Jewelers Say.

THIS watch costs you \$10. Elgin or Waltham in 20-year filled case. The best watch for the money ever offered. My guarantee means something, not merely that it is a watch, but all that is represented at the time of purchase. F. M. Powers, Youngstown, O.

Cut glass moderately priced. The beauty of cut glass, combined with its utility, is becoming more and more appreciated, and there are few tables or sideboards where it is not in evidence. One can hardly have too many pieces of good crystal, and the very moderate prices at which we are selling lappies, trays and other articles will allow one to own quite a collection without an extravagant outlay. L. L. Biekings, Norristown, Pa.

The oldest jewelry store in Kansas City. This year we are carrying the largest and most complete line in our history. We cordially invite strangers in the city during Horse Show week to inspect our stock of diamonds (mounted and loose stones), set in any combination you may desire, gold jewelry, watches, sterling silver and cut glass. Cady & Olmstead Jewelry Co., Kansas City, Mo.

Will you be one? Our customers are our best advertisements. Every pair of glasses fitted by us sells others. Every day some one says, "Mrs. So and So is so well pleased with her glasses that I thought I would come to you." We are human, though, never satisfied. We want to add you to our chain. To fit you is to fit your friends in future. We correct all defects of the human eye that glasses will remedy. Kinsel & Petri's, Columbus, Ga.

An entirely new line of opera glasses, mounted in the various leathers and the three most popular pearls, namely, the Oriental, smoked and mother of pearl. Special attention being called to the detachable handles with which the lenses can be adjusted to suit the eyes without raising the hand to the glasses themselves. A gift appreciated by every one. Edwin Keller & Sons, Allentown, Pa.

Solid gold society emblem pins, \$1. We show here but a few styles in emblem goods but carry a full and complete line in emblem rings, charms, buttons, pins, badges, at guaranteed lowest prices. If you desire anything in this line come and examine our assortment and prices; we will save you money. Cohen & Co., York, Pa.

Watches.—If there is any feature of our stock which we can show with especial pride, it is our very handsome array of watches, both for ladies and gentlemen, in either gold, gold filled or silver cases. We are able to offer the very best combinations of as first class case and excellent movement as was ever offered in this locality, and at prices that are, beyond comparison, the lowest that can be made on warrantable goods. In filled cases we can offer some excellent bargains, that for service and wear leave nothing to be desired. While we can meet any figures, our goods run up to the highest and best grades in the most finished styles of modern workmanship. We challenge comparison, both of goods and prices, with any and every dealer. James W. Sanders, Schenectady, N. Y.

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan which they are utilizing in connection with their business.

The Jeweler's Window Display During the Yuletide Season.

Christmas Suggestions Which the Show Window Should Offer the Purchasing Public.

NEGLIGENCE in making "special" displays may be excused at some seasons, but neglect of the window during the Christmas season could scarcely be condoned. At

CIRCULAR-WEEKLY always endeavors to give suggestions for attractive window displays which can be arranged at a comparatively small cost, at the same time making the

to find a more fitting symbol of Yuletide than the time-honored evergreen wreath and garlands which play a conspicuous part in this trim. In the center, surmounted by a clock, place a pillar, the height of which should depend upon the dimensions of the show window. This pillar can be made of wood covered with cloth or silk in a fluted effect. Garlands of evergreen are suspended from the top and are fastened to the floor of the window. Jewelry on neat cards may be intertwined as shown herewith, ar

A CHRISTMAS WINDOW DISPLAY BY WHICH TIMELY GIFTS MAY BE SHOWN TO GOOD ADVANTAGE.

this time the jeweler should gather together all the force of his originality and enterprise and put forth his best efforts to make his window appear "good to look at." THE

arrangement as practicable as possible. The accompanying design for a Christmas show window was also laid out with this end in view. It would be hard indeed

at glass in boxes fill up the rest of the case.

The background may be gracefully draped with white silk, or, if economy is a very important consideration, even a fine quality crepe paper may be used.

How the Jeweler Can Meet the Competition of the Mail-Order House.

(Continued from issue of Nov. 21.)

ARE you the kind of a fellow who can learn something from the experience of your competitors, the mail-order houses, do you need to have ideas driven into your brain with a club? If you are willing to take advantage of the experience of others there is no reason why you cannot gradually turn the mail-order people in your neighborhood into good customers of your store. If you know too much to take advantage of other people's experiences, of course you have already made enough money to retire, and should at once sell out and give some other merchant a chance. One of the first things we learn by watching the methods of mail-order houses is the writing quality of their letters. Is there anything about that discovery which gives you an idea that you can apply to your own business? Possibly it has never occurred to you that you could increase your business by writing letters, but you have the advantage of the mail-order house in this respect, for you can write a letter to a neighbor and very likely cause him to drop into your store to see the goods you wish him to see. When you get him in the store you ought to be able to sell him whatever he is interested in. Your advantage lies in the fact that you can invite him to come in and see the goods, and examine them. He does not have to take your word as to quality or anything else, for he can use his own judgment.

If you are a good buyer you always make an estimate of about what your trade will be in each line. In order to do this you mentally run over the possibilities and size up the tastes of your customers. Now, after buying certain things with the view of selling to certain people, do you not think it would be advisable to let those people know about what you have done?

Many retailers put the goods on their shelves and wait for the customers to come. The best way is to put the goods in sight and then get out after your customer and invite him in, and one of the best ways of doing this is by a personal letter.

Do not write up a general form and have a circular letter printed. That does not touch the bill in this case. Get these letters to touch the right spot in each customer. Do not try to write one to each person in your county, but confine this kind of advertising to such people as you are personally acquainted with, and feel sure you can dispose of the goods which you have to offer. Some of your customers like the best that the market affords, and some like the cheapest. Write these personal letters to all such people, but tell each class about the goods that will appeal to them. You can save those letters written at a reasonable cost by someone who has a typewriter,

and wants experience, in case you do not need a stenographer all the time.

You will probably find that you can write identically the same letter to eight or 10 persons, and in that case you can write the one letter and have it copied for the others; but the main thing to keep in mind is to make your letter appeal to the particular person to whom it is addressed. Never lose that idea.

You can tell all about having bought the goods with a special view to his likes; describe the quality very minutely, so he will be thoroughly impressed with the idea that you have bought the best of the kind, and be very sure to quote prices, for the mail-order house has done that, and has a catalogue in the house of your customer. Conclude by inviting the prospective customer to come in and see for himself. If your letter is well written, you are very likely to get a call, and then, even if not pleased with your offering, you can find out exactly what will please, and probably make arrangements to order it for him.

F. A. P.

(To be continued.)

The Power of Initiative.

NOTHING counts in this world like initiative, says a writer in the *General Merchants' Review*. The rewards in every walk in life are held for those who possess initiative and know how to use it. Initiative is a gift of the Almighty, and every man is endowed with this gift, and if he fails to use it is not making the best of the talent he has. Initiative is the faculty of going ahead and doing things. It is the faculty of doing the right thing at the right time and being the first in the field.

Without initiative a man stands but little show of ever getting very far ahead in this world, for it is initiative that places a man in the front rank and makes him a leader. Initiative is what makes one employe stand out above all of the rest. It is that which places one merchant as the leader in his town and puts him in the position where others look up to him. Initiative makes his store the best one in the locality and brings him the rewards of efforts in the full measure in which he merits them.

Initiative is push. It is not gall or unseemly forwardness. It is quality that keeps a man's head up, his mind clear, his thoughts concentrated on a definite aim, and helps him to push forward to success. Initiative is possessed by every one in the proportion to which the person will apply it.

If you would be a leader in your line, cultivate initiative. Urge yourself on to greater endeavors, and by accomplishing small beginnings big endings come of their own bidding. Initiative will bring you anything you desire under the sun provided that desire is a worthy one.

Do not mistake initiative for a greed to get ahead of every one else. This it is not. It is not avarice, but it is a clean, smooth quality of push that holds honesty and right dealing in the forefront and works forward to big things through short, quick stages, founded on fairness to fellow man.

All of the great minds in history developed initiative to a marked degree. All of the great men possessed great initiative

and used it. There is not a single instance in history of business, warfare, conquest, science or religion where initiative on the part of some man did not win the battles. Without initiative man is nothing. With it he is everything. Initiative does not condemn those in front. It emulates them. Initiative does not abuse the man who has advanced to a high point of his career. It studies him and works toward the same end through honest endeavor. Initiative has no time for petty jealousies, it is too busy figuring out the right way to success for the individual.

Initiative accomplishes all things. Initiative mounts every obstacle or else finds a way around it. Initiative combines tact and push, with the result that the union does everything for the individual that the individual mind desires. It does things first. Primarily it is the quality of doing things before other people think of them.

Many people possess the minds to think out things that other people have not thought of, but fail to put them into effect. This is the result of a lack of initiative. Minds that are capable of originating can become capable of executing by the cultivation of initiative. If you are in business in any section of this great country initiative is a very valuable asset. No matter what your line or what your location, no matter what your handicaps or advantages, initiative will conquer all difficulties and solve all woes. Initiative will place you first and make you the leader, but you must cultivate that quality and cultivate it with a vim.

Initiative eliminates fear. Fear is the worst enemy of man. Fear causes more ruined lives and more ruined business than anything else. Initiative never admits of fear or failure, and should failure come, to initiative it is but a stepping stone to something greater, and is but one of the mistakes attendant upon the struggle for success.

Cultivate initiative. Fear and unrest will vanish. Cultivate initiative and to you nothing is impossible. Initiative is a wonderful quality, it is a sort of sixth sense, and it is of such great importance that it must not be disregarded.

The Way of the Enterprising.

THE recent formal opening of the store of J. C. Mellichamp, 70 Whitehall St., Atlanta, Ga., attracted large crowds. The store was artistically decorated with palms, ferns and smilax, while large yellow chrysanthemums filled every available space throughout the establishment. An orchestra rendered well chosen music and added much to the gaiety and pleasure of the occasion, which reminded one of a social function. The new store is one of the most attractive in Atlanta, and the stock, which is well arranged, shows up well against the backgrounds of rich velvets, plateglass and mahogany fixtures.

* * *

Considerable attention was attracted to the show window in the store of A. F. McMillan, Vancouver, B. C., recently, by the display of a number of rough diamonds.

* * *

Fritz Guy, St. Cloud, Minn., recently advertised a 20 days' sale of diamonds at last year's prices.

QUESTION No. 1714.—Soft Solders.—*Please give me the alloy of some soft solders, also a few of the bismuth variety.*
S. S.

ANSWER:—Solders are classified according to the manner in which they are used, with further distinctions in regard to their fusibility and to the metals which are to be soldered. Soft solder is the most fusible kind, requiring, therefore, the least heat for soldering. The following are a few alloys known as tin solders. They are numbered according to their fluidity, No. 1 being the hardest:

No. 1. Lead, 2 parts; tin, 1 part. Fusing point, 240° C.

No. 2. Lead, 1 part; tin, 1 part. Fusing point, 200° C.

No. 3. Lead, 1 part; tin 2 to 2½ parts. Fusing point, 185-190° C.

No. 4. Lead, 10 parts; tin, 177 parts. Fusing point, about 180° C.

Bismuth Solder.—All solders containing bismuth have a very low fusing point; their disadvantage is that they have but little cementing power, and are very brittle, so that if an article soldered in this way is allowed to fall the whole soldering seam will often give away. Below are a few compositions of solders of tin, lead and bismuth:

Tin, 118 parts; bismuth, 208 parts; lead, 207 parts. Fusing point, 124° C.

Tin, 236 parts; bismuth, 208 parts; lead, 414 parts. Fusing point, 145° C.

Tin, 354 parts; bismuth, 208 parts; lead, 621 parts. Fusing point, 255° C.

Tin, 472 parts; bismuth, 208 parts; lead, 828 parts. Fusing point, 160° C.

Tin, 236 parts; bismuth, 208 parts; lead, 207 parts. Fusing point, 160° C.

QUESTION No. 1715.—Characteristics of Platinum.—*Kindly give me a short description of the characteristics of platinum.*
C. P.

ANSWER:—Platinum is a steel gray metal, hard as iron, and yet quite malleable. With the exception of iridosmium, it is the heaviest metal occurring in nature. Platinum does not amalgamate with quicksilver, is not dissolved by potassium cyanide when cold, and is not attacked by acids, except the mixture of nitric acid and hydrochloric acid known as aqua regia. It is more difficult to melt than gold. It is used in all electric machinery. Its coefficient of expansion is the same as glass, and it is the only metal which can carry the electric current through the globes of incandescent lamps, the hairlike wires that convey the fluid to the filaments in the bulbs being of platinum. It is also used in laboratories for crucibles and other utensils to which its infusibility and its ability to resist acids

peculiarly adapt it, and in dentistry, especially for the pins which attach porcelain teeth. It is alloyed with other metals for many purposes, and it is now worth nearly twice as much as gold per ounce. The chief mines of the world are located in the Ural Mountains, on the borders of Siberia. Further information on this subject will be published in a forthcoming issue.

QUESTION No. 1716.—Cleaning Silverware.—*Please give me full information as to how I can clean silverware and relacquer it.*
C. S. W.

ANSWER:—If the silverware has been long exposed, so that it is tarnished very dark, then it will require some polishing to obtain a good finish. A weak cyanide dip is necessary. This is made by dissolving one-half to three-quarters of a pound of cyanide potassium in one gallon of warm water and placing the same in a glazed earthen jar. The dip should be large enough so that medium-sized pieces may be immersed in it. For this reason it is best to make from three to four gallons. This size will allow the dipping of articles of the size of water pitchers and ice pitchers. If there be larger articles it is well to pour the dip over them and thereby remove the tarnish. The first operation is to remove all the old lacquer that may cover the silver. This can be distinguished by the label usually pasted on the bottom, or by the spotted appearance of the piece. The lacquer may be removed by immersing the pieces in boiling water for some time, or by immersing in hot potash, and may also be removed by means of alcohol, by saturating a cloth with it and washing it off. To remove the lacquer, simply loosen it, so it will peel off, or by dissolving in the warm water or potash. The pieces are now ready for the cyanide dip. Dip them just long enough to remove the oxidation, which sometimes will take less than a minute; then rinse thoroughly in cold running water. The pieces should now be well washed with strong warm soapsuds and a soft sponge. Rinse off in cold water, dip in clean boiling water and dry with a soft towel. If the pieces were burnished, the above treatment would restore them to newness, and all that would be required is to touch them up a little with soft chamois. If, however, the pieces are gray and dull in appearance, then they will require polishing. This is best done with a regular polishing lathe, with cotton flannel buffs and finely powdered rouge, which has been saturated with alcohol. Care must now be taken to wash off all the rouge that might have gathered in the recesses or corners. Have the pieces in as perfect a condition as possible. It is best to lacquer the pieces as soon after the

polishing as possible, in order to prevent oxidization, which often sets in at very early stages. The lacquer can be brushed off the pieces with a camel's hair brush. Brush every part of the piece with the lacquer and let the piece dry in a place where there is no dust flying about. All the preparations used for cleaning silverware, as described above, may be saved, and can be used a number of times. The cyanide dip can be covered up to prevent evaporation, the lacquer should be kept in the can, and the brush should be cleaned after each operation. By doing this the preparations are ready for use in a few moments when occasion demands. It should not be forgotten that the cyanide dip is a rank poison, if taken internally, and should be labeled "Poison." Owing to the scrupulous care necessary in using the cyanide, it is most advisable to send the articles to be treated to a good electroplater.

QUESTION No. 1717.—Platinum Chloride.—*Please give me a formula for producing platinum chloride, which I can use for putting a gray finish on silver articles.*
T. P.

ANSWER:—The platinum chloride is produced by obtaining scraps of platinum, or the wires from old incandescent light globes, and placing in an evaporating dish that can be heated. Over this pour C. P. muriatic acid, two parts, to one part nitric acid, and gradually heat the dish. The more heat applied the more vigorous will be the action of the acid upon the platinum. The dish should be kept hot until the acid has been reduced by evaporation to one-fifth its original volume, or until it has a dark red color and the consistency of thin syrup. After cooling the dish, add one-third its volume of alcohol and bottle for use. The reducing of the platinum should be done where there is a good ventilation, or in the open air, as the fumes are injurious to health. This solution is usually applied with a brush, after the article to be treated has been heated. If it does not turn black, heat the article again.

QUESTION No. 1718.—Bright Silver Solution.—*I want to plate a number of small washers and screws a bright silver, and wish to know how to make a solution that will do this.*
B. S. S.

ANSWER:—Many of the bright silver-plated articles are bright nicked first, after which a bright silver deposit is applied. The best way to produce a bright silver solution is to take eight drops of bisulphide of carbon and place in a quart bottle, nearly full of regular silver solution. Then cork the bottle and shake vigorously several times during the day, until all the carbon seems to have dissolved. This should be left to settle over night, and about a tablespoonful of this mixture is added to each 10 gallons of silver solution. The same should be done to the strike solution. This will brighten deposits on any article, but it should be remembered that it does not leave a heavy deposit on the work, and should be used only when a light, bright deposit is wanted. Another method is to obtain a bright deposit of silver by simply reducing the current and the anode surface. Have the solution quite strong in cyanide and low in silver.

A Word About Fine American Cut Glass and Its Imitations.

BY THE COMMENTATOR.

ONE writer on the subject of cut glass speaks of glass itself as being the least decorative of materials. The COMMENTATOR is disposed to dispute the accuracy of this notion, without overlooking certain limitations to which fine glass ware is subject. One may venture to maintain that clear glass, simply in itself, possesses elements of beauty. No one would think of speaking of gems as the least decorative of materials; and yet the simple process of cutting to develop refractory power in gems applies in its appropriate degree to glass also. The fact that both the principle and the effects are simple and limited in their scope does not detract from the distinctive beauty of the products.

If our subject were the general one of ornamental glass, there are many interesting subdivisions to vary and extend the decorative possibilities. Its imitative effects range from onyx to opals, and the splendid cope of stained glass extends from lamp shades to cathedral windows. These departments, however, are not germane to the present comments. As to cut glass, it must be admitted that its possibilities of artistic expression have distinct limitations, in view of which the results obtained are all the more notable.

Like marble statuary, cut glass is a creature of form. Effects depend on two things—first, the quality of the blank or metal; and, second, the shape or design. The average consumer is chiefly interested in the latter element, but the connoisseur as due regard for the former. Color, in the ordinary sense of the term, does not enter into the matter. The decorative effects attainable in porcelain, for example, are debarred from cut glass. Any attempts at such effects produces a hybrid result, not a true or consistent example.

It will probably be admitted that the more limited the media of artistic expression, the higher the degree of skill required to achieve notable effects. An error of the painter can be erased or painted over; a slip of the glass-cutter spoils the product. Indeed, this element of waste enters into the price of cut glass to an appreciable degree. The comparative lack of complexity in design renders any blemishes readily apparent. On the other hand, where color is a feature as in pottery, coupled with laborateness and complexity of design, criticism is less easy. Thus the very limita-

tions of cut glass give rise to the most exacting standards.

First, then, one has to consider the body or "metal." The standard aimed at is to approximate by artificial means the finest of true crystal. No less skill is required to produce the appropriate quality of glass than to manipulate it afterwards. Fine cutting will not compensate for the lack of this crystal clearness. There are as many variations in the clearness of glass as there are in that of the atmosphere. Results in this respect depend upon the proper proportion, relation and admixture of the ingredients. Of these sand is, of course, the most important, constituting about three-quarters of the substance of every finished piece. Only the purest sand can be used in the manufacture of the finest ware. Thus it will be seen that pure sand has somewhat the same relation to fine glass that kaolin has to fine porcelain. Of course, other substances enter into the composition of glass, and the proportion of such substances is varied to produce effects desired. For example, refractory power depends upon the percentage of oxide of lead; fusibility, upon the proportion of potash and soda; hardness, upon the percentage of lime. Needless to say, the attainment of the precise proportions is a problem of some nicety. Indeed, the difficulties begin with the very first stages of manufacture. The cutter has his own troubles afterwards.

