Shade Gardening

Shady sites often contain more subtle colours and soft lighting, two characteristics that bring out feelings of serenity as well as solitude in the garden. In this handout, we will explore the many plant possibilities that you can combine in your shade garden. Bear in mind that not all of these plants withstand the same amount of shade. Some plants will not flower as well in shade as in partial sun e.g. *Stewartia*, *Hosta* and *Campanula*.

VARYING DEGREES OF SHADE

SUNNY SITE - Receives more than eight hours of direct sun each day, with most of that in the afternoon.

PARTIAL SHADE - Receives sunlight for less than eight hours, or sun under the dappled shade of trees.

SHADE - Receives no direct sunlight, but may get some reflected off buildings.

DEEP SHADE - Receives no direct or indirect sunlight -e.g.: underneath an evergreen tree or large dense shrub.