We referred a moment ago to porcelains. Some former comments in a previous issue of this paper spoke of certain tests of fine porcelain, special mention being made to its "feel" in determining its quality. Doubtless the feel of glass also reveals something to the expert; and its looks tell more than in the case of porcelain, because glass is naked, which porcelain seldom is. Porcelain wears a clothing of paint and glaze, often the gayest of clothing. Glass, like marble, is naked. There is another test, however, which is applied to glass. You can tell it by its "ring," like money. You could not deceive a good cashier with a base coin, once he had flung it on the counter. No more could you deceive a judge of glass, once he had tapped it with his finger nail. To the expert all glasses are "musical glasses"; each sings its own song to him. It is conceivable that one familiar with various makes might be able to tell their source with his eyes shut, merely by the

sound they give forth when struck. But when it comes to distinguishing cut glass from its imitations, both the looks and the feel afford tests which it needs no great skill to apply. The comparative lack of sharpness in the imitations is revealed more readily by the finger-tips than to the eyes, though the latter can generally discern it also.

Such imitations of cut glass as exist are never of old examples, but always of modern and popular forms. There is no commercial advantage in imitating old pieces. There is no such demand for old cut glass as there is, for example, for old china plates. Early examples of American glass cutting, however unique and graceful in form, do not bring high prices. As to modern types, there are many cheap and meritorious imitations in pressed glass. Even wealthy and discriminating customers will often deliberately buy such inferior glass ware, with their eyes open, for the simple reason that they want a substitute to save their finer glass, which they reserve for formal occasions. Thus wealth and thrift are seen to go hand in hand. Such a purchaser realizes that his thin and beautiful glass is brittle, that children are no respecters of it, and a lusty boy may crack it with a fork to hear it ring, or a maid drop it when thinking of something else—her best young man, probably. It comes to pass, therefore, that a sale of cut glass may involve also a sale of cheap glass, to preserve the former. This applies, of course, to table service only, and not to forms designed for purely ornamental purposes.

More or less good imitations of cut glass are made possible by improvements in mechanical processes, but such processes are not confined to the imitations. Effects even in cut glass which formerly were produced by hand are now often imparted by other means. For example, the acid finish has superseded the old-fashioned method of polishing by hand. Commercially this is an advantage, because it is so much quicker as to increase the output of cut glass about 25 per cent. It is manifestly an easier and cleaner process. It is said to be more healthful to the workmen. Artistically, however, it is less satisfactory. There is lacking the perfection of surface which characterized the cut glass of 15 years ago. Moreover, the disadvantages of the acid finish are often exaggerated by carelessness in its application. Possibly a development of the public taste may some day compel a return to the older method.

It is estimated that there are about 4,000 glass cutters employed in the United States to-day. The industry in this country long

Look for the Pouyat Marks

Some of the reasons why dealers in Art-Porcelains should be interested in Pouyat China:

It is a notable ware historically; famous since 1783.
 It is recognized as the finest modern product of the celebrated Limoges potteries.
 Its unflinching supremacy is certified by a long series of medals and awards, including five bestowals of the Cross of the Legion of Honor upon successive heads of the Pouyat house.
 It offers the widest choice of artistic designs, the widest range of prices.
 Finally, all Pouyat ADVERTISING is designed to stimulate the business of LOCAL DEALERS.
 If your jobber does not handle Pouyat China, we will inform you where to obtain it.

o triumphantly overcame the curious prejudice which existed against American glass products. So great was this prejudice 20 years ago that American cut glass could only be sold under a trade fiction as English product; the best customers would have nothing to do with it. The Centennial Exposition of 1876 opened the eyes of the world, and incidentally of our own people, to the excellence of the American product. Subsequent expositions have continued to educate the public in this respect. The prejudice has been completely wiped out. The work in every department of the industry has become highly specialized here, so that the skilled workmen employed compare favorably with any in the world. The glass itself is the finest, unequalled in clearness and refractory power. Whatever may be the deficiencies of American art products in other lines, this splendent cut glass is an example in which we certainly take pride.

System Employed by the Japanese in Their Pearl Oyster Farms.

THE National Geographical Society publishes an interesting article by K. Tsukuri, Ph.D., Professor of Zoology in Imperial University of Tokio, Japan, on "Artificial and Fresh Water Animals in Japan." In the course of his article Dr. Tsukuri tells of a pearl oyster farm which offers some suggestions to those persons who propose to avail themselves of the work of the Maryland Shellfish Commission, and who can eventually lease oyster ponds, where they can raise oysters for their pearl. The Japanese scientist tells of an experiment of a Miko Moto. This gentleman in 1890 began some experiments, which have been so successful that to-day he has millions of pearl oysters on his farm, and is able to place on the market each day a large crop of pearls.

The breeding season of the pearl oyster is from July to August, and before this comes the spawning—namely, in May and June—stones weighing six to eight pounds are placed on the bottom of the spat-collecting pond. By August tiny shells are first discovered attached to these stones, and the number increases constantly with the season. They are allowed to lie as they are until November, and then those that are near to the shore are removed with the stones on which they are anchored into depths greater than five or six feet, in order to protect them from the cold. The young shells are then left alone for three years. At the end of three years they are taken out of the water and the operations necessary for inducing them to produce pearls—that is, of putting in nuclei for pearls—are performed on them.

At present the number operated on each year is about 300,000. They are then returned to the sea and left alone for four or five years, at the end of which time they are taken out and opened and the pearls are taken from them. These "culture pearls" are beautiful in luster, shape and size, and while most of them are either half pearls or a little more than half pearls, they meet all requirements where half pearls only are required.

Cameos of the Past Century.

FEW articles of jewelry ever went so completely out of fashion as the cameo, and no woman, whatever her eccentricity in matters of personal jewelry, would have been sufficiently bold a few years ago to have risked her reputation for artistic taste by exploiting a cameo brooch, bracelet or hair ornament. But nowadays we are nothing if not retrospective, says the London *Evening Standard*, and these old-fashioned heirlooms are more prized to-day than they ever were by their original owners.

Our ancestresses would hardly have laid claim to discovering the old methods of cameo cutting, but they at least revived the love for an art which has prospered and languished in regular ebb and flow since the beginning of history. Egyptian designs were much to the fore in the days of hoops and farthingales, but classic designs had a still greater vogue, and the semblance of "mortals and immortals" derived from mythological sources made a picturesque subject for many an ornament treasured by the beauties of three generations ago.

Most of the cameos which have descended to modern times were carved in sardonyx or agate-onyx, although in museums and many private collections beryls and amethysts as well as many of the other more valuable gems are to be seen.

Cameos which date from the First Empire were often carved out of shell. The great demand for precious stones necessitating the discovery of some cheaper substitute, and although more brittle and consequently much less lasting than the real gems, shell cameos were made with such skill as almost to deceive the eye of an expert. Layers of the shell were placed one on the other until the required thickness was obtained, and not only Dianas and Cupids but beauties or favorites of the day, from the famous ladies of the French courts to Napoleon or MacMahon, were popular subject models.

As regards settings, no one but a vandal in artistic taste would tamper with the old twisted gold framework or beading which encircled an antique cameo brooch or the heavy links which bound a row of carved sardonyx medallions around the wrist. In the '40s and '50s, however, artistic taste was not invariably to be trusted, and there is no disguising the fact that some of the gems of those times cannot be countenanced nowadays in their heavy and barbarous looking settings, and many women are in consequence having the old heirlooms reset according to beautiful old Greek or Italian designs. Girdles formed of rows of cameos interlinked with fine gold openwork promise to have a great vogue this Winter, and the single cameo in the form of a locket, suspended by a gold chain around the neck, and marquise rings are already being adopted with enthusiasm, while in addition Empire combs and other personal trinkets, toilet boxes and ornaments inset with cameos are carrying all before them at present in the French capital.

Edgar G. Chase, Mantorville, Minn., has located a timber claim in the country north-east of Duluth, Minn.

HOLIDAY NOVELTIES IN CUT GLASS.

BUYERS visiting the salesrooms of the J. D. Bergen Co., 38 Murray St., New York, are delighted with the many new designs and patterns shown in cut glass. The manufacturers are constantly finding new use for the product along both ornamental and useful lines. Napkin rings, ladies' dressing table trays, comb cases, puff jars and jewelry cases are among the new samples. The Roemer wine glasses now on exhibition are something new to the trade. They are made in Bermuda rose, Bermuda green and fern-decorated crystal. The base of the glass is of thick, brilliant crystal supporting a Colonial stem of unusual length, as delicate as the base is substantial. The body of the glass is clear cut and delicate in outline, having a slightly flanged top. Some difficulty was at first experienced in shipping the "Roemer" designs, because of the fragile Colonial stems, but that trouble has been overcome by packing in pasteboard. The Viceroy cut glass vases, modeled after the Egyptian style, are another new assortment. The heavy lines of the ancient designs are lessened somewhat by delicate decoration and fluted work, while the square cut base and smooth top give that stability always found in Egyptian models. The vases are made in four sizes.

AMERICAN POTTERY EXHIBIT AT WASHINGTON.

AN American pottery exhibit is to be conducted in December in Washington, D. C., during the annual convention to be held by the United States Potters' Association. The exhibit held last year in the Hotel Raleigh, in that city, was so successful that the committee on art and design decided to continue this feature of the conventions. Frank H. Haynes, Baltimore, Md., the chairman of the committee, has sent out invitations to potters in all parts of the country, who are requested to send each a few specimens representing the best of the commercial products. A large number of potters have already indicated their intention of exhibiting, and each exhibitor is limited in number of specimens to 12. A proposal will be made at the convention to show the exhibit at the Jamestown Exposition in 1907, and plans are also being discussed for adding some of the specimens to the exhibit of American Pottery in the United States National Museum at Washington.

THE RAMBLER.

John P. Hill, Danville, Ill., has the sympathy of his many friends in the trade owing to the recent death of his wife, who died of a complication of diseases after an illness of about two weeks.

**You Can Easily Operate
This Typewriter
Yourself**

Don't worry your correspondent.

Don't write him anything by hand that takes him time to make out—that may leave him in doubt—that he can't easily read.

And don't fill out legal papers or card memos—or make out accounts or hotel menus in your own handwriting.

It looks bad, reflects on your standing, makes people think you can't afford a stenographer, and is sometimes ambiguous.

You can write out your letters—make out an abstract—fill in an insurance policy—enter your card memos—make out your accounts, or a hotel menu—or do any kind of writing you need, on any kind, size or thickness of paper, and space any way you want on

The **OLIVER**
Typewriter

The Standard Visible Writer

You can write any of these things yourself if you do not happen to have a stenographer.

For you can easily learn, with a little practice, to write just as rapidly, and as perfectly as an expert operator on the OLIVER. Because the OLIVER is the simplified typewriter. And you can see every word you write. About 80% more durable than any other typewriter, because it has about 80% less wearing points than most other typewriters.

80% easier to write with than these other complicated, intricate machines that require "humoring"—technical knowledge—long practice and special skill to operate.

Than machines which cannot be adjusted to any special space—with which it is impossible to write abstracts, insurance policies, or odd sized documents except you buy expensive special attachments requiring experts to operate.

You can adjust the OLIVER to any reasonable space—you can write on any reasonable size and thickness of paper, right out to the very edge, without the aid of any expensive attachment or special skill, and your work will be neat appearing, legible and clear.

For the OLIVER is the typewriter for the doctor, the lawyer, the insurance agent, the merchant, the hotel proprietor—or any man who does his own writing.

Write us now for our booklet on the simplified features of the OLIVER.

Warning to the Trade!

Retailers are being called upon by a man who is selling twenty-one chains on a cloth for \$18, with swivels stamped "S. O. B. & Co.," and with a duplicate tag of ours bearing our trade-mark, attached to same. The chains are nothing more or less than brass shaded over, and will not stand acid for a single moment.

Jewelers with any experience ought to be able to discover the difference between a finished article and a rotten one.

Anyone who has been swindled by this man will please notify our house, as we want all the evidence possible, and we will do the rest.

Localities where goods have been disposed of are Pittsburg, Allegheny, McKeesport and surrounding towns.

We have two chains now in our possession that were sold by this man.

S. O. BIGNEY & CO.

We give you below an exact copy of an assay of chains manufactured by the leading chain makers of the United States.

FILLED versus SOLID WATCH CASES

IT IS ADMITTED, of course, that a Solid Case is worth more intrinsically than a Gold Filled one. The question is, "Does the former necessarily possess greater *practical wearing qualities*?"

The Wadsworth "PERMANENT"—Worthy of Its Name

QUERY:

Is not the finest type of Filled Case as capable of resisting the ordinary surface wear as if it were solid gold all through? If so, what a saving in cost! The WADSWORTH "PERMANENT" CASE answers these questions in favor of the best type of Filled Case. Nor are consummate style, form and finish lacking. Attractive prices.

Dueber

is the name most intimately known to the Watch Trade of the United States as associated with the Watch Case industry. The name "Dueber" on any Watch Case is an absolute guarantee of good quality, artistic conception and fine workmanship.

Hampden

stands for what is peerless in American Watch Movements. For twenty-five years the name has borne an unrivaled reputation, and the Hampden high-grade movement has been a standard for imitators to work from.

Watches

are an essential part of every retail jeweler's stock, and to have the right kind of watches should be the care of every dealer. The more consideration given to this subject the more sure are Dueber-Hampden Watches to be chosen.

SILVERSMITHS

FACTORY AND SALESROOM, 543-5-7 WEST 23D STREET, NEW YORK

When customers can't decide what to select for gifts, show them Simmons Chains

and Fobs

THE Simmons lorgnette Chains and men's and women's Fobs, in particular, offer especially attractive gift suggestions and are well worth featuring in your Holiday displays.

And they are the safest sort of Christmas sellers—certain to insure the absolute satisfaction of those who buy them and those who will receive them as gifts.

Remember, practically all wholesale jewelers carry the Simmons line, so, if you have occasion to re-order any styles or patterns you can rely upon getting the goods promptly.

An Apt Suggestion

will often enable you to make a sale.

During the holiday season many enter your store undecided what to buy for friend or relative.

To such you can be of assistance by suggesting some of the Sternau Wares, which are ornamental as well as useful.

The Ash-receiver shown here is novel in design and has proved unusually salable, especially in the Old Brass and Copper finishes.

Our latest Catalogue, No. 21, showing many staple articles, suitable for the holiday trade, will be sent on request

with its cares, troubles and ultimate feeling of contentment, is again upon us. May the month's business be the most satisfactory you ever had. We should be pleased to lighten the cares and add to your satisfaction and profit by attending to your special orders. Our stock here is very complete and we were never so well equipped to take care of your wants. You may rely upon all orders receiving prompt and careful attention and goods being shipped by return express. Write, wire or 'phone us. Everything in the line of watches, diamonds and gold jewelry.

Henry Freund & Bro.

"Sellers of Sellers"

71 Nassau St., New York

ELK and EAGLE GOODS
a specialty.

Jewelers! School Seals are Popular.

Seals are very popular, and we show here only a few of the many made for the different schools last year.

For a State School or University no pin would be more appropriate than one with the Coat of Arms of the State in the center. If the school has no official seal, let us make a pin for you showing the characteristics of this design. If you do not care to have pin made in either of these ways, substitute the year and class initials and have the class motto in the circle.

We make seals in two sizes and three different ways, as you will see by the illustrations. Advise us regarding your wishes, stating quality and quantity desired, and we will be pleased to have prepared a colored sketch embodying your ideas, and forward with prices.

Send for our new catalog of Flag and Class pins. You can make more money handling Bastian's than any other. Special designs and estimates free of charge.

BASTIAN BROS. CO., N. 21 South Ave., Rochester, N. Y.

Actual Size—Best Quality Rolled Plate

BRACELETS

Are one of the leading money makers of the present prosperous season.

Our experience in the making reaches back for years—and our present line, comprising over 600 different styles, bears ample proof that we have profited by this long prestige, and that it is not a hit-or-miss proposition we present to you, but definite and clear-cut ideas, artistically and intelligently carried out.

Any leading jobber will be glad to show you these goods—and an inspection of the goods will prove conclusively their worth to you.

14 KARAT
ONLY

23
Maiden Lane
New York

GOLD BUCKLES now claim your attention. In size, they are fairly generous; in shape, varied; in price, reasonable; in substance,

14 KARAT gold only.

Oval and oblong shapes are decidedly popular. Plain and beaded effects are among the simpler designs, while Colonial Engraving and fancy decorations adorn many ornate examples. In some instances the introduction of jewels, heightens the effect.

The vogue of the belt emphasizes the importance of the Buckle.

Original Designs in Jewelry.

ON this page are shown some original designs in jewelry drawn especially for THE CIRCULAR-WEEKLY. At the left hand is a pendant design which is especially adaptable for platinum work, now so much in vogue. The ribbon, the hair and the drapery should be of platinum, while the face, the arms, the lining of the drapery and the decorative lines, as well as the setting, should be made of 18 karat gold. The large stones at the center are cabochon

The small comb at the right is intended to be mounted in 18 karat gold, but the best effect can be obtained by having the hair of the figure in green finish, the figure of red gold and the drapery of platinum. A single stone, preferably an emerald, can be used in the hair of the figure. This figure may be cast or chased in repoussé.

These designs are the work of Paul H. Shramm, a designer and maker of artistic jewelry, who is now making a specialty of this class of work for the trade. He is an artist and portrait painter who, after study-

Exhibit of the Precious Stone Cutting Industry at the Crefeld Museum.

IN the Kaiser Wilhelm Museum at Crefeld there is at the present time a noteworthy exhibition of the products of the industry in precious stones carried on at Idar-Oberstein. The exhibition is intended to point out a broader sphere for this branch of art, which is capable of much further development.

It is surely a thing to be desired, says a European exchange, that the "applied art"

ORIGINAL DESIGNS FOR COMBS, PENDANT AND BROOCH, BY PAUL H. SHRAMM.

methysts, as is also the upper one on the bosom of the figure, while the small stones indicated on the ribbon and lower part of the bosom should be diamonds. The three stones in the lower part of the drapery could be cabochon or marquise shaped methysts. The other three indicated could be pigeon blood rubies.

The brooch at the top, in the center, can be used as a mounting for a small comb. This should be set with dia-

monds. The tortoiseshell comb design can be best tried out with straight line effects, all in platinum, ornamented with one marquise shaped stone varied to suit the color of the comb.

ing abroad and in this country, took a course in jewelry designing and later in jewelry making to become qualified to reproduce his own designs in the precious metals.

E. F. Hirst, who has been engaged in the retail jewelry business in Richmond, Ind., for over 50 years, is disposing of his stock at auction prior to retiring permanently.

A recent dispatch from Newport, N. H., reports that burglaries have been numerous and frequent in that section recently. Included among the stores which have been entered and looted is that of W. H. Graves, a retail jeweler.

of to-day; which has taken hold upon so many industries, shaping them anew, should also devote some attention to the beautiful varieties of agate and others of the precious and semi-precious stones worked at Idar-Oberstein, and bring out their valuable qualities for jewelry and small ornamental household articles. Stone cutting for cameos and seals would surely be an enticing task for many an artist.

The Crefeld exhibition affords an instructive view of the different varieties of stones used at Idar-Oberstein, and the products in different stages. A booklet which serves as a guide gives interesting information with regard to the stones used, the industry and the technical processes employed.

Handsome Silver Cup Awarded to the Crescent Athletic Club.

ONE of the pleasing trophies of the season, made of sterling silver, is the cup awarded to the Crescent Athletic Club, New York, in recognition of its members' victories in contests extending through a period of six years.

This cup is 28 inches high, including a base of ebony. The foot is chased with maple leaves, and the lower part of the body is encircled with pine cone, handsomely chased, emblematic of Canada.

Around the upper part is a wreath of laurel, in the center of which is a handsome grouping of the Crescent emblem, with a pair of hockey skates entwined in high relief. Resting on the maple leaves are a pair of hockey sticks, crowned with a puck placed between them. Two handsome cast handles ornament the sides. The finish is in a soft gray tone.

The ebony base is girdled by six silver shields, upon which are to be engraved the names of the six teams who were in successive years champions of the Amateur Hockey League of America.

The trophy, which is illustrated on the front cover of this issue, was designed and made by George W. Shiebler & Co., New York.

E. E. Clark, Check Swindler, Arrested at Pittsburg, Sent to Prison for Four Years.

PITTSBURG, Pa., Nov. 29.—E. E. Clark, alias James or Peter Fuller, the check swindler who was captured in Pittsburg several weeks ago, as told in THE CIRCULAR WEEKLY at the time, was arraigned in court yesterday and sentenced to the Western Penitentiary for four years.

Clark is the man who, after his photograph was published in THE CIRCULAR WEEKLY, was identified by James Lewis, Columbus jeweler, as the man who has swindled him out of diamonds valued at \$500 with a bogus check. When arrested Clark had a large number of pawn tickets in his possession. Mr. Lewis came to Pittsburg and secured one of the diamonds in this city from a pawnbroker, with whom Clark had pawned it. It was recovered after considerable difficulty.

Clark is regarded as a dangerous man and it is quite likely that after he serves his time here he will be taken back to Columbus to answer the charge of check swindling at that place. Before being taken to the penitentiary Clark told Detective Cecil Rice, who arrested him, that he had planned to escape from the Pittsburg officers by jumping through the plate glass window in the office of Captain of Detectives James W. Eagan, and that Rice had made a move just in time to prevent him carrying out his plans. Clark at the time of his arrest threatened to shoot the officer who arrested him.

The police have received numerous communications from various sections of the country, owing to the publication of Clark's arrest in THE CIRCULAR-WEEKLY, asking information regarding the man.

L. M. Lowenthal, Mt. Ayr, Ia., is about to move to Diagonal, Ia.

Lyons Loses His Suit.

International Silver Co. Recovers Judgment Against Chicago Dealer Who Set Up Anti-Trust Law as a Defense.

CHICAGO, Dec. 3.—The suit of the International Silver Co. vs. Samuel Lyons to recover the value of goods sold and delivered to him was decided on Nov. 26 by Judge Landis, of the United States Circuit Court against Lyons, the amount of the judgment awarded the plaintiff being \$5,620.93.

The suit was brought because of the failure of Lyons to pay for silverware sold him by the International Silver Co. In defense of the suit Lyons filed his answer, setting up that the plaintiff since November, 1898, was a trust to regulate the price of silverware, etc., limiting its output for the purpose of artificially increasing the price to dealers and consumers. Further, that the plaintiff, in conjunction with A. L. Sercomb and C. D. Dungan, its Chicago agents, fixes the prices at which its commodities are sold in Chicago, and compels dealers to retail its wares at prices fixed by them upon penalty of refusing to sell goods to dealers who refuse to agree to said prices or who fail to sell at said prices after agreeing to do so. For these reasons Lyons pleaded that the International Silver Co. was existing in this State in violation of the anti-trust law of Illinois, and claimed he was not to be liable for the value of the goods bought under Section six (6) of the law.

Judge Landis in his opinion said that a combination formed outside of this State did not come within the meaning or the prohibitions of the Illinois statutes; that statute related only to such combinations formed within this State, and therefore had no application in this case.

Edgar L. Masters, attorney for Mr. Lyons, prayed for appeal, and was given 30 days in which to file his bill of exceptions and 10 days in which to file a bond in the sum of \$6,500. The case was conducted by Nathan G. Moore, of Wilson, Moore & McIlvane, in behalf of the International Silver Co.

The text of the opinion of Judge Landis follows:

In this case the plaintiff files its suit to recover the balance due from the defendant for goods sold and delivered.

The defendant files the general issue, and with a notice of proof that will be offered on the trial, in short, this notice sets out that the plaintiff is a corporation of the State of New Jersey, that it has taken unto itself 18 or 20 other corporations, that prior to such taking by it were competitors in the silverware manufacturing business, located in different States and in the Dominion of Canada; that the purpose of such taking over by the plaintiff was to get a monopoly of the silverware manufacturing business, and that the purpose was accomplished; that the plaintiff came to Illinois and sold goods to various dealers in this State, including the defendant; that the plaintiff would sell only with the distinct understanding and agreement between it and its vendees—the plaintiff acting through the two men whose names are used in this notice—that the vendees in turn would sell this plaintiff's product to the vendee's patrons only at the certain fixed prices; that the plaintiff exacted the same undertaking, imposed the same conditions, which were effective upon all of the other patrons of the plaintiff in this same territory who were competitors of this defendant.

The defendant sets out with sufficient certainty to enable him to avail himself of the provisions of the Anti-Trust Law of this State, of 1891, and refers to the Act of Congress in such way as that will consider it is here urged, and has brought

himself within the rule required in giving such a notice.

The Supreme Court of the United States will not allow a suit brought by a combination organized in violation of the Sherman Law to recover the value of goods sold and delivered to be defeated by the purchaser of the goods exhibiting to the court where the suit is brought that the plaintiff who delivered the goods to the defendant is an illegal combination. There is not any escape from the views of the Supreme Court of the United States upon that question. That takes the Sherman Anti-Trust Law out of this case, it being a suit by an illegal combination to recover from this purchaser the value of its product delivered to him, as distinguished from a controversy brought into court based upon the original unlawful undertaking, the purpose of such controversy being to enforce some purpose of the original unlawful undertaking.

The Court of Appeals of this circuit, in dealing with the question of the effect of Section 6 of the Act of 1891 of the Legislature of Illinois, has excluded from the consideration by the court in the pending case any benefit of which the defendant might have availed himself in the absence of that decision, based upon and growing out of the alleged unlawful absorption by this plaintiff of the various constituent concerns; so that when the International Silver Co. went to Lyons to sell him these goods, under the law which is binding upon this court in the pending case, the International Silver Co. was not a combination or conspiracy organized in restraint of trade; it was simply a lawful foreign corporation. That is what the Court of Appeals of this circuit has decided. I am dealing now with what has been decided, not with what this court might do, if it were here as an original proposition.

It does seem to me that if the legislature can denounce this sort of thing if done here by its own people, and may legislate to the extent of holding that its courts shall not be open to such concerns formed in Illinois by its own people bearing in mind that foreign corporations come here only by our consent—that it would not have been contrary to reason for the court to have held that what the State had indicated against its own people would be indicated against outsiders in such a case, but they have not held so; they have held the other thing, and it is the law of this court.

Now, all that is left is this proposition: Is the International Silver Co. a lawful foreign corporation in this State in the exercise of its rights under the law? Has it conducted itself, as exhibited in this notice, in a way which brings it within this anti-trust law of 1891?

Section 1 of that law is in substance as follows: If any corporation organized in Illinois or outside of Illinois and so forth, creates, enters into, or becomes a member of any pool, trust, and so forth, to regulate or fix prices of any article, or to limit the amount or quantity of any article to be manufactured or sold, it shall be guilty of a misdemeanor, and adjudged guilty of conspiracy.

Section 6 excuses anybody owing such a concern for goods sold and delivered from paying the creditor what otherwise the creditor would have a right to exact and enforce in a court.

Now, under the notice here it appears that an arrangement was made, that the International Silver Co. sold to Lyons the goods—his failure to pay for them is the basis of this suit before me—with a distinct understanding that he would not, having been furnished with these goods, sell them except at certain prices; and that not only did the International Silver Co. impose that condition upon this defendant, but that the International Silver Co. imposed the same condition upon every other purchaser of its commodities in this State, or this neighborhood.

Now, if there is any combination here—I exclude the two agents of the International Silver Co. as being the method by which the International Silver Co. did its business, they spoke for it—we have here the situation of the men, the corporation, with goods to sell, saying to the purchaser, who in turn desires to sell those goods either to the retail dealer or to the trade: I will sell you my goods on this condition, namely, that you shall not sell these goods except at the prices which I fix.

The arrangement which is entered into in this case is between the seller of the goods, that is to say the plaintiff, namely, the manufacturer, and the manufacturer's vendee, namely, the wholesaler or the jobber. There is no arrangement here between Lyons and his competitors. If it appeared here that Lyons and his competitors, namely the other wholesalers here, that is to say the other vendees of this plaintiff manufacturer, had en-

tered into this arrangement, the purpose of which was to keep up the prices as between them and the retailers, we would have an entirely different situation; but on the facts which this notice exhibits, there is no arrangement between Lyons and his competitors; the sole arrangement is between Lyons and his vendor, namely, the manufacturer.

The law on that subject is very fully, if not satisfactorily, exhibited in a very complete and able opinion by Judge Sanborn of the Eighth Circuit, in that tobacco case (Whitwell vs. Continental Tobacco Co., 125 Federal Reporter 459), in which the vendor imposed upon his vendee not merely the obligation to hold up prices, but the vendee in that case had no right to buy of anybody else. In other words, in that case everything that anybody at any time has ever injected into a contract belonging to this general class, was imposed upon the vendee by the tobacco company, and this was sustained, in accordance with what, wisely or unwisely, the courts have enforced in such cases as the rule.

The case arises on the objection of the plaintiff to evidence offered by the defendant tending to prove the facts relied upon by the defendant to establish to acquit it of its obligation to pay the plaintiff, as alleged in its notice of proof filed on the general issue; the theory of the notice being that the plaintiff is a trust or combination organized and conducted in restraint of trade, in violation of the anti-trust law, in violation of the common law and in violation of the Illinois Act of 1891. I will hold it is a proper way to raise the question. *The objection is sustained.*

Canadian Commercial Agent Reports Discoveries of Diamondiferous Ground in South Africa.

The Canadian commercial agent for South Africa, C. M. Kittson, reports to the Trade and Commerce Department of the Dominion that recently many new discoveries of diamondiferous ground have been made in localities many hundreds of miles apart, and in view of this fact it is quite possible that within the next few years the world's supply of diamonds may increase, with a resultant fall in prices, although it is pointed out by one authority that the world's demand is constantly on the increase.

Another Fire at Attleboro, Mass., Damages Several Manufacturing Jewelry Shops.

ATTLEBORO, Mass., Dec. 1.—A. S. Ingraham & Co., the Torrey Jewelry Co., E. D. Gilmore & Co. and Rothschild Bros. suffered inconvenience to-day from a fire which, the evening before, destroyed a wooden flue on the outside of the Bates Steam Power building, where they have quarters. The flue led from the Torrey shop to the roof. The fire damage was confined to the flue, the Torrey acid room and the roof. The water damage was distributed among all four concerns. All but the Torrey company resumed operations Saturday with more or less handicap.

The four concerns are located in the building thus: Ingraham in the basement, Torrey on the first floor, Gilmore on the second floor, and Rothschild on the third floor. At 8 o'clock last night workers among the nearby factories heard a loud explosion. In a few minutes Everett S. Stanton, passing the building, saw flames envelop the flue from top to bottom. He notified the night watchman, who rang an alarm. Less than a half hour of activity by the firemen extinguished the flames.

There were a few busy minutes while the doubts were in doubt about the fate of the building. John H. Moore, of Moore Bros., plants in a section of the building remote from the fire, made all preparations for removal if necessary. Mr. Rothschild and his employe, working late in the office, were surprised by the arrival of the firemen, not realizing the fire had started. Both men set to work to make a prompt removal of the valuables possible if it should be required. The Gilmore and Ingraham plants minor damage was the only trouble experienced. Elmer Fors, employed by the Torrey Jewelry Co., broke into the office and made secure the samples with which the salesmen were to start the following Monday. Charles Lyons, head of the company, was out of town, but established telephone communication and arranged for the necessary precautions.

The working force of the Torrey company was ordered back on duty Monday, all needed repairs taking place Saturday.

sel for the defendant made a statement vindicating Strouse's character, but claimed that the statements issued by Holderman were not of a malicious character.

Death of Chas. S. Hungerford.

CHICAGO, Dec. 3.—Word was received in this city last week that Charles S. Hungerford, an oldtime jewelry salesman, had died in San Antonio, Tex., Wednesday, Nov. 28, of consumption. C. A. Garlick, 103 State St., a lifelong friend of the deceased, was immediately notified, and wired for the remains to be sent to Chicago. The body will arrive to-morrow, Dec. 4, and funeral services will be held on that day at the Englewood Commandery, A. F. and A. M. The interment is to be at Oakwoods Cemetery, where Mr. Hungerford will rest beside his wife, who died three years ago.

Charles S. Hungerford was born in Oneida County, New York, 68 years ago, and came to Chicago in 1865, going into the fur business on his own account. In the fire of 1871 he lost all he had, and entered the employ of the jewelry jobbing house of W. B. Clapp, Young & Co. He traveled for that concern in the southwest, and when they dissolved continued with their successors, Clapp, Davis & Co. After being with that house for eight years he traveled for Benj. Allen & Co., leaving them to represent M. B. Bryant & Co., New York. His last position was with E. L. Logee & Co., Providence, R. I., whom he represented in the west for nine years.

About three years ago Mr. Hungerford's wife died, and as his health was poor he retired from business and traveled through California, Colorado, New Mexico, Kansas, Nebraska and Texas to see if he could not improve his condition.

Mr. Hungerford was a 32d degree Mason, a Knight Templar and a Mystic Shriner. He was a careful and prudent man, and left an estate of about \$20,000. His surviving relatives are his brothers, A. T. Hungerford, St. Louis, Mo., and Henry H. Hungerford, Lawrence, Kans., and his niece, Miss Eliza M. Connell, of this city. Under the will A. T. Hungerford receives the bulk of the estate.

Death of Oscar Schwencke.

Oscar Schwencke, who was for many years identified with the manufacture of hair jewelry in New York, died Monday of last week at his home, 274 E. 23d St., Brooklyn. He had not been in active business in the last 12 years, and had passed much of his time during this period at his cottage on Long Island, having ample facilities for the pastime of fishing, of which he was very fond.

Mr. Schwencke was born in Germany, May 10, 1833. He came to New York in 1864 and obtained employment at his trade as a jeweler. He worked for A. Guntzenhauser, 15 Maiden Lane, who manufactured gold trimmings in which hair braids and chains and other articles were mounted. In 1877 Mr. Schwencke bought out the business from Geo. Guntzenhauser, who had succeeded his brother on the latter's death four years before. Under Mr. Schwencke's management the volume of the business was increased, and he moved to 43 Maiden Lane and subsequently, in 1885, to 8 John St.,

where he added the manufacture of badges to his other lines.

When Mr. Schwencke retired he sold out to his son, William Schwencke, who had been engaged in the manufacture of badges from 1885, and who has continued the business at the same location. Two other sons, Oscar L. and Edward F., also survive, the former being a dealer in Long Island real estate.

The funeral took place Tuesday evening at his late home, the service being conducted by the Rev. Dr. Luther Gable, pastor of the English Lutheran Church at Newkirk Ave. The interment was in Evergreen Cemetery.

Jewelry, Clocks, Watches, Optical Goods and Kindred Lines Exported from New York.

WASHINGTON, D. C., Nov. 28.—The following were the exports of jewelry, silverware and optical goods, clocks, watches and kindred lines from the Port of New York for the week just ended:

Bombay: 64 cases clocks, \$1,071.
Bradford: 8 cases clocks, \$111.
Bremen: 2 cases jewelry, \$500; 1 case jewelers' sweepings, \$150; 2 cases silverware, \$150; 3 cases plated ware, \$620.
Calcutta: 1 case watch goods, \$110; 74 cases clocks, \$1,371.
Callao: 1 case jewelry, \$305.
Chaux de Fonds: 2 packages watch cases, \$100.
Corinto: 3 cases clocks, \$170.
Demerara: 11 cases clocks, \$121.
Glasgow: 70 cases clocks, \$1,699.
Guayaquil: 3 cases watches, \$487; 4 cases jewelry, \$1,118.
Hamburg: 1 case jewelry, \$500; 2 packages optical goods, \$344; 2 cases watches, \$3,520; 2 packages optical goods, \$495; 1 case clocks, \$103.
Havana: 1 case watches, \$189; 2 packages optical goods, \$523; 5 packages scopes and views, \$301.
Havre: 3 cases silverware, \$510; 2 cases jewelry, \$550; 2 cases clocks, \$270.
Hong Kong: 59 cases clocks, \$1,332.
Kingston: 1 case silverware, \$330; 8 cases clocks, \$148.
La Guaira: 1 case jewelry, \$108.
Lagos: 1 case clocks, \$113.
Liverpool: 1 case silverware, \$1,025; 15 cases clocks, \$133; 2 cases jewelry, \$710; 1 package optical goods, \$100; 37 cases clocks, \$1,489; 2 cases jewelry, \$910.
London: 2 cases plated ware, \$174; 1 case silverware, \$150; 27 packages optical goods, \$4,003; 40 cases watches, \$7,439; 2 packages scopes and views, \$250; 1 case jewelry, \$181; 4 cases watches, \$1,500; 121 cases clocks, \$3,120; 3 cases watches, \$500; 1 package optical goods, \$403; 20 cases clocks, \$542.
Manaos: 1 case watches, \$660; 1 case plated ware, \$106.
Martinique: 12,727 cases silverware, \$5,127.
Santos: 28 cases clocks, \$466; 1 case watches, \$688.
Savanilla: 1 case plated ware, \$131.
Shanghai: 45 cases clocks, \$920.
Sydney: 10 cases plated ware, \$424; 85 cases clocks, \$805; 1 case jewelry, \$134; 1 case watches, \$780.
Tampico: 14 cases clocks, \$214; 1 case jewelry, \$117.
Valparaiso: 1 case watches, \$293; 2 cases silverware, \$120; 24 cases plated ware, \$2,311; 6 cases watches, \$2,686; 52 cases clocks, \$1,107; 5 cases plated ware, \$1,084.
Vera Cruz: 9 cases plated ware, \$1,020.
Wellington: 5 cases plated ware, \$459; 27 cases clocks, \$838.

The E. J. Hyde Jewelry Co., Spokane, Wash., has moved from 716 Sprague St. to 609 Sprague Ave., on the opposite side of the street and one block east of the former location. The business was begun by Mr. Hyde 19 years ago.

Sunder Suit Between Two Shenandoah, Pa., Jewelers Settled, Defendant Paying \$300 and Costs.

POTTSVILLE, Pa., Dec. 1.—A settlement was effected between counsel for both sides in a lawsuit in this town last week in the slander case in which Carl Holderman and Charles Strouse, both Shenandoah jewelers, were named as defendant and complainant respectively. Under the terms of the settlement Holderman must pay Strouse \$300 and must pay the costs of the suit.

The outcome of the case had been anticipated with much interest. Holderman always claimed that he told the story about Strouse and his family after hearing it from a traveling man, and that he had, after he discovered what a stir it had made, offered to pay all the costs of a legal proceeding against the man if Strouse desired to take the step. Strouse, however, took the view that Holderman had circulated the story and must bear the consequences.

After the jury had been empaneled coun-

MEMORANDUM ORDERS SOLICITED.

Death of Otto Young.

Chicago's Well Known Jobber, Millionaire and Financier Passes Away at Lake Geneva.

CHICAGO, Dec. 3.—Otto Young, one of the city's most prominent millionaire merchants and a leader in the world of finance, died at his beautiful home at Lake Geneva, Saturday, of a complication of diseases, after an illness lasting but two weeks. His death was unexpected and came as a distinct shock to his friends and business associates, many of whom did not even know that he was seriously ill. The bulletin issued at the office of Otto Young & Co., wholesale jewelers, 42 Maiden St., caused profound sorrow throughout the jewelry trade, as Mr. Young had been one of the trade's most prominent members for over 30 years.

At his bedside when he died were the deceased's widow and four daughters and Dr. Frank Billings, who had been hurriedly summoned when his critical condition was realized. The remains were brought to Chicago yesterday morning on a special train over the North Western railroad, and relatives and friends went to Lake Geneva and formed an escort of honor on the journey to this city.

Otto Young may truly be considered to have been one of the jewelry trade's most representative and leading citizens in the west, and his career both in the trade and in the mercantile and financial world generally will long be pointed to as an example to the younger generation.

Born in Eberfeld, Germany, on Dec. 20, 1844, he was one of a large family of children. His father was an architect, but died when the boy was five years old, and in a few years it was necessary that some of them should go away to seek their own fortune. The lot fell to Otto.

The boy had relatives in New York, and upon his arrival it was decided that he needed a little more education than the old country schools had afforded him, so for a year and a half he studied hard at the military academy at Cornwall-on-the-Hudson. When this was over his commercial career started. He became a clerk in a cigar store in the Gilsey House, New York, at a salary of \$3 a week.

Frugality and economy probably characterized the boy at that time. He saved money and cast about him for an opportunity. He returned to Germany in 1861, but came back to the United States, and in 1862 went into business for himself, dealing in imported fancy goods and jewelry.

In 1867 Mr. Young sold this retail business and became a traveling salesman for another New York house, Hecht Bros., in the same line of business. As ever, he was on the alert for more opportunity and investment. His work brought him into the west for the first time. That same year he was married in New Orleans to Miss Ann Elizabeth Murphy.

By chance Mr. Young was in Chicago when the city was destroyed by the fire of 1871. The democratic level of the place and the great chances that he saw impressed the young man, and a year later he bought an interest with W. B. Clapp & Co., wholesale jewelers, 149-151 State St., the firm becoming W. B. Clapp, Young & Co. To-day

this wholesale house is still doing business on the old-established lines on the sixth floor of the Heyworth building, Wabash Ave. and Madison St. In 1880 he bought Mr. Clapp's interest and it became Otto Young & Co.

As his jewelry business grew Mr. Young incorporated it and became its president, the other officers being: Julius Schnering, treasurer, and Peter T. White, secretary. In the jewelry trade Mr. Schnering has been associated with him almost since the beginning.

In 1885 Mr. Young purchased a half interest in the big store here known as "The Fair," and became secretary and treasurer of the concern, which, under his influence and direction, developed to a wonderful extent, increasing its capital from \$200,000 to several millions. On Aug. 2, 1905, Mr. Young sold out his interest in the concern.

THE LATE OTTO YOUNG.

but retained the real estate on which the business is done. Mr. Young was an operator in real estate; in fact, he was one of the largest holders of business property in Chicago. He was also prominently identified with many financial institutions, and at the time of his death was a director of the First National Bank, of the First Trust and Savings Bank, of the National Safe Deposit Co. and of the Silversmiths' Building Co. and a number of other concerns. He was a member of the leading social clubs of the city, among them the Calumet, Chicago Athletic, Union League and Washington Park organizations.

His charities were many and great. Shortly after the death of his only son, Otto Young, Jr., Mr. Young built an addition to the Home for Incurables at 56th St. and Ellis Ave., in the form of a consumptives' home, at a cost of \$40,000, and has spent an equal amount every year in the maintenance of it. Some time ago he also gave real estate to the value of about \$125,000 to an asylum for children.

Among Mr. Young's hobbies was the

collecting of Oriental rugs, of which he had one of the finest collections in the country.

While nothing is known definitely outside of the immediate advisers of Mr. Young as to the disposition which he made of his great fortune, it is said that the will provides for a trusteeship, as in the case of the Marshall Field will. Mr. Young was known as an essentially conservative business man, and the fact that all his children are daughters without any intimate knowledge of business affairs is said to have influenced him in providing every possible safeguard for the large fortune which will fall to them.

The funeral of Mr. Young was held at the city residence of the family, 2032 Calumet Ave., the Rev. W. O. Waters, rector of Grace Episcopal Church, officiating. The burial services were held at Oakwoods and were private. The honorary pallbearers were: Byron L. Smith, H. H. Porter, Charles H. Wacker, A. C. Bartlett, Hugh McBirney, E. R. Graham, Andrew McLeish, R. W. Patterson, C. C. Kohlsaat, W. J. Chalmers, Albert Keep, Eugene S. Pike, John G. Shedd, J. B. Clow, Frank O. Lowden, Thomas Murdoch, H. H. Kohlsaat, John P. Wilson, H. A. Beidler, T. J. Lefens, Lyman J. Gage, Marshall M. Kirkman, James B. Forgan, Harry G. Selfridge, Benjamin Allen, P. A. Valentine, R. T. Crane, Samuel W. Allerton, L. L. McArthur, Ferdinand W. Peck, Edward T. Jeffery, Harlow N. Higginbotham, Charles L. Hutchinson, John J. Mitchell, J. Ogden Armour, Martin A. Ryerson, Frank Billings, R. H. McCormick and N. W. Harris.

James Mix, Veteran Jeweler of Albany, N. Y., Retires from Business.

ALBANY, N. Y., Nov. 28.—James Mix, one of the oldest and best known jewelers of Albany, has retired from business, and is succeeded by Emma C. Mix, Emma L. Hogland and Fred. L. Mix, who will continue the establishment under the old name. Mr. Mix is over 80 years old, and his advanced age as well as poor health the last few years has caused him to cease all active participation in the affairs of the concern. His successors are all members of the family.

Mr. Mix has not only been one of the most prominent jewelers of Albany, but his business is one of the oldest as well as one of the most widely known in this section. It was established by his father in 1847 and James Mix succeeded the latter here in the early '60's. For nearly 50 years he has continued his career as a merchant of the highest standing and repute, and retires with a competence which he has justly earned.

Strike at the Whiting Mfg. Co.'s Factory Continues, but Plant Is Running as Usual.

The strike of the finishers at the Whiting Mfg. Co.'s shop at 4th and Lafayette Sts., New York, which began about seven weeks ago, is not causing delay in the filling of orders, and the shop is now running with about the same number of men as were employed before the trouble.

President H. H. Hamilton, in reply to questions, said yesterday that there has been no interruption, even for a day, in the work at the factory. He said that the shipments are fully 20 per cent. more than they were a year ago, and everything is moving smoothly and satisfactorily. About 80 men have been brought here from other cities. These men include both finishers and stampers. The old force of stampers struck in sympathy with the finishers, and this necessitated the employment of new men in both departments. The new men are quartered in a house at 8th St. near Sixth Ave., and are escorted daily by an armed guard from this house to the factory and back. Saturday last in the Jefferson Market Court, John Jaeger, a former employe, and John Ouligan were each fined \$3 for interfering with the men en route from the 8th St. house to the factory.

In a recent issue of the *Silver Workers' Magazine* an article signed by Wm. Durkee published, in which are given some details in relation to the differences between rival unions, bearing on the strike at the Whiting factory. The writer of this article called that the silver workers and brass workers were formerly affiliated in the Metal Polishers' Union, and that back in 1903 a vote was taken on the question of mandating a nine-hour day. The vote stood 1,102 in favor of the demand and 40 against. The writer charges that subsequently there was juggling of the interests of the silver workers on the part of leaders identified with the brass workers' side of the association. There resulted a bolt and the organization of the Brotherhood of Silver Workers. This organization claims to have succeeded in obtaining the nine-hour day in all of the sterling silver shops, including the Whiting factory, and to have continued its efforts, being now engaged in attempts to reduce the hours in the silver plating factories. It is charged by Mr. Durkee that A. Hellthaler, who is conducting the strike against the Whiting Co., is going to organize a "knockers' local" among suspended members of the Silver Workers' Union, and to give such new organization the protection of the Metal Polishers' Union. Circulars have been issued by Mr. Hellthaler announcing that \$10 a week has been paid to all the strikers, and that the union will continue to pay this amount.

Death of William E. Searles.

HONESDALE, Pa., Nov. 28.—William E. Searles, a prominent citizen of Spencer, Pa., who died at his home recently in that town, was the twin brother of George W. Searles, of this town, and was at one time prominent in the jewelry business in this town. The funeral services were held at Spencer, Wednesday.

Mr. Searles was 60 years old. He came to this town from Spencer when a young

man, and with his brothers Edward A. and George W. formed the firm of Searles Bros., who conducted a shoe store and jewelry business in Honesdale from 1894 to 1897. The deceased is survived by a widow and six brothers.

Schedules for Jewelry, Gems, Clocks and Kindred Lines in the Revised Tariff of Canada.

TORONTO, Can., Nov. 30.—The revised tariff was presented to the Canadian House of Commons at Ottawa on Thursday by Hon. W. S. Fielding, Minister of Finance. There are numerous changes in detail, but no general increase or decrease. The British preference is retained and extended to all British colonies. The principal feature is the adoption of an intermediate rate between the British preference and the maximum tariff, which will be applied in the case of countries making reciprocal concessions. The dumping clauses are retained and made applicable to goods on the free list as well as dutiable commodities. The following are the principal items affecting the jewelry and kindred trades:

| | Maxi- mum. Per cent. | Inter- mediate. Per cent. | British preference. Per cent. |
|---|----------------------------|---------------------------------|-------------------------------------|
| Jewelry of any material for the adornment of the person | 35 | 30 | 22½ |
| Diamonds, unset, precious stones in the rough or polished, but not pierced or otherwise manufactured, and imitations | 5 | 5 | 5 |
| Watch actions and movements | 15 | 12½ | 10 |
| Watch cases and parts, finished or unfinished. | 30 | 27½ | 20 |
| Clocks, watches, time recorders, watch glasses, clock and watch keys, clock cases and clock movements | 30 | 27½ | 20 |
| Composition metal and plated metal in bars, ingots or cores, for the manufacture of watch cases, jewelry and of filled gold and silver seamless wire | 10 | 7½ | 5 |
| Articles consisting wholly or in part of sterling or other silverware, nickel-plated ware, gilt or electroplated ware; manufactures of gold or silver, N. O. P. | 35 | 30 | 22½ |
| Gold and silver unmanufactured, gold and silver sweepings, and bullion fringe or gold fringe | Free. | Free. | Free. |
| Gold, silver and aluminum leaf, Dutch or Schlag metal leaf, brocade and bronze powders | 27½ | 25 | 15 |
| Britannia metal, nickel silver, Nevada and German silver manufactures of, not plated. | 30 | 27½ | 17½ |
| Spectacles, eyeglasses and ground or finished spectacles or eyeglass lenses | 30 | 27½ | 20 |
| Spectacles and eyeglass frames and metal parts thereof | 20 | 17½ | 15 |
| Glass bottles, flasks, phials, cut pressed or moulded crystal or glass table ware, decorated or not, blown glass table ware, etc. | 32½ | 30 | 20 |

M. C. Nester, Alamosa, Colo., recently sold out.

Death of John Wimmer.

INDIANAPOLIS, Ind., Dec. 3.—Members of the trade were much grieved to learn of the death, Sunday, of John Wimmer, one of the best known jewelers in this city. Death was caused directly by heart failure. Mr. Wimmer, about five weeks ago, fell and sustained a fracture of the leg, since which time he had been confined in a hospital.

The deceased was 52 years old and endowed with the qualities which make for success in the commercial world. He began business in 1880, but soon afterwards suffered reverses and failed, finally resum-

THE LATE JOHN WIMMER.

ing under the name of E. Wimmer, his wife.

In the year 1896 he again bestowed upon the business his own name. Since that time the business prospered, and Mr. Wimmer was reputed to have been worth over \$75,000, accumulated by dint of energy, enterprise and business acumen.

Mr. Wimmer was also well known in the east, where his many friends will read of his demise with profound sorrow.

J. H. Sweger, of the Mifflin County Jewelry Co., Still Among the Missing.

PHILADELPHIA, Pa., Nov. 30.—Inquiries are being made in this city and other centers of the east by friends and creditors of J. H. Sweger, of the Mifflin County Jewelry Co., Lewistown, Pa., who seek to locate him. Mr. Sweger, as told in THE CIRCULAR-WEEKLY, Oct. 31, mysteriously disappeared Oct. 10 from Lewistown and has not since been seen. It is said that at the time of his disappearance he had a quantity of jewelry belonging to this concern, and fears are expressed in some quarters that he may have met with foul play by people who sought to rob him of this. On the other hand, some of the creditors as well as some of the stockholders in his company, think that the disappearance of the property may in part account for the disappearance of the man.

Mr. Sweger is 38 years old, five feet eight inches high, heavily built, and weighs about 200 pounds.

S. W. Wright has erected a new clock in front of his new business block, on N. Front St., Philipsburg, Pa.

Arthur H. Buck, Missing Jewelry Salesman, Reported Arrested at Butte, Mont.

Abel Bros. & Co., 64 John St., New York, were notified Monday that Arthur H. Buck, their former salesman, who was reported missing several weeks ago, had been arrested at Butte, Mont. Accounts of Mr. Buck's disappearance were published in THE JEWELERS' CIRCULAR—WEEKLY of Nov. 14 and Nov. 21.

A jeweler at Butte, who had read the articles, telegraphed to the company that the salesman was in that city, and he was placed under arrest by Pinkerton detectives who had been looking for him. They had traced him to Helena and thence to Butte about the same time that the firm received word from the jeweler at the latter city.

An indictment charging Buck with grand larceny was recently found at Boston, where he had pledged for \$250, it is said, jewelry valued at \$550, the property of the company. At Helena and Butte, it is charged, he pledged his samples to the value of \$2,300 for \$600. Altogether the company's claims against him amount to more than \$5,000.

According to the reports sent by the detectives, Buck has been living since he disappeared from the view of his employers on the money obtained from the pawnbrokers, and has been spending it lavishly. After his arrest he consented to go to Boston without putting the company or the officers to the trouble of obtaining extradition papers, and he sent a telegram to the concern, notifying it of his willingness to come on without legal formality.

Salesman Who Stole Articles Obtained on Memorandum Sent to Elmira Reformatory.

Richard Scherer, the 22-year-old jewelry clerk who was arrested in October on the charge of grand larceny in converting articles entrusted to him on memorandum, was sentenced Monday by Justice Greenbaum to the criminal branch of the Supreme Court, New York, to the Elmira Reformatory. Scherer was formerly employed at 422 Third Ave., Manhattan. He is a native of Roumania, and had been living with an uncle prior to his arrest.

The young man, besides clerking in the Third Ave. store, sold articles occasionally on private trade, getting his goods on memorandum. He obtained a diamond heart costing \$600 from Cross & Bequelin last March, and a few days later pawned it. About the same time he pawned a diamond unburst valued at \$800 which he had obtained from Abraham Berrent, 43 E. 119th St., Manhattan, and other jewelry valued at \$400 obtained from Samuel Erlanger.

Scherer left the city for six months, and on his return was arrested, three indictments having been found against him based on the transactions mentioned. He said that he had lost the money obtained from the pawnbrokers in a wire-tapping scheme of which he was the victim, and also that he had sold some jewelry to a man who had failed to pay for it.

Friends of the young man made offers of restitution. The young man's friends were told that the complainants refused restitution except as it might be made after the approval of the District Attor-

ney and the court, and then only with the idea of a possible mitigation of sentence. The firm took the position that the offense was one calling for punishment, and that this should be inflicted as an example to others.

Acting on the advice of his lawyer, Scherer pleaded guilty on the three indictments. A petition was submitted to the court in the defendant's behalf, asking that sentence be suspended in view of his previous good reputation and for other reasons. Mr. Gleason, counsel for Cross & Bequelin, submitted a remonstrance against a suspension of sentence. The judge then sent the defendant to the Elmira Reformatory.

Decisions by United States General Appraisers on Jewelry and Kindred Lines.

Decisions of the Board of United States General Appraisers, New York, in cases involving duties on jewelry and kindred lines have been announced in the last week as follows:

JEWELRY—COMBS—Protests of G. W. Sheldon & Co. against the assessment of duty by the Collector of Customs at the Port of Chicago. Combs ornamented with gold or silver plated metal and set with imitation precious stones were held to have been properly classified as jewelry under Par. 434, Tariff Act of 1897.

JEWELRY—NOTEBOOKS—Protests of Jordan, Marsh & Co. against the assessment of duty by the Collector of Customs of Boston, Mass. The merchandise, which was classified as jewelry under Par. 434, Tariff Act of 1897, consisted (1) of chains, pins, etc., of gun metal, and (2) of notebooks, pencils and mirrors, the latter being adapted for use as articles of utility and not merely for purposes of personal adornment. As to the second class, the Board sustained the importer's contention that they should have been classified as manufactures of metal under Par. 193.

JEWELRY—SALVATION ARMY PINS—Protests of Thomas & Pierson against the assessment of duty by the Collector of Customs at New York. The protests related to base metal scarf pins, their heads forming a monogram composed of the letters S and A (Salvation Army). The Board held them to have been properly classified as jewelry under Par. 434, Tariff Act of 1897.

JEWELRY—SILVER BUCKLES—Protest of Hensel, Bruckmann & Lorbacher against the assessment of duty by the Collector of Customs of New York. The Board held silver belt buckles to have been properly classified as jewelry under Par. 434, Tariff Act of 1897.

JEWELRY—WATCH CHAINS OF COPPER AND NICKEL—Protest of F. B. Vandegrift & Co. against the assessment of duty by the Collector of Customs of New York. The protest related to completed watch chains fitted with bars and swivels, some having charms or pendants attached. They were made from an alloy of copper and nickel, producing a metal having a permanent white color similar to silver. The Board held them to have been properly classified as jewelry under Par. 434, Tariff Act of 1897.

JEWELRY—GUN METAL CHAINS—Protest of John Wanamaker against the assessment of duty by the Collector of Customs of

Philadelphia, Pa. Gun metal guard chains were held to have been properly classified as jewelry under Par. 434, Tariff Act of 1897.

JEWELRY—PURSES—BRASS AND COTTON RETICULE—Protest of International Forwarding Co. against the assessment of duty by the Collector of Customs, Chicago. The protest related to (1) cotton reticules with burnished brass frames and chains, valued at 28 to 12 cents apiece, decorated with about 2,500 glass beads ornamentally arranged; (2) purses of similar construction valued at 8 to 16 cents apiece; (3) bags of similar construction valued at 75 to 90 cents each, and (4) cotton belts ornamented with about 3,500 gilt-lined beads. The Board found the value of the beads in the first three classes to constitute a very small part of the value of the goods, and sustained the importers' contention that the articles should have been classified as manufactures of metal under Par. 193, Tariff Act of 1897. The belts comprising the fourth class were held dutiable as beaded articles under Par. 408, Tariff Act of 1897.

NECKLACE CLASPS—Protest of American Bead Co. against the assessment of duty by the Collector of Customs at New York. As claimed by the importers, necklace clasps were held dutiable as manufactures of metal under Par. 193, Tariff Act of 1897.

SILK JEWEL CASES—Protest of American Shipping Co. against the assessment of duty by the Collector of Customs at Chicago. The importers contended that the collector had improperly classified jewel cases as composed in chief value of silk. Protest overruled.

EARTHEN FIGURES—DIMINUTIVE BONE ARTICLES—Protest of Takito & Co. against the assessment of duty by the Collector of Customs at Chicago. (1) Figures composed of a soft earthen substance decorated, which were classified as decorated earthen ware, were held by the Board to be dutiable under Par. 97, Tariff Act of 1897, relating to decorated earthy substances, the Board finding them not to have been baked in a kiln. (2) Diminutive articles such as bottles, pocketbooks, etc., composed of bone, were held to have been improperly classified as jewelry under Par. 434, and to be dutiable as manufactures of bone under Par. 439, as claimed by the importers. G. A. 6262 (T. D. 26994) and G. A. 6264 (T. D. 26996) followed.

METAL AND GLASS FRUIT HOLDERS—Protests, etc., of Moses Norris against the assessment of duty by the Collector of Customs at Baltimore. The merchandise consisted of fruit holders with an imitation bronze base to which was attached a colored glass dish. These articles were classified as composed in chief value of colored glass under Par. 100, Tariff Act of 1897, and were claimed dutiable either as manufactures of metal under Par. 193 or as statuary. The former contention was sustained, metal being shown to be the component material of chief value.

Appraisers from all parts of the United States are holding a meeting this week in New York for the purpose of exchanging views on subjects pertaining to the service. Uniformity of methods is one of the objects that are being sought.

The Diamond Markets.

ANTWERP, Nov. 22.—The diamond market in this city has become quieter, and it is expected that this condition will continue until the middle of January next. This is probably due in great part to the unwillingness of merchants to give credit at the close of the year, as they prefer to sell for net cash or not at all. Clean and good polished diamonds are easily sold, but second quality tones are not moving. Polished white stones were sold for high prices.

At the factory of Eduard Van Dam, Rue de la Province, a small strike was recently declared, about 50 cutters leaving the shop. This action was due to the refusal of Mr. Van Dam to increase their pay 10 per cent., he having offered them 7½ per cent., which was refused. During the last month about 10 employers increased the pay of their workmen 10 per cent.

P. Littmann, a diamond merchant, 26 years old, died last week at his home, 103 Rue d'Herenthales.

Among the foreign buyers who visited this market during the past fortnight were: Mr. Hoffman, New York; Mr. Rutstein, Warsaw; Messrs. Arm. Levy, B. Rapoport, Veol. Weissberg, Ventura, Slog, D. Van Braug, S. Van Moppes, Ts. Levy, Arons, Prager, Horowitz and De Haan, all of Paris; Messrs. Bronkhorst, Roeg, Citroen and Kaufman, London; Mr. Gross, Vienna; Mr. Berenblum, Bialystock; Mr. Abend, Berlin; H. Strauss, Hanau; Nasib Karach, Constantinople; Mr. Pardo, Amsterdam; Mr. Colombo, Milan; Mr. Hackenbouck, Frankfurt-on-the-Main; Mr. Segamsky, Bucharest; Mr. Mendelsohn, Manchester; Mr. Walewicz, Madrid; G. Guttman, Strasburg; Mr. Monnossohn, St. Petersburg; Mr. Kahn, Stuttgart; Mr. Van alk, Goch; Mr. Nocera, Naples.

AMSTERDAM, Nov. 21.—Business conditions here have been very good, but the general tendency of the market is somewhat quieter. As usual, it is expected that December will be rather a dull month. Several assortments of the rough diamonds from the Premier mines are still unsold on account of their very poor quality and high price.

The union of the jewelers of this city has decided to support the proposal for the establishment of the decimal carat. They propose the use of the gram, fixing the value of the kilogram at 4.875 carats.

PARIS, Nov. 22.—The beginning of the month found business very satisfactory, but after the 15th it grew quieter. Very small brilliants are still in great demand, but small six-faces are not called for. Antwerp roses could easily be sold if obtainable. The sale of pearls is also slack, owing to the difficulty of discounting bills at the banks.

The settlement of the affairs of H. A. Boat Sons, 31 Rue le Maubeuge, realized only 10 per cent. A new firm has been established under the style of Stiller et fils, diamond and colored stone dealers, with offices at 78 Rue Lafayette. They have a capital of 100,000 francs, and will continue for a period of five years. The firm of Canraye & G. Racine have taken over the

business of Mr. Engel, 7 Rue Laffitte. The offices of Mr. Tsserlis, which were formerly at Faubourg Montmartre, are now at 53 Rue Lafayette. Mr. Forn has also moved from 11 Rue du Faubourg Montmartre to 54 Rue Lafayette. Maxime Rips is located in his new office, 26 Rue Buffault, where he removed to from 35 Rue de Bellefond.

Optical Notes and Briefs.

W. B. Lawhead contemplates opening optical parlors in Athens, Ga.

Frederick King has joined the staff of the Virginia Optical Co., Norfolk, Va.

The Johnston Optical Co., San Francisco, Cal., has opened a well-equipped store on lower Van Ness Ave.

The stock of the Geneva Optical Co., in the Colonial Security building, on N. 7th St., St. Louis, Mo., was slightly damaged by fire about a week ago.

E. L. Jones, Sandusky, O., secretary of the Ohio Optometrical Association, was called to Granville, O., recently, owing to the illness of his daughter, who is a student at Dennison University.

The Fillmore St. store of the Chinn-Beretta Optical Co., San Francisco, Cal., is being improved. New fixtures have been added and the interior renovated. The establishment now has attractive optical parlors, equipped with all the modern optical instruments.

At the semi-annual meeting of the principal and faculty of the Northern Illinois College of Ophthalmology and Otolaryngology, at Chicago, the honorary degree of Doctor of Ophthalmology was accorded Prof. Samuel S. Grant, of Montreal, as special acknowledgment of eminent services rendered the cause of optometry. The degree will be conferred at the reunion of the college alumni at Chicago in February next.

J. W. Gould was taken into custody in Albion, Mich., a short time ago, on a charge of practicing medicine without a license. Gould in his defense asserted that he never attempted to practice medicine in any manner, but has always adhered strictly to the fitting of eyeglasses as done by an optometrist. The fact that he had been alluded to as "doctor" by certain newspapers is what caused the Albion physicians to bring about his arrest.

George H. Sigler, whose wife was struck by an automobile belonging to James C. Hutson, of the J. C. Hutson Optical Co., Omaha, Nebr., last July, suffering injuries from which, he asserts, she died Oct. 25, has begun suit against Mr. Hutson for \$7,000 damages. He asks \$2,000 for the loss of her companionship and services, and \$5,000 for damages growing out of her death. Mrs. Sigler was being wheeled along Cass St. in the downtown district in an invalid's chair when, it is asserted, the defendant's machine struck her. Mrs. Sigler began the suit before her death.

The next meeting of the Buffalo Optometrical Society will be held Friday evening, Dec. 7, at 8 o'clock P. M., in the Lafayette Hotel, Lafayette Park, Buffalo, N. Y. Dr. Arthur Brown, Rochester, will give his second lecture. His subject will be "Light," and promises to be even more interesting than the last, which included dis-

section. Preceding this E. A. Arrington, chairman of the Legislative Committee, and W. W. Bissell, Rochester, president of the State Optical Society, will speak on "Optical Legislation." John Lang was elected an active member. James Taylor, Buffalo, has applied for membership. There will be a short business session, beginning promptly.

Miss Maria Goodyear, after having been blind for 20 years, can now see. Her blindness was the result of a practical joke on the part of a fellow-worker, who pulled her chair away just as she was sitting down. Miss Goodyear fell, and struck the back of her head against an iron wheel, and shortly afterward she became blind. Dr. Samuel S. Grant, the well-known Montreal optician, in explanation of this accident, says: "All retinal impressions or pictures are conveyed by the optic nerve to gray matter cells at the back, outer part of the brain. Place the hand thus (Dr. Grant illustrates) over the lower part of the back of the head and you will cover that portion of the brain cells in which vision takes place, including the cells that lie in the third and fourth ventricles and in the aqueduct of Sylvius. The function of 'Sight' is entirely controlled in the base of the brain, the eye being the mechanical instrument and the optic nerve the transmitting medium to convey the luminous impressions thereto. It can, therefore, be easily understood why a violent blow at the outer base of the brain should shatter sight and cause blindness. But why Miss Goodyear recovered her sight by another knock on the same place is not so readily explained; the probability is that the continuity of nerve impulse between optic nerve and brain cells, which was disarranged by the first blow, was re-arranged or restored by the later accident."

Louisville, Ky.

A fire in the building at 942 W. Market St. recently caused about \$300 damage to the jewelry stock of George A. Schroeder.

The *Post* last week published an interview with I. Haarhoff, said to be a local adviser of the De Beers Consolidated Mines, Ltd., in which the latter gave a lot of details as to the mine and its production already familiar to the jewelry trade.

Herman Haegle, 352 W. Jefferson St., swore out a warrant against W. Miller, New Albany, recently charging that he had obtained several rings worth \$95 and had given in payment a worthless check drawn on the German-American Trust Co. of Indianapolis. After accepting the check the jeweler was told that Miller had no account in the bank.

Simon Stavitsky, a pawnbroker and jeweler at 237 W. Market St., reported to the police recently that his store had been robbed of silver, watches and other articles valued in all at about \$800. The thieves broke into the place through a transom and smashed the show case, but did not get into the safe. The day after the robbery a boy brought a note to the jeweler saying that if he would drop \$45 wrapped in a piece of paper in the gutter, at a location mentioned, the goods would be returned to him. He did not do this, and the police later arrested John Woods, a negro, to answer to the charge.

"GEMFINDER" takes a melancholy pleasure in referring the trade to his advertisement of April 25th last, in the "Jewelers' Circular." Unfortunately, his prophecy has been fulfilled. Not only have Precious Stones advanced, but the end has not yet been reached. Sapphires have gone up at least 25 per cent. in the last six months, and they will go still higher.

"Gemfinder" again warns prospective buyers not to delay. All kinds of Precious Stones are scarce and prices on some may become prohibitive.

News Gleanings.

C. M. Adams, Dawson, Ga., contemplates opening a branch store in Cutlbert, Ga.

J. H. LeRoy has succeeded E. A. Levi as manager of the Sarbach Jewelry Co., Lincoln, Nebr.

The bankrupt plant of Albro & Kettley, Providence, R. I., was scheduled to be disposed of at auction to-day.

August Gehring, Carlisle, Pa., has just completed extensive improvements in the interior of his store.

Benj. T. & Wm. E. Ash, Binghamton, N. Y., will move shortly from 51 Court St. to the Goldsmith building.

C. G. Theiling, Spencer, N. C., was severely burned in his store one night, recently, by an explosion of gasoline.

Louis Pfister, New Iberia, La., has limited his brother into the business, the firm being now known as Pfister Bros.

The regular weekly meeting of the Manufacturing Jewelers Board of Trade was not held last week at Providence, R. I., because of the holiday.

Ormond & Klucher, 317 Ohio St., Sedalia, Mo., have just installed new show cases and otherwise improved the interior of their establishment.

Reed & Barton, Taunton, Mass., have completed a new foundry for casting bronze goods. It will be put in commission after the Christmas holidays.

Mr. Crockett has bought an interest in E. Whittaker's business, Clyde, O., Whittaker & Crockett being the new style under which the business is conducted.

The stock, fixtures and furniture of Davis Bros., of Galion, O., are to be sold at auction, Dec. 8, on the premises, by the trustee in bankruptcy to the highest bidder.

Thieves one night last week broke into the retail jewelry store of W. W. Porter, Brighton, Ont., and stole about \$200 worth of stock and some money.

C. P. Bininger, Lancaster, O., has disposed of his business interests at that place to Thomas Pearsall, Jeannette, Pa. Mr. Pearsall will locate permanently in Lancaster.

Wm. H. Balch, Ashland, O., has purchased the business of C. W. Evans & Co., of that place. Mr. Evans will move to Urbana, where he will resume his former position with G. J. Williams.

Jacob Lemmett, Norfolk, Va., moved last week from Church St. to 368 Main St., where he has handsomely furnished quarters. The new store will be known as "The White Marble Front."

M. Johnson, formerly a watchmaker in the employ of J. E. Jackson, Jackson, Tenn., was arrested near Cairo, Ill., about a week ago, on a serious charge, and placed in the county jail at that place.

Charles D. Childs, administrator of the estate of the late George E. Childs, Flint, Mich., received sealed bids for the entire block at 424 S. Saginaw St., that place, from Nov. 24 until last Friday.

Albert Shiefing, at one time engaged in the retail jewelry business on S. Adams St., Peoria, Ill., was arrested in that city a short time ago on a charge of disorderly conduct and offering violence to a patrolman.

Sam. Cera, Litcher, La., on Tuesday of

last week suffered a loss of \$3,000 by fire. The insurance amounted to \$1,400.

Joseph Linz & Bros., Dallas, Tex., were the donors of a handsome grandfather's clock, which was presented recently to the Koon Kreek Klub, of Henderson County.

J. C. Walton, Fort Worth, Tex., who recently made arrangements for an auction sale, has sold fixtures and lease to Mr. Ballew, who is now holding the auction, Mr. Walton having accepted a salaried position.

Earl Foutz, who, as announced in a previous issue of THE CIRCULAR-WEEKLY, was arrested and convicted of looting the retail jewelry store of W. W. Bugg, Jackson, Mich., has been sentenced to not less than two and a half nor more than five years in the State prison.

H. Cohen, Richmond, Va., who for the past seven years has conducted business under the name of the Southern Watch Co., has moved into new quarters at 707 E. Main St., where he will carry a large stock of jewelry. The new store is attractively furnished with mahogany show cases of the latest pattern.

A number of western buyers were in Providence, R. I., during the past week, among them B. Rothchild, of F. Lewold, Chicago; Mr. Evans, Butler Bros., Chicago; Mr. Davies, Butler Bros., New York; Mr. Kaufman and Mr. Wakmann, of Chicago; A. Stone, of Stone Bros., Chicago; N. Eisenman, of Eisenman Bros., Chicago.

Frank Douglass and Edward Foutz, arrested recently in Muncie, Ind., for violating a city ordinance, have been discharged and ordered to leave the city. Douglass and Foutz were picked up for selling cheap jewelry and were held on a charge of peddling without a license. Both the men had served a term in the Indianapolis workhouse for a similar offense.

Work on the new building of the Paul-Gale-Greenwood Co., which is being erected at Granby St., Norfolk, Va., is rapidly progressing, and it is expected that the structure will be ready for occupancy by the middle of March. The new store, it is said, will be one of the most handsomely appointed jewelry houses below the Mason and Dixon line.

Wm. H. Noyes, Milwaukee, Wis., last week identified as part of his stock several articles of jewelry, which were recently stolen by John Mielenz, who admitted participating in over 40 burglaries in the last two months. Mielenz confessed that he gave his sister part of the jewelry stolen from the store of Mr. Noyes.

The Enterprise Cut Glass Co., Elmira Heights, N. Y., has filed articles of incorporation, with a capital stock of \$30,000, of which \$11,100 has been paid in. The principal stockholders are: C. E. Gaylord and W. E. Loring, Elmira Heights; J. W. Bennett, Elmira; J. B. Peterson, F. C. Burnham, Honesdale, Pa. The concern moved recently from Honesdale because of inducements offered by the Elmira Heights Chamber of Commerce.

Walter J. Newman, who has been superintendent of the Horton, Angell Co.'s factory, Attleboro, Mass., for a number of years past, has severed his connection with the firm. His resignation took effect last week. Mr. Newman has been with the firm for the past 27 years. Soon after it was

incorporated in 1898, he was appointed superintendent and has served in that capacity since. He is well known among manufacturers as an able jeweler. He has made no announcement as yet of his plans for the future.

According to a report from Albany, N. Y., Monday, it is not likely that Joseph Young and George Bliss, who are wanted in that city on the charge of robbing the jewelry store of W. F. Antemann & Son, some months ago, of \$1,800 worth of jewelry, will be tried for the crime until after the Utica authorities get through with them for a similar job in that city. Chief Hyatt was notified Saturday that both Young and Bliss had been indicted for the Utica robbery, and will be placed on trial at once. It was supposed that the Utica victims would refuse to prosecute, because, it is alleged, the stolen jewelry was returned. When this was learned by Chief Hyatt a warrant was sworn out in this city for both Young and Bliss and lodged with the authorities at Utica to be served in case no conviction was secured in Utica. Young is said to be suffering with tuberculosis and the doctors report that he cannot live many months.

Adelbert S. Kneale, for several years a trusted clerk in the employ of J. F. Hartwell, Oklahoma City, Okla., was arrested a short time ago and placed in the county jail charged with wrongfully taking for his own use jewelry and other merchandise valued at several hundred dollars. The discovery of the theft was made by the Oklahoma Detective Agency while the latter was looking for evidence in another case, one of its detectives having learned that Kneale had given valuable jewelry gifts to several women in the city. A conference with Mr. Hartwell disclosed the fact that he had been missing several articles from the store for several months past. It is alleged that Kneale had presented a promiscuous collection of jewelry to at least eight women. Kneale is 50 years of age, and is said to have a wife and two children in Texas. He admits taking all the stock, but claims to have paid for it by putting the money in the drawer at the time he took each piece. According to Mr. Hartwell this is an untenable contention, as it is contrary to the rule of his establishment.

In the line of Sheffield silver plated ware Samuel Buckley & Co., 100 William St., New York, exhibit serving trays of sizes varying from 8 to 26 inches in diameter, made in antique designs. Vine decorations with clustered grape effects in raised work are seen in the border patterns. Among others is a "George Washington" sterling silver tray, an exact reproduction of an old design. In the center of the tray is an engraving of the first president, about which is draped the stars and stripes, supported at either side by cherubs. Above the portrait is a wreath of laurel, in the center of which is a star, and beneath are the words, "Declaration of Independence." A wreath of wheat and corn gracefully entwined with the names of the 13 original States partly surrounds the central design. The American eagle and shield is at the bottom of the wreath. The handles of the tray are covered with scroll work.

Attleboro.

Charles L. Barrows is a loser to the extent of nearly \$10 from a petty burglary at his home last week.

Plans are being drawn for an addition to the S. O. Bigney & Co. plant, work of construction to start next Spring.

Ralph H. Cole, of the Hlaydn Mfg. Co., has been spending a few days in town. He is now a resident at Waterville, Me.

Fellow workers in the employ of W. E. Richards & Co. last week gave a purse of gold to Clark Ryder on the occasion of his marriage.

Charles H. Eden, of the C. H. Eden Co., with S. M. Einstein and Morris Baer, of the Attleboro Mfg. Co., are spending a few days in northern Vermont.

Orlando W. Hawkins, formerly of O. V. Hawkins & Co., later with McRae & Seeler, has taken the superintendency of the C. H. Eden Co. factory.

James E. Blake, of the James E. Blake Co., has arranged to make a two-story addition to his factory building on South Main St., occupied by the Frank Mossberg Co.

From the Horton, Angell Co.'s factory some reports that the passing difficulty between corporation and employes over the form of a new tag system on goods in process of manufacture has been settled, and the work is again running without friction.

Patrick Greene, employed by J. M. Fisher Co., lost his life last week in an explosion. He employed an off day from the factory to dynamite stumps. One discharge injured him fatally. His fellow workers at the factory raised a liberal purse for his family.

Capt. George F. Bicknell died in this town last week, aged 76. He was a veteran jeweler, being for years a skilled plater and colorer with the old G. A. Dean Co., since absorbed into Bates & Bacon. He had been engaged in the insurance business first prior to his death.

The Supreme Court Friday overruled the exceptions taken by the defendant in the case of William M. Hoddie, Jr., against the Attleboro Mfg. Co., and the verdict of \$6,000, which the jury returned in favor of the plaintiff, stands. Hoddie's eyesight as damaged by acid in an accident at the defendant company's factory.

Edward A. Sweeney, of W. H. Wilmarth Co., has been seriously ill at his home for several days, the result of his efforts at the fire which damaged the Wilmarth factory Nov. 20. During the fire he personally took part in saving books and other property, and for a considerable time wore nothing dripping wet, and this brought on a cold. For a time it was feared pneumonia would develop. This he escaped, however, and is now convalescent.

The utmost indignation is felt by the general public and among the manufacturing jewelers over the inadequate railroad stations provided in the center of Attleboro by the N. Y., N. H. & H. R. R. Co., which is just completing the abolition of the grade crossings. The effect of such stations on sitting business men cannot fail to be discreditable to the town. A vigorous protest has been filed by the manufacturing jew-

elers with President C. S. Mellen of the corporation.

The work of repairing the burned factory has been started auspiciously, but it is plain it will require almost all Winter to complete it. The occasion will be embraced to make a number of permanent improvements. The burned head-house and ell have been partitioned off from the main section, and will be rebuilt. In the main section both W. H. Wilmarth & Co. and the P. J. Cummings Co. are busily at work, almost as if nothing had happened. The conveniences are not as good, but a spirit of determination to "get busy" and get the cream of the holiday trade overcomes all obstacles.

North Attleboro.

Frank Maintien, of Maintien Bros. & Elliot, is ill.

Walter B. Ballou is steadily gaining and will be able to be out soon.

The boiler for the new W. G. Clark & Co. factory on Chestnut St. has arrived and is being installed. The concern will be in the new home by Jan. 1.

Richard L. Saunders, who for the past year has been western representative for the Paye & Baker Mfg. Co., has tendered his resignation. It took effect immediately.

Fred E. Sturdy, George S. Semple, Frank Kennedy, Ira McGavin, Percy Clap, William Lowe, H. H. Curtis and K. L. Taylor were among the salesmen to return to town last week.

Henry Rogers sustained a painful injury at the factory of R. Blackinton & Co. last Thursday. A piece of work flew and struck the palm of the right hand inflicting a deep gash clear to the bone.

A big automobile owned by G. Herbert French was badly wrecked on Wednesday evening of last week by a collision with a fence while going to the rescue of an "autoist" stranded in South Attleboro.

John F. Sturdy, founder of the big chain house of J. F. Sturdy's Sons, observed on last week the 60th anniversary of his wedding. Because of the poor health of Mrs. Sturdy the exercises were not on quite so elaborate a scale as was intended. A large number of relatives and friends, however, took the occasion to call upon the couple and extend their hearty and sincere congratulations. Mr. Sturdy was born in North Attleboro but a half mile from his present abode on Towne St., March 12, 1822. Acquiring his education in North Attleboro and Cumberland, Mr. Sturdy in 1849 went to Providence and commenced the manufacture of jewelry tools. Returning shortly to town he entered the firm of Draper, Sturdy & Co., manufacturers of jewelry novelties. At the death of Herbert Draper several changes were made in the personnel of the concern up to 1893, when the business was turned over to Mr. Sturdy's three sons, Fred E., Herbert K. and Frank H. The elder Mr. Sturdy is best known to the jewelry world through the fact that he was first to manufacture rolled plate articles. Mr. Sturdy married Miss Elizabeth Knapp, of Cumberland Hills, Nov. 26, 1846. Seven children were born, and the three sons that constitute the Sturdy firm are all that survive.

Providence.

Marcus W. Morton, secretary of the Manufacturing Jewelers' Board of Trade, Wilcox building, is once more back at his desk, after a brief illness.

Robert E. Budlong was last week installed as treasurer of Harmony Lodge of Masons, Pawtuxet. Several other jewelers also belong to this lodge, which recently dedicated its new home.

The Thanksgiving holiday gave employers and employes a needed rest. Many of the employers "remembered" those working for them by donations of turkey and money, as cards of thanks in the local papers indicate.

Among the imports at the Port of Providence, last week, were one package of imitation pearls from Havre, as well as one of imitation precious stones from the same place, and three packages of silverware from Toronto, Can.

A sad homecoming was that of Charles Checkley, a jeweler in the employ of H. C. Lindol & Co., who found, one evening last week, on his return to his house from work, that his wife had killed herself and their two children by turning on the gas. The woman had been in ill-health and was despondent.

Rumor has it that an attempt is being made to revivify the Jewelers' Bowling League, which enjoyed such prosperity last year. There were several teams in the league, and some hot games were rolled, considerable interest being shown by fellow shopmates of those on the teams.

Edmund D. Fisk, traveling representative for the Nicholson File Co., in this city, shot himself in his room at the Newman Hotel, Friday. His home was in Lincoln, Nebr., and he had been here to hold a conference with officials of the company. Domestic troubles are said to have been the cause for his deed.

Charles Genet, formerly employed by the Bassett Jewelry Co., who was detected in the act of trying to open a safe in the office of the company, the burglar alarm ringing, was arraigned last week on a charge involving tampering with the burglar alarm device. He was adjudged probably guilty, and was held for the Grand Jury.

Harrisburg, Pa.

TRADE CONDITIONS.

The last of the penny-a-mile excursions to see the new State capitol was run Thanksgiving Day. It is estimated that these excursions brought 50,000 visitors to Harrisburg. Downtown jewelers profited by them to some extent.

George A. Hutman has become a member of the West End Business Men's Association.

Mr. Early, general merchant at Derry Church, this county, has lately added a jewelry department to his establishment.

Harry W. Snyder, of this city, has sold his store property in Lypens, this county, to R. Cable & Son, the present tenants.

The general store of the Lochiel Iron Co., at Lochiel, this city, was robbed of jewelry and razors Friday night last. The thieves entered through a cellar window.

S. S. Lick's store in Millersburg, this county, was robbed last week. Among the stolen property was quite a quantity of holiday jewelry. The burglars, who left no clew, entered through a window.

Philadelphia.

TRADE CONDITIONS.

A marked improvement in trade in this city has been generally felt since Thanksgiving. Although a brisk trade had been expected, following the normal lull between election day and Thanksgiving, such activity as has been displayed has been more than satisfying to both wholesalers and retailers, and a record breaking holiday trade seems assured. From all parts of the surrounding country came retailers at the week's end to place orders for the Christmas rush. This in itself is regarded as an indication of perhaps the heaviest December's business in the history of the trade. A healthy stimulus is also given to retailers by the fact that the increases in wages and salaries of the Pennsylvania and Reading railroad companies' employes, the Transit Co., and other big public service corporations and industrial plants, took effect last Saturday. On the whole conditions are exceptionally gratifying.

Louis Sickles, of M. Sickles & Sons, was in New York on special business for the week, last week.

J. E. Caldwell & Co. displayed the dog show prizes and trophies made by them for the exhibition last week.

Frank Johnson, watchmaker, formerly with John Shuler, resigned his position, last week, to go with C. D. Cassel, Norrisown, Pa.

Thomas J. Campbell, with the Koshlan & Itale Co., departed, this week, on his final trip of the year to the Pennsylvania state trade.

George White, engraver, formerly with E. Caldwell & Co., has accepted a position with E. O. Zadek, Mobile, Ala. Mr. White departed last week for the south.

Anthony Kroner, watchmaker, formerly with the John F. Blisard Co. has left the city, intending to go to the Pacific Coast by easy stages and locate finally at Sacramento, Cal.

In speaking of the fact that Isidor S. Sagorsky, manufacturing jeweler, had remodelled his quarters and installed improvements, a note in the issue of Nov. 21, incorrectly gave Mr. Sagorsky's address as 716 S. 8th St. This should have read 114-118 S. 8th St.

William Rawlings, Jr., manufacturing jeweler, 727 Sansom St., was robbed, last week, of an overcoat containing \$500 worth of jewelry. The overcoat was left in the office and was stolen by a sneak thief. Although the robbery was reported to the police, no clue has been found.

Joshua Litchfield, 711 Sansom St., is reported to contemplate opening a retail store in this city soon, if he can find a suitable location. Mr. Litchfield was formerly in the retail business on Columbia Ave., near 19th St., and has been all his life identified with the jewelry business of this city.

The Bailey, Banks & Biddle Co. secured the contract recently for the class rings for the cadets at the United States Naval Academy at Annapolis. The rings are of the signet variety and handsomely engraved. An attractive display of the rings was made in the Chestnut St. show windows of the company last week.

J. Frank Allee, the leading jeweler of Dover, Del., which State he represents in the United States Senate, incorporated his business, last week, as the J. Frank Allee Co., of which he is president. The paid-in capital stock is reported to be \$25,000. Senator Allee is well known to jewelers of

this city, although of recent years he has not done much buying here in person, trusting employes to make purchases on his behalf of local wholesalers.

J. Warner Hutchins, 728 Sansom St., is a candidate for election as a member of the Board of Directors of the Union League. Mr. Hutchins is one of the directors of the Jewelers' Club. John Gordon Gray, president of Queen & Co., Inc., manufacturing opticians, is also a candidate for the directory of the Union League, an honorary office which is sought after by the best element of Philadelphia citizenship. Mr. Hutchins entertained, last week, a Thanksgiving Day party at dinner at the Bellevue-Stratford Hotel.

Alexander Kay, one of the best known engravers in the country died at his home, 1218 S. 19th St., this city, last week, at the advanced age of 89 years. Mr. Kay was especially known as the inventor of the Ronaldson type. He devoted most of his time to cutting Roman faces on steel. With his punch cutting he combined the engraving of dies and for several years did most of the work of the Philadelphia Mint. He was born in Edinburgh, Scotland, and came to this city in 1854, where he has continuously resided since. He is survived by three sons.

Among the out-of-town retailers visiting the local trade for Christmas shopping during the week were: E. Allez, Millville, N. J.; H. L. Phillips, Smyrna, Del.; M. K. Loudenslager, Souderton, Pa.; Josiah Heckler, Mainland, Pa.; John MacPherson, Mauch Chunk, Pa.; C. F. Kuhn, Cape May, N. J.; M. Friedberg, Atlantic City, N. J.; Gustave Lanz, Norristown, Pa.; A. M. Kendall, Millville, N. J.; F. C. Maag, Bridgeport, Pa.; D. H. Krause, North Wales, Pa.; E. L. Barton, Oxford, Pa.; B. C. Foster, Bristol, Pa.; Howard Stratton, Mt. Holly, N. J.; C. August Carmany, Coatesville, Pa.; J. M. Norcross, Pمبرton, N. J.; C. T. Hadley, Jamesburg, N. J.

J. C. Courtney, a watchmaker, formerly well known to the wholesale trade of this city, for whom he did much work, but who is now with E. & J. Swigart, Cincinnati, O., has written to Charles H. O'Bryon, 735 Sansom St., that he intends, next year, to go to Colorado and locate in business. Mr. Courtney has written that he reads in THE CIRCULAR-WEEKLY that many changes appear to have taken place among his old associates, especially among watchmakers, who, he says, appear to be trying to outdo each other in the "moving stunt." He has written his congratulations to W. C. Williams, with C. H. O'Bryon, who will be sworn in to-morrow as a member of Common Council.

The city and Pinkerton detectives have not yet traced the sneak thief who stole a sample case belonging to C. F. Willemin, of T. G. Frothingham & Co., from the establishment of M. Sickles & Sons. Neither has any of the stolen goods been traced so far as can be ascertained. Some in this city are inclined to believe that the thief may have been Fred Hayes, who recently escaped from the Haysborough, Pa., jail, and whose picture was published in THE CIRCULAR-WEEKLY, Nov. 21. Hayes was a jewelry sneak thief. One of those who

observed the man in M. Sickles & Sons' store, who is believed to have been the thief who took the sample case, declared that the photograph published in THE CIRCULAR-WEEKLY closely resembles the suspect.

Lancaster, Pa.

Augustus Rhoads, last week, visited Brownstown, Pa., accompanied by his wife. Joshua Fisher, a retired watchmaker, died in Lancaster, last week, aged 71 years.

G. L. Hepp, Litz, has been elected president of the Litz, Manheim & Ephrata Gas Co.

Guy K. Herr, with L. A. Faunce, Harrisburg, visited friends in Lancaster, last week.

Perceval Bedloe, a Manchester, England, jeweler, who visited Lancaster, several years ago, was here again, last week.

William Fochle, a local jeweler, and his wife, celebrated their wooden wedding anniversary, Nov. 25, by a reception at their home.

Charles E. Foose, E. R. Kant, Howard W. Detterlein and Fred A. Wheeler, traveling salesmen of the Non-Retailing Co., are home from extended trips.

William Hodgen, of the Hamilton Watch Co.'s factory, was married, Nov. 29, to Miss Ida M. Morton, and his best man was Oscar M. Smith, with Augustus Rhoads.

Among the jewelers visiting Lancaster, last week, were: Jacob Fisher, Elizabethtown; T. E. Gleim, Mechanicsburg, Cumberland Co.; C. E. P. Keim, Newport, Pa.; Henry Fochl, Columbia; J. H. Senseing, New Holland.

William F. Markley, a Columbia jeweler who went to Iowa 15 years ago, and whose death was reported several weeks ago, is now visiting Columbia relatives, the rumor as to his decease having been unfounded. He is still engaged in business, a few miles from Des Moines.

A Philadelphia detective was here, last week, working with the Lancaster police in relation to a recent big jewelry robbery in that city. As no arrests have yet been made, no particulars of the affair have yet been made public, but it is known that the thieves were in Lancaster only a couple of days before the visit of the Philadelphia officer.

On Nov. 27, a stranger called at C. B. Kern's jewelry store, Mt. Joy., under pretense of examining his watches. Watching an opportunity, the man snatched up a timepiece and ran away, but Mr. Kern soon overhauled him, secured the watch and had the fellow arrested. He was committed to jail for trial and refused to give his name.

O. T. Fenton, Hightstown, N. J., will move to-morrow, Dec. 5, from 122 Main St. to a newly furnished store at 102 Main St. The new quarters have been handsomely fitted up with up-to-date fixtures and furnishings. A well-equipped optical department is located in the rear of the establishment. The store space is 48 feet by 16 feet.

BACKES & STRAUSS, Sole Agents for Europe and India, London, E. C., 14-17 Holborn Viaduct

Connecticut.

The old watch shop in Cheshire, which has been a landmark in that town for some time past, is being torn down.

Henry E. Lewis, with the F. L. Wilson Co., Danbury, was recently united in marriage in Union Springs, N. Y., to Miss Iva Essenden, of that place.

L. J. Stone, superintendent of the case department of the Sessions Clock Co., Forestville, recently purchased a parcel of real estate opposite the factory.

A public hearing in New Haven, on the petition of Gen. George H. Ford and others for the city to purchase Lighthouse Point for park purposes, was held in the City Hall, on Monday last week.

George Roberts, who recently resigned as manager of the plate department of the Sessions Clock Co., Forestville, to go to New Britain, has returned to his old position at the clock factory.

The erection of the new addition to the plant of the International Silver Co., in Shelton, will necessitate the changing of the driveway used for trucking to and from the factory. The new roadway will enter on Bridge St.

A large plate glass window on the Chapel St. side of the Ford Co.'s store, corner of Chapel and Chapel Sts., New Haven, was recently shattered one night last week. A policeman was chasing a culprit and both jumped into the glass.

Hon. Edward B. Dunbar, senior member of the Dunbar Bros., manufacturers of steel springs for clocks, etc., and president of the Bristol National Bank, Bristol, underwent an operation in New York, about a week ago. His many friends in the trade look forward to his speedy recovery.

Among the well known members of the Yale who were seen at the recent Yale-Princeton football game in New Haven were: Mayor Landers, of New Britain; President C. F. Smith, of the same place; J. S. Ingraham, Bristol; President Walter Kemp, of the New Haven Clock Co.; and Mayor T. D. Bradstreet, Thomaston.

Mrs. Rosa Peluso was arrested on Tuesday of last week in the retail jewelry store of Alexander Weed, Stamford, for the alleged theft of three gold rings. The arrest is due to the vigilance of Alexander Weed, Jr., son of the jeweler, who telephoned for the police when he saw the woman, who was accompanied by a constable, put a ring in her pocket.

Harry Halpern was recently brought to Waterbury from the Elmira Reformatory to stand trial on charges of forgery and larceny. It is alleged that the accused in August, 1905, fraudulently obtained diamonds from the store of Morris A. Green, and on another occasion forged his brother's name on a check. He has been confined in the Elmira Reformatory on a charge of forgery.

The H. C. Thompson Clock Co., clock manufacturers, Bristol, will immediately begin work on the construction of a two-story brick factory building to replace the structure destroyed by fire last week, as told in the issue of THE CIRCULAR-WEEKLY, Nov. 28. Plans are now being prepared by the architects, and as soon as possible the contract will be awarded. The factory will be 110 feet in length, 25 feet wide and of

mill construction. The site of the factory will not be on the foundation of the burned building, but on Federal St., running east and west. The part of the old wooden factory which was saved will be used as a storehouse.

Minneapolis and St. Paul.

E. F. English, watchmaker for W. M. Stone, Minneapolis, has returned from a visit to his son in Colorado Springs, Colo.

Henry Birkenhauer, Minneapolis, has returned from a short business trip to the Mesaba Iron Range, in Northern Minnesota.

H. Melhum is now working for the R. G. Winter Jewelry Co., Minneapolis. He was formerly with A. N. Anderson, of the same place.

Charles M. Erickson spent Thanksgiving in Red Wing, Minn., visiting his father, Thor Erickson. The latter lost his store by fire last week.

The concern occupying the store adjoining that of J. B. Hudson & Son, Minneapolis, contemplates vacating at the end of the lease, to permit the jewelers to occupy both stores.

White & MacNaught, 407 Nicollet Ave., Minneapolis, have remodeled and enlarged their display window, having taken in the space formerly occupied by an entrance to the second story. The change makes a much more attractive window.

Among the out-of-town jewelers in the Twin Cities during the past week were: Emil Nelson, Williston, N. Dak.; Charles Kruger, Paynesville, Minn.; Thorson & Brown, Northwood, Ia.; I. M. Radabaugh, Hastings, Minn.; A. G. Scherf, Red Wing, Minn.; Chris Nygaard, Brownton, Minn.; A. J. Krueger, North Branch, Minn.; Bronson & Lighthall, Kalispell, Mont.; Frank C. Wittenberg, Luverne, Minn.

Rochester.

A. R. DeWitt, watchmaker and jeweler, who for some time had his place of business at 16 Wilders Arcade, has removed to 41 Reynolds Arcade.

Judgment was taken by default in Municipal Court, recently, by Chas. Schlosser against William C. Brackley, for \$31.81, and by Don I. Danks against Sidney J. Dibble for \$31.80.

Sam Gordon is a recent addition to the traveling force of Morris Rosenbloom & Co. He will cover Pennsylvania and the south. Mr. Rosenbloom has just returned from a special trip to West Virginia and Pennsylvania. Harry Doolin is an addition to the executive staff of this company.

Henry Sloan, formerly partner with his brother in the Model Jewelry Store, has opened a new establishment at 62 Clinton Ave., N., a few doors from the old stand. Mr. Sloan, besides a large stock of jewelry, has a line of men's furnishings, but as the two lines do not seem to take well together, he expects to do away with the furnishings, and about the first of the year fill up the store with jewelry.

New Stores and Enterprises.

Orris Gurney recently began business in Alta, Ia.

E. E. Brown has begun business in Central City, Nebr.

Frank Finch is about to open a store in Pierre, S. Dak.

W. A. Donmayer, Kutztown, Pa., has added a line of jewelry.

John Ericson, Lake View, Ia., will shortly commence business in Mapleton, Ia.

The La France Jewelry Co. opened a store at 27 Patton Ave., Asheville, N. C., Dec. 1.

D. I. Schaur, formerly of Atlanta, Ga., has opened a store at 1004 Franklin Ave., St. Louis, Mo.

Walter Pireaux, formerly with Archie Tegmeyer, Milwaukee, Wis., has started in business on his own account at Lena, Wis.

C. W. Struby, formerly of Kansas City, Mo., has gone to Green City, Mo., where he will engage in the retail jewelry business.

A new jewelry store has just been opened at 313 N. Main St., Piqua, O. A Mr. Webster has charge of the establishment.

R. E. Gill, about a week ago, began business at 3d St., Parkersburg, W. Va. His brother, F. A. Gill, is associated in business with him.

A new building is being erected in Grand Junction, Colo., for Sherman Moody, who will conduct a retail jewelry business at that place.

Leslie Caldwell, formerly with E. C. Albertson, Wildwood, N. J., opened a retail store of his own in the Atlantic Coast resort, last week.

Halvorsen & Hanson have engaged in the retail jewelry business in Hanska, Minn. Both members of the firm come from Colfax, Wis.

Holderle Bros. is the name of a new firm in Salisbury, Mo. Both members of the firm were formerly employed in jewelry stores in St. Louis.

The Omaha Optical Co., Omaha, Nebr., has filed articles of incorporation. The capital stock is \$50,000, of which \$10,000 is paid up. Elwood Riggs, William G. Riggs and N. A. Riggs are the incorporators of the concern.

The Charles A. Green Optical Co. has fitted up a store at 115 Broad St., Columbus, Ga., where it will commence business at once. The head of the concern was formerly with the A. K. Hawkes Optical Co., of Atlanta.

The Ophthalmoscope Co. has just been incorporated in Toledo, O., by L. M. Bate-man, I. N. Humphrey, Chas. R. Clapp, E. R. Kelsey and W. P. Rowland. The concern will manufacture spectacles and goggles. It will be located at 437 Dorr St., Toledo.

The New System Jewelry Co., New Haven, was recently incorporated in the State of Connecticut with a capital stock of \$5,000. The incorporators were Frank S. Day, New Haven; R. S. Barkley, Rowayton; Mary A. Barkley, Rowayton; Agnes S. Day, New Haven.

GORHAM SILVER

WHAT EVERY JEWELER NEEDS

¶ At no season of the year other than this is there a more insistent demand made upon the retail jeweler's stock for such silverware as Toilet Goods and Manicure Sets, Desk Furnishings, Handkerchief and Glove Boxes and articles of a similar nature.

¶ It is, therefore, incumbent upon the jeweler of alert perceptiveness to satisfy himself that in this respect his stock needs no replenishing, or to remedy the omission should he find that it exists.

¶ The Gorham Company have always paid particular attention to this important feature of their holiday productions and in variety as well as in attractiveness of price and appearance the Gorham line of these goods is without parallel.

THE wholesale jewelry trade of the west has lost one of its most prominent members, and Chicago is bereft of one of its leading and most active citizens through the death Friday, as noted in another column, of Otto Young, president of Otto Young & Co, jobbers of that city. Mr. Young's career not only shows what can be accomplished by a man of activity and energy, who holds strictly to the highest commercial standards of honesty and integrity, but it will no doubt be held up before the young men of Chicago as indicating the possibilities in the future of the business men of that city. Coming to this country when a youth, he was first a clerk in New York, and finally drifted to Chicago in 1871. From the time he started the firm of Otto Young & Co he prospered, branching out until he was identified with many interests, and at his death was not only a director in his city's leading financial institutions but was also one of the largest real estate owners in the metropolis of the west. His passing will be mourned by hosts of friends in the jewelry trade in all parts of the country.

An Important Decision on "Plate." ACCORDING to a cable dispatch received Saturday last, a most important case concerning the hall-marking in Great Britain of foreign-made watch cases was decided that day by the Court of Appeal, which reversed the decision of Justice Channell, published some time ago, to the effect that when foreign watch cases were imported as parts of complete watches they were not "plate" within the meaning of the Hall Marking Act, and need not, therefore, go to the British Halls to be marked, while on the other hand when they were imported separately they were "plate" within the meaning of the statutes. The Court of Appeal, according to the dispatch, has decided that all gold and silver watch cases, whether imported with or without works, must be assessed and hall-marked before they can be sold in Great Britain.

This case, which as told in the London notes of last week, is known under the title of the Wardens and Commonalty of the Mystery of Goldsmiths vs. William Wyatt, and was brought as a test case by the Goldsmiths Company at the request of the Board of Trade and the Commissioners of Customs, in order to raise the question and get a decision. A special case was made before Justice Channell by an agreement between the parties. In the arguments of the defendant it was urged that the word "plate" referred to complete articles of silver and gold, and it could not be applied to a complete article wherein the gold or silver case was no more than a covering for the essential elements of the piece in question—namely, the works, and consequently Sections 59 and 60 of the Customs Act of 1842 and the Hall Marking of Foreign Plate Act of 1904 could not apply. On behalf of the Goldsmiths Company it was contended that gold and silver watch cases were certainly "plate" within the meaning of the statutes, even though at times the word "watches" and "plate" had been used in the same sentence.

As the text of the decision has not yet been received in this country, it is impossi-

ble to state exactly upon what points the Court of Appeal reversed Justice Channell, but from statements given out by counsel when the decision was rendered it would appear that the end is not yet, and an attempt will be made to have the matter finally settled on an appeal to the House of Lords. Inasmuch as Parliament is to be petitioned on behalf of the silverware industries of Sheffield to amend the Merchandise Marks Act of 1897 in regard to foreign-made articles, it is probable that an attempt will also be made to amend the Hall Marking of Foreign Plate Act of 1904, also, in a way that will definitely settle the question at issue.

The watchmaking industries of both Switzerland and America are vitally interested in the suit, as the final determination of the questions involved will have a decided effect upon their trade with Great Britain.

The Demand and the Supply of Diamonds.

THE announcement made last week of the annual meeting of the stockholders of the De Beers Consolidated Mines, Ltd., is worthy of careful study by all members of the jewelry and precious stone trade. According to a report presented by the company, and cabled to New York, the sales during the past year realized over £5,600,000, an increase of more than £800,000 over the previous year, resulting in a substantial increase in the December dividend. When these figures are compared with the importation at the Port of New York alone, which show for the 11 months just passed that the value of precious stones brought in (principally diamonds) amounted to \$39,500,000, it will easily be seen how far the demand for diamonds is in excess of the supply, as the figures of the De Beers corporation are those of the bulk of the output.

Of course, one must consider that the importations at New York include other gems besides diamonds, and a large part of these obtained an additional value by cutting, but the value of the rough stones imported in New York alone since January amount to \$9,360,000, showing that the diamond cutting interests of this country alone consume about one-third of the output, while the cut precious stones imported are nearly equal in value to the entire output. When one considers these facts in connection with the demand for diamonds that exists in the principal countries of Europe, not taking into consideration Asia, Africa, Australia or South America, there is little wonder the prices have increased to the extent they have in the past few years, and there can be little doubt that even with a decided increase in the production of the diamond mines of the world prices of gem stones must go higher in the future according to all economic laws.

Market Price for Silver Bars.

The following are the quotations of silver bars in London and New York, as reported by Zimmerman & Forshay:

BESIEGED by crowds of Holiday Buyers!

This is a condition which is now confronting many jewelers.

Many of these buyers are calling for certain grades of diamonds and diamond jewelry which you may be temporarily out of, or don't regularly carry in stock.

You make or lose sales according to whether you can or cannot supply the goods quickly.

We can send any assortment on memorandum *at once*. This is the time to put us to the test.

YOUNGSTOWN, PA., T. S. Rohrer (G. L. P. dyce & Co.), Herald Sq.

Canada Notes.

W. P. Bromley, Balcarres, Man., has assigned to James Wessel.

Alfred B. White, Pictou, N. S. has assigned under collection act.

J. R. Leggatt, Parry Sound, Ont. I made an assignment to F. W. Quinn.

E. Lees, Yellow Grass, Sask., has disposed of his business to the Yellow Grass Jewe Co.

James M. Whitney, Woodstock, Ont. has given a renewal bill of sale for \$1, to J. McCulloch.

The Gorham Co. is about to establish new silverware works in the vicinity the Birks building, Montreal.

George Manson has been found guilty of stealing jewelry from the store George Manson, Notre Dame St. Montreal, and sentenced to three months jail.

Philip S. Thomas, jeweler and drugg Sturgeon Falls, Ont., was burned out Nov 25 by fire, which destroyed the principal business block of the town, sustaining a loss of \$10,000. The concern was insured \$5,800.

The store of W. W. Porte, Brighton, Ont. was broken into recently and about \$200 jewelry, money and other valuables were stolen. The burglars entered by prying of the front door, and are supposed to have been alarmed while at work and gone hurriedly as valuable silverware in room was not taken.

The business formerly conducted by Dorenfield, Atlanta, Ga., will hereafter be carried on under the style of J. Dorenfield & Co.

New York Notes.

Emanuel Liebowitz moved last week from 82 to 52 E. Broadway.

The engagement of Louis Kramer, 618 Washington St., Hoboken, N. J., and Miss Dorothea Beinhart, 5 W. 116th St., New York, is announced.

Thursday evening, Feb. 14, has been selected as the date for the dinner to be given by the Stationers' Board of Trade, at the Waldorf-Astoria.

Robert H. Deem, jewelry salesman, of 117 W. 90th St., was one of the jurors selected last week in the trial of George Burnham, Jr., one of the insurance cases.

Marcus & Co., 544 Fifth Ave., are creditors to the amount of \$300 of Woodruff Sutton, a paint dealer for whom a receiver in bankruptcy was last week appointed.

Herbert R. Morss and sister, of North Attleboro, Mass., passed Thanksgiving week at the home of their father, John R. Morss, local representative for R. Blackinton & Co. Chas. A. Grote, of F. Grote & Son, manufacturers of ivory and of billiard supplies, 312 E. 23d St., died last Thursday at his home, 1109 Longwood Ave., the Bronx, aged 28 years.

A turkey with a fountain pen suspended from a ribbon, tied around the bird's neck, was the central figure in an attractive window display seen last week at the store of the L. E. Waterman Co., 173 Broadway.

Differences between partners composing the Vienna Novelty Co., 424 Broome St., led last week to the appointment of Paul L. Bernan as receiver. Silas W. Newburger, one of the partners, has sued the other, Fred Rosenzweig, for an accounting.

Col. John L. Shepherd, E. R. Crippen and F. Brinck, composing the speakers' committee of the 24 Karat Club, will start today for Washington, where they expect to hear some notable orators for their club's annual banquet, to be given in Delmonico's, p. 25.

The German-American Metal and Novelty Works, Inc., last week filed a certificate of incorporation. It is authorized to manufacture metal specialties, novelties, jewelry and toys, with a capital of \$50,000. The incorporators are: A. W. Hollister and John Sherlock, New York; R. E. Kinlock, Brooklyn.

An enjoyable event was a first monthly dinner given by the Boost Club in the dine Association rooms, Tuesday evening last week, there being an excellent menu, followed by informal addresses, stories and songs. Among those at the table were Arch Foster Arthur P. Jackson, F. P. Seymour and others known in jewelry and trade.

Simon, 82 Sixth Ave., was arrested last week on the charge of receiving jewelry stolen from the flat of Orlando Ferry, 7 Lafayette Ave., Brooklyn. The police suspect that Harry Becker, arrested recently for burglary, sold his booty to Mr. Simon. Some of the articles are said to have been found in the latter's store. In the Court Mr. Simon was held in \$500 bail. He denies the charge.

About 400 persons attended the mask and dice ball held Thursday evening last by the Watchmakers and Jewelers' Benevolent Association at the Yorkville Casino. The first prize, a bronze clock, was won by a fair

dancer, who wore, attached to her gown, three ordinary alarm clocks and 144 much smaller clocks, all of which rang constantly. The second prize, a manicure set, was awarded to a lady dressed in a butterfly costume.

The Metropolitan Museum of Art is not to have for the present the famous collection from M. Hoentschel's gallery in Paris. J. Pierpont Morgan offered \$600,000 in order to get these art treasures for the museum of which he is president. It is understood, however, that at some future time the owner may consider the offer. A report from Paris says that meanwhile Mr. Morgan obtained for his private collection some choice pieces of sculpture, including a bronze by Michael Angelo.

Owing to their steadily increasing business, Alois Kohn & Co. have leased two entire floors of the building on the north-west corner of Nassau and Ann Sts., to which they will move their factory. These premises will be completely equipped with the most modern machinery and appliances for the manufacture of solid gold chains. The *New York Mercantile and Financial Times* devoted a half column in its issue of Nov. 24 to a notice of this removal as an evidence of progress and expansion. The firm will continue its offices at 16 Maiden Lane.

Maurice and Joseph Klein, who were members of Klein Bros. & Co., manufacturing jewelers at 51 Maiden Lane, and who are accused of grand larceny in obtaining merchandise by means of false credit statements in writing, were not tried at the recent term of the Court of General Sessions, although their cases were on the calendar. A H. Gleason, counsel for the Jewelers Board of Trade, said yesterday that as these were bail cases he had agreed to the request of the assistant district attorney in charge of the prosecution for an adjournment to the January term. This Mr. Gleason did the more willingly, he said, as about 20 witnesses are to be examined, and he knew that they would prefer not to be called until the rush of the holiday business is over.

Sloan & Co., 21 Maiden Lane, are now comfortably established in their enlarged offices, which give them ample room for the increasing business. The company has added to its old quarters other adjoining offices, and now has possession of one entire side of the building. In the additional room President A. K. Sloan has a pleasant, private office. A well-lighted salesroom has been prepared for the use of visiting customers while they inspect samples, and other facilities have been added. The offices are all *en suite* and have been handsomely fitted and furnished. Mr. Sloan said yesterday that work at the new factory in Newark, N. J., to which the concern moved its plant about a year ago, is now going on night as well as day, and he believes that his neighbors in Newark are also having all they can do to fill orders.

Dr. George F. Kunz, of Tiffany & Co., was asked yesterday his opinion as to recent reports of the finding of surface indications that diamonds exist in the range of mountains lying near the boundary line between Santiago and Riverside counties of California. Dr. Kunz said that he has a

list of several hundred stones found in California, but they were found somewhat to the north of the locality mentioned. The stones in his list come from Trinity, Plumas, Eldorado and Butte counties. As far as he knows, he said, there have been no developments showing with any certainty that there are important diamond deposits in the State. Nobody can say, of course, what may be found in the future. It was suggested that if any real evidence of a diamond mine had been found, there would be little delay in getting the stones, and Dr. Kunz said he thought so, too.

Erroneous reports were printed in a part of the city press, one day last week, in relation to the decision by the Board of United States General Appraisers sustaining a protest by Albert Lorsch & Co. and Wm. H. Stiner in relation to the duties on imitation pearls. It was incorrectly said that the Board found the imitations to be dutiable at 10 per cent., that being the rate for pearls in their natural state. The decision in fact was to the effect that the imitations were dutiable at 20 per cent. under the clause relating to imitations of precious stones made of glass or paste. It was settled last year that imitations of pearls are to be classed with imitations of precious stones under the 20 per cent. clause. A large number of protests were pending when the test case was decided, fixing the duty at 20 per cent., and the old cases which have come up from time to time since then have been decided in accordance with that precedent.

Some talk was caused lately by the fact that in an invoice accompanying an importation of imitation precious stones there was an item, "reconstructed diamonds." The importers put in no claim, however, for any lower duty than the 20 per cent. rate, which is required for imitation precious stones made of glass or paste, so no question as to the character of the articles arose officially. The importers said afterwards that there had been a mistake in applying the word "reconstructed" to imitation diamonds, and that there was no purpose of claiming the invention of a reconstructed diamond. In speaking of the incident, an expert in precious stones said that the closest imitation of the diamond, except as to specific gravity, which had never come under his notice, was a zircon from which, by the application of heat, he had eliminated the tint, leaving a clear, white stone. Afterward he experimented with numerous other zircons, but the heat acted differently, and he had no success except in the one instance.

Four arrests were made Monday in connection with the theft of silverware valued at several hundred dollars from the Whiting Mfg. Co.'s factory, Lafayette and E. 4th Sts. Oscar Rohr, employed as a silver chaser, and Joseph Kellner, employed as a porter, were accused of stealing the articles. It is charged that these men took the silverware while it was being carried from the work benches to the stock room, and afterward they sold it to Jacob Benner, who has a jewelry store at 7 Second Ave. Benner and his son, Adolph, were arrested on a charge of receiving stolen property. The police say that Rohr confessed to them and

(Continued from page 67.)

owed where he had six dozen silver spoons concealed in the factory ready to try away at the first opportunity. The detective directed Rohr to take the spoons to the store where he had disposed of the property, and he took them to the office of Mr. Benner, who was then arrested. Mr. Benner lives at 431 5th St., and Kellner at 10 E. 4th St. They were held each in \$1,000 bail. The Benners denied that they had any knowledge of the silverware being stolen.

A diamond cluster ring with eight of 10 side diamonds in a gold mounting, the center stone being missing, was lost last week in Maiden Lane, and a reward of \$25 was offered for the return of the article to the Jewelers Board of Trade.

James H. Miles, a diamond broker at 9 Bridge St., was held up and robbed on a crowded Third Ave. surface car near 67th

Monday afternoon, by three men. A policeman who was on the car arrested a man who gave his name as William Lewis, number 27 years old, and was afterwards released by Magistrate Moss in \$1,000 bail.

Miles said that he was on the rear platform when the men attacked him and tried to get a bag in which he had a quantity of diamonds. In this they were unsuccessful, Mr. Miles said, but they took \$97 in cash and a check for \$11 from one of his pockets.

The first exhibition of the National Society of Craftsmen opened Saturday at the rooms of the society in the National Club Studios, 119 E. 19th St., New York. Monday afternoon a reception to the members of the club was given. After the exhibition, which will continue until late in the month, permanent sales-rooms will be conducted by the society. The exhibition is a representative showing of work in the applied arts, including jewelry and metal work, casting, pottery, basketry, embroidery, carving, wood carving and decoration, stencil work and book illumination. Among the exhibitors are: Paul H. Schramm, jewelry and bronze work; Linden Henry, bronzes; Charles Volkmar, pottery and decorative work; Chas. Binns and Mrs. Alsop Robinson, pottery. There is an exhibit of the

Combe College style of pottery from the school in New Orleans. Jewelry exhibits of an attractive character are shown by Miss Je Carson, of the Carson Studios; Edward B. Thresher, Miss Marie Zimmermann, Miss Emily Peacock, Mrs. Madeline Wynn and others. Some interesting specimens of Indian jewelry are shown by Mrs. Josephine Foard, in charge of the Indian work at Lagema, N. Mex. It is the purpose of the society to encourage individual endeavor along any line of original artistic work and to provide a means of disposing of the product.

odd & Struthers, Des Moines, Ia., who recently added two stories to their quarters at 720-722 Sixth Ave., are about to engage in the cutting of precious stones, having just installed a full set of lapidary machinery.

Our Traveling Representatives

Paul Walsh, with Hambright & Walsh, Los Angeles, Cal., was in San Francisco, Cal., recently.

Lee Kahn, of Lindenbergh & Fox, Cincinnati, O., is stocking up for his last trip of the season in the south.

L. Herman and Mayo Loeb, of Herman & Loeb, Cincinnati, O., have started on their trips west and north.

A. J. Howell has returned from a trip to the Southern Mines on behalf of the Julius A. Young Co., San Francisco, Cal.

Albert Cantor, traveling representative of Nordman Bros., San Francisco, Cal., has just returned from a successful southern trip.

Melville Cohn, who has just returned from a two months' trip up north for J. S. Lehrberger & Co., San Francisco, Cal., will start for the south, this week.

Among the few traveling representatives visiting the trade in Lancaster, Pa., recently, were: H. M. Hupfeld, H. Bealman & Co.; Mr. Lapham, Carter, Howe & Co.; E. W. Dellar, William S. Hicks' Sons.

Traveling representatives who visited Denver, Colo., last week, included: L. Horwitz, L. Horwitz & Co.; J. D. Bridges, R. F. Simmons Bro. & Co.; F. H. Wilkinson, A. Wittman Co.; Benjamin Spier, Spier & Forshelm.

Traveling representatives in Omaha, Nebr., last week, included: De Lancey Stone, Shafer & Douglas; John O. Slemmons, J. B. Bowden & Co.; Geo. W. Hoadley, Edward Todd & Co.; Walter R. Shute, Kohn & Co.; Mr. Weidlich, Watson & Newell Co.; I. W. Friedman; Wm. S. Manheimer, Louis Manheimer & Bros.; L. Bruns, Juergens & Andersen Co.

The F. H. Sandler Co., Attleboro, Mass., has enlarged its traveling force for the coming year. E. P. Tiffany, who has been with this house several years, still covers his usual territory. G. Fred. Perry will cover Canada, Chicago, Pacific coast and the south. Ira B. Hudson will have charge of the New York office at 180 Broadway, and A. P. Whitehill, the eastern territory.

Traveling representatives who called on the Cincinnati, O., trade, during the past week, included: Norbert Günsberger, L. & M. Kahn & Co.; Mr. McClannin, Wilcox Silver Plate Co.; C. L. Krugler, Mandeville, Carrow & Crane; R. B. Carr, Link & Angell; Fred D. Smith, Reeves & Browne; H. L. Lambord, Gorham Co.; D. A. Davidson, Wallach & Davidson; J. Baker, Frank M. Whiting & Co.; Thomas Jewett, Gorham Mfg. Co.; Mr. Krause, Arthur W. Ware & Co.

The following traveling representatives called on the trade in Kansas City, Mo., during the past week: W. A. Montague, H. F. Hahn & Co.; John F. Garland, L. H. Keller & Co.; I. W. Friedman; I. Price, Louis Strasburger's Son & Co.; George W. Beardsley, Allsopp & Allsopp; Charles H. Anderson, Ross, Saltman & Anderson; Wm. Weidlich, Wm. Weidlich & Bro.; Wm. Lamb, Geo. H. Fuller & Son Co.; Geo. W. Hoadley, Edward Todd & Co.; Jas. J. Doll, A. Z. Zugsmith.

Among the traveling representatives who visited the trade at Pittsburg, Pa., last week, were the following: D. A. Davidson, Wallach & Davidson; Fred D. Smith, Reeves & Browne; Robert B. Steele, David Kaiser & Co.; J. F. Dean, Reed & Barton; Walter S. Strauss, Jacob Strauss & Sons; Mr. Sideman, Redlich & Co.; F. E. Whiting, Whiting & Davis; Wm. Matschke, A. Joralemon & Son; W. H. Shiman, Shiman Bros. & Co.; H. B. Bliss, Gorham Mfg. Co.; Russell A. Talbot, Joseph Fahys & Co.

Among the traveling representatives who called on the trade in St. Louis, Mo., last week, were the following: George W. Beardsley, Allsopp & Allsopp; Alvin T. Hatch, S. B. Champlin Co.; H. S. Aicher, Alvin Mfg. Co.; Charles H. Anderson, Ross, Saltman & Anderson; H. H. Meyer, William B. Kerr Co.; S. W. Abbey, E. Ira Richards &

Co.; Mortimer C. Adler, Charles Adler's Sons; George W. Hoadley, Edward Todd & Co.; C. T. E. Smith, Reed & Barton; Walter R. Shute, Kohn & Co.; William S. Manheimer, Louis Manheimer & Bros.

Patent and Trade-Mark Notes.

It will be recalled that in May the Commissioner of Patents declared an interference between the Dueber Watch Case Mfg. Co. and others, with reference to the use by the respective companies of the words "silveroid," "silverine," "silverod" and "silverex," used as trade-marks on watch cases. From that decision no appeal was taken, therefore the letters of registration were issued to the Dueber Watch Case Mfg. Co., under date of Oct. 23, 1906. Application for this registration was filed April 25, 1905, and was published Aug. 28, 1906. Registration number is 56,890.

The Philadelphia Watch Case Co. was involved in interference proceedings before the United States Patent Office with the Hampden Watch Co., over the right of the Hampden company to use the word "Diadem" and a representation of same as a trade-mark for use on watch movements. During the past Summer and Fall testimony has been taken by the attorneys for the latter company to prove that there can be no interference, for the reason that "Diadem" is for use exclusively on watch movements of a very fine grade manufactured by that company, whereas the Crown mark, with which interference is claimed, is only used on watch cases. It is rumored that the matter will be compromised in a few days.

Syracuse.

A contract for the time clocks in the new County Courthouse, in this city, was recently awarded to the Blodgett Clock Co., upon the company's bid of \$4,423. The building will be ready for occupancy of some of the departments on Jan. 1, 1907.

A collection of specimens from the different grades of earth or Kimberlite found in the De Beers mines in South Africa, has recently been received by the Onondaga Academy of Science, of this city, from G. F. Williams, manager of the De Beers Consolidated Mines, Ltd. There are samples of the yellow ground found near the surface and others taken at different depths showing greenish and bluish hues. Syracuse scientists have been comparing these specimens with rock and earth taken from excavations in that city, and say that there is little difference in appearance. No diamonds are being found, however, in any excavations in Syracuse.

Toledo, O.

H. S. Sheley, optician, has moved his office from the Spitzer building to the fourth floor of the Smith & Baker building.

J. J. Freeman, of the firm of J. J. Freeman & Co., Summit St., has been elected a director of the Toledo Chamber of Commerce.

The Rushmer Jewelry Co., Pueblo, Colo., has remodeled its store.

THE GEM CUTTERS CRAFT. By Leopold Claremont. Profusely illustrated. 12mo. cloth, 296 pages. Published by Geo. Bell & Sons, London. Price, \$5 et. in the U. S.

THIS beautifully printed and very readable work is a welcome contribution to the literature on the subject of precious stones, already extant, and is by the author of a number of articles on precious stones which have appeared in the *Mining Journal* of London, and *THE JEWELERS' CIRCULAR WEEKLY* in this country. Mr. Claremont is a well known precious stone dealer in London, and practical gem cutter, and his work is the result of the many years study which he had given to the gem business. While the volume is not and does not pretend to be as complete or authoritative as the standard works on the subject, such as those by Bauer and of age, it will be found to be a treatise of considerable value, which can be read with ease and deep interest by even a layman. In text, press and illustrations it is superior to any work that has so far been produced. It, in fact, is one of the most completely illustrated works on gems that has ever been published.

Mr. Claremont begins his work with a fiction instead of a preface, which reads as follows: "*Precious stones are rare minerals which (to the exclusion of metals) possess sufficient beauty to warrant their use as personal ornaments, and sufficient hardness to render them suitable for the purpose.*" He opens the book proper with a chapter on the identification of precious stones which will be read with deep interest by many jewelers as the tests which he gives—some old, some new—are unfortunately not too generally known, or thoroughly understood by the members of the trade at large.

A brief chapter on gems under the X-ray is followed by one on the nomenclature of gems, which in turn is succeeded by the chapter on the cutting of precious stones. In this the author illustrates and describes the oldest methods of diamond and precious stone cutting as well as the new ones, and gives many half-tone portraits of instruments used in diamond and precious stone polishing and cleaving, as well as illustrations from life, showing men at work on the various processes or stages through which a stone passes from its rough to its finished state.

Chapters on gems considered commercially, and the effects of fashion upon gems, are followed by a most excellent discourse on gems, as amulets, birth stones, etc., which Mr. Claremont has compiled from various tables of gems and their relations to the months, the signs of the Zodiac, gem stones of the Bible, of the tribes of Israel, all of which retail dealers may find available for use in their booklets.

The author then takes up each gem under a separate chapter beginning with the diamond and following with the ruby, sapphire, emerald, lazuli, spinel, amethyst, beryl, emerald, zircon, tourmaline, etc. These chapters are so distinctly up-to-date that in the illustrations will be found many that have never appeared before in a work of this character, such as the new Cullinan diamond, crystals

of Kunzite, scenes from Montana sapphire mines, etc., etc. The illustrations in this part of the book of both rough crystals and cutting gems are particularly interesting.

The book proper concludes with a chapter on imitation precious stones and their artificial production and alteration, and then comes an appendix showing a table giving the characteristics and localities of the principal precious stones, a short treatise on how to prepare certain solutions for taking specific gravity of gems, and a list of books and papers recommended to the reader.

Exceptions will be taken by gem experts to certain statements in the book, and while others, such as the author's differentiation in hardness between the ruby on one hand, and the sapphire, garnet and other corundum gems on the other, will no doubt lead to considerable discussion. American dealers also will disagree with some of his statements as to American turquoise, particularly about their being inferior to the Persian variety and more likely to change color, as one of the principal reasons for the increase in the sale of American turquoises abroad has been the fact that they have held their color so well. The statement that the rose pink beryl variety is rare will also be controverted by the handlers of the product of some of the California mines.

Mr. Claremont's chapters on rubies and sapphires will be found especially instructive and full of the most up-to-date and reliable information, but some regret will be expressed on this side of the water that the question of the reconstructed ruby was not treated more fully by the author, owing to the importance which this imitation gem has assumed in the trade within the last year or so. His treatment of the subject of sapphires is also most interesting and instructive.

There is no doubt that Mr. Claremont's article on zircon will also be a cause of discussion, as his classification of the varieties of the gem under different names differs from other authors on the subject from the past and present. Zircon is a subject of which the author has made a specialty, and for this reason his statements will be considered of more than usual importance, particularly as he uses the terms zircon and jargon as practically interchangeable, though many chemists hold different views.

An index at the back of the book affords ready reference for the many subjects treated.

London Jeweler Offers to Return Kit to Burglar if Ownership Is Proved.

A SPECIAL cable to the *New York Times* from London, Thursday, stated that a jeweler had displayed the following notice in his shop window on that day:

A full set of burglar tools was found on these premises this morning. It will be delivered to any person describing the property and proving ownership.

The tools had not been claimed at shutting-up time, said the dispatch.

F. M. Grow & Co., Rutland, Vt., have added a line of jewelry. The new department is in charge of Percy P. Wood. A watch repairing department will shortly be added.

Boston.

Henry M. Rich is conducting an auction sale for F. C. Maude, Beverly, Mass.

Dame, Stoddard & Co. have remodeled the front of their store on Washington St., securing thereby a handsome pair of display windows.

W. E. Woodman, formerly of the W. E. Woodman Co., now with H. Bornstein, as auctioneer, is conducting a sale at 340 Washington St.

Charles Pass, salesman with Henry Cowan, is to sail, next week, for Oldham, Eng., on a Christmas visit to his former home. He will be away about eight weeks.

Henry M. Rich, jewelers' auctioneer, who has been seriously ill for upward of a month with acute indigestion, is convalescent and able to be at his place of business again.

William E. Crocker, with D. C. Percival & Co., met with an accidental fall on Wednesday last, resulting in a sprained knee, which has confined him to his home during the past week.

The second unsuccessful attempt to rob the store of M. C. Jewell, in the suburban city of Everett, was made by thieves, last week, who were frightened away by the approach of the police and managed to evade capture.

Herman S. Hewett & Co., retail jewelers, Brockton, Mass., last week, added a new room to their growing establishment. This new department is to be for the display of china and cut glass. A room for optical goods was added just previously.

Marshall P. Thompson, receiver of the T. F. Tuttle Silver Co., states that he has received several offers for the sale of the company as a going concern, which are now under consideration. The repair shop in the Washington building has been leased, by permission of the court, to Herbert Gleason and James Wooley, who were formerly with the Tuttle company.

The Howard Clock Co. has contracted to install a time system in the Woodworsted mill at Lawrence, one of the plants of the American Woolen Co., said to be the largest mill of the kind in the world. The outfit includes a tower clock, with illuminated six-foot dial, which will be the master-clock, operating 20 secondary clocks by electrical contact.

Buyers in town during the week included: C. E. Haywood, Potsdam, N. Y.; Charles A. Keene, New York, formerly of Boston, who was welcomed by many friends in the trade; F. L. Bassett, Ware; J. S. Jefts, Brockton; Mr. Anderson, Robinson & Anderson, Worcester; H. P. N. Dahl, Maynard; J. B. Hall, Methuen; J. J. Woodward, Somersworth, N. H.; Mr. Stearns, Stearns & Hills, Keene, N. H.; J. R. Holland, Holland & Co., Concord, N. H.; C. E. Whitmore, Bar Harbor, Me.; Freeman Daniels, Hartland, Me.; C. H. Place, St. Albans, Vt.

H. W. Schreiber, Honey Grove, Tex., watch inspector for the G. C. & S. F. Ry. Co., has moved his stock into an attractively furnished store, which is the only establishment dealing exclusively in jewelry at that place.

Ball's Official Standard R. R. Watches

WHAT WOULD YOU GIVE FOR A LIFELONG CUSTOMER?

Try this plan:
 Sell your next watch customer a "Ball."
 Its reliable performance will convince him you are a dealer to be depended on—he'll keep coming back for other things.
 The watch will win you his business and friendship for always.

Write for booklet, and watch this space.

We want to add a lot of new friends to the Ball family of railroad watch dealers.

CHICAGO, WEDNESDAY, DECEMBER 5, 1906.

No. 18.

Chicago Notes.

Herbert W. Allen has been spending the week at Mudlavia, Ind.

Jacob Franks, of the Rockford Watch Co., is the proud father of a new baby girl. Alvin Bauman, president of the L. Bauman Jewelry Co., St. Louis, was here last week.

W. Stoneburner, representing Capron Co., of Providence, R. I., is on a visit to the factory.

A. E. Barringer, with Henry Paulson & Co., has returned from a trip through the western states.

C. B. Shepard, of the Shepard Mfg. Co., Woburn, Mass., was in this city, recently, visiting the Chicago office and the trade.

E. H. Luke, son of E. Luke, Yazoo City, Miss., has been spending some time in this city buying goods and visiting with friends.

The engagement is announced of L. A. Eppenstein, of L. A. Eppenstein & Co., to Miss Annetta Davis, of Minneapolis, Minn.

Henry Spears, who was recently appointed to the office of assistant sheriff, is the father of Edward Spears, with C. H. Wright & Co.

Emil Braude, of E. Braude & Bro., 42 Madison St., has been suffering from an attack of tonsilitis, but is now well on the road to recovery.

Malvin Clauer, South Bend, Ind., who was formerly in the watch material business in this city, has been spending some time among his friends here.

Paul N. Lackritz, 964 Milwaukee Ave., has made great improvements in his store by adding a 25-foot extension at the rear and by installing new show and wall cases.

The Seth Thomas Clock Co. recently secured contracts to put up tower clocks for the City Hall, Dillon, Mont., and for the court houses at Grand Island, Nebr., and Ebersville, Ky.

G. H. Van der Wijst, Dordrecht, Netherlands, has recently enrolled in the Kadler School of Engraving. Other students enrolling, recently, are: Dora Genshaw, Elroy, Wis., and Minnie Miller, of the John A. Miller Jewelry Co., Cairo, Egypt.

G. Thearle, secretary of the Chicago Jewelers' Association, called a meeting at the association rooms on Saturday at 3:30

p. m. At this meeting, which had a large attendance, resolutions of regret at the death of Otto Young were passed, and an engrossed copy was ordered to be sent to Mrs. Otto Young.

Lapp & Flershem were recently visited by a clever swindler who desired to see some diamonds. After making a selection he requested that it be put aside for him until he should return. It was soon discovered, after his departure, that a stone was missing. The matter has been reported to the police.

Gus Fischer, 36 years of age, who has been with the Shourds-Adcock-Teufel Co., for the past seven years at the head of their watch department, died recently at the home of his parents at Whitehall, Ill., and was buried there on the afternoon of Thanksgiving Day. He was especially well liked by his employers and associates. He was a member of the Lakeside Lodge, A. F. and A. M.

The show window of the jewelry store of W. J. Gardner & Son, 3640 State St., was smashed by three negroes last week and 11 watches, valued at \$200, were stolen. Mr. Gardner was absent at the time, but his son fired two shots at the thieves, who dropped their plunder and ran. Two of the robbers were caught, and one has been sentenced to 20 years in Joliet. The watches were picked up by negro residents of the neighborhood and were not recovered.

Among the buyers in this city from the surrounding towns, during the past week, were the following: E. L. Wentworth, Kasson, Minn.; Mr. Trask, of Trask & Plain, Aurora, Ill.; I. Zinzer, Washington, Ill.; F. A. Hannis, York, Nebr.; Edw. A. Sigler, Crown Point, Ind.; David Goldman, Milwaukee, Wis.; Robert P. Kiep, Joliet, Ill.; B. H. Britton, Hampshire, Ill.; C. W. Hotchkiss, Ardmore, I. T.; M. King, Muscatine, Ia.; John Novack, Escanaba, Mich.; A. F. Werve, Watervliet, Mich.

Graffe & Stanek, who have been occupying about 1,600 sq. ft. of space on the eighth floor of the Heyworth building, have arranged to take similar space on the seventh floor of the building. This place has much better light and is the space formerly occupied by J. H. Purdy & Co. The floor vacated by Graffe & Stanek will be occupied by E. V. Roddin & Co., who are now

occupying 4,800 sq. ft. adjoining, increasing their space by one-third, which is necessary on account of their rapidly growing business.

Charles Lester, for many years manager of the Chicago office of the New England Watch Co., has signified his intention of resigning his position on Jan. 1. Mr. Lester has not been enjoying the best of health lately and his physician has advised him that a change in climate would be beneficial to him. It is Mr. Lester's intention to reside in one of the southern states. Charles Lester has been a conspicuous figure in watch circles in the west for many years, and his friends here heard of his withdrawal from the watch field with deep regret.

Denver.

Morris Mayer, St. Louis, Mo., is visiting his father, in this city, for the holidays.

James E. Lewis, of the Lewis Jewelers' Supply Co., is home from a successful trip through the northwest.

J. Elroff & Co. are selling out their stock. They are forced to leave their store at the expiration of their lease.

Rollin M. Turner, formerly manager of the J. S. Johnson Jewelry Co., Greeley, Colo., spent the past week in this city.

Charles H. Clark & Co. are planning to enlarge their manufacturing shop and add a department for silver plating on an extensive scale.

D. S. Manian, with the Crown Mfg. Co., returned, last week, from a trip through the western states, and left at once for the east on business. He will be in New York by Jan. 1.

A. Heitler, with J. C. Bloom & Co., was married to Miss Minnie Goldsticker, recently, at Dallas, Tex. He has just brought his bride home after an extended trip through the south.

Out-of-town jewelers visiting Denver, during the past week, included: H. G. Petty, Fort Collins, Colo.; James Inland, Goldfield, Colo.; Henry Curtis, Jr., Littleton, Colo.; J. Freshman, Cripple Creek, Colo.; A. J. Nelson, Longmont, Colo.; Edward Eddy, Westcliff, Colo., and F. W. Broad, Chalomer, N. Mex.
